(Do not check if a smaller reporting company)

CALCULATION OF REGISTRATION FEE

Title of Each Class of Securities to be Registered	Amount to be Registered ⁽¹⁾	Proposed Maximum Aggregate Offering Price per Share	Proposed Maximum Aggregate Offering Price ⁽¹⁾⁽²⁾	Amount of Registration Fee
Common Stock, \$0.0001 par value	6,152,500	\$15.00	\$92,287,500	\$7,328.65 ⁽³⁾

(1) Includes shares of common stock that the underwriters have the option to purchase to cover the over-allotment.

(2) Estimated solely for purposes of determining the registration fee in accordance with Rule 457(a) under the Securities Act of 1933, as amended.

(3) \$5,347.50 of the registration fee was previously paid on May 12, 2010 and \$1,981.15 of the registration fee was previously paid on January 30, 2012.

The Registrant hereby amends this Registration Statement on such date or dates as may be necessary to delay its effective date until the Registrant shall file a further amendment which specifically states that this Registration Statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the Registration Statement shall become effective on such date as the Commission, acting pursuant to said Section 8(a), may determine.

Table of Contents

The information in this preliminary prospectus is not complete and may be changed. Neither we nor the selling stockholders may sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. This preliminary prospectus is not an offer to sell these securities and it is not soliciting an offer to buy these securities in any jurisdiction where the offer or sale is not permitted.

SUBJECT TO COMPLETION, DATED MARCH 21, 2012
PRELIMINARY PROSPECTUS

Erickson Air-Crane Incorporated
5,350,000 Shares
Common Stock
\$ per share

This is Erickson Air-Crane Incorporated's initial public offering. We are selling 5,350,000 shares of our common stock.

We expect the public offering price to be between \$13.00 and \$15.00 per share. Currently, no public market exists for the shares. We have applied to list our common stock on The NASDAQ Global Market under the symbol "EAC."

Investing in our common stock involves risks. See "Risk Factors" beginning on page 17 of this prospectus.

	Per Share	Total
Public offering price	\$	\$
Underwriting discount	\$	\$
Proceeds, before expenses, to us	\$	\$

The selling stockholders named in this prospectus have granted the underwriters an option to purchase up to an additional 802,500 shares of our common stock at the public offering price, less the underwriting discounts and commissions, to cover overallocments, if any, within 30 days from the date of this prospectus. We will not receive any proceeds from the sale of shares by the selling stockholders, if any; however, we will pay all expenses on behalf of the selling stockholders in connection with this offering other than the underwriting discounts and commissions payable by the selling stockholders.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The underwriters expect to deliver the shares on or about _____, 2012.

Neither we, the underwriters, nor the selling stockholders have authorized anyone to provide any information or to make any representations other than those contained in this prospectus or in any free writing prospectuses we have prepared. You should not rely on any information other than the information contained in this prospectus and in any free writing prospectus that we prepare. Neither we, the underwriters, nor the selling stockholders take any responsibility for, nor can provide any assurance as to the reliability of, any other information that others may give you. This prospectus is an offer to sell only the shares of common stock offered hereby, but only under circumstances and in jurisdictions where it is lawful to do so. The information contained in this prospectus is current only as of its date.

Erickson Air-Crane Incorporated, our logo, and other trademarks mentioned in this prospectus are the property of their respective owners.

Table of Contents

EXPLANATORY NOTE REGARDING RECAPITALIZATION

In connection with this offering, we will amend and restate our certificate of incorporation to reclassify our Series A Redeemable Preferred Stock and our Class A Common Stock into an aggregate of 4,802,970 shares of our common stock. Unless otherwise noted, the information in this prospectus gives effect to our recapitalization and the amendment and restatement of our certificate of incorporation. We also intend to adopt a 2012 Long-Term Incentive Plan under which we intend to issue restricted stock units ("RSUs") concurrently with the closing of this offering. See "Capitalization" and "Executive Compensation 2012 Long-Term Incentive Plan" for additional information.

Table of Contents

PROSPECTUS SUMMARY

This summary highlights information contained elsewhere in this prospectus and does not contain all of the information that you should consider in making your investment decision. Before investing in our common stock, you should carefully read this entire prospectus, including our consolidated financial statements and the related notes included in this prospectus and the information set forth under the headings "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations."

In this prospectus, unless otherwise indicated or the context otherwise requires, references to "we," "us," "our," the "Company," and "Erickson" refer to Erickson Air-Crane Incorporated and its subsidiaries on a consolidated basis.

Our Company

We specialize in the operation and manufacture of the Erickson S-64 Aircrane ("Aircrane"), a versatile and powerful heavy-lift helicopter. The Aircrane has a lift capacity of up to 25,000 pounds and is the only commercial aircraft built specifically as a flying crane without a fuselage for internal loads. The Aircrane is also the only commercial heavy-lift helicopter with a rear load-facing cockpit, combining an unobstructed view and complete aircraft control for precision lift and load placement capabilities.

We own and operate a fleet of 17 Aircranes, which we use to support a wide variety of government and commercial customers worldwide across a broad range of aerial services, including firefighting, timber harvesting, infrastructure construction, and crewing. We refer to this segment of our business as Aerial Services. We also manufacture Aircranes and related components for sale to government and commercial customers and provide aftermarket support and maintenance, repair, and overhaul services for the Aircrane and other aircraft. We refer to this segment of our business as Aircraft Manufacturing and Maintenance, Repair, and Overhaul ("Manufacturing / MRO"). As part of our Manufacturing / MRO segment, we also offer cost per hour ("CPH") contracts pursuant to which we provide components and expendable supplies for a customer's aircraft at a fixed cost per flight hour. We believe CPH contracts help our customers better predict and manage their maintenance costs. In 2010, our Aerial Services and Manufacturing / MRO segments generated revenues of \$105.7 million and \$12.5 million, respectively, and in 2011, our Aerial Services and Manufacturing / MRO segments generated revenues of \$138.6 million and \$14.1 million, respectively. In 2010, we had a net loss attributable to Erickson Air-Crane of \$8.3 million, and in 2011, we had net income attributable to Erickson Air-Crane of \$15.9 million.

We own the Type and Production Certificates for the Aircrane, granting us exclusive design, manufacturing, and related rights for the aircraft and original equipment manufacturer ("OEM") components. We invest in new technologies and proprietary solutions with a goal of increasing our market share and entering new markets. We have made more than 350 design improvements to the Aircrane since acquiring the Type Certificate and we have developed Aircrane accessories that enhance our aerial operations, such as our firefighting tank system and snorkel, timber "heli harvester," and anti-rotation device and hoist.

We have manufactured 33 Aircranes for our own fleet and for our customers in several countries worldwide. To date, we have sold and delivered nine Aircranes, including our first sale to a commercial customer in 2009 (subject to the purchaser's right to resell the aircraft to us on July 31, 2013, which was an important term to the purchaser when the sale agreement was negotiated).

We believe we are the only fully integrated developer, manufacturer, operator, and provider of aftermarket parts and services for a precision heavy-lift helicopter platform, and that there are significant growth opportunities for our business. For example, we believe population growth and deconcentration, which increases the size and breadth of communities that must be protected from wildfires, will lead to increased government spending on rapid response, heavy-lift firefighting solutions such as the Aircrane. See "Business Competition" and "The Commercial Heavy-Lift Helicopter Industry Commercial

Table of Contents

Heavy-Lift Helicopter Markets." There is, however, no guarantee that growth will occur in the markets we serve or that we will be able to take advantage of growth opportunities. See "Risk Factors."

We target long-term contract opportunities and had a total backlog of \$212.8 million as of February 29, 2012, of which \$128.0 million was from signed contracts and \$84.8 million was from anticipated exercises of customer extension options (including \$54.3 million from multi-year annual customer extension options). We had a total backlog of \$298.9 million as of February 28, 2011, of which \$176.4 million was from signed contracts and \$122.5 million was from anticipated exercises of customer extension options (including \$22.6 million from multi-year annual customer extension options). No sales of Aircranes were associated with our backlog as of February 29, 2012 or February 28, 2011. We define long-term contracts as contracts of six months or more, to distinguish them from our contracts related to a specific task for a customer, which are generally short-term engagements. We include anticipated exercises of customer extension options in our backlog when our prior operating history, including past exercises of extension options by such customers and the other circumstances specific to the particular contract, causes us to conclude that the exercise of such extension option is likely. We expect that approximately \$123.8 million of the backlog will not be filled in 2012. See "Business Backlog" for a discussion of how we define and calculate backlog. There is no guarantee, however, that any customer will exercise its extension options or that any contracts will be renewed or extended. See "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

Our Aerial Services operations are seasonal and tend to peak in June through October and tend to be at a low point in January through April. As a result of this seasonality, we have historically generated higher revenue in our third quarter as compared to other quarters, and received the majority of our cash in the second half of the calendar year. We had cash used in operations of \$8.4 million for the year ended December 31, 2010 and \$20.7 million for the year ended December 31, 2011. Cash used in operations included an increase in inventory and work in process of approximately \$26.7 million and \$25.7 million for the years ended December 31, 2010 and 2011, respectively. A significant portion of this increase was attributable to the manufacture of two Aircranes during 2010 and 2011 that are currently held in inventory. We expect to have a significant decrease in the amount of cash used for inventory in 2012 as compared to the amounts used in 2010 and 2011 and, to a lesser extent, savings resulting from our reduction-in-force in November 2011. As a result, we believe that our cash flows from operations, together with cash on hand and the availability of our revolving credit facility, will provide us with sufficient liquidity to operate our business for the foreseeable future. However, there is no guarantee that we will have sufficient liquidity, and our significant debt service obligations could adversely affect our financial condition and impair our ability to grow and operate our business and comply in 2012 with the financial covenants under the credit agreement dated June 24, 2010 by and among us, Wells Fargo Bank, National Association ("Wells Fargo"), Keybank National Association, Bank of the West, Bank of America, N.A., and Union Bank, N.A. (as amended, the "Credit Agreement"). See "Risk Factors Risks Relating to Our Business Our indebtedness and significant debt service obligations could adversely affect our financial condition and impair our ability to grow and operate our business and we might not comply with the financial covenants under our Credit Agreement in 2012." See also " Our Strategy Increase Our Aircrane Sales" and " Risks Related to Our Business."

We are headquartered at 5550 SW Macadam Avenue, Suite 200, Portland, Oregon 97239, our phone number is (503) 505-5800, and our website address is www.ericksonaircrane.com. The information on, or accessible through, our website is not a part of this prospectus and should not be relied upon in determining whether to make an investment decision. We have production, maintenance, and logistics facilities in Central Point, Oregon. We currently maintain a year-round international presence with operations in Canada, Italy, Malaysia, and Peru, and an operating presence in Australia and Greece.

We employ approximately 700 employees of whom approximately 500 are located in Oregon, primarily at our Central Point facilities and Portland headquarters. We employ approximately 100 pilots. We deploy crews, including pilots and maintenance personnel, on-site globally where we deploy our Aircranes.

Table of Contents

Our Competitive Strengths

We believe we have certain competitive advantages in the heavy-lift helicopter market that further our ability to execute on our strategy.

Versatile Heavy-Lift Helicopter Solutions. The versatility and high payload capacity of the Aircrane, its proprietary mission-specific accessories, and the skill of our pilots and crews make the Aircrane an attractive solution for a wide variety of aerial services. We believe our fleet of 17 owned and operating Aircranes is the largest commercial fleet of helicopters in the world capable of carrying loads of up to 25,000 pounds and that our role as the manufacturer of the Aircrane, combined with our scale, service readiness, and comprehensive global support network, provides us with a leadership position in the heavy-lift helicopter industry. See "Business Competition."

Vertically Integrated Business Model. We offer a full spectrum of heavy-lift helicopter solutions, including the design, engineering, development, manufacturing, and testing of the Aircrane, as well as Aerial Services and MRO services. We believe our integrated business model reduces our costs, diversifies our revenue stream, and results in better products and services through close collaboration between our product engineers and our operations personnel.

Established International Presence. During our history, we have operated in 18 countries across five continents. Global operations allow us to maximize the use of our fleet for seasonal aerial services and position us to capitalize on opportunities in a broad range of geographies. We currently maintain a year-round international presence in Canada, Italy, Malaysia, and Peru, and an operating presence in Australia and Greece. Global operations expose us to risks, such as currency fluctuations, different regulatory and legal environments, and risks of financial, political, and other instability related to the countries in which we operate. See "Risk Factors Risks Related to Our Business Our business is subject to risks associated with international operations, including operations in emerging markets."

Proprietary Technologies and Continuous Innovation. We have made more than 350 design improvements to the Aircrane and have developed a variety of innovative accessories for our Aerial Services, including a 2,650 gallon firefighting tank and snorkel refill system, a "heli harvester" for aerial timber harvesting, and an anti-rotation device and hoist that facilitates precision heavy load placement. We continuously explore ways to deliver innovative solutions to our customers and to potential customers in new markets.

Valuable Long-Term Customer Relationships and Contracts. We believe that our established relationships with customers, some of whom have been customers for more than 20 years, allow us to effectively compete for and win new projects and contract renewals. Our long-term relationships help provide us with visibility with respect to our revenue, aircraft utilization, and scheduled usage patterns. We increased our backlog as of February 29, 2012 by \$179.8 million to \$212.8 million compared to September 26, 2007, the date of the acquisition of the Company by a group of private equity investors. We had \$298.9 million of backlog at February 28, 2011. No sales of Aircranes were associated with our backlog as of February 29, 2012 or February 28, 2011. We derived approximately 76% of our 2010 revenues and approximately 83% of our 2011 revenues from long-term contracts. We define a long-term contract to be a contract with a duration of six months or more. See "Business Backlog" for a discussion of how we define and calculate backlog. While our contracts with our largest customers have a term of six months or more, they may be subject to annual renewals or customer extension options, and there is no guarantee that such contracts will be renewed or extended. See also "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

Experienced and Growth-Oriented Management Team. Within the last four years, we have added the six members of our senior management team, including our Chief Executive Officer ("CEO"), our Chief Financial Officer ("CFO"), our Vice President and Chief Marketing Officer, our Vice President of Manufacturing and MRO, our Vice President of Aerial Services, and our Vice President, General Counsel,

Table of Contents

and Corporate Secretary. Our senior management team has an average of more than 20 years of experience in the aviation industry and rotorcraft sector. This professional aerospace team provides us with deep domain knowledge, extensive operational and manufacturing expertise, and strong customer and business relationships.

Our Strategy

Our goals are to strengthen our position in the competitive heavy-lift helicopter industry by continuing to provide innovative, value-added solutions to our customers, and to expand our aircraft and component sales and MRO services. We intend to focus on the following strategies to achieve these goals:

Maintain Position in Aerial Services and Expand into New Markets. We intend to leverage our global presence, our vertically integrated offerings, and our innovative technologies to expand our customer base and increase our fleet utilization in existing and new markets.

Firefighting. We intend to opportunistically enter European, Asian, and South American countries that have significant fire seasons. We expect the seasonal differences between these countries and those we currently serve will provide us with the opportunity to increase our global fleet utilization and provide more scale in each of our key target regions.

Timber harvesting. We intend to opportunistically enter new markets in South America and Asia where abundant high-value timber resources present significant growth potential for our heavy-lift solutions. In addition, we expect to continue to capitalize on the growing desire for sustainable timber harvesting practices, as we have done in North America and Malaysia. Specifically, we have been able to secure Aerial Services contracts in the United States, Canada, and Malaysia supporting customers who do not clear cut timber (which allows for easier access by road) and instead use sustainable timber harvesting practices that require extraction of heavy timber loads from sites that may not be accessible by ground transportation.

Infrastructure construction. We believe that infrastructure construction represents a large market with growth potential for us. In particular, we believe that electrical grid development and modernization, oil and gas pipeline construction, wind turbine construction, and other alternative energy projects represent our most significant growth opportunities in this sector.

Emergency response. We have developed and continue to expand a comprehensive emergency response marketing effort to provide advanced global aerial solutions in support of disaster recovery, hazard mitigation, and infrastructure restoration.

Crewing. We have experienced strong demand for crewing services from customers who have purchased our Aircranes and we expect this trend to continue as the global installed base of Aircranes expands.

Increase Our Aircrane Sales. We have not sold an Aircrane since 2009, but have manufactured two Aircranes that are ready for sale, one of which is complete and one of which is substantially complete. These two Aircranes are currently held in inventory and are not part of our fleet of 17 Aircranes that we operate for our customers. We intend to increase sales of the Aircrane to existing and new customers. In addition to generating profits upon sale, we expect an increase in the installed base of Aircranes to augment demand for our crewing services, OEM components, and MRO and other aftermarket services. We have established a sales team that is focused on expanding Aircrane sales and has significantly increased our sales pipeline activities. However, potential sales of Aircranes are subject to considerable uncertainties. For example, in September 2010, we entered into an aircraft purchase agreement for the purchase of one Aircrane with Aliar Aircrane Servicios Especializados Ltda that was subject to a purchaser financing condition. No payments were made by the purchaser and the agreement terminated. In December 2010, we entered into a non-binding memorandum of understanding with Wan Yu Industries Groups, Limited for the purchase of five Aircranes that was subject to a condition that the customer pay a

Table of Contents

non-refundable deposit by the end of January 2011. The deposit with respect to such potential Aircrane sales was not received and therefore the arrangement terminated. On August 1, 2011, we entered into an Aircraft Lease and Purchase Option Agreement with HRT Netherlands B.V. ("HRT"), a subsidiary of HRT Participações em Petróleo S.A., a Brazilian oil and gas exploration company. HRT declined to exercise its option to purchase the Aircrane pursuant to such agreement and the lease expired on January 15, 2012. The failure of HRT to exercise its purchase option or the failure by us to otherwise sell an Aircrane increases the risk that we may fail to comply with the financial covenants under our Credit Agreement in 2012. See "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement" and "Management's Discussion and Analysis of Financial Condition and Results of Operations Trends and Uncertainties Affecting Our Business." In February 2012, we entered into a non-binding letter of intent with Türk Hava Kurumu ("THK"), a Turkish governmental aviation organization, pursuant to which THK expressed its intent to purchase one Aircrane on or prior to June 30, 2012. The terms of the binding purchase agreement remain subject to ongoing negotiations between us and THK, and we do not know when such negotiations will conclude. There can be no assurance that THK will purchase an Aircrane. See "Recent Developments." In addition, a sale of one of the 17 Aircranes that is part of our fleet would reduce the number of Aircranes available to provide Aerial Services. If we consummate such a sale, we may not always have the ability to maintain our desired level of Aerial Services operations with a reduced fleet, and our results of operations could be adversely affected. See "Risk Factors Risks Related to Our Business Our Aerial Services revenues depend on the availability and size of our Aircrane fleet."

Expand Our MRO and Aftermarket Solutions. We intend to leverage the expertise of our highly trained engineers and maintenance support personnel to extend our MRO capabilities across aircraft platforms similar to the Aircrane. We have entered into a service and supply agreement with Bell Helicopter Textron Inc. ("Bell") pursuant to which we will manufacture and sell certain commercial aircraft parts and components to Bell. We believe that we are also well-positioned to provide similar services for other aircraft, directly or in partnership with OEMs.

Maintain a Focus on Long-Term Customer Relationships and Contracts. We intend to focus on developing long-term relationships with key customers through reliable performance and a strong commitment to safety and service. This focus has resulted in an increase in our backlog and we believe it has given us a competitive advantage in competing for new contracts and renewals of existing contracts.

Maintain a Continued Focus on Research and Development. We are dedicated to continuous innovation and significant research and development projects. Our operations have benefited from innovations such as our fire tank and snorkels, anti-rotation device and hoist, hydraulic grapple, and a redesigned automated flight control system. We have several new product applications and aircraft accessories under development, including composite main rotor blades, and a universal multipurpose container for cargo transportation. See "Business Research and Development."

Selectively Pursue Acquisitions of Businesses and Complementary Aircraft. We intend to continue to opportunistically evaluate the acquisition of businesses and aircraft that could complement and enhance our Aerial Services capabilities and service offerings and increase our access to customers and our penetration of new and existing markets.

There is no guarantee that we will be able to execute on our strategies, and, even if we successfully execute on our strategies, there is no guarantee that our strategies will strengthen our position in the heavy-lift helicopter industry. Our ability to execute on our strategies is subject to risks and uncertainties described in "Risk Factors."

Table of Contents

Changes to Our Company Since Our 2007 Acquisition

Our Company was acquired by a group of private equity investors in September 2007. Our new stockholders have taken several steps to improve our business and financial position and improve our focus on implementing our strategies.

Management. We have added strong professional aerospace managers to our management team, adding six members of our senior management team, including our CEO and CFO, our Vice President and Chief Marketing Officer, our Vice President of Manufacturing and MRO, our Vice President of Aerial Services, and our Vice President, General Counsel, and Corporate Secretary. This management team has extensive experience in the helicopter services and aerospace manufacturing sectors and has brought significant improvements to our operations.

Focus on Long-Term Relationships and Contracts. We have focused on building a diverse range of long-term relationships and obtaining long-term contracts. We have increased our backlog as of February 29, 2012 by \$179.8 million to \$212.8 million compared to September 26, 2007, the date of the acquisition of the Company by a group of private equity investors. We derived approximately 76% of our 2010 revenues and approximately 83% of our 2011 revenues from long-term contracts. We define a long-term contract to be a contract with a duration of six months or more. See "Business Backlog" for discussion of how we define and calculate backlog. See also "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

Increased MRO Focus. We have begun to leverage our expertise with the Aircrane and the military version of the Aircrane, known as the CH-54, to offer MRO services to customers with similar aircraft platforms who need their aircraft components repaired or overhauled by a certified facility.

Oil and Gas Pipeline Construction. We have begun penetrating the oil and gas pipeline construction services market. We have recently entered into a three-year services contract with an oil and gas exploration company in Peru.

Increased Effort to Expand Aircrane Sales. Our sales group is dedicated to expanding Aircrane sales, and has significantly increased our sales pipeline activities. We may enter into agreements providing options to potential customers on future aircraft deliveries, which options only become binding obligations on us if non-refundable deposits are paid. The options allow us to engage potential customers in the sale process. However, there is no assurance that any options will be exercised or any conditional sales will be completed. See " Our Strategy Increase Our Aircrane Sales" above and "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Aircrafts, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement."

Improved Standards for Safety and Quality. We have implemented specific, company-wide safety and quality processes to further enhance our safety and quality culture and now meet or exceed all recommended Federal Aviation Administration ("FAA") standards.

Recent Developments

Since December 31, 2011, a number of developments have occurred that may have a material impact on our business:

Helifor Contract. In January 2012, we and our Canadian subsidiary, Canadian Air-Crane Limited, entered into a one-year aircraft services agreement with Columbia Helicopters, Inc. ("Columbia Helicopters"), a U.S. heavy-lift helicopter operator, and Helifor Canada Corporation ("Helifor"), a Canadian heavy-lift helicopter operator. Under the terms of the agreement, we will provide aviation services in the United States and Canada as of January 15, 2012 to Columbia Helicopters and Helifor. The total amount we expect to be paid pursuant to this agreement is approximately \$7.6 million.

Table of Contents

Western Forest Products Contract. In January 2012, our Canadian subsidiary, Canadian Air-Crane Limited, amended its existing agreement with Western Forest Products Inc. ("Western Forest Products"), a Canadian forest products and timberlands management company, to establish the terms for one year of aviation services. Under the terms of the agreement, we will provide aviation services in Canada as of February 1, 2012 to Western Forest Products. The total amount we expect to be paid pursuant to this agreement is approximately C\$13.6 million.

Samling Global Contract. In February 2012, our Malaysian subsidiary, Erickson Aircrane Malaysia Sdn. Bhd., entered into an amendment to our existing logging contract with Syarikat Samling Timber Sdn. Bhd. ("Samling Global") to extend the contract term to January 31, 2013. Pursuant to the amended contract, we began providing aerial timber harvesting services in Malaysia on February 1, 2012 to Samling Global. The total amount we expect to be paid pursuant to this agreement is approximately \$11.2 million.

THK Letter of Intent. In February 2012, we entered into a non-binding letter of intent with THK, pursuant to which THK expressed its intent to purchase one Aircrane on or prior to June 30, 2012. The terms of a binding agreement remain subject to ongoing negotiations between us and THK, and we do not know when such negotiations will conclude. The letter of intent also provides that we will grant THK an option, expiring on December 31, 2013, to purchase three additional Aircranes. This option does not specify a purchase price or any other potential terms of purchase and will be subject to further negotiation of a binding agreement. There can be no assurance that THK will purchase an Aircrane. If THK elects to purchase an Aircrane, it may need to obtain financing, which it may not be able to obtain on terms acceptable to THK, if at all. See "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement."

U.S. Forest Service Claim. On February 1, 2012 the Civilian Board of Contract Appeals issued its final decision with respect to our claim against the U.S. Forest Service for recovery of \$2.8 million related to costs incurred in 2008 under our contracts with the U.S. Forest Service that we were not able to mitigate as a result of a stop work order. The Civilian Board denied our claim in full. Accordingly, as of December 31, 2011, we reduced the receivable to zero. The write-off of this receivable increases the risk that we will be unable to comply with the financial covenants under our Credit Agreement in 2012. See "Business Legal Proceedings."

Hellenic Fire Brigade (Greece) Contract. Our contract with the Hellenic Fire Brigade calls for annual confirmation notices. On January 31, 2012, the Hellenic Fire Brigade notified us that it would not exercise its option to extend our existing contract for the 2012 fire season, which contract relates to the use of three Aircranes during the summer of 2012. The Hellenic Fire Brigade has not notified us whether it intends to exercise its option for the 2013 fire season. As a result of these developments, we are not currently providing services to the Hellenic Fire Brigade and our backlog has been reduced by approximately \$25.4 million relating to services we had expected to provide to the Hellenic Fire Brigade in 2012 and 2013. See "Business Backlog" for a discussion of how we define and calculate backlog. We did not receive any advance payments under this contract for 2012.

Our agents and representatives in Greece have informed us that the Hellenic Fire Brigade has cancelled or not exercised its extension options in respect of all of its firefighting contracts for 2012 with us and all other aerial service providers. The NATO Maintenance and Supply Agency ("NAMSA"), which provides various logistics services for NATO nations, has posted on its website a request for proposal for Greek aerial firefighting services for the 2012 to 2014 firefighting seasons. We have registered as a NAMSA supplier and we expect to provide a response by late April to the request for proposal to compete for the requested aerial firefighting services to be provided by three heavy-lift helicopters in Greece for 2012 through 2014. The aircraft specifications for the requested services are similar to those relating to the previous tender by the Hellenic Fire Brigade in 2010 that we

Table of Contents

successfully won. The Hellenic Fire Brigade has been a continuous customer of ours for more than ten years through several successful re-tendering processes. There is no guarantee that our bid will be successful or that we will be able to satisfy tender specifications. If a Greek contract is awarded to us, there is no guarantee that our revenues and profit margins thereunder will be similar to those that we have received in connection with past contracts with the Hellenic Fire Brigade. If a Greek contract is not awarded to us and we are unable to redeploy the three Aircranes we have historically used to provide services in Greece in order to generate comparable revenues and operating earnings, we may fail to comply with the financial covenants under our Credit Agreement in 2012.

Account Receivable from Hellenic Fire Brigade. We have approximately \$5.8 million in outstanding accounts receivable due from the Hellenic Fire Brigade that are currently past due. In February 2012, the Hellenic Fire Brigade informed our agents and representatives in Greece that, although funds for this receivable have been allocated for payment to us, under Greek law it cannot make the payment until a tax withholding issue is resolved. We are currently working with our agents and representatives in Greece, local tax advisors, and the Greek tax authorities to resolve this withholding tax issue. The timing of such payment is uncertain. See "Risk Factors Risks Related to Our Business Our failure to timely collect our receivables could adversely affect our cash flows and results of operations and our compliance with the financial covenants under our Credit Agreement."

Risks Related to Our Business

Our business is subject to numerous risks and uncertainties of which you should be aware and that you should carefully consider before investing in shares of our common stock. These risks are more fully discussed in the section entitled "Risk Factors" following this prospectus summary and include but are not limited to the following:

Our helicopter operations involve significant risks, which may result in hazards that may not be covered by our insurance or may increase the cost of our insurance.

Failure to maintain our safety record would seriously harm our ability to attract new customers and maintain our existing customers, and would increase our insurance costs.

Our indebtedness and significant debt service obligations could adversely affect our financial condition and impair our ability to grow and operate our business and we might not comply with the financial covenants under our Credit Agreement in 2012.

If our business does not perform as expected, including if we generate less than anticipated revenue from our Aerial Services operations or encounter significant unexpected costs, we may fail to comply with the financial covenants under our Credit Agreement in 2012.

We were not in compliance with certain financial covenants under our Credit Agreement as of December 31, 2010 and March 31, 2011, and subsequent amendments to our Credit Agreement waived such non-compliance. We cannot assure you that, if we fail to comply with the financial covenants under our Credit Agreement, our lenders will agree to waive any non-compliance.

We depend on a small number of large customers for a significant portion of our revenues. In particular, for the years ended December 31, 2010 and 2011, 24.4% and 27.2% of our revenues, respectively, were attributable to our contract with the U.S. Forest Service, 13.8% and 15.9% of our revenues, respectively, were attributable to our contract with the Italian Ministry of Civil Protection, 11.0% and 8.4% of our revenues, respectively, were attributable to services provided to the Hellenic Fire Brigade, and 12.3% and 7.0% of our revenues, respectively, were attributable to our contract with Samling Global. For the years ended December 31, 2010 and 2011, 9.0% and 0% of our accounts receivable at the end of such periods, respectively, were attributable to our contract with the U.S. Forest Service, 10.5% and 18.9% of our accounts receivable at the end of such periods, respectively, were attributable to our contract with the Italian Ministry of Civil Protection, 16.2% and 21.6% of our accounts receivable at the end of such periods, respectively, were attributable to services provided to

Table of Contents

the Hellenic Fire Brigade, and 7.8% and 6.7% of our accounts receivable at the end of such periods, respectively, were attributable to our contract with Samling Global. Should we lose one of our major customers for any reason, we may be unable to identify new opportunities sufficient to avoid a reduction in our revenues and operating earnings, which would have a material adverse effect on our business and operations. In light of the ongoing European sovereign debt crisis, there are heightened risks associated with our future revenue attributable to, and our accounts receivable from, the Hellenic Fire Brigade and the Italian Ministry of Civil Protection. On January 31, 2012, the Hellenic Fire Brigade notified us that it would not exercise its option to extend our existing contract for the 2012 fire season. See "Recent Developments."

If we do not receive any portion of the receivable that we are owed by the Hellenic Fire Brigade, we may incur a charge to write-off such portion, and there is a risk that any such write-off may adversely affect our ability to comply with the financial covenants under our Credit Agreement in 2012.

After this offering, entities affiliated with ZM Equity Partners, LLC will own approximately 47% of our outstanding common stock, and two of our directors will continue to be managing directors of Centre Lane Partners LLC, an affiliate of ZM Equity Partners. As a result, these stockholders, acting individually or together, could exert significant influence over all matters requiring stockholder approval, including the election of directors and the approval of significant corporate transactions. These stockholders may take action by written consent without a meeting of stockholders until such date that ZM EAC LLC, ZM Private Equity Fund I, L.P., or ZM Private Equity Fund II, L.P., their affiliates, or any express assignee or designee of ZM EAC LLC, ZM Private Equity Fund I, L.P., or ZM Private Equity Fund II, L.P., and such assignees or designee's affiliates cease to own, in the aggregate, at least 30% of the outstanding shares of our common stock (the "Trigger Date"). Their interests may not coincide with yours, and they may make decisions with which you may disagree.

Although we intend to use the proceeds of this offering to pay down indebtedness under our revolving credit facility and to pay off our unsecured subordinated promissory notes (which have a 20% annual interest rate that is payable in kind by increasing the principal amount of the notes) in order to increase the likelihood of our compliance with the financial covenants under our Credit Agreement and to improve our ability to refinance our senior credit facilities, there will remain uncertainties regarding our ability to comply with our financial covenants in 2012 and 2013 and achieve such refinancing.

We have significant payment obligations due in 2013 as a result of the maturity of our senior credit facilities on June 24, 2013 and the possible exercise by one of our significant customers of a put option that would, if exercised, require us to repurchase on July 31, 2013 the Aircrane we sold to such customer. Our ability to finance such repurchase may depend on our ability to refinance our senior credit facilities.

Some of our backlog may be deferred or may not be realized.

Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement.

In November 2011, we completed a company restructuring which included a reduction-in-force of 119 employees that affected both our Aerial Services and Manufacturing / MRO segments. The restructuring was needed to realign our operating expenses to ensure that we remain competitive in the markets we serve. However, as a result of the reduction-in-force, we may experience longer aircraft delivery lead times for future customers who wish to purchase Aircranes, which may delay the timing of our aircraft sales revenues in the future. In the event that we experience significantly increased customer demand to purchase our Aircranes, we anticipate being able to meet such demand by rapidly expanding our manufacturing capacity and related resources. However, such expansion may require us to incur significant costs.

Table of Contents

THE OFFERING

Common stock offered by Erickson Air-Crane Incorporated	5,350,000 shares
Common stock to be outstanding after this offering	10,152,970 shares
Common stock subject to overallotment option granted by selling stockholders	802,500 shares (these shares will only be sold, in full or in part, if the underwriters exercise their overallotment option to purchase additional shares)
Use of proceeds	<p>We estimate that we will receive net proceeds from the sale of shares of common stock in this offering of approximately \$65.3 million, assuming an initial public offering price of \$14.00 per share, the midpoint of the sale price range set forth on the cover of this prospectus, after deducting underwriting discounts and commissions and estimated offering expenses. We intend to use the proceeds of this offering as follows:</p> <p>approximately \$41.8 million to pay down indebtedness under our revolving credit facility (as reduced by any additional amount we use to pay off interest that has accrued on our unsecured subordinated promissory notes since December 31, 2011), which will increase the amounts available for future borrowing under our revolving credit facility and will, in our view, increase the likelihood of our compliance with the financial covenants under our Credit Agreement on an ongoing basis and improve our ability to refinance our senior credit facilities;</p> <p>approximately \$23.5 million to pay off our unsecured subordinated promissory notes in full and such additional amounts as necessary to pay off interest accrued on such notes since December 31, 2011; and</p> <p>the remaining net proceeds, if any, for general corporate and working capital purposes.</p> <p>As of December 31, 2011, our total indebtedness, excluding letters of credit, was \$130.6 million, consisting of \$51.8 million borrowed under our revolving credit facility, \$55.3 million borrowed under our term loan facility and \$23.5 million borrowed under our unsecured subordinated promissory notes. At December 31, 2011, we had maximum availability for borrowings under our revolving credit facility of approximately \$13.4 million. We issued unsecured subordinated promissory notes with an original value of \$19.5 million and a 20% annual interest rate that is payable in kind by increasing the principal amount of the notes. As of December 31, 2011, the principal amount outstanding under the notes was \$23.5 million, including \$4.0 million in paid-in-kind interest. We issued the</p>

Table of Contents

notes to provide for additional borrowing capacity under our revolving credit facility, recognizing that the proceeds of this offering are intended to be used to pay off the remaining amounts owed under the unsecured subordinated promissory notes. Under the terms of our revolving credit facility, we are prevented from paying down principal on the unsecured subordinated promissory notes unless such payments are made with the proceeds of this offering.

We will not receive any of the proceeds from the sale of shares by the selling stockholders. However, we will pay all expenses on behalf of the selling stockholders in connection with this offering other than the underwriting discounts and commissions payable in connection with the sale of shares of our common stock by the selling stockholders.

See "Use of Proceeds" for additional information.

Risk factors

"EAC"

See "Risk Factors" and the other information included in this prospectus for a discussion of factors you should carefully consider before investing in shares of our common stock.

The number of shares of common stock to be outstanding after this offering is based on our shares outstanding as of the date of this prospectus, which gives effect to the completion of our recapitalization described in "Explanatory Note Regarding Recapitalization."

Unless we indicate otherwise, all information in this prospectus excludes:

417,649 shares of common stock reserved for issuance under our 2012 Long-Term Incentive Plan, which we intend to adopt prior to the closing of this offering, which includes the following RSUs that we intend to issue concurrently with the closing of this offering: (1) 252,935 RSUs to certain members of our management and (2) 4,864 RSUs to our independent directors; and

the shares of common stock to be sold by the selling stockholders if the underwriters exercise their overallotment option.

SUMMARY CONSOLIDATED FINANCIAL AND OTHER DATA

The following tables set forth our summary consolidated financial and other data. We derived our summary consolidated financial and other data as of December 31, 2010 and 2011 and for the years ended December 31, 2009, 2010, and 2011 from our audited consolidated financial statements and notes thereto, which are included elsewhere in this prospectus. The balance sheet data as of December 31, 2009 has been derived from our audited consolidated financial statements which are not included in this prospectus.

Our summary consolidated financial and other data are not necessarily indicative of our future performance. The data provided in this table are only a summary and do not include all of the data contained in our financial statements. Accordingly, this table should be read in conjunction with, and is qualified in its entirety by, our consolidated financial statements and related notes contained elsewhere in this prospectus and the sections of this prospectus entitled "Management's Discussion and Analysis of Financial Condition and Results of Operations" and "Capitalization."

Bank EBITDA (unaudited) ⁽¹⁰⁾	\$ 31,496	\$ 11,859	\$ 25,069

- (1) Net revenues from Manufacturing / MRO reflect the sale of one Airplane in 2009, zero Airplanes in 2010, and zero Airplanes in 2011.
- (2) Debt is comprised of amounts outstanding under our credit facilities and our unsecured subordinated promissory notes. In June 2010, we replaced our former revolving credit facility and our former term loan with a new credit facility. As a result of the refinancing, we expensed \$2.3 million, including the unamortized portion of the previously deferred financing costs and early termination fees. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness."
- (3) Other income (expense) for the year ended December 31, 2010 includes a net gain related to an Airplane accident in Malaysia of \$6.3 million, after accounting for insurance proceeds, and \$10.0 million in litigation settlement expenses. In 2011, we recognized income of \$2.7 million associated with the reversal of interest expense from a tax settlement.
- (4) Income tax expense (benefit) for the year ended December 31, 2011 includes a tax benefit of \$9.5 million in connection with a tax settlement.
- (5) Dividends on Series A Redeemable Preferred Stock represent non-cash accruals. No cash dividends have been paid or will be paid to holders of Series A Redeemable Preferred Stock. The Series A Redeemable Preferred Stock and the Class A common stock will be reclassified into 4,802,970 shares

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Table of Contents

of a single class of common stock in connection with this offering. See "Explanatory Note Regarding Recapitalization."

- (6) Pro forma amounts give effect to our recapitalization in connection with this offering, including the reclassification of Series A Redeemable Preferred Stock and Class A Common Stock as common stock. The pro forma weighted diluted share amounts also include 257,799 shares of common stock related to RSUs that we intend to issue concurrently with the closing of this offering under our 2012 Long-Term Incentive Plan (except for the year ended December 31, 2010 because the effect of including these shares would be anti-dilutive). See "Explanatory Note Regarding Recapitalization" and "Executive Compensation 2012 Long-Term Incentive Plan."
- (7) Working capital is calculated as our current assets less our current liabilities.
- (8) Represents Series A Redeemable Preferred Stock which will be reclassified as common stock in connection with this offering. See "Explanatory Note Regarding Recapitalization" and note 5 above.
- (9) We define EBITDA as net income (loss) before interest expense, net, provision for (benefit from) income taxes, and depreciation and amortization.

To provide investors with additional information regarding our financial results, we have disclosed in the table below and elsewhere in this prospectus EBITDA, a financial measure not prepared in accordance with accounting principles generally accepted in the United States ("GAAP"). We have provided a reconciliation below of EBITDA to net income (loss), the most directly comparable GAAP financial measure. EBITDA is not a financial measurement prepared in accordance with GAAP and should not be considered as an alternative to revenue, net income (loss) as a measure of operating performance or to cash flows from operating activities as a measure of liquidity or any other measure of financial performance presented in accordance with GAAP. We present EBITDA because we believe it is an important measure of our operating performance and provides more comparability between our historical results by taking into account our capital structure including (i) changes in our asset base (depreciation and amortization) from acquisitions and from capital expenditures, and (ii) changes in interest expense and amortization of financing costs. Because not all companies use identical calculations, our presentation of EBITDA may not be comparable to similarly titled measures of other companies.

The following table presents a reconciliation of net income (loss) to EBITDA for each of the periods indicated:

(In thousands)	Year Ended December 31, 2009	Year Ended December 31, 2010	Year Ended December 31, 2011
EBITDA			
Reconciliation:			
Net income (loss) attributable to Erickson Air-Crane Incorporated	\$ 12,052	\$ (8,251)	\$ 15,870
Interest expense, net	6,006	4,865	9,150
Tax expense (benefit)	5,330	(3,544)	(4,926)
Depreciation	4,378	4,745	7,300
Amortization of debt issuance costs	976	703	875
EBITDA	\$ 28,742	\$ (1,482)	\$ 28,269

- (10) We use an adjusted EBITDA ("Bank EBITDA") to monitor compliance with various financial covenants under our Credit Agreement and in connection with measuring performance for management incentive compensation. In addition to adjusting net income (loss) to exclude interest expense, net, provision for (benefit from) income taxes, and depreciation and amortization, Bank EBITDA also

adjusts net income by excluding non-cash unrealized mark-to-market foreign exchange

Table of Contents

gains (losses), specified litigation expenses up to a maximum of \$2.0 million for any 12-month period, certain management fees, gains from sale of equipment, non-cash charges arising from awards to employees relating to equity interests, non-cash charges relating to financings, initial public offering-related non-capitalized expenses up to a maximum of \$2.0 million, certain fourth quarter 2010 charges up to \$11.6 million and other unusual, extraordinary, non-recurring non-cash costs. For each calculation of Bank EBITDA made as of the end of the quarters ended June 30, September 30, and December 31, 2011 and that will be made as of the quarter ending March 31, 2012, Bank EBITDA also includes an amount equal to the \$10.0 million in new unsecured subordinated promissory notes dated June 30, 2011 and any additional subordinated debt issued in connection with an equity cure under the Credit Agreement. Such amounts have been excluded from this table for presentation purposes. Bank EBITDA also assists us in monitoring our ability to undertake key investing and financing functions such as making investments and incurring additional indebtedness, which may be prohibited by the covenants under our Credit Agreement unless we comply with certain financial ratios and tests. Bank EBITDA, as presented herein, is a supplemental measure of our performance that is not required by or presented in accordance with GAAP. Bank EBITDA is not a measurement of our financial performance under GAAP and should not be considered as an alternative to revenue, net income (loss), cash flow, or any other performance measure derived in accordance with GAAP. Our presentation of Bank EBITDA may not be comparable to similarly titled measures of other companies. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness Bank EBITDA."

The following table presents a reconciliation of EBITDA to Bank EBITDA for the periods indicated:

(In thousands)	Year Ended December 31, 2009	Year Ended December 31, 2010	Year Ended December 31, 2011
Bank EBITDA			
Reconciliation:			
EBITDA	\$ 28,269	\$ (1,482)	\$ 28,269
Non-cash unrealized mark-to-market foreign exchange gains (losses)	992	905	(1,819)
Interest related to tax contingencies	500	495	(2,745)
Management fees ⁽¹⁾	500	165	
Loss on early extinguishment of debt		2,265	
Litigation expense	1,430	2,000	1,390
Legal settlements and other		11,600	
Other (gains) losses	(668)	(4,089) ⁽²⁾	(26)
 Bank EBITDA	 \$ 31,496	 \$ 11,859	 \$ 25,069 ⁽³⁾

(1) Fees paid to a previous stockholder pursuant to a management agreement that terminated in 2010.

(2) Includes a \$4.2 million net adjustment related to an Aircrane accident in 2010.

(3) As part of the amendments to the Credit Agreement on June 30, 2011, the \$10.0 million in new unsecured subordinated promissory notes are included, with limitation, as an addition to Bank EBITDA. Such amounts have been excluded from this table for presentation purposes.

Table of Contents

RISK FACTORS

Investing in our common stock involves a high degree of risk. You should carefully consider the risks described below and the other information in this prospectus before making a decision to invest in our common stock. If the events described below actually occur, our business, operating results, or financial condition could be materially adversely affected. In those cases, the trading price of our common stock could decline and you may lose all or part of your investment.

Risks Related to Our Business

Our helicopter operations involve significant risks, which may result in hazards that may not be covered by our insurance or may increase the cost of our insurance.

The operation of helicopters inherently involves a high degree of risk. Hazards such as aircraft accidents, mechanical failures, collisions, fire, and adverse weather may result in loss of life, serious injury to employees and other persons, damage to property, losses of equipment and revenues, and suspension or reduction of operations. The aerial services we provide and the missions we fly, which include firefighting and timber harvesting in confined spaces, can be hazardous. Since 2003, we have experienced an average of 6.7 incidents per 1,000 flight hours and 0.07 accidents per 1,000 flight hours. An "incident" is an occurrence, other than an accident, which affects or could affect the safety of operations; an "accident" is an occurrence associated with the operation of an aircraft, which takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death or serious injury, or in which the aircraft receives substantial damage. Since 2003, we had seven accidents that resulted in the loss or hangar rebuild of aircraft, injuries to pilots and crew, and four fatalities, including an accident in June 2010 that resulted in the loss of an aircraft and the death of a pilot. In addition, we ship our helicopters to various locations, which exposes them to risks, including risks relating to piracy and inclement weather, when in transit.

We maintain hull and liability insurance on our aircraft, which insures us against physical loss of, or damage to, our aircraft and against certain legal liabilities to others. In addition, we carry war risk, expropriation, confiscation, and nationalization insurance for our aircraft involved in international operations. In some instances, we are covered by indemnity agreements from our customers in lieu of, or in addition to, our insurance. In addition, we maintain product liability insurance for aircraft and aircraft components we manufacture. We do not currently maintain business interruption insurance, which would cover the loss of revenue during extended periods, such as those that occur during unscheduled extended maintenance or due to damage to aircraft from accidents. In addition, our insurance will not cover any losses incurred pursuant to any performance provisions under agreements with our customers.

Our insurance and indemnification arrangements may not cover all potential losses and are subject to deductibles, retentions, coverage limits, and coverage exceptions and, as a result, severe casualty losses or the expropriation or confiscation of significant assets could materially and adversely affect our financial condition or results of operations. The insured value of one of our aircraft is typically lower than its replacement cost, and our aircraft are not insured for loss of use. The occurrence of an event that is not fully covered by insurance could have a material adverse impact on our financial condition, results of operations, and cash flows. The loss of an aircraft, which we believe would take us at least six months to replace, could negatively impact our operations.

Failure to maintain our safety record would seriously harm our ability to attract new customers and maintain our existing customers, and would increase our insurance costs.

A favorable safety record is one of the primary factors a customer reviews in selecting an aviation provider. If we fail to maintain our safety and reliability record, our ability to attract new customers and maintain our current customers will be materially and adversely affected. In addition, safety violations could lead to increased regulatory scrutiny; increase our insurance rates, which is a significant operating cost; or increase the difficulty of maintaining our existing insurance coverage in the future, which would

Table of Contents

adversely affect our operations. Because of the inherent risks in our helicopter operations, no safety program can guarantee accidents will not occur. Since 2003, we have experienced an average of 6.7 incidents per 1,000 flight hours and 0.07 accidents per 1,000 flight hours. An "incident" is an occurrence, other than an accident, which affects or could affect the safety of operations; an "accident" is an occurrence associated with the operation of an aircraft, which takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death or serious injury, or in which the aircraft receives substantial damage. Since June 2003, we had seven accidents that resulted in the loss or hangar rebuild of aircraft, injuries to pilots and crew, and four fatalities, including an accident in June 2010 that resulted in the loss of an aircraft and the death of a pilot.

Our indebtedness and significant debt service obligations could adversely affect our financial condition and impair our ability to grow and operate our business and we might not comply with the financial covenants under our Credit Agreement in 2012.

We are a highly leveraged company and, as a result, have significant debt service obligations. As of December 31, 2011, our total indebtedness, excluding letters of credit, was \$130.6 million, consisting of \$51.8 million borrowed under our revolving credit facility, \$55.3 million borrowed under our term loan facility and \$23.5 million borrowed under unsecured subordinated promissory notes. At December 31, 2011, we had maximum availability for borrowings under our revolving credit facility of approximately \$13.4 million.

Our substantial indebtedness could have significant negative consequences to us that you should consider. For example, it could:

require us to dedicate a substantial portion of our cash flow from operations to pay principal of, and interest on, our indebtedness, thereby reducing the availability of our cash flow to fund working capital, capital expenditures, or other general corporate purposes, or to carry out other aspects of our business plan;

increase our vulnerability to general adverse economic and industry conditions and limit our ability to withstand competitive pressures;

adversely affect our profitability and results of operations, particularly if our interest expense increases due to an increase in our outstanding indebtedness or an increase in our borrowing costs;

adversely affect our financial condition and impair our ability to grow and operate our business;

limit our flexibility in planning for, or reacting to, changes in our business and future business opportunities;

place us at a competitive disadvantage compared to our competitors that have less debt; and

limit our ability to obtain additional financing for working capital, capital expenditures, and other aspects of our business plan.

Our ability to meet our debt obligations and other expenses will depend on our future performance, which will be affected by financial, business, economic, regulatory, and other factors, many of which we are unable to control. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Trends and Uncertainties Affecting Our Business Credit Agreement Compliance and Refinancing Costs."

We were not in compliance with certain financial covenants under our Credit Agreement as of December 31, 2010 and March 31, 2011, and subsequent amendments to our Credit Agreement waived such non-compliance. We cannot assure you that, if we fail to comply with the financial covenants under our Credit Agreement, our lenders will agree to waive any non-compliance. We amended the Credit Agreement effective December 31, 2010. An initial amendment removed the requirement to comply with

Table of Contents

existing financial covenants as of December 31, 2010, added a net income covenant calculation for fiscal 2010, and adjusted certain amounts related to the determination of Bank EBITDA and tangible net worth. In addition, the interest rate matrix was modified to add an additional pricing tier. Subsequent amendments waived our non-compliance with certain requirements and financial covenants under the Credit Agreement for both the fourth quarter of 2010 and the first quarter of 2011, and modified the financial covenants for future periods. These amendments modified the interest rate matrix and adjusted our financial reporting requirements. In connection with these amendments we issued new unsecured subordinated promissory notes in the amount of \$10.0 million to ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P., which were funded on June 30, 2011. We were in compliance with our Credit Agreement covenants at June 30, 2011, September 30, 2011, and December 31, 2011 and we expect to be in compliance with these covenants at March 31, 2012. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness." If our business does not perform as expected, including if we generate less than anticipated revenue from our Aerial Services operations or encounter significant unexpected costs, we may fail to comply with the financial covenants under our Credit Agreement in 2012. In addition, we have significant payment obligations due in 2013 as a result of the maturity of our senior credit facilities on June 24, 2013 and the possible exercise by one of our significant customers of a put option that would, if exercised, require us to repurchase on July 31, 2013 the Aircrane we sold to the customer. Our ability to finance such repurchase may depend on our ability to refinance our senior credit facilities. These significant payments, if required, could adversely affect our ability to refinance our debt or obtain additional financing to grow or operate our business.

Our indebtedness under our senior credit facilities is secured by liens on substantially all of our assets, including our interests in our subsidiaries, against which our lenders could proceed if we default on our obligations. When our term loan and revolving loan come due in 2013, we will likely need to enter into new financing arrangements to repay those loans. We may be unable to obtain financing on favorable terms or at all, which could adversely affect our business, financial condition, and results of operations. For more information on our indebtedness, please see our financial statements included elsewhere in this prospectus and our description of indebtedness in "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness."

Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement.

Operating results in our Manufacturing / MRO segment are affected by many factors, including the timing of orders from large customers and the timing of expenditures to manufacture parts and purchase inventory in anticipation of future sales of products and services. The sale of Aircranes has a material effect on our financial results, and Aircrane sales have been a dominant factor in fluctuations in our year-over-year results. We have not sold an Aircrane since 2009, but have manufactured two Aircranes that are ready for sale, one of which is complete and one of which is substantially complete.

