HORNBECK OFFSHORE SERVICES, INC.

ANNUAL REPORT TO STOCKHOLDERS

For the Year Ended December 31, 2014

EXPLANATORY NOTE

This Annual Report to Stockholders of Hornbeck Offshore Services, Inc. (the "Company") for the year ended December 31, 2014 includes the Company's previously filed Annual Report on Form 10-K for the year ended December 31, 2014 as well as additional disclosures on the last page of this report that are required to be included in annual reports to stockholders.

Hornbeck Offshore Services, Inc.
(Exact Name of Registrant as Specified in Its Charter)

Delaware
(State or other jurisdiction of
incorporation or organization)
103 Northpark Boulevard, Suite 300
Covington, Louisiana 70433
(985) 727-2000
(Address, including zip code, and telephone number, including area code, of registrant's principal executive offices)

72-1375844
(I.R.S. Employer
Identification Number)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Name of exchange, on which registered
Common Stock, \$0.01 par value	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act:

None.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the Registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of the Common Stock held by non-affiliates computed by reference to the price at which the Common Stock was last sold as of the last day of registrant's most recently completed second fiscal quarter is \$1,628,299,575.

The number of outstanding shares of Common Stock as of January 31, 2015 is 35,556,990 shares.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Registrant's definitive 2015 proxy statement, anticipated to be filed with the Securities and Exchange Commission within 120 days after the close of the Registrant's fiscal year, are incorporated by reference into Part III of this Annual Report on Form 10-K.

Forward Looking Statements

This Annual Report on Form 10-K contains “forward-looking statements,” as contemplated by the Private Securities Litigation Reform Act of 1995, in which the Company discusses factors it believes may affect its performance in the future. Forward-looking statements are all statements other than historical facts, such as statements regarding assumptions, expectations, beliefs and projections about future events or conditions. You can generally identify forward-looking statements by the appearance in such a statement of words like “anticipate,” “believe,” “continue,” “could,” “estimate,” “expect,” “forecast,” “intend,” “may,” “might,” “plan,” “potential,” “predict,” “project,” “remain,” “should,” “will,” comparable words or the negative of such words. The accuracy of the Company’s assumptions, expectations, beliefs and projections depends on events or conditions that change over time and are thus susceptible to change based on actual experience, new developments and known and unknown risks. The Company gives no assurance that the forward-looking statements will prove to be correct and does not undertake any duty to update them. The Company’s actual future results might differ from the forward-looking statements made in this Annual Report on Form 10-K for a variety of reasons, including significant and sustained additional declines in oil and natural gas prices; a sustained weakening of demand for the Company’s services; unplanned customer suspensions, cancellations, rate reductions or non-renewals of vessel charters or failures to finalize commitments to charter vessels; further reductions in capital spending budgets by customers; the inability to accurately predict vessel utilization levels and dayrates; fewer than anticipated deepwater and ultra-deepwater drilling units operating in the GoM or other regions that the Company operates in; the effect of inconsistency by the United States government in the pace of issuing drilling permits and plan approvals in the GoM or other drilling regions; the Company’s inability to successfully complete the remainder of its current vessel newbuild and conversion programs on-time and on-budget, which involves the construction, conversion and integration of highly complex vessels and systems; the inability to successfully market the vessels that the Company owns, is constructing, converting or might acquire; the inability of the Company to complete a sale to the U.S. Navy of four vessels or the government’s cancellation or non-renewal of the operations and maintenance contracts for those vessels; an oil spill or other significant event in the United States or another offshore drilling region that could have a broad impact on deepwater and other offshore energy exploration and production activities, such as the suspension of activities or significant regulatory responses; the imposition of laws or regulations that result in reduced exploration and production activities or that increase the Company’s operating costs or operating requirements; environmental litigation that impacts customer plans or projects; disputes with customers; bureaucratic, administrative or operating barriers that delay vessels chartered in foreign markets from going on-hire or result in contractual penalties or deductions imposed by foreign customers; industry risks; the impact stemming from the reduction of Petrobras’ announced plans for or administrative barriers to exploration and production activities in Brazil; less than expected growth in Mexican offshore activities; age restrictions imposed on our vessels by PEMEX ; unanticipated difficulty in effectively competing in or operating in international markets; less than anticipated subsea infrastructure and field development demand in the GoM and other markets; the level of fleet additions by the Company and its competitors that could result in over capacity in the markets in which the Company competes; economic and political risks; weather-related risks; the shortage of or the inability to attract and retain qualified personnel, including vessel personnel for active, and newly constructed vessels; regulatory risks; the repeal or administrative weakening of the Jones Act or changes in the interpretation of the Jones Act related to the U.S. citizenship qualification; drydocking delays and cost overruns and related risks; vessel accidents, pollution incidents or other events resulting in lost revenue, fines, penalties or other expenses that are unrecoverable from insurance policies or other third parties; unexpected litigation and insurance expenses; fluctuations in foreign currency valuations compared to the U.S. dollar and risks associated with expanded foreign operations, such as non-compliance with or the unanticipated effect of tax laws, customs laws, immigration laws, or other legislation that result in higher than anticipated tax rates or other costs or the inability to repatriate foreign-sourced earnings and profits. In addition, the Company’s future results may be impacted by adverse economic conditions, such as inflation, deflation, or lack of liquidity in the capital markets, that may negatively affect it or parties with whom it does business resulting in their non-

Table of Contents

payment or inability to perform obligations owed to the Company, such as the failure of customers to fulfill their contractual obligations or the failure by individual banks to provide funding under the Company's credit agreement, if required. Further, the Company can give no assurance regarding when and to what extent it will affect share repurchases. Should one or more of the foregoing risks or uncertainties materialize in a way that negatively impacts the Company, or should the Company's underlying assumptions prove incorrect, the Company's actual results may vary materially from those anticipated in its forward-looking statements, and its business, financial condition and results of operations could be materially and adversely affected. Additional factors that you should consider are set forth in detail in the "Risk Factors" section of this Annual Report on Form 10-K as well as other filings the Company has made and will make with the Securities and Exchange Commission which, after their filing, can be found on the Company's website, www.hornbeckoffshore.com.

The Company makes references to certain industry-related terms in this Annual Report on Form 10-K. A glossary and definitions of such terms can be found in Item 9B—Other Information on page 49.

Table of Contents

PART I

ITEM 1—Business

COMPANY OVERVIEW

Hornbeck Offshore Services, Inc. was incorporated under the laws of the State of Delaware in 1997. In this Annual Report on Form 10-K, references to “company,” “we,” “us,” “our” or like terms refer to Hornbeck Offshore Services, Inc. and its subsidiaries, except as otherwise indicated. Hornbeck Offshore Services, Inc. is a leading provider of marine transportation, subsea installation and accommodation support services to exploration and production, oilfield service, offshore construction and U.S. military customers. Since our establishment, we have primarily focused on providing innovative technologically advanced marine solutions to meet the evolving needs of the deepwater and ultra-deepwater energy industry in domestic and select foreign locations. Throughout our history, we have expanded our fleet of vessels primarily through a series of new vessel construction programs, as well as through acquisitions of existing vessels. Until August 29, 2013 we operated a Downstream tug and tank barge fleet, which we sold on that date. We maintain our headquarters at 103 Northpark Boulevard, Suite 300, Covington, Louisiana, 70433; our telephone number is (985) 727-2000.

We own and operate one of the youngest and largest fleets of U.S.-flagged, new generation OSVs and MPSVs. In late 2011, we commenced our fifth OSV newbuild program, which also includes the construction of MPSVs. Since that time we have grown our new generation fleet from 51 OSVs and four MPSVs to 63 OSVs and five MPSVs. Upon completion of the vessels currently contracted to be constructed under this newbuild program in 2016, our expected fleet will be comprised of 62 OSVs and 10 MPSVs. Together, these vessels support the deep-well, deepwater and ultra-deepwater activities of the offshore oil and gas industry. Such activities include oil and gas exploration, field development, production, construction, installation, IRM, well-stimulation and other enhanced oil recovery activities. We have also developed a specialized application of our new generation OSVs for use by the U.S. military. Our new generation OSVs and MPSVs have enhanced capabilities that allow us to more effectively support the premium drilling and installation equipment and facilities required for the offshore deep-well, deepwater and ultra-deepwater energy industry. We are among the leading operators of new generation OSVs in each of our three core markets and one of the top five operators of such equipment worldwide based on DWT. Our fleet is among the youngest in the industry, with an average vessel age of approximately seven years compared to our domestic public company OSV peer group average vessel age of 10 years. Upon completion of our current newbuild program, we believe that our fleet will have a weighted-average age, based on DWT, of seven years at the end of 2016.

While we have historically operated our vessels predominately in the U.S. GoM, we have diversified our market presence and now operate in three core geographic markets: the GoM, Mexico and Brazil. In addition to our core markets, we frequently operate in other foreign regions on a project or term charter basis. We have recently operated in the Middle East, the Mediterranean Sea, the Black Sea and the Caribbean basin, including Nicaragua, Guyana, Trinidad and Venezuela. We have further diversified by providing specialized vessel solutions to non-oilfield customers such as the United States military as well as oceanographic research and other customers that utilize sophisticated marine platforms in their operations. We also operate a shore-base support facility located in Port Fourchon, Louisiana. See "Item 2-Properties" for a listing of our shoreside support facilities. On occasion, we provide vessel management services for other vessel owners, such as crewing, daily operational management and maintenance activities. We have recently agreed to sell to the U.S. Navy four vessels that it currently charters from us and to continue operating such vessels pursuant to an operations and maintenance contract. This transaction is described further under "Recent Events".

Although all of our vessels are physically capable of operating in both domestic and international waters, approximately 85% are qualified under Section 27 of the Merchant Marine Act of 1920, as amended, or the Jones Act, to engage in the U.S. coastwise trade. All of the vessels being constructed under our fifth OSV newbuild program will qualify for Jones Act coastwise trading privileges. Foreign owned, flagged, built or crewed vessels are restricted in their ability to conduct U.S. coastwise trade and are typically excluded from such trade in the GoM. Of the public company OSV peer group, we own the largest fleet of Jones Act-qualified, new generation OSVs, which we believe offers us a competitive advantage in the GoM. From time to time we may elect to reflag certain of our vessels to the flag of another nation. For instance, since 2009 we have reflagged six Jones Act-qualified OSVs to Mexican and other

flags. Once a Jones Act-qualified vessel is reflagged, it permanently loses its right to return to the U.S. coastwise trade.

