Cameco Confirms Uranium Supply

Saskatoon, Saskatchewan, Canada, September 25, 2006

Cameco Corporation became aware today of incorrect and misleading speculation about the company s recent uranium purchase and existing supplies.

Cameco confirms that the company has sufficient uranium to meet all current and future sales commitments based on its inventory of uranium, current mining plans, reserve base and long-term purchase agreements. The company s uranium supply situation remains unchanged from the disclosure in the last quarter s management s discussion and analysis.

In addition to being the world's largest uranium producer, Cameco is one of the world's largest uranium traders. The recent purchase of about 1 million pounds U_3O_8 (400 tonnes as UF_6) at an average weighted price of less than \$51 (US) per pound U_3O_8 was one example of trading activity. The company identified this purchase as a buying opportunity and has already sold a portion of this material at higher prices. Cameco expects to sell the remainder of this material at a profit. Since the company purchased this material, the uranium spot price has increased to more than \$53 (US) per pound U_3O_8 . Cameco will continue to look for trading opportunities.

The statements regarding the company s future financial outlook are based on the following key assumptions: no significant changes in our estimates for sales volumes, costs and prices as well as no disruption of supply from our mines or third-party sources.

Cameco, with its head office in Saskatoon, Saskatchewan, is the world s largest uranium producer. The company s uranium products are used to generate electricity in nuclear energy plants around the world, providing one of the cleanest sources of energy available today. Cameco s shares trade on the Toronto and New York stock exchanges. Statements contained in this news release, which are not historical facts, are forward-looking statements that involve risks, uncertainties and other factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements. Factors that could cause such differences, without limiting the generality of the following, include: the impact of the sales volume of fuel fabrication services, uranium, conversion services, electricity generated and gold; volatility and sensitivity to market prices for uranium, conversion services, electricity in Ontario and gold; competition; the impact of change in foreign currency exchange rates and interest rates; imprecision in decommissioning, reclamation, reserve and tax estimates; environmental and safety risks including increased regulatory burdens and long-term waste

Page 4

disposal; unexpected geological or hydrological conditions; adverse mining conditions; political risks arising from operating in certain developing countries; terrorism; sabotage; a possible deterioration in political support for nuclear energy; changes in government regulations and policies, including tax and trade laws and policies; demand for nuclear power; replacement of production; failure to obtain or maintain necessary permits and approvals from government authorities; legislative and regulatory initiatives regarding deregulation, regulation or restructuring of the electric utility industry in Ontario; Ontario electricity rate regulations; natural phenomena including inclement weather conditions, fire, flood, underground floods, earthquakes, pit wall failure and cave-ins; ability to maintain and further improve positive labour relations; strikes or lockouts; operating performance, disruption in the operation of, and life of the company s and customers facilities; decrease in electrical production due to planned outages extending beyond their scheduled periods or unplanned outages; success of planned development projects; and other development and operating risks.

Although Cameco believes that the assumptions inherent in the forward-looking statements are reasonable, undue reliance should not be placed on these statements, which only apply as of the date of this report. Cameco disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.