As we have expanded internationally and sought to make Aircrane sales in the difficult economic environment in the last few years, several potential customers have defaulted or not completed anticipated Aircrane sales. In September 2010, we entered into an Aircrane purchase agreement with a potential Brazilian purchaser which required staged payments beginning in September 2010 based on set conditions, but was subject to a purchaser financing condition. Although we substantially completed the Aircrane for delivery, no payments were made by the purchaser and the agreement terminated in December 2010. Subsequently, we have entered into non-binding letters of intent for several Aircrane sales that have not resulted in sales as the potential customers could not obtain financing or did not make required deposits. In December 2010, we entered into a non-binding memorandum of understanding with Wan Yu Industries Groups, Limited for the purchase of five Aircranes that was subject to a condition that the customer pay a non-refundable deposit by the end of January 2011. The deposit with respect to such potential Aircrane sales was not received and therefore the arrangement terminated. On August 1, 2011, we entered into an

Table of Contents

Aircraft Lease and Purchase Option Agreement with HRT, a subsidiary of a Brazilian oil and gas exploration company, which agreement was amended on October 11, 2011. HRT declined to exercise its option to purchase the Airplane pursuant to such agreement and the lease expired on January 15, 2012. The failure of HRT to exercise its purchase option and the failure by us to otherwise sell an Airplane increases the risk that we may fail to comply with the financial covenants under our Credit Agreement in 2012. Accordingly, we have incurred significant costs in building Airplanes for sale but have been unable to sell any in 2010 or 2011.

In February 2012, we entered into a non-binding letter of intent with THK, pursuant to which THK expressed its intent to purchase one Airplane on or prior to June 30, 2012. The terms of a binding agreement remain subject to ongoing negotiations between us and THK, and we do not know when such negotiations will conclude. The letter of intent also provides that we will grant THK an option, expiring on December 31, 2013, to purchase three additional Airplanes. This option does not specify a purchase price or any other potential terms of purchase and will be subject to further negotiation of a binding agreement. There can be no assurance that THK will purchase an Airplane. If THK elects to purchase an Airplane, it may need to obtain financing, which it may not be able to obtain on terms acceptable to THK, if at all.

In the past, failures to make sales of an Airplane have resulted in financial performance below our expectations, and we have obtained waivers from our lenders and have amended our Credit Agreement in order to comply with our financial and reporting covenants.

Our failure to timely collect our receivables could adversely affect our cash flows and results of operations and our compliance with the financial covenants under our Credit Agreement.

We provide services to our customers for which we are customarily not paid in advance. We rely on the creditworthiness of our customers to collect on our receivables in a timely manner after we have billed for services previously provided. For the years ended December 31, 2009, 2010, and 2011, 7.8%, 9.0%, and 0% of our accounts receivable at the end of such periods, respectively, were attributable to our contract with the U.S. Forest Service, 6.6%, 10.5%, and 18.9% of our accounts receivable at the end of such periods, respectively, were attributable to our contract with the Italian Ministry of Civil Protection, 27.8%, 16.2%, and 21.6% of our accounts receivable at the end of such periods, respectively, were attributable to services provided to the Hellenic Fire Brigade, and 2.5%, 7.8%, and 6.7% of our accounts receivable at the end of such periods, respectively, were attributable to our contract with Samling Global. While we generally provide services pursuant to a written contract which determines the terms and conditions of payment to us by our customers, occasionally customers may dispute a bill and delay, contest, or not pay our receivable.

For example, we have historically received approximately \$13 million of revenue each year from our contract with the Hellenic Fire Brigade. During 2011, we received an advance payment of approximately 50% of 2011 revenue pursuant to our contract with the Hellenic Fire Brigade. The balance of approximately \$5.8 million in accounts receivable is currently past due. In February 2012, the Hellenic Fire Brigade informed our agents and representatives in Greece that, although funds for this receivable have been allocated for payment to us, under Greek law it cannot make the payment until a tax withholding issue is resolved. We are currently working with our agents and representatives in Greece, local tax advisors, and the Greek tax authorities to resolve this withholding tax issue. The timing of such payment is uncertain. Although we believe the receivable to be fully collectible, in the event that it is not and we write-off this receivable, we may fail to comply with the financial covenants under our Credit Agreement in 2012.

We make estimates in accounting for revenues and costs, and any changes in these estimates may significantly impact our earnings.

We historically have sold Airplanes under long-term contracts with our customers. We have historically, including in the periods presented in this prospectus, recognized revenues on Airplane sales when the aircraft is delivered to a customer. We expect to account for Airplane sales using the percentage of completion method of accounting when all of the requirements are met. Revenue on contracts using the

Table of Contents

percentage of completion method is recognized as work progresses toward completion and is based on estimates, including estimated labor hours. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Critical Accounting Policies and Estimates Revenue Recognition."

Our Aircranes are normally manufactured under long-term construction contracts, and we expect to recognize revenues for Aircrane sales over several fiscal periods. Changes in estimates affecting sales, costs, and profits are recognized in the period in which the change becomes known using the cumulative catch-up method of accounting, resulting in the cumulative effect of changes reflected in the period. A significant change in an estimate on one or more contracts could have a material effect on our results of operations.

We also offer CPH contracts to customers under which we provide components and expendable supplies for a customer's aircraft at a fixed cost per flight hour. If actual costs vary materially from our estimates, our operating results could be materially and adversely affected.

The helicopter services business is highly competitive.

Each of our segments faces significant competition. We compete for most of our work with other helicopter operators and, for some operations, with fixed-wing operators and ground-based alternatives. Many of our contracts are awarded after competitive bidding, and competition for those contracts is generally intense. The principal aspects of competition are safety, price, reliability, availability, and service.

We have several major competitors and numerous small competitors operating in our aerial services markets. In the firefighting market, we compete heavily with both helicopter and fixed-wing operators. Our competitors may at times undercut our prices, especially if they are at risk of having too many idle aircraft. In the timber harvesting market, we compete with other heavy-lift helicopter operators, medium-lift helicopter operators, and ground-based solutions. The cyclical supply/demand for timber may at times drive down commodity prices, which in turn can make lower cost/productivity solutions more attractive. A competitor could develop, or acquire (including from the military) and adapt, an aircraft with heavy-lift capability that directly competes with one of our aircraft and diminishes its competitive advantages; while we are not aware of current development of a competitive aircraft or any competitor's plan to acquire and convert a military helicopter to civilian uses that would compete with our services, such a development could adversely affect our results of operations. The conversion of a military aircraft for civilian use would take time and expense and would typically be subject to an extended FAA approval process, which mitigates the short-term risk to our business of such a conversion.

In the manufacturing and MRO market, our competitors may have more extensive or more specialized engineering, manufacturing, and marketing capabilities than we do in some areas. In addition, some of our largest customers could develop the capability to manufacture products or provide services similar to products that we manufacture or services that we provide. This could result in these customers supplying their own products or services and competing directly with us for sales of these products or services, all of which could significantly reduce our revenues. Furthermore, we are facing increased international competition and cross-border consolidation of competition.

We cannot assure you that we will be able to compete successfully against our current or future competitors or that the competitive pressures we face will not result in reduced revenues and market share. If we are unable to adjust our costs relative to our pricing, our profitability will suffer. In addition, some of our competitors may have greater financial and other resources than we do, and may therefore be able to react to market conditions and compete more effectively than we do.

Table of Contents

Factors beyond our control, including weather and seasonal fluctuations, may reduce aircraft flight hours, which would affect our revenues and operations.

A significant portion of our operating revenue is dependent on actual flight hours, and a substantial portion of our direct costs is fixed. Flight hours could be negatively impacted by factors beyond our control and fluctuate depending on cyclical weather-related and seasonal limitations, which would affect our revenues and operations. These factors include:

poor weather conditions;

unexpected maintenance or repairs; and

unexpectedly calm fire seasons.

From November through February, heavy snow in North America and significant rainfall in Asia Pacific can impede timber harvesting operations. Our aircraft are not currently equipped to fly at night, reinforcing the seasonality of our business with more activity in the Northern Hemisphere during the summer months and less activity during the winter months. Also, firefighting activity is dependent on fires in dry conditions during summer months. In addition, there is variability in the number and extent of fires from year to year, and these patterns are not predictable.

The missions that we fly can be flown safely only if weather conditions permit. Poor visibility, high winds, and heavy precipitation can restrict the operation of helicopters and significantly reduce our flight hours. Reduced flight hours can have a material adverse effect on our business, financial condition, and results of operations. We budget for our operations based on historical weather information, but worse than expected weather could materially affect our results of operations.

We depend on a small number of large customers for a significant portion of our revenues.

We derive a significant amount of our revenue from a small number of major customers, including the U.S. Forest Service, the Hellenic Fire Brigade, the Italian Ministry of Civil Protection, and Samling Global. Approximately 58.5% of our 2011 revenues were attributable to these four customers. In particular, for the years ended December 31, 2009, 2010, and 2011, 16.6%, 24.4%, and 27.2% of our revenues, respectively, were attributable to our contract with the U.S. Forest Service, 13.6%, 13.8%, and 15.9% of our revenues, respectively, were attributable to our contract with the Italian Ministry of Civil Protection, 10.5%, 11.0%, and 8.4% of our revenues, respectively, were attributable to services provided to the Hellenic Fire Brigade, and 5.1%, 12.3%, and 7.0% of our revenues, respectively, were attributable to our contract with Samling Global.

Several of our largest customers are governmental agencies or entities that may be subject to budget or other financial constraints. The economies of Greece and Italy in particular have been adversely affected by global financial pressures. In light of the ongoing European sovereign debt crisis, there are heightened risks associated with our future revenue attributable to, and our accounts receivable from, the Hellenic Fire Brigade and the Italian Ministry of Civil Protection. We have an account receivable from the Hellenic Fire Brigade that is past due and our agents and representatives in Greece have informed us that the Hellenic Fire Brigade has cancelled or not exercised its extension options in respect of all of its firefighting contracts for 2012 with us and all other aerial service providers. Although we expect to provide a response by late April to NAMSAs request for proposal to compete for Greek firefighting services to be provided by three heavy-lift helicopters in 2012 through 2014, there is no guarantee that our bid will be successful or that we will be able to satisfy tender specifications. If a Greek contract is awarded to us, there is no guarantee that our revenues and profit margins thereunder will be similar to those that we have received in connection with past contracts with the Hellenic Fire Brigade. If a Greek contract is not awarded to us and we are unable to redeploy the three Aircranes we have historically used to provide services in Greece in order to generate comparable revenues and profit margins, we may fail to comply with the financial covenants under our Credit Agreement in 2012. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Trends and Uncertainties Affecting Our Business Greek

Table of Contents

Economic Crisis." We may suffer delays in payment, payment defaults or termination of contracts of governmental agencies or entities as a result of such financial difficulties, which would adversely affect our results of operations and may adversely affect our ability to comply with the financial covenants under our Credit Agreement in 2012.

Some of our customer contracts, including those with the U.S. Forest Service and the Australia Fire Service, include "call when needed" provisions, and therefore the precise amounts we will ultimately earn under these agreements are not known. Contracts with the majority of our significant customers are multi-year contracts; however, these contracts are periodically up for renewal or rebid. Renewal, or a successful rebid, is not guaranteed. Should we lose one of our major customers for any reason, we may be unable to identify new opportunities sufficient to avoid a reduction in our revenues and operating earnings, which would have a material adverse effect on our business and operations. If one or more of these customers is disproportionately impacted by factors that affect its ability to pay us or to enter into new contracts, including general economic factors, our operations could be materially and adversely affected.

In the past, several of our larger contracts have not been renewed for reasons unrelated to our performance, such as the financial condition of our customers or their decision to move the services we provided to them in-house. For example, in 2007 we were not awarded any long-term contracts by the U.S. Forest Service. Accordingly, we cannot assure you that in any given year we will be able to generate similar revenues from our customers as we did in the previous year. Our current contract with the U.S. Forest Service ends at the end of 2012 and, though the contract provides a customer option for three one-year extensions, there is no guarantee that these options will be exercised.

Some of our backlog may be deferred or may not be realized.

Backlog represents the amount of revenue that we expect to derive from signed contracts, including oral contracts that have been subsequently memorialized in writing, or anticipated exercises of customer extension options. Our backlog includes contracts with a duration of six months or more. As of February 29, 2012, we had approximately \$212.8 million of backlog, of which \$128.0 million was from signed contracts and \$84.8 million was from anticipated exercises of customer extension options (including \$54.3 million from multi-year annual customer extension options). We expect that approximately \$123.8 million of the backlog will not be filled in 2012. As of February 28, 2011, we had \$298.9 million of backlog, of which \$176.4 million was from signed contracts and \$122.5 million was from anticipated exercises of customer extension options (including \$22.6 million from multi-year annual customer extension options). No sales of Aircranes were associated with our backlog as of February 29, 2012 or February 28, 2011. We include anticipated exercises of customer extension options in our backlog when our prior operating history, including past exercises of extension options by such customers and the other circumstances specific to the particular contract, causes us to conclude that the exercise of such extension option is likely. On January 31, 2012, the Hellenic Fire Brigade notified us that it will not exercise its option to extend our existing contract for the 2012 fire season, which contract relates to the use of three Aircranes during the summer of 2012. As a result of these developments, we are not currently providing services to the Hellenic Fire Brigade and our backlog has been reduced by approximately \$25.4 million relating to services we had expected to provide to the Hellenic Fire Brigade in 2012 and 2013. We did not receive any advance payments under this contract for 2012.

For contracts that include a guaranteed number of hours, the value of the guaranteed hours is included in backlog. For CPH contracts, which depend on hours flown by our customers, we calculate the contribution to backlog based on contracted minimum hours. When a binding aircraft sale contract has been signed with a customer, the purchase price of the aircraft not included in current revenues is included in backlog. When we sign a contract giving a potential purchaser an option to purchase an aircraft which only becomes binding on a non-refundable payment of a material option fee, we do not include the purchase price of the aircraft in backlog until the non-refundable payment has been made and the contract is a binding purchase contract. A customer may default on a purchase contract that has become binding, and we may not be able to convert sales contract backlog into revenue. We calculate the contribution to

Table of Contents

backlog for some timber harvesting contracts based on our estimate of the cubic meters of high grade timber we expect to deliver under the contract based on our experience. As a result, our estimates of backlog for some of our timber harvesting contracts could be affected by variables beyond our control and may not be entirely realized, if at all. As of February 29, 2012, \$4.0 million of our backlog was attributable to timber harvesting contracts based on an estimate of cubic meters of timber to be delivered.

In addition, given the nature of our customers and our industry, there is a risk that our backlog may not be fully realized in the future. For example, the terms of contracts with the U.S. Government, such as our contract with the U.S. Forest Service, generally permit the U.S. Government to terminate the contract, partially or completely, without cause, at the end of each annual period of the contract. Our contracts with other customers may contain similar provisions. A large portion of our operating expenses are relatively fixed and cancellations, reductions or delays in orders by a customer could have a material adverse effect on our business, financial condition and results of operations. Any unexpected termination of a significant government contract could have a material adverse effect on our results of operations. Failure to realize sales from our existing or future backlog would negatively impact our financial results.

Some of our arrangements with customers are short-term, ad hoc, or "call when needed." As a result, we cannot assure you that we will be able to continue to generate similar revenues from these arrangements.

We generate a large portion of our revenues from arrangements with customers with terms of less than six months, *ad hoc* arrangements, and "call when needed" contracts. In 2010 and 2011, for example, approximately 24% and 17% of our revenues, respectively, were derived from such arrangements. There is a risk that customers may not continue to seek the same level of services from us as they have in the past or that they will not renew these arrangements or terminate them at short notice. Under "call when needed" contracts, we pre-negotiate rates for providing services that customers may request that we perform (but which we are not typically obligated to perform) depending on their needs. The rates we charge for these contingent services are higher than the rates under stand-by arrangements, and we attempt to schedule our aircraft to maximize our revenue from these types of contracts. The ultimate value we derive from such contracts is subject to factors beyond our control, such as the severity and duration of fire seasons. In the past, several of our larger contracts have not been renewed for reasons unrelated to our performance, such as the financial condition of our customers or their decision to move the services we provided to them in-house. For example, in 2007 we were not awarded any long-term contracts by the U.S. Forest Service. Accordingly, we cannot assure you that in any given year we will be able to generate similar revenues from our customers as we did in the previous year. Our current contract with the U.S. Forest Service ends at the end of 2012 and, though the contract provides a customer option for three one-year extensions, there is no guarantee that these options will be exercised.

Our Aerial Services revenues depend on the availability and size of our Airplane fleet.

We currently have 17 Airplanes that we employ in providing Aerial Services. An accident could make an Airplane unavailable to us temporarily or permanently. A sale of an Airplane that is part of our fleet would also reduce the number of Airplanes available to provide Aerial Services. We have manufactured two Airplanes that are ready for sale, one of which is complete and one of which is substantially complete. These two Airplanes are held in inventory and are not part of our fleet of 17 Airplanes that we operate for our customers. Although we have entered into several non-binding agreements and a binding Aircraft Lease and Purchase Option Agreement with HRT, HRT did not exercise its purchase option thereunder and allowed its lease to expire, and we have not sold an Airplane since 2009. The Airplane that was subject to the Aircraft Lease and Purchase Option Agreement with HRT was one of the 17 Airplanes in our Aerial Services fleet. Potential customers may prefer, due to cost or other reasons, to purchase a used Airplane, and we could accommodate such preference by selling one of the Airplanes in our fleet. The purchase price of a used Airplane is generally lower than the purchase price of a new or remanufactured Airplane. Although we would expect to be able to maintain the level of our operations through more efficient scheduling of our fleet or by allocating Airplanes held for sale to Aerial Services operations if we sell an

Table of Contents

Aircrane from our fleet, we may not always have the ability to maintain our desired level of Aerial Services operations with a reduced fleet and our results of operations could be adversely affected.

We may be unable to effectively implement production rate changes, particularly in light of our November 2011 restructuring, which may adversely affect our business.

The market for Aircranes is variable and we have historically manufactured a limited number of Aircranes in any year. Production rate reductions could cause us to incur disruption and other costs, which could reduce our profitability. Higher orders for Aircranes could lead to production rate increases in order to meet customers' delivery schedules, and our production rates are impacted by our staffing levels, which were recently reduced. In November 2011, we completed a company restructuring which included a reduction-in-force of 119 employees that affected both our Aerial Services and Manufacturing / MRO segments. The restructuring was needed to realign our operating expenses to ensure that we remain competitive in the markets we serve. However, as a result of the reduction-in-force, we may experience longer aircraft delivery lead times for future customers who wish to purchase Aircranes, which may delay the timing of our aircraft sales revenues in the future. In the event that we experience significantly increased customer demand to purchase our Aircranes, we anticipate being able to meet such demand by rapidly expanding our manufacturing capacity and related resources. However, such expansion may require us to incur significant costs. Failure to effectively implement any production rate changes could lead to extended delivery commitments, and depending on the length of any delay in meeting delivery commitments, additional costs and customers rescheduling their deliveries or terminating their related contract with us.

Foreign, domestic, federal, and local government spending and mission priorities may change in a manner that materially and adversely affects our future revenues and limits our growth prospects.

Our business depends upon continued government expenditures on programs that we support. These expenditures have not remained constant over time. For example, the overall U.S. Forest Service budget declined for periods of time in the late 1980s and the early 1990s, resulting in a slowing of new program starts, program delays, and program cancellations. These reductions caused many Forest Service related government contractors to experience declining revenues, increased pressure on operating margins, and, in some cases, net losses. While spending authorizations for U.S. Forest Service programs by the U.S. Government have increased in recent years, future levels of expenditures, mission priorities, and authorizations for these programs may decrease, remain constant, or shift to program areas in which we do not currently provide services. Current foreign and domestic government spending levels on programs that we support may not be sustainable as a result of changes in government leadership, policies, or priorities. In addition, the economies of Greece and Italy in particular have been adversely affected by global financial pressures. In light of the ongoing European sovereign debt crisis, there are heightened risks associated with our future revenue attributable to and our accounts receivable from the Hellenic Fire Brigade and the Italian Ministry of Civil Protection. We have an account receivable from the Hellenic Fire Brigade that is past due and our agents and representatives in Greece have informed us that the Hellenic Fire Brigade has cancelled or not exercised its extension options in respect of all of its firefighting contracts for 2012 with us and all other aerial service providers. Although we expect to provide a response by late April to NAMSAs request for proposal to compete for Greek firefighting services to be provided by three heavy-lift helicopters in 2012 through 2014, there is no guarantee that our bid will be successful. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Trends and Uncertainties Affecting Our Business Greek Economic Crisis." Additionally, our business, prospects, financial condition, or operating results could be materially harmed by the following:

budgetary constraints affecting government spending generally, or specific departments or agencies in particular, and changes in fiscal policies or available funding;

changes in government programs or requirements;

Table of Contents

realignment of funds to changed government priorities;

government shutdowns (such as that which occurred during the U.S. Government's 1996 fiscal year) and other potential delays in government appropriations processes;

delays in the payment of our invoices by government authorities;

adoption of new laws or regulations; and

general economic conditions.

These or other factors could cause government agencies and departments to reduce their purchases under contracts, exercise their right to terminate contracts, or not exercise options to renew contracts, any of which could cause us to lose revenue. A significant decline in overall government spending or a shift in expenditures away from agencies or programs that we support could cause a material decline in our revenues and harm our financial results.

Product liability and product warranty risks could adversely affect our operating results.

We produce, repair, and overhaul complex aircraft and critical parts for aircraft. Failure of our aircraft or parts could give rise to substantial product liability and other damage claims. We maintain insurance to address this risk, but our insurance coverage may not be adequate for some claims and there is no guarantee that insurance will continue to be available on terms acceptable to us, if at all.

Additionally, aircraft and parts we manufacture for sale are subject to strict contractually established specifications using complex manufacturing processes. If we fail to meet the contractual requirements for a part, we may be subject to warranty costs to repair or replace the part itself and additional costs related to the investigation and inspection of non-complying parts. These costs are generally not insured. For example, in June 2011 we encountered an issue associated with an accessory failure on a customer's Airplane that resulted in warranty cost to us of approximately \$0.9 million in excess of amounts previously accrued.

We establish warranty reserves that represent our estimate of the costs we expect to incur to fulfill our warranty requirements. We base our estimate for warranty reserves based on our historical experience and other assumptions. If actual results materially differ from these estimates, our results of operations could be materially affected.

Because we own the S-64 Type Certificate, we are obligated to issue directives to operators of our aircraft and to identify defects or required replacements to our aircraft. We could be liable to operators of our aircraft if we fail to fulfill our obligation to issue directives, even if our aircraft or components of our aircraft are no longer under warranty.

Our failure to attract and retain qualified personnel could adversely affect us.

Our pilots and maintenance and manufacturing personnel are highly trained and qualified. Our ability to attract and retain qualified pilots, mechanics, and other highly trained personnel will be an important factor in determining our future success. Our aircraft, and the aerial services we provide, require pilots with high levels of flight experience. The market for these experienced and highly trained personnel is extremely competitive. Accordingly, we cannot assure you that we will be successful in our efforts to attract and retain such persons. Some of our pilots and mechanics, and those of our competitors, are members of the U.S. military reserves and could be called to active duty. If significant numbers of such persons were called to active duty, it would reduce the supply of such workers, possibly curtailing our operations and likely increasing our labor costs. Because of our small size relative to many of our competitors, we may be unable to attract qualified personnel as easily as our competitors.

Table of Contents

The loss of key managers could negatively affect our business.

We are dependent upon a number of key managers, including our CEO, Udo Rieder, our CFO, Charles Ryan, our Vice President of Aerial Services, H.E. "Mac" McClaren, our Vice President and Chief Marketing Officer, Gary Zamieroski, and our Vice President of Manufacturing and MRO, David Ford. We have employment agreements with each of these key executive officers and intend to encourage their retention, in part, through the award of time-vesting equity grants. See "Executive Compensation Employment Agreements." If we were to lose the services of one or more of our key team members, our operations could be materially impacted. We do not maintain key person insurance on any team member.

The outcome of litigation in which we may be named as a defendant and of government inquiries and investigations involving our business is unpredictable, and an adverse decision in any such matter could result in significant monetary payments and have a material adverse affect on our financial position and results of operations.

We may be a defendant in future litigation matters. These claims may divert financial and management resources that would otherwise be used to benefit our operations. We cannot assure you that the results of these matters will be favorable to us. An adverse resolution of any of these lawsuits could have a material adverse affect on our financial position and results of operations. In addition, we are sometimes subject to government inquiries and investigations of our business due to, among other things, our business relationships with the U.S. Government, the heavily regulated nature of our industry, and, in the case of environmental proceedings, our ownership of certain property. Any such inquiry or investigation could potentially result in an adverse ruling against us, which could result in significant monetary payments (including possible environmental remediation costs) and a material adverse effect on our financial position and operating results. See "Business Legal Proceedings."

We are subject to FAA regulation and similar international regulation, and our failure to comply with these regulations, or the adoption of any new laws, policies, or regulations, may have a material adverse effect on our business.

The aerial services business is heavily regulated by governmental entities in the United States and in other countries in which we operate. We operate in the United States under laws and regulations administered by the Department of Transportation, principally through the FAA. The FAA promulgates rules relating to the general operation of our aircraft, the process by which our aircraft are maintained, the components and systems that are installed in our aircraft, the qualification of our flight crews and maintenance personnel, and the specialized operations that we undertake, including the carrying of loads and the use of various chemicals. We are regularly inspected by FAA personnel to ensure compliance. Compliance with these rules is complex and costly, and the failure to comply could result in the imposition of fines, the grounding of our aircraft, or other consequences detrimental to our operations and operating results. Our operations in other countries are similarly regulated under equivalent local laws and regulations.

Our aircraft manufacturing and MRO operations are also subject to regulation by the FAA and other governmental authorities. The FAA promulgates regulations applicable to the design and manufacture of aircraft and aircraft systems and components. It also sets and enforces standards for the repair of aircraft, systems, and components and for the qualification of personnel performing such functions. It regularly conducts inspections to ensure compliance and has the power to impose fines or other penalties for non-compliance or to shut down non-compliant operations. Our manufacturing and MRO operations are also subject to complex environmental, safety, and other regulations. Failure to comply with applicable regulations could result in the imposition of fines or other penalties or in the shutting down of our operations, which could impair our ability to fulfill our contracts or otherwise negatively impact our reputation for safety and dependability.

The FAA approves major changes in aircraft design such as fuel control systems or new rotor blades. Such approvals take time, require investment, and are not assured. Similar regulatory bodies in other

Table of Contents

countries may accept FAA certification or may impose their own individual requirements. The failure to obtain FAA or other required approval for such changes, or the imposition of unanticipated restrictions as a condition of approval, could increase our production costs or reduce the effectiveness of the system in question and could render our development effort less valuable or, in an extreme case, worthless.

The laws and regulations affecting our business are subject to change at any time and, because we operate under numerous jurisdictions, we are particularly exposed to the possibility of such changes. Any change in laws or regulations applicable to our business could restrict our operations, increase our costs, or have other effects detrimental to our results of operations or competitive position.

Our business is affected by federal rules, regulations, and orders applicable to government contractors, and the award of government contracts may be challenged.

Some of our services are sold under U.S. or foreign government contracts or subcontracts. Consequently, we are directly and indirectly subject to various federal rules, regulations and orders applicable to government contractors. From time to time, we are also subject to government inquiries and investigations of our business practices due to our participation in government programs. These inquiries and investigations are costly and consume internal resources. Violation of applicable government rules and regulations could result in civil liability, the cancellation or suspension of existing contracts, or the ineligibility for future contracts or subcontracts funded in whole or in part with federal funds, any of which could have a material adverse effect on our business.

Governmental contracts typically require a competitive bid process, and the award of a contract may be subject to challenge by bid participants. For example, a competitor challenged the U.S. Forest Service contract we were awarded in 2008. As a result, we provided services to the U.S. Forest Service without a contract for a period of time, pending resolution of the challenge. See "Business Legal Proceedings" for additional information.

Claims against us by governmental agencies or other parties related to environmental matters could adversely affect us.

In the late 1990s, environmental damage that resulted from hazardous substances at our Central Point, Oregon facility was identified. It was determined that the contamination migrated beyond the property boundary at our facility and impacted off-site water supply wells. A remediation was completed in the late 1990s. Based on the testing of the site in recent years, the contamination levels have been decreasing, though the remediation cannot be guaranteed. We are continuing to participate in monitoring and testing the remediation of the site and we incur ongoing costs for this monitoring and testing. We did not incur any remediation expense in 2010 or 2011.

Our obligations in respect of such contamination are subject to an indemnification agreement with a former owner of the Company. Under this agreement, our potential total liability in respect of remediation costs is capped at \$0.5 million, of which we have already paid \$0.4 million, with a total remaining liability of \$0.1 million. Although the agreement caps our total potential liability, the creditworthiness of the indemnitor is uncertain. If the indemnitor fails to honor the terms of the indemnification agreement, it is possible that we would have to bear the entire cost of the remediation, monitoring and testing. Although our costs during the past two years have not been significant and we do not expect material costs in the future, if the indemnifying party does not meet its obligations we could have additional expenses and the exact amounts are unknown. If a previously unidentified or new source of contamination or pollution is detected, however, the costs could increase substantially. In addition, it is possible that government agencies or other parties could bring a claim against us resulting from the contamination and that defending and resolving such claims could adversely affect our financial condition and results of operations.

Table of Contents

Environmental and other regulation and liability may increase our costs and adversely affect us.

We are subject to a variety of laws and regulations, including environmental and health and safety regulations. Because our operations are inherently hazardous, compliance with these regulations is challenging and requires constant attention and focus. We are subject to federal, state, and foreign environmental laws and regulations concerning, among other things, water discharges, air emissions, hazardous material and waste management, and environmental cleanup. Environmental laws and regulations continue to evolve, and we may become subject to increasingly stringent environmental standards in the future, particularly under air quality and water quality laws and standards related to climate change issues, such as reporting greenhouse gas emissions. We are required to comply with environmental laws and with the terms and conditions of multiple environmental permits. Our failure to comply with these regulations could subject us to fines and other penalties administered by the agencies responsible for environmental and safety compliance or by the FAA or other aviation-related agencies.

The occurrence of events for which the risk is allocated to us under our contracts could negatively impact our results of operations.

Many of our contracts are fixed price contracts which could subject us to losses if we have cost overruns. Under these contracts, we typically are responsible for normal maintenance, repair, and fuel costs. In addition, some of our Aerial Services contracts have performance penalty provisions, subjecting us to the risk of unexpected down time caused by mechanical failures or otherwise, which could cause our net income to suffer. Risks associated with estimating our costs and revenues are exacerbated for long-term contracts, which include most of our material contracts.

Our contracts to manufacture aircraft and major overhauls or components typically contain penalty provisions that require us to make payments to customers, or provide interim aerial services to them at no cost, if we are unable to timely deliver aircraft or components. Such contracts may also include a repurchase obligation by us if certain performance or other criteria are not met.

We may be required to provide components or services to owners or operators of the S-64 or the CH-54, which could limit our operational flexibility and divert resources from more productive uses.

Because we own the S-64 Type Certificate, we may be required to supply components or provide MRO services to customers who own or operate the S-64 or the CH-54, the military version of the S-64. This could limit our operational flexibility, divert resources from more productive uses, and adversely affect our ability to execute on our growth plans.

Our dependence on a small number of manufacturers for some of our aircraft components and the costs associated with the purchase or manufacture of new components pose significant risks to our business.

We rely on approximately 120 supplier business units or locations for significant or critical components. A small number of manufacturers make some of the key components for our aircraft, and in some instances there is only a single manufacturer, although other manufacturers could be used if necessary for all of our components. If these manufacturers experience production delays, or if the cost of components increases, our operations could suffer. If a manufacturer ceases production of a required component, we could incur significant costs in purchasing the right to manufacture those components or in developing and certifying a suitable replacement, and in manufacturing those components.

Many key components and parts on the Airplane have not been manufactured since originally introduced. A significant portion of our inventory was acquired in bulk on the surplus market. For some aviation components, our operating cost includes the overhaul and repair of these components but does not include the purchase of a new component. It may be difficult to locate a supplier willing to manufacture replacement components at a reasonable cost or at all. As we exhaust our inventory, the purchase of any new components, or the manufacture by us of new components, could materially increase

Table of Contents

our operating cost or delay our operations; we routinely monitor levels of out-of-production parts and design and certify replacement parts to mitigate this risk.

Our reliance on the Aircrane could harm our business and financial results if technical difficulties specific to the Aircrane occur.

We exclusively fly and manufacture Aircranes and related components. If the Aircrane encounters technical or other difficulties, it may be grounded or lose value and we may be unable to sell the aircraft or parts or provide aerial services on favorable terms or at all. The inability to sell or contract out the Aircrane would virtually eliminate our ability to operate.

If we are unable to continue to develop new technologies and to protect existing technologies, we may be unable to execute on our growth and development plans.

Our success has resulted in part from our development of new applications for our aircraft, such as our fire tank and snorkel for firefighting services, and we believe our growth will continue to depend on the development of new products or applications. Competitors may develop similar applications for their aircraft, which would increase our competition in providing aerial services. In addition, our growth strategy depends, in part, on our ability to develop new products and applications. A number of factors, including FAA certifications, could result in our being unable to capitalize on the development costs for such products or applications. For example, we have devoted significant resources to our program to develop composite-material main rotor blades. If they are not certified by the FAA, we will be unable to recover our research and development costs and will need to expend additional resources to develop an alternative blade.

Not all of our products and applications have been, or may be, patented or otherwise legally protected. If we are not able to adequately protect the inventions and intellectual property we have developed, in the U.S. and in foreign countries, we may face increased competition from those who duplicate our products, and our results of operations and growth opportunities could suffer.

Failure to adequately protect our intellectual property rights could adversely affect our operations.

We rely upon intellectual property law, trade secret protection, and confidentiality and license agreements with our employees, clients, consultants, partners, and others to protect our intellectual property rights. Any of these parties may breach these agreements and we may not have adequate remedies for any specific breach. In addition, our competitors may independently develop equivalent knowledge, methods, and know-how, and we would not be able to prevent their use. To the extent that employees, partners, and consultants use intellectual property owned by others in their work for us, disputes may arise as to the rights in the related or resulting know-how and inventions. If any of our trade secrets, know-how, or other technologies were to be disclosed to or independently developed by a competitor, our business, financial condition, and results of operations could be materially adversely affected.

We may have to engage in litigation to defend our trademarks, trade secrets, and other intellectual property rights. Even if we are successful, such litigation could result in substantial costs and be a distraction to management. If we are not successful in such litigation, we may lose valuable intellectual property rights.

Any of our patents may be challenged, invalidated, circumvented, or rendered unenforceable. Our patents may be subject to reexamination proceedings affecting their scope. We cannot assure you that we will be successful should one or more of our patents be challenged for any reason. If our patent claims are rendered invalid or unenforceable, or narrowed in scope, the patent coverage afforded our products could be impaired, which could significantly impede our ability to market our products, negatively affect our competitive position, and harm our business and operating results.

Table of Contents

Further, we are a party to licenses that grant us rights to intellectual property, including trade secrets, that is necessary or useful to our business. One or more of our licensors may allege that we have breached our license agreement with them, and accordingly seek to terminate our license. If successful, this could result in our loss of the right to use the licensed intellectual property, which could adversely affect our ability to commercialize our technologies, products, or services, as well as harm our competitive business position and our business prospects.

Success within our Maintenance, Repair, and Overhaul business is dependent upon fleet utilization and continued outsourcing by helicopter operating companies.

We currently conduct MRO services at facilities in Central Point, Oregon. Revenues at these facilities fluctuate based on demand for maintenance which, in turn, is driven by the number of helicopters operating and the extent of outsourcing of maintenance activities by helicopter operating and OEM companies. If the number of helicopters operating globally declines or outsourcing of maintenance and OEM activities declines, our results of operations and financial condition could be adversely affected.

Our business is subject to risks associated with international operations, including operations in emerging markets.

We purchase products from and supply products to businesses located outside of the United States. We also have significant operations outside the United States. For the years ended December 31, 2010 and 2011, approximately 62.5% and 55.8%, respectively, of our total revenues were attributable to operations in non-U.S. countries. A number of risks inherent in international operations could have a material adverse effect on our international operations and, consequently, on our results of operations, including:

the uncertain ability of select non-U.S. customers to finance purchases and our inability as a result of lesser transparency in certain jurisdictions to evaluate the credit of potential customers accurately;

currency fluctuations, which can reduce our revenues for transactions denominated in non-U.S. currency or make our services relatively more expensive if denominated in U.S. currency;

difficulties in staffing and managing multi-national operations;

political and financial instability in several of the countries in which we operate, including Greece and Italy;

significant receivables from international customers, including customers in Greece and Italy;

risks associated with transporting our aircraft, including risks associated with piracy and adverse weather;

fluctuations in the costs associated with transporting our aircraft, pilots, and crews, which are significant operating costs for us;

limitations on our ability to enforce legal rights and remedies;

uncertainties regarding required approvals or legal structures necessary to operate aircraft or provide our products and services in a given jurisdiction;

restrictions on the repatriation of funds from our foreign operations;

changes in regulatory structures or trade policies;

tariff and tax regulations;

ensuring compliance with the Foreign Corrupt Practices Act;

difficulties in obtaining export and import licenses; and

the risk of government-financed competition.

Table of Contents

Part of our growth strategy is to enter new markets, including emerging market countries such as China and in South America. Emerging market countries have less developed economies that are more vulnerable to economic and political problems and may experience significant fluctuations in gross domestic product, interest rates, and currency exchange rates, as well as civil disturbances, government instability, nationalization and expropriation of private assets, and the imposition of taxes or other charges by government authorities. The occurrence of any of these events and the resulting economic instability that may arise could adversely affect our operations in those countries, or the ability of our customers in those countries to meet their obligations. As a result, customers that operate in emerging market countries may be more likely to default than customers that operate in developed countries. In addition, legal systems in emerging market countries may be less developed, which could make it more difficult for us to enforce our legal rights in those countries. In particular, we have focused on expanding our presences in developing markets such as China and Malaysia, and the laws and regulations governing aviation sales and services may require approvals that are uncertain and enforcement of joint venture or other contractual relationships may be uncertain. For these and other reasons, our growth plans may be materially and adversely affected by adverse economic and political developments in emerging market countries.

If our employees unionize, our expenses could increase and our results of operations would suffer.

Except for statutory protections for our 11 Italian pilots, none of our employees work under collective bargaining, union or similar agreements. Unionization efforts have been made from time to time within our industry, with varying degrees of success. If our employees unionize, our expenses could increase and our results of operations may suffer.

The cost of fuel is a major operating expense, and fuel shortages and fluctuations in the price of fuel could adversely affect our operations.

Our aerial operations depend on the use of jet fuel. Fuel costs have historically been subject to wide price fluctuations, and fuel availability is subject to shortage and is affected by demand for heating oil, gasoline, and other petroleum products. Fuel shortages and increases in the price of fuel, or decreases in the price of fuel when we have entered into hedging agreements, could adversely affect our operations.

We may not realize the anticipated benefits of acquisitions, joint ventures, strategic alliances, or divestitures.

As part of our business strategy, we may acquire businesses or specific assets, form joint ventures or strategic alliances, and divest operations. Whether we realize the anticipated benefits from these transactions depends, in part, upon the integration between the businesses or assets involved; the performance of the underlying products, capabilities, or technologies; and the management of the transacted operations. We have had limited experience with such integrations. Accordingly, our financial results could be adversely affected by unanticipated performance issues, transaction-related charges, amortization of expenses related to intangibles, charges for impairment of long-term assets, credit guarantees, partner performance, and indemnifications. Consolidations of joint ventures could also impact our results of operations or financial position. Divestitures may result in continued financial involvement in the divested businesses, such as through guarantees or other financial arrangements, following the transaction. Nonperformance by those divested businesses could affect our future financial results.

We may be unable to access public or private debt markets to fund our operations and contractual commitments at competitive rates, on commercially reasonable terms, or in sufficient amounts.

We depend, in part, upon borrowings under our credit facilities to fund our operations and contractual commitments. If we were called upon to fund all outstanding commitments, we may not have sufficient funds to do so. A number of factors could cause us to incur increased borrowing costs and to have greater difficulty accessing public and private markets for debt. These factors include general economic conditions, disruptions or declines in the global capital markets, and our financial performance, outlook, or credit

Table of Contents

ratings. An adverse change in any or all of these factors may materially adversely affect our ability to fund our operations and contractual or financing commitments.

Our senior credit facilities require us, among other obligations, to comply with three significant financial covenants on a quarterly basis, including:

a minimum fixed charge coverage ratio;

a maximum leverage ratio; and

beginning with the quarter ending June 30, 2012 and thereafter, a minimum tangible net worth amount.

If our business does not perform as expected, including if we generate less than anticipated revenue from our Aerial Services operations or encounter significant unexpected costs, we may fail to comply with the financial covenants under our Credit Agreement in 2012. If we do not comply with our financial covenants and we do not obtain a waiver or amendment, our lenders may accelerate payment of all amounts outstanding which would immediately become due and payable, together with accrued interest. Any default may require us to seek additional capital or modifications to our credit facilities, which may not be available or which may be costly. Additionally, our suppliers may require us to pay cash in advance or obtain letters of credit as a condition to selling us their products and services. Any of these risks and uncertainties could have a material adverse effect on our financial position, results of operations or cash flow.

In addition, a significant customer holds the right to exercise a put option that would, if exercised, require us to repurchase on July 31, 2013 the Aircrane we sold to the customer in 2009. The put option was an important term to the purchaser when the sale agreement was negotiated. The exercise price would be the fair market value of the Aircrane, determined by independent appraisers at the time of exercise. The fair market value of the Aircrane at July 31, 2013 will be highly dependent upon the hours of usage and the customer use profile for the Aircrane, which makes it difficult to estimate a fair value at this time. However, management believes an anticipated range of fair value, based upon our experience and industry knowledge, may be approximately between \$10.0 million and \$18.0 million. Because our existing credit facility terminates on June 24, 2013, our ability to finance the repurchase of this Aircrane may depend on our ability to obtain new financing.

Our expected growth and new obligations as a public company will require us to add additional personnel, infrastructure, and internal systems with which we have limited experience.

Our management is continuing to implement enhancements to a number of our internal systems, including inventory administration, human resources, and internal controls. We believe that these enhancements will be necessary to support our expected growth as well as our new status as a public company. Following the closing of this offering, we will be subject to various requirements of the SEC and NASDAQ, including record keeping, financial reporting, and corporate governance rules and regulations. Our management team has limited experience in managing a public company. In addition, historically, we have not had some of the internal systems typically found in a public company. Implementing new systems and procedures is always challenging, and we are subject to the risk that our new systems will not function as anticipated or that we will initially fail to understand or properly administer them. Our business could be adversely affected if our internal infrastructure is inadequate to ensure compliance with federal, state, and local laws and regulations.

Our business is subject to laws limiting ownership or control of aircraft companies, which may increase our costs and adversely affect us.

Most of the countries in which we operate have laws requiring local ownership or control, or both, of certain kinds of companies that operate aircraft. We use various strategies to comply with these laws,

Table of Contents

including the formation of local subsidiaries that we do not wholly own and partnerships with local companies. FAA regulations may require that at least 75% of our voting securities be owned or controlled by United States citizens. The existence of these laws may restrict our operations; reduce our profit from, or control of, some foreign operations; or restrict the market for our securities.

Our production may be interrupted due to equipment failures or other events affecting our factories.

Our manufacturing and testing processes depend on sophisticated and high-value equipment. Unexpected failures of this equipment could result in production delays, revenue loss, and significant repair costs. In addition, our factories rely on the availability of electrical power and natural gas, transportation for raw materials and finished product, and employee access to our workplace that are subject to interruption in the event of severe weather conditions or other natural or manmade events. While we maintain backup resources to the extent practicable, a severe or prolonged equipment outage or other interruptive event affecting areas where we have significant manufacturing operations may result in loss of manufacturing days or in shipping delays which could have a material adverse effect on our business.

General economic conditions and recent market events may expose us to new risks.

Recent events in the financial markets and the economic downturn have contributed to severe volatility in the securities markets, a severe liquidity crisis in the global financial markets, and unprecedented government intervention. These conditions have affected our results of operations and may continue to affect them. In such an environment, significant additional risks may exist for us. The recent instability in the financial markets has led the U.S. Government to take a number of unprecedented actions designed to support certain financial and other institutions and segments of the financial market that have experienced extreme volatility, and in some cases, a lack of liquidity. There can be no assurance that this intervention will improve market conditions, that such conditions will not continue to deteriorate, or that further government intervention will or will not occur. For example, recently, general market volatility has been exacerbated by uncertainty about sovereign debt and the fear that countries such as Greece and Italy may default on their governments' financial obligations. If economic conditions continue or worsen, we face risks that may include:

declines in revenues and profitability from reduced or delayed orders by our customers, in particular with respect to infrastructure construction projects which may be delayed or cancelled;

supply problems associated with any financial constraints faced by our suppliers;

reductions in credit availability to us or in general;

increases in corporate tax rates to finance government spending programs; and

reductions in spending by governmental entities for services such as infrastructure construction and firefighting.

The economic downturn and continued credit crisis and related turmoil in the global financial system may have an adverse impact on our business and our financial conditions. We cannot predict our ability to obtain financing due to the current credit crisis, and this could limit our ability to fund our future growth and operations. In addition, the creditworthiness of some of our customers may be affected, which may affect our ability to collect on our accounts receivable from such customers.

Risks Related to this Offering

Our stock price may be volatile, and you may not be able to resell your shares at or above the initial offering price.

There has been no public market for shares of our common stock. An active trading market for our shares may not develop or be sustained following the closing of this offering. The initial public offering

Table of Contents

price of our shares will be determined by negotiations between us and the representative of the underwriters. Our common stock may trade at a lower price upon the closing of this offering.

The stock market has experienced significant price and volume fluctuations. After the offering, the market price for our shares may fluctuate significantly in response to a number of factors, some of which are beyond our control, including:

- quarterly or annual variations in our operating results;
- changes in financial estimates by securities analysts;
- additions or departures of our key personnel;
- the adoption of new laws or regulations that apply to our business; and
- sales of shares of our common stock in the public markets.

Fluctuations or decreases in the trading price of our common stock may adversely affect your ability to trade your shares. In the past, following periods of volatility in the market price of a company's securities, securities class action litigation has often been instituted. A securities class action suit against us could result in substantial costs and divert management's attention and resources that would otherwise be used to benefit the future performance of our operations. Such litigation expense may not be covered by insurance.

Within 180 days of the date of this offering, the outstanding shares of our common stock will become eligible for sale in the public market, which could cause the price of our common stock to decline.

Our officers, our directors, and all of our stockholders have agreed with the representative of the underwriters not to sell or otherwise dispose of any of their shares for a period of 180 days after the date of this offering. When these lock-up agreements expire, the 4,802,970 outstanding shares held by our stockholders, as well as 252,935 RSUs we intend to issue to certain members of our management and 4,864 RSUs we intend to issue to our independent directors, will become eligible for sale, in some cases subject only to the volume, manner of sale, and notice requirements of Rule 144 of the Securities Act of 1933, as amended (the "Securities Act"). Some of our stockholders have the right to require that we register their shares for public sale. See "Shares Eligible for Future Sale Registration Rights." Sales of a substantial number of these shares in the public market after this offering, or the perception that these sales could occur, could cause the market price of our common stock to decline. In addition, the sale of these shares could impair our ability to raise capital through the sale of additional equity securities. See "Shares Eligible for Future Sale" for further discussion of the shares that will be freely tradable within 180 days after the date of this offering.

Existing stockholders will exert significant influence over us after the closing of this offering. Their interests may not coincide with yours, and they may make decisions with which you may disagree.

After this offering, entities affiliated with ZM Equity Partners, LLC will own approximately 47% of our outstanding common stock, and two of our directors will continue to be managing directors of Centre Lane Partners LLC, an affiliate of ZM Equity Partners. As a result, these stockholders, acting individually or together, could exert significant influence over all matters requiring stockholder approval, including the election of directors and approval of significant corporate transactions. These stockholders may take action by written consent without a meeting of stockholders until the Trigger Date. In addition, this concentration of ownership may delay or prevent a change in control of our Company and make some transactions more difficult or impossible without the support of these stockholders. The interests of these stockholders may not always coincide with our interests as a company or the interest of other stockholders. Accordingly, these stockholders could cause us to enter into transactions or agreements that you would not approve or make decisions with which you may disagree.

Table of Contents

As a new investor, you will experience immediate and substantial dilution in net tangible book value.

Investors purchasing shares of our common stock in this offering will pay more for their shares than the amount paid by stockholders who acquired shares before this offering. If you purchase common stock in this offering, you will incur immediate dilution in pro forma net tangible book value of approximately \$1.96 per share. See "Dilution."

If securities or industry analysts do not publish research or publish inaccurate or unfavorable research about our business, our stock price and trading volume could decline.

The trading market for our common stock will depend in part on the research and reports that we expect securities or industry analysts to publish about us or our business. If one or more of the analysts who cover us downgrade our stock or publish inaccurate or unfavorable research about our business, our stock price would likely decline. If one or more of these analysts cease coverage of us or fail to publish reports on us regularly, demand for our stock could decrease, which might cause our stock price and trading volume to decline.

Our management will continue to have broad discretion over the use of the proceeds we received in the offering and might not apply the proceeds in ways that increase the value of your investment.

Our management will continue to have broad discretion to use the net proceeds we receive from the offering. We expect to use the net proceeds from the offering to pay down indebtedness under our revolving credit facility, to pay off our unsecured subordinated promissory notes, and, to the extent that there are any excess proceeds after the debt pay-down, for working capital and other general corporate purposes. Our management retains the discretion, however, to use the proceeds differently if events we do not anticipate arise. Our management might not apply the net proceeds from the offering in ways that increase the value of our common stock. Until we use the net proceeds from the offering, we plan to invest them in short-term, investment-grade, interest-bearing securities, and these investments may not yield a favorable rate of return. If we do not invest or apply the net proceeds from the offering in ways that enhance stockholder value, we may fail to achieve expected financial results, which could cause our stock price to decline.

Provisions in our charter documents and Delaware law could discourage takeover attempts and lead to management entrenchment.

Our second amended and restated certificate of incorporation and bylaws contain provisions that could have the effect of delaying or preventing changes in control or changes in our management without the consent of our board of directors. These provisions include:

a classified board of directors with three-year staggered terms, which may delay the ability of stockholders to change the membership of a majority of our board of directors;

no cumulative voting in the election of directors, which limits the ability of minority stockholders to elect director candidates;

the exclusive right of our board of directors to elect a director to fill a vacancy created by the expansion of the board of directors or the resignation, death, or removal of a director, which prevents stockholders from being able to fill vacancies on our board of directors;

the ability of our board of directors to determine to issue shares of preferred stock and to determine the price and other terms of those shares, including preferences and voting rights, without stockholder approval, which could be used to significantly dilute the ownership of a hostile acquirer;

from and after the Trigger Date, a prohibition on stockholder action by written consent, which forces stockholder action to be taken at an annual or special meeting of our stockholders;

Table of Contents

the requirement that a special meeting of stockholders may be called only by the chairman of our board of directors or our board of directors, which may delay the ability of our stockholders to force consideration of a proposal or to take action, including the removal of directors;

advance notice procedures that stockholders must comply with in order to nominate candidates to our board of directors or to propose matters to be acted upon at a stockholders' meeting, which may discourage or deter a potential acquirer from conducting a solicitation of proxies to elect the acquirer's own slate of directors or from otherwise attempting to obtain control of us;

the requirement of a 66²/₃% stockholder vote for the alteration, amendment, or repeal of certain provisions of our second amended and restated certificate of incorporation; and

stockholders may remove directors only for cause.

We are also subject to certain anti-takeover provisions under Delaware law. Under Delaware law, a corporation may not, in general, engage in a business combination with any holder of 15% or more of its capital stock unless the holder has held the stock for three years or, among other things, our board of directors has approved the transaction.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS AND INDUSTRY DATA

This prospectus includes forward-looking statements. In some instances, you can identify forward-looking statements by the words such as "believe," "may," "estimate," "continue," "anticipate," "intend," "plan," "expect," "predict," "potential," and similar expressions, as they relate to us, our business, and our management. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends affecting the financial condition of our business. Forward-looking statements should not be read as a guarantee of future performance or results, and will not necessarily be accurate indications of the times at, or by, which such performance or results will be achieved. Forward-looking statements are based on information available at the time those statements are made and/or management's good-faith belief as of that time with respect to future events, and are subject to risks and uncertainties that could cause actual performance or results to differ materially from those expressed in or suggested by the forward-looking statements. Important factors that could cause such differences include, but are not limited to:

our safety record and any related impact on our reputation;

our ability to comply with our debt obligations;

the effects of increased competition in our business;

our ability to accurately forecast revenues, convert our backlog into revenues, and appropriately plan our expenses;

the impact of worldwide economic conditions, including the resulting effect on governmental budgets and capital investments by governmental and private entities and including conditions in Greece and Italy;

changes in government regulation affecting our business;

the attraction and retention of qualified employees and key personnel;

our ability to effectively manage our growth;

our ability to keep pace with changes in technology and our competitors;

our ability to successfully enter new markets, manage our international expansion, and expand and diversify our customer base;

our ability to expand and market our manufacturing and MRO services;

our ability to market our aerial services in new geographic areas and markets;

our ability to successfully manage any future acquisitions of businesses, solutions, or technologies;

the success of our marketing efforts;

the impact of fluctuations in currency exchange rates; and

other risk factors included under "Risk Factors" in this prospectus.