1

Table of Contents

We intend to continue our efforts to maximize stockholder value through our long-term return-oriented growth strategy. We will, as opportunities arise, acquire or construct additional vessels, as well as divest certain assets that we consider to be non-core or otherwise not in-line with our long-term strategy or prevailing industry trends.

Recent Events

In February 2015, we agreed to sell four of our 250EDF class OSVs currently chartered to the U.S. Navy and to subsequently operate such vessels for the Navy under an operations and maintenance (O&M) contract, which contains an initial term and annual renewal options spanning a 10-year operating period. These arrangements are subject to final documentation. Since their construction in 2008 and 2009, these vessels have supported the U.S. Navy's submarine fleet on the east and west coasts of the U.S. In order for the Navy to continue receiving the unique capabilities of these vessels, Congress has required their purchase from the Company, provided an agreement could be reached. The details of this transaction are currently being finalized and are expected to be completed in late-February with the O&M contract beginning immediately upon closing of each respective vessel sale. More details will be announced upon completion of the transaction.

DESCRIPTION OF OUR BUSINESS

The Deepwater Offshore Energy Industry

The modern quest to explore for and produce energy resources located offshore began in the 1940's. While these offshore operations began in shallow waters, relatively close to shore, technological advances have permitted them to migrate to ever deeper waters and well depths. Until the late 1970's, most offshore activity was technologically and logistically restricted to that which was accessible on the continental shelf, or waters of up to about 500 feet of depth. Since that time, a number of advances have opened drilling regions in deepwater. The initial push into deeper waters was facilitated through the development of "floating" drilling units that could be positioned over a drilling site without being fixed. Petrobras pioneered these techniques in Brazil beginning in the late 1970's as it lacked an accessible "shallow water" continental shelf. The first deepwater project in the United States Gulf of Mexico was completed in 1993 in nearly 3,000 feet of water by Shell Oil Company. The Auger facility produced a then unheard of 46,000 barrels per day from a reservoir tapped at 25,000 feet. Today, exploration and production activities have pushed into the ultra-deepwater, where wells are routinely drilled in water depths of more than 8,000 feet, the deepest having been drilled in approximately 10,000 feet of water.

In addition to the ability to operate in very deepwater, technological advances have also allowed hydrocarbon resources to be detected, drilled for and produced at extreme well depths. "Pre-salt" discoveries in Brazil are being drilled and produced in waters exceeding 5,000 feet and at well depths of more than 35,000 feet. In 2014, Chevron announced first oil from its Jack/St. Malo facility in the GoM, which is expected to produce previously undetectable lower tertiary hydrocarbons at an astounding rate of 94,000 barrels per day from deposits more than 20,000 feet below the seabed situated in 7,000 feet of water. In addition to contending with extreme deepwater and deep well depths, these projects present challenges involving high temperatures and pressures within reservoirs and the associated difficulties of safely bringing those resources to the surface and then transporting them to shoreside locations. Despite these challenges, today deepwater production accounts for approximately 80% percent of all offshore production in the United States.

Deepwater Regions

The energy industry has had success in many deepwater regions throughout the world. Deepwater drilling efforts are underway in the Mediterranean Sea, the Indian Ocean and Asia. However, the so-called "golden triangle" of deepwater activity is comprised of deposits found offshore West Africa, the Eastern coast of South America - dominated by Brazil - and the GoM.

As large international oil companies have been pushed out of participating in many regions of the world by national oil companies intent upon retaining for themselves the economic benefits of national exploitation, the deepwater GoM has grown in significance. The deepwater GoM is among the most abundant hydrocarbon regions in the world. Political stability in the United States and accessibility of deepwater lease blocks allows major oil companies to plan, execute and finance the significant long-term commitments that deepwater success requires. While the scale and complexity associated with deepwater projects is considerable, the significant size of the resource discoveries allows companies to replenish reserves on a large scale from relatively few projects. Unlike most on-shore exploration and

production projects, deepwater projects require long-lead times to plan and execute, but also enjoy long production lives once online. For instance, the first exploratory wells at the Jack/St. Malo fields were drilled in 2003 and 2004 and first oil was not produced until 2014. Now online, Chevron projects that Jack/St. Malo are expected to produce an estimated 500 million

2

Table of Contents

oil equivalent barrels over 30 years. Consequently, short term fluctuations in oil and gas prices do not have the same impact on sanctioned deepwater projects as such fluctuations may have on other on-shore and continental shelf projects.

An emerging opportunity for the deepwater offshore energy industry is presented by recent changes in Mexico, which is opening its petroleum sector to foreign investment for the first time in recent history. In December 2013, the Mexican congress ended PEMEX's 75 year-old monopoly on drilling activities in Mexico and voted in favor of allowing the government to grant contracts and licenses for exploration and production of oil and gas to foreign firms, which previously had been prohibited under Mexico's constitution. The Mexican congress has recently finalized reforms that would allow Round One tenders and joint ventures to be formed between PEMEX and private companies, which means contracts could be awarded as early as during the second quarter of 2015. These tenders and joint ventures will cover an estimated 20 billion barrels of oil equivalent and are expected to generate more than \$40 billion in new investments over the next few years. The "Perdido Belt", which straddles the U.S. and Mexican portions of the GoM, accounts for several deepwater and ultra-deepwater successes. The recent constitutional and legislative changes in Mexico are expected to allow technology not previously available in Mexico to be deployed there in order to exploit the Mexican deepwater GoM.

Brazil, through its state-owned national oil company, Petrobras, has been a pioneer in deepwater drilling. Today it is a dominant player in the global deepwater energy industry claiming 34% of global deepwater and ultra-deepwater production. Petrobras claims approximately 13.8 billion barrels of proven deepwater and ultra-deepwater resources, the vast majority of which are located in pre-salt formations which are the driving force behind an ambitious national plan to dramatically increase production by 2020 to 4.2 million barrels per day. Petrobras has previously announced plans to spend \$220 billion in order to achieve its aggressive goals.

The Subsea Oilfield

Deepwater successes have driven further innovation around the infrastructure required to produce and transport ashore the abundant resources that have been discovered. In shallower regions, once hydrocarbons are discovered, they are typically produced by installing a fixed platform over the well site onto which are installed all of the equipment and infrastructure necessary to produce the hydrocarbons and move them ashore through pipelines. Platforms also provide a locale from which well maintenance and similar activities can be performed. The size, pressures, temperatures and water depths of deepwater hydrocarbon deposits require enormous amounts of infrastructure to develop, produce and maintain their wells. These challenges have pushed the development of technologies to allow infrastructure to be placed directly onto the seafloor, as opposed to a fixed platform. The process of building out this subsea oilfield requires the use of vessels to transport infrastructure to location, install infrastructure to subsea points and inspect, repair and maintain it all over the multi-decade life of the field. When hydrocarbons are brought to the surface, they are brought from multiple subsea locations through pipelines to a single deepwater floating production facility that often serves as a production hub for multiple fields. These production facilities take years to design, engineer, transport, install and, often, cost billions of dollars.

OSVs

OSVs primarily serve exploratory and developmental drilling rigs and production facilities and support offshore and subsea construction, installation, IRM and decommissioning activities. OSVs differ from other ships primarily due to their cargo-carrying flexibility and capacity. In addition to transporting deck cargo, such as pipe or drummed material and equipment, OSVs also transport liquid mud, potable and drilling water, diesel fuel, dry bulk cement and personnel between shore bases and offshore rigs and production facilities. Deepwater environments require OSVs with capabilities that allow them to more effectively support drilling and related subsea construction projects that occur far from shore, in deepwater and increasingly at extreme well depths. In order to best serve these projects, we have designed our various classes of new generation vessels in a manner that seeks to maximize their liquid mud and dry bulk cement capacities, as well as their open larger areas of open deck space. Deepwater operations also require vessels having dynamic positioning, or anchorless station-keeping capability, driven primarily by safety concerns that preclude vessels from physically mooring to floating deepwater installations. DP systems have experienced steady increases in technology over time with the highest DP rating currently being DP-3. The number following the DP notation generally indicates the degree of redundancy built into the vessel's systems and the range of usefulness of the

vessel in deepwater construction and subsea operations. Higher numbers represent greater DP capabilities. Today, deepwater drilling operations in the GoM overwhelmingly prefer a DP-2 notation and a vessel with 2,500 DWT capacity or greater. We consider these vessels to be high-spec new generation OSVs. Currently, 52 of our vessels are DP-2 and two are DP-3. All eight of the remaining vessels contracted to be constructed under our fifth OSV newbuild program are expected to be DP-2. Ultra-deepwater projects, which occur in waters of greater than 5,000 feet, are driving a need for DP-2 vessels with very large capacities. The distance of these projects from shore, together with their water and well depths dictate the use of massive volumes of bulk drilling materials

Table of Contents

and related supplies. Our fifth OSV newbuild program is comprised of OSVs that will be among the largest in the world. With DWT capacities of 5,500 DWT to 6,200 DWT, we believe these ultra high-spec vessels provide our ultra-deepwater drilling customers vessel solutions that will help them to maximize efficiencies and improve the logistical challenges prevalent in their projects.

Vessels that do not carry a DP-2 notation or have less than 2,500 DWT capacity typically operate in more shallow U.S. waters or in foreign locations in which DP-2 has not yet emerged as the dominant standard. Currently, 14 of our vessels are DP-1, comprising 11% of our fleet by DWT. The remaining 89% of our fleet is considered high-spec, including 54% of our overall fleet that are ultra high-spec.

MPSVs

MPSVs also support the deepwater activities of the energy industry. MPSVs are distinguished from OSVs in that they are significantly larger and more specialized vessels that are principally used for IRM activities, such as the subsea installation of well heads, risers, jumpers, umbilicals and other equipment placed on the seafloor. MPSVs are also utilized in connection with the setting of pipelines, the commissioning and de-commissioning of offshore facilities, the maintenance and/or repair of subsea equipment and the intervention of such wells, well testing and flow-back operations and other sophisticated deepwater operations. To perform these various functions, MPSVs are or can be equipped with a variety of lifting and deployment systems, including large capacity cranes, winches or reel systems, well intervention equipment, ROVs and accommodation facilities. The typical MPSV is outfitted with one or more deepwater cranes employing active heave compensation technology, one or more ROVs and accommodations for the offshore crew, including customer personnel. MPSVs can also be outfitted as a flotel to provide accommodations to large numbers of offshore construction and technical personnel involved in large-scale offshore projects, such as the commissioning of a floating offshore production facility. When in a flotel mode, the MPSV provides living quarters for personnel, catering, laundry, medical services, recreational facilities and offices. In addition, flotels coordinate and help to provide the facilities necessary for the offshore workers being accommodated to safely move from the vessel to other offshore structures being supported. Generally, MPSVs command higher day rates than OSVs due to their significantly larger relative size and versatility, as well as higher construction and operating costs.

We have devised a new breed of MPSV that, in addition to the array of services described above, also are capable of being utilized to transport deck or bulk cargoes in capacities exceeding all other new generation OSVs. We own and operate two proprietary 370 class DP-2 new generation MPSVs with such capabilities. These MPSVs have approximately double the deadweight and three times the liquid mud barrel-capacity of one of our 265 class new generation OSVs and more than four times the liquid mud barrel-capacity of one of our 240 class new generation OSVs. Moreover, with their large tanks, these MPSVs have assisted in large volume deepwater well testing and flow-back operations as well as supporting large drilling operations in remote or harsh conditions.

Both of our 370 class MPSVs have certifications by the United States Coast Guard that permit Jones Act-qualified operations as a supply vessel, industrial/construction vessel and as a petroleum and chemical tanker under subchapters "L", "I", "D", and "O", respectively. We believe that these vessels are not only the largest supply vessels in the world, but are also the only vessels in the world to have received all four of these certifications. As part of our fifth OSV newbuild program, we are constructing five additional Jones Act-qualified 310 class MPSVs. Because these MPSVs are Jones Act-qualified, we expect that they will enable our customers to transport from shore to the installation site equipment to be installed by the MPSV. Today, due to a lack of Jones Act-qualified MPSVs, customers typically charter an OSV to carry equipment to location, which is then installed by a foreign flag MPSV. By eliminating the need for two vessels, we believe our customers will improve efficiencies and mitigate operational risks. Our Jones Act-qualified MPSVs will include a heave-compensated, knuckle-boom crane, helideck, accommodations for approximately 70 persons and will be suitable for two or more work-class ROVs. Moreover, our 310 class MPSVs will also be equipped with below deck cargo tanks, allowing them to expand their mission usefulness to include services more typically provided by OSVs.

We also recently announced plans to outfit one of our 300 class OSVs that was placed in service under our ongoing newbuild program as an additional 300 class MPSV in flotel configuration. This new U.S.-flagged, Jones Act-qualified MPSV requires an additional period of modification in the shipyard and will include a 35-ton knuckle-boom crane, a motion-compensated gangway and accommodations for 194 persons. Upon re-delivery as a

domestic flotel in April 2015, this vessel will be included in our MPSV fleet counts and operating statistics. Being Jones Act-qualified will give it mission flexibility that foreign flag flotels lack in the GoM. We also operate the HOS Iron Horse and HOS Achiever which are 430 class DP-3 new generation MPSVs. A DP-3 notation requires greater vessel and ship-system redundancies. DP-3 systems also include separate vessel

Table of Contents

compartments with fire-retardant walls for generators, prime movers, switchboards and most other DP components. These 430 class MPSVs are designed to handle a variety of global offshore energy applications, many of which are not dependent on the exploratory rig count. They are excellent platforms for those specialty services described above for our 370 class MPSVs with the exception of handling liquid cargoes. The HOS Iron Horse and the HOS Achiever are not U.S.-flagged vessels, however, they can engage in certain legally permissible operations in the U.S. that do not constitute coastwise trade. In 2009 and during 2012, 2013 and 2014, the HOS Achiever was operating as a flotel. During the fourth quarter of 2013, the HOS Achiever was outfitted with additional accommodations for up to 270 personnel onboard, including the vessel's marine crew, hotel and catering staff. The increased accommodations will allow this vessel to support the commissioning of deepwater installations around the world. Because flotel services do not typically involve the transportation of passengers, foreign-flag vessels, such as our 430 class MPSVs, can provide this service in the U.S.

We believe that our reputation for safety and technologically superior vessels, combined with our size and scale relative to our public company OSV peer group, enhance our ability to compete for work awarded by large international oil and gas producers, who are among our primary customers. Approximately 85% of our total forward-contracted revenue is currently with major oil companies, national oil companies, and the U.S. government. These customers demand a high level of safety and technological advancements to meet the more stringent regulatory standards in the GoM. As our customers' needs and requirements become more demanding, we expect that smaller vessel operators may struggle to meet these standards.

Table of Contents

The following table provides information, as of February 11, 2015, regarding our fleet of 63 new generation OSVs, five MPSVs and the four new generation OSVs and four MPSVs yet to be delivered under our fifth OSV newbuild program.

Our Vessels

Name ⁽¹⁾	Design	Current Service Function	Current Location	In-Service Date	Deadweight (long tons)	Liquid Mud Capacity (barrels)	Brake Horsepower	DP Class ⁽²⁾
Active:

FF—foreign-flagged

TBD—to be determined

(1) Excludes one conventional OSV acquired with the Sea Mar Fleet in August 2007. This vessel, the Cape Breton, is considered a non-core asset and is currently inactive and marketed for sale.

(2) “DP-1,” “DP-2” and “DP-3” mean various classifications, or equivalent, of dynamic positioning systems on new generation vessels to automatically maintain a vessel’s position and heading.

(3) These vessels are currently being constructed under our fifth OSV newbuild construction program with anticipated in-service dates ranging during 2015 and 2016.

(4) The HOS Riverbend is currently being converted into a 300 class MPSV flotel vessel. Upon re-delivery in the second quarter of 2015, this vessel will be included in the Company’s MPSV fleet.

(5) These six vessels were converted into 240 class DP-2 OSVs as part of our 200 class OSV retrofit program. These six vessels were originally constructed and placed in service in their prior 200 class DP-1 configuration in 1999 or 2000 and were acquired by us in August 2007.

We own long-term lease rights to two adjacent shore-base facilities located in Port Fourchon, Louisiana, named HOS Port. Port Fourchon’s proximity to the deepwater GoM provides a strategic logistical advantage for servicing drilling rigs, production facilities and other offshore installations and sites. Developed as a multi-use facility, Port Fourchon

has historically been a land base for offshore oil support services and the Louisiana Offshore Oil Port, or LOOP. According to industry sources, Port Fourchon services nearly all deepwater rigs and almost half of all shallow rigs in the GoM. The HOS Port facility has four years remaining on its current leases and three additional five-year renewal options on each parcel. The combined acreage of HOS Port is approximately 60 acres with total waterfront bulkhead of nearly 3,000 linear feet. HOS Port not only supports our existing fleet and customers' deepwater logistics requirements, but it underscores our long-term commitment to and our long-term outlook for the deepwater GoM.

Principal Markets

OSVs and MPSVs operate worldwide, but are generally concentrated in relatively few offshore regions with high levels of exploration and development activity, such as the GoM, the North Sea, Southeast Asia, West Africa, Latin America, and the Middle East. Our core geographic markets are the GoM, Mexico and Brazil. In these markets we provide services to several major integrated oil companies as well as mid-size and large independent oil companies with deepwater and ultra-deepwater activities and to national oil companies such as PEMEX and Petrobras. We also occasionally operate in select international markets, which have included West Africa, Latin America, the Mediterranean Sea, the Black Sea and the Caribbean basin. We are often subcontracted by other oilfield service companies, both in the GoM and internationally, to provide a new generation fleet that enables them to render offshore oilfield services, such as well stimulation or other enhanced oil recovery activities, diving and ROV operations, construction, installation, maintenance, repair and decommissioning services. We also provide a specialized application of our new generation OSVs for use by the United States military.

While there is some vessel migration between regions, key factors such as mobilization costs, vessel suitability and government statutes prohibiting foreign-flagged vessels from operating in certain waters, or coastwise cabotage laws such as the Jones Act, can limit the migration of OSVs. Because MPSVs are generally utilized for non-cargo operations, they

Table of Contents

are less limited by cabotage laws. Demand for OSVs, as evidenced by dayrates and utilization rates, is primarily related to offshore oil and natural gas exploration, development and production activity. Such activity is influenced by a number of factors, including the actual and forecasted price of oil and natural gas, the level of drilling permit activity, capital budgets of offshore exploration and production companies, and repair and maintenance needs in the deepwater oilfield.

Offshore exploration and production activities are increasingly focused on deep wells (as defined by total well depth rather than water depth), whether on the Outer Continental Shelf or in the deepwater or ultra-deepwater. These types of wells require high-specification equipment and have resulted in an on-going newbuild cycle for drilling rigs and for OSVs. As a result of the projected deepwater drilling activity levels worldwide, there were 81 floating rigs under construction or on order on February 11, 2015 and, as of that date, there were options outstanding to build 34 additional floating rigs. In addition, on that date, there were 129 high-spec jack-up rigs under construction or on order worldwide, and there were options outstanding to build 60 additional high-spec jack-up rigs. Each drilling rig working on deep-well projects typically requires more than one OSV to service it, and the number of OSVs required is dependent on many factors, including the type of activity being undertaken and the location of the rig. For example, based on the historical data for the number of floating rigs and OSVs working, we believe that two to four OSVs per rig are required in the GoM and even more OSVs are necessary per rig in Brazil where greater logistical challenges result in longer vessel turnaround times to service drill sites. Typically, during the initial drilling stage, more OSVs are required to supply drilling mud, drill pipe and other materials than at later stages of the drilling cycle. In addition, generally more OSVs are required the farther a drilling rig is located from shore. Under normal weather conditions, the transit time to deepwater drilling rigs in the GoM and Brazil can typically range from six to 24 hours for a new generation vessel. In Brazil, transit time for a new generation vessel to some of the newer, more logistically remote deepwater drilling rig locations are more appropriately measured in days, not hours. In addition to drilling rig support, deepwater and ultra-deepwater exploration and production activities will result in the expansion of other specialty-service offerings for our vessels. These markets include subsea construction support, installation, IRM work, and life-of-field services, which include well-stimulation, workovers and decommissioning.