The factors listed above are not exhaustive and new factors may emerge or changes to the foregoing factors may occur that could impact our business. In light of these risks and uncertainties, the forward-looking events and circumstances discussed in this prospectus may not occur and actual results could differ materially from those anticipated or implied in the forward-looking statements.

Forward-looking statements speak only as of the date of this prospectus. You should not put undue reliance on any forward-looking statements. We assume no obligation to update forward-looking statements to reflect actual results, changes in assumptions, or changes in other factors affecting forward-looking information, except to the extent required by applicable laws. If we update one or more

Table of Contents

forward-looking statements, no inference should be drawn that we will make additional updates with respect to those or other forward-looking statements.

Information contained in this prospectus concerning our industry and the markets in which we operate, including our general expectations, our market position, and market size estimates and forecasts, is based on market research, industry publications, publicly available information, assumptions that we have made that are based on such data and other similar sources, and on our knowledge of the markets in which we operate. We believe that such industry and market information is generally reliable. Although we have not independently verified any third-party information included in the industry and market information, we make our business decisions on the basis of this and other third-party information and we believe the presented information is accurate. Third-party publications generally state that they have obtained information from sources believed to be reliable but do not guarantee its accuracy and completeness. We are not funded by or otherwise affiliated with, and we did not fund, any of the sources we cite. In addition, industry and market estimates and projections are based on a number of assumptions and subject to risks and uncertainties, including those described in "Risk Factors" and elsewhere in this prospectus. If any one or more of the underlying assumptions turn out to be incorrect, actual results may differ materially from the estimates and projections. For example, the estimated future demand for sawlogs in the United States and Canada may not grow at the rate projected by market data, or at all. You are cautioned not to give undue weight to such estimates and projections.

Table of Contents

USE OF PROCEEDS

We estimate that we will receive net proceeds from the sale of shares of common stock in this offering of approximately \$65.3 million, assuming an initial public offering price of \$14.00 per share, after deducting underwriting discounts and commissions and estimated offering expenses. We intend to use the net proceeds of this offering as follows:

approximately \$41.8 million to pay down indebtedness under our revolving credit facility (as reduced by any additional amount we use to pay off interest that has accrued on our unsecured subordinated promissory notes since December 31, 2011), which will increase the amounts available for future borrowing under this facility and will, in our view, increase the likelihood of our compliance with the financial covenants under our Credit Agreement on an ongoing basis and improve our ability to refinance our senior credit facilities;

approximately \$23.5 million to pay off our unsecured subordinated promissory notes in full and such additional amounts as necessary to pay off interest accrued on such notes since December 31, 2011; and

the remaining net proceeds, if any, for general corporate and working capital purposes.

As of December 31, 2011, our total indebtedness, excluding letters of credit, was \$130.6 million, consisting of \$51.8 million borrowed under our revolving credit facility, \$55.3 million borrowed under our term loan facility and \$23.5 million borrowed under our unsecured subordinated promissory notes. At December 31, 2011, we had maximum availability for borrowings under our revolving credit facility of approximately \$13.4 million. We issued unsecured subordinated promissory notes with an original value of \$19.5 million and a 20% annual interest rate that is payable in kind by increasing the principal amount of the notes. As of December 31, 2011, the principal amount outstanding under the notes, including \$4.0 million in paid-in-kind interest, was \$23.5 million. We issued the notes to provide for additional borrowing capacity under our revolving credit facility, recognizing that the proceeds of this offering were intended to be used to pay off the remaining amounts owed under the unsecured subordinated promissory notes. Under the terms of our revolving credit facility, we are prevented from paying down principal on the unsecured subordinated promissory notes unless such payments are made with the proceeds of this offering.

At December 31, 2011, the interest rate on borrowings under our revolving credit facility, which terminates on June 24, 2013, was 3.61%, which was calculated based on the prime rate as quoted by Wells Fargo. As of December 31, 2011, there was \$51.8 million outstanding under our revolving credit facility, not including letters of credit. Amounts under our revolving credit facility were borrowed within the prior year and used to refinance our prior senior debt and second lien debt and for general working capital purposes. At December 31, 2011, the interest rate under our unsecured subordinated promissory notes was 20.0%, which is payable in kind by increasing the principal amount of such notes and is payable quarterly, and the outstanding principal balance under the notes was \$23.5 million, of which \$11.4 million mature on June 30, 2015 and \$12.1 million mature on June 30, 2016. For a description of the terms of our revolving credit facility and unsecured subordinated promissory notes see "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness."

Pending use for general corporate purposes, we intend to invest the net proceeds in short-term, investment-grade, interest-bearing securities. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity and Capital Resources" for additional information regarding our sources and uses of capital.

We will not receive any of the proceeds from the sale of shares by the selling stockholders. Pursuant to a registration rights agreement, we are obligated to pay all expenses of the selling stockholders in connection with this offering except for underwriting discounts and commissions which will be paid by the selling stockholders. See "Principal and Selling Stockholders" and "Description of Capital Stock Registration Rights."

Table of Contents

DIVIDEND POLICY

We have never declared or paid, and do not anticipate declaring or paying, any cash dividends on our common stock. Instead, we currently anticipate that we will retain all of our future earnings, if any, to fund the operation and expansion of our business and to use as working capital and for other general corporate purposes. Any future determination as to the declaration and payment of dividends, if any, will be at the discretion of our board of directors and will depend on then existing conditions, including our financial condition, operating results, contractual restrictions, capital requirements, business prospects, and other factors our board of directors may deem relevant. Our existing credit facility limits our ability to declare and pay dividends.

Table of Contents**CAPITALIZATION**

The table below sets forth our cash and cash equivalents and our capitalization on a consolidated basis as of December 31, 2011:

on an actual basis;

on a pro forma basis after giving effect to the completion of our recapitalization, as discussed under "Explanatory Note Regarding Recapitalization"; and

on a pro forma as adjusted basis after giving effect to the sale of 5,350,000 shares of our common stock offered by us in this offering (at an estimated initial public offering price of \$14.00 per share, the midpoint of the sale price range set forth on the cover of this prospectus) less the underwriting discount and estimated offering expenses, and the use of proceeds received by us from this offering as discussed under "Use of Proceeds."

You should read the following table in conjunction with "Management's Discussion and Analysis of Financial Condition and Results of Operations" and our consolidated financial statements and the related notes included elsewhere in this prospectus.

	As of December 31, 2011		
	Actual	Pro Forma ⁽¹⁾	Pro Forma As Adjusted
(In thousands)			
Cash and cash equivalents	\$ 268	\$ 268	\$ 268

(1) See "Explanatory Note Regarding Recapitalization."

Table of Contents

DILUTION

If you invest in our common stock, your interest will be diluted to the extent of the difference between the public offering price per share of our common stock and the pro forma net tangible book value per share of our common stock after this offering. Dilution results from the fact that the public offering price per share of our common stock is substantially in excess of net tangible book value per share attributable to existing stockholders for the presently outstanding stock. We calculate net tangible book value per share by dividing our net tangible book value, which equals total assets less intangible assets and total liabilities, by the number of shares outstanding.

The discussion and tables below are based on 1,000 shares of our Class A common stock outstanding as of December 31, 2011 and also reflect the issuance of shares of common stock in the recapitalization. On this basis, our net tangible book value at December 31, 2011 was \$57.0 million, or \$11.87 pro forma per share, based upon 4,802,970 shares outstanding.

After giving effect to the sale of 5,350,000 shares of common stock in this offering at a price of \$14.00 per share, the midpoint of the sale price range set forth on the cover of this prospectus, and after deducting the estimated underwriting discounts and commissions and estimated offering expenses payable by us, our pro forma net tangible book value as of December 31, 2011 would have been approximately \$122.3 million, or \$12.04 per share. This represents an immediate increase in net tangible book value of \$0.17 per share to existing stockholders, and an immediate dilution in net tangible book value of \$1.96 per share to new investors, or approximately 14% of the offering price of \$14.00 per share. The following table illustrates this dilution on a per share basis:

Assumed initial public offering price per share	\$ 14.00
Net tangible book value per share as of December 31, 2011	\$ 11.87
Increase in net tangible book value per share attributable to new investors	\$ 0.17
Pro forma net tangible book value per share of common stock after this offering	\$ 12.04
Dilution per share to new investors	\$ 1.96

The following table shows on a pro forma basis at December 31, 2011, after giving effect to the total cash consideration paid to us, the average price per share paid by existing stockholders and by new investors in this offering before deducting estimated underwriting discounts and estimated offering expenses payable by us.

	Shares Purchased		Total Consideration		Average Price Per Share
	Number	%	Amount	%	
Existing stockholders	4,802,970	47.3	93,103,000	55.4	\$ 19.38
New investors	5,350,000	52.7	74,900,000	44.6	\$ 14.00
Total	10,152,970	100.0%	168,003,000	100.0%	\$ 16.55

The above table excludes 417,649 shares of common stock reserved for issuance under our 2012 Long-Term Incentive Plan, which we intend to adopt prior to the closing of this offering, which includes the following RSUs that we intend to issue concurrently with the closing of this offering: (1) 252,935 RSUs to certain members of our management and (2) 4,864 RSUs to our independent directors. Each RSU entitles the holder to receive one share of our common stock. See "Executive Compensation Elements of Compensation Long-Term Equity Incentives."

Table of Contents

SELECTED CONSOLIDATED FINANCIAL AND OTHER DATA

The following tables set forth our selected consolidated financial and other data. We derived our selected consolidated financial and other data as of December 31, 2010 and 2011 and for the years ended December 31, 2009, 2010 and 2011 from our audited consolidated financial statements and notes thereto, which are included elsewhere in this prospectus. The balance sheet data as of December 31, 2007, 2008, and 2009 has been derived from our audited consolidated financial statements which are not included in this prospectus.

Our Company was acquired on September 27, 2007. Although we continued as the same legal entity following the acquisition, in the table below we refer to periods ended on or prior to September 26, 2007 as "predecessor" periods. The predecessor period balance sheets reflect the historical accounting basis in our assets and liabilities, and the balance sheets subsequent to September 27, 2007 reflect the new basis in our assets and liabilities resulting from the acquisition, which altered the book value of our aircraft, property, plant and equipment, and aircraft support parts and has impacted our operating costs compared to the predecessor periods.

We derived our selected consolidated financial and other data of the predecessor for the period from January 1, 2007 through September 26, 2007, and for us as of December 31, 2007, 2008, and 2009 and for the period from September 27, 2007 through December 31, 2007 and the year ended December 31, 2008 from audited consolidated financial statements and notes thereto, which are not included in this prospectus.

Our selected consolidated financial and other data are not necessarily indicative of our future performance. The data provided in this table are only a summary and do not include all of the data contained in our financial statements. Accordingly, this table should be read in conjunction with, and is qualified in its entirety by, our consolidated financial statements and related notes contained elsewhere in this prospectus and the sections of this prospectus entitled, "Management's Discussion and Analysis of Financial Condition and Results of Operations" and "Capitalization."

- (1) The period from January 1, 2007 through September 26, 2007 does not include the effect of fair value purchase accounting adjustments resulting from our acquisition on September 27, 2007. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Trends and Uncertainties Affecting Our Business."
- (2) Net revenues from Manufacturing / MRO reflect the sale of three Aircrafts in 2007, zero Aircrafts in 2008, one Aircraft in 2009, zero Aircrafts in 2010, and zero Aircrafts in 2011.
- (3) Other income (expense) for the period ended December 31, 2007 includes \$12.5 million in litigation settlement expenses; for the year ended December 31, 2008 includes a \$4.3 million gain related to an insurance settlement with respect to an Aircraft accident; for the year ended December 31, 2010 includes \$10.0 million in litigation settlement expenses and a net gain related to an aircraft accident in Malaysia of \$6.3 million, after accounting for insurance proceeds; and for the year ended December 31, 2011 includes \$2.7 million of recognized income associated with the reversal of interest expense from a tax settlement.
- (4) Income tax expense (benefit) for the year ended December 31, 2011 includes a tax benefit of \$9.5 million in connection with a tax settlement.
- (5) Dividends on Series A Redeemable Preferred Stock are non-cash accruals. No dividends have been paid or will be paid to holders of Series A Redeemable Preferred Stock. The Series A Redeemable Preferred Stock and the Class A Common Stock will be reclassified into 4,802,970 shares of a single class of common stock in connection with this offering. See "Explanatory Note Regarding Recapitalization."
- (6) Pro forma amounts give effect to our recapitalization in connection with this offering, including the reclassification of Series A Redeemable Preferred Stock and Class A Common Stock as common stock. The pro forma weighted diluted share amounts also include 257,799 shares of common stock related to RSUs that we intend to issue concurrently with the closing of this offering under our 2012 Long-Term Incentive Plan (except for the period September 27, 2007 through December 31, 2007 and the year ended December 31, 2010 because the effect of including these shares would be anti-dilutive). See "Explanatory Note Regarding Recapitalization" and "Executive Compensation 2012 Long-Term Incentive Plan."
- (7)

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Working capital is calculated as our current assets less our current liabilities.

- (8) Debt is comprised of amounts drawn under our revolving credit facility, our term loan, and our unsecured subordinated promissory notes. In June 2010, we replaced our former revolving credit facility and our former term loan with a new credit facility. As a result of the refinancing, we expensed \$2.3 million, including the unamortized portion of the previously deferred financing costs and early termination fees. See "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness."
- (9) Represents Series A Redeemable Preferred Stock which will be reclassified as common stock in connection with this offering. See "Explanatory Note Regarding Recapitalization" and note 5 above.

**MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

You should read the following discussion and analysis of our financial condition and results of our operations together with our financial statements and the related notes to those statements included in this prospectus. In addition to historical financial information, this discussion contains forward-looking statements reflecting our current plans, estimates, beliefs, and expectations that involve risks and uncertainties. As a result of many important factors, particularly those set forth under "Risk Factors" and "Special Note Regarding Forward-Looking Statements and Industry Data" in this prospectus, our actual results and the timing of events may differ materially from those anticipated in these forward-looking statements.

Overview of the Business

We specialize in the operation and manufacture of the Aircrane, a versatile and powerful heavy-lift helicopter. The Aircrane has a lift capacity of up to 25,000 pounds, and is the only commercial aircraft built specifically as a flying crane without a fuselage for internal load. The Aircrane is also the only commercial heavy-lift helicopter with a rear load-facing cockpit, combining an unobstructed view and complete aircraft control for precision lift and load placement capabilities. We own and operate a fleet of 17 Aircranes which we use to support a wide variety of government and commercial customers worldwide across a broad range of critical aerial services including firefighting, timber harvesting, infrastructure construction, and crewing. We refer to this segment of our business as Aerial Services. We also manufacture Aircranes and related components for sale to government and commercial customers and provide aftermarket support and maintenance, repair and overhaul services for the Aircrane and other aircraft. We refer to this segment of our business as Manufacturing / MRO. In 2010, our Aerial Services and Manufacturing / MRO segments generated revenues of \$105.7 million and \$12.5 million, respectively, and in 2011, our Aerial Services and Manufacturing / MRO segments generated revenues of \$138.6 million and \$14.1 million, respectively. In 2010, we had a net loss attributable to Erickson Air-Crane of \$8.3 million, and in 2011, we had net income attributable to Erickson Air-Crane of \$15.9 million.

In our Aerial Services segment, our engineering staff has developed enhanced mission-specific capabilities and modifications for the Aircrane that allow us to compete effectively and contribute to our market share. We typically lease our Aircranes to customers and provide associated crewing and maintenance services. Our pilots and mechanics are technical specialists with years of training. One of our offerings is to provide crewing for aircraft we have sold to various customers.

Through our Manufacturing / MRO segment we manufacture Aircranes from existing airframes, manufacture new components on a contract basis, and provide customers with FAA- and European Aviation Safety Agency-certified MRO services in our AS9100 certified facility. AS9100 is a widely adopted and standardized quality management system for the aerospace industry. We also offer CPH contracts pursuant to which we provide components and expendable supplies for a customer's aircraft at a fixed cost per flight hour. We believe CPH contracts help our customers better predict and manage their maintenance costs.

We manage our business using key operating indicators to measure our performance, balancing short-term results and strategic priorities.

Sales and Marketing

To maintain and strengthen our position in the Aerial Services market, we monitor revenue flight hours and aggregate revenues from firefighting, timber harvesting, construction and crewing contracts, and compare these against budgeted and forecasted targets to measure performance. We monitor our sales pipeline for each of these services, and maintain a master fleet schedule and attempt to maximize Aircrane utilization and revenues by minimizing our "white space," or Aircrane idle time.

To continue to build and develop our Manufacturing / MRO business, we focus on our aircraft sales pipeline, including the quality of our prospects, and on the number of bids and win-rate associated

Table of Contents

with bids for MRO and component manufacturing opportunities. We compare revenues against budgeted and forecasted targets to measure performance.

Operations and Safety

A key operating measure used by management in evaluating each of our business segments is gross profit, which is revenues less cost of revenues. Our most significant cost of revenues are material (including raw materials and plant labor and overhead including related employee benefits), fuel, and labor. We closely monitor material costs and fuel costs measured on a per-flight-hour basis. We also measure the costs of crewing (our pilots and field mechanics) and related expenses such as travel and local contract-related expenses, and compare these metrics against budgeted and forecasted targets to measure performance. We target all contracts to have positive gross profit; however, due to the seasonality of our business, we often have unabsorbed costs in the first quarter and the fourth quarter which could lead to negative reported gross profit in these quarters.

We evaluate key corporate projects and research and development projects based on projected returns on investment. We monitor implementation and development schedules and costs and compare performance to budgeted amounts.

Safety is critical to the operation of our business, and we measure a variety of safety metrics including detail by ground and aerial operations and by mechanical and human factor related causes. We measure all metrics for both the current period and long-term trending, both in absolute terms and on a per-flight-hour basis.

Financial and Overall Performance

We measure overall business performance according to five critical metrics: EBITDA, Bank EBITDA (see " Bank EBITDA"), revenue growth, net income, and free cash flow.

Our key liquidity measures include revolver availability, receivables aging, capital investments, and bank covenant compliance.

We annually prepare a five-year strategic plan encompassing expected results of operations and key growth opportunities. Our strategic planning process results in a complete set of forecasted financial statements, a critical action plan to achieve our strategic goals, and specific performance goals and measurements.

Our Operating Revenue

Aerial Services. Our Aerial Services revenue is derived primarily from contracts with government and commercial customers who use our services for firefighting, timber harvesting, infrastructure construction projects, and crewing services. Many of our contracts for Aerial Services are multi-year, and these contracts provide the majority of our current revenue backlog.

Firefighting Contracts. We generally charge a daily standby fee for the contract period with an additional rate for hours flown; some contracts include a minimum number of hours to be flown before the hourly rate is charged. We have both domestic and international contracts, which may be exclusive-use or call-when-needed in nature. Exclusive-use contracts denote that we are obligated to provide, and our customer is obligated to take and pay for, the use of our services. Call-when-needed contracts are contracts with pre-negotiated terms under which we may elect to provide services if requested.

Timber Harvesting Contracts. We generally operate on either an hourly rate structure or a per cubic meter of high grade timber delivered basis. We serve a variety of private customers in North America and Asia.

Infrastructure Construction Contracts. Our infrastructure construction operations vary from short-term construction jobs (generally one to five days in duration) to longer-term jobs (several months in duration) within the construction, energy transmission, and energy generation industries.

Table of Contents

Crewing Services. For customers who purchase an Aircrane but lack qualified operating personnel, we offer pilots and field maintenance crews on annual or multi-year contracts. We have contracts in place for crewing five of the nine aircraft we have sold since 2002.

Manufacturing / MRO. Our Manufacturing / MRO revenue is derived from the sale of Aircranes, from the sale of aircraft components, and from providing MRO and CPH services to various customers.

Aircrane Sales. In our Central Point, Oregon facility we have the capability to remanufacture Aircranes on existing S-64 and CH-54 airframes. Customers who identify a year-round or otherwise critical application for an Aircrane may find it advantageous to own an Aircrane rather than leasing our fleet's services. We have sold nine Aircranes since 2002.

Component Part Sales. We have an ongoing revenue stream from customers who own or operate either Aircranes or the military version, CH-54s and require parts support for their helicopters. We are also pursuing aftermarket opportunities to develop component parts for other aircraft.

MRO Services. Similar to component part sales, we have an ongoing revenue stream from customers who own or operate Aircranes, CH-54s, or other aircraft and need their aircraft components repaired or overhauled by a certified facility.

CPH Services. For customers who desire better predictability and stability in their aircraft operating costs, we offer contracts in which we provide components and expendable supplies at a fixed cost per flight hour.

Our Operating Expenses

Cost of Revenues. Our cost of revenues consists of purchased materials; consumed inventory; plant labor and overhead; aviation fuel; aircraft insurance; contract specific expenses associated with operating in various geographies; shipping costs for transporting our Aircranes; depreciation and amortization of our Aircranes, plant, property, and equipment; and pilot and field mechanic wages, benefits, and other related costs.

Selling and Marketing. Our selling and marketing expenses consist primarily of compensation, benefits, and travel related costs for sales and marketing employees and fees paid to contractors and consultants. Also included are expenses for trade shows, customer demonstrations, and public relations and other promotional and marketing activities, as well as cost of bad debts.

Research and Development. Our research and development expenses consist primarily of wages, benefits, and travel costs for our engineering employees and fees paid to contractors and consultants. Also included are expenses for materials needed to support research and development efforts and expenses associated with testing and certification.

General and Administrative. Our general and administrative expenses consist primarily of wages, benefits, and travel costs for general and administrative employees and fees paid to contractors and consultants in executive, finance, accounting, information technology, human resources, and legal roles, including employees in our foreign subsidiaries involved in these activities. Also included are expenses for legal, accounting, and other professional services and bank fees.

Other Income (Expense), Net. Our other income (expense) consists primarily of the interest paid on outstanding indebtedness, realized/unrealized foreign exchange gains and losses, amortization of debt issuance costs, and interest related to tax contingencies, as well as certain other charges and income, such as legal settlements, gain and loss on the disposal of equipment, amortization and write-off of deferred financing fees, and insurance settlements. With regard to foreign exchange gains and losses, our operations in foreign countries are partially self-hedged, with the majority of our European, Canadian, Australian and Asian contracts having both revenues and local expenses paid in the local currency; in addition, some of our contracts provide for rate adjustments based on changes in currency exchange rates. For currency exposure that is not self-hedged, we sometimes enter into forward contracts to reduce our currency risk.

Table of Contents

Trends and Uncertainties Affecting Our Business

Effect of 2007 Acquisition. Our Company was acquired on September 27, 2007, in which the buyers acquired 100% of our outstanding common stock for \$93.1 million, which amount included direct acquisition costs of \$3.4 million. The acquisition was accounted for as a purchase in accordance with the Financial Accounting Standard Board's Accounting Standards Codification No. 805, Business Combinations. As a result, we allocated the purchase price to the assets acquired and the liabilities assumed at the date of the acquisition based on their estimated fair value as of the closing date. The difference between the aggregate purchase price and the estimated fair value of the assets acquired and liabilities assumed was approximately \$553.7 million. Our management determined that the fair value of the various assets acquired and liabilities assumed was \$646.8 million on the date of acquisition and that, based in part on a valuation provided by an independent third party as required by GAAP in connection with such determination, the fair value of the 18 Aircranes in our fleet on the date of acquisition was \$317.7 million. The negative goodwill was used to reduce the value of Aircranes and support parts and other property, plant and equipment. As a result of this adjustment, the cost of revenues in each of the successor periods included in this prospectus reflects the lower carrying value of our aircraft support parts that we have sold or used in our maintenance, repair, and overhaul operations. The aggregate effect of the purchase accounting adjustment with respect to our inventory was approximately \$28.5 million from the date of acquisition through December 31, 2011. Based on our past experience and historical inventory usage patterns, we expect to largely realize the benefit of the approximately \$20.0 million remaining fair value purchase accounting adjustment to aircraft support parts over the next five years as we sell and use our legacy inventory. Our legacy inventory consists of aircraft parts and components purchased over multiple years for which there is no liquid market; therefore, there is no guarantee that we will be able to purchase new inventory at the carrying values of our legacy inventory currently reflected on our balance sheet.

Aircrane Sales. A sale of an Aircrane has a material effect on our financial results, and Aircrane sales have been a dominant factor in fluctuations in our year-over-year results. Although we have focused our sales and marketing efforts on increasing Aircrane sales, sales are not guaranteed in a particular financial period or at all. In the six years comprising 2006 to 2011, we sold three, three, zero, one, zero, and zero Aircrane(s), respectively. Since 2002, we have sold and delivered nine Aircranes. One of our significant customers holds the right to exercise a put option that would, if exercised, require us to repurchase on July 31, 2013 the Aircrane we sold to the customer in 2009. The exercise price would be the fair market value of the Aircrane, determined by independent appraisers at the time of exercise. The fair market value of the Aircrane at July 31, 2013 will be highly dependent upon the hours of usage and the customer use profile for the Aircrane, which makes it difficult to estimate a fair value at this time. However, management believes an anticipated range of fair value, based upon our experience and industry knowledge, should be approximately between \$10.0 million and \$18.0 million. Because our existing credit facility terminates on June 24, 2013, our ability to finance this purchase may depend on our ability to obtain new financing in the ordinary course of our business. If the put option is exercised, the customer must provide six months' advance notice, and we would anticipate funding the purchase through our credit facilities, if available, or by improving our cash flow position by adjusting inventory levels and build plans. None of our other aircraft sale agreements have included a put option. We agreed to provide a put option in our 2009 sale agreement based on that customer's unique circumstances. Inclusion of the put option was important to the customer when the sale agreement was negotiated.

We currently have 17 Aircranes that we employ in providing Aerial Services. We have manufactured two Aircranes that are ready for sale, one of which is complete and one of which is substantially complete. These two Aircranes are held in inventory and are not part of our fleet of 17 Aircranes that we operate for our customers. Manufacturing the Aircranes held in inventory significantly impacts our cash flow from operations. We expect to have a significant decrease in the amount of cash used for inventory in 2012 as compared to the amounts used in 2010 and 2011. Although we have entered into several non-binding agreements and a binding Aircraft Lease and Purchase Option Agreement with HRT, HRT did not

Table of Contents

exercise its purchase option thereunder and allowed its lease to expire, and we have not sold an Aircrane since 2009. The Aircrane that was subject to the Aircraft Lease and Purchase Option Agreement with HRT was one of the 17 Aircranes in our Aerial Services fleet. In addition, the failure of HRT to exercise its purchase option and the failure by us to otherwise sell an Aircrane increases the risk that we may fail to comply with the financial covenants under our Credit Agreement in 2012. We entered into a non-binding letter of intent with THK, pursuant to which THK expressed its intent to purchase one Aircrane on or prior to June 30, 2012. The terms of a binding agreement remain subject to ongoing negotiations between us and THK, and we do not know when such negotiation will conclude. There can be no assurance that THK will purchase an Aircrane. See "Prospectus Summary Recent Developments." To effect a sale, we could sell one of our 17 Aircranes used for Aerial Services. Although we would expect to be able to maintain the level of our operations through more efficient scheduling of our fleet or by allocating Aircranes held for sale to Aerial Services operations if we consummate such a sale, we may not always have the ability to maintain our desired level of Aerial Services operations with a reduced fleet, which could reduce our ability to generate Aerial Services revenues.

Historically, we have recognized revenues on Aircrane sales when the Aircrane was delivered to a customer, because management did not believe it was able to accurately estimate the percentage of completion of an Aircrane during manufacturing. In light of revisions to our cost tracking and estimating processes, we expect to recognize revenue for our long-term construction contracts in the future using the percentage of completion method, when all required criteria are met. With respect to the one completed Aircrane and the one substantially completed Aircrane included in Aircrane and support parts in process at December 31, 2011, we have not recognized any revenue on either Aircrane since neither Aircrane is under a purchase agreement and therefore the criteria for using the percentage of completion method of accounting have not been met. Revenue on contracts using the percentage of completion method is based on estimates, including estimated labor hours. See "Critical Accounting Policies and Estimates Revenue Recognition Manufacturing / MRO." Because the percentage of completion method requires management estimates of aggregate contract costs, changes in estimates between periods could affect our anticipated earnings. See "Risk Factors Risks Related to Our Business We make estimates in accounting for revenues and costs, and any changes in these estimates may significantly impact our earnings."

Credit Agreement Compliance and Refinancing Costs. We are subject to financial covenants under our Credit Agreement, including a leverage ratio test based on maximum Funded Indebtedness (excluding subordinated debt) to Bank EBITDA, a minimum fixed charge coverage ratio, and beginning with the quarter ending June 30, 2012 and thereafter, a minimum tangible net worth amount. See "Description of Indebtedness Senior Credit Facilities." We were not in compliance with certain financial covenants under our Credit Agreement as of December 31, 2010 and March 31, 2011, and subsequent amendments to our Credit Agreement waived such non-compliance. We were in compliance with our financial covenants at June 30, 2011, September 30, 2011, and December 31, 2011, and we expect to be in compliance with such financial covenants at March 31, 2012. Our ability to comply with the financial covenants under our Credit Agreement in 2012 and 2013 is subject to various risks and uncertainties, and among other factors may be adversely affected by any of the following:

if our business does not perform as expected, including if we generate less than anticipated revenue from our Aerial Services operations or encounter significant unexpected costs;

if we do not sell an Aircrane;

if we are not successful in winning a contract award through the NAMS tender process for an aerial services contract with the Hellenic Fire Brigade relating to the 2012 to 2014 firefighting seasons and we are unable to redeploy the three Aircranes we have historically used to provide services in Greece in order to generate comparable revenues and operating earnings; or

if we fail to timely collect our receivables, including our receivable from the Hellenic Fire Brigade.

Table of Contents

For a discussion of these and other risks, see "Risk Factors" generally, including "Risk Factors Risks Related to Our Business Our indebtedness and significant debt service obligations could adversely affect our financial condition and impair our ability to grow and operate our business and we may not comply with the financial covenants under our Credit Agreement in 2012." If we fail to comply with the financial covenants under our Credit Agreement, we may incur additional costs that might adversely affect our financial condition, results of operations and cash flows. Such costs might include costs related to obtaining a waiver of any such non-compliance from our lenders. We cannot assure you that our lenders will agree to waive any such non-compliance.

Although we intend to use the proceeds of this offering to pay down indebtedness under our revolving credit facility and to pay off our unsecured subordinated promissory notes (which have a 20% annual interest rate that is payable in kind by increasing the principal amount of the notes) in order to increase the likelihood of our compliance with the financial covenants under our Credit Agreement and to improve our ability to refinance our senior credit facilities, there will remain uncertainties regarding our ability to comply with our financial covenants in 2012 and 2013 and achieve such refinancing.

The senior credit facilities under our Credit Agreement mature on June 24, 2013. We intend to refinance our senior credit facilities with new credit facilities prior to such maturity. Such refinancing may cause us to incur significant costs, including costs related to the acceleration of amortizing debt issuance costs.

Greek Economic Crisis. The Greek economy in particular has been adversely affected by global financial pressures. We have historically received approximately \$13 million of revenue each year from our contract with the Hellenic Fire Brigade. During 2011, we received an advance payment of approximately 50% of the expected 2011 revenue pursuant to our contract with the Hellenic Fire Brigade. The balance of approximately \$5.8 million in accounts receivable is currently past due. In February 2012, the Hellenic Fire Brigade informed our agents and representatives in Greece that, although funds for this receivable have been allocated for payment to us, under Greek law it cannot make the payment until a tax withholding issue is resolved. We are currently working with our agents and representatives in Greece, local tax advisors, and the Greek tax authorities to resolve this withholding tax issue. Although we believe the receivable to be fully collectible, in the event that it is not and we write-off the receivable, we may fail to comply with the financial covenants under our Credit Agreement in 2012.

Our contract with the Hellenic Fire Brigade calls for annual confirmation notices. On January 31, 2012, the Hellenic Fire Brigade notified us that it would not exercise its option to extend our existing contract for the 2012 fire season, which contract relates to the use of three Aircranes during the summer of 2012. The Hellenic Fire Brigade has not notified us whether it intends to exercise its option for the 2013 fire season. As a result of these developments, we are not currently providing services to the Hellenic Fire Brigade and our backlog has been reduced by approximately \$25.4 million relating to services we had expected to provide to the Hellenic Fire Brigade in 2012 and 2013. See "Business Backlog" for a discussion of how we define and calculate backlog. We did not receive any advance payments under this contract for 2012.

Our agents and representatives in Greece have informed us that the Hellenic Fire Brigade has cancelled or not exercised its extension options in respect of all of its firefighting contracts for 2012 with us and all other aerial service providers. NAMSA has posted on its website a request for proposal for Greek aerial firefighting services for the 2012 to 2014 firefighting seasons. We have registered as a NAMSA supplier and we expect to provide a response by late April to the request for proposal to compete for the requested aerial firefighting services to be provided by three heavy-lift helicopters in Greece for 2012 through 2014. The aircraft specifications for the requested services are similar to those relating to the previous tender by the Hellenic Fire Brigade in 2010 that we successfully won. The Hellenic Fire Brigade has been a continuous customer of ours for more than ten years through several successful re-tendering processes. There is no guarantee that our bid will be successful or that we will be able to satisfy tender specifications. If a Greek contract is awarded to us, there is no guarantee that our revenues and profit margins thereunder will be similar to those that we have received in connection with past contracts with the Hellenic Fire Brigade. If a Greek contract is not awarded to us and we are unable to redeploy the three

Table of Contents

Aircranes we have historically used to provide services in Greece in order to generate comparable revenues and operating earnings, we may fail to comply with the financial covenants under our Credit Agreement in 2012.

November 2011 Restructuring. On November 2, 2011, we completed a company restructuring which included a reduction-in-force of 119 employees that affected both our Aerial Services and our Manufacturing / MRO segments. The restructuring was needed to realign our operating expenses to ensure that we remain competitive in the markets we serve. However, as a result of the reduction-in-force, we may experience longer aircraft delivery lead times for future customers who wish to purchase Aircranes, which may delay the timing of our aircraft sales revenues in the future. In the event that we experience significantly increased customer demand to purchase our Aircranes, we anticipate being able to meet such demand by rapidly expanding our manufacturing capacity and related resources. However, such expansion may require us to incur significant costs.

Seasonality. Our Aerial Services operations in any given location are heavily seasonal and depend on prevailing weather conditions. Our flight hours are substantially reduced in winter or monsoon seasons. The global deployment of our helicopters and crews helps to limit the effect of seasonality, but our Aerial Services operations tend to peak in June through October and to be at a low point in January through April. Due to the seasonality of our business, we often have unabsorbed costs in the first quarter and the fourth quarter which could lead to negative reported gross profit in these quarters.

Stock-based Compensation. Prior to the closing of this offering, we intend to adopt our 2012 Long-Term Incentive Plan and to commence granting equity awards thereunder. We expect increased operating expenses associated with stock-based compensation, which will be allocated and included primarily in general and administrative expenses and selling and marketing expenses. We expect substantially all of our stock-based compensation expense to be comprised of costs associated with equity incentive awards issued to employees. We will record the fair value of these equity-based awards and expense their cost ratably over related vesting periods, which we expect will generally be five years.

We intend to issue 257,799 RSUs concurrently with the closing of this offering, including: (1) 252,935 RSUs to certain members of our management and (2) 4,864 RSUs to our independent directors. The value of each RSU will be the initial public offering price. Assuming issuance at a price of \$14.00 per share, the midpoint of the sale price range set forth on the cover of this prospectus, we would expect to recognize stock-based compensation expense of approximately \$2.1 million for the three months ending March 31, 2012 with an additional stock-based compensation expense of approximately \$1.5 million that will be recognized over the remaining vesting period of such RSUs. In future periods, our stock-based compensation expense may increase materially if we issue additional stock-based awards to attract and retain employees.

Table of Contents**Results of Operations****2011 Compared to 2010**

The following table presents our consolidated operating results for the year ended December 31, 2011 compared to the year ended December 31, 2010:

(Dollars in thousands)	Year Ended December 31, 2010	% of Revenues	Year Ended December 31, 2011	% of Revenues	Change	%
						Change
Net revenues:						
Aerial Services	\$ 105,747	89.4	\$ 138,637	90.7	\$ 32,890	31.1

Table of Contents

Revenues

Consolidated revenues increased by \$34.5 million, or 29.2%, to \$152.8 million in 2011 from \$118.2 million in 2010. The increase in revenues was attributable to a \$32.9 million increase in Aerial Services revenues and a \$1.6 million increase in Manufacturing / MRO revenues compared to 2010.

(Dollars in thousands)	Year Ended December 31, 2010	% of Revenues	Year Ended December 31, 2011	% of Revenues	Change	% Change
Net revenues:						
Aerial Services	\$ 105,747	89.4	\$ 138,637	90.7	\$ 32,890	31.1
Manufacturing / MRO	12,493	10.6	14,132	9.3	1,639	13.1
Total revenues	\$ 118,240	100.0	\$ 152,769	100.0	\$ 34,529	29.2

Aerial Services. Aerial Services revenues increased by \$32.9 million, or 31.1%, to \$138.6 million in 2011 from \$105.7 million in 2010. This increase was due in part to a 40.0% increase in revenue flight hours for Aerial Services during 2011 to 10,152 hours from 7,252 hours in 2010.

The following are our revenues and revenue flight hours by type of service for 2011 and 2010:

(Dollars in thousands)	Year Ended December 31, 2010	Year Ended December 31, 2011	Change	% Change
Aerial Services Revenues:				
Firefighting	\$ 54,749	\$ 72,939	\$ 18,190	33.2
Timber Harvesting	29,694	31,684	1,990	6.7
Infrastructure Construction	5,743	14,459	8,716	151.8
Crewing	15,561	19,555	3,994	25.7
Total Aerial Services revenues	\$ 105,747	\$ 138,637	\$ 32,890	31.1

(Dollars in thousands)	Year Ended December 31, 2010	Year Ended December 31, 2011	Change	% Change
Aerial Services Revenue Flight Hours:				
Firefighting	1,803	3,088	1,285	71.3
Timber Harvesting	4,137	4,585	448	10.8
Infrastructure Construction	342	961	619	181.0
Crewing	970	1,518	548	56.5
Total Aerial Services revenue flight hours	7,252	10,152	2,900	40.0

Firefighting revenues increased by \$18.2 million, or 33.2%, to \$72.9 million in 2011 from \$54.7 million in 2010. This increase was largely due to increases in firefighting revenues in North America of \$14.6 million and in Australia of \$3.8 million in 2011 compared to 2010. In 2011, both the United States and Canada experienced active fire seasons which resulted in higher demand for our services as compared to 2010. In Australia the increase in revenues was primarily due to contract extensions.

Timber Harvesting revenues increased by \$2.0 million, or 6.7%, to \$31.7 million in 2011 from \$29.7 million in 2010. This increase was primarily due to revenues from a new Canadian customer in 2011.

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Infrastructure Construction revenues increased by \$8.7 million, or 151.8%, to \$14.5 million in 2011 from \$5.7 million in 2010. This increase was primarily due to longer duration jobs in Canada and the United States and new customers in Brazil, Peru, and Malaysia.

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Table of Contents

Crewing revenues increased by \$4.0 million, or 25.7%, to \$19.6 million in 2011 from \$15.6 million in 2010. This increase was due to the mid-year 2010 start of the contract with a United States customer and to higher flight hours in Italy.

Manufacturing / MRO. Manufacturing / MRO revenue increased by \$1.6 million, or 13.1%, to \$14.1 million in 2011 from \$12.5 million in 2010. This increase was primarily due to higher flight hours on our CPH contract in Italy.

Gross Profit

Consolidated gross profit increased by \$16.2 million, or 55.5%, to \$45.5 million in 2011 from \$29.2 million in 2010. The increase was attributable to an increase in Aerial Services gross profit of \$20.7 million, partially offset by a decrease in gross profit from Manufacturing / MRO of \$4.4 million in 2011 compared to 2010.

(Dollars in thousands)	Year Ended December 31, 2010	% of Related Revenues	Year Ended December 31, 2011	% of Related Revenues	Change	% Change
Gross profit						
Aerial Services	\$ 24,394	23.1	\$ 45,071	32.5	\$ 20,677	84.8
Manufacturing / MRO	4,842	38.8	402	2.8	(4,440)	(91.7)
 Total gross profit	 \$ 29,236	 24.7	 \$ 45,473	 29.8	 \$ 16,237	 55.5

Aerial Services. Aerial Services gross profit increased by \$20.7 million, or 84.8%, to \$45.1 million in 2011 from \$24.4 million in 2010. Gross profit margin was 29.8% in 2011 compared to 24.7% in 2010. The revenue increase of \$32.9 million for 2011 compared to 2010 was the primary reason for the gross profit improvement. Certain costs of Aerial Services revenues are fixed in nature, and the increase in flight hour revenues directly benefitted our operating margins and results and were partially offset by costs associated with increased maintenance performed in 2011.

Manufacturing / MRO. Manufacturing / MRO gross profit decreased by \$4.4 million, or 91.7%, to \$0.4 million in 2011 compared to \$4.8 million in 2010, primarily due to higher plant costs, including scrap and unabsorbed plant costs due to lower plant activity levels; a net increase in excess inventory reserves; and higher warranty costs associated with an accessory failure on a customer's Aircrane.

Operating Expenses

(Dollars in thousands)	Year Ended December 31, 2010	% of Revenues	Year Ended December 31, 2011	% of Revenues	Change	% Change
Operating expenses:

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Table of Contents

Operating expenses increased by \$1.4 million, or 5.0%, to \$28.9 million in 2011 from \$27.5 million in 2010. The change was primarily due to the write-off of the receivable related to our U.S. Forest Service claim and charges due to our November 2011 restructuring, partially offset by a decrease in legal expenses and a decrease in research and development expenses resulting from the completion of a major project during 2010.

Other Income (Expense), Net

(Dollars in thousands)	Year Ended December 31, 2010	% of Revenues	Year Ended December 31, 2011	% of Revenues	Change	%

Table of Contents

Revenues

Consolidated revenues decreased by \$31.4 million, or 21.0%, to \$118.2 million in 2010 from \$149.6 million in 2009. The decrease in revenues was attributable to a \$7.9 million decrease in Aerial Services revenues and a \$23.5 million decrease in Manufacturing / MRO revenues.

(Dollars in thousands)	Year Ended December 31, 2009	% of Revenues	Year Ended December 31, 2010	% of Revenues	Change	% Change
Net revenues:						
Aerial Services	\$ 113,603	75.9	\$ 105,747	89.4	\$ (7,856)	(6.9)
Manufacturing / MRO	36,019	24.1	12,493	10.6	(23,526)	(65.3)
Total revenues	\$ 149,622	100.0	\$ 118,240	100.0	\$ (31,382)	(21.0)

Aerial Services. Aerial Services revenues decreased by \$7.9 million, or 6.9%, to \$105.7 million in 2010 from \$113.6 million in 2009. This decrease was due in part to a 10.8% decrease in revenue flight hours for Aerial Services during 2010 to 7,252 hours from 8,132 hours in 2009.

The following are our revenues and revenue flight hours by type of service for the year ended December 31, 2010 and 2009:

(Dollars in thousands)	Year Ended December 31, 2009	Year Ended December 31, 2010	Change	% Change
Aerial Services Revenues:				
Firefighting	\$ 74,802	\$ 54,749	\$ (20,053)	(26.8)
Timber Harvesting	23,624	29,694	6,070	25.7
Infrastructure Construction	7,494	5,743	(1,751)	(23.4)
Crewing	7,683	15,561	7,878	102.5
Total Aerial Services revenues	\$ 113,603	\$ 105,747	\$ (7,856)	(6.9)

	Year Ended December 31, 2009	Year Ended December 31, 2010	Change	% Change
Aerial Services Revenue Flight Hours:				
Firefighting	3,332	1,803	(1,529)	(45.9)
Timber Harvesting	3,611	4,137	526	14.6
Infrastructure Construction	406	342	(64)	(15.8)
Crewing	783	970	187	23.9
Total Aerial Services revenue flight hours	8,132	7,252	(880)	(10.8)

Firefighting revenues decreased by \$20.1 million, or 26.8%, to \$54.8 million in 2010 from \$74.8 million in 2009. This decrease was primarily due to a contract restructuring with a European customer in 2009, in which we transitioned services from firefighting to crewing and CPH services, resulting in a decrease of approximately \$9.9 million in firefighting revenues and an increase of approximately \$8.9 million in crewing and CPH services in 2010 compared to 2009. This was coupled with decreases in firefighting revenues in Canada of \$4.7 million, in Australia of \$4.9 million and in Greece of \$2.7 million in 2010 compared to 2009 partially offset by a \$2.1 million increase in firefighting revenues in the United States. In 2009, both British Columbia, Canada and Australia experienced active fire seasons which resulted in relatively higher demand for our services. In the United States, an additional Aircrane was added to our U.S. Forest Service contract, resulting in increased revenues of \$2.0 million in 2010.

Table of Contents

Timber Harvesting revenues increased by \$6.1 million, or 25.7%, to \$29.7 million in 2010 from \$23.6 million in 2009. This increase was primarily due to revenues from a full year of sales with a Malaysian customer in 2010 as compared to 2009.

Infrastructure Construction revenues decreased by \$1.8 million, or 23.4%, to \$5.7 million in 2010 from \$7.5 million in 2009, primarily due to shorter-duration jobs and lower construction hours flown in 2010 compared to 2009.

Crewing revenues increased by \$7.9 million, or 102.5%, to \$15.6 million in 2010 from \$7.7 million in 2009. The increase was primarily due to a contract restructuring with a significant European customer, resulting in an increase in crewing services and a decrease in firefighting services with this customer; as part of the contract restructuring, flight hours on this European customer's Aircranes, which were reported as Crewing flight hours before the restructuring, are reported as CPH flight hours in Manufacturing / MRO after the restructuring. Additionally, during 2010 we began crewing for the customer we sold and delivered an aircraft to in 2009.

Manufacturing / MRO. Manufacturing / MRO revenue decreased by \$23.5 million to \$12.5 million in 2010 from \$36.0 million in 2009. The decrease in revenue was primarily the result of not having an aircraft sale in 2010 and having one aircraft sale in 2009, which was partially offset by an increase in CPH for 2010 as compared to 2009, primarily due to the restructuring of a contract with a European customer as discussed above.

Gross Profit

Consolidated gross profit decreased by \$22.3 million, or 43.2%, to \$29.2 million in 2010 from \$51.5 million in 2009. The decrease was attributable to a decrease in Aerial Services gross profit of \$12.4 million and a decrease in gross profit from Manufacturing / MRO of \$9.9 million in 2010 compared to 2009.

(Dollars in thousands)	Year Ended December 31, 2009	% of Related Revenues	Year Ended December 31, 2010	% of Related Revenues	Change	% Change
Gross profit						
Aerial Services	\$ 36,748	32.3	\$ 24,394	23.1	\$ (12,354)	(33.6)
Manufacturing / MRO	14,747	40.9	4,842	38.8	(9,905)	(67.2)
Total gross profit	\$ 51,495	34.4	\$ 29,236	24.7	\$ (22,259)	(43.2)

Aerial Services. Aerial Services gross profit decreased by \$12.4 million, or 33.6%, to \$24.4 million in 2010 from \$36.7 million in 2009. Gross profit margin was 23.1% in 2010 compared to 32.3% in 2009. The lower gross profit margin primarily resulted from (1) a change in the mix of our revenues from firefighting to timber harvesting and crewing, (2) increased insurance premiums after an aircraft accident in June 2010, (3) the \$7.9 million revenue decrease in 2010 compared to 2009, and (4) the effects of our fixed costs related to Aerial Services spread across lower flight hour revenues in 2010 compared to 2009.

Manufacturing / MRO. Manufacturing / MRO gross profit decreased by \$9.9 million, or 67.2%, to \$4.8 million in 2010 compared to \$14.7 million in 2009, primarily due to the decreased revenues. Gross profit margin was 38.8% in 2010 compared to 40.9% in 2009.

Table of Contents*Operating Expenses*

(Dollars in thousands)	Year Ended December 31, 2009	% of Revenues	Year Ended December 31, 2010	% of Revenues	Change	%
Operating expenses:						
General and administrative	\$ 14,877	9.9	\$ 14,105	11.9	\$ (772)	(5.2)

Income (loss) from operations	\$ 24,614	16.5	\$ 1,744	1.5	\$ (22,870)	(92.9)
-------------------------------	-----------	------	----------	-----	-------------	--------

Operating expenses, which include general and administrative, research and development, and selling and marketing, increased by \$0.6 million, or 2.3%, to \$27.5 million in 2010 from \$26.9 million in 2009. The change was primarily due to a greater investment in our sales and marketing functions in 2010 compared to 2009, including the addition of key personnel, coupled with an increase in our allowance for bad debts and legal fees, partially offset by reductions in incentive based compensation and research and development spending.

Other Income (Expense), Net

(Dollars in thousands)	Year Ended December 31, 2009	% of Revenues	Year Ended December 31, 2010	% of Revenues	Change	%

Unrealized foreign exchange gain (loss)	(992)	(905)	87
Realized foreign exchange gain (loss)	371	34	(337)
Gain (loss) on disposal of equipment	349	(83)	(432)
Amortization of debt issuance costs	(975)	(703)	272
Interest expense related to tax contingencies	(500)	(495)	5
Other income (expense), net	760	(326)	(1,086)
Other income (expense), net	\$ (987)	\$ (6,193)	\$ (5,206)

Other income (expense), net in 2010 included our \$10.0 million litigation settlement with Evergreen Helicopters, Inc., partially offset by a net gain of \$6.3 million, after accounting for insurance proceeds, associated with an aircraft accident; and foreign exchange gains and (losses) of a net loss of \$0.9 million in 2010 compared to a net loss of \$0.6 million in 2009.

Income Tax Expense (Benefit)

(Dollars in thousands)	Year Ended December 31, 2009	% of Revenues	Year Ended December 31, 2010	% of Revenues	Change	% Change
Net income (loss) before income taxes and noncontrolling interest	\$ 17,621	11.8	\$ (11,579)	(9.8)	\$ (29,200)	NM
Income tax expense (benefit)	5,330	3.6	(3,544)	(3.0)	(8,874)	NM
Net income (loss)	\$ 12,291	8.2	\$ (8,035)	(6.8)	\$ (20,326)	NM

Income tax expense (benefit) decreased by \$8.9 million to a benefit of \$3.5 million in 2010 from an expense of \$5.3 million in 2009, primarily due to the decrease in net income (loss) before taxes. The effective tax rate in 2010 was 30.6% compared to 30.2% in 2009.

Net Income (Loss) Attributable to Erickson Air-Crane Incorporated

(Dollars in thousands)	Year Ended December 31, 2009	% of Revenues	Year Ended December 31, 2010	% of Revenues	Change	% Change
Net income (loss)	\$ 12,291	8.2	\$ (8,035)	(6.8)	\$ (20,326)	NM

Net income (loss) attributable to common stockholders	\$	5,246	3.5	\$	(16,176)	(13.7)	\$	(21,422)	NM
---	----	-------	-----	----	----------	--------	----	----------	----

Table of Contents

Net income (loss) attributable to Erickson Air-Crane Incorporated decreased by \$20.3 million to a loss of \$8.3 million in 2010 from an income of \$12.1 million in 2009, primarily due to the changes in revenues and expenses discussed above. Net income (loss) attributable to common stockholders decreased by \$21.4 million to a loss of \$16.2 million in 2010 from an income of \$5.2 million in 2009 after accounting for accrued dividends on our Series A Redeemable Preferred Stock.

Liquidity and Capital Resources

We believe that our cash flows from operations, together with cash on hand and the availability of our revolving credit facility, will provide us with the ability to fund our operations, make planned capital expenditures, and make scheduled debt service payments for at least the next 12 months. Although we had cash used in operations in 2010 and 2011, we expect to have cash flow from operations in 2012 primarily because a significant factor that caused us to have cash used in operations in 2010 and 2011 was the increase in our inventory mainly attributable to the manufacture of two Aircranes. We expect to have a significant decrease in the amount of cash used for inventory in 2012 as compared to the amounts used in 2010 and 2011 and, to a lesser extent, savings resulting from our reduction-in-force in November 2011. However, such cash flows are dependent upon our future operating performance, which, in turn, is subject to prevailing economic conditions and to financial, business, and other factors, including the conditions of our markets, some of which are beyond our control. Specifically, we have a concentration of large customers, several of which are U.S. and foreign government agencies or entities, and our cash flows depend on being able to collect our receivables from them. See "Risk Factors Risks Related to Our Business We depend on a small number of large customers for a significant portion of our revenues" and " Risks Related to Our Business Our failure to timely collect our receivables could adversely affect our cash flows and results of operations and our compliance with the financial covenants under our Credit Agreement." If, in the future, we cannot generate sufficient cash from operations to comply with our debt service obligations, we will need to refinance such debt obligations, obtain additional financing, or sell assets. We cannot assure you that our business will generate cash from operations, or that we will be able to obtain financing from other sources, sufficient to satisfy our debt service or other requirements.

Our senior credit facilities mature on June 24, 2013. Prior to maturity, we intend to refinance our senior credit facilities with new credit facilities.

One of our significant customers holds the right to exercise a put option that would, if exercised, require us to repurchase on July 31, 2013 the Airplane we sold to such customer in 2009. If such customer exercises this put option, we expect to pay the repurchase price with cash generated from operations and any currently available financing sources. Because our existing credit facility terminates on June 24, 2013, our ability to finance this purchase may depend on our ability to refinance our senior credit facilities as described above.

2011 Compared to 2010

The following chart is a condensed presentation of our statement of cash flows for year ended December 31, 2011 and 2010 (in thousands):

	Year Ended December 31, 2010	Year Ended December 31, 2011	Change
Net cash provided by (used in) operating activities	\$ (8,430)	\$ (20,723)	\$ (12,293)
Net cash provided by (used in) investing activities	(5,017)	(13,083)	(8,066)
Net cash provided by (used in) financing activities	11,057	32,759	21,702
Foreign-currency effect on cash and cash equivalents	782	(613)	(1,395)
Net increase (decrease) in cash and cash equivalents	(1,608)	(1,660)	(52)
Cash and cash equivalents at beginning of period	3,536	1,928	(1,608)
Cash and cash equivalents at the end of period	\$ 1,928	\$ 268	\$ (1,660)

Table of Contents**Sources and Uses of Cash**

At December 31, 2011, we had cash and cash equivalents of \$0.3 million compared to \$1.9 million at December 31, 2010. At December 31, 2011, we had restricted cash of \$5.2 million compared to \$4.3 million at December 31, 2010. Our cash and cash equivalents are intended to be used for working capital, capital expenditures, and debt repayments. Our restricted cash includes cash to secure certain performance and bid bonds on certain contracts.

Net cash provided by (used in) operating activities. For the year ended December 31, 2011, net cash provided by operating activities before the change in operating assets and liabilities was \$20.0 million, which included net income of \$16.3 million and non-cash adjustments reconciling net income to net cash provided by operating activities of \$3.7 million (depreciation of \$7.3 million and amortization of debt issuance costs of \$0.9 million, non-cash interest on subordinated notes of \$3.2 million, coupled with an increase in deferred income taxes of \$4.6 million, partially offset by a non-cash tax settlement of \$9.5 million and non-cash interest reversal on tax contingencies of \$2.7 million). The change in operating assets and liabilities was a \$40.7 million use consisting of the following: a \$25.7 million increase in Aircranes and support parts (primarily attributable to increases in inventory levels, including the in-process build of aircraft), a \$6.8 million decrease in accrued and other current liabilities, a \$4.6 million increase in accounts receivable (primarily attributable to a receivable related to our Greece contract), a \$4.1 million decrease in other long-term liabilities, and a \$0.2 million decrease in accounts payable, partially offset by a \$0.5 million decrease in prepaid expenses and other and a \$1.5 million decrease in income taxes payable. As a result of these factors, we used \$20.7 million of cash in operating activities in the year ended December 31, 2011.

For the year ended December 31, 2010, net cash used in operating activities before the change in operating assets and liabilities was \$9.2 million, which includes a net loss of \$8.0 million and non-cash adjustments reconciling net income to net cash used in operating activities of \$1.1 million (gain on involuntary conversion related to an aircraft accident of \$6.3 million after accounting for insurance proceeds, coupled with a net decrease in deferred income taxes of \$3.5 million, partially offset by depreciation of \$4.7 million, non-cash interest on subordinated notes of \$0.9 million, amortization and write-off of debt issuance costs of \$2.5 million, and non-cash interest on tax contingencies of \$0.5 million). The change in operating assets and liabilities was a \$0.7 million source consisting of the following: a \$15.2 million decrease in accounts receivable (primarily attributable to the collection of a receivable of our 2009 aircraft sale), a \$8.4 million increase in other long-term liabilities (primarily attributable to a customer prepayment under a CPH contract), a \$9.7 million increase in accrued and other current liabilities (primarily attributable to the accrual of a legal settlement), and a \$0.9 million increase in accounts payable, partially offset by a \$26.7 million increase in Aircranes and support parts (primarily attributable to the in-process build of aircraft for sale), a \$4.2 million increase in prepaid expenses and other, and a \$2.5 million decrease in income taxes payable. As a result of these factors, we used \$8.4 million of cash in operating activities for the year ended December 31, 2010.

Net cash provided by (used in) investing activities. Net cash used in investing activities was \$13.1 million for the year ended December 31, 2011 compared to net cash used in investing activities of \$5.0 million for the year ended December 31, 2010. In the year ended December 31, 2011, we used net cash of \$11.4 million for heavy maintenance on our fleet, implementing a new enterprise resource planning system ("ERP") system, as well as routine capital expenditures. In the year ended December 31, 2010, we used net cash of \$14.6 million for capital expenditures, including the addition of an aircraft to our fleet, and received \$9.5 million in insurance proceeds from involuntary conversions.

Net cash provided by (used in) financing activities. Net cash provided by financing activities was \$32.8 million for the year ended December 31, 2011 compared to \$11.1 million for the year ended December 31, 2010. In the year ended December 31, 2011, net cash provided by financing activities of \$33.5 million was from net borrowings of long-term debt and we used cash of \$0.8 million for debt issuance

Table of Contents

costs related to our credit facility refinancing. In the year ended December 31, 2010, net cash provided by financing activities of \$12.5 million was from net borrowings of long-term debt and we used cash of \$1.4 million for debt issuance costs related to our credit facility refinancing.

2010 Compared to 2009

The following chart is a condensed presentation of our statement of cash flows for the years ended December 31, 2010 and 2009 (in thousands):

	Year Ended December 31, 2009	Year Ended December 31, 2010	Change
Net cash provided by (used in) operating activities	\$ 9,900	\$ (8,430)	\$ (18,330)
Net cash provided by (used in) investing activities	(2,667)	(5,017)	(2,350)
Net cash provided by (used in) financing activities	(5,662)	11,057	16,719
Foreign-currency effect on cash and cash equivalents	(338)	782	1,120
Net increase (decrease) in cash and cash equivalents	1,233	(1,608)	(2,841)
Cash and cash equivalents at beginning of period	2,303	3,536	1,233
Cash and cash equivalents at the end of period	\$ 3,536	\$ 1,928	\$ (1,608)

Sources and Uses of Cash

At December 31, 2010, cash and cash equivalents was \$1.9 million compared to \$3.5 million at December 31, 2009. At December 31, 2010, we had restricted cash of \$4.3 million compared to \$5.0 million at December 31, 2009.

Net cash provided by (used in) operating activities. For the year ended December 31, 2010, net cash used in operating activities before the change in operating assets and liabilities was \$9.2 million, which includes a net loss of \$8.0 million and non-cash adjustments reconciling net income to net cash used in operating activities of \$1.1 million (gain on involuntary conversion related to an aircraft accident of \$6.3 million after accounting for insurance proceeds, coupled with a net decrease in deferred income taxes of \$3.5 million, partially offset by depreciation of \$4.7 million, non-cash interest on subordinated notes of \$0.9 million, amortization and write-off of debt issuance costs of \$2.5 million, and non-cash interest on tax contingencies of \$0.5 million). The change in operating assets and liabilities was a \$0.7 million source consisting of the following: a \$15.2 million decrease in accounts receivable (primarily attributable to the collection of a receivable of our 2009 aircraft sale), a \$8.4 million increase in other long-term liabilities (primarily attributable to a customer prepayment under a CPH contract), a \$9.7 million increase in accrued and other current liabilities (primarily attributable to the accrual of a legal settlement), and a \$0.9 million increase in accounts payable, partially offset by a \$26.7 million increase in Aircranes and support parts (primarily attributable to the in-process build of aircraft for sale), a \$4.2 million increase in prepaid expenses and other, and a \$2.5 million decrease in income taxes payable. As a result of these factors, we used \$8.4 million of cash in operating expenses in the year ended December 31, 2010.

For the year ended December 31, 2009, net cash provided by operating activities before the change in operating assets and liabilities was \$21.2 million, which includes net income of \$12.3 million and non-cash adjustments reconciling net income to net cash used in operating activities of \$8.9 million (depreciation of \$4.4 million, coupled with a net increase in deferred income taxes of \$3.4 million, amortization of debt issuance costs of \$1.0 million and non-cash interest on tax contingencies of \$0.5 million, partially offset by a gain on disposal of equipment of \$0.3 million). The change in operating assets and liabilities was a \$11.3 million use consisting of the following: a \$9.6 million increase in Aircranes and support parts, including the in-process build of aircraft, a \$4.9 million increase in accounts receivable (primarily attributable to the sale of an aircraft in December 2009), and a \$2.8 million decrease in accrued and other

Table of Contents

current liabilities, partially offset by a \$4.6 million increase in income taxes payable and a \$1.5 million decrease in prepaid expenses and other. As a result of these factors, we provided \$9.9 million of cash in operating expenses in the year ended December 31, 2009.

Net cash provided by (used in) investing activities. Net cash used in investing activities was \$5.0 million for the year ended December 31, 2010 compared to net cash used in investing activities of \$2.7 million for the year ended December 31, 2009. In the year ended December 31, 2010, we used net cash of \$14.6 million for capital expenditures, including the addition of an aircraft to our fleet, and received \$9.5 million in insurance proceeds from involuntary conversions. In the year ended December 31, 2009, we used net cash of \$2.3 million for routine capital expenditures.

Net cash provided by (used in) financing activities. Net cash provided by financing activities was \$11.1 million for the year ended December 31, 2010 compared to net cash used in financing activities of \$5.7 million for the year ended December 31, 2009. In the year ended December 31, 2010, net cash provided by financing activities of \$12.5 million was from net borrowings of long-term debt and we used net cash of \$1.4 million for debt issuance costs related to our credit facility refinancing. In the year ended December 31, 2009, cash used in financing activities of \$5.7 million was from net borrowings under our revolving credit facility.

Description of Indebtedness

The following summary of certain provisions of the instruments evidencing our material indebtedness does not purport to be complete and is subject to, and qualified in its entirety by reference to, all of the provisions of the corresponding agreements, including the definitions of certain terms therein that are not otherwise defined in this prospectus.

Senior Credit Facilities

At the end of June 2010, we entered into a Credit Agreement with a bank syndicate led by Wells Fargo, which consists of up to \$132.5 million of senior secured credit facilities, including a \$65.0 million term loan facility and a revolving credit facility of up to \$67.5 million. The \$67.5 million revolving credit facility has a \$30.0 million sublimit to be used for issuance of letters of credit and a \$10.0 million sublimit for swingline loans. Subject to the terms of the Credit Agreement, including lender approval, we may request an increase in the senior credit facility of up to \$50.0 million. A request for an increase must be in a minimum amount of \$10.0 million and we may request an increase no more than three times during the term of the senior credit facilities.

The commitment under the senior credit facilities is shared among Wells Fargo (60.4%), KeyBank National Association (13.2%), Bank of the West (13.2%), Bank of America, N.A. (7.5%), and Union Bank, N.A. (5.7%).

The interest rate on the senior credit facilities is calculated based on LIBOR or a base rate, in each case as defined in the Credit Agreement. The base rate is the higher of the Federal Funds rate plus 150 basis points, the prime rate as quoted by Wells Fargo, or LIBOR plus 150 basis points. The interest rate is calculated as LIBOR or base rate plus a LIBOR margin or base rate margin, respectively. Margin rates are tied to our leverage ratio, which is defined in the Credit Agreement as the ratio of Funded Indebtedness to Bank EBITDA. LIBOR margin ranges between 2.75% and 5.00% and base rate margin ranges between 1.75% and 4.00%. We pay a quarterly unused commitment fee between 0.375% and 0.625% and fees between 2.75% and 5.00% on outstanding letters of credit, both of which fees are determined based on the level of the Funded Indebtedness to Bank EBITDA ratio.

We were not in compliance with certain financial covenants under our Credit Agreement as of December 31, 2010 and March 31, 2011, and subsequent amendments to our Credit Agreement waived such non-compliance. We cannot assure you that, if we fail to comply with the financial covenants under

Table of Contents

our Credit Agreement, our lenders will agree to waive any non-compliance. We amended the Credit Agreement effective December 31, 2010. An initial amendment removed the requirement to comply with existing financial covenants as of December 31, 2010, added a net income covenant calculation for fiscal year 2010, and adjusted certain amounts related to the determination of Bank EBITDA and tangible net worth. In addition, the interest rate matrix was modified to add an additional pricing tier. Subsequent amendments waived our non-compliance with certain requirements and financial covenants under the Credit Agreement for both the fourth quarter of 2010 and the first quarter of 2011, and modified the financial covenants for future periods. These amendments modified the interest rate matrix and adjusted our financial reporting requirements. In connection with these amendments we issued new unsecured subordinated promissory notes in the amount of \$10.0 million to ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P., which were funded on June 30, 2011. We were in compliance with our Credit Agreement covenants at June 30, 2011, September 30, 2011, and December 31, 2011.

The senior credit facilities contain several affirmative and negative covenants customary for similar senior credit facilities, including the following financial covenants: a leverage ratio test based on maximum Funded Indebtedness (excluding subordinated debt) to Bank EBITDA, a minimum fixed charge coverage ratio and, beginning with the quarter ending June 30, 2012 and thereafter, a minimum tangible net worth amount. In addition, if at any time the amount outstanding under our senior credit facilities exceeds the most recent Asset Coverage Amount (as defined in our Credit Agreement), we have to prepay the amount of such excess. Under the senior credit facilities we have affirmative covenants to, among other things, deliver certain financial statements, notices, and certificates to our lenders and maintain certain insurance policies. The negative covenants include limitations on indebtedness, liens, acquisitions, mergers and dispositions, investments, fundamental changes, certain lease transactions, restricted payments, transactions with affiliates, agreements that burden our subsidiaries, and capital expenditures.

We were in compliance with our financial covenants at December 31, 2011 and we expect to be in compliance with such financial covenants at March 31, 2012. The maximum leverage ratio under our senior credit facilities was 3.50 to 1.0 for the fiscal quarter ended December 31, 2011. Our actual leverage ratio was 3.12 at December 31, 2011. The minimum fixed charge coverage ratio at December 31, 2011 under our senior credit facilities was 2.00 to 1.0 and is 1.75 to 1.00 for the quarter ending March 31, 2012 and subsequent quarters. Our actual fixed charge coverage ratio was 2.42 to 1.0 at December 31, 2011. The minimum net income requirement under our senior credit facilities was \$1.00 for the year ended December 31, 2011. Our net income for the year ended December 31, 2011 was \$15.9 million. We are no longer subject to a minimum net income covenant. Beginning with the quarter ending June 30, 2012, we will be subject to a tangible net worth covenant under which we are required to have a tangible net worth of not less than \$75.0 million (including 90% of the net proceeds from our issuance of certain equity interests after April 30, 2010 (other than proceeds used substantially contemporaneously with receipt to retire or redeem specified subordinated debt and/or Series A Redeemable Preferred Stock)), which requirement increases to \$100.0 million for the quarter ending September 30, 2012 and subsequent quarters. If our business does not perform as expected, including if we generate less than anticipated revenue from our Aerial Services operations or encounter significant unexpected costs, we may fail to comply with the financial covenants under our Credit Agreement in 2012. See " Trends and Uncertainties Affecting Our Business Credit Agreement Compliance and Refinancing Costs."

Our indebtedness under our senior credit facilities is secured by liens on substantially all our assets, including our interests in our subsidiaries, our real and personal property, and interests in property and proceeds thereof, including, but not limited to, intangible assets and the type certificates and supplemental type certificates for our aircraft.

The Credit Agreement allows borrowings up to \$67.5 million under the revolving credit facility, which terminates on June 24, 2013. The weighted average interest rate for borrowings under the revolving credit facility for the years ended December 31, 2011 and 2010 was 5.35% and 4.02%, respectively. The outstanding balance under the revolving credit facility at December 31, 2011 and 2010, excluding letters of

Table of Contents

credit, was \$51.8 million and \$22.8 million, respectively. These amounts were classified as long-term debt based on the maturity date of the Credit Agreement. The borrowing rate at December 31, 2011 and 2010 was 3.61% and 3.86%, respectively. We had approximately \$2.3 million and \$7.8 million outstanding standby letters of credit issued as of December 31, 2011 and 2010, respectively.

Due to the seasonality of our business, the amount outstanding under our revolving credit facility during the fiscal year varies significantly. During the fiscal years ended December 31, 2011 and December 31, 2010, the outstanding balance on our existing and prior revolving credit facility, excluding letters of credit, ranged from \$22.8 million to \$64.9 million and \$0.3 million to \$33.7 million, respectively. The outstanding balance on our revolving credit facility, excluding letters of credit of \$2.3 million, was \$51.8 million as of December 31, 2011. At December 31, 2011, we had a maximum availability for borrowings under our revolving credit facility, including letters of credit, of approximately \$13.4 million.

The Credit Agreement allows borrowings of up to \$65.0 million under the term loan facility. On June 30, 2010, we borrowed \$65.0 million and used the proceeds to pay off existing debt. We are required to pay \$1.625 million per quarter for principal, plus accrued interest, until maturity, at which time the remaining principal balance of \$45.5 million, plus accrued interest, is due. The term loan matures on June 24, 2013. The weighted average interest rate for the term loan borrowings for the year ended December 31, 2011 and 2010 was 4.73% and 3.32%, respectively. At December 31, 2011 and 2010, the outstanding balance under the term loan facility was \$55.3 million and \$61.8 million, respectively. The borrowing rate at December 31, 2011 and 2010 was 3.17% and 3.50%, respectively.

On June 30, 2010, we expensed deferred loan costs and termination fees relating to the old debt in the amount of \$2.3 million and capitalized loan costs relating to the new credit facilities in the amount of \$2.7 million. On June 30, 2011, we paid \$0.4 million in amendment fees in conjunction with the amendment of our Credit Agreement and the fees associated with obtaining the establishment of the Working Capital Guarantee Credit Agreement. Such loan costs will be amortized to amortization of debt issuance costs over the term of such credit agreements.

We intend to use a portion of the proceeds from this offering to pay down indebtedness under our revolving credit facility, which will increase the amounts available for future borrowing under this facility and will, in our view, increase the likelihood of our compliance with the financial covenants under our Credit Agreement and improve our ability to refinance our senior credit facilities.

Working Capital Guarantee Credit Agreement

On June 30, 2011, in connection with an amendment to the Credit Agreement, we obtained a separate credit facility with Wells Fargo of up to \$10.0 million, pursuant to which Wells Fargo issues standby letters of credit to certain of our non-domestic customers for the purpose of assuring our performance of our obligations to such customers. The standby letters of credit are collateralized by the proceeds of unsecured subordinated promissory notes we issued to ZM Private Equity Fund I, L.P. in the initial principal amount of \$700,000 and to ZM Private Equity Fund II, L.P. in the initial principal amount of \$300,000. See " Subordinated Notes" below. The \$1.0 million is included in restricted cash. As of December 31, 2011 we had \$8.6 million in outstanding letters of credit under this credit facility, and the largest amount we had outstanding during the year ended December 31, 2011 was \$8.6 million.

Subordinated Notes

On June 30, 2010, in connection with our entry into the Credit Agreement and our refinancing of existing indebtedness outstanding at that time, we issued \$8.5 million of unsecured subordinated promissory notes to ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. Such notes mature on June 30, 2015.

Table of Contents

On June 30, 2011, in connection with amendments to the Credit Agreement, we borrowed an additional \$10.0 million through the issuance of unsecured subordinated promissory notes to ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. Such notes mature on June 30, 2016.

In addition, in connection with the Working Capital Guarantee Credit Agreement discussed above, we borrowed \$1.0 million on June 30, 2011 through the issuance of unsecured subordinated promissory notes to ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. Such notes mature on June 30, 2016.

Interest on all of the foregoing unsecured subordinated promissory notes accrues at a rate of 20.0% per year. Interest is payable quarterly in arrears and is payable in kind by increasing the principal amount of the note. No periodic payment of principal or interest in cash is required. We have the right to prepay all or any portion of the notes at any time prior to maturity without any prepayment premium or penalty.

The aggregate balance of our unsecured subordinated promissory notes was \$23.5 million and \$9.4 million at December 31, 2011 and December 31, 2010, respectively. The weighted average interest rate for the year ended December 31, 2011 and 2010 was 20.0% and 11.81% respectively.

Bank EBITDA

We use an adjusted EBITDA ("Bank EBITDA") to monitor compliance with various financial covenants under our Credit Agreement. In addition to adjusting net income (loss) to exclude interest expense, net, provision for (benefit from) income taxes, and depreciation and amortization, Bank EBITDA also adjusts net income by excluding non-cash unrealized mark-to-market foreign exchange gains (losses), specified litigation expenses up to a maximum of \$2.0 million for any 12-month period, certain management fees, gains from sale of equipment, non-cash charges arising from awards to employees relating to equity interests, non-cash charges relating to financings, initial public offering-related non-capitalized expenses up to a maximum of \$2.0 million, certain fourth quarter of 2010 charges up to \$11.6 million and other unusual, extraordinary, non-recurring non-cash costs. For each calculation of Bank EBITDA made as of the end of the quarters ended June 30, September 30, and December 31, 2011 and that will be made as of the quarter ending March 31, 2012, Bank EBITDA also includes an amount equal to the \$10.0 million in new unsecured subordinated promissory notes dated June 30, 2011 and any additional subordinated debt issued in connection with an equity cure under the Credit Agreement. Such amounts have been excluded from the table below for presentation purposes. Bank EBITDA also assists us in monitoring our ability to undertake key investing and financing functions such as making investments and incurring additional indebtedness, which may be prohibited by the covenants under our Credit Agreement unless we comply with certain financial ratios and tests.

Bank EBITDA is a supplemental measure of our performance that is not required by or presented in accordance with GAAP. Bank EBITDA is not a measurement of our financial performance under GAAP and should not be considered as an alternative to revenue, net income (loss), cash flow, or any other performance measure derived in accordance with GAAP. Our presentation of Bank EBITDA may not be

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Table of Contents

comparable to similarly titled measures of other companies. A reconciliation of net income to EBITDA to Bank EBITDA is provided below.

(In thousands)	Year Ended December 31, 2009	Year Ended December 31, 2010	Year Ended December 31, 2011
Bank EBITDA			
Reconciliation:			
Net income (loss) attributable to Erickson Air-Crane Incorporated	\$ 12,052	\$ (8,251)	\$ 15,870
Interest expense, net	6,006	4,865	9,150
Tax expense (benefit)	5,330	(3,544)	(4,926)
Depreciation	4,378	4,745	7,300
Amortization of debt issuance costs	976	703	875
EBITDA	\$ 28,742	\$ (1,482)	\$ 228,269
Non-cash unrealized mark-to-market foreign exchange gains (losses)	992	905	(1,819)
Interest related to tax contingencies	500	495	(2,745)
Management fees ⁽¹⁾	500	165	
Loss on early extinguishment of debt		2,265	
Litigation expense	1,430	2,000	1,390
Legal settlements and other		11,600	
Other (gains) losses	(668)	(4,089) ⁽²⁾	(26)
Bank EBITDA	\$ 31,496	\$ 11,859	\$ 25,069⁽³⁾

(1) Fees paid to a previous stockholder pursuant to a management agreement that terminated in 2010.

(2) Includes a \$4.2 million net adjustment related to an Aircrane accident in 2010.

(3) As part of the amendments to the Credit Agreement on June 30, 2011, the \$10.0 million in new unsecured subordinated promissory notes are included, with limitation, as an addition to Bank EBITDA. Such amounts have been excluded from this table for presentation purposes.

Restricted Cash

We maintain restricted cash at financial institutions as collateral for performance and bid bonds on certain contracts. At December 31, 2010 and 2011, the amount of such restricted cash was \$4.3 million and \$5.2 million, respectively.

Contractual Obligations

As of December 31, 2011, we had \$130.6 million of long-term debt (including current maturities), excluding letters of credit. This amount consisted of the term loan debt of \$55.3 million and the revolving credit facility debt of \$51.8 million under the Credit Agreement and the

unsecured subordinated promissory notes of \$23.5 million.

Table of Contents

The following table sets forth our long-term contractual cash obligations as of December 31, 2011 (in thousands):

	Payment Due by Period				
	Total	Less than 1 Year	1-3 Years	3-5 Years	More than 5 Years
Contractual obligations ⁽¹⁾⁽²⁾ :					
Term debt	\$ 55,250	\$ 6,500	\$ 48,750	\$	\$
Revolving credit facility	51,783		51,783		
Unsecured subordinated promissory notes	23,537		11,400	12,137	
Operating leases	1,459	497	433	120	409
 Total contractual obligations	 \$ 132,029	 \$ 6,997	 \$ 112,366	 \$ 12,257	 \$ 409

(1) Amounts shown above do not include outstanding purchase orders as of December 31, 2011.

(2) Amounts shown in the table above do not include any payment obligations under the put option that would, if exercised, require us to repurchase on July 31, 2013 the Aircrane we sold to one of our customers in 2009. See Note 12 to our audited condensed consolidated financial statements included in this prospectus.

Our operating leases are described below in " Off-Balance Sheet Arrangements Operating Leases."

Off-Balance Sheet Arrangements

With the exception of operating leases, letters of credit, and an advance agreement with a foreign bank, we are not a party to any off-balance sheet arrangements that have, or are reasonably likely to have, a current or future material effect on our financial condition, results of operations, or cash flows.

Operating Leases. We periodically lease certain premises on a short-term basis, and lease a minor amount of our facilities and certain other property under noncancelable operating lease agreements that expire on various dates through May 2032. Certain leases have renewal options.

Letters of Credit. To meet certain customer requirements, we issue letters of credit which are used as collateral for performance bonds, bid bonds, or advance customer payment on contracts. These instruments involve a degree of risk that is not recorded on our balance sheet. We had letters of credit with various expiration dates extending through 2013 valued at approximately \$15.1 million outstanding at December 31, 2011, including \$2.3 million outstanding under our revolving credit agreement, \$8.6 million outstanding under our working capital guarantee credit agreement and \$4.3 million (€3.3 million) outstanding under a performance bond issued by Banca Di Credito Cooperativo Di Cambiano that we have secured with \$3.9 million (€3.0 million) in restricted cash.

Advance Agreements with Foreign Banks. In order to provide short-term liquidity needs of our subsidiaries, we may allow those subsidiaries to enter into agreements with banks to obtain advances on key accounts receivable. At December 31, 2011, there were €2.6 million of advances outstanding under these types of arrangements.

Uncertainty in Income Taxes

While we believe we have adequately provided for all tax positions, amounts asserted by taxing authorities could materially differ from our accrued positions as a result of uncertain and complex application of tax regulations. Additionally, the recognition and measurement of certain tax benefits includes estimates and judgment by management and inherently includes subjectivity. Accordingly, additional provisions on tax-related matters could be recorded in the future as revised estimates are made or the underlying matters are settled or otherwise resolved.

Table of Contents

Other Contingencies

In the ordinary conduct of our business, we are subject to periodic lawsuits, investigations, and claims. See "Business Legal Proceedings" in this prospectus for a description of significant legal proceedings in which we are currently involved. Although we cannot predict with certainty the ultimate resolution of lawsuits, investigations, and claims asserted against us, we do not believe that any currently pending legal proceeding to which we are a party, if determined adversely to us, will have a material adverse effect on our business, financial condition, results of operation, or cash flows.

Critical Accounting Policies and Estimates

Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with GAAP. The preparation of these consolidated financial statements requires us to make estimates and judgments that affect amounts reported in those statements. We have made our best estimates of certain amounts contained in our consolidated financial statements. We base our estimates on historical experience and on various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets and liabilities. However, application of our accounting policies involves the exercise of judgment and use of assumptions as to future uncertainties, and, as a result, actual results could differ materially from these estimates. Management believes that the estimates, assumptions, and judgments involved in the accounting policies described below have the most significant impact on our consolidated financial statements.

We cannot predict what future laws and regulations might be passed that could have a material effect on our results of operations. We assess the impact of significant changes in laws and regulations on a regular basis and update the assumptions and estimates used to prepare our financial statements when we deem it necessary.

Revenue Recognition

We determine and recognize revenue based on the type of service we provide to customers.

Aerial Services. We enter into contracts with our customers that may range from one-day to multiple-years with extension options for additional years. We recognize revenue for contracts as the services are rendered, which services include leasing of the Aircrane(s), pilot and field maintenance support, and related services. We charge daily rates, hourly rates, and production rates (such as timber volume transported) depending on the type of lease or service. Revenues from timber harvesting operations in Canada, the U.S., and Malaysia may be based on estimates of the number of cubic meters of timber delivered to customers, which are adjusted after the logs are measured and scaled, or may be recorded based on the number of flight hours, depending on the terms of the contract.

Manufacturing / MRO. Historically, we have recognized revenues on Aircrane sales when the Aircrane was delivered to a customer, because management did not believe it was able to accurately estimate the percentage of completion of an Aircrane during manufacturing. After our acquisition in September 2007, we revised our cost tracking and estimating processes, including personnel and system changes, which management believes provides them with the ability to accurately track and estimate costs in order to determine the percentage of completion of an Aircrane during manufacturing. Accordingly, we expect to recognize revenue for our long-term construction contracts in the future using the percentage of completion method, when all required criteria are met.

Aircranes are normally manufactured under long-term construction contracts. Changes in estimates affecting sales, costs and profits are recognized in the period in which the change becomes known using the cumulative catch-up method of accounting, resulting in the cumulative effect of changes reflected in the period. A significant change in an estimate on one or more contracts could have a

Table of Contents

material effect on our results of operations. For contracts with anticipated losses at completion, we establish a provision for the entire amount of the estimated remaining loss and charge it against income in the period in which the loss becomes known. Amounts representing performance incentives, penalties, contract claims or change orders are considered in estimating revenues, costs and profits when they can be reliably estimated and realization is considered probable.

Contracts for the sale of Aircranes have multiple deliverables. Such elements may include warranty, spare parts, training and crew provisioning arrangements. We allocate arrangement consideration based on the relative selling prices of the separate units of accounting contained within an arrangement containing multiple deliverables. Selling prices are determined using fair value, when available, third party evidence when fair value is not available, or our estimate of selling price when fair value and third party evidence is not available.

Other products and services. We recognize revenue for other products and services when the products are delivered or services are performed. Sales to customers for maintenance, repair, overhaul, and/or assembly of various major components and other Aircrane parts are deferred until the repair work is completed and the customer accepts the final product. Spare parts sales are recognized at the time of delivery and customer acceptance of the spare parts. CPH contracts are accounted for on a long-term contract basis; revenues are recorded based upon negotiated hourly rates and applicable flight hours earned, and profitability of the contract is based upon estimated costs over the life of the contract.

Accounts Receivable

Accounts receivable is composed of billed amounts for which revenue has been earned and recognized. The allowance for doubtful accounts, an estimate of the amount of accounts receivable outstanding which we believe may be uncollectable, is determined quarterly, principally based on the aging of receivables. We review the current trends and aged receivables periodically and adjust the estimated bad debt expense to accrue for doubtful accounts as needed. An account is written off when deemed uncollectable, although collection efforts may continue.

Aircrane Support Parts

Aircrane support parts consist of Aircrane parts, overhauls of certain significant components, and work-in-process which are valued at the lower of cost or market utilizing the first-in first-out method. Costs capitalized for Aircrane support parts include materials, labor, and operating overhead. Overhauls on certain significant components are capitalized, and then amortized based on estimated flight hours between overhauls. All aircraft require daily routine repairs and maintenance based on inspections. Such maintenance costs are expensed as incurred. Periodically, Aircranes are removed from service and undergo heavy maintenance activities including inspections and repairs of the airframe and related parts as required. Such costs are expensed as incurred.

A significant part of our inventory consists of Aircrane parts and components purchased over multiple years for which there is no liquid market. Therefore, there is no guarantee that we will be able to purchase new inventory at the carrying values currently reflected on our balance sheets.

Aircrane parts are categorized as serviceable, which indicates that they are in a condition suitable for installing on an Aircrane, or repairable, which indicates that additional overhaul or repair work needs to be performed in order for the part to be certified as serviceable. Because we operate within a niche of the heavy-lift helicopter market, we experience long lead times and are required to carry large quantities of spare inventory in order to ensure availability of parts for servicing our fleet of Aircranes. As a result, the accounting judgments used in determining the provision for excess and obsolete Aircrane support parts can vary significantly based on forecasted demand.

Table of Contents

Income Taxes

We account for income taxes in accordance with Accounting Standards Codification 740, formerly Financial Accounting Standards No. 109, "Accounting for Income Taxes," and FIN 48, "Accounting for Uncertainties in Income Taxes." We recognize deferred tax assets and liabilities for the expected future tax consequences of events that have been included in the financial statements or tax returns in accordance with applicable accounting guidance for accounting for income taxes, using currently enacted tax rates in effect for the year in which the differences are expected to reverse. We record a valuation allowance when necessary to reduce deferred tax assets to the amount expected to be realized. We are subject to income taxes in the U.S., state, and several foreign jurisdictions. Significant judgment is required in determining our worldwide provision for income taxes and recording the related assets and liabilities. In the ordinary course of business, there are many transactions and calculations where the ultimate tax determination is uncertain.

Reserves for taxes are established for taxes that may become payable in future years as a result of audits by tax authorities. These tax reserves are reviewed as circumstances warrant and adjusted as events occur that affect our potential liability for additional taxes, such as conclusion of tax audits, identification of new issues, changes in federal or state laws, or interpretations of the law.

Impairment and Depreciation of Long-Lived Assets

We record impairment losses on long-lived assets used in operations when indicators of impairment are present and the undiscounted cash flows estimated to be generated by those assets are less than the assets' carrying amount. In such cases, the amount of the impairment is determined based on the relative fair values of the impaired assets. Significant judgments and estimates used by management when evaluating long-lived assets for impairment cover, among other things, the following:

program product volumes and remaining production life for parts produced on the assets being reviewed;

product pricing over the remaining life of the parts, including an estimate of future customer price reductions which may be negotiated;

product cost information, including an assessment of the success of our cost reduction activities; and

assessments of future alternative applications of specific long-lived assets based on awarded programs.

In addition, we follow our established accounting policy for estimating useful lives of long-lived assets. This policy is based upon significant judgments and estimates as well as historical experience. Actual future experience with those assets may indicate different useful lives resulting in a significant impact on depreciation expense.

Warranty Reserves

Sales of Aircranes to third parties include limited warranty provisions that require us to remedy deficiencies in quality or performance of our products over a specified period of time, generally from two to five years depending on the type of part, component, or airframe, including technical assistance services. Warranty reserves are established at the time that revenue is recognized at levels that represent our estimate of the costs that will be incurred to fulfill those warranty requirements. Warranty reserves may be adjusted periodically to sustain levels representing the estimate of the costs to fulfill those warranty requirements over the remaining life of the warranty.

Recently Issued Accounting Pronouncements

For information regarding recent accounting pronouncements, see Note 2 to our audited condensed consolidated financial statements included in this prospectus.

Table of Contents

Quantitative and Qualitative Disclosure Regarding Market Risk

We are exposed to market risk in the normal course of our business operations due to changes in interest rates, increase in cost of aircraft fuel, and our exposure to fluctuations in foreign currency exchange rates. We have established policies and procedures to govern our management of market risks.

Interest Rate Risk

At December 31, 2011, we had total indebtedness of \$130.6 million (excluding \$15.1 million of letters of credit). Our exposure to market risk from adverse changes in interest rates is primarily associated with our senior secured credit facilities and long-term debt obligations. Market risk associated with our long-term debt relates to the potential reduction in fair value and negative impact to future earnings, respectively, from an increase in interest rates. Under the Credit Agreement, our borrowings bear interest at fluctuating rates. The applicable interest rate is calculated based on either LIBOR or a base rate plus a margin depending on the level of the Funded Indebtedness to Bank EBITDA ratio as defined in the Credit Agreement. The rates applicable to outstanding borrowings fluctuate based on many factors including, but not limited to, general economic conditions and interest rates, including the LIBOR, Federal Funds, and prime rates, and the supply of and demand for credit in the London interbank market. We estimate that a hypothetical 10% change in the LIBOR or prime rate as quoted by Wells Fargo would have impacted interest expense for the year ended December 31, 2011 by \$0.8 million.

Aircraft Fuel

Our results of operations are affected by changes in price and availability of aircraft fuel. Based on our 2011 fuel consumption, a 10% increase in the average price per gallon of fuel would increase fuel expense for fiscal year 2011 by approximately \$1.6 million. Many of our contracts allow for recovery of all or part of any fuel cost change through pricing adjustments. We do not currently purchase fuel under long-term contracts or enter into futures or swap contracts.

We are not exposed to material commodity price risks except with respect to the purchase of aircraft fuel.

Foreign Currency Exchange Rate Risk

A significant portion of our revenues are denominated in a currency other than the U.S. dollar. We are subject to exposures that arise from foreign currency movements between the date the foreign currency transactions are recorded and the date they are settled. Our exposure to foreign currency movements is somewhat mitigated through naturally offsetting asset and liability currency positions. We periodically enter into foreign currency hedging transactions to mitigate the risk of foreign currency movements and minimize the impact of exchange rate fluctuations on our profits. A hypothetical 10% decrease in the value of the foreign currencies in which our business is denominated relative to the U.S. dollar for the year ended December 31, 2011 would have resulted in an estimated pre-hedged \$0.6 million decrease in our net income.

Table of Contents

THE COMMERCIAL HEAVY-LIFT HELICOPTER INDUSTRY

The heavy-lift helicopter is a highly specialized aircraft which typically has an external load capacity greater than 10,000 pounds. This large external load capacity, combined with the helicopter's maneuverability, provides a solution in situations where ground-based or fixed-wing lifting solutions are not optimal. Heavy-lift helicopters are essential in numerous commercial applications, including firefighting, timber harvesting, infrastructure construction, and emergency response.

The heavy-lift helicopter industry extends beyond the services and operations of the aircraft, and encompasses all manufacturing, after-market services, and crew training required to properly equip the aircraft to support the demands of government agencies and commercial customers.

History and Development of the Commercial Heavy-Lift Helicopter

Heavy-lift helicopters were first conceived in 1958, when the Sikorsky Aircraft Corporation designed and developed an aircraft capable of carrying heavy and irregular loads. After four years of development, the first S-64 model helicopter flight occurred in 1962. In 1965, Sikorsky worked with the U.S. Army to create the CH-54A Tarhe, a military aircraft similar to the S-64, and entered it into service in the Vietnam War. During the Vietnam War, the CH-54A earned recognition for its ability to transport 90-passenger pods, lift armored vehicles, recover aircraft, and relocate mobile hospitals and command posts for the U.S. Army's First Cavalry Division.

Due to the CH-54's success in military operations, the S-64 platform drew renewed interest for its potential use in commercial applications. In 1968, Sikorsky introduced the S-64E Skycrane to serve alongside the S-61, a smaller aircraft which was developed in 1961 for use in heavy-lift operations, oil rigging construction, and passenger transport. Around the same time, Boeing began to market the Boeing Vertol 107 and 234 model aircraft, which competed with the Skycrane for use in firefighting, infrastructure construction, and oil drilling. In 1971, Jack Erickson and Wes Lematta, founders of Erickson Air-Crane and Columbia Helicopters, respectively, completed the first successful commercial aerial timber harvesting operation, demonstrating the effectiveness of heavy-lift helicopters in precision heavy-lift applications.

Over the next several decades, design enhancements to the S-64 and other heavy-lift platforms increased their functionality and use in a variety of end markets. Heavy-lift helicopters became an attractive alternative to fixed-wing aircraft for firefighting due to their large water-carrying capacity, their precision in depositing water, and their ability to reload quickly and efficiently. The precision and heavy-lift capabilities applied in firefighting and timber harvesting projects were also used in the construction of transmission and utility grids, wind turbines, ski lifts, mine conveyor belts, and oil and gas pipelines, as well as in offshore oil-development work and heating, ventilating, and air conditioning ("HVAC") unit placement and general high-rise building construction. These applications are increasingly relied upon for projects in locations that lack ground vehicular access or require non-invasive and environmentally sustainable alternatives. Notable projects performed by the S-64 include the transportation of the 15,000-pound "Statue of Freedom" from the U.S. Capitol for restoration in 1993 and the movement of snow from Mount Strachan in British Columbia to nearby Cypress Mountain for the 2010 Winter Olympics.

Due to the growing utility of heavy-lift helicopters, the universe of users has expanded to include large and medium-sized businesses and federal, state, local, and international government agencies. Customers often lease the aircraft under arrangements where they pay for the aircraft, crew, maintenance, and insurance, as well as fuel expense.

Table of Contents**Current S-64 and CH-54 Operators**

The following table presents the current S-64 and CH-54 operators and the number of aircraft in operation.

	Standard	Restrictions for Use in U.S. ⁽¹⁾	
	S-64E/S-64F	CH-54A/CH-54B	Total
Erickson Air-Crane	17		17
Corpo Forestale (Italy)	4		4
Korea Forest Service	4		4
SDG&E	1		1
Siller Brothers	2	1	3
Helicopter Transport Services	1	10	11
Approximate Number in Operation	29	11	40

(1)

CH-54 aircraft have a similar frame and similar capabilities to the S-64, but, because they are military aircraft, they are limited in the U.S. in their allowed applications due to certification restrictions.

Commercial Heavy-Lift Helicopter Markets

While heavy-lift helicopters have been used in a number of commercial applications, we believe that the key markets with the most significant growth potential include firefighting, timber harvesting, infrastructure construction, and emergency response. There is no guarantee, however, that growth will occur in the markets we serve or that we will be able to take advantage of growth opportunities. See "Risk Factors." The demand for these applications varies by region and depends on local environmental, economic, social, and political considerations. We have existing customers in some markets, and with respect to some of the aerial services, described below. For example, we have existing contracts to provide aerial firefighting services in Australia, Greece, and the United States and timber harvesting services in Malaysia. In some markets where we have an established presence, we derive revenues, in part, from "call when needed" provisions, which could increase if government spending to fight fires increases. In addition, we believe we are well-positioned to expand our services as governmental and commercial spending for aerial firefighting, timber harvesting and construction expands in these markets. We also believe our versatile product offering will be attractive to prospective customers in markets where we do not currently operate.

Aerial Firefighting

Aerial firefighting can be one of the most efficient means of combating wildfires because of the speed, mobility, and large carrying capacity of certain aircraft. The types of aircraft used in aerial firefighting include heavy-lift rotary aircraft such as the Aircrane, as well as fixed-wing aircraft, including the Bombardier CL-215 and 415, the Lockheed Martin C-130, and the McDonnell Douglas DC-10. We believe heavy-lift helicopters have several advantages over fixed-wing aircraft, including hovering capabilities that enable operations in congested areas, rapid refill from a greater variety of water sources, and more accurate fire retardant dispersion. We also believe heavy-lift helicopters are more cost-competitive than fixed-wing aircraft when water sources are nearby.

Fire Trends

Aerial firefighting has a long and established history. In recent years fires have become increasingly destructive around the world. For example, fires in 2007 in Greece, in 2009 in Australia, and in 2010 in Israel had unprecedented impacts on land and property. However, fires are inherently unpredictable and are impacted by a number of factors outside of our control, such as weather, population deconcentration,

Table of Contents

government policies and resources, and human factors. Population deconcentration reflects both regional shifts in population and the increasing attractiveness of owning property for both seasonal recreation and full-time residency in areas adjacent to public land. Population deconcentration has increased the amount of wildland-urban-interface ("WUI"), which has greatly complicated the mission of fire management in protecting communities at risk from wildfires. WUI creates an environment in which fire can move rapidly and readily, and threaten numerous buildings, homes, and people.

We believe that fire seasons in some areas are growing more intense and lasting longer, a phenomenon which some climatologists ascribe to climate change. This is consistent with findings in the 2009 Quadrennial Fire Review ("QFR"), an integrated strategic assessment process conducted by the U.S. Fire Executive Council and other government agencies to evaluate the future environment of fire management, that climate change will continue to result in a greater probability of longer fire seasons and bigger fires in various regions in the U.S. Over the past five years, longer and drier summers in the U.S. have contributed to an increase in the number of fires annually. The QFR suggests that fire mitigation efforts must address potentially 10-12 million annual wildfire acres in the U.S. alone in the coming decade, up from the previous 2005 estimate of 8-10 million annual wildfire acres. According to the QFR, research also confirmed that fire seasons are lengthening in the U.S., indicating that 30 days or more should be added to the start of the traditional fire season and possibly to the end.

We believe that if fire seasons in the U.S. and other parts of the world intensify and lengthen, government agencies may require more firefighting resources for longer periods of time, which we believe may benefit heavy-lift service providers. This increased demand for firefighting services may also ultimately drive some users to transition from leasing aircraft to owning them.

North America

In North America, the Western U.S. and Canada have historically suffered the most from the effects of wildfires. Since 1999, the U.S. has experienced 242 large wildfires, compared to 119 in the previous two decades combined. The following chart presents annual expenditures by the U.S. for fire suppression:

United States Federal Fire Suppression Costs

Source: National Interagency Fire Center.

Table of Contents

Larger and more frequent wildfires will continue to have a major impact on fire suppression strategy and spending. The following chart presents the number and size of large wildfires recorded by agencies in the U.S. from 1979 to 2010:

United States Large Wildfires 1979-2010 (Over 50,000 Acres)

Source: Fire report programs for each agency (Fish and Wildlife Service, National Park Service, Bureau of Land Management, USDA Forest Service and Bureau of Indian Affairs). Only agency fires are included in these data. Compiled by National Interagency Coordination Center, Predictive Services.

Southern Europe

The Southern European "Fire Club" includes France, Greece, Italy, Portugal, and Spain, countries that have historically suffered the most from severe fires. The following chart presents the annual burnt area due to wildfires in the Fire Club from 1980 to 2010:

Burnt Area in the "Fire Club" France, Greece, Italy, Portugal, and Spain 1980 to 2010

Source: European Commission Joint Research Center, Forest Fires in Europe 2010.

According to the European Commission Joint Research Center, the total burnt area in the 2007 fire season in Greece amounted to 225,734 hectares, making 2007 the country's most damaging year on record in terms of burned area and average fire size. Extremely hot and dry weather conditions combined with strong winds led to a disastrous upsurge in wildfires. Aerial firefighting techniques were heavily employed in the eventual calming of the fires. The Community Mechanism for Civil Protection, which facilitates civil protection assistance interventions in the event of major emergencies among European member states, deployed 10 Bombardier turboprops, three Pilatus prop planes, and 12 helicopters (including four Aircranes) to Greece over a 10-day period.

Table of Contents

The following chart presents annual burnt area from 1980 to 2010 in Greece:

Burnt Area in Greece 1980-2010

Source: European Commission Joint Research Center, Forest Fires in Europe 2010.

Australia

Australia has endured forest fires that have damaged vast parts of the coast and have endangered metropolitan areas. As a result of the country's high susceptibility to forest fires, the Australian government continues to fund the civil defense budget for the procurement of firefighting suppression equipment, including the use of heavy-lift helicopters.

Drought, high winds, and high temperatures contributed to an outbreak of major brushfires in the Sydney metropolitan area in December 2001. Known as "Black Christmas," the fire was one of the worst wildfires in Australia's recent history, burning over 750,000 hectares. Government, public, and media interest piqued due to the scale of the fire, the proximity to Sydney, and the threat to residential property. Aerial firefighting played a critical role in the containment and extinguishment of the fire, and the aircraft used received widespread recognition. The Australian United Firefighters Union designated our "Elvis" as the flagship of its Aerial Firefighting Fleet.

Fires further devastated Australia in early 2009. The 2009 southeastern Australian heat wave began in late January 2009 and led to record-breaking prolonged high temperatures. The heat wave arrived during the peak of the 2008-2009 Australian fire season, and contributed to many bushfires throughout the region, the worst of which were the "Black Saturday" bushfires. The Black Saturday bushfires occurred on and around February 7, 2009 in the state of Victoria, as power lines were felled by winds in excess of 60 miles per hour and temperatures were near their peak during the heat wave. By the time the bushfires had been completely extinguished in mid-March, at least 173 people had perished, making it one of the deadliest wildfires in recorded history. The fires also injured over 400 people, burnt over 450,000 hectares, and destroyed over 3,500 structures. Several of our Aircranes were involved in the Australian firefighting efforts in February 2009.

In May 2009, following the Black Saturday fires, the Australian Attorney General announced that the government would increase its contributions to the national aerial firefighting program by approximately 30%, raising them from AU\$43.2 million to AU\$56.0 million over the 2009 to 2013 period. In addition, the Australian government is providing annual funding of AU\$14.0 million to assist states and territories in extending lease arrangements on aerial firefighting aircraft. The Attorney General's Department stated that aerial firefighting equipment, such as the Aircrane, was a key weapon in the fight against major wildfires.

Table of Contents

Timber Harvesting

Heavy-lift helicopters are used in timber harvesting to remove cut trees from forests, lifting them on cables attached to the aircraft. Due to helicopters' relatively high operational costs, companies use heavy-lift helicopters to harvest primarily high-value timber used in high-grade wood products such as furniture and flooring. Aerial timber harvesting is well suited for accessing high-grade timber where challenging terrain or environmental concerns limit the possibility of building access roads.

Tropical timber species in particular can carry premiums large enough to justify aerial timber harvesting when more common harvesting methods are not economically, environmentally, or politically acceptable. Tropical species are often found in dense forests which are difficult to access and where the cost of building roads can be prohibitive. In addition, local governments are increasingly facing environmental pressures and have begun limiting, and in some cases forbidding, the use of access roads in order to protect and preserve forest lands. We believe the tropical forests of Malaysia and Indonesia present significant near-term opportunities for aerial timber harvesting, and think there are additional opportunities in South America and Southeast Asia.

In addition to tropical forestlands, a number of countries have high-value timber in mountainous and difficult-to-reach locations, where aerial timber harvesting is a highly attractive alternative, including regions of the North America, Europe, and South America. North America, in particular, remains an attractive market for aerial timber harvesting. The demand for sawlogs, or softwood that typically carries a significant premium over pulpwood logs, remains strong and is expected to grow. The following chart shows the historical and estimated future demand for sawlogs in the U.S. and Canada:

North American Harvest Demand for Sawlogs

Source: RISI, March 2010 data.

Growing environmental awareness is a factor driving the use of aerial timber harvesting solutions. Consumer demand for more socially responsible businesses helped third-party forest certification emerge in the 1990s as a tool for communicating the environmental and social performance of forest operations. Today, 340 million hectares of forests are "certified," representing nearly 9.0% of the estimated four billion hectares of forestland in the world. Timber logged from certified forests is often more expensive and must be harvested in a sustainable manner, yielding growth opportunities for aerial timber harvesting as environmentally friendly forest resource management continues to grow in importance.

Infrastructure Construction

Heavy-lift helicopters are used in a variety of infrastructure construction projects, including oil and gas pipeline construction, transmission and utility grid construction, wind turbine construction, and offshore oil-development work. Additionally, heavy-lift helicopters are used in construction projects such as building construction, HVAC unit placement, ski lift construction, and mine conveyor belt construction. Aerial services are often the most efficient means to accomplish heavy-lift project goals.