Our charters are the product of either direct negotiation or a competitive proposal process, which evaluates vessel capability, availability and price. Our primary method of chartering in the GoM is through direct vessel negotiations with our customers on either a long-term or spot basis. In the international market, we sometimes charter through local entities in order to comply with cabotage or other local requirements. Some charters are solicited by customers through international vessel brokerage firms, which earn a commission that is customarily paid by the vessel owner. Our U.S. Navy charters are the product of a competitive procurement process conducted by the Military Sealift Command as well as sole source selections based upon certain capabilities that are unique to the Company. All of our charters, whether long-term or spot, are priced on a dayrate basis, whereby for each day that the vessel is under contract to the customer, we earn a fixed amount of charter-hire for making the vessel available for the customer's use. Many long-term contracts and all government, including national oil company, charters contain early termination options in favor of the customer; however, some have fees designed to discourage early termination. Long-term charters sometimes contain provisions that permit us to increase our dayrates in order to be compensated for certain increased operational expenses or regulatory changes.

Competition

The offshore support vessel industry is highly competitive. Competition primarily involves such factors as:

- quality, capability and age of vessels;
- quality, capability and nationality of the crew members;
- ability to meet the customer's schedule;
- safety record, reputation, experience and;
- price.

Our high-spec OSVs are predominately U.S.-flagged vessels, which qualify them under the Jones Act to engage in domestic coastwise trade. The Jones Act restricts the ability of vessels that are foreign-built, foreign-owned, foreign-crewed or foreign-flagged from engaging in coastwise trade in the United States including its territories, like Puerto Rico. The transportation services typically provided by OSVs constitute coastwise trade as defined by the

Jones Act. Consequently, competition for our services in the GoM is largely restricted to other U.S. vessel owners and operators, both publicly and privately held. We believe that we operate the second largest fleet by DWT of new generation Jones Act-qualified OSVs in the United States. See "Item 1A-Risk Factors" for a more detailed discussion of the Jones Act. Internationally, our OSVs compete against other U.S. owners, as well as foreign owners and operators of OSVs. Some of

8

Table of Contents

our international competitors may benefit from a lower cost basis in their vessels, which are usually not constructed in U.S. shipyards, as well as from lower crewing costs and favorable tax regimes. While foreign vessel owners cannot engage in U.S. coastwise trade, some cabotage laws in other parts of the world permit temporary waivers for foreign vessels if domestic vessels are unavailable. We and other U.S. and foreign vessel owners have been able to obtain such waivers in the foreign jurisdictions in which we operate.

Many of the services provided by MPSVs do not involve the transportation of merchandise and therefore are generally not considered coastwise trade under U.S. and foreign cabotage laws. Consequently, our MPSVs face, and the HOSMAX MPSVs to be constructed under our fifth OSV newbuild program will face, competition from both foreign-flagged vessels and U.S.-flagged vessels for non-coastwise trade activities. However, because our MPSVs will be Jones Act-qualified, we believe our customers will achieve greater efficiency as our MPSVs will eliminate the need for customers to separately charter a Jones Act-qualified vessel to transport project cargo from a U.S. point to an installation site. In addition, our U.S.-flagged MPSVs will compete for projects with other international MPSVs as well as participate in the GoM and international OSV markets as large-capacity carriers of drilling fluids, petroleum products and deck cargos in support of deep-well exploration, development and production operations. Competition in the MPSV industry is significantly affected by the particular capabilities of a vessel to meet the requirements of a customer's project. While operating in the GoM, our foreign-flagged DP-3 MPSVs are required to utilize U.S. crews while foreign-owned vessels are not. U.S. crews are often more expensive than foreign crews. Also, foreign MPSV owners may have more favorable tax regimes than ours. Consequently, prices for foreign-owned MPSVs in the GoM are often lower than prices we can charge. Finally, some potential MPSV customers are also owners of MPSVs that will compete with our vessels. However, we have, for some time, observed a clear preference by our customers for a "one-stop" Jones Act solution, which would provide improved efficiencies, derived from a single U.S.-flagged vessel as well as greater regulatory certainty as compliance questions continue to arise from the use of foreign-flagged vessels in the subsea GoM. In the post-Macondo GoM, we see this Jones Act preference as a long-term trend, not only for construction vessels but for vessels of all types working offshore.

We continue to observe intense scrutiny by our customers on the safety and environmental management systems of vessel operators. As a consequence, we believe that deepwater customers are increasingly biased towards companies that have demonstrated a financial and operational commitment and capacity to employ such systems. We believe this trend will, over time, make it difficult for small enterprises to compete effectively in the deepwater OSV and MPSV markets. Additionally, we have observed less willingness by operators to utilize DP-1 vessels in deepwater operations in the GoM. This trend will likely result in the retirement of non-DP vessels and a migration of DP-1 vessels to non-deepwater regions, such as the shelf, and certain international regions. In 2014, Pemex announced its intention to use only vessels that are less than 15 years old. A recent tender included this age requirement, we and other market participants in Mexico have challenged this restriction.

Although some of our principal competitors are larger, have greater financial resources and have more extensive international operations than we do, we believe that our financial strength, operating capabilities and reputation for quality and safety enable us to compete effectively with other fleets in the market areas in which we operate or intend to operate. In particular, we believe that the relatively young age and advanced features of our OSVs and MPSVs provide us with a competitive advantage. The ages of our high-spec new generation OSVs range from less than one year to 16 years with weighted-average age, based on DWT, of less than six years. In fact, over one-third of our active new generation OSVs have been placed in-service since January 1, 2008. The average age of the industry's conventional U.S.-flagged OSV fleet is approximately 35 years. We believe that most of these older vessels are cold-stacked and many of them have been or will be permanently retired in the next few years due to physical and economic obsolescence. Worldwide competition for new generation vessels has been impacted in recent years by the increase in newbuild OSVs placed in-service, greater customer interest in deep-well, deepwater and ultra-deepwater drilling activity. Upon completion of our fifth OSV newbuild program, we expect to own a fleet of 72 Upstream vessels of which 81% will be DP-2 or DP-3 with a weighted-average age, based on DWT, of seven years in 2016. Our success depends in large part on our ability to attract and retain highly skilled and qualified personnel. Our inability to hire, train and retain a sufficient number of qualified employees could impair our ability to manage, maintain and grow our business. In crewing our vessels, we require skilled employees who can perform physically

demanding work.

9

Table of Contents

Discontinued Operations

Historically, we had operated our business in two segments, an Upstream segment and a Downstream segment. Through our Downstream segment, we previously operated nine double-hulled tank barges and nine ocean-going tugs and provided marine transportation, distribution and logistics services primarily in the northeastern United States, GoM, Great Lakes and Puerto Rico. On August 29, 2013, we closed the sale of substantially all of the assets and business of our Downstream segment's tug and tank barge fleet to Genesis Marine, LLC, an affiliate of Genesis Energy L.P. (NYSE:GEL), for net cash proceeds of approximately \$227.5 million, after deal costs. The net proceeds of this asset sale have been reinvested in the construction of vessels under our fifth OSV newbuild program. The sale resulted in a gain of \$60.0 million (\$38.1 million after-tax or \$1.04 per diluted share). Excluded from the sale were three older, lower-horsepower tugs considered to be non-core assets, all of which were later sold to different buyers on various dates in 2014 at nominal gains. The historical results for the Downstream segment and the gain on the sale of the segment have been presented as discontinued operations for all periods in the accompanying condensed consolidated financial statements.

CUSTOMER DEPENDENCY

Our customers are generally limited to large, independent, integrated or nationally-owned energy companies. These firms are relatively few in number. The percentage of revenues attributable to a customer in any particular year depends on the level of oil and natural gas exploration, development and production activities undertaken, the availability and suitability of our vessels for the customer's projects or products and other factors, many of which are beyond our control. For the year ended December 31, 2014, Royal Dutch Shell plc (including worldwide affiliates) accounted for 10% or more of our consolidated revenues. For a discussion of significant customers in prior periods, see Note 12 to our consolidated financial statements.

GOVERNMENT REGULATION

Environmental Laws and Regulations

Our operations are subject to a variety of federal, state, local and international laws and regulations regarding the discharge of materials into the environment or otherwise relating to environmental protection. The requirements of these laws and regulations have become more complex and stringent in recent years and may, in certain circumstances, impose strict liability, rendering a company liable for environmental damages and remediation costs without regard to negligence or fault on the part of such party. Aside from possible liability for damages and costs including natural resource damages associated with releases of oil or hazardous materials into the environment, such laws and regulations may expose us to liability for the conditions caused by others or even acts of ours that were in compliance with all applicable laws and regulations at the time such acts were performed. Failure to comply with applicable laws and regulations may result in the imposition of administrative, civil and criminal penalties, revocation of permits, issuance of corrective action orders and suspension or termination of our operations. Moreover, it is possible that future changes in the environmental laws, regulations or enforcement policies that impose additional or more restrictive requirements or claims for damages to persons, property, natural resources or the environment could result in substantial costs and liabilities to us and could have a material adverse effect on our financial condition, results of operations or cash flows. We believe that we are in substantial compliance with currently applicable environmental laws and regulations.