Table of Contents

Promising growth prospects exist on a global basis, as infrastructure development opportunities arise in both developing and developed countries for power, oil and gas pipeline, and telecommunications construction. Throughout the world's developing economies, population growth, globalization, international trade, and reliance on technology have encouraged governments to accelerate various infrastructure development projects. Government agencies and private businesses are expected to increase the number of power, oil and gas pipeline, and telecommunications construction projects in order to develop each of these sectors. CIBC World Markets ("CIBC") predicts that between \$25.0 trillion and \$30.0 trillion of infrastructure investment will be carried out over the next two decades. CIBC believes that of this investment, 30.0% will be devoted to power projects, 22.5% to telecommunications projects, 10.0% to water projects, and 37.5% to transportation projects.

The following chart presents projected average annual global infrastructure expenditures by geography through 2030:

Projected Annual Global Infrastructure Expenditures through 2030

Source: CIBC World Markets.

Building Construction and Specialized Heavy-Lift Projects

Heavy-lift helicopters have a diverse range of construction and specialized heavy-lift applications, including the lifting of HVAC systems to building rooftops, the placement of mining conveyor systems over challenging terrain, and the assembly of ski lifts. Heavy-lift helicopters have also been used for projects such as the development of a NASA platform for astronaut training, the transportation of the 15,000-pound "Statue of Freedom" from the U.S. Capitol for restoration, and the movement of snow to Cypress Mountain in British Columbia for the 2010 Winter Olympics. Additional opportunities exist in the construction of high-rise buildings (*e.g.*, lifting building materials and installing/removing construction cranes) and the construction of isolated structures such as bridges, tunnels, and ports. Heavy-lift helicopters are frequently used in building construction and specialized heavy-lift projects because they offer highly efficient and safe solutions and provide access to challenging terrain.

Energy Transmission and Distribution

Heavy-lift helicopters are also used to support electric transmission line construction, allowing utilities and construction services firms to install infrastructure in remote or hard-to-access locations where traditional access methods may be too costly or impossible. Additionally, heavy-lift helicopters allow utilities to construct large lines faster and with minimal environmental impact, an increasing concern for asset owners.

The global market for electric power transmission and distribution equipment is forecasted to reach \$154.4 billion by the year 2017. Catalysts for this spending include the acceleration of renewable energy generation project activity; allocation of stimulus funds to specific transmission, renewable energy generation, and smart grid installations; the availability of low-cost capital; and the continued need to upgrade aging grid components that are reaching the end of their useful lives.

Table of Contents

According to Global Industry Analysts, Asia-Pacific represents both the largest and the fastest growing regional market for electric power transmission and distribution equipment. Driven by China's significant economic growth and investment in electrifying new housing, as well as India's initial progress in the electrical sector, the Asia-Pacific electric power transmission and distribution equipment market is expected to grow at a compounded annual growth rate of 8.3% from 2010 to 2017.

Significant infrastructure construction and other heavy-lift opportunities exist in mature economies as well. According to the American Society of Civil Engineers, the U.S. electric power grid and associated infrastructure is aging, overloaded, and in need of maintenance, upgrade, and expansion. Consequently, the Edison Electric Institute, the association of U.S. shareholder-owned electric companies, projects that investor-owned utilities will spend in excess of \$11.0 billion on transmission projects in 2010, up from approximately \$5.7 billion in 2004. The recent American Recovery and Reinvestment Act of 2009 ("ARRA") dedicated more than \$90.0 billion in government investment and tax incentives to lay the foundation for a clean energy economy, including grid modernization, renewable generation, and energy efficiency.

Power construction in the U.S. has already seen four years of rapid growth, with spending increasing at a compounded annual growth rate of 19%, from \$35.5 billion in 2005 to \$84.3 billion in 2010. FMI's Construction Outlook, a quarterly construction market forecast based on quantitative and qualitative studies within the construction industry, expects this trend to remain strong, with power construction spending projected to grow at a compounded annual growth rate of between 9.0% and 12.0%, or between \$129.7 billion and \$148.5 billion in 2015. This growth is mainly driven by investments in renewable energy projects, as well as by transmission and distribution projects, which include maintenance and replacement work.

European investment is expected to be driven by the continued replacement of aging assets, as well as efforts by the 10 new states that joined the European Union in 2004 to bring their countries' infrastructure in line with other member states.

Alternative Energy

The global wind power market grew in 2010, bolstered by the approval of the second Kyoto Protocol and promises of strong policy support such as the U.S. Government's Production Tax Credit ("PTC"). The U.S. and China accounted for 54.0% of the world's new wind turbine installations in 2008. Both nations have set in motion powerful policy supports, indicating that these two countries will likely lead the global wind market going forward. Both the U.S. and China are expected to provide various support measures including PTCs and cash grants in lieu of credits, investment tax credits, and setting much higher wind turbine installation targets. Other governments around the world have also been strengthening wind power support measures. According to MAKE Consulting, the global wind power market is expected to grow at a compounded annual growth rate of over 10.0% from 2011 to 2016. We believe heavy-lift helicopters have the ability to play an important role in the construction of wind turbines, particularly in the delivery and installation of turbine blades.

Oil and Gas Pipeline Development

Heavy-lift helicopters are expected to play a significant role in the continued development of global oil and gas pipelines. Continued global demand for natural gas, crude oil, and petroleum products, coupled with production of gas and oil moving to more remote areas, drives the need for constant pipeline expansion. There are currently approximately 1.5 million kilometers of natural gas, crude oil, and petroleum product pipeline globally. According to Global Data, an additional 100,000 kilometers of pipeline are expected to be developed by 2015, driven by significant increases in global consumption of natural gas and crude oil.

Table of Contents

Significant regional opportunities exist around the world for pipeline development, as new projects come on-line in the next few years. The chart below shows the combined length of natural gas and crude oil pipeline projects currently planned in different regions:

Future Pipeline Projects by Region (km)

Source: SIMDEX, September 2010.

According to the Pipeline and Gas Journal, an estimated \$193.0 billion will be spent on onshore pipelines from 2011 to 2015 and an estimated \$55.0 billion is expected to be spent on pipeline construction in the Asia-Pacific region.

The following table highlights the key natural gas and crude oil pipeline projects currently planned around the world:

Region	Selected Projects
North America	364-mile Beluga to Fairbanks (B2F) gas pipeline 700-mile Texas natural gas line (NGL) pipeline
Asia	285-mile Rizhao-Dongming oil pipeline 1,240-mile Russia-China Crude Pipeline 1,970-mile NGL pipeline network 790-mile Jagdishpur-Haldia NGL pipeline 510-mile Dabhol to Bangalore NGL pipeline
Australasia	280-mile coal seam gas (CSG) pipeline 318-mile Malaysian pipeline
Europe	560-mile Black Sea NGL pipeline 500-mile Turkey-Greece-Italy pipeline 281-mile Skanled pipeline 2,050-mile Nabucco pipeline 130-mile Slovakia-Hungary pipeline
Middle East & Africa	595-mile Abu Dhabi pipeline 560-mile Iran-Pakistan pipeline 2,565-mile Nigeria-Algeria pipeline
South America	750-mile Brazilian pipeline network 155-mile Carrasco-Cochabamba gas pipeline 136-mile Humay-Marcona pipeline

Table of Contents

Emergency Response

We believe that heavy-lift helicopters will be increasingly used in rescue missions and disaster relief operations for severe natural and man-made disasters (*e.g.*, the tsunami in Thailand in 2004, Hurricane Katrina in the U.S. in 2005, and earthquakes in Haiti, Chile, and China in 2010 and Japan in 2011). In the U.S. alone, the number of natural and man-made disasters declared by the Federal Emergency Management Agency increased from 45 in 2000 to 81 in 2010. Although it is impossible to predict the number of future disasters, the increasing frequency with which they are occurring in certain regions and the growing population globally is forcing numerous governments and affiliated agencies to evaluate improving response preparedness and increasing relief spending. As governments do so, we believe heavy-lift helicopters, because of their unique attributes and ability to operate when ground-based solutions are unavailable, will increasingly be called upon to help.

After-Market Support

After-market support is an important element of the heavy-lift helicopter industry and includes CPH agreements, MRO services, specialized educational and training services, and the development of customized aircraft components and tools. CPH involves an OEM providing a full suite of parts and services (*e.g.*, replacement parts, spare parts replenishment, scheduled, and unscheduled engine maintenance) to the aircraft it manufactures for a fixed cost per hour of utilization over a specified time period. The option provides a level of reliability and cost certainty for customers. It also allows OEMs to deepen their relationships with users, monitor the performance of their aircraft, and generate additional contracted revenue.

MRO business performance is directly correlated to the number of aircraft in service and the number of hours those aircraft are flown. In order to provide MRO services including major and minor maintenance, modifications, refurbishment, and repairs of aircraft airframes, engines and parts a provider must be licensed by the FAA in the U.S. and European Aviation Safety Agency in Europe. AeroStrategy, a specialist management consulting firm devoted to the aviation and aerospace sectors, estimated that the civil helicopter MRO market was approximately \$5.0 billion in 2006, the most recent year for which information is available, with 50.0% dedicated to components, 20.0% dedicated to engines, 20.0% dedicated to modifications, and 10.0% dedicated to airframes. AeroStrategy predicts that this market will grow to \$6.8 billion in 2016, representing a compounded annual growth rate of 3.1%.

Crew training and education are additional after-market services for the heavy-lift helicopter industry. Typical training requires a combination of ground school and flight training, and in some cases, the use of flight simulators. Training may also include maintenance and type training, as well as annual FAA certification courses. Heavy-lift helicopter pilots are required to log a minimum number of flight hours each year and must keep current on all industry certifications.

Table of Contents

COMPANY HISTORY

Our Company was founded in 1971 by Jack Erickson, a second-generation logger and entrepreneur. Mr. Erickson leased an S-64E Skycrane helicopter from Sikorsky Aircraft Corporation to assist in timber harvesting. After his initial success with the aircraft, the company purchased four Skycranes and subsequently changed its name to Erickson Air-Crane.

In 1972 we expanded into construction, first using an Aircrane for power line construction while working as a subcontractor for utility companies such as the Bonneville Power Administration, Pacific Gas and Electric Company, and Southern California Edison Company. Since these initial operations, we have placed transmission towers for over 8,000 miles of power lines. In 1975, we expanded our construction offering as an Aircrane placed the final 17 steel sections on the CN Tower in Canada. In 1993, the U.S. Government hired us to remove and replace the "Statue of Freedom," which sits atop the U.S. Capitol dome in Washington, D.C., for renovation, garnering significant media attention. In the years since these initial heavy-lift operations, the Aircrane has been flown in North America, Europe, Southeast Asia, Australia, and South America for use in large-scale delivery, installation, and construction operations.

In 1992, we purchased the Type Certificate to the Sikorsky S-64E and S-64F model Skycranes, and the aircraft designation was changed to the "S-64 Aircrane" helicopter. Since then, we have developed and certified over 350 modifications and improvements to the original design. By 1993, Erickson Air-Crane had become the manufacturer and support facility for all Aircrane parts and components.

We certified our attachable fire tank system in 1992, providing the basis for our success in aerial firefighting. Initial overseas firefighting operations commenced in Australia in 1998, and the Aircrane has since maintained an annual presence with the Australian firefighting corps. Aircranes have also been used to fight fires in the U.S., Canada, Greece, France, Italy, Turkey, and South Korea. The performance of the helicopter allowed us to make our first Aircrane sale in 2002, when the South Korea Forest Service purchased four aircraft. A year later, we sold an additional four aircraft to the Italian Forest Service. All eight of those Aircranes were built and delivered between 2002 and 2007. We sold an Aircrane to our first commercial customer in 2009 (subject to the purchaser's right to resell the aircraft to us on July 31, 2013, which was an important term to the purchaser when the sale agreement was negotiated).

On September 27, 2007, Stonehouse Erickson Investment Co. LLC, Stonehouse Erickson Management Co. LLC, and ZM EAC LLC acquired 100% of our outstanding common stock. On January 8, 2010, ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. purchased the interests of the Stonehouse entities.

Table of Contents

BUSINESS

Overview

We specialize in the operation and manufacture of the Aircrane, a versatile and powerful heavy-lift helicopter. The Aircrane has a lift capacity of up to 25,000 pounds and is the only commercial aircraft built specifically as a flying crane without a fuselage for internal loads. The Aircrane is also the only commercial heavy-lift helicopter with a rear load-facing cockpit, combining an unobstructed view and complete aircraft control for precision lift and load placement capabilities.

We own and operate a fleet of 17 Aircranes, which we use to support a wide variety of government and commercial customers worldwide across a broad range of aerial services, including firefighting, timber harvesting, infrastructure construction, and crewing. We refer to this segment of our business as Aerial Services. We also manufacture Aircranes and related components for sale to government and commercial customers and provide aftermarket support and maintenance, repair, and overhaul services for the Aircrane and other aircraft. We refer to this segment of our business as Manufacturing / MRO. As part of our Manufacturing / MRO segment, we also offer CPH contracts pursuant to which we provide components and expendable supplies for a customer's aircraft at a fixed cost per flight hour. We believe CPH contracts help our customers better predict and manage their maintenance costs. In 2010, our Aerial Services and Manufacturing / MRO segments generated revenues of \$105.7 million and \$12.5 million, respectively, and in 2011, our Aerial Services and Manufacturing / MRO segments generated revenues of \$138.6 million and \$14.1 million, respectively. In 2010, we had a net loss attributable to Erickson Air-Crane of \$8.3 million, and in 2011, we had net income attributable to Erickson Air-Crane of \$15.9 million.

We own the Type and Production Certificates for the Aircrane, granting us exclusive design, manufacturing, and related rights for the aircraft and OEM components. We invest in new technologies and proprietary solutions with a goal of increasing our market share and entering new markets. We have made more than 350 design improvements to the Aircrane since acquiring the Type Certificate and we have developed S-64 Aircrane accessories that enhance our aerial operations, such as our firefighting tank system and snorkel, timber "heli harvester," and anti-rotation device and hoist.

We have manufactured 33 Aircranes for our own fleet and for our customers in several countries worldwide. To date, we have sold and delivered nine Aircranes, including our first sale to a commercial customer in 2009 (subject to the purchaser's right to resell the aircraft to us on July 31, 2013, which was an important term to the purchaser when the sale agreement was negotiated).

We believe we are the only fully integrated developer, manufacturer, operator, and provider of aftermarket parts and services for a precision heavy-lift helicopter platform, and that there are significant growth opportunities for our business. For example, we believe population growth and deconcentration, which increases the size and breadth of communities that must be protected from wildfires, will lead to increased government spending on rapid response, heavy-lift firefighting solutions such as the Aircrane. See "Business Competition" and "The Commercial Heavy-Lift Helicopter Industry Commercial Heavy-Lift Helicopter Markets." There is, however, no guarantee that growth will occur in the markets we serve or that we will be able to take advantage of growth opportunities. See "Risk Factors."

We target long-term contract opportunities and had a total backlog of \$212.8 million as of February 29, 2012, of which \$128.0 million was from signed contracts and \$84.8 million was from anticipated exercises of customer extension options (including \$54.3 million from multi-year annual customer extension options). We had a total backlog of \$298.9 million as of February 28, 2011, of which \$176.4 million was from signed contracts and \$122.5 million was from anticipated exercises of customer extension options (including \$22.6 million from multi-year annual customer extension options). No sales of Aircranes were associated with our backlog as of February 29, 2012 or February 28, 2011. We define long-term contracts as contracts of six months or more, to distinguish them from our contracts related to a specific task for a customer, which are generally short-term engagements. We include anticipated exercises of customer extension options in our backlog when our prior operating history, including past exercises of extension options by such customers and the other circumstances specific to the particular contract, causes us to conclude that the exercise of such extension option is likely. We expect that approximately \$123.8 million of the backlog

Table of Contents

will not be filled in 2012. See " Our Competitive Strengths Valuable Long-Term Customer Relationships and Contracts" for a description of some of our long-term customer relationships. See " Backlog" for a discussion of how we define and calculate backlog. There is no guarantee, however, that any customer will exercise its extension options or that any contracts will be renewed or extended. See "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

Our Aerial Services operations are seasonal and tend to peak in June through October and tend to be at a low point in January through April. As a result of this seasonality, we have historically generated higher revenue in our third quarter as compared to other quarters, and received the majority of our cash in the second half of the calendar year, although we often have unabsorbed costs in the fourth quarter which could lead to negative reported gross profit in the third and fourth quarters. We had cash used in operations of \$8.4 million for the year ended December 31, 2010 and \$20.7 million for the year ended December 31, 2011. Cash used in operations included an increase in inventory and work in process of approximately \$26.7 million and \$25.7 million for the years ended December 31, 2010 and 2011, respectively. A significant portion of this increase was attributable to the manufacture of two Aircranes during 2010 and 2011 that are currently held in inventory. We expect to have a significant decrease in the amount of cash used for inventory in 2012 as compared to the amounts used in 2010 and 2011 and, to a lesser extent, savings resulting from our reduction-in-force in November 2011. As a result, we believe that our cash flows from operations, together with cash on hand and the availability of our revolving credit facility, will provide us with sufficient liquidity to operate our business for the foreseeable future.

We have production, maintenance, and logistics facilities in Central Point, Oregon. We currently maintain a year-round international presence with operations in Canada, Italy, Malaysia, and Peru, and an operating presence in Australia and Greece. We employ approximately 700 employees of whom approximately 500 are located in Oregon, primarily at our Central Point facilities and Portland headquarters. We employ approximately 100 pilots. We deploy crews, including pilots and maintenance personnel, on-site globally where we deploy our Aircranes.

Our Competitive Strengths

We believe we have certain competitive advantages in the heavy-lift helicopter market that further our ability to execute on our strategy.

Versatile Heavy-Lift Helicopter Solutions. The versatility and high payload capacity of the Aircrane, its proprietary mission-specific accessories, and the skill of our pilots and crews make the Aircrane an attractive solution for a wide variety of aerial services. We believe our fleet of 17 owned and operating Aircranes is the largest commercial fleet of helicopters in the world capable of carrying loads of up to 25,000 pounds and that our role as the manufacturer of the Aircrane, combined with our scale, service readiness, and comprehensive global support network, provides us with a leadership position in the heavy-lift helicopter industry. See "Business Competition."

Vertically Integrated Business Model. We offer a full spectrum of heavy-lift helicopter solutions, including the design, engineering, development, manufacturing, and testing of the Aircrane, as well as Aerial Services and MRO services. Our business benefits from close cooperation between our designers and engineers, on the one hand, and our operations personnel, on the other hand, allowing us to quickly react to changing customer needs and new business opportunities. We provide MRO services on our Aircrane fleet, and we continue to supply parts and major maintenance and overhaul services to every aircraft we have sold. We also perform similar operations on components for owners of other aircraft platforms. Our FAA-certificated repair station offers a full array of services, from small repairs to extensive heavy airframe maintenance. Beyond the usual capabilities of a repair station, we have a team of engineers and resident Designated Engineering Representatives to assist in repair and modifications, as well as to address engineering issues that arise during the maintenance process. We believe our integrated approach business model reduces our costs and diversifies our revenue stream, and results in better products and services through close collaboration between our product engineers and our operations personnel.

Table of Contents

Established International Presence. During our history, we have operated in 18 countries across five continents. Global operations allow us to maximize the use of our fleet for seasonal aerial services and position us to capitalize on opportunities in a broad range of geographies. We currently maintain a year-round international presence in Canada, Italy, Malaysia and Peru, and an operating presence in Australia and Greece. Our global reach and our efficient management structure enable us to provide high-quality, reliable services with high levels of operational availability to our customers. In addition, our geographically distributed fleet minimizes our mobilization costs and the response times in meeting our customers' service requirements. Revenues from external customers by geographic area for the last three fiscal years are provided in Note 11 to our consolidated financial statements included in this prospectus. Global operations expose us to risks, such as currency fluctuations, different regulatory and legal environments, and risks of financial, political, and other instability related to the countries in which we operate. See "Risk Factors Risks Related to Our Business Our business is subject to risks associated with international operations, including operations in emerging markets."

Proprietary Technologies and Continuous Innovation. We have made more than 350 design improvements to the Aircrane and have developed a variety of innovative accessories for our Aerial Services, including a 2,650 gallon firefighting tank and snorkel refill system, a "heli harvester" for aerial timber harvesting, and an anti-rotation device and hoist that facilitates precision heavy load placement. We continuously explore ways to deliver innovative solutions to our customers and to potential customers in new markets.

Valuable Long-Term Customer Relationships and Contracts. We believe that our established relationships with customers, some of whom have been customers for more than 20 years, allow us to effectively compete for and win new projects and contract renewals. Our long-term relationships help provide us with visibility with respect to our revenue, aircraft utilization, and scheduled usage patterns. We increased our backlog as of February 29, 2012 by \$179.8 million to \$212.8 million compared to September 26, 2007, the date of the acquisition of the Company by a group of private equity investors. We had \$298.9 million of backlog at February 28, 2011. No sales of Aircranes were associated with our backlog as of February 29, 2012 or February 28, 2011. We derived approximately 76% of our 2010 revenues and approximately 83% of our 2011 revenues from long-term contracts. We define a long-term contract to be a contract with a duration of six months or more. See "Business Backlog" for a discussion of how we define and calculate backlog. While our contracts with our largest customers have a term of six months or more, they may be subject to annual renewals or customer extension options, and there is no guarantee that such contracts will be renewed or extended. See "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

Experienced and Growth-Oriented Management Team. Within the last four years, we have added the six members of our senior management team, including our CEO and CFO, our Vice President and Chief Marketing Officer, our Vice President of Manufacturing and MRO, our Vice President of Aerial Services, and our Vice President, General Counsel, and Corporate Secretary. Our senior management team has an average of more than 20 years of experience in the aviation industry and rotorcraft sector. This professional aerospace team provides us with deep domain knowledge, extensive operational and manufacturing expertise, and strong customer and business relationships.

Our Strategy

Our goals are to strengthen our position in the competitive heavy-lift helicopter industry by continuing to provide innovative, value-added solutions to our customers, and to expand our aircraft and component sales and MRO services. We intend to focus on the following strategies to achieve these goals:

Maintain Position in Aerial Services and Expand into New Markets. We intend to leverage our global presence, our vertically integrated offerings, and our innovative technologies to expand our customer base and increase our fleet utilization in existing and new markets.

Firefighting. We intend to opportunistically enter European, Asian, and South American countries that have significant fire seasons. We expect the seasonal differences between these countries and

Table of Contents

those we currently serve will provide us with the opportunity to increase our global fleet utilization and provide more scale in each of our key target regions.

Timber harvesting. We intend to opportunistically enter new markets in South America and Asia where abundant high-value timber resources present significant growth potential for our heavy-lift solutions. In addition, we expect to continue to capitalize on the growing desire for sustainable timber harvesting practices, as we have done in North America and Malaysia. Specifically, we have been able to secure Aerial Services contracts in the United States, Canada, and Malaysia supporting customers who do not clear cut timber (which allows for easier access by road) and instead use sustainable timber harvesting practices that require extraction of heavy timber loads from sites that may not be accessible by ground transportation.

Infrastructure construction. We believe that infrastructure construction represents a large market with growth potential for us. In particular, we believe that electrical grid development and modernization, oil and gas pipeline construction, wind turbine construction, and other alternative energy projects represent our most significant growth opportunities in this sector.

Emergency response. We have developed and continue to expand a comprehensive emergency response marketing effort to provide advanced global aerial solutions in support of disaster recovery, hazard mitigation, and infrastructure restoration.

Crewing. We have experienced strong demand for crewing services from customers who have purchased our Aircranes and we expect this trend to continue as the global installed base of Aircranes expands.

Increase Our Aircrane Sales. We have not sold an Aircrane since 2009, but have manufactured two Aircranes that are ready for sale, one of which is complete and one of which is substantially complete. These two Aircranes are held in inventory and are not part of our fleet of 17 Aircranes that we operate for our customers. We intend to increase sales of the Aircrane to existing and new customers. In addition to generating profits upon sale, we expect an increase in the installed base of Aircranes to augment demand for our crewing services, OEM components, and MRO and other aftermarket services. We have established a sales team that is focused on expanding Aircrane sales and has significantly increased our sales pipeline activities. However, potential sales of Aircranes are subject to considerable uncertainties. For example, in September 2010, we entered into an aircraft purchase agreement for the purchase of one Aircrane with Aliar Aircrane Services Especializados Ltda that was subject to a purchaser financing condition. No payments were made by the purchaser and the agreement terminated. In December 2010, we entered into a non-binding memorandum of understanding with Wan Yu Industries Groups, Limited for the purchase of five Aircranes that was subject to a condition that the customer pay a non-refundable deposit by the end of January 2011. The deposit with respect to such potential Aircrane sales was not received and therefore the arrangement terminated. On August 1, 2011, we entered into an Aircraft Lease and Purchase Option Agreement with HRT, a subsidiary of a Brazilian oil and gas exploration company. HRT declined to exercise its option to purchase the Aircrane pursuant to such agreement and the lease expired on January 15, 2012. The failure of HRT to exercise its purchase option and the failure by us to otherwise sell an Aircrane increases the risk that we may fail to comply with the financial covenants under our Credit Agreement in 2012. See "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement" and "Management's Discussion and Analysis of Financial Condition and Results of Operations Trends and Uncertainties Affecting Our Business." In February 2012, we entered into a non-binding letter of intent with THK, pursuant to which THK expressed its intent to purchase one Aircrane on or prior to June 30, 2012. The terms of the binding purchase agreement remain subject to ongoing negotiations between us and THK, and we do not know when such negotiations will conclude. There can be no assurance that THK will purchase an Aircrane. See "Prospectus Summary Recent Developments." In addition, a sale of one of the 17 Aircranes that is part of our fleet would reduce the number of Aircranes available to provide Aerial Services. If we consummate such a sale, we may not always

Table of Contents

have the ability to maintain our desired level of Aerial Services operations with a reduced fleet, and our results of operations could be adversely affected. See "Risk Factors Risks Related to Our Business Our Aerial Services revenues depend on the availability and size of our Aircrane fleet."

Expand Our MRO and Aftermarket Solutions. We intend to leverage the expertise of our highly trained engineers and maintenance support personnel to extend our MRO capabilities across aircraft platforms similar to the Aircrane. We have entered into a service and supply agreement with Bell pursuant to which we will manufacture and sell certain commercial aircraft parts and components to Bell. We believe that we are also well-positioned to provide similar services for other aircraft, directly or in partnership with OEMs. These OEMs are increasingly focused on developing new platforms rather than on servicing legacy platforms, because their large fixed-cost structures and limited engineering capacity often render the latter uneconomical. We are currently pursuing aftermarket OEM opportunities that leverage our engineering expertise.

Maintain a Focus on Long-Term Customer Relationships and Contracts. We intend to focus on developing long-term relationships with key customers through reliable performance and a strong commitment to safety and service. This focus has resulted in an increase in our backlog and we believe it has given us a competitive advantage in competing for new contracts and renewals of existing contracts.

Maintain a Continued Focus on Research and Development. We are dedicated to continuous innovation and significant research and development projects. Our operations have benefited from innovations such as our fire tank and snorkels, anti-rotation device and hoist, hydraulic grapple and a redesigned automated flight control system. We have several new product applications and aircraft accessories under development, including composite main rotor blades, and a universal multipurpose container for cargo transportation. See "Business Research and Development." Innovative new products and capabilities enhance the reliability and versatility of our aircraft in existing and new markets, enabling us to expand our market access, increase our customer base, and capture additional market share.

Selectively Pursue Acquisitions of Businesses and Complementary Aircraft. We intend to continue to opportunistically evaluate the acquisition of businesses and aircraft that could complement and enhance our Aerial Services capabilities and service offerings and increase our access to customers and our penetration of new and existing markets.

There is no guarantee that we will be able to execute on our strategies, and, even if we successfully execute on our strategies, there is no guarantee that our strategies will strengthen our position in the heavy-lift helicopter industry. Our ability to execute on our strategies is subject to risks and uncertainties described in "Risk Factors."

Changes to Our Company Since Our 2007 Acquisition

Our Company was acquired by a group of private equity investors in September 2007. Our new stockholders have taken several steps to improve our business and financial position and improve our focus on implementing our strategies.

Management. We have added strong professional aerospace managers to our management team, adding six members of our senior management team, including our CEO and CFO, our Senior Vice President of Global Sales and Marketing, our Vice President of Manufacturing and MRO, our Vice President of Aerial Services, and our Vice President, General Counsel, and Corporate Secretary. This management team has extensive experience in the helicopter services and aerospace manufacturing sectors and has brought significant improvements to our operations.

Corporate Functions. Under the leadership of the current management team, we have institutionalized all corporate functions and developed key performance indicators that are reviewed monthly with our senior leadership team. This includes a comprehensive revenue forecasting process. Our governance has been enhanced through the use of a transaction approval process for all material transactions. Safety, operating, and strategic plans are now in place. Investments in leadership talent

Table of Contents

and systems have been made in our sales and marketing and finance groups. We have implemented a new ERP that integrates our financial and manufacturing processes.

Focus on Long-Term Relationships and Contracts. We have focused on building a diverse range of long-term relationships and obtaining long-term contracts. We have increased our backlog as of February 29, 2012 by \$179.8 million to \$212.8 million compared to September 26, 2007, the date of the acquisition of the Company by a group of private equity investors. We had \$298.9 million of backlog at February 28, 2011. We derived approximately 76% of our 2010 revenues and approximately 83% of our 2011 revenues from long-term contracts. We define a long-term contract to be a contract with a duration of six months or more. See "Business Backlog" for discussion of how we define and calculate backlog. See also "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

Increased MRO Focus. Prior to our acquisition, our MRO effort was primarily internally focused. While servicing our own fleet of 17 Aircranes remains the largest component of our current MRO activities, we have broadened our focus to leverage our expertise with the Aircrane to offer MRO services across similar aircraft platforms. We are currently pursuing various aftermarket OEM opportunities.

Increased Effort to Expand Airplane Sales. Our sales group is dedicated to expanding Airplane sales, and has significantly increased our sales pipeline activities. We may enter into agreements providing options to potential customers on future aircraft deliveries, which options only become binding obligations on us if non-refundable deposits are paid. The options allow us to engage potential customers in the sale process. However, there is no assurance that any options will be exercised or any conditional sales will be completed. See " Our Strategy Increase our Airplane Sales" and "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Airplanes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement."

Oil and Gas Pipeline Construction. We have begun penetrating the oil and gas pipeline construction services market. We have recently entered into a three-year services contract with Repsol Exploración Perú S.A. ("Repsol"), a Peruvian subsidiary of a Spanish oil and gas exploration company that is developing natural gas resources in Peru. See " Significant Customers."

Improved Standards for Safety and Quality. We have implemented specific, company-wide safety and quality processes to further enhance our safety and quality culture and now meet or exceed all recommended FAA standards. These processes allow us to provide all of our employees and customers with consistently safe and high-quality service, which we believe is essential to our business. In recognition of the importance of safety, we have a full-time dedicated Safety & Compliance Department reporting directly to our CEO. We operate under a fully implemented Safety Management System, which meets or exceeds current FAA requirements. We received AS9100 Certification in May 2009, and in March 2011, we successfully completed our annual AS9100 audit with no major findings. In 2011, we also received our third consecutive year of Safety and Health Achievement Recognition Program ("SHARP") accreditation. In February 2012, we successfully completed an in-depth FAA/Flight Standards District Offices audit of our repair station resulting in zero findings and added to our staff an accredited International Standards for Business Aircraft Operations ("IS-BAO") auditor. We anticipate that we will become IS-BAO certified this year.

Increased Media Exposure. Our management team has pursued various opportunities to increase the Airplane's media exposure. In addition to features in newspapers and magazines, the unique design and capabilities of our Airplane have been featured in a recent documentary by National Geographic and at the center stage of the 2009 EAA Airventure Oshkosh airshow.

Headquarters Relocation. In March 2009, we relocated our corporate headquarters from Central Point, Oregon to Portland, Oregon, which we believe has improved our ability to attract and retain highly qualified management personnel and provides us with improved access to our global customers and facilities.

Table of Contents

Products and Services

Our Aircrane is a versatile and powerful precision heavy-lift helicopter with lift capacity of up to 25,000 pounds. The Aircrane is the only commercial aircraft built specifically as a flying crane, in contrast to those with fuselages built for internal loads. The Aircrane's unique design allows us to perform a wide variety of critical services, including firefighting, timber harvesting, and infrastructure construction. The Aircrane is the only helicopter in the world with a rear load-facing pilot station that provides an unobstructed view and complete control of the load being placed. We believe the aircraft's inherent versatility, large payload capacity, and precision placement capabilities provide us with competitive advantages and support our position as a leading provider of heavy-lift helicopter solutions worldwide. See "Business Competition."

The table below highlights the specifications of our two Aircrane models:

Specification	S-64E	S-64F
Power Plant	2 Pratt & Whitney JFTD12A-4A	2 Pratt & Whitney JFTD12A-5A
Shaft HP	4,500 per engine, 9,000 total	4,800 per engine, 9,600 total
Gross Weight (Max.)	42,000 pounds	47,000 pounds
Empty Weight	20,200 pounds average	20,400 pounds average
Payload Capacity	20,000 pounds	25,000 pounds
Max Cruise Speed	115 knots = 132 miles per hour	104 knots = 119 miles per hour

The Aircrane was originally manufactured by Sikorsky Aircraft Corporation. We purchased the S-64 Type Certificate from Sikorsky in 1992 and have since developed and certified over 350 modifications and improvements to the original design, which have significantly enhanced the Aircrane's versatility and precision heavy-lift capabilities. In addition, we are committed to continuous innovation and the allocation of resources to the design, engineering, and development of new and improved Aircrane tools and accessories. Components such as the anti-rotation device and hoist, hydraulic grapple, and high-volume fire tank and snorkel enhance the Aircrane's ability to perform effectively and cost-efficiently. As we continue to enter new markets we will continue to design and develop products as needed. The table below highlights some of our proprietary Aircrane accessories.

Accessory	Market	Description
Fire Tank and Pond Snorkel	Firefighting	2,650 gallon tank that drops water, retardant, or foam mix; includes a water-collecting snorkel that refills the tank with fresh water in less than 45 seconds
Fire Tank and Sea Snorkel	Firefighting	2,650 gallon tank with anti-sea spray device, enabling in-flight seawater refill in less than 45 seconds while minimizing the damaging effects of seawater spray from stationary refilling
Foam Cannon	Firefighting	Water, foam, and fire retardant dispenser that forces a stream of retardant at 300 gallons per minute with a coverage range of 200 feet.

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

Table of Contents

Accessory	Market	Description
Hydromulch Loading Manifold	Post-Firefighting	Dispenser of mulch and other regenerative materials for post-fire management, promoting regrowth and reducing post-fire erosion
"Heli Harvester"	Timber Harvesting	Self-seating harvester that allows timber harvesting operations with no ground crew required during helicopter operations
Hydraulic Grapple	Timber Harvesting and Infrastructure Construction	Exerts over 42,000 pounds of pressure to secure timber as it is harvested in an ecologically friendly manner; supports debris removal
Long-Line Shock and Pendant	Timber Harvesting and Infrastructure Construction	Shock-absorbing aircraft attachment for hydraulic grapple that absorbs load variances, facilitating smoother flying and increased aircraft longevity
Anti-Rotation Device and Hoist	Infrastructure Construction	Prevents load rotation and enables precise load placement
Material Transport Bucket	Infrastructure Construction	Allows for the transportation and precision delivery of various materials to a particular location

We have several new product applications and aircraft accessories under development, including composite main rotor blades and a universal multi-purpose container for cargo transportation. Innovative new products and capabilities enhance the reliability and versatility of our aircraft, which we believe positions us well to increase our customer base and market share. See " Research and Development."

Aerial Services

We provide heavy-lift aerial helicopter solutions to domestic and international customers. Our Aircrane was designed as a versatile, airborne heavy-lift platform with capabilities that support a wide variety of missions and end-markets. The Aircrane is capable of providing heavy-lift solutions to a wide variety of

Table of Contents

industries, including firefighting, timber harvesting, infrastructure construction, oil and gas and energy related construction, disaster recovery, and emergency response. We own, operate, and maintain a fleet of 17 Aircranes, making us the world's largest Aircrane operator. We typically lease our aircraft to customers for specific missions, with customers generally paying for the aircraft, maintenance, and crewing services, as well as fuel expense. In addition, we currently provide crewing for the majority of aircraft we have sold.

Our air crews consist of two or three pilots per aircraft who are capable of flying daily missions of up to 10 hours. Aircrane missions are highly specialized and require pilots, mechanics, technicians, and support crews with extensive experience in helicopter operations and in specific mission training. To support our commitment to safety and quality service, we recruit pilots with exceptional long-term in-flight helicopter experience and require that new hires spend significant time as co-pilots before graduating to full pilots, regardless of previous experience in other aircraft. We believe that our attractiveness to customers depends not only on the capabilities of our aircraft but also on the high level of training and abilities of our air crews and support personnel, as well as our safety policies and procedures. See "Business Employees and Training."

Aerial services accounted for 91% of our consolidated revenues in 2011 (53% firefighting, 23% timber harvesting, 10% construction, and 14% crewing), 89% in 2010 (52% firefighting, 28% timber harvesting, 5% construction, and 15% crewing), and 76% in 2009 (66% firefighting, 21% timber harvesting, 6% construction, and 7% crewing). Our aerial services are seasonal, but our global operations help us mitigate the effects of seasonality; for example, the firefighting season in the U.S. typically runs from May to October and in Australia it typically runs from October to February.

Periodically, Aircranes are removed from service and undergo heavy maintenance activities, including inspections and repairs of the airframe and related parts as required. The actual time between heavy maintenance depends on many factors, including hours of operation and kind of use. We perform the heavy maintenance procedures at our Central Point facilities. Heavy maintenance requires several months to complete during which time the Aircrane is not available to provide Aerial Services. We attempt to schedule heavy maintenance so that no more than one Aircrane is out of service undergoing heavy maintenance at any time.

Firefighting. Our Aircrane Helitanker the Aircrane with an attached 2,650 gallon fire tank is a versatile, powerful, and cost-competitive aerial firefighter. The Aircrane Helitanker has provided firefighting services in the U.S., Canada, Mexico, Italy, Greece, France, Turkey, and Australia. Our firefighting customers include federal, state, local, and international government agencies who hire us to be available as needed. Under our typical firefighting contracts, aircraft are deployed to locations prone to seasonal fires and remain on standby throughout the fire season. For these contracts, which we refer to as exclusive-use contracts, we typically charge on a per-day basis for availability and on a per-hour basis for actual aircraft use. In some circumstances, we only charge for actual aircraft use; these contracts, which we refer to as call-when-needed contracts, have considerably higher daily and/or hourly rates than our exclusive-use contracts. Because fire seasons differ in the Northern and Southern Hemispheres, we are able to capitalize on the year-round demand for firefighting services by moving aircraft from one location to another.

Our 2,650 gallon fire tank features microprocessor controlled tank doors that allow for eight different coverage levels. The tank provides the Aircrane with a comparable delivery capacity of fixed-wing tanker planes and the increased maneuvering capabilities of a helicopter. Fixed-wing alternatives must land to reload or skim-load from large bodies of water. Our Helitanker reloads while in flight in 45 seconds or less from any available water source deeper than 18 inches, including rivers, lakes, oceans, and cisterns. As a result, if there is a water source nearby, the Aircrane can reload and return to its target significantly faster than fixed-wing alternatives, resulting in a substantially larger total drop capacity and a more cost-effective solution for fighting most fires.

Table of Contents

Our proprietary accessories, including our water cannon, sea and pond snorkels, and hydromulch loading manifold, have helped us remain a leader in the firefighting market. As we look to increase our market share within the international firefighting market we will continue to pursue new product innovations.

Timber Harvesting. We have flown the Aircrane in high-performance, low-impact timber operations since 1971 in a number of regions, including the U.S., Canada, and the tropical forests in Malaysia. Our customers request our harvesting solutions primarily for high-value timber, such as tropical hardwoods and for remote area harvesting in locations that would otherwise require road construction or prohibit ground-based harvesting.

Aerial timber harvesting with the Aircrane is a cost-competitive, sustainable, and environmentally friendly method of harvesting high-value and difficult to access timber. Timber is vertically lifted and transported with our proprietary hydraulic grapple, minimizing the need for road development and large support crews on the ground. We believe one Aircrane can harvest and transport the same amount of timber in a day as approximately 50 ground tractors. The environmental benefits of this sustainable forest practice include far less damage to adjacent stands of trees, soil, and riparian areas.

Infrastructure Construction. The Aircrane's rear load-facing pilot seat, combined with the skill and experience of our pilots, makes the aircraft particularly well-suited for infrastructure projects that require extreme precision in load delivery, such as electricity transmission and broadcasting towers, oil and gas pipelines, wind turbines, mining conveying systems, industrial equipment, emergency shelters, and ski-lift equipment. The Aircrane can be configured to transport heavy machinery and equipment such as heating, ventilating, and air conditioning HVAC units, automotive equipment, and other large cargo items.

We have developed a number of innovative mission-specific tools and accessories that further enhance our capabilities and increase our versatility, including our anti-rotation device and hoist, hydraulic grapple, and material transport bucket.

Crewing. For customers who purchase an Aircrane but lack qualified operating personnel, we offer pilots and field maintenance crews on an annual or multi-year contract basis. Because we are currently the largest employer of trained and qualified Aircrane pilots, crew chiefs, field mechanics, and other support personnel worldwide, we are often a critical solution for effective crewing of our sold aircraft. We provide crewing services for five of the nine aircraft we have sold since 2002. For example, we provide crewing services on a multi-year basis to the Italian Forest Service in respect of four Aircranes we previously sold to the Italian Forest Service. We also provide maintenance and CPH for parts to this customer. As we increase our sales of Aircranes, we expect our crewing services to increase accordingly.

Aircraft Manufacturing and Maintenance, Repair, and Overhaul (Manufacturing / MRO)

Through our Manufacturing / MRO segment we manufacture Aircranes from existing airframes, manufacture new components on a contract basis, and provide customers with FAA- and European Aviation Safety Agency-certified MRO services in our AS9100-certified facility. The MRO process includes the disassembly, cleaning, inspection, repair, and reassembly of airframes, engines, components, and accessories, as well as the testing of complete engines and components. We perform major maintenance, repair, and overhaul on our own Aircranes, and we continue to provide parts and major maintenance and overhaul services to each aircraft we have sold. We also offer CPH contracts in which we provide all parts and service for a customer's aircraft at a fixed hourly rate, increasing our customers' ability to predict and manage their maintenance costs. Our Manufacturing / MRO segment accounted for 9.3% and 10.6% of our 2011 and 2010 consolidated revenue, respectively.

We have manufactured a total of 33 Aircranes for our own use and for sale to customers, and have sold one for domestic construction operations and eight for international firefighting operations. The sale of an Aircrane to an existing or potential Aerial Services customer may reduce future Aerial Services revenues

Table of Contents

we may have received for services provided to such customer. Although we expect in the future to manufacture Aircranes only after entering into a binding sales agreement, we have substantially manufactured two Aircranes that we currently hold for sale. In years when aircraft sales occur, they typically account for more than 10% of our consolidated revenues. We also build and manufacture Aircranes for our own use as dictated by customer demand and currently own, operate, and maintain 17 Aircranes. All of our aircraft are built in-house at our facility in Central Point, Oregon, enabling us to manufacture an Aircrane to new specifications in approximately six to fourteen months depending on specifications and lead times. As the owner of the S-64 Type and Production Certificates, we also have the exclusive authority and ability to manufacture an Aircrane entirely from new parts. We believe our manufacturing operations are scalable. We recently reduced manufacturing capacity in our November 2011 reduction-in-force, and if we experience significantly increased customer demand for our Aircranes, we anticipate being able to meet such demand by rapidly expanding our manufacturing capacity and related resources. However, such expansion may require us to incur significant financial costs.

We have extensive capabilities in new parts production of airframes, aircraft systems, and avionics components for a wide variety of rotary and fixed-wing aircraft. Our highly skilled mechanics and technicians regularly manufacture airframe subassemblies and other sheet metal parts and have machining capabilities that include computer numerical control milling, grinding, and lathing. Our manufacturing operations can fabricate hard-to-locate parts, or even reverse engineer and reproduce parts that may no longer be available from traditional sources. We manufacture aluminum main and tail rotor blades and have partnered with OEMs to design and manufacture composite main rotor blades that we believe will significantly improve the performance of our Aircranes and other helicopters.

While we provide MRO services to our own Aircranes, we continue to provide parts and major maintenance and overhaul services to every Aircrane we have sold. We also perform similar operations on engines and other components for owners of other aircraft platforms. Our FAA-certificated repair station offers a full array of services from small repairs to extensive heavy airframe maintenance. Beyond the usual capabilities of a repair station, we have a team of engineers and resident Designated Engineering Representatives to assist in repair and modifications, as well as to address any engineering issues that arise during the maintenance process.

Research and Development

Our research and development efforts have been critical to our success, and we dedicate significant resources to improving our aircraft's performance and developing new applications and products. We spent approximately \$4.8 million, \$6.4 million, and \$6.9 million on research and development in 2011, 2010, and 2009, respectively. We have recently completed several new product applications and aircraft accessories and have others under development, including the following:

A redesigned Automated Flight Control System that significantly improves system performance and reliability and reduces maintenance costs, certified by the FAA in 2010.

Night vision cockpit instrumentation, certified by the FAA in 2010.

Composite main rotor blades, with respect to which the detailed design is complete and manufacturing tooling is fabricated, and prototype blades have been fabricated.

A universal multi-purpose container for the transportation of cargo, a prototype of which has been tested and proven, and with respect to which variations are in development for medical facilities and portable command centers.

Innovative new products and capabilities enhance the reliability and versatility of our aircraft in existing and new markets, enabling us to expand our markets, increase our customer base, and capture additional market share.

Table of Contents

Backlog

Backlog represents the amount of revenue that we expect to derive from signed contracts, including oral contracts that have been subsequently memorialized in writing, or customer extension options. Our backlog consists of contracts with a duration of six months or more. For contracts that include both a daily and an hourly rate component, only the daily component of revenue is included in backlog and an estimate of the expected hourly revenue is not included. For contracts that include a guaranteed number of hours, the value of the guaranteed hours is included in backlog. For CPH contracts, which depend on hours flown by our customers, we calculate the contribution to backlog based on contracted minimum hours. When a binding aircraft sale contract has been signed with a customer, the purchase price of the aircraft not included in current revenues is included in backlog. When we sign a contract giving a potential purchaser an option to purchase an aircraft which only becomes binding on a non-refundable payment of a material option fee, we do not include the purchase price of the aircraft in backlog until the non-refundable payment has been made and the contract is a binding purchase contract.

We calculate the contribution to backlog for some timber harvesting contracts based on our estimate of the cubic meters of high grade timber we expect to deliver under the contract based on our experience. As of February 29, 2012, \$4.0 million of our backlog was attributable to our estimate of the cubic meters of timber we expect to deliver under timber harvesting contracts. Our backlog as of February 28, 2011 included \$140.6 million attributable to our estimate of the cubic meters of timber we expected to deliver under timber harvesting contracts.

A substantial portion of our backlog is related to anticipated exercises of customer extension options. See "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized." We anticipate customer extension options based on our prior operating history and experience with these customers. There is no guarantee, however, that these extension options will be exercised. As of February 29, 2012, none of our backlog was attributable to the anticipated confirmation of extension options in connection with our contract with the Hellenic Fire Brigade. As of February 28, 2011, \$25.4 million of our backlog was attributable to the anticipated confirmation of extension options in connection with our contract with the Hellenic Fire Brigade.

Our backlog as of February 29, 2012 was \$212.8 million, of which \$128.0 million was attributable to signed contracts and \$84.8 million was attributable to anticipated exercises of customer extension options (including \$54.3 million from multi-year annual customer extension options). We had total backlog of \$298.9 million as of February 28, 2011, of which \$176.4 million was from signed contracts and \$122.5 million was from anticipated exercises of customer extension options (including \$22.6 million from multi-year annual customer extension options). This decrease in total backlog was primarily the result of (1) the restructuring of our contractual relationship with Asiatic Lumber Industries from a multi-year contract to a year-to-year contractual relationship, (2) general consumption of backlog through our performance of Aerial Services and collection of revenue under existing contracts that were previously categorized as contract backlog, and (3) the removal of backlog attributable to customer extension options with the Hellenic Fire Brigade. These decreases were partially offset by increases in backlog resulting from new contract signings during the 12 months prior to February 29, 2012. \$18.4 million of our backlog as of February 29, 2012 and \$22.7 million of our backlog as of February 28, 2011 was attributable to our Manufacturing / MRO segment. No sales of Aircranes were associated with our backlog as of February 29, 2012 or February 28, 2011.

Sales and Marketing

Sales and marketing assignments are allocated based on geography to regional managers who are responsible for generating qualified sales leads. Once a potential customer is qualified, the managers are supported by segment managers who provide subject matter expertise on our various products and services. We have retained consultants to assist us with new government contracting opportunities in the

Table of Contents

U.S. We also retain independent representatives in specific countries on a commission basis. Our independent representatives operate under contracts in which they pledge to act in full compliance with the Foreign Corrupt Practices Act and other applicable legislation.

As a part of our sales effort, we may enter into agreements providing potential customers with an option to purchase an aircraft from future production. Such agreements can be structured as a purchase agreement which is not binding until a non-refundable deposit is paid. On payment of the negotiated option payment or non-refundable deposit, and on occasion negotiation of a more specific purchase agreement, the agreement becomes binding. Such agreements allow us to engage potential customers without committing the customer. No income is recognized on such agreements until the non-refundable payment is made and a binding purchase commitment exists. See "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement."

Our marketing functions are principally directed at identifying and understanding geographic markets and developing new applications for our products and services. We are currently focused on potential energy applications for oil and gas exploration, transmission towers, and pipeline development in South America, Europe, North America, and Asia. In firefighting applications, we are focused on Southern Europe, South America, and Asia. We are pursuing timber harvesting applications in North America, Asia, and South America and construction applications in North America, Europe, the Middle East, South America, and Asia. In addition to our traditional operating markets, we are exploring various new product applications to enable us to enter new markets such as emergency response.

Significant Customers

Both the U.S. Forest Service and the Italian Ministry of Civil Protection accounted for 10% or more of our total net revenues in 2011, and we have existing contracts with each of these customers. We believe that we have good relationships with the U.S. Forest Service and the Italian Ministry of Civil Protection.

The table below sets forth all customers that accounted for at least 10% of our total net revenues in 2009, 2010, or 2011:

	Year Ended December 31, 2009	Year Ended December 31, 2010	Year Ended December 31, 2011
U.S. Forest Service	16.6%	24.4%	27.2%
Italian Ministry of Civil Protection	13.6%	13.8%	15.9%
Hellenic Fire Brigade	10.5%	11.0%	8.4%
Samling Global	5.1%	12.3%	7.0%
	45.8%	61.5%	58.5%

In December 2011, the U.S. Department of Agriculture awarded us a National Exclusive Use Large Fire Support Helicopter Services contract with the U.S. Forest Service. The contract has a one-year term with a customer option for three one-year extensions. The contract comprises seven awards for a total contract award of approximately \$24.0 million annually. The agreement with the U.S. Forest Service represents a material portion of our backlog. See "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized."

In June 2010, we entered into an agreement to provide firefighting services for the Hellenic Fire Brigade, which agreement calls for annual confirmation notices. On January 31, 2012, the Hellenic Fire Brigade notified us that it would not exercise its option to extend our existing contract for the 2012 fire season, which contract relates to the use of three Aircranes during the summer of 2012. The Hellenic Fire Brigade has not notified us whether it intends to exercise its option for the 2013 fire season. As a result of

Table of Contents

these developments, we are not currently providing services to the Hellenic Fire Brigade and our backlog has been reduced by approximately \$25.4 million relating to services we had expected to provide to the Hellenic Fire Brigade in 2012 and 2013. See "Business Backlog" for a discussion of how we define and calculate backlog. We did not receive any advance payments under this contract for 2012.

Our agents and representatives in Greece have informed us that the Hellenic Fire Brigade has cancelled or not exercised its extension options in respect of all of its firefighting contracts for 2012 with us and all other aerial service providers. NAMSA has posted on its website a request for proposal for Greek aerial firefighting services for the 2012 to 2014 firefighting seasons. We have registered as a NAMSA supplier and we expect to provide a response by late April to the request for proposal to compete for the requested aerial firefighting services to be provided by three heavy-lift helicopters in Greece for 2012 through 2014. The aircraft specifications for the requested services are similar to those relating to the previous tender by the Hellenic Fire Brigade in 2010 that we successfully won. The Hellenic Fire Brigade has been a continuous customer of ours for more than ten years through several successful re-tendering processes. There is no guarantee that our bid will be successful or that we will be able to satisfy tender specifications. If a Greek contract is awarded to us, there is no guarantee that our revenues and profit margins thereunder will be similar to those that we have received in connection with past contracts with the Hellenic Fire Brigade. If a Greek contract is not awarded to us and we are unable to redeploy the three Aircranes we have historically used to provide services in Greece in order to generate comparable revenues and operating earnings, we may fail to comply with the financial covenants under our Credit Agreement in 2012. See "Risk Factors Risks Related to Our Business Cancellations, reductions or delays in customer orders, delays in delivery of Aircranes, or customer breaches of purchase agreements may adversely affect our results of operations and our ability to comply with covenants under our Credit Agreement."

In October 2011, we entered into a three-year helicopter services agreement with Repsol, a Peruvian subsidiary of a Spanish oil and gas company. Under the terms of the agreement, we are providing helicopter services to Repsol in connection with Repsol's construction of a natural gas pipeline in Peru. The agreement with Repsol represents a material portion of our total backlog. See "Risk Factors Risks Related to Our Business Some of our backlog may be deferred or may not be realized." The total amount we expect to be paid pursuant to this agreement is approximately \$30.0 million.

In February 2012, our Malaysian subsidiary, Erickson Aircrane Malaysia Sdn. Bhd., entered into an amendment to our existing logging contract with Samling Global to extend the contract term to January 31, 2013. Pursuant to the amended contract, we began providing aerial timber harvesting services in Malaysia on February 1, 2012 to Samling Global. The total amount we expect to be paid pursuant to this agreement is approximately \$11.2 million.

Intellectual Property

Because we own the S-64 Type and Production Certificates, we are the only company authorized to manufacture the Aircrane and OEM components for the Aircrane. In addition, our core technologies are protected through a combination of intellectual property rights, including trade secrets, patents, copyrights, and trademarks, as well as through contractual restrictions. We enter into confidentiality and inventions assignment agreements with our designers, engineers, consultants, and business partners, and we control access to and distribution of our proprietary information.

We have patents related to our fire tank in the U.S. that expire in 2011 and 2012. We also have patents related to our sea snorkel in the U.S., Canada, Korea, China, certain countries in Europe, and elsewhere. Our sea snorkel patents expire in the U.S. in 2021.

Table of Contents

We may file for additional patent protection as we deem appropriate to protect new products.

We have registered the AIR CRANE word mark in the United States and we have registered the Erickson logo, featuring a design of an Aircrane. We have also registered the A.I.R.S. word mark in the United States. We have a pending trademark filing in the United States for the AIRCRANE INCIDENT RESPONSE SYSTEMS word mark.

Insurance and Risk Management

We mitigate risk by maintaining hull and liability insurance on our aircraft covering us for loss of or damage to the aircraft and for the cost of defending against and paying any claims brought by others. We also insure the aircraft against war risk and related perils. In addition, we maintain insurance for other risks inherent in doing business, such as automobile liability, pollution liability, and workers' compensation coverage. In some instances, we are covered by indemnity agreements from our customers in lieu of, or in addition to, our insurance.

Competition

We compete with several other heavy-lift helicopter operators in one or more of our markets. We believe our fleet of 17 owned and operating Aircranes is the largest commercial fleet of helicopters in the world capable of carrying loads of up to 25,000 pounds. See "The Commercial Heavy-Lift Helicopter Industry Commercial Heavy-Lift Alternatives."

The following table presents our primary competitors in the commercial heavy-lift market.

Competitor	Competitor's Services	Total Heavy-lift Helicopters Operated ⁽¹⁾
Helicopter Transport Services	Aerial services and support to the petroleum, forestry, and mining industries; aerial fire suppression, aerial construction, air ambulance, electronic news gathering, executive transport, motion pictures	14 ⁽²⁾
Columbia Helicopters	Heavy-lift aerial services, including construction, oil rig moves, oil rig support, timber removal, firefighting, disaster recovery	22 ⁽³⁾
Siller Brothers	Maintenance, overhaul, and repair services Aerial firefighting, construction, timber harvesting, hydroseeding Maintenance, facility, and overhaul	6 ⁽⁴⁾

(1) For purposes of this chart, heavy-lift helicopters are defined as having an external load capacity of 10,000 pounds or more. See "The Commercial Heavy-Lift Helicopter Industry Commercial Heavy-Lift Alternatives."

(2) Consists of ten CH-54A/B, one S-64E, and three S-61/N aircraft.

(3) Consists of six Columbia 234 and sixteen Columbia 107 aircraft.

(4) Consists of two S-64E, one CH-54A, and three S-61/N aircraft.

Table of Contents

In a more general sense, we compete with other airborne solutions, including fixed-wing firefighting operators, and with a variety of ground-based alternatives. Competition is generally on the basis of appropriateness of the solution, cost, reliability, and environmental impact. For some missions, such as the transportation of the "Statue of Freedom" from the U.S. Capitol or other precision placement of heavy loads, the Aircrane's precision and heavy-lift capabilities often make it the preferred choice. For other missions, such as firefighting, the Aircrane competes against other aircraft and ground-based solutions and is often one in an array of resources used by a customer.

On a platform basis, we believe our closest competitor is the Columbia 234 "Chinook" helicopter, the Type Certificate for which is owned by Columbia Helicopters. A number of military helicopters could, if made available for civilian use, be deployed in operations similar to those that we undertake and have significantly greater lift capacity and range.

Facilities

We operate from two principal facilities that we own in Central Point, Oregon. Our operations and general offices are located in an 88,548 square foot factory on an eight-acre site. We also operate a 50,000 square foot warehouse on a 40-acre site approximately four miles from our operations facility. In their current configuration, our facilities can support all of our current operations and the manufacture of up to four aircraft per year.

We lease approximately 7,300 square feet of headquarters office space in Portland, Oregon under a lease that expires in 2013. We lease office and hangar space for our foreign operations.

Employees and Training

We employ approximately 700 employees, of whom approximately 500 are located in Oregon, primarily at our Central Point facilities and Portland headquarters. We employ approximately 100 pilots. We deploy crews, including pilots and maintenance personnel, on-site globally where we deploy our aircraft. Our employee base is generally stable and turnover is low. None of our employees is represented by a labor union. Our 11 pilots in Italy are covered by statutory employment protections.

Our hiring policies dictate that pilots have a minimum of 1,500 hours of Pilot in Command helicopter time to be employed by us as a Second in Command pilot. The training process for these pilots to advance to Captain status is extensive and can take up to five years. Our Aircrane Captains have an average of over 10,000 hours of helicopter time, with extensive experience in fire and vertical reference missions.

Our field mechanics are qualified to a number of levels of Return to Service ("RTS") on the Aircrane based on work experience and task qualification. All field mechanics must meet the requirements of the FAA-approved Repair Station Part 145 Training Program and minimum task qualifications as specified in Erickson's Standard Operating Procedure # 2005 before becoming qualified to sign off the aircraft. The task qualification process typically takes three to five years for an FAA-certificated mechanic to reach Full RTS. This process ensures that the individuals maintaining our fleet of Aircranes meet the high standards that have become associated with Erickson Air-Crane. In addition to the Limited and Full RTS qualifications, a number of our field mechanics hold other task qualifications in Non Destructive Testing, Pilot-Static Testing, and ATC Transponder Testing.

On November 2, 2011, we completed a company restructuring that included a reduction-in-force of 119 employees. The restructuring was needed to realign our operating expenses to ensure that we remain competitive in the markets we serve.

Regulation

All aspects of our business are heavily regulated under federal, state, local, and foreign laws and regulations. These laws and regulations may require us to maintain and comply with a wide variety of

Table of Contents

certificates, permits, licenses, noise abatement standards, and other requirements. These regulatory agencies have the authority to modify, amend, suspend, or revoke the certificates, permits, and licenses granted to us for failure to comply with provisions of law or applicable regulations, and may impose civil or criminal penalties for violations of applicable rules and regulations.

Federal Aviation Administration and Comparable Agencies. Our aerial operations, aircraft manufacturing, and MRO are subject to complex aviation and transportation laws and regulations under which the United States Department of Transportation ("DOT"), principally through the FAA, exercises regulatory authority over certificate holders and persons that operate, manufacture, or repair aircraft. We are also subject to comparable regulation in several foreign countries with respect to our operations in those countries.

The FAA and comparable foreign agencies, including the European Aviation Safety Agency, have jurisdiction over many aspects of our business, including:

The issuance of type certificates for the Airplane;

Approval of major modifications to the Airplane or its systems;

Approval of Airplane accessories used in our operations, such as our sea snorkel and our anti-rotation device and hoist;

Promulgation and enforcement of rules governing the operation of aircraft generally and in connection with specific missions;

Promulgation and enforcement of rules governing the manufacture and repair of aircraft, aircraft systems, and aircraft components; and

Promulgation and enforcement of rules governing the qualification, training, and currency of pilots, flight crew, and repair and maintenance personnel.

The FAA and comparable foreign authorities actively monitor compliance with these rules and conduct regular inspections and audits of our operations and facilities. A serious violation of any of these rules could result in the imposition of fines or penalties, the revocation of our type certificate or the suspension or revocation of our operating licenses. The aviation regulation agencies in various jurisdictions sometimes work in concert to avoid duplication of regulatory effort, but each agency has authority to impose and enforce its own regulations and conduct its own inspections with respect to operations within its jurisdiction.

U.S. federal laws require that at least 75% of the voting securities of a domestic air carrier be owned or controlled by citizens of the U.S., and that its president and at least two-thirds of its directors and managing officers be U.S. citizens. We believe that these requirements do not apply to our operations. Nonetheless, out of caution and to allow for possible changes in our future operations, we have adopted governance practices to ensure our compliance with these provisions even if inapplicable. Our CEO and at least two-thirds of our directors and managing officers are U.S. citizens, and our second amended and restated certificate of incorporation and second amended and restated bylaws restrict voting of shares of our capital stock by non-U.S. citizens. Our second amended and restated bylaws provide that no shares of our capital stock may be voted by or at the direction of non-U.S. citizens unless such shares are registered on a separate stock record, which we refer to as the foreign stock record. Our second amended and restated bylaws further provide that the voting rights of the shares registered on the foreign stock record in the name of each foreign stockholder will be proportionally reduced so that the voting rights of the amount so registered are reduced if the amount registered would exceed the foreign ownership restrictions imposed by federal law.

The FAA and comparable foreign agencies may adopt new regulations, directives, or orders that could require us to take additional compliance steps or result in the grounding of some of our aircraft or the

Table of Contents

suspension of certificates or licenses, which could increase our costs or result in a loss of revenues. New regulations could also restrict our operations or increase our operating costs.

Environmental Regulations. We are subject to increasingly stringent federal, state, local, and foreign environmental laws and regulations concerning, among other things, water discharges, air emissions, hazardous material and waste management, and environmental cleanup. Future regulatory developments may require us to take additional action to maintain compliance with applicable laws. For example, future laws and regulations limiting the emission of greenhouse gasses could, among other things, require us to change our manufacturing processes, which may require us to make significant additional expenditures.

Certain of our operations are also subject to the oversight of the Occupational Safety and Health Administration ("OSHA") concerning employee safety and health matters.

Other Regulations. Our operations in non-U.S. jurisdictions are subject to local governmental regulations that may limit foreign ownership of aviation companies. Because of these local regulations, we conduct some of our operations through entities in which local citizens own a majority interest and we hold a minority interest, or through local agents.

Safety

We have company-wide safety and quality processes administered by a Safety & Compliance Department reporting directly to the CEO. In 2011, we received our third consecutive year of SHARP Certification from the Oregon OSHA. The SHARP Certification identifies companies that achieve a level of safety that far exceeds base compliance standards. We operate under a fully implemented Safety Management System ("SMS") which meets or exceeds FAA requirements. SMS is the global aviation gold standard for managing risk. We have been a participant in Helicopter Association International's Platinum Program of Safety for the last four years. We received AS9100 Certification in May 2009 and in March 2011, we successfully completed our annual AS9100 audit with no major findings. In February 2012, we successfully completed an in-depth FAA/Flight Standards District Offices audit of our repair station resulting in zero findings and added to our staff an accredited IS-BAO auditor. We anticipate that we will become IS-BAO certified this year.

Legal Proceedings

From time to time, we are party to various legal proceedings in the normal course of business. These claims, even if lacking in merit, may result in the expenditure of significant financial and managerial resources. We were recently a party to the following significant legal proceedings.

U.S. Forest Service Claim. In early June 2008, we were awarded four contracts with the U.S. Forest Service. In late June 2008, the U.S. Forest Service issued a stop work order on three of the four contracts. In October 2008, we filed a request for equitable adjustment on the stop work order with the U.S. Forest Service Contracting Officer. After being denied our request for equitable adjustment, in July 2009, we filed a claim with the Civilian Board of Contract Appeals for approximately \$3.0 million, which represented our estimate of additional costs incurred by us under these contracts, which we were not able to mitigate, as a result of the stop work order. We recorded approximately \$3.0 million as a receivable in 2008, and subsequently reduced this amount by \$0.8 million in 2010 to reflect the revised estimate of additional costs we anticipated to recover. On February 1, 2012, the Civilian Board of Contract Appeals issued its final decision in the matter denying our claim in full. As of December 31, 2011, we further reduced our net receivable to zero as a result of the decision issued on February 1, 2012. We currently do not expect to appeal the decision of the Civilian Board.

IRS Claim. The IRS issued a Notice of Proposed Adjustment on June 3, 2009 proposing to reallocate foreign tax credits amounting to \$9.5 million taken in 2005 and 2006 to earlier tax years. We submitted the matter to IRS appeals. On August 25, 2011, our assigned IRS appeals officer verbally advised us that the

Table of Contents

IRS agreed with our original position concerning the foreign tax credits, and this matter has now been formally settled with the IRS.

Evergreen Claim. Evergreen Helicopters, Inc. ("Evergreen") filed a complaint against us in the U.S. District Court for the District of Oregon on June 29, 2009 alleging claims under the Sherman Antitrust Act and the Clayton Act and for breach of contract. Evergreen alleged that we breached our obligations to Evergreen as a third-party beneficiary to a 1992 contract between us and Sikorsky Aircraft Corporation by restricting the supply of parts and not supplying parts for its S-64E in a timely manner, particularly in the four-year period prior to the filing of the complaint, and by restricting the supply of parts and not supplying parts for CH-54As. Evergreen also alleged that we had monopoly power in the alleged heavy-lift helicopter service and parts markets, or that we were attempting to obtain such monopoly power, and that Evergreen's business was injured by our actions. On February 15, 2011, we entered into a settlement agreement with Evergreen, pursuant to which we paid Evergreen a total of \$10.0 million in cash. In exchange for the \$10.0 million payment from us, Evergreen dismissed the claim and has released us from all potential claims of any kind up to the date of the settlement.

Organizational Structure

Some of our foreign operations are conducted through local subsidiaries and are structured to ensure compliance with local ownership laws and other requirements. Typically, we provide comprehensive lease services to our minority-owned subsidiaries under agreements which are cancelable by us; those subsidiaries in turn contract with foreign entities.

Table of Contents**MANAGEMENT****Directors and Executive Officers**

The following table provides information regarding our executive officers and directors as of the date of this prospectus. Concurrently with the closing of this offering, we expect that our board of directors will consist of seven members, a majority of which are expected to be "independent" as defined under SEC and NASDAQ rules.

Name	Age	Position
Udo Rieder	52	President and Chief Executive Officer, Director
Charles Ryan	57	Senior Vice President and Chief Financial Officer
H.E. "Mac" McClaren	57	Vice President and Head of Aerial Services
David Ford	61	Vice President of Manufacturing and MRO
Gary Zamieroski	49	Vice President and Chief Marketing Officer
Edward Rizzuti	42	Vice President, General Counsel, and Corporate Secretary
Quinn Morgan	40	Director and Chairman of the Board of Directors
Kenneth Lau	34	Director
Hank Halter*	47	Director nominee
Gary R. Scott*	61	Director nominee
Meredith R. Siegfried*	38	Director nominee
James L. Welch*	57	Director nominee

*

Ms. Siegfried and Messrs. Halter, Scott, and Welch are expected to take office immediately following the closing of this offering. All director nominees are "independent" as defined in the rules and regulations of the SEC and NASDAQ.

Udo Rieder has served as our Chief Executive Officer and as a member of our board of directors since March 2008. From February 2005 to March 2008, Mr. Rieder served as Vice President and General Manager, Parts Logistics and Services for Bombardier Aerospace Inc. Prior to Bombardier, July 1996 to December 2004, Mr. Rieder worked at Delta Air Lines, Inc., most recently as Vice President, Engineering and Planning and as Vice President, Purchasing. From May 1990 until June 1996, Mr. Rieder held various manager positions with American Airlines, Inc., including Manager of Power Plant Purchasing and Manager of Warranty and Repair Contracts. From May 1985 until May 1990, Mr. Rieder served as an engineer with Bell Helicopter, Inc. Mr. Rieder holds a BS in Mechanical Engineering from Texas A&M University and also holds an AAS in Business from Central Texas College. He has served as the Chairman of the Engineering, Maintenance and Materiel Council of the Air Transport Association and as the Chairman of the e-Business Committee for the same organization. Mr. Rieder was selected to serve as one of our directors because he is our Chief Executive Officer, and has extensive knowledge of our business and industry.

Charles Ryan has served as our Senior Vice President and Chief Financial Officer since January 2009. From August 2005 until December 2008, Mr. Ryan served as Chief Financial Officer and Treasurer of Latham International Inc. In December 2009, Latham International Inc. filed a petition for voluntary reorganization under Chapter 11 of the U.S. Bankruptcy Code and emerged from reorganization under Chapter 11 in January 2010. From January 2002 until August 2005, Mr. Ryan served as Chief Financial Officer of SSG Precision Optonics, Inc. From July 1999 until December 2001, Mr. Ryan served as Group Vice President and Chief Financial Officer of the seating products group of B/E Aerospace Inc. From January 1995 until July 1999, Mr. Ryan served in various positions in General Electric's subsidiary GE Aircraft Engines, most recently as a Finance Officer in component repair and manufacturing operations. From July 1986 until January 1995, Mr. Ryan worked at Textron Inc. and its successor entity Allied Signal-Honeywell, most recently as a Group Controller in the Military Engines and Engineering Development

Table of Contents

Group. From June 1979 until July 1986, Mr. Ryan worked at Howmet Corporation in various financial controlling positions. Mr. Ryan started his career in May 1978 at Olin Corporation in the financial management development program and internal audit group. Mr. Ryan holds an MBA from the University of New Haven and a BS in Accounting from Quinnipiac University and is a licensed CPA in the state of Massachusetts and a current member of the American Institute of Certified Public Accountants.

H.E. "Mac" McClaren has served as our Vice President and Head of Aerial Services since January 2009. From July 2006 until December 2008, Mr. McClaren served as the Vice President and Program Manager of the V-22 Osprey Program and prior to that as the Vice President of H-1 Upgrades, Eagle Eye, and Presidential Helicopter Programs at Bell Helicopter Inc. From June 2003 until July 2006, Mr. McClaren worked as Capture Team Leader for the CH-53K program at Sikorsky Aircraft Corporation. From August 1975 until June 2003, Mr. McClaren served in the U.S. Marine Corps, including duty as head of the Expeditionary Aviation Working Group, Operations Officer for the 1st Marine Division, Commanding Officer of Marine Light Attack Helicopter Squadron 369, as well as various other positions. His personal awards include the Legion of Merit, Meritorious Service Medal, Air Medal, Navy Commendation Medal, and Navy Achievement Medal. Mr. McClaren retired from the Marine Corps at the rank of Colonel. Mr. McClaren is a graduate of the U.S. Army War College at Carlisle, Pennsylvania and holds a BS from the University of North Carolina.

David Ford has served as our Vice President of Manufacturing and MRO since June 2010. Mr. Ford was General Manager of Sikorsky Global Helicopters Manufacturing and MRO Operations in Coatesville, PA. from January 2006 through March 2010. He also served as Vice President of MRO for Keystone Helicopter from February 1996 through December 2001, and President from January 2002 through December 2005. Mr. Ford's background includes over 30 years of leadership experience in the aerospace industry, including as Engineering Director and GM for Regional Airline Products for PTC Aerospace from November 1993 through January 1996; Director of Customer Service for Textron Lycoming from November 1988 through October 1993; and Program Management, Engineering and Customer Support management positions for Bell Helicopter from June 1978 through October 1988. His formal education includes a Bachelor of Science in Aerospace Engineering from Georgia Tech and a Master of Science in Industrial Management from Purdue's Krannert Graduate School of Business. He has also successfully completed Executive Leadership training courses at the University of Virginia's Darden Business School. Mr. Ford has served as Chairman of the Manufacturer's Committee and Board Liaison for Helicopter Association International and currently serves on the Board of Directors for the American Helicopter Museum in West Chester, PA. He also serves on the Governor's Aviation Advisory Committee for the State of Pennsylvania.

Gary Zamieroski has served as our Vice President and Chief Marketing Officer since March 2012. Mr. Zamieroski has over 27 years of experience in the aerospace industry. From January 2010 through July 2011, Mr. Zamieroski served as Vice President, Marketing, Sales, and Strategy for Meggitt Safety Systems/Equipment Group. From September 2008 through December 2009, Mr. Zamieroski founded Aviation Associates International, a private consulting firm. From April 2007 through September 2008, Mr. Zamieroski was Vice President, Business Development and Strategy at HRTextron/Textron Systems. From November 2005 to November 2006, Mr. Zamieroski served as VP/Director, Marketing and Sales at MTU Maintenance in Hannover, Germany. Between February 1998 and November 2005, Mr. Zamieroski held leadership roles in Sales, Marketing, Strategy, and Service at Honeywell International. From October 1994 through February 1998, Mr. Zamieroski was Director of Sales for Airbus North America. From August 1985 through October 1994, Mr. Zamieroski held a variety of positions with GE Aircraft Engines and GE International, including postings in Australia, Indonesia, and Mexico. Mr. Zamieroski earned a Masters Degree from the School of International Service at American University, a post-graduate certificate in Legislative Studies from Georgetown University, and a BS in Aerospace from the School of Technology at Kent State University. In addition, he has completed MBA coursework at the College of William and Mary, Seattle Pacific University, and the University of Dayton.

Table of Contents

Edward Rizzuti joined Erickson in August 2010 and has served as our Vice President, General Counsel and Corporate Secretary since November 2011. Prior to joining Erickson, from August 2006 to August 2010, Mr. Rizzuti worked for NACCO Materials Handling Group, Inc., most recently serving as Associate General Counsel. From January 2004 to July 2006, Mr. Rizzuti served as Legal Counsel for Terex Corporation. Prior to his employment with Terex, Mr. Rizzuti worked as a lawyer with Mintz Levin Cohn Ferris Glovsky and Popeo PC from September 1999 to July 2003, focusing in the area of private equity and corporate transactional work. From September 1998 to September 1999 Mr. Rizzuti worked as a lawyer with Clifford Chance LLP. Mr. Rizzuti received his JD from New York University School of Law and holds a BS in civil engineering from Rutgers University.

Quinn Morgan has served on our board since September 2007 and as our Chairman since January 2010. Mr. Morgan is a founding member and Managing Director of Centre Lane Partners, LLC ("Centre Lane"), an affiliate of ZM Equity Partners, LLC. Mr. Morgan serves on the boards of several private companies affiliated with Centre Lane. Prior to co-founding ZM Equity Partners in May 2007, Mr. Morgan was a Managing Director and Head of Corporate Private Equity at D. B. Zwirn & Co., L.P., which he joined in January 2005. At D.B. Zwirn & Co., L.P. Mr. Morgan had overall responsibility for the corporate private equity investment program. From 2000 to 2005, he was employed with Moore Capital Management and its illiquid asset management joint venture, Steelpoint Capital Partners. From 1994 to 2000, he was employed with Goldman Sachs & Co. Mr. Morgan holds a BS in Economics from the London School of Economics and Political Science. Mr. Morgan was selected to serve as one of our directors because he is the managing member of our largest beneficial owner and has extensive experience in financing, private equity investment, and board service.

Kenneth Lau has served on our board since January 2010. Mr. Lau is a founding member and Managing Director of Centre Lane. Mr. Lau also serves on the boards of several private companies affiliated with Centre Lane. Prior to co-founding ZM Equity Partners in May 2007, Mr. Lau was a Vice President in the Corporate Private Equity Group of D. B. Zwirn & Co., L.P., which he joined in February 2005. From 2001 to 2005, he was employed with Moore Capital Management and its illiquid asset management joint venture, Steelpoint Capital Partners. From 1999 to 2001, he was employed with Merrill Lynch. Mr. Lau received a Master of Engineering and two BS degrees from the Massachusetts Institute of Technology. Mr. Lau was selected to serve as one of our directors because he is a member of our largest beneficial owner and has extensive experience in financing, private equity investment, and board service.

Hank Halter is expected to become a member of our board immediately after the closing of this offering. Mr. Halter served as Senior Vice President and Chief Financial Officer of Delta Air Lines from November 2008 until his retirement in February 2012. Mr. Halter previously served in a variety of finance positions at Delta Air Lines, including as Senior Vice President and Controller of Delta Air Lines (May 2005 through November 2008); Vice President-Controller (March 2005 through May 2005); Vice President-Assistant Controller (January 2002 through March 2005); Vice President-Finance-Operations (February 2000 through December 2001); and various other finance leadership positions (August 1998 through February 2000). In September 2005, Delta Air Lines filed a petition for voluntary reorganization under Chapter 11 of the U.S. Bankruptcy Code and emerged from reorganization under Chapter 11 in April 2007. From June 1993 through August 1998, Mr. Halter held various finance positions at American Airlines in corporate reporting, financial planning, and corporate real estate. Prior to his tenure with American Airlines, Mr. Halter was a Senior Accountant in the Philadelphia office of Ernst & Young LLP from June 1987 through July 1991. Mr. Halter holds an MBA from Duke University and a BS in accountancy from Villanova University. Mr. Halter is a certified public accountant, a member of the Board of Directors of the Atlanta Police Foundation and the Delta Community Credit Union. He also serves on the Board of Trustees of the Delta Heritage Museum and on the Advisory Board for the Atlanta Chapter of the CFO Roundtable. Mr. Halter was selected as a director nominee because of his experience as the chief financial officer of Delta Air Lines, and for his general experience with finance and public accounting. We expect to appoint him chair of our Audit Committee. Mr. Halter will qualify as an "independent" director under the

Table of Contents

rules and regulations of the SEC and NASDAQ, and as an "audit committee financial expert" under SEC rules.

Gary R. Scott is expected to become a member of our board immediately after the closing of this offering. Mr. Scott recently retired from Bombardier, Inc., where he served as the President of the Commercial Aircraft unit of Bombardier Aerospace since April 2008. He joined Bombardier in March 2004, serving as President of New Commercial Aircraft from March 2004 through February 2006 and President of Aircraft Services and New Commercial Aircraft from February 2006 through April 2008. Before joining Bombardier, Mr. Scott was Group President, Civil Simulation and Training at CAE, Inc. from July 2002 through March 2004. Mr. Scott began his career in aviation with The Boeing Company in 1973, holding the following executive positions: President, Flight Safety Boeing Training International (July 2000 through July 2002); Vice President, Business Strategy and Finance, Commercial Aviation Services (January 1999 through July 2000); Vice President and Chief Operating Officer, Boeing Enterprises (April 1998 through January 1999); and Vice President and General Manager for the 737/757 programs (November 1995 through March 1998). Mr. Scott earned a BA in Business Administration at the University of Washington and an MBA at Seattle University. Mr. Scott has also completed the Executive Development Program, University of Illinois, as well as the Harvard Business School Advanced Management Program. Mr. Scott also serves on the Board of Directors of the Wings Club. Mr. Scott was selected as a director nominee because of his experience as the chief executive of a significant business unit of a public aerospace company, and for his general management and financial experience in the aerospace industry. Mr. Scott will qualify as an "independent" director under the rules and regulations of the SEC and NASDAQ.

Meredith Siegfried is expected to become a member of our board immediately after the closing of this offering. In June 2011, Ms. Siegfried was appointed Chief Executive Officer of The NORDAM Group, Inc. She previously served as the Chief Operating Officer of the Repair Group of The NORDAM Group, Inc., responsible for its worldwide maintenance, repair and overhaul operations, from January 2009. Before becoming COO of the Repair Group, Ms. Siegfried served in a variety of roles at The NORDAM Group, including Vice President of Global Sales of the Repair Group (May 2006 through December 2008); Vice President, International (February 2002 through April 2006); Director, International Operations (January 2000 through January 2002); and Manager, International Operations (February 1999 through December 1999). Ms. Siegfried joined The NORDAM Group from Arthur Andersen's Global Corporate Finance division, where she served as a Senior Consultant on mergers and acquisitions, seller services, and financial advisory from November 1996 through January 1999. Ms. Siegfried also serves on the board of World Travel Services, LLC. She is also a member of the Young Presidents' Organization and served as Chairman of the Board of Trustees for the Tulsa Airport Authority for seven years through 2010. In 2011, she was awarded a Henry Crown Fellowship, a two-year program sponsored by The Aspen Institute. Ms. Siegfried received a BA in Finance from Notre Dame and an MBA from the University of Chicago. Ms. Siegfried was selected as a director nominee because of her experience in international sales and manufacturing and maintenance and overhaul operations. Ms. Siegfried also has industry, finance, and management experience that will be valuable to us. Ms. Siegfried will qualify as an "independent" director under the rules and regulations of the SEC and NASDAQ.

James L. Welch is expected to become a member of our board immediately after the closing of this offering. Mr. Welch has served as Chief Executive Officer and a director of YRC Worldwide since July 2011. From October 2008 through July 2011, Mr. Welch served as President and Chief Executive Officer and a director of Dynamex Inc., a leading provider of same-day transportation services in North America. From October 2007 through September of 2008, Mr. Welch was a consultant and Interim Chief Executive Officer of JHT Holdings, Inc., a provider of truck transportation services. From June 2000 through January 2007, Mr. Welch served as President and Chief Executive Officer of Yellow Transportation, a leading provider of transportation services for industrial, commercial and retail goods. Mr. Welch joined Yellow Transportation in 1978, where he held various senior management positions prior to his appointment as President and Chief Executive Officer. Mr. Welch received his BS in Psychology from West Texas A&M.

Table of Contents

Mr. Welch currently serves on the Board of Directors of SkyWest, Inc. and formerly served on the Boards of Spirit AeroSystems Holdings, Inc. and Roadrunner Transportation Services. Mr. Welch was selected as a director nominee because of his experience as the chief executive of transportation companies, his experience with air transportation, and because of his board experience with other aerospace companies. Mr. Welch will qualify as an "independent" director under the rules and regulations of the SEC and NASDAQ.

Board Composition

Concurrently with the closing of this offering, we expect our board of directors will consist of seven members, four of whom will qualify as "independent" under the rules and regulations of the SEC and NASDAQ.

Concurrently with the closing of this offering, we will amend and restate our certificate of incorporation. In accordance with our second amended and restated certificate of incorporation, immediately after this offering, our board will be divided into three classes with staggered three-year terms. At each annual general meeting of stockholders, the successors to the directors whose terms then expire will be elected to serve from the time of election and qualification until the third annual meeting following election. The initial terms of the Class 1, Class 2, and Class 3 directors will expire in 2013, 2014, and 2015, respectively. Udo Rieder and an independent director will each serve as Class 1 directors, Quinn Morgan and two independent directors will each serve as Class 2 directors, and Kenneth Lau and an independent director will each serve as Class 3 directors.

Any additional directorships resulting from an increase in the number of directors will be distributed among the three classes so that, as nearly as possible, each class will consist of one-third of the directors.

Committees of the Board of Directors

Concurrently with the closing of this offering, we will establish the following committees of our board of directors.

Audit Committee

The audit committee will oversee our accounting and financial reporting processes and audits of our financial statements.

The members of the committee will be Hank Halter, Meredith Siegfried, and Gary R. Scott, each of whom will be an "independent" director according to the rules and regulations of the SEC and of NASDAQ. Each of these directors will be determined to be financially literate by our board and as required by the rules and regulations of NASDAQ, and one will be an "audit committee financial expert" as defined under SEC rules. The audit committee will operate under a written charter, to be effective upon the closing of this offering, that will satisfy the applicable standards of the SEC and NASDAQ. The audit committee will also review and approve in advance any related person transaction, other than those that are pre-approved pursuant to pre-approval guidelines or rules established by the committee.

Compensation Committee

The compensation committee will:

assist our board of directors in fulfilling its responsibilities relating to the design, administration, and oversight of employee compensation programs and benefit plans;

discharge our board of directors' duties relating to the compensation of executive officers; and

recommend matters relating to director compensation for our board of directors' approval.

Table of Contents

The compensation committee will operate under a written charter, to be effective upon the closing of this offering, that will satisfy the applicable standards of the SEC and NASDAQ. The members of the committee will be James L. Welch, Meredith Siegfried, and Gary R. Scott, each of whom will be an "outside director" under Section 162(m) of the Internal Revenue Code (the "Code") and an "independent" director under the rules and regulations of the SEC and NASDAQ concurrently with the closing of this offering. No member of our compensation committee has served as one of our executive officers.

Compensation Committee Interlocks and Insider Participation

None of the members of our compensation committee will be or will have been at any time during the past year an officer or employee of ours, and none of our executive officers will serve or will have served in the past year as a member of our board of directors or compensation committee of any entity that has one or more executive officers serving on our board or compensation committee.

Nominating and Corporate Governance

Our entire board will oversee our nominating and corporate governance processes. However, only independent directors will be able to vote on matters related to the identification, selection, qualification, and recommendation of director candidates.

There will be no family relationships among any of our directors or executive officers.

Code of Business Conduct and Ethics

We have adopted a code of business conduct and ethics that applies to all of our employees, officers, and directors, including those officers responsible for financial reporting. The code of business conduct and ethics will be available on our website at www.ericksonaircrane.com upon the closing of this offering. Any amendments to the code, or any waivers of its requirements, will be disclosed on our website. The information on, or accessible through, our website is not part of this prospectus.

Compensation of Directors

We have not historically paid any compensation to our directors. Following the closing of this offering, we will pay an annual fee to each independent director equal to \$70,000, payable semi-annually. Up to \$35,000 of the annual director fee will be made through the issuance of RSUs, based on the value of our common stock at the date of issuance, rather than in cash. In addition, an annual fee of \$10,000 will be paid to the chairs of each of the audit and compensation committees of our board of directors. Directors affiliated with our majority stockholder, however, will not be separately compensated by us, unless the fully diluted ownership of the majority stockholder falls below 50%. Management directors will not be separately compensated by us. All members of our board of directors will be reimbursed for reasonable costs and expenses incurred in attending meetings of our board of directors. Following the closing of this offering, each independent director will be eligible to receive equity incentive awards.

Each of our independent directors will be granted a number of RSUs concurrently with the closing of this offering, equal in value to the price at which we will sell shares in this offering. These RSUs will vest in three equal portions on the last day of each of our fiscal years 2012, 2013, and 2014, provided the director is still serving as of the applicable date.

Limitation on Liability and Indemnification Matters

Our second amended and restated certificate of incorporation will provide that no director will be personally liable to us or our stockholders for monetary damages for breach of fiduciary duty as a director, except to the extent that this limitation on or exemption from liability is not permitted by the Delaware

Table of Contents

General Corporation Law (the "DGCL"), and any amendments to that law. As currently enacted, the DGCL permits a corporation to provide in its certificate of incorporation that a director of the corporation will not be personally liable to the corporation or its stockholders for monetary damages for breach of fiduciary duty as a director, except for liability for any breach of the director's duty of loyalty to the corporation or its stockholders; acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law; payments of unlawful dividends or unlawful stock repurchases or redemptions; or any transaction from which the director derived an improper personal benefit. In addition, our second amended and restated certificate of incorporation provides that, if the DGCL is amended to authorize corporate action further limiting or eliminating the personal liability of directors, then the liability of our directors will be limited or eliminated to the extent permitted by the DGCL, as then amended.

The principal effect of this limitation on liability provision is that a stockholder will be unable to recover monetary damages against a director for breach of fiduciary duty unless the stockholder can demonstrate that one of the exceptions listed in the DGCL applies. This provision, however, will not eliminate or limit director liability arising in connection with causes of action brought under the federal securities laws. Our second amended and restated certificate of incorporation does not eliminate our directors' fiduciary duties. The inclusion of this provision in the certificate of incorporation may, however, discourage or deter stockholders or management from bringing a lawsuit against directors for a breach of their fiduciary duties, even though such an action, if successful, might otherwise have benefited us and our stockholders. This provision should not affect the availability of equitable remedies such as injunction or rescission based upon a director's breach of his or her fiduciary duties.

The DGCL provides that a corporation may indemnify its directors and officers as well as its other employees and agents against judgments, fines, amounts paid in settlement, and expenses, including attorneys' fees, in connection with various proceedings, other than an action brought by or in the right of the corporation, if such person acted in good faith and in a manner he or she reasonably believed to be in or not opposed to the best interests of the corporation, and, with respect to any criminal action or proceeding, if he or she had no reasonable cause to believe his or her conduct was unlawful. A similar standard applies to an action brought by or in the right of the corporation, except that indemnification in such a case may only extend to expenses, including attorneys' fees, incurred in connection with the defense or settlement of such actions, and the statute requires court approval before there can be any indemnification where the person seeking indemnification has been found liable to the corporation.

Our second amended and restated certificate of incorporation will provide that we will indemnify our directors, executive officers and other officers designated by our board of directors to the fullest extent permitted by Delaware law. Under these provisions and subject to the DGCL, we will be required to indemnify our current and former directors, executive officers, and other officers designated by our board of directors for all judgments, fines, settlements, legal fees, and other expenses incurred in connection with pending or threatened legal proceedings because of the director's or officer's position with us or with another entity at which the person serves as a director, an officer, an employee, or an agent at our request, subject to various conditions, and to advance funds to directors and officers before the final disposition of such proceedings to enable them to defend against such proceedings. To receive indemnification, the director or officer must have been successful in the legal proceeding or have acted in good faith and in what was reasonably believed to be a lawful manner in our best interest.

Our second amended and restated bylaws provide that, to the fullest extent permitted by law, we will indemnify any director, executive officer, or other officer designated by our board of directors against all expenses incurred and arising out of the fact that such person is or was our director or officer, or served any other enterprise at our request as a director or an officer. We will pay such expenses in advance of the final disposition of such action only when we receive an undertaking to repay such amounts if it is ultimately determined that such person is not entitled to be indemnified by us.

Table of Contents

We have entered into indemnification agreements with each of our directors that provide that we will indemnify the indemnitee against, and advance certain expenses relating to, liabilities incurred in the performance of such indemnitee's duties on our behalf to the fullest extent permitted under Delaware law, our second amended and restated certificate of incorporation, and our second amended and restated bylaws. Under these indemnification agreements, the indemnified party is indemnified against all expenses (including all reasonable attorneys' fees), judgments, penalties, fines, and amounts paid in settlement actually and reasonably incurred by the indemnitee, or on the indemnitee's behalf, in connection with a proceeding or any claim, issue or matter therein, if the indemnitee acted in good faith and in a manner the indemnitee reasonably believed to be in or not opposed to our best interests. With respect to any criminal proceeding, the indemnitee will be indemnified if the indemnitee had no reasonable cause to believe the indemnitee's conduct was unlawful. If the indemnitee is not wholly successful in a proceeding, but is successful, on the merits or otherwise, as to one or more but less than all claims, issues, or matters in such proceeding, we will indemnify the indemnitee against all expenses actually and reasonably incurred by the indemnitee or on the indemnitee's behalf in connection with each successfully resolved claim, issue, or matter.

Table of Contents

EXECUTIVE COMPENSATION

Compensation Discussion and Analysis

The discussion and analysis of our compensation program for our chief executive officer, chief financial officer, and the three other most highly compensated executive officers (collectively, the "named executive officers") which follows should be read in conjunction with the tables and text contained elsewhere in this filing. We describe below the compensation policies and procedures currently in effect and certain compensation and benefit arrangements that we intend to implement in connection with and following this offering.

The compensation paid to our named executive officers for 2011 is not necessarily indicative of how we will compensate our named executive officers after this offering and we anticipate that our compensation programs following this offering, as developed and implemented by our compensation committee, could vary significantly from our historical practice.

Compensation Philosophy and Objectives

Our non-management directors, and, following this offering, our compensation committee, are charged with establishing and reviewing the compensation programs for executive officers. Our overall goal in compensating executive officers is to attract, retain, and motivate key executives of superior ability who are critical to our future success. We believe that both short-term and long-term incentive compensation paid to executive officers should be aligned with our performance, and that compensation should be structured to ensure that a significant portion of executives' compensation opportunities is related to achieving financial and operational goals and other factors that impact stockholder value.

Our compensation decisions with respect to executive officer salaries, annual incentives, and long-term incentive compensation opportunities are influenced by: (i) the executive's level of responsibility and experience, (ii) our overall performance and profitability, (iii) our assessment of the competitive dynamics of the markets we operate in, and (iv) other factors we may deem relevant. Our philosophy is to focus on total direct compensation opportunities through a mix of base salary, annual non-equity incentive plan payments, and, after the closing of this offering, long-term incentives, including stock-based awards. In setting the pay of our named executive officers, we have historically not significantly relied on formal benchmarking or peer group data, but we do consider general information related to compensation at other private companies.

We also believe that the best way to directly align the interests of our executives with the interests of our stockholders is to make sure that a portion of the pay of our named executive officers is linked to increases in our stock value. Beginning in 2012, we intend to pursue this objective through equity-based long-term incentive awards.

We view each component of executive compensation as related but distinct, and we also review total compensation of our executive officers to ensure that our overall compensation objectives are met. Not all elements are provided to each executive officer.

Our philosophy is to tie a significant percentage of an executive officer's compensation to performance, including, after the closing of this offering, to stockholder returns. We strive to keep base salary at a competitive level while providing our named executive officers with the opportunity to be rewarded through annual incentive payments and, after the closing of this offering, periodic equity grants that will reward our executives if we perform well over time. To this end, we used non-equity incentive plan compensation to reward company and individual performance in the prior year, and, after the closing of this offering, we will use equity awards to provide long-term incentives to our senior executives.

We have not retained a compensation consultant to review our policies and procedures with respect to executive compensation, although the compensation committee may elect in the future to retain a

Table of Contents

compensation consultant, if it determines that doing so would assist it in implementing and maintaining our compensation philosophy and goals.

Elements of Compensation

Our executive compensation consists of the elements set forth below. Determinations regarding any one element of compensation affect determinations regarding each other element of compensation.

Base Salary

Base salaries for our named executive officers are established based upon the scope of their responsibilities, taking into account the compensation levels from their recent prior employment. Base salaries are reviewed annually and adjusted from time to time in view of each named executive officer's individual responsibilities, individual and company performance, and experience. The current base salaries for our named executive officers are set forth in "Management Compensation of Our Named Executive Officers Summary Compensation Table" below.

Annual Non-Equity Incentive Plan

Our board of directors and, after the closing of this offering, our compensation committee have the authority to award discretionary annual non-equity incentive plan payments to our named executive officers and other employees. These payments are intended to compensate our named executive officers and other employees for individual performance, for our overall financial performance, and for achieving important milestones. Payment levels vary depending on the individual recipient and generally take into account such factors as our overall financial performance, including our liquidity position; the recipient's individual performance; and other operating and non-operating elements we deem relevant. Our non-equity incentive plans do not provide for threshold or maximum amounts, but, rather, provide for a single estimated payout based on accomplishing the designated performance measures. A recipient may receive an incentive award even if all of the performance measures have not been met. We may also make additional discretionary cash incentive payments to key employees who contribute significantly to our strategic and long-term performance objectives and growth.

Non-equity incentive plan payments ordinarily are determined and communicated to our employees following the completion and delivery of our annual audit. Our employees, including our executives, are not entitled to any non-equity incentive plan payment unless they are employed by us on the date of payment. Incentive payments, if any, are paid in a single installment, typically in the first quarter of the year. Our board of directors uses financial measures to determine the aggregate incentive pool and makes incentive payments to individuals at its discretion based on non-financial criteria. Non-financial criteria for evaluating individual performance include specific goals or achievements that employees may set for themselves with management oversight at the beginning of a year or other intangible performance objectives, including completion of certain project milestones or improving a specific skill set relating to a given employee's position.

Our board of directors has typically used target Bank EBITDA (see "Management's Discussion and Analysis of Financial Condition and Results of Operations Description of Indebtedness Bank EBITDA") to determine the size of the incentive pool.

2011 Non-Equity Incentive Plan

For 2011, our board of directors set target Bank EBITDA at \$46.6 million and the size of the potential pool at approximately \$1.8 million multiplied by the percentage of target Bank EBITDA actually achieved. No pool would be established if actual Bank EBITDA were less than 80% of target Bank EBITDA and no additional incentive payments would be paid if Bank EBITDA exceeded 150% of target Bank EBITDA. The incentive pool was subject to increase or decrease at the board's discretion, and our board of directors

Table of Contents

could consider other financial measures, such as accounts receivable, and non-financial measures in determining whether to increase or decrease the size of the pool. Our board of directors determined that no incentive payments were payable for 2011.

Long-Term Equity Incentives

We intend to adopt a 2012 Long-Term Incentive Plan concurrently with the closing of this offering. The goal of the plan is to align the interests of our executive officers with the interests of our stockholders. Because vesting is based on continued employment, our equity-based incentives are also intended to encourage the retention of our named executive officers and other employees through the vesting period of the awards. In determining the size of the long-term equity incentives awarded to our named executive officers and other employees, we will take into account a number of internal factors, such as the relative job scope, the value of existing long-term incentive awards, individual performance history, prior contributions to us, and the size of prior grants, as well as general information related to compensation at other companies.

We intend to reserve 417,649 shares of our common stock for issuance under the plan, which includes the following RSUs that we intend to issue concurrently with the closing of this offering: (1) 252,935 RSUs to certain members of our management and (2) 4,864 RSUs to our independent directors. We intend to grant RSUs to our named executive officers concurrently with the closing of this offering as set forth in the following table.

Name and principal position	RSUs⁽¹⁾
Udo Rieder, President and Chief Executive Officer ⁽²⁾	110,257
Charles Ryan, Senior Vice President and Chief Financial Officer ⁽³⁾	48,642
H.E. "Mac" McClaren, Vice President, Aerial Services ⁽³⁾	19,456
David Ford, Vice President of Manufacturing and MRO ⁽⁴⁾	19,456
Edward Rizzuti, Vice President, General Counsel, and Corporate Secretary ⁽⁴⁾	16,214

- (1) Each RSU entitles the holder to receive one share of our common stock. Each grant of RSUs to our named executive officers will vest in accordance with the vesting schedule set out in the executive officer's RSU agreement. On the grant date, a portion of the RSUs will vest immediately based on the number of years the executive officer has been employed by us.
- (2) Four-fifths of the number of RSUs subject to the awards will vest on the grant date and one-fifth of the number of RSUs subject to the awards will vest on the first anniversary of the grant date.
- (3) Three-fifths of the number of RSUs subject to the awards will vest on the grant date and one-fifth of the number of RSUs subject to the awards will vest on each of the first and second anniversaries of the grant date.
- (4) Two-fifths of the number of RSUs subject to the awards will vest on the grant date and one-fifth of the number of RSUs subject to the awards will vest on each of the first, second, and third anniversaries of the grant date.

Severance Benefits

We have entered into employment agreements with all of our named executive officers that provide severance benefits to such officers, as detailed in the section of this prospectus entitled "Potential Payments upon Termination or Change in Control." We believe that these severance and change in control benefits are essential elements of our executive compensation and assist us in recruiting and retaining talented executives.

Table of Contents

Other Compensation

All of our executive officers are eligible to participate in our employee benefit plans, including medical, dental, and 401(k) plans. These plans are available to all employees and do not discriminate in favor of our executive officers. Certain of our named executive officers are also eligible for reimbursements for relocation expenses, temporary housing, and/or commuting expenses. We do not view perquisites as a significant element of our comprehensive compensation structure.

Assessment of Risk

Our board of directors has determined that our compensation policies do not pose risks that are reasonably likely to result in a material adverse effect on us. The base salary component of our compensation program is a fixed amount and does not depend on performance. Our non-equity incentive plans may take into account multiple non-financial metrics, diversifying the risk associated with any single performance metric, and we believe they do not incentivize our executive officers to focus exclusively on short-term outcomes. Grants under the 2012 Long-Term Incentive Plan we are adopting concurrently with the closing of this offering will be limited by the terms of the plan to a fixed maximum specified in the plan, and we expect will typically be subject to vesting requirements to align the long-term interests of our executive officers with those of our stockholders.

Internal Revenue Code Section 162(m)

Section 162(m) of the Code generally limits a tax deduction for any publicly held corporation of certain items of compensation paid to the chief executive officer and the three most highly compensated executive officers (other than the chief financial officer) to \$1,000,000 annually per officer, unless the compensation qualifies as "performance-based" or is otherwise exempt from Section 162(m). As our shares of common stock have not been publicly held, we have not previously taken this deductibility limit into consideration in setting compensation. Under a transition rule, for a limited period of time after a company becomes publicly held, the deduction limits do not apply to any compensation paid pursuant to a compensation plan or agreement that existed during the period in which the company was not publicly held. We expect that the compensation committee will adopt a policy to consider the potential impact of Section 162(m) on compensation decisions but to ultimately maintain flexibility to approve compensation for an executive officer that does not meet the deductibility requirements of Section 162(m) in order to provide competitive compensation packages.

Compensation of Our Named Executive Officers

Set forth below is information concerning the cash and non-cash compensation earned by, awarded to, or paid to our named executive officers during 2011, 2010, and 2009. They did not participate in or have account balances under any pension or nonqualified deferred compensation plans. The potential payments to be made to a named executive officer upon a termination of employment or change in control of the Company are described in the section of this prospectus entitled "Potential Payments upon Termination or Change in Control."

Table of Contents**Summary Compensation Table**

Name and principal position	Year	Salary (\$)	Bonus (\$)	Non-equity incentive plan compensation (\$)⁽¹⁾	All other compensation (\$)	Total (\$)
Udo Rieder, President and Chief Executive Officer	2011	300,060				300,060
	2010	300,060				300,060
	2009	311,538		233,199		544,737
Charles Ryan, Senior Vice President and Chief Financial Officer ⁽²⁾	2011	280,060				280,060
	2010	291,260				291,260
	2009	274,615	100,000 ⁽²⁾	139,252	55,050 ⁽²⁾	568,917
H.E. "Mac" McClaren, Vice President, Aerial Services ⁽³⁾	2011	200,060				200,060
	2010	205,060			50,451 ⁽³⁾	255,511
	2009	194,615		77,573	6,000 ⁽³⁾	278,188
David Ford, Vice President of Manufacturing and MRO ⁽⁴⁾	2011	200,060				200,060
	2010	100,060			43,045 ⁽⁴⁾	143,105
Edward Rizzuti, Vice President, General Counsel, and Corporate Secretary ⁽⁵⁾	2011	175,829	15,000 ⁽⁵⁾			190,829
	2010	67,368				67,368

- (1) Annual non-equity incentive plan compensation is typically paid in the quarter following completion of our audit. Amounts are paid only if the executive is employed with us at the time of payment. Amounts earned for performance in 2009 were paid in 2010.
- (2) Mr. Ryan commenced employment with us on January 5, 2009. His compensation for 2009 reflects the partial year of employment. We paid \$55,050 of Mr. Ryan's relocation expenses and \$100,000 as a hiring bonus.
- (3) Mr. McClaren commenced employment with us on January 7, 2009. His compensation for 2009 reflects the partial year of employment. We paid \$50,451 and \$6,000 of Mr. McClaren's relocation expenses in 2010 and 2009, respectively.
- (4) Mr. Ford commenced employment with us on June 28, 2010. His compensation for 2010 reflects the partial year of employment. We paid \$43,045 of Mr. Ford's relocation expenses.
- (5) Mr. Rizzuti commenced employment with us on August 13, 2010. His compensation for 2010 reflects the partial year of employment. Mr. Rizzuti received a signing bonus of \$15,000 relating to his hire. The bonus was paid in 2011 after the completion of the audit of our financial statements for 2010.