OPA 90 and regulations promulgated pursuant thereto amend and augment the oil spill provisions of the Clean Water Act and impose a variety of duties and liabilities on "responsible parties" related to the prevention and/or reporting of oil spills and damages resulting from such spills in or threatening U.S. Waters, including the Outer Continental Shelf or adjoining shorelines. A "responsible party" includes the owner or operator of an onshore facility, pipeline or vessel or the lessee or permittee of the area in which an offshore facility is located. OPA 90 assigns liability to each responsible party for containment and oil removal costs, as well as a variety of public and private damages including the costs of responding to a release of oil, natural resource damages, damages for injury to, or economic losses resulting from, destruction of real or personal property of persons who own or lease such affected property. For any vessels, other than "tank vessels," that are subject to OPA 90, the liability limits are the greater of \$1,000 per gross ton or \$854,400. A party cannot take advantage of liability limits if the spill was caused by gross negligence or willful misconduct or

resulted from violation of a federal safety, construction or operating regulation. In addition, for vessels carrying crude oil from a well situated on the Outer Continental Shelf, the limits apply only to liability for damages. The owner or operator of such vessel is liable for all removal costs resulting from a discharge without limits. If the party fails to report a spill or to cooperate fully in the cleanup, the liability limits likewise do not apply and certain defenses may not be available. Moreover, OPA 90 imposes on responsible parties the need for proof of financial responsibility to cover at least some costs in a potential spill.

Table of Contents

As required, we have provided satisfactory evidence of financial responsibility to the U.S. Coast Guard for all of our vessels over 300 tons.

OPA 90 also imposes ongoing requirements on a responsible party, including preparedness and prevention of oil spills and preparation of an oil spill response plan. We have engaged the Marine Spill Response Corporation to serve as our Oil Spill Removal Organization for purposes of providing oil spill removal resources and services for our operations in U.S. waters as required by the U.S. Coast Guard. In addition, our Tank Vessel Response Plan and Non-Tank Vessel Response Plan have been approved by the U.S. Coast Guard.

The Clean Water Act imposes strict controls on the discharge of pollutants into the navigable waters of the United States. The Clean Water Act also provides for civil, criminal and administrative penalties for any unauthorized discharge of oil or other hazardous substances in reportable quantities and imposes liability for the costs of removal and remediation of an unauthorized discharge, including the costs of restoring damaged natural resources. Many states have laws that are analogous to the Clean Water Act and also require remediation of accidental releases of petroleum in reportable quantities. Our OSVs routinely transport diesel fuel to offshore rigs and platforms and also carry diesel fuel for their own use. Our OSVs also transport bulk chemical materials used in drilling activities and liquid mud, which contain oil and oil by-products. We maintain vessel response plans as required by the Clean Water Act to address potential oil and fuel spills.

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980, also known as “CERCLA” or “Superfund,” and similar laws impose liability for releases of hazardous substances into the environment. CERCLA currently exempts crude oil from the definition of hazardous substances for purposes of the statute, but our operations may involve the use or handling of other materials that may be classified as hazardous substances. CERCLA assigns strict liability to each responsible party for response costs, as well as natural resource damages. Under CERCLA, responsible parties include owners and operators of vessels. Thus, we could be held liable for releases of hazardous substances that resulted from operations by third parties not under our control or for releases associated with practices performed by us or others that were standard in the industry at the time.

The Resource Conservation and Recovery Act regulates the generation, transportation, storage, treatment and disposal of onshore hazardous and non-hazardous wastes and requires states to develop programs to ensure the safe treatment, storage and disposal of wastes. We generate non-hazardous wastes and small quantities of hazardous wastes in connection with routine operations. We believe that all of the wastes that we generate are handled in all material respects in compliance with the Resource Conservation and Recovery Act and analogous state statutes.

The United States Coast Guard published its final Ballast Rule on March 23, 2012, which became effective on June 21, 2012, and the United States EPA renewed the Vessel General Permit under the National Pollutant Discharge Elimination System on December 19, 2013. These regulations require all our existing vessels to meet certain standards pertaining to ballast water discharges, on or before certain dates between January 2014 and January 2016. An exemption to certain compliance requirements is provided for vessels that operate within an isolated geographic region, as determined by the United States Coast Guard. Most of our vessels operating in the GoM are exempt from the ballast water treatment requirements. However, for vessels that do not so operate, ballast water treatment equipment may be required to be utilized on the vessel. The cost of compliance with this higher standard is expected to be approximately \$250,000 per vessel that may be fitted with a system.

The EPA also imposed emissions regulations affecting vessels that operate in the United States. These regulations impose standards that may require modifications to our vessels at a cost that we have as yet been unable to estimate. Moreover, the EPA’s decision to regulate “greenhouse gases” as a pollutant may result in further regulations and compliance costs.

Climate Change

Greenhouse gas emissions have increasingly become the subject of international, national, regional, state and local attention. The EPA has adopted regulations under the Clean Air Act that require new and existing industrial facilities to obtain permits for carbon dioxide equivalent emissions above emission thresholds. In addition, the EPA adopted rules that mandate reporting of greenhouse gas data and other information by i) industrial sources, ii) suppliers of certain products, and iii) facilities that inject carbon dioxide underground. To the extent that these regulations may

apply, we could be responsible for costs associated with complying with such regulations. Cap and trade initiatives to limit greenhouse gas emissions have been introduced in the European Union. Similarly, numerous bills related to climate change have been introduced in the U.S. Congress, which could adversely impact most industries. In addition, future regulation of

Table of Contents

greenhouse gas could occur pursuant to future treaty obligations, statutory or regulatory changes or new climate change legislation in the jurisdictions in which we operate. It is uncertain whether any of these initiatives will be implemented. However, based on published media reports, we believe that it is unlikely that the current proposed initiatives in the U.S. will be implemented without substantial modification. If such initiatives are implemented, we do not believe that such initiatives would have a direct, material adverse effect on our operating results.

Restrictions on greenhouse gas emissions or other related legislative or regulatory enactments could have an effect in those industries that use significant amounts of petroleum products, which could potentially result in a reduction in demand for petroleum products and, consequently and indirectly, our offshore transportation and support services. We are currently unable to predict the manner or extent of any such effect. Furthermore, one of the asserted long-term physical effects of climate change may be an increase in the severity and frequency of adverse weather conditions, such as hurricanes, which may increase our insurance costs or risk retention, limit insurance availability or reduce the areas in which, or the number of days during which, our customers would contract for our vessels in general and in the GoM in particular. We are currently unable to predict the manner or extent of any such effect.

EMPLOYEES

On December 31, 2014, we had 1,641 employees, including 1,326 operating personnel and 315 corporate, administrative and management personnel. Excluded from these personnel totals are 235 third-country nationals that we contracted to serve on our vessels as of December 31, 2014. These non-U.S. mariners are typically provided by international crewing agencies. With the exception of our employees in Brazil and Mexico, none of our employees are represented by a union or employed pursuant to a collective bargaining agreement or similar arrangement. We have not experienced any strikes or work stoppages, and our management believes that we continue to experience good relations with our employees.

GEOGRAPHIC AREAS

The table below presents revenues by geographic region for the past three fiscal years (in thousands):

	Year Ended December 31,		
	2014	2013	2012
United States	\$490,314	\$415,898	\$301,430
International	144,479	132,247	161,879
	\$634,793	\$548,145	\$463,309

The table below presents net property, plant and equipment by geographic region for the past three fiscal years (in thousands):

	December 31,		
	2014	2013	2012
United States	\$2,052,145	\$1,913,293	\$1,250,305
International	407,341	212,081	393,318
	\$2,459,486	\$2,125,374	\$1,643,623

Foreign Operations

Operating in foreign markets present many political, social and economic challenges. Although we take measures to mitigate these risks, they cannot be completely eliminated. See "Item—1A Risk Factors" for a further discussion of the risks of operating in foreign markets.

SEASONALITY

Demand for our offshore support services is directly affected by the levels of offshore drilling and production activity. Budgets of many of our customers are based upon a calendar year, and demand for our services has historically been stronger in the second and third calendar quarters when allocated budgets are expended by our customers and weather conditions are more favorable for offshore activities. Many other factors, such as the expiration of drilling leases and the

Table of Contents

supply of and demand for oil and natural gas, may affect this general trend in any particular year. In addition, we typically have an increase in demand for our vessels to survey and repair offshore infrastructure immediately following major hurricanes or other named storms in the GoM.

WEBSITE AND OTHER ACCESS TO COMPANY REPORTS AND OTHER MATERIALS

Our website address is <http://www.hornbeckoffshore.com>. We make available on this website, free of charge, access to our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and amendments to those reports, as well as other documents that we file with, or furnish to, the Commission pursuant to Sections 13(a) or 15(d) of the Exchange Act, as soon as reasonably practicable after such documents are filed with, or furnished to, the Commission. We intend to use our website as a means of disclosing material non-public information and for complying with disclosure obligations under Regulation FD. Such disclosures will be included on our website under the heading “Investors—IR Home.” Accordingly, investors should monitor such portion of our website, in addition to following our press releases, Commission filings and public conference calls and webcasts. Periodically, we also update our investor presentations which can be viewed on our website. You may read and copy any materials we file with the Commission at the Commission’s Public Reference Room at 100 F Street, N.E., Washington, DC 20549. You can obtain information on the operation of the Public Reference Room by calling the Commission at 1-800-732-0330. The SEC maintains an Internet site that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the Commission at <http://www.sec.gov>. Our Corporate Governance Guidelines, Code of Conduct (which applies to all employees, including our Chief Executive Officer and certain Financial and Accounting Officers), Code of Business Conduct and Ethics for Members of the Board of Directors, and the charters for our Audit, Nominating/Corporate Governance and Compensation Committees, can all be found on the Investor Relations page of our website under “Corporate Governance”. We intend to disclose any changes to or waivers from the Code of Conduct that would otherwise be required to be disclosed under Item 5.05 of Form 8-K on our website. We will also provide printed copies of these materials to any stockholder upon request to Hornbeck Offshore Services, Inc., Attn: General Counsel, 103 Northpark Boulevard, Suite 300, Covington, Louisiana 70433. The information on our website is not, and shall not be deemed to be, a part of this report or incorporated into any other filings we make with the Commission.