Grants of Plan-Based Awards

The following table summarizes information regarding potential awards of non-equity incentive compensation for our named executive officers in 2011 that would have been paid if we had met our target

Table of Contents

Bank EBITDA. Our board of directors has determined that no awards of non-equity incentive compensation will be made for 2011.

Name	Grant date	Estimated future payouts under non-equity incentive plan awards ⁽¹⁾		
		Threshold	Target	Maximum
Udo Rieder, President and CEO	March 31, 2011	\$ 120,000	\$ 150,000	\$ 225,000
Charles Ryan, Senior Vice President and CFO	March 31, 2011	\$ 112,000	\$ 140,000	\$ 210,000
H.E. "Mac" McClaren, Vice President, Aerial Services	March 31, 2011	\$ 64,000	\$ 80,000	\$ 120,000
David Ford, Vice President of Manufacturing and MRO	March 31, 2011	\$ 64,000	\$ 80,000	\$ 120,000
Edward Rizzuti, Vice President, General Counsel, and Corporate Secretary	March 31, 2011	\$ 35,166	\$ 43,957	\$ 65,936

(1)

Our 2011 non-equity incentive plan provides for an estimated payout based on accomplishing designated performance measures. A recipient may receive an incentive award even if all of the performance measures have not been met. If 80%, 100%, and 150% of target Bank EBITDA had been achieved, the aggregate estimated potential payouts under the 2011 non-equity incentive plan would have been approximately \$1.4 million, \$1.8 million, and \$2.7 million, respectively. The threshold, target, and maximum amounts above are based upon an incentive pool of \$1.4 million, \$1.8 million, and \$2.7 million, respectively. Each of Messrs. Rieder and Ryan was eligible for an incentive payment equal to 50% of his annualized base salary, each of Messrs. McClaren and Ford was eligible for an incentive payment equal to 40% of his annualized base salary, and Mr. Rizzuti was eligible for an incentive payment equal to 25% of his annualized base salary. A description of this non-equity incentive plan is included in " Elements of Compensation 2011 Non-Equity Incentive Plan."

Employment Agreements

We have entered into employment agreements with each of Messrs. Rieder, Ryan, McClaren, Ford, and Rizzuti providing for the payment of an annual base salary and non-equity incentive plan payment opportunities, as well as participation by each of them in the benefit plans and programs generally maintained by us for senior executives from time to time.

We or the employee may terminate the applicable employment agreement at any time. Upon termination of employment by us without "cause," by the executive for "good reason" following a "change in control," or as a result of the executive's death or disability, the executive is entitled to receive: (1) a basic termination payment equal to (i) his base salary earned through the date of termination, plus (ii) continued payment of his base salary for a specified time following the termination date; and (2) continuation of health benefits for a specified period of time after termination of employment at the same rate that was paid by the executive before termination of employment.

Summaries of the specific severance payments and continuation periods for health benefits for the named executive officers are provided below:

Mr. Rieder is entitled to receive: (i) a monthly sum equal to his monthly base salary in effect at such time for a period of 12 months and (ii) continuation of health benefits for Mr. Rieder and his family for that same period.

Mr. Ryan is entitled to receive: (i) a monthly sum equal to his monthly base salary in effect at such time for a period of 12 months and (ii) continuation of health benefits for Mr. Ryan and his family for that same period.

Table of Contents

Mr. McClaren is entitled to receive: (i) a monthly sum equal to his monthly base salary in effect at such time for a period of nine months and (ii) continuation of health benefits for Mr. McClaren and his family for that same period.

Mr. Ford is entitled to receive: (i) a monthly sum equal to his monthly base salary in effect at such time for a period of nine months and (ii) continuation of health benefits for Mr. Ford and his family for that same period.

Mr. Rizzuti is entitled to receive: (i) a monthly sum equal to his monthly base salary in effect at such time for a period of nine months and (ii) continuation of health benefits for Mr. Rizzuti and his family for that same period.

The employment agreements each contain confidentiality, non-compete, and non-solicitation provisions, and subject severance to the executive executing a general release of all claims against us and our affiliates.

Potential Payments upon Termination or Change in Control

The table below reflects the amount of compensation payable to each named executive officer in the event of termination of the executive's employment for various reasons. The table does not include payments that would be made to a named executive officer under benefit plans or employment terms generally available to other salaried employees similarly situated, such as group life or disability insurance. The amounts shown assume termination of employment as of December 31, 2011, the last day of our 2011 fiscal year.

If each of Messrs. Rieder's, Ryan's, McClaren's, Ford's, and Rizzuti's employment had been terminated on December 31, 2011 by us without cause, by the executive for good reason following a change in control, or as a result of the executive's death or disability, we would have paid the following amounts:

Name	Severance		Total
	Payment	Health Benefits	
Udo Rieder	\$ 300,000	\$ 14,220	\$ 313,897
Charles Ryan	\$ 280,000	\$ 12,600	\$ 293,944
H.E. "Mac" McClaren	\$ 150,000	\$ 64	\$ 150,628
David Ford	\$ 112,500	\$ 7,069	\$ 119,963
Edward Rizzuti ⁽¹⁾			

(1) No amounts are presented for Mr. Rizzuti because he did not have an employment contract effective at December 31, 2011 and therefore he was not entitled to severance payments as of such date.

In each of Messrs. Rieder's, Ryan's, McClaren's, Ford's, and Rizzuti's executive employment agreements:

"Cause" means:

a breach of any material provision of his employment agreement or the proprietary rights, invention assignment, and confidentiality agreement;

fraud or an act of dishonesty in connection with his employment;

gross misconduct or gross negligence;

willful or habitual neglect in the performance of his duties after having received written notice calling his attention

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

to the deficiency and requiring improvement;

the making of disparaging remarks about us, our products, employees, services, or other business, or otherwise causing any injury to our economic or ethical welfare;

sexual or any other prohibited form of harassment or discrimination;

Table of Contents

violation of any of our material policies, procedures, or guidelines; or

engaging in any of the following forms of misconduct: commission of any felony or misdemeanor involving dishonesty or moral turpitude; theft or misuse of our property or time; insubordination; appearing on our premises while intoxicated or while under the influence of controlled substances; illegal gambling on our premises; or falsifying any document or making any false or misleading statement relating to his employment by us.

"Good Reason" means a material reduction in his duties, level of responsibility, or authority, other than reductions solely attributable to our becoming a subsidiary or division of another company or isolated incidents that are promptly remedied by us.

A "Change of Control" occurs upon the completion of any of the following events in a single transaction or in a series of related transactions:

a merger or consolidation in which we are not the surviving entity, except for a transaction the principal purpose of which is to change the state of our incorporation or a transaction in which 50% or more of the surviving entity's outstanding voting stock following the transaction is held by holders who held 50% or more of our outstanding voting stock before the transaction;

the sale, transfer, or other disposition of all or substantially all of our assets;

any reverse merger in which we are the surviving entity if, immediately after the merger, 50% or more of our outstanding voting stock is transferred to holders different from those who held the stock immediately before the merger; or

the acquisition by any person (or entity), directly or indirectly, of 50% or more of the combined voting power of the outstanding shares of our common stock.

2012 Long-Term Incentive Plan

Before the closing of this offering, we plan to adopt a 2012 Long-Term Incentive Plan and to submit such plan to our pre-offering stockholders for approval. We intend to reserve 417,649 shares of our common stock for issuance under the plan, which includes the following RSUs that we intend to issue concurrently with the closing of this offering: (1) 252,935 RSUs to certain members of our management and (2) 4,864 RSUs to our independent directors. The following description of our 2012 Long-Term Incentive Plan and the shares that are available for future awards thereunder is qualified in its entirety by the full text of the plan, which will be filed with the SEC as an exhibit to the registration statement of which this prospectus is a part.

Eligibility; Types of Awards. Selected employees, officers, and directors of ours and any of our subsidiaries will be eligible to participate in the plan. The plan will provide for the grant of incentive stock options that qualify under Section 422 of the Internal Revenue Code of 1986 (subject to the plan's stockholder approval), nonqualified stock options, restricted stock, RSUs, stock bonuses, and stock appreciation rights. Incentive stock options may be granted only to our employees, including officers, or employees of any of our subsidiaries. Nonqualified stock options, and all awards other than incentive stock options, may be granted to our employees, officers, and directors. Our board of directors may elect, in its sole discretion, to grant an award in exchange for the cancellation of an existing award.

Administration. The plan will be administered by an independent committee of our board of directors, which has the authority to determine which eligible individuals should receive awards, the type and amount of the awards, and the other terms and conditions of the awards (including vesting and cancellation provisions) and has the full authority to interpret the plan. Such independent committee may delegate to our chief executive officer or to a committee of our officers any or all authority for administering the plan, subject to certain limitations.

Table of Contents

Term of Plan; Amendments. We expect the plan to be in effect until all shares available for issuance under the plan are issued and all restrictions on the shares have lapsed. However, no incentive stock options will be granted under the plan on or after the 10th anniversary of the last action by our board of directors, subsequently approved by our stockholders within 12 months of such action, adopting the plan or approving an increase in the number of shares available for issuance under the plan. Our board of directors may at any time modify or amend the plan in any respect, subject to applicable laws, rules and regulations, and requirements of NASDAQ Marketplace Rules. However, no change in an award already granted under the plan may generally be made without the written consent of the award holder if the change would adversely affect the holder.

Stock Options. Our board of directors will determine whether a stock option is granted as an incentive stock option or a nonqualified stock option. The exercise price per share of incentive stock options may not be less than the fair market value of our common stock at the date of the grant, and the maximum term of incentive stock options will be 10 years. The aggregate market value, on the date of the grant, of the common stock for which incentive stock options are exercisable for the first time by an employee during any calendar year may not exceed \$100,000. For grantees who own more than 10% of the total combined voting power of the Company or our parent or subsidiaries, incentive stock options must have an exercise price of not less than 110% of the fair market value of the common stock underlying the option and a maximum term of five years. The exercise price per share of nonqualified stock options may be any amount determined by our board of directors, and nonqualified stock options may have any term fixed by the board of directors.

Stock Appreciation Rights. The plan will provide that our board of directors may grant stock appreciation rights, which entitle the person who exercises the rights to receive an amount equal to the difference between the fair market value of the common stock subject to the right at the time of exercise and the time of grant, in the amounts and subject to such terms, conditions, and restrictions as the board of directors determines.

Restricted Stock; Restricted Stock Units; Performance-Based Awards; Stock Bonuses. The plan will provide that our board of directors may issue restricted stock, RSUs, performance-based awards, or stock bonuses in the amounts and subject to such terms, conditions, and restrictions as the board of directors determines. Restricted stock, RSUs, and performance-based awards may be issued for any consideration determined by our board of directors, and all restricted stock and RSUs issued under the plan shall be subject to purchase agreements.

Changes in Capital Structure. The plan will authorize our board of directors to make appropriate adjustments in outstanding options and awards and in shares reserved under the plan in the event of a stock split, recapitalization, or certain other transactions. The board of directors also will have discretion to convert options, to limit the exercise period of outstanding options, and to accelerate the exercisability of options in the event of merger or certain other changes in our capital structure.

Retirement Benefits

We do not provide our named executive officers with supplemental or other retirement benefits other than eligibility to participate in our broad-based 401(k) plan.

Table of Contents

CERTAIN RELATIONSHIPS AND RELATED PERSON TRANSACTIONS

In addition to the director and executive officer compensation arrangements discussed above under "Executive Compensation," the following is a description of the transactions and series of similar transactions, during our last three fiscal years, to which we were a party or will be a party, in which:

the amounts involved exceeded or will exceed \$120,000; and

any of our directors, executive officers, or holders of more than 5% of our common stock, or any member of their immediate family, had or will have a direct or an indirect material interest.

Registration Rights Agreement

We are party to an amended and restated registration rights agreement among us and ZM EAC LLC, ZM Private Equity Fund I, L.P., and ZM Private Equity Fund II, L.P., our stockholders prior to this offering, which provides that ZM EAC LLC will have the right to demand that we register its shares for sale to the public. Those stockholders waived their registration rights with respect to this offering, but we have agreed to pay the expenses that the selling stockholders incur in connection with this offering in connection with the exercise, if any, of the overallotment option. We estimate that these expenses will be less than \$120,000. Once we become subject to periodic reporting requirements under the Exchange Act, ZM EAC LLC will have the right to require that we register its shares under the Securities Act for sale to the public. If ZM EAC LLC exercises its demand registration right, ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. will have the opportunity to include their shares in the registration. We must pay all expenses, except for underwriters' discounts and commissions, incurred in connection with the exercise of these demand registration rights.

In addition, ZM EAC LLC, ZM Private Equity Fund I, L.P., and ZM Private Equity Fund II, L.P., our stockholders prior to this offering, have piggyback registration rights, which means that they have the right to include their shares in any registration that we effect under the Securities Act, other than a registration effected pursuant to an exercise of demand registration rights, subject to specified exceptions. We must pay all expenses, except for underwriters' discounts and commissions, incurred in connection with these piggyback registration rights.

We are unable to estimate the dollar value of registration rights to the holders of these rights. The amount of reimbursable expenses under the registration rights agreement depends on a number of variables, including whether registration rights are exercised incident to a primary offering by us, the form on which we are eligible to register such a transaction, and whether we have a shelf registration in place at the time of a future offering. For a more detailed description of these registration rights, see "Description of Capital Stock Registration Rights."

Management Stockholders Agreement

We are a party to a management stockholders agreement with ZM EAC LLC, ZM Private Equity Fund I, L.P., ZM Private Equity Fund II, L.P., and certain of our executives. The management stockholders agreement restricts the transfer of the shares of our stock held by our executive officers, provides us with a right of first refusal (and ZM EAC LLC, ZM Private Equity Fund I, L.P., and ZM Private Equity Fund II, L.P. with a right of second refusal) with respect to those shares, and provides us with a right to repurchase those shares in defined circumstances. In addition, the agreement grants ZM EAC LLC, ZM Private Equity Fund I, L.P., and ZM Private Equity Fund II, L.P. a bring-along right in connection with specified stock sales by them. The agreement also provides our executive officers with a tag-along right in connection with the specified transfers of shares by ZM EAC LLC, ZM Private Equity Fund I, L.P., or ZM Private Equity Fund II, L.P. We intend to terminate this agreement concurrently with the closing of this offering.

Other Transactions

We have employment agreements with our chief executive officer and other executive officers that, among other things, provide for certain severance and change of control benefits. We intend to enter into

Table of Contents

RSU agreements with certain members of our senior management concurrently with the closing of this offering. For a description of the employment agreements, see "Executive Compensation Employment Agreements."

We have indemnification agreements with each of our current directors and executive officers, and some employees. See "Management Limitation on Liability and Indemnification Matters."

On January 8, 2010, upon payment of \$0.5 million, we terminated our management services agreement with Stonehouse Erickson Management Co. LLC, an affiliate of former stockholders of ours. We paid Stonehouse Erickson Management Co., LLC a management fee of \$125,000 in 2007, \$500,000 in 2008, and \$125,000 in 2009 under that management services agreement.

On June 30, 2010, concurrently with the entry into our current senior credit facilities, we used proceeds from such facilities to pay down \$11.5 million of our \$20.0 million second lien debt owed to ZM Private Equity Fund II, L.P., which is one of our stockholders, and 10th Lane Finance Co., LLC, an affiliate of ours through common ownership, under the Second Lien Credit Agreement, with the remaining \$8.5 million exchanged for unsecured subordinated promissory notes. See "Management's Discussion and Analysis Liquidity and Capital Resources." We believe the terms of the notes are as fair to us as those that would have been available to us in arm's-length negotiations with an unrelated party.

On June 30, 2011, in connection with an amendment to the Credit Agreement, an additional \$10.0 million of unsecured subordinated promissory notes were issued to ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. which accrue interest at a rate of 20.0% per annum, which is payable in kind by increasing the principal amount of such notes and is payable quarterly. No periodic payments of cash principal or interest are required and the notes mature on June 30, 2016. Additionally, in connection with the Working Capital Guarantee Credit Agreement, ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. issued \$1.0 million in unsecured subordinated promissory notes. See "Management's Discussion and Analysis Liquidity and Capital Resources." We believe the terms of the loan are as fair to us as those that would have been available to us in arm's-length negotiations with an unrelated party.

Policies and Procedures for Related Party Transactions

Our board of directors has adopted a written statement of policy requiring our audit committee to review any transactions with related persons, as defined in Item 404 of Regulation S-K, or in which a related person has a direct or an indirect interest, and determine whether to ratify or approve the transaction. Our related party transaction policy provides that a transaction may only be ratified or approved if the committee determines that it is fair to us or otherwise in our interest. Certain types of transactions have been pre-approved by the committee under the policy. These pre-approved transactions include: (i) certain compensation arrangements; (ii) transactions in the ordinary course of business where the related party's interest arises only (a) from his or her position as a director of another entity that is party to the transaction, (b) from an equity interest of less than 5% in another entity that is party to the transaction, or (c) from a limited partnership interest of less than 5%, subject to certain limitations; and (iii) transactions in the ordinary course of business where the interest of the related party arises solely from the ownership of a class of our equity securities where all holders of such class of equity securities will receive the same benefit on a pro rata basis. No director may participate in the approval of a related party transaction for which he or she is a related party.

Table of Contents

PRINCIPAL AND SELLING STOCKHOLDERS

The following table sets forth information regarding beneficial ownership of our capital stock as of March 21, 2012 for:

each person, or group of affiliated persons, known by us to beneficially own more than 5% of the outstanding shares of our common stock;

each of our named executive officers;

each of our directors;

all of our executive officers and directors as a group; and

each of the selling stockholders.

Beneficial ownership of a security is determined according to the rules of the SEC and generally means that a person possesses sole or shared voting or investment power with respect to that security, including as to any securities a person has the right to acquire within 60 days after the measurement date. Except as indicated by the footnotes below, we believe, based on the information furnished to us, that the persons named in the table below have sole voting and investment power with respect to all shares of common stock shown that they beneficially own, subject to community property laws where applicable.

The table lists beneficial ownership prior to the offering on a pro forma basis after giving effect to the completion of the recapitalization described under "Explanatory Note Regarding Recapitalization." This table lists applicable percentage ownership prior to the offering based on 4,802,970 shares of common stock outstanding as of March 21, 2012 and applicable percentage ownership after the offering based on 10,152,970 shares of common stock outstanding upon the closing of the offering. If the underwriters exercise the overallotment option to purchase additional shares, those shares will be sold by the selling stockholders and will not increase the aggregate shares outstanding.

*

Represents beneficial ownership of less than 1% of the outstanding common stock.

The selling stockholders will sell shares only if the underwriters exercise their over-allotment option. The number of shares below assumes full exercise of the over-allotment option.

- (1) Shares shown in the table above include shares held in the beneficial owner's name or jointly with others, or in the name of a bank, nominee, or trustee for the beneficial owner's account. Under the terms of the RSU agreements, payment of shares underlying vested RSUs granted concurrently with the closing of this offering to our executive officers and directors will be deferred for more than 60 days after the grant date. As a result, such shares are not beneficially owned and are not presented in this table.
- (2) Mr. Morgan serves on our board of directors and is the managing member of ZM EAC LLC and Q&U Investments LLC. Q&U Investments LLC is the managing member of ZM Private Equity Fund I GP, LLC, which is the general partner of ZM Private Equity Fund I, L.P. Q&U Investments LLC is also the managing member of ZM Private Equity Fund II GP, LLC, which is the general partner of ZM Private Equity Fund II, L.P. Accordingly, Mr. Morgan may be deemed to have sole voting and investment power with respect to the shares held by ZM EAC LLC, ZM Private Equity Fund I, L.P., and ZM Private Equity Fund II, L.P. Mr. Morgan disclaims beneficial ownership of such shares, except to the extent of his pecuniary interest therein. The address of each of the parties is 60 East 42nd Street, Suite 1400, New York, NY 10165.
- (3) Consists of 3,850,125 shares owned by ZM EAC LLC, 666,991 shares owned by ZM Private Equity Fund I, L.P., and 285,854 shares owned by ZM Private Equity Fund II, L.P. Mr. Morgan disclaims beneficial ownership of such shares, except to the extent of his pecuniary interest therein.
- (4) Mr. Lau serves on our board of directors and is a member of ZM Private Equity Fund I GP, LLC, which is the general partner of ZM Private Equity Fund I, L.P., and he is a member of ZM Private Equity Fund II GP, LLC, which is the general partner of ZM Private Equity Fund II, L.P. Mr. Lau disclaims beneficial ownership of such shares, except to the extent of his pecuniary interest therein. The

Edgar Filing: Erickson Air-Crane Inc - Form S-1/A

address of each of the parties is 60 East 42nd Street, Suite 1400, New York, NY 10165.

Table of Contents

DESCRIPTION OF CAPITAL STOCK

We will complete a recapitalization and amend and restate our certificate of incorporation prior to the closing of this offering. The following description of our capital stock gives effect to our recapitalization and assumes the amendment and restatement of our certificate of incorporation. See "Explanatory Note Regarding Recapitalization."

Common Stock

Our certificate of incorporation authorizes us to issue up to 110,000,000 shares of common stock, par value \$0.0001 per share, of which 10,152,970 shares will be issued and outstanding immediately after the closing of this offering. Our certificate of incorporation provides that the holders of our common stock are entitled to one vote per share on all matters to be voted on by our stockholders. After payment of any dividends due and owing to the holders of our preferred stock, holders of our common stock will be entitled to receive dividends declared by our board of directors out of funds legally available for dividends. In the event of our liquidation, dissolution, or winding up, holders of our common stock will be entitled to share in all assets remaining after payment of liabilities and liquidation preferences of outstanding shares of our preferred stock. Holders of our common stock have no preemptive, conversion, subscription, or other rights. There are no redemption or sinking fund provisions available to holders of our common stock.

Limited Voting by Foreign Owners

To comply with restrictions imposed by federal law on foreign ownership of domestic common carriers that may apply to our operations, our second amended and restated certificate of incorporation restricts voting of shares of our capital stock by non-U.S. citizens. The restrictions imposed by federal law require that at least 75% of our voting stock be owned by persons who are U.S. citizens. Our second amended and restated certificate of incorporation further provides that the voting rights of the shares held by non-U.S. citizens shall be proportionally reduced so that the voting rights would not exceed the foreign ownership restrictions imposed by federal law.

Preferred Stock

Our certificate of incorporation provides that our board of directors has the authority, without further action by the stockholders, to issue up to 10,000,000 shares of preferred stock, par value \$0.0001 per share. Our board of directors is able to issue preferred stock in one or more series and determine the rights, preferences, privileges, qualifications, and restrictions granted to or imposed upon our preferred stock, including dividend rights, conversion rights, voting rights, rights and terms of redemption, liquidation preferences, and sinking fund terms, any or all of which may be greater than the rights of our common stock. Issuances of preferred stock could adversely affect the voting power of holders of our common stock and reduce the likelihood that holders of our common stock will receive dividend payments and payments upon liquidation. Any issuance of preferred stock also could have the effect of decreasing the market price of our common stock and could delay, deter, or prevent a change in control of the Company. We have no present plans to issue any shares of preferred stock.

Registration Rights

Substantially all of our stockholders prior to this offering are parties to an amended and restated registration rights agreement dated April 21, 2010. The terms of the registration rights agreement include provisions for demand registration rights and piggyback registration rights in favor of holders of our common stock. The demand and piggyback registration rights under the agreement terminate when the stockholders party to the agreement are first able to sell all of their shares under Rule 144 under the Securities Act within a three-month period. We and the selling stockholders have reciprocal indemnification obligations for misstatements in connection with the registration of selling stockholders' shares, and these obligations survive the termination of the registration rights agreement. The stockholders

Table of Contents

waived their registration rights with respect to this offering, but we have agreed to pay the expenses that the selling stockholders incur in connection with this offering in connection with the exercise, if any, of the overallotment option.

Demand Registration Rights. Subject to the terms of the registration rights agreement, once we become subject to periodic reporting requirements under the Exchange Act, ZM EAC LLC will have the right to require that we register its shares under the Securities Act for sale to the public. If ZM EAC LLC exercises its demand registration right, ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. will have the opportunity to include their shares in the registration. The underwriters in an underwritten offering have the right to limit on a pro rata basis the number of shares to be included in a registration statement filed in response to the exercise of these demand registration rights. We must pay all expenses, except for underwriters' discounts and commissions, incurred in connection with the exercise of these demand registration rights.

Piggyback Registration Rights. ZM EAC LLC, ZM Private Equity Fund I, L.P., and ZM Private Equity Fund II, L.P. have piggyback registration rights under the terms of the registration rights agreement. The registration rights agreement provides that the stockholders with piggyback registration rights have the right to include their shares in any registration that we effect under the Securities Act, other than a registration effected pursuant to an exercise of demand registration rights, subject to specified exceptions. The underwriters of any underwritten offering have the right to limit on a pro rata basis the number of shares registered by these holders. We must pay all expenses, except for underwriters' discounts and commissions, incurred in connection with these piggyback registration rights.

Anti-Takeover Provisions

Certificate of Incorporation and Bylaws

Our second amended and restated certificate of incorporation provides for our board of directors to be divided into three classes with staggered three-year terms. Only one class of directors will be elected at each annual meeting of our stockholders, with the other classes continuing for the remainder of their respective three-year terms. Because our stockholders do not have cumulative voting rights, our stockholders holding a majority of the shares of common stock outstanding will be able to elect all of our directors. Our second amended and restated certificate of incorporation provides that, from and after the Trigger Date, all stockholder actions must be effected at a duly called meeting of stockholders and not by a consent in writing. In addition, our certificate of incorporation provides that only our board of directors or the chairman of our board may call a special meeting of stockholders. Prior to the Trigger Date, ZM EAC LLC, ZM Private Equity Fund I, L.P., or ZM Private Equity Fund II, L.P., as our controlling stockholders, also have the right to call a special meeting of stockholders.

Our second amended and restated certificate of incorporation requires a 66²/₃% stockholder vote for the alteration, amendment, or repeal of certain of its provisions. Further, stockholders may only remove directors for cause, as defined in our second amended and restated certificate of incorporation. The combination of the classification of our board of directors, the lack of cumulative voting, the 66²/₃% stockholder voting requirements, and the limitation on the ability of our stockholders to remove directors will make it more difficult for our existing stockholders to replace our board of directors as well as for another party to obtain control of us by replacing our board of directors. Since our board of directors has the power to retain and discharge our officers, these provisions could also make it more difficult for existing stockholders or another party to effect a change in management. In addition, the authorization of undesignated preferred stock makes it possible for our board of directors to issue preferred stock with voting or other rights or preferences that could impede the success of any attempt to change our control.

These provisions may have the effect of deterring hostile takeovers or delaying changes in our control or management. These provisions are intended to enhance the likelihood of continued stability in the composition of our board of directors and its policies and to discourage certain types of transactions that

Table of Contents

may involve an actual or a threatened acquisition of us. These provisions are designed to reduce our vulnerability to an unsolicited acquisition proposal. The provisions also are intended to discourage certain tactics that may be used in proxy fights. However, such provisions could have the effect of discouraging others from making tender offers for our shares and, as a consequence, they may inhibit fluctuations in the market price of our stock that could result from actual or rumored takeover attempts. Such provisions may also have the effect of preventing changes in our management.

Section 203 of the Delaware General Corporation Law

We are subject to Section 203 of the DGCL, which prohibits a Delaware corporation from engaging in any business combination with any interested stockholder for a period of three years after the date that such stockholder became an interested stockholder, with the following exceptions:

before such date, the board of directors of the corporation approved either the business combination or the transaction that resulted in the stockholder becoming an interested stockholder;

upon completion of the transaction that resulted in the stockholder becoming an interested stockholder, the interested stockholder owned at least 85% of the voting stock of the corporation outstanding at the time the transaction began, excluding for purposes of determining the voting stock outstanding (but not the outstanding voting stock owned by the interested stockholder) those shares owned (i) by persons who are directors and also officers and (ii) employee stock plans in which employee participants do not have the right to determine confidentially whether shares held subject to the plan will be tendered in a tender or an exchange offer; or

on or after such date, the business combination is approved by our board of directors and authorized at an annual or a special meeting of the stockholders, and not by written consent, by the affirmative vote of at least 66²/₃% of the outstanding voting stock that is not owned by the interested stockholder.

In general, Section 203 defines "business combination" to include the following:

any merger or consolidation involving the corporation or any direct or indirect majority owned subsidiary of the corporation and the interested stockholder or any other corporation, partnership, unincorporated association, or other entity if the merger or consolidation is caused by the interested stockholder and as a result of such merger or consolidation the transaction is not excepted as described above;

any sale, transfer, pledge, or other disposition (in one transaction or a series) of 10% or more of the assets of the corporation involving the interested stockholder;

subject to certain exceptions, any transaction that results in the issuance or transfer by the corporation of any stock of the corporation to the interested stockholder;

any transaction involving the corporation that has the effect of increasing the proportionate share of the stock or any class or series of the corporation beneficially owned by the interested stockholder; or

the receipt by the interested stockholder of the benefit of any loss, advances, guarantees, pledges, or other financial benefits by or through the corporation.

In general, Section 203 defines an "interested stockholder" as an entity or a person who, together with the person's affiliates and associates, beneficially owns, or within three years prior to the time of determination of interested stockholder status did own, 15% or more of the

outstanding voting stock of the corporation.

Listing

We have applied to list our common stock on The NASDAQ Global Market under the symbol "EAC."

Transfer Agent and Registrar

The transfer agent and registrar for our common stock is Computershare Trust Company, N.A.

Table of Contents

SHARES ELIGIBLE FOR FUTURE SALE

Future sales of our common stock in the public market, or the availability of those shares for sale in the public market, could adversely affect market prices prevailing from time to time. As described below, only a limited number of shares will be available for sale shortly after this offering due to contractual and legal restrictions on resale. Nevertheless, sales of our common stock in the public market after those restrictions lapse, or the perception that those sales may occur, could adversely affect the prevailing market price at that time and our ability to raise equity capital in the future.

Upon the closing of this offering, 10,152,970 shares of common stock will be outstanding. In addition, the following RSUs that we intend to issue concurrently with the closing of this offering will be outstanding: (1) 252,935 RSUs issued to certain members of our management and (2) 4,864 RSUs issued to our independent directors. Of the outstanding shares, all of the shares sold in the offering will be freely tradable, except that any shares held by our affiliates, as that term is defined in Rule 144 under the Securities Act, may only be sold in compliance with the limitations described below

All of our shares of common stock outstanding after this offering will be restricted as a result of RSU agreements or lock-up agreements described below. After the lock-up period expires, all shares will be eligible for resale in compliance with Rule 144 or Rule 701 to the extent those shares have been released from any repurchase option that we may hold. We issued and sold "restricted securities" as defined under Rule 144 in reliance on exemptions from the registration requirements of the Securities Act. These shares may be sold in the public market only if sold pursuant to an exemption from registration, such as Rule 144 or Rule 701 under the Securities Act.

Rule 144

In general, a person who beneficially owns restricted shares of our common stock for at least six months is entitled to sell his or her securities if that person is not deemed to have been one of our affiliates at the time of, or at any time during the 90 days preceding, the sale. A person who beneficially owns restricted shares of our common stock for at least six months and who is our affiliate at the time of, or was our affiliate any time during the 90 days preceding, a sale is subject to additional restrictions on the sale of securities. Those additional restrictions limit the number of securities such person may sell within any three-month period to the number of securities that does not exceed the greater of either of the following:

1% of the number of shares of our common stock then outstanding, which equals approximately 48,030 shares based on the number of shares of common stock outstanding immediately prior to the closing of this offering; or

the average weekly trading volume of our common stock on NASDAQ during the four calendar weeks before the filing of a notice on Form 144 with respect to the sale.

Sales both by affiliates and by non-affiliates must also comply with the manner of sale, current public information, and notice provisions of Rule 144.

Rule 701

Rule 701 under the Securities Act, as in effect on the date of this prospectus, permits resales of shares in reliance upon Rule 144, but does not require the selling shareholder to comply with certain Rule 144 restrictions, including the Rule 144 holding period requirement. Most of our employees, executive officers, or directors who purchased shares under a written compensatory plan or contract may be entitled to rely on the resale provisions of Rule 701. However, all of our holders of shares exempt under Rule 701 are required to wait until 90 days after the date of the prospectus relating to the offering before selling their shares; substantially all of the shares exempt under Rule 701 are subject to lock-up agreements described below and under the section of this prospectus entitled "Underwriting" and will become eligible for sale upon the expiration of the restrictions set forth in those agreements.

Table of Contents

Lock-Up Agreements

In connection with the offering, all of our existing stockholders signed lock-up agreements under which they agreed not to sell, transfer, or dispose of, directly or indirectly, any shares of our common stock or any securities into or exercisable or exchangeable for shares of our common stock without the prior written consent of the representative of the underwriters until 180 days after the closing of this offering, subject to extension under certain circumstances. These agreements are described below under "Underwriting." In addition, the purchase agreement will provide that any shares or rights to receive shares of our common stock that we issue to our directors, executives, and other employees will be subject to transfer restrictions restricting such persons from selling, transferring, or otherwise disposing of such shares or rights until at least 180 days after the completion of this offering. See "Executive Compensation 2012 Long-Term Incentive Plan."

Registration Rights

The holders of approximately 4,802,970 shares of our common stock, or their transferees, are entitled to certain rights with respect to the registration of those shares under the Securities Act. For a description of these registration rights, please see "Description of Capital Stock Registration Rights." After these shares are registered, they will be freely tradable without restriction under the Securities Act.

Equity Awards under Our 2012 Long-Term Incentive Plan

Immediately after the closing of this offering, we intend to file a Form S-8 registration statement under the Securities Act to register shares of our common stock outstanding or reserved for issuance under our 2012 Long-Term Incentive Plan. The shares covered by the Form S-8 registration statement will be eligible for sale in the public markets, subject to vesting restrictions, the lock-up agreements described above, and Rule 144 limitations applicable to affiliates. For a more complete discussion of our long-term incentive plan, see "Executive Compensation 2012 Long-Term Incentive Plan."

Table of Contents

**MATERIAL UNITED STATES FEDERAL INCOME TAX
CONSEQUENCES TO NON-U.S. HOLDERS OF OUR COMMON STOCK**

The following is a summary of the material United States federal income tax consequences to non-U.S. holders (as defined below) of the acquisition, ownership, and disposition of our common stock issued pursuant to this offering. This discussion is not a complete analysis of all the potential United States federal income tax consequences relating thereto, nor does it address any estate and gift tax consequences or any tax consequences arising under any state, local, or foreign tax laws, or any other United States federal tax laws. This discussion is based on the Internal Revenue Code of 1986, as amended, the Treasury Regulations promulgated thereunder, judicial decisions, and published rulings and administrative pronouncements of the Internal Revenue Service (IRS), all as in effect as of the date of this offering. These authorities may change, possibly retroactively, resulting in United States federal income tax consequences different from those discussed below. No ruling from the IRS or opinion of counsel has been or will be sought with respect to the matters discussed below, and we cannot assure you that the IRS will not take a contrary position regarding the tax consequences of the acquisition, ownership, or disposition of our common stock, or that any such contrary position would not be sustained by a court.

This discussion is limited to non-U.S. holders who purchase our common stock issued pursuant to this offering and who hold our common stock as a "capital asset" within the meaning of the Internal Revenue Code (generally, property held for investment). This discussion does not address all of the United States federal income tax consequences that may be relevant to a particular holder in light of such holder's particular circumstances. This discussion also does not consider any specific facts or circumstances that may be relevant to holders subject to special rules under the United States federal income tax laws, including, without limitation, shareholders, partners, beneficiaries, or other owners of a person holding our common stock; former citizens or residents of the United States subject to tax as expatriates; S Corporations; partnerships or other entities taxed as partnerships; real estate investment trusts; regulated investment companies; corporations that accumulate earnings to avoid United States federal income tax; banks or financial institutions; thrifts; insurance companies; brokers, dealers, or traders in securities, commodities, or currencies; tax-exempt organizations; tax-qualified retirement plans; persons subject to the alternative minimum tax; persons that own, or have owned, actually or constructively, more than 5% of our common stock; and persons holding our common stock as part of a hedging or conversion transaction or straddle, or a constructive sale, or other risk reduction strategy.

PROSPECTIVE INVESTORS ARE ENCOURAGED TO CONSULT THEIR TAX ADVISORS REGARDING THE PARTICULAR UNITED STATES FEDERAL INCOME TAX CONSEQUENCES TO THEM OF ACQUIRING, OWNING, AND DISPOSING OF OUR COMMON STOCK, AS WELL AS ANY TAX CONSEQUENCES ARISING UNDER ANY STATE, LOCAL, OR FOREIGN TAX LAWS AND ANY OTHER UNITED STATES FEDERAL TAX LAWS OR UNDER ANY APPLICABLE TAX TREATY.

Definition of Non-U.S. Holder

For purposes of this discussion, a non-U.S. holder is a person that is not a "U.S. person" for United States federal income tax purposes. A U.S. person is any of the following:

an individual citizen or resident of the United States;

a corporation or partnership (including any entity treated as such for United States federal income tax purposes) created or organized under the laws of the United States, any state thereof, or the District of Columbia;

an estate the income of which is subject to United States federal income tax regardless of its source; or

a trust (1) the administration of which is subject to the primary supervision of a United States court and which has one or more United States persons who have the authority to control all substantial

Table of Contents

decisions of the trust, or (2) that has a valid election in effect under applicable Treasury Regulations to be treated as a U.S. person.

An individual may be treated as a resident of the United States in any calendar year by being present in the United States on at least 31 days in that calendar year and for an aggregate of at least 183 days during the three-year period ending in that calendar year. For purposes of determining days present in the United States, certain days that an individual is actually present in the United States are not taken into account. In addition, the 183-day test is determined by counting all of the days the individual is treated as being present in the current year, one-third of such days in the immediately preceding year and one-sixth of such days in the second preceding year.

Distributions on Our Common Stock

If we make distributions of cash or other property on our common stock, such distributions will constitute dividends for United States federal income tax purposes to the extent paid from our current or accumulated earnings and profits, as determined under United States federal income tax principles. Distributions in excess of our current or accumulated earnings and profits generally will constitute a return of capital and will first be applied against and reduce a holder's tax basis in the common stock, but not below zero. Any excess will be treated as gain realized on the sale or other disposition of the common stock and will be treated as described under "Gain on Disposition of Our Common Stock" below.

Dividends paid to a non-U.S. holder of our common stock, except as provided below with respect to dividends that are treated as effectively connected with the non-U.S. holder's conduct of a trade or business in the United States, will be subject to United States federal withholding tax at a rate of 30% of the gross amount of the dividends, or such lower rate specified by an applicable income tax treaty. To receive the benefit of a reduced treaty rate, a non-U.S. holder must furnish to us or our paying agent a valid IRS Form W-8BEN (or applicable successor form) certifying such holder's qualification for the reduced rate. This certification must be provided to us or our paying agent prior to the payment of dividends and must be updated periodically. Non-U.S. holders that do not timely provide us or our paying agent with the required certification, but that qualify for a reduced treaty rate, may obtain a refund of any excess amounts withheld by timely filing an appropriate claim for refund with the IRS.

Dividends we pay to a non-U.S. holder that are treated as effectively connected with such holder's United States trade or business (and if required by an applicable income tax treaty, attributable to a permanent establishment maintained by the non-U.S. holder in the United States) are not subject to United States federal withholding tax. Instead, such dividends generally will be subject to United States federal income tax on a net income basis at regular graduated United States federal income tax rates in much the same manner as if such holder were a resident of the United States. To inform us that dividends are not subject to United States federal withholding tax, the non-U.S. holder generally must furnish to us or our paying agent a properly executed IRS Form W-8ECI (or applicable successor form). This certification must be provided to us or our paying agent prior to the payment of dividends and must be updated periodically. A non-U.S. holder that is a foreign corporation also may be subject to an additional branch profits tax equal to 30% (or such lower rate specified by an applicable income tax treaty) of its effectively connected earnings and profits for the taxable year, as adjusted for certain items. Non-U.S. holders are encouraged to consult their tax advisors regarding any applicable income tax treaties that may provide for different rules.

A non-U.S. holder who claims the benefit of an income tax treaty generally will be required to satisfy applicable certification and other requirements prior to the distribution date. Non-U.S. holders are encouraged to consult their tax advisors regarding their entitlement to benefits under a relevant income tax treaty.

Table of Contents

Gain on Disposition of Our Common Stock

Subject to the discussion below regarding backup withholding, a non-U.S. holder generally will not be subject to United States federal income tax on any gain realized upon the sale or other disposition of our common stock, unless:

the non-U.S. holder is a nonresident alien individual who is present in the United States for 183 days or more during the taxable year of the disposition (but nevertheless is treated as a nonresident alien because some or all of those days were not taken into account for purposes of determining whether the individual is a U.S. resident under the 183-day test described in the definition of "non-U.S. holder" above);

the gain is effectively connected with the non-U.S. holder's conduct of a trade or business in the United States and, if required by an applicable income tax treaty, attributable to a permanent establishment maintained by the non-U.S. holder in the United States; or

we are, or have been, a United States real property holding corporation (USRPHC) for United States federal income tax purposes at any time within the shorter of the five-year period preceding the disposition or the non-U.S. holder's holding period for our common stock, unless (i) our common stock is regularly traded on an "established securities market" as defined in applicable Treasury Regulations and (ii) the non-U.S. holder holds no more than 5% of our outstanding common stock, directly or indirectly, during the relevant period (the "5% exception"). Generally, we will be a USRPHC if the fair market value of our United States real property interests equals or exceeds 50% of the sum of the fair market value of our other trade or business assets, our United States real property interests, and our foreign real property interests, all as determined under applicable Treasury Regulations. Although we believe we are not currently and do not anticipate becoming a USRPHC for United States federal income tax purposes, no assurances can be made in this regard.

Gain realized on sale of our common stock by a non-U.S. holder described in the first bullet point above will be subject to United States federal income tax at a flat 30% rate (or such lower rate specified by an applicable income tax treaty), but may be offset by United States source capital losses (even though the individual is not considered a resident of the United States), provided that the non-U.S. holder has timely filed U.S. federal income tax returns with respect to such losses.

Gain described in the second and third bullet points above will be subject to United States federal income tax on a net income basis at regular graduated United States federal income tax rates in the same manner as if such holder were a resident of the United States. A non-U.S. holder that is a foreign corporation also may be subject to an additional branch profits tax equal to 30% (or such lower rate specified by an applicable income tax treaty) of its effectively connected earnings and profits for the taxable year, as adjusted for certain items. In addition, if we are determined to be a USRPHC and the 5% exception does not apply, then a purchaser may be required to withhold 10% of the proceeds payable to a non-U.S. holder from a sale or other taxable disposition of our common stock. This 10% withholding, if applicable, is not an additional tax, and amounts withheld may be credited against the non-U.S. holder's federal income tax liability. Non-U.S. holders are encouraged to consult their tax advisors regarding any applicable income tax treaties that may provide for different rules.

Information Reporting and Backup Withholding

We generally must report annually to the IRS and to each non-U.S. holder the amount of distributions on our common stock paid to such holder and the amount of any tax withheld with respect to those distributions. These information reporting requirements apply even if no withholding was required. This information also may be made available under a specific treaty or agreement with the tax authorities in the country in which the non-U.S. holder resides or is established.

Table of Contents

The gross amount of dividends paid to a non-U.S. holder subject to information reporting that fails to certify its non-U.S. holder status in accordance with applicable Treasury Regulations may be subject to backup withholding, currently at a 28% rate (scheduled to increase to 31% on January 1, 2013). Generally, a non-U.S. holder furnishes the required certification by providing a valid IRS Form W-8BEN or IRS Form W-8ECI, as applicable. Notwithstanding the foregoing, backup withholding may apply if either we have or our paying agent has actual knowledge, or reason to know, that the holder is a U.S. person that is not an exempt recipient.

Backup withholding is not an additional tax. Any amounts withheld under the backup withholding rules may be allowed as a refund or a credit against a non-U.S. holder's United States federal income tax liability, provided the required information is timely furnished to the IRS.

Recent Legislation Imposing Additional Disclosure Requirements on holders that are Foreign Entities

Non-U.S. holders are encouraged to be aware of recently enacted legislation under sections 1471 through 1474 of the Internal Revenue Code that, beginning on January 1, 2013, will impose a 30% withholding tax on certain payments (which could include dividends in respect of our common shares and gross proceeds from the sale, exchange or other disposition of our common shares and gross proceeds from the sale, exchange or other disposition of our common shares) made to a foreign entity if such entity fails to satisfy certain disclosure requirements. Various requirements and exceptions are provided under the legislation and additional requirements and exceptions may be provided in subsequent guidance. **Non-U.S. holders are encouraged to consult their own tax advisors regarding the potential application and impact of the new requirements based upon their particular circumstances.**

Table of Contents**UNDERWRITING**

Stifel, Nicolaus & Company, Incorporated is acting as representative of each of the underwriters named below. The selling stockholders may be deemed to be underwriters. We, the selling stockholders and the underwriters named below, have entered into an underwriting agreement with respect to the shares of common stock being offered. Subject to certain conditions, each underwriter has severally agreed to purchase the number of shares of common stock indicated in the following table.

Underwriter	Number of Shares
Stifel, Nicolaus & Company, Incorporated	
Oppenheimer & Co. Inc.	
Lazard Capital Markets LLC	
D.A. Davidson & Co.	
Wedbush Securities Inc.	
Total	

The expenses of the offering, not including the underwriting discounts and commissions, are estimated at \$4.4 million and are payable by us. This includes all reasonable fees and disbursements of counsel to the underwriters in connection with FINRA's review of the terms of this offering, which are estimated as \$25,000, and includes all reasonable documented out-of-pocket expenses of the underwriters (other than fees and disbursements of the underwriters' counsel), which are estimated as \$75,000.

Subject to the terms and conditions set forth in the underwriting agreement, the underwriters have agreed, severally and not jointly, to purchase all of the shares of common stock offered by this prospectus, other than those covered by the option to purchase additional shares described below, if any of these shares are purchased.

If the underwriters sell more shares of common stock than the total number set forth in the table above, the underwriters have an option to buy up to 802,500 shares of common stock from the selling stockholders to cover such excess sales. They may exercise that option for 30 days. If any shares of common stock are purchased pursuant to this option, the underwriters will severally purchase shares of common stock in approximately the same proportion as set forth in the table above.

The following table shows the per share and total underwriting discounts and commissions to be paid to the underwriters by us and the selling stockholders. Such amounts are shown assuming both no exercise and full exercise of the underwriters' option to purchase an additional shares of common stock.

	Per Share	Without Option	With Option
Public offering price	\$	\$	\$
Underwriting discount	\$	\$	\$
Proceeds, before expenses, to us	\$	\$	\$
Proceeds to the selling stockholders assuming full exercise of the underwriters' overallotment option	\$	\$	\$

Shares of common stock sold by the underwriters to the public will initially be offered at the initial public offering price set forth on the cover of this prospectus. The underwriters may allow a concession of not more than \$ per share to selected dealers. The underwriters may also allow, and those dealers may re-allow, a concession of not more than \$ per share to some other dealers. If all the shares of common stock are not sold at the initial public offering price, the representative may change the offering price and the other selling terms. The offering of the shares by the underwriters is subject to receipt and acceptance and subject to the underwriters' right to reject any order in whole or in part.

Lazard Frères & Co. LLC referred this transaction to Lazard Capital Markets LLC and will receive a referral fee from Lazard Capital Markets LLC in connection therewith.

Table of Contents

We and our existing stockholders have agreed, subject to limited exceptions, with the underwriters not to sell or transfer any of our shares of common stock or securities convertible into or exchangeable or exercisable for shares of common stock without the prior written consent of the representative of the underwriters during the period from the date of this prospectus continuing through the date that is 180 days after the date of this prospectus. Specifically, we and these other persons have agreed, with certain limited exceptions, not to directly or indirectly:

offer, pledge, sell, or contract to sell any common stock,

sell any option or contract to purchase any common stock,

purchase any option or contract to sell any common stock,

grant any option, right, or warrant for the sale of any common stock,

lend or otherwise dispose of or transfer any common stock,

request or demand that we file a registration statement related to the common stock, or

enter into any swap or other agreement that transfers, in whole or in part, the economic consequence of ownership of any common stock, whether any such swap or transaction is to be settled by delivery of shares or other securities, in cash or otherwise.

The 180-day restricted period described in the preceding paragraph may be extended by the representative of the underwriters by written notice to us if: (1) during the last 17 days of the initial 180-day restricted period we issue an earnings release or announce material news or a material event; or (2) prior to the expiration of the initial 180-day restricted period, we announce that we will release earnings results or we become aware that material news or a material event will occur during the 16-day period beginning on the last day of the initial 180-day period, then, in each case, the initial 180-day restricted period may be extended until the expiration of the 18-day period beginning on the date of the earnings release or the occurrence of the material news or material event.

In addition, the underwriting agreement will provide that any shares or rights to receive shares of our common stock that we issue to our directors, executives, or other employees will be subject to transfer restrictions restricting such persons from selling, transferring or otherwise disposing of such shares or rights until at least 180 days after the closing of this offering.

We have applied to list our common stock on The NASDAQ Global Market under the symbol "EAC."

Prior to this offering, there has been no public market for the shares of common stock. The initial public offering price will be negotiated between us and the representative. Among the factors to be considered in determining the initial public offering price of the shares of common stock, in addition to prevailing market conditions, will be our historical performance, estimates of our business potential and earnings prospects, an assessment of our management, and the consideration of the above factors in relation to market valuation of companies in related businesses. An active trading market for the shares may not develop. It is also possible that after the offering the shares will not trade in the public market at or above the initial offering price.

The underwriters do not expect to sell more than 5% of the shares in the aggregate to accounts over which they exercise discretionary authority.

We and the selling stockholders have agreed to indemnify the underwriters against certain liabilities, including liabilities under the Securities Act, or to contribute to payments that the underwriters may be required to make for these liabilities.

In connection with this offering, the underwriters may purchase and sell our shares of common stock in the open market. These transactions may include short sales, stabilizing transactions, and purchases to cover positions created by short sales. Short sales may involve the sale by the underwriters of a greater number of shares of common stock than they are required to purchase in this offering. "Covered" short sales are sales

made in an amount not greater than the underwriters' option to purchase additional shares

Table of Contents

of common stock in this offering. The underwriters may close out any covered short position by either exercising their option to purchase additional shares of common stock or purchasing shares of common stock in the open market. In determining the source of shares of common stock to close out the covered short position, the underwriters will consider, among other things, the price of shares of common stock available for purchase in the open market as compared to the price at which they may purchase additional shares of common stock pursuant to the option granted to them. "Naked" short sales are any sales in excess of that option. The underwriters must close out any naked short position by purchasing shares of common stock in the open market. A naked short position is more likely to be created if the underwriters are concerned that there may be downward pressure on the price of the shares of common stock in the open market after pricing that could adversely affect investors who purchase in this offering. Stabilizing transactions consist of various bids for or purchases of, or offers to sell or sales of, shares of common stock made by the underwriters in the open market prior to the closing of this offering.

The underwriters may also impose a penalty bid. This occurs when a particular underwriter repays to the underwriters a portion of the underwriting discount received by it because the representative has repurchased shares of common stock sold by or for the account of such underwriter in stabilizing or short covering transactions.

Purchases to cover a short position and stabilizing transactions, as well as other purchases by the underwriters for their own accounts, may have the effect of preventing or retarding a decline in the market price of our stock, and together with the imposition of the penalty bid, may stabilize, maintain, or otherwise affect the market price of the common stock. As a result, the price of the common stock may be higher than the price that otherwise might exist in the open market. If these activities are commenced, they may be discontinued at any time. These transactions may be effected on the NASDAQ exchange, in the over-the-counter market or otherwise.

Relationships with the Underwriters

Certain of the underwriters and their respective affiliates, as well as Lazard Frères & Co. LLC, have and may in the future perform various financial advisory, commercial banking, and investment banking services for us, the selling stockholders, and our affiliates, for which they receive or will receive customary fees and expenses.

Online Offering

A prospectus in electronic format may be made available on the websites maintained by one or more of the underwriters participating in this offering. Other than the prospectus in electronic format, the information on any such website, or accessible through any such website, is not part of the prospectus. The representative may agree to allocate a number of shares to underwriters for sale to their online brokerage account holders. Internet distributions will be allocated by the underwriters that will make Internet distributions on the same basis as other allocations. In addition, shares may be sold by the underwriters to securities dealers who resell shares to online brokerage account holders.