Table of Contents

ITEM 1A—Risk Factors

Our results of operations and financial condition can be adversely affected by numerous risks. You should carefully consider the risks described below as well as the other information we have provided in this Annual Report on Form 10-K. The risks described below are not the only ones we face. You should also consider the factors contained in our “Forward Looking Statements” disclaimer found on page ii of this Annual Report on Form 10-K. Additional risks not presently known to us or that we currently deem immaterial may also impair our business operations.

As a result of the recent declines in oil prices that began in late 2014 and have continued into 2015, our clients will likely reduce spending on exploration and production projects, resulting in a decrease in demand for our services. Oil and natural gas prices, and market expectations of potential changes in these prices, significantly impact the level of worldwide drilling and production services activities. Reduced demand for oil and natural gas or periods of surplus oil and natural gas generally result in lower prices for these commodities and often impact the economics of planned drilling projects and ongoing production projects, resulting in the curtailment, reduction, delay or postponement of such projects for an indeterminate period of time. When drilling and production activity and spending declines, both vessel dayrates and utilization for our vessels historically decline as well.

In recent months, beginning in October 2014, oil prices worldwide have dropped significantly. If the current depressed oil and natural gas prices persist for a prolonged period, or decline further, oil and gas exploration and production companies are likely to cancel or curtail their drilling programs and lower production spending on existing wells even more than they have already, thereby further reducing demand for our services.

Any prolonged reduction in the overall level of exploration and development activities, whether resulting from changes in oil and gas prices or otherwise, could materially and adversely affect us by negatively impacting:

- our revenues, cash flows and profitability;
- the fair market value of our vessels;
- our ability to maintain or increase our borrowing capacity;
- our ability to obtain additional capital to finance our business and make acquisitions, and the cost of that capital;
- the collectability of our receivables; and
- our ability to retain skilled personnel whom we would need in the event of an upturn in the demand for our services.

If any of the foregoing were to occur, it could have a material adverse effect on our business and financial results.

Increases in the supply of vessels could decrease dayrates.

In addition to our fifth OSV newbuild program, certain of our competitors have announced plans to construct new vessels to be deployed in domestic and foreign locations. A remobilization to the GoM oilfield of U.S.-flagged vessels currently operating in other regions or in non-oilfield applications would result in an increase in vessel capacity in the GoM, one of our core markets. Similarly, vessel capacity in foreign markets, including our core markets of Mexico and Brazil, may also be impacted by U.S.-flagged or other vessels migrating to such foreign locations. Further, a repeal, suspension or significant modification of the Jones Act, or the administrative erosion of its benefits, permitting vessels that are either foreign-flagged, foreign-built, foreign-owned, foreign-controlled or foreign-operated to engage in the U.S. coastwise trade, would also result in an increase in capacity. Any increase in the supply of OSVs or MPSVs, whether through new construction, refurbishment or conversion of vessels from other uses, remobilization or changes in law or its application, could not only increase competition for charters and lower utilization and dayrates, which would adversely affect our revenues and profitability, but could also worsen the impact of any downturn in the oil and gas industry on our results of operations and financial condition. Because some services provided by MPSVs are not protected by the Jones Act, foreign competitors may bring additional MPSVs to the GoM or build additional MPSVs that we will compete with domestically or internationally.

Table of Contents

The failure to successfully complete our fifth OSV newbuild program or repairs, maintenance and routine drydockings on-schedule and on-budget could adversely affect our financial condition and results of operations.

In November 2011, we commenced and later expanded our fifth OSV newbuild program. We have contracted with three domestic shipyards on the Gulf Coast to construct a total of 19 new generation, high-spec OSVs, 14 of which have already been delivered, and six MPSVs, one of which has been delivered. We routinely engage shipyards to drydock our vessels for regulatory compliance and to provide repair and maintenance. Our vessel newbuild program and drydockings are subject to the risks of delay and cost overruns inherent in any large construction project, including shortages of equipment, lack of shipyard availability, unforeseen engineering problems, work stoppages, weather interference, unanticipated cost increases, including costs of steel, inability to obtain necessary certifications and approvals and shortages of materials or skilled labor. Significant delays under our fifth OSV newbuild program could have a material adverse effect on anticipated contract commitments or anticipated revenues. Further, significant delays with respect to other possible newbuild programs or the conversion or drydockings of vessels could result in similar adverse effects to our anticipated contract commitments or revenues. Significant cost overruns or delays for vessels under construction not adequately protected by liquidated damages provisions, in general could adversely affect our financial condition and results of operations.

Additional reductions in Petrobras' announced plans for exploration and production activities offshore Brazil could have a material adverse effect on the market for high-spec OSVs.

Petrobras accounts for a substantial portion of global deepwater drilling activity and has publicly announced plans to reduce its investment in exploration and production activities by roughly \$10 billion. This reduction and any decision by Petrobras to further reduce the scope or pace of its announced exploration and production plans offshore Brazil could negatively impact the worldwide market for high-spec OSVs and could have a material adverse effect on our financial condition and results of operations.

The level of offshore oil and gas exploration, development and production activity has historically been volatile and is likely to continue to be so in the future. The level of activity is subject to large fluctuations in response to relatively minor changes in a variety of factors that are beyond our control

Changes in, among others, the following factors can negatively impact our performance:

- worldwide demand for oil and natural gas;
- prevailing oil and natural gas prices and expectations about future prices and price volatility;
- changes in capital spending budgets by our customers;
- the ability of oil and gas companies to generate or otherwise obtain funds for exploration and production;
- local and international political and economic conditions and policies;
- unavailability of drilling rigs in our core markets of the GoM, Mexico and Brazil;
- the cost of offshore exploration for, and production and transportation of, oil and natural gas;
- successful exploration for, and production and transportation of, oil and natural gas from onshore sources;
- consolidation of oil and gas and oil service companies operating offshore;
- availability and rate of discovery of new oil and natural gas reserves in offshore areas;
- technological advances affecting energy production and consumption;
- weather conditions; and
- environmental and other regulation affecting our customers and their other service providers.

Since late 2014 we have observed a significant decline in oil prices, which has caused oil companies to announce and implement significant reductions in their capital spending programs, upon which much of our business activities depend. A prolonged reduction in oil prices could have a significant adverse and long-term impact on the Company's financial condition and results of operations.

Table of Contents

Intense competition in our industry could reduce our profitability and market share.

Contracts for our vessels are generally awarded on an intensely competitive basis. Some of our competitors, including diversified multinational companies, have substantially greater financial resources and larger operating staffs than we do. They may be better able to compete in making vessels available more quickly and efficiently, meeting the customer's schedule and withstanding the effect of declines in dayrates and utilization rates. They may also be better able to weather a downturn in the oil and gas industry. As a result, we could lose customers and market share to these competitors. Some of our competitors may also be willing to accept lower dayrates in order to maintain utilization, which can have a negative impact on dayrates and utilization. Similarly, competition in various markets may also be impacted by U.S.-flagged vessels migrating in and out of foreign locations due to the pace of drilling permit activity in the GoM. Moreover, customer demand for vessels under our fifth OSV newbuild program may not be as strong as we have anticipated and our inability to obtain contracts on anticipated terms or at all may have a material adverse effect on our revenues and profitability.

We may not have the funds available or be able to obtain the funds necessary to meet the obligations relating to our fifth OSV newbuild program, our 2019 convertible senior notes, our 2020 senior notes, or our 2021 senior notes. Under our fifth OSV newbuild program, we are spending approximately \$1,265 million, excluding capitalized construction period interest, for the construction of vessels currently under contract, of which \$1,032.4 million has been paid as of December 31, 2014. The amounts required to fund our fifth OSV newbuild program represent a substantial capital commitment. We expect the remaining obligations relating to this newbuild program to be paid, over time through 2016, based on construction milestones. Our 2019 convertible senior notes, our 2020 senior notes, and our 2021 senior notes, which collectively have a face value of \$1,125 million, mature in September 2019, April 2020, and March 2021, respectively. In addition, upon the occurrence of certain change of control events, as defined in the indentures governing the 2020 senior notes and the 2021 senior notes, holders of such notes would have the right to require us to repurchase such notes at 101% of their principal amount, plus accrued and unpaid interest. Further, upon certain fundamental changes as defined in the indenture governing the 2019 convertible senior notes, holders of such notes would have the right to require us to repurchase such notes at 100% of their principal amount, plus any accrued and unpaid interest. To the extent that our cash on hand and cash flow from operations are not sufficient to meet these obligations, we plan to borrow on our currently undrawn credit facility, sell non-core assets and arrange for additional financing. Nevertheless, there can be no assurance that we will be able to sell our non-core assets or arrange for additional financing on acceptable terms. Failure to meet our obligations related to our fifth OSV newbuild program, our 2019 convertible senior notes, our 2020 senior notes, and our 2021 senior notes may result in the acceleration of our other indebtedness and result in a material adverse effect on our financial condition and results of operations.

We have grown, and may continue to grow, through acquisitions that give rise to risks and challenges that could adversely affect our future financial results.

We regularly consider possible acquisitions of single vessels, vessel fleets and businesses that complement our existing operations to enable us to grow our business. Acquisitions can involve a number of special risks and challenges, including:

- diversion of management time and attention from our existing business and other business opportunities;
- delays in closing or the inability to close an acquisition for any reason, including third party consents or approvals;
- any unanticipated negative impact on us of disclosed or undisclosed matters relating to any vessels or operations acquired;
- loss or termination of employees, including costs associated with the termination or replacement of those employees;
- assumption of debt or other liabilities of the acquired business, including litigation related to the acquired business;
- the incurrence of additional acquisition-related debt as well as increased expenses and working capital requirements;

Table of Contents

dilution of stock ownership of existing stockholders;

- increased costs and efforts in connection with compliance with Section 404 of the Sarbanes-Oxley Act; and

substantial accounting charges for restructuring and related expenses, impairment of goodwill, amortization of intangible assets, and stock-based compensation expense.

Even if we consummate an acquisition, the process of integrating acquired operations into our own may result in unforeseen operating difficulties and costs and may require significant management attention and financial resources. In addition, integrating acquired businesses may impact the effectiveness of our internal controls over financial reporting. Any of the foregoing, and other factors, could harm our ability to achieve anticipated levels of utilization and profitability from acquired vessels or businesses or to realize other anticipated benefits of acquisitions.

We can give no assurance that we will be able to identify desirable acquisition candidates or that we will be successful in entering into definitive agreements or closing such acquisitions on satisfactory terms. An inability to acquire additional vessels or businesses may limit our growth potential.

The early termination of contracts on our vessels could have an adverse effect on our operations.

Some of the long-term contracts for our vessels and all contracts with governmental entities and national oil companies contain early termination options in favor of the customer; however, some have early termination remedies or other provisions designed to discourage the customers from exercising such options. We cannot assure that our customers would not choose to exercise their termination rights in spite of such remedies or the threat of litigation with us. Until replacement of such business with other customers, any termination could temporarily disrupt our business or otherwise adversely affect our financial condition and results of operations. We might not be able to replace such business on economically equivalent terms. In addition, during the current and prior downturns, we have experienced customers requesting contractual concessions even though contrary to existing contractual terms. While not legally required to give concessions, commercial considerations may dictate that we do so, given the relatively few deepwater customers operating in the GoM.

Our contracts with the United States Government could be impacted by budget cuts.

Our government contracts depend upon annual funding commitments authorized by Congress. In a period of government budget cuts or other political events, our contracts might not be re-authorized, resulting in a decline in our anticipated revenues.

We are subject to complex laws and regulations, including environmental regulations that can adversely affect the cost, manner or feasibility of doing business.

Increasingly stringent federal, state, local and foreign laws and regulations governing worker health and safety and the manning, construction and operation of vessels significantly affect our operations. Many aspects of the marine industry are subject to extensive governmental regulation by the United States Coast Guard, the National Transportation Safety Board, the EPA and the United States Customs Service, and their foreign equivalents, and to regulation by private industry organizations such as the American Bureau of Shipping. The Coast Guard and the National Transportation Safety Board set safety standards and are authorized to investigate vessel accidents and recommend improved safety standards, while the Coast Guard and Customs Service are authorized to inspect vessels at will. Our operations are also subject to international conventions, federal, state, local and international laws and regulations that control the discharge of pollutants into the environment or otherwise relate to environmental protection. Compliance with such laws, regulations and standards may require installation of costly equipment, increased manning, and/or operational changes. While we endeavor to comply with all applicable laws, circumstances might exist where we might not come into complete compliance with applicable laws and regulations which could result in administrative and civil penalties, criminal sanctions, imposition of remedial obligations or the suspension or termination of our operations. Some environmental laws impose strict liability for remediation of spills and releases of oil and hazardous substances, which could subject us to liability without regard to whether we were negligent or at fault. These laws and regulations may expose us to liability for the conduct of, or conditions caused by, others, including charterers. Moreover, these laws and regulations could change in ways that substantially increase costs that we may not be able to pass along to our customers. Any changes in applicable conventions or laws, regulations or standards that would impose additional requirements or restrictions on our or our oil and gas exploration and

production customers' operations could adversely affect our financial condition and results of

17

Table of Contents

operations. It is possible that laws and regulations may become even more stringent, which could also adversely affect our financial condition and results of operations.

We are also subject to the Merchant Marine Act of 1936, which provides that, upon proclamation by the President of a national emergency or a threat to the security of the national defense, the Secretary of Transportation may requisition or purchase any vessel or other watercraft owned by United States citizens (which includes United States corporations), including vessels under construction in the United States. If one of our OSVs or MPSVs were purchased or requisitioned by the federal government under this law, we would be entitled to be paid the fair market value of the vessel in the case of a purchase or, in the case of a requisition, the fair market value of charter hire. We would also not be entitled to be compensated for any consequential damages we suffer as a result of the requisition or purchase of any of our OSVs or MPSVs. The purchase or the requisition for an extended period of time of one or more of our vessels could adversely affect our results of operations and financial condition.

Finally, we are subject to the Merchant Marine Act of 1920, commonly referred to as the Jones Act, which requires that vessels engaged in coastwise trade to carry cargo between U.S. ports be documented under the laws of the United States and be controlled by U.S. citizens. A corporation is not considered a U.S. citizen unless, among other things, at least 75% of the ownership of voting interests with respect to its equity securities are held by U.S. citizens. We endeavor to ensure that we would be determined to be a U.S. citizen as defined under these laws by including in our certificate of incorporation certain restrictions on the ownership of our capital stock by non-U.S. citizens and establishing certain mechanisms to maintain compliance with these laws. If we are determined at any time not to be in compliance with these citizenship requirements, our vessels might become ineligible to engage in the coastwise trade in U.S. domestic waters, and our business and operating results would be adversely affected.

The Jones Act's provisions restricting coastwise trade to vessels controlled by U.S. citizens have been circumvented in recent years by foreign interests that seek to engage in trade reserved for vessels controlled by U.S. citizens and otherwise qualifying for coastwise trade. Legal challenges against such actions are difficult, costly to pursue and are of uncertain outcome. In addition, the Jones Act is often criticized and there are efforts underway by affected interest groups to seek its repeal. For instance, Senator John McCain recently introduced legislation, that was subsequently withdrawn, seeking to repeal the Jones Act. To the extent such efforts are successful and foreign competition is permitted, such competition could have a material adverse effect on domestic companies in the offshore service vessel industry and on our financial condition and results of operations. In addition, in the interest of national defense, the Secretary of Homeland Security is authorized to suspend the coastwise trading restrictions imposed by the Jones Act on vessels not controlled by U.S. citizens. Such waivers are granted from time-to-time.

Our business involves many operating risks that may disrupt our business or otherwise result in substantial losses, and insurance may be unavailable or inadequate to protect us against these risks.

Our vessels are subject to operating risks such as:

- catastrophic marine disaster;
- adverse weather and sea conditions;
- mechanical failure;
- collisions or allisions;
- oil and hazardous substance spills;
- navigation errors;
- acts of God; and
- war and terrorism.

The occurrence of any of these events may result in damage to or loss of our vessels or other property, injury or death of people or contamination of the environment. If any of these events were to occur, we could be exposed to liability for resulting damages and possible penalties that, pursuant to typical marine indemnity policies, we must pay and then seek reimbursement from our insurer. Affected vessels may also be removed from service and thus be unavailable for income-generating activity. While we believe our insurance coverage is adequate and insures us against risks that are customary in the industry, we may be unable to renew such coverage in the future at commercially reasonable rates.

Table of Contents

Moreover, existing or future coverage may not be sufficient to cover claims that may arise and we do not maintain insurance for loss of income resulting from a marine casualty.

Our operations in international markets and shipyard activities in foreign shipyards subjects us to risks inherent in conducting business internationally.

We derive a portion of our revenues from foreign sources. In addition, certain of our shipyard repair and procurement activities are being conducted with foreign vendors. We therefore face risks inherent in conducting business internationally, such as legal and governmental regulatory requirements, potential vessel seizure or nationalization of assets, import-export quotas or other trade barriers, difficulties in collecting accounts receivable and longer collection periods, political and economic instability, kidnapping of or assault on personnel, piracy, adverse tax consequences, difficulties and costs of staffing international operations and language and cultural differences. We do not hedge against foreign currency risk. While we endeavor to contract in U.S. Dollars when operating internationally, some contracts may be denominated in a foreign currency, which would result in a foreign currency exposure risk. All of these risks are beyond our control and difficult to insure against. We cannot predict the nature and the likelihood of any such events. If such an event should occur, however, it could have a material adverse effect on our financial condition and results of operations.

We may lose the right to operate in some international markets in which we have a presence.

In certain foreign markets in which we operate, most notably Mexico and Brazil, we depend upon governmental waivers of cabotage laws. These waivers could be revoked or made more burdensome, which could result in our inability to continue our operations or materially increase the costs of operating in such foreign locations. In addition, our foreign customers are often large state-owned oil companies that have monopolies or near monopolies in their home countries. These companies sometimes impose contractual requirements or restrictions that cannot be negotiated away and that can impose significant operating risks upon us. We have attempted to challenge these contractual actions in foreign markets, which entails significant risks.

Future results of operations depend on the long-term financial stability of our customers.

Some of the contracts we enter into for our vessels are full utilization contracts with initial terms ranging from one to five years. We enter into these long-term contracts with our customers based on a credit assessment at the time of execution. Our financial condition in any period may therefore depend on the long-term stability and creditworthiness of our customers. We can provide no assurance that our customers will fulfill their obligations under our long-term contracts and the insolvency or other failure of a customer to fulfill its obligations under such contract could adversely affect our financial condition and results of operations.

We may be unable to attract and retain qualified, skilled employees necessary to operate our business.

Our success depends in large part on our ability to attract and retain highly skilled and qualified personnel. Our inability to hire, train and retain a sufficient number of qualified employees could impair our ability to manage, maintain and grow our business.

In crewing our vessels, we require skilled employees who can perform physically demanding work. As a result of the volatility of the oil and gas industry and the demanding nature of the work, potential vessel employees may choose to pursue employment in fields that offer a more desirable work environment at wage rates that are competitive with ours. Further, we face strong competition within the broader oilfield industry for potential employees, including competition from drilling rig operators for our fleet personnel. As the vessels being constructed in our fifth OSV newbuild program are delivered and placed in service, we may not be able to hire employees or find suitable replacements. With a reduced pool of workers, it is possible that we will have to raise wage rates to attract workers and to retain our current employees. If we are not able to increase our service rates to our customers to compensate for wage-rate increases, our financial condition and results of operations may be adversely affected. If we are unable to recruit qualified personnel we may not be able to operate our vessels at full utilization, which would adversely affect our results of operations.

Our employees are covered by federal laws that may subject us to job-related claims in addition to those provided by state laws.

Some of our employees are covered by provisions of the Jones Act, the Death on the High Seas Act and general maritime law. These laws preempt state workers' compensation laws and permit these employees and their

Table of Contents

representatives to pursue actions against employers for job-related incidents in federal courts based on tort theories. Because we are not generally protected by the damage limits imposed by state workers' compensation statutes for these types of claims, we may have greater exposure for any claims made by these employees.