Foreign Selling Restrictions

Notice to Prospective Investors in the European Economic Area

In relation to each Member State of the European Economic Area ("EEA"), which has implemented the Prospectus Directive (each, a "Relevant Member State"), an offer to the public of any shares which are the subject of the offering contemplated by this prospectus may not be made in that Relevant Member State except that an offer to the public in that Relevant Member State of any shares may be made at any time under the following exemptions under the Prospectus Directive, if they have been implemented in that Relevant Member State:

(a) to legal entities which are authorized or regulated to operate in the financial markets or, if not so authorized or regulated, whose corporate purpose is solely to invest in securities;

Table of Contents

(b) to any legal entity which has two or more of (1) an average of at least 250 employees during the last financial year; (2) a total balance sheet of more than €43,000,000; and (3) an annual net turnover of more than €50,000,000, as shown in its last annual or consolidated accounts;

(c) by the underwriters to fewer than 100 natural or legal persons (other than qualified investors as defined in the Prospectus Directive) subject to obtaining the prior consent of the representative for any such offer; or

(d) in any other circumstances falling within Article 3(2) of the Prospectus Directive,

provided that no such offer of shares shall result in a requirement for the publication by us or any of the underwriters of a prospectus pursuant to Article 3 of the Prospectus Directive.

Any person making or intending to make any offer within the EEA of shares which are the subject of the offering contemplated in this prospectus should only do so in circumstances in which no obligation arises for us or any of the underwriters to produce a prospectus for such offer. Neither we nor the underwriters have authorized, nor do we or they authorize, the making of any offer of shares through any financial intermediary, other than offers made by the underwriters which constitute the final offering of shares contemplated in this prospectus.

For the purposes of this provision, and your representation below, the expression "an offer to the public" in relation to any shares in any Relevant Member State means the communication in any form and by any means of sufficient information on the terms of the offer and any shares to be offered so as to enable an investor to decide to purchase any shares, as the same may be varied in that Relevant Member State by any measure implementing the Prospectus Directive in that Relevant Member State, and the expression "Prospectus Directive" means Directive 2003/71/EC and includes any relevant implementing measure in each Relevant Member State.

Each person in a Relevant Member State who receives any communication in respect of, or who acquires any shares which are the subject of the offering contemplated by this prospectus under, the offers contemplated in this prospectus will be deemed to have represented, warranted, and agreed to and with us and each underwriter that:

(a) it is a qualified investor within the meaning of the law in that Relevant Member State implementing Article 2(1)(e) of the Prospectus Directive; and

(b) in the case of any shares acquired by it as a financial intermediary, as that term is used in Article 3(2) of the Prospectus Directive, (i) the shares acquired by it in the offering have not been acquired on behalf of, nor have they been acquired with a view to their offer or resale to, persons in any Relevant Member State other than "qualified investors" as defined in the Prospectus Directive, or in circumstances in which the prior consent of the representatives has been given to the offer or resale; or (ii) where shares have been acquired by it on behalf of persons in any Relevant Member State other than qualified investors, the offer of those shares to it is not treated under the Prospectus Directive as having been made to such persons.

United Kingdom

Each underwriter has represented and agreed that:

(a) it has only communicated or caused to be communicated and will only communicate or cause to be communicated an invitation or inducement to engage in investment activity (within the meaning of Section 21 of the Financial Service and Markets Act 2000 ("FSMA")) received by it in connection with the issue or sale of the notes in circumstances in which Section 21(1) of the FSMA does not apply to the Issuer; and

(b) it has complied and will comply with all applicable provisions of the FSMA with respect to anything done by it in relation to the notes in, from, or otherwise involving the United Kingdom.

Table of Contents

Switzerland

This document, as well as any other material relating to the shares which are the subject of the offering contemplated by this prospectus, does not constitute an issue prospectus pursuant to Article 652a of the Swiss Code of Obligations. The shares will not be listed on the SIX Swiss Exchange and, therefore, the documents relating to the shares, including, but not limited to, this document, do not claim to comply with the disclosure standards of the listing rules of the SIX Swiss Exchange and corresponding prospectus schemes annexed to the listing rules of the SIX Swiss Exchange. The shares are being offered in Switzerland by way of a private placement, *i.e.*, to a small number of selected investors only, without any public offer and only to investors who do not purchase the shares with the intention to distribute them to the public. The investors will be individually approached by us from time to time. This document, as well as any other material relating to the shares, is personal and confidential and does not constitute an offer to any other person. This document may only be used by those investors to whom it has been handed out in connection with the offering described herein and may neither directly nor indirectly be distributed or made available to other persons without our express consent. It may not be used in connection with any other offer and shall in particular not be copied and/or distributed to the public in (or from) Switzerland.

Dubai International Financial Centre

This document relates to an exempt offer in accordance with the Offered Securities Rules of the Dubai Financial Services Authority. This document is intended for distribution only to persons of a type specified in those rules. It must not be delivered to, or relied on by, any other person. The Dubai Financial Services Authority has no responsibility for reviewing or verifying any documents in connection with exempt offers. The Dubai Financial Services Authority has not approved this document nor taken steps to verify the information set out in it, and has no responsibility for it. The shares which are the subject of the offering contemplated by this prospectus may be illiquid and/or subject to restrictions on their resale. Prospective purchasers of the shares offered pursuant to this prospectus should conduct their own due diligence on such shares. If you do not understand the contents of this document you should consult an authorized financial adviser.

Hong Kong, Singapore, and Japan

The shares may not be offered or sold by means of any document other than (i) in circumstances which do not constitute an offer to the public within the meaning of the Companies Ordinance (Cap. 32, Laws of Hong Kong), or (ii) to "professional investors" within the meaning of the Securities and Futures Ordinance (Cap. 571, Laws of Hong Kong) and any rules made thereunder, or (iii) in other circumstances which do not result in the document being a "prospectus" within the meaning of the Companies Ordinance (Cap. 32, Laws of Hong Kong), and no advertisement, invitation or document relating to the shares may be issued or may be in the possession of any person for the purpose of issue (in each case whether in Hong Kong or elsewhere), which is directed at, or the contents of which are likely to be accessed or read by, the public in Hong Kong (except if permitted to do so under the laws of Hong Kong) other than with respect to shares which are or are intended to be disposed of only to persons outside Hong Kong or only to "professional investors" within the meaning of the Securities and Futures Ordinance (Cap. 571, Laws of Hong Kong) and any rules made thereunder.

This prospectus has not been registered as a prospectus with the Monetary Authority of Singapore. Accordingly, this prospectus and any other document or material in connection with the offer or sale, or invitation for subscription or purchase, of the shares may not be circulated or distributed, nor may the shares be offered or sold, or be made the subject of an invitation for subscription or purchase, whether directly or indirectly, to persons in Singapore other than (i) to an institutional investor under Section 274 of the Securities and Futures Act, Chapter 289 of Singapore (the "SFA"), (ii) to a relevant person, or any person pursuant to Section 275(1A), and in accordance with the conditions, specified in Section 275 of the SFA or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA.

Table of Contents

Where the shares are subscribed or purchased under Section 275 by a relevant person which is: (a) a corporation (which is not an accredited investor) the sole business of which is to hold investments and the entire share capital of which is owned by one or more individuals, each of whom is an accredited investor; or (b) a trust (where the trustee is not an accredited investor) whose sole purpose is to hold investments and each beneficiary is an accredited investor, shares, debentures and units of shares and debentures of that corporation or the beneficiaries' rights and interest in that trust shall not be transferable for 6 months after that corporation or that trust has acquired the shares under Section 275 except: (1) to an institutional investor under Section 274 of the SFA or to a relevant person, or any person pursuant to Section 275(1A), and in accordance with the conditions, specified in Section 275 of the SFA; (2) where no consideration is given for the transfer; or (3) by operation of law.

The securities have not been and will not be registered under the Financial Instruments and Exchange Law of Japan (the Financial Instruments and Exchange Law) and each underwriter has agreed that it will not offer or sell any securities, directly or indirectly, in Japan or to, or for the benefit of, any resident of Japan (which term as used herein means any person resident in Japan, including any corporation or other entity organized under the laws of Japan), or to others for re-offering or resale, directly or indirectly, in Japan or to a resident of Japan, except pursuant to an exemption from the registration requirements of, and otherwise in compliance with, the Financial Instruments and Exchange Law and any other applicable laws, regulations and ministerial guidelines of Japan.

Australia

This document has not been, and will not be, lodged with the Australian Securities and Investments Commission as a disclosure document for the purpose of Australia's Corporations Act 2001 (Cwlth) ("Corporations Act"). The offer is extended to Australian investors under section 708(8), 708(10), or 708(11) of the Corporations Act. Any of our shares issued as a result of the offer may not be offered for sale (or transferred, assigned, or otherwise alienated) to investors in Australia for at least 12 months after their issue, except in circumstances where disclosure to investors is not required under Chapter 6D of the Corporations Act or unless a compliant disclosure document is prepared and lodged with ASIC under Chapter 6D. Disclosure to investors would not generally be required under Chapter 6D where:

- (a) the shares are offered for sale in the ordinary course of trading on The NASDAQ Global Market;
- (b) the shares are offered for sale to the categories of "professional investors" referred to in section 708(11) of the Corporations Act; or
- (c) the shares are offered for sale to persons who are "sophisticated investors" that meet the criteria set out in sections 708(8) or 708(10) of the Corporations Act.

We are not licensed to provide financial product advice in relation to the shares, under Australian law. We recommend that investors obtain and consider this document before making any decision to acquire shares and confirm that there is no "cooling off" period under Australian law, in relation to the offer of shares under the offer. This document is not intended to provide financial product advice, and has been prepared without taking account of any particular investor's objectives, financial situation, or needs; as a result investors should consider the appropriateness of the information, having regard to their own objectives, financial situation, and needs. If in any doubt, stockholders should obtain their own professional advice in relation to any investment decision.

LEGAL MATTERS

Certain legal matters with respect to the legality of the issuance of the shares of common stock offered by us and by the selling stockholders by this prospectus will be passed upon for us by Milbank, Tweed, Hadley & McCloy LLP, New York, New York. The underwriters are being represented by DLA Piper LLP (US), Washington, DC, in connection with the offering. DLA Piper LLP (US) has in the past provided, and continues to provide, legal services to us.

EXPERTS

The audited consolidated financial statements included in this prospectus and elsewhere in the registration statement have been so included in reliance upon reports of Grant Thornton LLP, independent registered public accountants, upon the authority of said firm as experts in accounting and auditing in giving said reports.

WHERE YOU CAN FIND MORE INFORMATION

We have filed with the SEC a registration statement on Form S-1 under the Securities Act with respect to this offering of our common stock. This prospectus, which constitutes a part of the registration statement, does not contain all of the information set forth in the registration statement, some items of which are contained in exhibits to the registration statement as permitted by the rules and regulations of the SEC. For further information with respect to us and our common stock, we refer you to the registration statement, including the exhibits and the financial statements and notes filed as part of the registration statement. Statements contained in this prospectus concerning the contents of any contract or any other document are not necessarily complete. If a contract or document has been filed as an exhibit to the registration statement, please see the copy of the contract or document that has been filed. Each statement in this prospectus relating to a contract or document filed as an exhibit is qualified in all respects by the filed exhibit. The exhibits to the registration statement should be referenced for the complete contents of these contracts and documents. You may obtain copies of this information by mail from the Public Reference Section of the SEC, 100 F Street, N.E., Room 1580, Washington, D.C. 20549, at prescribed rates. You may obtain information on the operation of the public reference rooms by calling the SEC at 1-800-SEC-0330. The SEC also maintains an Internet website that contains reports, proxy statements, and other information about issuers, like us, that file electronically with the SEC. The address of that website is www.sec.gov.

After this offering, we will file with the SEC periodic reports, proxy statements, and other information required by the Exchange Act. Our SEC filings will also be available at the office of The NASDAQ Global Market. For further information on obtaining copies of our public filings at NASDAQ, please call (212) 401-8700.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors
Erickson Air-Crane Incorporated and Subsidiaries

We have audited the accompanying consolidated balance sheets of Erickson Air-Crane Incorporated and its subsidiaries (collectively the "Company") as of December 31, 2011 and 2010, and the related consolidated statements of operations and comprehensive income (loss), redeemable preferred stock and stockholders' equity (deficit), and cash flows for each of the three years in the period ended December 31, 2011. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Erickson Air-Crane Incorporated and its subsidiaries as of December 31, 2011 and 2010, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2011, in conformity with accounting principles generally accepted in the United States of America.

/s/ GRANT THORNTON LLP

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Description of the Business

The consolidated financial statements include the accounts of Erickson Air-Crane Incorporated ("EAC") and its subsidiaries and affiliated companies: CAC Development Ltd. ("Canada"), Canadian Air-Crane Ltd. ("CAC"), Erickson Air-Crane Malaysia Sdn. Bhd. ("EACM"), European Air-Crane S.p.A. ("EuAC"), and Dutch Air-Crane B.V. ("DAC") (collectively referred to as "the Company"). At December 31, 2011, EuAC owned a 60% equity interest in Societa Italiana de Manutenzioni Aeroautiche S.p.A. ("SIMA"), which is an aircraft maintenance organization located in Lucca, Italy. Additionally, EACM owned a 49% equity interest in Layang-Layang Services Sdn. Bhd., which provides aircraft rental services in Malaysia.

On September 27, 2007, Stonehouse Erickson Investment Co. LLC and Stonehouse Erickson Management Co. LLC (together "Stonehouse") and ZM EAC LLC acquired 100% of the outstanding common stock of EAC. On January 8, 2010, ZM Private Equity Fund I, L.P. and ZM Private Equity Fund II, L.P. purchased the interests of the Stonehouse entities.

As of December 31, 2011 the Company owned and operated a fleet of thirteen S-64E and four S-64F model Aircranes which are used in timber harvesting, firefighting, and construction operations predominantly in North America, South America, Europe, Southeast Asia, and Australia. Nine of the Aircranes were deployed outside of North America as of December 31, 2011.

The Company owns the Type Certificate and Production Certificate for the S-64 Airplane which gives it the authorization to convert, remanufacture, and manufacture S-64 Airplanes for its own use or to sell to third parties. The Company holds a Type Certificate issued by the European Aviation Safety Agency ("EASA") certifying the S-64F model which allows the Airplane to be sold to third parties in the European Union. The Company also holds a Repair Station Certificate which allows it to repair and overhaul airframes and components for Airplanes and other aircraft.

Note 2. Summary of Significant Accounting Policies

Basis of Accounting

The consolidated financial statements are prepared in accordance with the accounting principles generally accepted in the United States of America ("US GAAP").

Principles of Consolidation

The consolidated financial statements of the Company include the accounts of all majority-owned subsidiaries and variable interest entities in which it is determined that the Company is the primary beneficiary, as defined by Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 810 *Consolidation* ("ASC 810"). Intercompany accounts and transactions between the companies have been eliminated during consolidation.

Use of Estimates

The preparation of financial statements in conformity with US GAAP requires management to make assumptions and estimates that directly affect the amounts reported in the consolidated financial statements. Significant estimates for which changes in the near term are considered reasonably possible and that may have a material impact on the financial statements are: (a) excess and obsolete Airplane support parts reserves, (b) allowance for doubtful accounts, (c) income tax assets and liabilities, (d) warranty reserves and (e) cost per hour (CPH) reserves. Management of the Company bases their

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

estimates on historical experience and other relevant assumptions. Actual results could differ from those estimates, and such differences may be material to the consolidated financial statements.

Foreign Currency Translation and Transactions

The financial statements of the Company's subsidiaries CAC and EuAC are measured in Canadian dollars (C\$) and Euros (€), respectively (the functional currencies of each respective subsidiary) and then are translated into U.S. dollars. Generally, balance sheet accounts are translated using the current exchange rate at each balance sheet date. Results of operations are translated using the average exchange rate each month. Translation gains or losses resulting from the changes in the exchange rates from month to month are recorded in other comprehensive income. The financial statements of the Company's subsidiaries EACM and DAC are prepared using the U.S. dollar as their functional currency. The transactions related to these operations that are denominated in foreign currencies have been re-measured in U.S. dollars, and any resulting gain or loss is reported in total other income (expense), net.

Cash and Cash Equivalents

The Company classifies cash on deposit in banks and cash invested in money market accounts maturing in less than three months from the original date of purchase as cash and cash equivalents. The carrying amount of these items approximates fair value. The Company's subsidiaries generally maintain cash account balances sufficient to meet their short-term working capital requirements and periodically remit funds to the parent company to pay intercompany lease, maintenance and other charges. Substantially all of the Company's cash is concentrated in a few financial institutions. At times, deposits in these institutions exceed the federally insured limits. The Company has not experienced any losses in such accounts and believes that it is not exposed to any significant risk on these balances.

Cash held in accounts in foreign institutions, including restricted cash, totaled \$4.5 million and \$5.8 million at December 31, 2011 and 2010, respectively, of which, \$4.2 million and \$4.3 million is restricted cash at December 31, 2011 and 2010, respectively.

Restricted Cash

Restricted cash of \$5.2 million and \$4.3 million at December 31, 2011 and 2010, respectively, maintained at financial institutions, serves as collateral for performance bonds required as a part of certain operating and sales contracts. Additionally, letters of credit are also used for collateral for performance bonds.

Allowance for Doubtful Accounts

The Company maintains an allowance for doubtful accounts for estimated losses resulting from the inability of its customers to make required payments. The Company makes estimates as to the overall collectability of its receivables on an ongoing basis and writes off accounts receivable after reasonable collection efforts have been made and collection is deemed questionable or not probable. The Company specifically analyzes its accounts receivable and historical bad debt experience, customer concentrations, customer credit-worthiness and changes in its customer payment terms when evaluating the adequacy of the allowance for doubtful accounts. Charges increasing the allowance for doubtful accounts are recorded in general and administrative expense.

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

Aircrafts and Support Parts in Process

Aircrafts and support parts in process consist of manufactured aircrafts, in process aircrafts, and support parts relating to those aircrafts. Because these are assets the Company is actively marketing as being available for sale, they are classified in the consolidated balance sheets as a current asset.

At December 31, 2011 and 2010, this account consisted of aircrafts in various stages of production including one completed aircraft.

Aircraft Support Parts

Aircraft support parts consist of Aircraft parts, overhauls of certain major components, and work-in-process which are valued at the lower of cost or market utilizing the first-in first-out method. Costs capitalized for Aircraft support parts include materials, labor, and operating overhead. Overhauls on certain major components are capitalized, and then amortized based on estimated flight hours between overhauls. All aircraft require daily routine repairs and maintenance based on inspections; such maintenance costs are expensed as incurred. Periodically, Aircrafts are removed from service and undergo heavy maintenance activities including inspections and repairs of the airframe and related parts as required; such costs are expensed as incurred.

Abnormal amounts of idle facility expense, freight, handling costs, and scrap are expensed as current-period charges. Allocation of fixed production overheads is based on the normal capacity of the production facilities.

Aircraft parts are categorized as serviceable, which indicates that they are in a condition suitable for installing on an Aircraft, or repairable, which indicates that additional overhaul or repair work needs to be performed in order for the part to be certified as serviceable. Since the Company operates within a niche of the heavy-lift helicopter market, it experiences long lead times and is required to carry large quantities of spares inventory in order to ensure availability of parts for servicing its fleet of Aircrafts. As a result, the accounting judgments used in the determination of the provision for excess and obsolete Aircraft support parts can vary significantly based on forecasted demand.

Aircraft support parts are classified as a non-current asset in the consolidated balance sheets because they are primarily used to maintain and overhaul the Company's fleet of Aircrafts, which are long term assets, and generally are not actively marketed as being held for sale. Aircraft support parts which are used in operations are recorded as an element of cost of sales in the accompanying consolidated statements of operations.

Aircrafts and Property, Plant, and Equipment

Aircrafts and property, plant, and equipment are recorded at cost. Depreciation is provided over the estimated useful lives of the assets as follows:

Aircrafts	15 years
Buildings	20 years
Vehicles and equipment	3-5 years

The cost of maintenance and repairs is charged to expense as incurred. Expenditures that increase the value or productive capacity of assets are capitalized. Upon retirement or other disposition of property,

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

plant and equipment, the cost and related accumulated depreciation are removed from the accounts and any gain or loss is included in operations. Leasehold improvements are amortized over the shorter of the estimated useful life of the asset or the life of the lease.

Impairment of Long-Lived Assets

The Company records impairment losses on long-lived assets used in operations when indicators of impairment are present and the undiscounted cash flows estimated to be generated by those assets are less than the assets' carrying amount. In such cases, the amount of the impairment is determined based on the relative fair values of the impaired assets. No impairments were recorded for long-lived assets during the years ended December 31, 2011, 2010, and 2009.

Investments

Investments are accounted for using the equity method of accounting if the investment gives the Company the ability to exercise significant influence, but not control over an investee. Significant influence is generally deemed to exist if the Company has an ownership interest in the investee of between 20% and 50% although other factors such as representation on the investee's board of directors and the effect of commercial arrangements are considered in determining whether the equity method of accounting is appropriate. Investments in which the Company does not have the ability to exercise significant influence over operating and financial policies are accounted for under the cost method.

Deferred Offering Costs

Deferred offering costs consist of direct incremental accounting and legal fees related to the Company's proposed anticipated initial public offering of its common stock. Approximately \$2.8 million and \$1.6 million of deferred offering costs are included in prepaid expenses and other on the Company's consolidated balance sheet as of December 31, 2011 and 2010, respectively. Upon completion of the initial public offering, these amounts will be offset against the proceeds of the offering. If the offering is terminated, the deferred offering costs will be expensed.

Debt Issuance Costs

Debt issuance costs consist of expenditures associated with obtaining debt financing, principally legal and bank commitment fees. Such costs are deferred and amortized over the term of the related credit agreements using a method that approximates the effective interest method. Amortization of debt issuance costs was \$0.9 million, \$0.7 million and \$1.0 million for the years ended December 31, 2011, 2010 and 2009, respectively.

In connection with the full pay-off and replacement of the Company's working capital revolving line of credit in 2010, the Company wrote off deferred loan costs and expensed termination fees relating to the old debt in the amount of \$2.3 million and capitalized loan costs relating to the new debt in the amount of \$2.7 million. Such loan costs will be amortized to amortization of debt issuance costs over the term of the Credit Agreement.

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

Income Taxes

The Company recognizes deferred tax assets and liabilities for the expected future tax consequences of events that have been included in the financial statements or tax returns in accordance with applicable accounting guidance for accounting for income taxes, using currently enacted tax rates in effect for the year in which the differences are expected to reverse.

The Company is subject to audit by federal, state and local taxing authorities. The outcome of these audits may result in the Company being assessed taxes in addition to amounts previously paid. Accordingly, the Company maintains a reserve for uncertain tax positions. The Company calculates its reserves in accordance with applicable accounting standards for accounting for uncertainty in income taxes. Changes in facts and circumstances could result in material changes to the amounts recorded for such tax positions.

The Company records accrued interest and penalties associated with uncertain tax positions in interest expense related to tax contingencies in the statements of operations.

Revenue Recognition

For the Aerial Services business segment, the Company enters into short-term and medium-term service contracts with its customers, which generally range from one day to one year. Occasionally, the Company enters into multiple year contracts, with extension options for additional years. Revenue is recognized for contracts as the services are rendered and include leasing of the Airplane, pilot and field maintenance support, and related services. The Company charges daily rates, hourly rates, and production rates (logging volume transported) depending upon the type of service being rendered. Mobilization fees, which represent recovery of the costs incurred in deploying an Airplane to a customer, are recognized over the contract term. Revenues from timber harvesting operations in Canada and the U.S. are earned based on the number of flight hours or the timber volume and quality delivered to customers, depending on the customer contract. Revenues from timber harvesting operations in Malaysia are recorded based on the number of flight hours, or the timber volume delivered to customers, depending on the customer contract.

Contracts for the sale of Airplanes have multiple deliverables. Such elements may include warranty, spare parts, training and crew provisioning arrangements. The Company allocates arrangement consideration based on the relative selling prices of the separate units of accounting contained within an arrangement containing multiple deliverables. Selling prices are determined using fair value, when available, third party evidence when fair value is not available, or the Company's estimate of selling price when fair value and third party evidence is not available.

For the sale of Airplanes that involve significant production, modification or customization, the Company uses the percentage of completion method of accounting, when all the required criteria are met. In circumstances when the criteria for using the percentage of completion method of accounting are not met, revenue is recognized as each unit is completed, delivered, and accepted by the customer, and the rights of ownership are transferred. When total cost estimates exceed revenues, the Company accrues the estimated losses immediately.

Revenue recognized represents the price negotiated with the customer, adjusted by any discounts. The amount reported as cost of sales is determined by specific identification of costs to manufacture each Airplane, plus a proportion of deferred program costs from specific modifications to the Airplane ordered by the customer. A discussion of revenue recognition with respect to the Company's 2009 Airplane sale is included in "Note 12. Commitments and Contingencies Put Option."

Table of Contents**ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****Note 2. Summary of Significant Accounting Policies (Continued)**

The Company's Manufacturing, Repair, and Overhaul ("MRO") facilities enter into contracts that require maintenance, repair, overhaul and/or assembly of various major components and other Airplane parts. In all such instances, revenues and costs are deferred until the repair work is completed and the customer accepts the final product. Additionally, this business sells spare parts; revenue and cost of sales are recorded at the time of delivery and customer acceptance of the spare parts. Cost Per Hour ("CPH") contracts are accounted for on a long-term contract basis; revenues are recognized based upon negotiated hourly rates and applicable flight hours earned, and profitability of the contract is based upon estimated costs over the life of the contract.

Warranty Reserves

Sales of Airplanes to third parties include limited warranty provisions that require the Company to remedy deficiencies in quality or performance of its products over a specified period of time, generally from two to five years depending on the type of part, component or airframe, including technical assistance services. Warranty reserves are established at the time that revenue is recognized at levels that represent the estimate of the costs that will be incurred to fulfill those warranty requirements. (See "Note 15 Warranty Reserves")

Risks and Uncertainties

The Company performs aerial services operations, sells Airplanes and spare parts, and performs other services throughout the world. Customers outside the U.S. accounted for 55.8%, 62.5%, and 51.3% of consolidated revenue during 2011, 2010 and 2009, respectively. Services are performed for customers in the timber harvesting, firefighting, and construction industries, which are periodically subject to economic disruptions. The Company had revenues from two, four and three customers in excess of 10% of the total revenues for the years ended December 31, 2011, 2010, and 2009, respectively.

The following is a summary of customers that accounted for at least 10% of the Company's sales in 2011, 2010, or 2009:

	For the Year Ended December 31, 2011	For the Year Ended December 31, 2010	For the Year Ended December 31, 2009
U.S. Forest Service	27.2%	24.4%	16.6%
Italian Ministry of Civil Protection	15.9%	13.8%	13.6%
Hellenic Fire Brigade	8.4%	11.0%	10.5%
Samling Global	7.0%	12.3%	5.1%
	58.5%	61.5%	45.8%

The Company performs ongoing credit evaluations of its customers and believes it has made adequate provisions for potential credit losses. The Company does not generally require collateral on accounts receivable; however, under certain circumstances, the Company obtains a letter of credit or requires prepayment prior to performing services. The Company estimates its allowance for doubtful accounts using a specific identification method based on an evaluation of payment history, the customer's credit situation, and other factors. At December 31, 2011, five customers made up 65.1% of the Company's accounts receivable balance. At December 31, 2010, six customers made up 70.4% of the Company's accounts

Table of Contents**ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****Note 2. Summary of Significant Accounting Policies (Continued)**

receivable balance. Allowance for doubtful accounts was \$0.5 million and \$1.4 million at December 31, 2011 and 2010, respectively.

The customers represented the following as a percentage of total Accounts Receivable:

	As of December 31, 2011	As of December 31, 2010
U.S. Forest Service		9.0%
Italian Ministry of Civil Protection	18.9%	10.5%
Corpo Forestale Services	5.9%	16.5%
Hellenic Fire Brigade	21.6%	16.2%
Helicorp	12.0%	10.4%
Samling Global	6.7%	7.8%
	65.1%	70.4%

The Company operates within the aviation industry segment where certain vendors constitute the sole source for FAA-approved parts. Alternative sources of supplies exist; however, the loss of certain suppliers could cause a material business disruption to the Company.

The Company operates in portions of Europe that have been significantly affected by the global recession, such as Greece and Italy, and the Company bears risk that existing or future accounts receivable may be uncollected if these customers experience curtailed government spending.

As of December 31, 2011, the Company had \$19.3 million of outstanding purchase orders for scheduled parts deliveries, all in the ordinary course of business, through 2019.

Fair Value of Financial Instruments

The fair value of the Company's cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities are carried at cost, which approximates fair value due to their short-term maturities. The fair value of bank borrowings and long-term debt approximate carrying value due to the variable rate nature of the indebtedness.

Fair Value Measurements

Fair value is defined as the price that would be received from selling an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Fair value measurements are classified and disclosed in one of the following three categories:

Level 1: Observable inputs that reflect unadjusted quoted prices for identical assets or liabilities traded in active markets.

Level 2: Valuations based on other than quoted prices in active markets for identical assets and liabilities, quoted prices for identical or similar assets or liabilities in inactive markets, or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

Level 3: Valuations based on inputs that are generally unobservable and typically reflect management's estimates of assumptions that market participants would use in pricing the asset or liability.

The Company's foreign currency forward contracts were measured at fair value within Level 2 of the fair value hierarchy at December 31, 2011 and 2010, which is valued using quoted market prices for contracts with similar terms and maturity dates.

Derivative Instruments and Hedging Activities

The Company is subject to exposures that arise from foreign currency movements between the date the foreign currency transactions are recorded and the date they are settled. The Company's exposure to foreign currency movements is somewhat mitigated through naturally offsetting asset and liability currency positions. In Southeast Asia, the Company generally enters into U.S. dollar denominated contracts for its services, which reduces foreign currency risk. The Company periodically enters into foreign currency hedging transactions to mitigate risk of foreign currency movements in Europe and Australia. Generally more than fifty percent of the Company's revenues are denominated in a currency other than the U.S. dollar, whereas a substantial portion of its costs are incurred in U.S. dollars. The Company uses hedging strategies to manage and minimize the impact of exchange rate fluctuations on its profits. (See "Note 14 Derivative Instruments and Hedging Activities")

All derivative instruments are recognized in the financial statements and measured at fair value regardless of the purpose or intent of holding them. The Company uses derivative instruments to principally manage cash flow risks from revenue which is expected to be recognized from executed contracts for the future delivery of goods or services. Revenues from such customer contracts are recorded in U.S. dollars at the contract rate and the impact of the foreign currency forward contract is recognized in gross margin and operating income at the time of revenue recognition. At the end of each accounting period, the value of each outstanding foreign currency forward contract is marked to market in the balance sheet on the basis of the then prevailing forward exchange rate. Revenues which are not hedged are translated into U.S. dollars at the average exchange rate during the month the services are rendered. All changes in fair value of the Company's foreign currency forward contracts have been recorded in the consolidated statement of operations because they do not meet the requirements for deferral accounting. The Company does not enter into foreign currency forward contracts for trading or speculative purposes.

Variable Interest Entity

An entity is generally considered a Variable Interest Entity (VIE) that is subject to consolidation under ASC 810 *Consolidation*, if the total equity investment at risk is not sufficient for the entity to finance its activities without additional subordinated financial support; or as a group, the holders of the equity investment at risk lack any one of the following characteristics: (a) the power, through voting rights or similar rights, to direct the activities that most significantly impact the entity's economic performance; (b) the obligation to absorb expected losses of the entity; (c) the right to receive the expected residual returns of the entity.

From March 2005 through November 2009, European Air-Crane, S.p.A. ("EuAC") was 49% owned by Erickson Air-Crane, Inc. ("EAC"); 49% owned by Grupo Inaer ("Inaer" formerly Elilario Italia S.p.A.); and 2% owned by Gian Franco Blower ("GFB"). This was achieved with each owner contributing capital proportional to their interest. All capital was fully paid up by the end of May 2005.

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

On November 27, 2009, GFB sold his 2% interest (20,000 shares with a €1.00 par value) in EuAC to Fiduciaria Centro Nord ("FCN") for € 0.6 million (\$0.9 million). EAC provided FCN with the financial means to purchase and transfer the shares of EuAC from GFB to FCN, in exchange for the patrimonial and administrative rights derived from the shares. These rights include the right to decide whether and how to vote in shareholders' meetings and the right to decide whether, when and to whom the shares should be transferred and endorsed. During 2009, EAC paid FCN €0.2 million (\$0.3 million) of the €0.6 million, and the remaining €0.4 million (\$0.6 million) was paid by EAC to FCN in 2010. As of December 31, 2011, EuAC had net assets of €1.8 million (\$2.3 million).

The Company believes that EuAC is a VIE and that it is the primary beneficiary of the VIE through its ability to make decisions about the entity's activities, the exposure to the expected losses of the entity if they occur, and the right to receive the expected residual returns of the entity if they occur. As such, the consolidated financial statements include the balances of EuAC. Noncontrolling interest of \$0.9 million and \$0.9 million relates to the other owners' stockholdings and is reflected in stockholders' equity in the accompanying consolidated balance sheet at December 31, 2011 and 2010, respectively.

Environmental Remediation

The Company is subject to federal and state requirements for protection of the environment, including those for discharge of hazardous materials and remediation of contaminated sites. The Company periodically assesses, based on environmental studies, expert analyses and legal reviews, the Company's contingencies, obligations and commitments for remediation of contaminated sites, including assessments of ranges and probabilities of recoveries from other responsible parties who have and have not agreed to a settlement and of recoveries from insurance carriers. The Company immediately accrues and charges to current expense identified exposures related to environmental remediation sites based on its best estimate within a range of potential exposure for investigation, cleanup and monitoring costs to be incurred. (See "Note 12 Commitments and Contingencies")

Research and Development Costs

Research and development costs predominately consist of internal labor costs and engineering tooling design costs, which are charged to expense when incurred. The Company's research and development expense totaled \$4.8 million, \$6.4 million, and \$6.9 million, for the years ended December 31, 2011, 2010 and 2009, respectively.

Earnings (Loss) per Common Share

Basic earnings (loss) per common share ("Basic EPS") is computed by dividing net income attributable to common stockholders after the reduction of earnings allocated to preferred stock by the weighted average number of shares of common stock outstanding during the period and excludes the effects of any potentially dilutive securities.

Diluted earnings (loss) per common share ("Diluted EPS") gives effect to all dilutive potential common stock outstanding during the period. The computation of Diluted EPS does not assume conversion, exercise or contingent exercise of securities that would have an anti-dilutive effect on earnings.

The computation of basic and diluted earnings (loss) per common share for the years ended December 31, 2011, 2010 and 2009 includes 1,000 shares of outstanding common stock, since there are no dilutive potential common shares.

Table of Contents

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 2. Summary of Significant Accounting Policies (Continued)

Comprehensive Income (Loss)

Comprehensive income (loss) consists of net income (loss) and the effects on the consolidated financial statements of translating the financial statements of the Company's international subsidiaries. Comprehensive income (loss) is presented in the consolidated statements of operations and comprehensive income (loss). The Company's accumulated other comprehensive income (loss) is presented as a component of equity in the consolidated balance sheets and consists of the cumulative amount of the Company's foreign currency translation adjustments, net of tax impact.

Reclassifications

Certain amounts in the prior years' financial statements have been reclassified to conform to the current year's presentation.

Segment Reporting

The Company determines its reportable segments based on the guidance in FASB ASC 280 *Segment Reporting* ("ASC 280"). The Company defines its operating segments as components of its business where separate financial information is available and is routinely evaluated by the chief operating decision maker. The chief operating decision maker reviews financial information based upon the nature of the products and services the Company offers.

The Company's two reportable segments are Aerial Services, and Aircraft Manufacturing and Maintenance Repair and Overhaul ("Manufacturing / MRO"). Activities within each operating segment are as follows:

Aerial Services This segment offers a broad range of heavy-lift helicopter services via the Company's worldwide fleet, including firefighting, timber harvesting, infrastructure construction, and crewing services.

Manufacturing / MRO This segment manufactures Aircranes from existing airframes, manufactures new components on a contract basis, and provides customers with Federal Aviation Administration and European Aviation Safety Agency certified maintenance, and MRO services in the Company's AS9100 certified facility. AS9100 is a widely adopted and standardized quality management system for the aerospace industry.

The Company has evaluated the activities within each of the operating segments and has determined that these activities meet the aggregation requirements within ASC 280 in that they have similar economic characteristics and share fundamental characteristics including the nature of the products, production processes, customers, and distribution channels.

Recent Accounting Pronouncements

In May 2011, the FASB issued Accounting Standards Update ("ASU") No. 2011-04, "Fair Value Measurement (Topic 820): Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in the U.S. GAAP and IFRSs." This guidance contains certain updates to the measurement guidance as well as enhanced disclosure requirements. The most significant change in disclosures is an expansion of the information required for "Level 3" measurements including enhanced disclosure for: (1) the valuation process used by the reporting entity; and (2) the sensitivity of the fair value measurement to changes in unobservable inputs and the interrelationships between those unobservable inputs, if any.

Table of Contents**ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****Note 2. Summary of Significant Accounting Policies (Continued)**

This guidance is effective for interim and annual periods beginning on or after December 15, 2011, with early adoption prohibited. This guidance will only impact the Company's "Level 3" disclosures.

In December 2011, the FASB issued ASU No. 2011-12, "Deferral of the Effective Date for Amendments to the Presentation of Reclassifications of Items Out of Accumulated Other Comprehensive Income in Accounting Standards Update No. 2011-05." Under the amendments in ASU 2011-05 "Presentation of Comprehensive Income," entities are required to present reclassification adjustments and the effect of those reclassification adjustments on the face of the financial statements where net income is presented, by component of net income, and on the face of the financial statements where other comprehensive income is presented, by component of other comprehensive income. In addition, the amendments in ASU 2011-05 require that reclassification adjustments be presented in interim financial periods. The amendments in ASU 2011-12 supersede changes to those paragraphs in ASU 2011-05 that pertain to how, when, and where reclassification adjustments are presented. ASU 2011-12 is issued to allow FASB time to redeliberate whether to present on the face of the financial statements the effects of reclassifications out of accumulated other comprehensive income on the components of net income and other comprehensive income for all periods presented. This amendment is effective for the Company in 2012 and will be applied retrospectively. The adoption of ASU 2011-12 will result in changes to the Company's presentation and disclosure only and will not have an impact on its consolidated results of operations and financial condition.

In October 2009, the FASB issued an amendment to ASC 605-25, *Multiple Element Arrangements*, which modifies how a company separates consideration in multiple-delivery arrangements. The amendment establishes a selling price hierarchy for determining the selling price of a deliverable. The amendment also clarifies the allocation of revenue is based on entity-specific assumptions rather than assumptions of a marketplace participant. The amendment also eliminates the residual method of allocating revenue and requires the use of the relative selling price method. Expanded disclosures of qualitative and quantitative information regarding application of multiple-deliverable revenue arrangement guidance are also required under the amendment. This amendment to ASC 605-25 was effective for the Company January 1, 2011. The adoption did not have a material impact on the Company's consolidated financial statements.

In December 2011 the FASB issued an accounting standards update to ASC 210-20, *Offsetting*, requiring new disclosures about financial instruments and derivative instruments that are either offset by or subject to an enforceable master netting arrangement or similar agreement. The standards update is effective for fiscal years beginning after December 15, 2012. The Company is currently evaluating the impact of adopting this standard on its consolidated financial statements.

Note 3. Accounts Receivable and Allowance for Doubtful Accounts

Accounts receivable consisted of the following (in thousands):

	December 31, 2011	December 31, 2010
Trade accounts receivable	\$ 26,432	\$ 23,582
Other receivables	572	541
Less: Allowance for doubtful accounts	(476)	(1,360)
	\$ 26,528	\$ 22,763

Note 7. Long-Term Debt*Credit Facilities*

At the end of June 2010, the Company entered into a Credit Agreement with a bank syndicate led by Wells Fargo Bank, National Association (Wells Fargo), which consists of up to \$132.5 million in senior credit facilities, including a \$65.0 million term loan facility and a revolving credit facility of up to \$67.5 million. The \$67.5 million revolving credit facility has a \$30.0 million sublimit to be used for issuance of letters of credit and a \$10.0 million sublimit for swingline loans. Subject to the terms of the Credit Agreement, including lender approval, the Company may request an increase in the senior credit facility of up to \$50.0 million. A request for an increase must be in a minimum amount of \$10.0 million and the

Note 7. Long-Term Debt (Continued)

Company may request an increase no more than three times during the term of the senior credit facilities. The commitment under the senior credit facilities is shared between Wells Fargo (60.4%), which is also the Administrative Agent, KeyBank National Association (13.2%), Bank of the West (13.2%), Bank of America, N.A. (7.5%), and Union Bank, N.A. (5.7%).

The senior credit facilities refinanced the Company's prior senior debt, resulting in a full pay-off and replacement of the Company's working capital revolving line of credit with Key Bank National Association ("KeyBank") and Bank of the West, and the Company's first lien term loan facility with The Prudential Insurance Company of America ("Prudential"). In addition, the Company used proceeds from the senior credit facilities to partially pay-down the second lien term loan facility, with the remaining amount outstanding under the second lien facility being converted into unsecured subordinated promissory notes. The interest rate on the senior credit facilities is calculated based on LIBOR or a base rate. The base rate is the higher of the federal funds rate plus 150 basis points, the prime rate as quoted by Wells Fargo, or LIBOR plus 150 basis points. The interest rate is calculated as LIBOR or base rate plus a LIBOR margin or base rate margin, respectively. Margin rates are tied to the total senior debt leverage covenant (Funded Indebtedness to Bank EBITDA) per the Company's Credit Agreement. LIBOR margin ranges between 2.75% and 5.00% and base rate margin ranges between 1.75% and 4.00%. The Company pays a quarterly unused commitment fee between 0.375% and 0.625% and fees between 2.75% and 5.00% on outstanding letters of credit, both of which are based on the level of the Funded Indebtedness to Bank EBITDA ratio.

The Company amended the Credit Agreement effective December 31, 2010. An initial amendment removed the requirement to comply with existing financial covenants as of December 31, 2010, added a net income covenant calculation for fiscal 2010, and adjusted certain amounts related to the determination of Bank EBITDA and Tangible Net Worth. In addition, the interest rate matrix was modified to add an additional pricing tier. Subsequent amendments waived the Company's non compliance with certain requirements and financial covenants under the Credit Agreement for both the fourth quarter of 2010 and the first quarter of 2011, and modified the financial covenants for future periods. Through the amendments the minimum 2010 net income covenant was (\$11.6 million), the interest rate matrix was modified and reporting requirements were adjusted. The amendment also required a new subordinated debt in the amount of \$10.0 million to be contributed by ZM Private Equity Funds I and II, L.P., which was funded on June 30, 2011. Absent these amendments, the Company would not have been in compliance with the covenants in the Credit Agreement at December 31, 2010 and March 31, 2011.

The senior credit facilities contain several affirmative and negative covenants customary for similar senior credit facilities, including a leverage ratio test based on maximum senior Funded Indebtedness (excluding subordinated debt) to Bank EBITDA, a minimum fixed charge coverage ratio, a minimum tangible net worth test and, for certain periods in 2011, a minimum net income. In addition, if at any time the amount advanced under the Company's senior credit facilities exceeds the most recent Asset Coverage Amount (as defined in the Company's Credit Agreement), the Company has to prepay the amount of such excess. Under the senior credit facilities the Company has affirmative covenants to, among other things, deliver certain financial statements, notices, and certificates to its lenders and maintain certain insurance policies. The negative covenants include limitations on indebtedness, liens, acquisitions, mergers and dispositions, investments, fundamental changes, certain lease transactions, restricted payments, transactions with affiliates, agreements that burden the Company's subsidiaries, and capital expenditures. See " Bank EBITDA."

ERICKSON AIR-CRANE INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Note 7. Long-Term Debt (Continued)

The indebtedness under the senior credit facilities is secured by liens on substantially all of the Company's assets, including the Company's interests in its subsidiaries, the Company's real and personal property, and interests in property and proceeds thereof, including, but not limited to, intangible assets, the type certificates and supplemental type certificates for the Company's aircraft.

The prior credit agreement ("KeyBank Credit Agreement") with KeyBank, was entered into on September 27, 2007 and contained a \$40.0 million working capital revolving line of credit ("Revolver"). The KeyBank Credit Agreement provided for an alternative currency sublimit under the Revolver of \$10.0 million, which provided for borrowing in Euros, Canadian dollars, and Australian dollars. Additionally, the agreement contained a letter of credit sublimit up to a maximum of \$10.0 million, which was amended on July 1, 2009 to increase the sublimit to \$15.0 million. The commitment under the KeyBank Revolver was shared between KeyBank (62.5%) and Bank of the West (37.5%). The interest rate on the KeyBank Revolver was calculated based on the prime rate as quoted in The Wall Street Journal, plus a base rate margin and depended on the level of the funded debt to Bank EBITDA ratio as defined in the Key Bank Credit Agreement, and could convert to LIBOR based interest. Margin rates were tied to the Company's total debt leverage covenant per the KeyBank Credit Agreement.

The prior term loan agreement with Prudential Insurance Company of America was initially entered into on September 27, 2007, and contained a \$65.0 million term loan facility (the "Term Debt"). The Term Debt required 60 consecutive monthly principal payments of \$0.5 million beginning November 1, 2007, together with variable interest calculated based on one-month LIBOR plus 2.75%.

The new Credit Agreement allows borrowings up to \$67.5 million under the revolving credit facility. The weighted average interest rate for borrowings under the revolving credit facility for the years ended December 31, 2011, 2010 and 2009 was 5.35%, 4.02% and 3.30%, respectively. The outstanding balance under the revolving credit facility at December 31, 2011, and 2010, excluding letters of credit, was \$51.8 million and \$22.8 million, respectively. These amounts were classified as long-term debt based on the maturity date of the respective credit agreements. The borrowing rate at December 31, 2011 and 2010 was 3.61% and 3.86%, respectively. The Company had \$2.3 million and \$7.8 million outstanding standby letters of credit issued as of December 31, 2011 and 2010. Borrowing availability was \$13.4 million and \$37.0 million as of December 31, 2011 and 2010, respectively.

The new Credit Agreement allows borrowings of up to \$65.0 million under the term loan facility. On June 30, 2010, the Company borrowed \$65.0 million and used proceeds to pay off existing debt. The Company is required to pay \$1.625 million per quarter for principal, plus accrued interest, until maturity, at which time the remaining principal balance of \$45.5 million, plus accrued interest, is due. The senior credit facilities terminate on June 24, 2013. The weighted average interest rate for the term loan borrowings for the year ended December 31, 2011, 2010 and 2009 was 4.73%, 3.32% and 3.14%, respectively. At December 31, 2011 and 2010 the outstanding balance under the term loan facility was \$55.3 million and \$61.8 million, respectively. The borrowing rate at December 31, 2011 and 2010 was 3.17% and 3.50%, respectively.

The Company expensed deferred loan costs and termination fees relating to the old debt in the amount of \$2.3 million and capitalized loan costs relating to the new debt in the amount of \$2.7 million. Such loan costs will be amortized to debt issuance costs over the term of the Credit Agreement.

Note 7. Long-Term Debt (Continued)

Working Capital Guarantee Credit Agreement

On June 30, 2011, in connection with an amendment to the Credit Agreement, the Company obtained a separate line of credit with Wells Fargo for up to \$10.0 million, pursuant to which Wells Fargo issues standby letters of credit to the Company's certain non-domestic customers for the purpose of assuring the Company's performance of its obligations to such customers. The standby letters of credit are required to be collateralized by funds obtained from the Company from promissory notes to ZM Private Equity Fund I, L.P. in the initial principal amount of \$700,000 and to ZM Private Equity Fund II, L.P. in the initial principal amount of \$300,000 at a rate of 20% per annum. No periodic principal or interest payments are required and the notes mature no earlier than June 30, 2016. As of December 31, 2011 the Company had \$8.6 million in outstanding letters of credit under this line of credit.

Subordinated Notes

The Company was party to a Second Lien Credit Agreement with ZM Private Equity Fund II, L.P., as Administrative Agent, pursuant to which the Company borrowed \$20.0 million, which was due on April 1, 2013. The lenders included ZM Private Equity Fund II, L.P. and 10th Lane Finance Co., LLC, which are affiliates of the Company through common ownership. Under the Second Lien Credit Agreement interest was payable quarterly and was calculated based on three-month LIBOR plus 8.00%.

On June 30, 2010, concurrent with the refinancing of the Company's senior debt, the Company used proceeds from the senior credit facilities to partially pay-down \$11.5 million of its \$20.0 million Second Lien Debt, with the remaining \$8.5 million being exchanged for unsecured subordinated promissory notes. On June 30, 2010, the Company also paid accrued interest of \$0.4 million and an early termination fee of \$0.2 million related to the Second Lien Debt.

The interest rate on the unsecured subordinated promissory notes is 20.0% per annum. No periodic principal or interest payments are required and the promissory notes mature on June 30, 2015. Interest payments are accrued to principal on a quarterly basis. The promissory notes can be prepaid at any time prior to maturity, at our option, at the original principal amount plus accrued interest without any prepayment penalties, subject to limitations under the agreement.

On June 30, 2011, in connection with an amendment to the Credit Agreement, an additional \$10.0 million of unsecured subordinated promissory notes were obtained from ZM Private Equity Funds I and II, L.P. at a rate of 20.0% per annum. No periodic principal or interest payments are required and the notes mature no earlier than June 30, 2016. Additionally, in connection with the Working Capital Guarantee Credit Agreement as disclosed above, ZM Private Equity Funds I and II issued \$1.0 million in unsecured subordinated promissory notes.

The weighted average interest rate for the year ended December 31, 2011 and 2010 was 20.00% and 11.81%, respectively. The borrowing rate was 20.0% and 20.0% and the balance was \$23.5 million and \$9.4 million at December 31, 2011 and 2010, respectively.

Bank EBITDA

Bank EBITDA assists management in monitoring management's ability to undertake key investing and financing functions such as making investments and incurring additional indebtedness, which may be prohibited by the covenants under the credit facilities unless the Company meets certain financial ratios and tests.

In addition to adjusting net income (loss) to exclude interest expense, provision for (benefit from) income taxes and depreciation and amortization of debt issuance costs, Bank EBITDA also adjusts net income by excluding non-cash unrealized mark-to-market foreign exchange gains (losses), specified litigation expenses up to a maximum of \$2.0 million for any 12-month period, certain management fees, gains from sale of equipment, non-cash charges arising from awards to employees relating to equity interests, non-cash charges relating to financings, initial public offering related non-capitalized expenses up to a maximum of \$2.0 million, certain fourth quarter 2010 charges up to a maximum of \$11.6 million and other unusual, extraordinary, non-recurring non-cash costs. For each calculation of Bank EBITDA made as of the end of the quarters ending June, September, and December 2011 and that will be made as of the quarter ending March 2012, Bank EBITDA also includes an amount equal to the \$10.0 million in new unsecured subordinated promissory notes dated June 30, 2011 and any additional subordinated debt issued in connection with an equity cure under the Credit Agreement. The Company has complied with the requirements of its debt covenants at December 31, 2011.

Long-term debt maturity schedule is as follows:

	Term Debt	Revolving Line of Credit	Subordinated Notes	Total
2012	\$ 6,500	\$	\$	\$ 6,500
2013	48,750	51,783		100,533
2014				
2015			11,400	11,400
2016			12,137	12,137
	\$ 55,250	\$ 51,783	\$ 23,537	\$ 130,570

Long-term debt was as follows:

	December 31, 2011	December 31, 2010
Term Debt	\$ 55,250	\$ 61,750
Revolving Line of Credit	51,783	22,765
Subordinated Notes	23,537	9,379
	\$ 130,570	\$ 93,894

On July 29, 2008, EuAC entered into an Agreement with Banca Di Credito Cooperativo Di Cambiano ("Cambiano") whereby Cambiano periodically advances European Air-Crane up to €6.0 million. Advances are based on documentary proof of receivables due from the Italian government. The purpose of this Agreement is to provide short term liquidity needs. At December 31, 2011 and 2010, there were €2.6 million and no advances outstanding, respectively, under this arrangement included within accounts payable and accrued liabilities. The agreement may be canceled by either party at any time.

On August 4, 2008, EuAC executed a bank guarantee and pledged €3.0 million as restricted cash in connection with a performance guarantee for a four-year leasing contract in Italy; these restrictions will expire in December 2012. Following receipt of the restricted cash, Cambiano issued a letter of credit for the performance bond.