Our success depends on key members of our management, the loss of whom could disrupt our business operations. We depend to a large extent on the efforts and continued employment of our executive officers and key management personnel. We do not maintain key-man insurance. The loss of services of one or more of our executive officers or key management personnel could have a negative impact on our financial condition and results of operations.

Restrictions contained in the indentures governing our 2020 senior notes, our 2021 senior notes, and in the agreement governing our revolving credit facility may limit our ability to obtain additional financing and to pursue other business opportunities.

Covenants contained in the indenture governing our 2020 senior notes, in the indenture governing our 2021 senior notes and in the agreement governing our revolving credit facility require us to meet certain financial tests, which may limit or otherwise restrict:

- our flexibility in operating, planning for, and reacting to changes, in our business;
- our ability to dispose of assets, withstand current or future economic or industry downturns and compete with others in our industry for strategic opportunities; and
- our ability to obtain additional financing for working capital, capital expenditures, including our newbuild programs, acquisitions, general corporate and other purposes.

We have high levels of fixed costs that will be incurred regardless of our level of business activity.

Our business has high fixed costs. Downtime or low productivity due to reduced demand, as is currently being experienced, from weather interruptions or other causes can have a significant negative effect on our operating results and financial condition.

Our revenues and operating results may vary significantly from quarter to quarter due to a number of factors such as volatility in our vessel dayrates, changes in utilization, vessel incidents and other unforeseen matters. Many of these factors that may cause our actual financial results to vary from our publicly disclosed earnings guidance and forecasts are outside of our control.

Our actual financial results might vary from those anticipated by us or by securities analysts and investors, and these variations could be material. From time to time we publicly provide various forms of guidance, which reflect our projections about future market expectations and operating performance. The numerous assumptions underlying such guidance may be impacted by factors that are beyond our control and might not turn out to be correct. Although we believe that the assumptions underlying our projections are reasonable when such projections are made, actual results could be materially different, particularly with respect to our MPSVs.

We are susceptible to unexpected increases in operating expenses such as crew wages, materials and supplies, maintenance and repairs, and insurance costs.

Many of our operating costs are unpredictable and vary based on events beyond our control. Our gross margins will vary based on fluctuations in our operating costs. If our costs increase or we encounter unforeseen costs, we may not be able to recover such costs from our customers, which could adversely affect our financial position, results of operations and cash flows.

We may be adversely affected by uncertainty in the global financial markets.

Our future results may be impacted by volatility, weakness or deterioration in the debt and equity capital markets. Inflation, deflation, or other adverse economic conditions may negatively affect us or parties with whom we do business resulting in their non-payment or inability to perform obligations owed to us, such as the failure of customers to honor their commitments, the failure of shipyards and major suppliers to complete orders or the failure by banks to provide expected

Table of Contents

funding under our revolving credit agreement. Additionally, credit market conditions may slow our collection efforts as customers experience increased difficulty in obtaining requisite financing, potentially leading to lost revenue and higher than normal accounts receivable. This could result in greater expense associated with collection efforts and increased bad debt expense.

Any significant softening in the already limited global economic recovery may adversely impact our ability to issue additional debt and equity in the future on acceptable terms. We cannot be certain that additional funding will be available if needed and to the extent required, on acceptable terms.

We may be unable to collect amounts owed to us by our customers.

We typically grant our customers credit on a short-term basis. Related credit risks are inherent as we do not typically collateralize receivables due from customers. We provide estimates for uncollectible accounts based primarily on our judgment using historical losses, current economic conditions and individual evaluations of each customer as evidence supporting the receivables valuations stated on our financial statements. However, our receivables valuation estimates may not be accurate and receivables due from customers reflected in our financial statements may not be collectible. Future changes in legislation, policy, restrictions or regulations for drilling in the United States that cause delays or deter new drilling could have a material adverse effect on our financial position, results of operations and cash flows. In response to the April 20, 2010, Deepwater Horizon incident, the regulatory agencies with jurisdiction over oil and gas exploration, including the DOI, imposed temporary moratoria on drilling operations, by requiring operators to reapply for exploration plans and drilling permits that had previously been approved, and by adopting numerous new regulations and new interpretations of existing regulations regarding offshore operations that are applicable to our customers and with which their new applications for exploration plans and drilling permits must prove compliant. Compliance with these new regulations and new interpretations of existing regulations have materially increased the cost of drilling operations in the GoM. These additional compliance costs could materially adversely impact our business, financial position or results of operations.

The fundamental change purchase feature of our 2019 convertible senior notes and provisions of our certificate of incorporation, bylaws, stockholder rights plan and Delaware law may delay or prevent an otherwise beneficial takeover attempt of our company.

The terms of our 2019 convertible senior notes require us to purchase the notes for cash in the event of a fundamental change. A takeover of our company would trigger the requirement that we purchase the notes. Furthermore, our certificate of incorporation and bylaws, Delaware corporations law, and our stockholder rights plan contain provisions that could have the effect of making it more difficult for a third party to acquire, or discourage a third party from attempting to acquire, control of us. These provisions could limit the price that investors might be willing to pay in the future for shares of our common stock and may have the effect of delaying or preventing a takeover of our company that would otherwise be beneficial to investors.

The convertible note hedge transactions may affect the value of our common stock.

In connection with the original issuance of our 2019 convertible senior notes, we entered into convertible note hedge transactions with counterparties that include the initial purchasers or their affiliates. The convertible note hedge transactions cover, subject to customary anti-dilution adjustments, the aggregate number of shares of our common stock that initially underlie the notes, and are expected to reduce the potential equity dilution, and/or offset cash payments due, upon conversion of the notes in the event the volume-weighted average price of our common stock on each trading day of the relevant conversion period or other relevant valuation period is greater than the strike price of the convertible note hedge transactions. Concurrently with entering into the convertible note hedge transactions, we also entered into separate warrant transactions with the same counterparties relating to the same number of shares of our common stock, subject to customary anti-dilution adjustments, pursuant to which we sold warrants to the counterparties. If the warrants are exercised, such exercise would mitigate some of the reduction upon exercise of the convertible note hedge transactions, and could have a dilutive effect on our earnings per share to the extent that the volume-weighted average price of our common stock during the measurement period at maturity of the warrants exceeds the strike price of the sold warrants.

Table of Contents

In connection with establishing their initial hedges of these transactions, such counterparties or their affiliates entered into various cash-settled over-the-counter derivative transactions with respect to our common stock. The counterparties or their affiliates may modify their hedge positions by unwinding these derivative transactions, entering into or unwinding additional cash-settled over-the-counter derivative transactions and/or purchasing or selling our common stock or other of our securities in secondary market transactions from time to time following the pricing of the notes and prior to maturity of the notes (and are likely to do so during any conversion period related to any conversion of the notes).

The potential effect, if any, of these convertible note hedge and warrant transactions or any of these hedging activities on the market price of our common stock will depend in part on market conditions and cannot be ascertained at this time, but any of these activities could materially and adversely affect the value of our common stock.

We do not make any representation or prediction as to the direction or magnitude of any potential effect that the transactions described above may have on the price of our common stock. In addition, we do not make any representation that the counterparties to those transactions will engage in these transactions or activities or that these transactions and activities, once commenced, will not be discontinued without notice; the counterparties or their affiliates may choose to engage in, or discontinue engaging in, any of these transactions or activities with or without notice at any time, and their decisions will be in their sole discretion and not within our control.

We are subject to counterparty risk with respect to the convertible note hedge transactions.

The counterparties to the convertible note hedge transactions are financial institutions, and we will be subject to the risk that any or all of them might default under the convertible note hedge transactions. Our exposure to the credit risk of the counterparties will not be secured by any collateral. Global economic conditions experienced between 2008 and 2010 resulted in the actual or perceived failure or financial difficulties of many financial institutions. If a counterparty becomes subject to insolvency proceedings, we will become an unsecured creditor in those proceedings, with a claim equal to our exposure at that time under our transactions with that counterparty. Our exposure will depend on many factors but, generally, an increase in our exposure will be correlated to an increase in the market price and in the volatility of our common stock. In addition, upon a default by a counterparty, we may suffer adverse tax consequences and more dilution than we currently anticipate with respect to our common stock. We can provide no assurances as to the financial stability or viability of the counterparties to the convertible note hedge transactions.

Conversion of the 2019 convertible senior notes or exercise of the warrants issued in the warrant transactions may dilute the ownership interest of existing stockholders.

The conversion of the 2019 convertible senior notes or exercise of some or all of the warrants we issued in the warrant transactions may dilute the ownership interests of existing stockholders. Although the convertible note hedge transactions are expected to reduce potential dilution upon conversion of our convertible notes, the warrant transactions could have a dilutive effect on our earnings per share to the extent that the price of our common stock exceeds the strike price of the warrants. Any sales in the public market of our common stock issuable upon such conversion could adversely affect prevailing market prices of our common stock. In addition, the anticipated exercise of the warrants for shares of our common stock could depress the price of our common stock. Current accounting standards require us to use the treasury method for determining potential dilution in our diluted earnings per share computation since it is our intention to settle the principal amount of the notes in cash. However, if due to changes in facts and circumstances beyond our control such intention were to change, or it becomes probable that we will be unable to settle the principal in cash, we could be required to change our methodology for determining fully diluted earnings per share to the if-converted method. The if-converted method would result in a substantial dilutive effect on diluted earnings per share compared to the treasury method.

Our stock price has been volatile, declining precipitously from time to time during the period from 2008 through the present, and it could decline again.

The securities markets in general and our common stock in particular have experienced significant price and volume volatility in recent years. The market price and trading volume of our common stock may continue to experience significant fluctuations due not only to general stock market conditions but also to a change in sentiment in the market regarding our operations or business prospects or those of companies in our industry. In addition to the other risk factors discussed above, the price and volume volatility of our common stock may be affected by:

operating results that vary from the expectations of securities analysts and investors;

22

Table of Contents

factors influencing the levels of global oil and natural gas exploration and exploitation activities, such as depressed prices for oil or natural gas;

disasters such as the Deepwater Horizon incident in the Gulf of Mexico in 2010;

the operating and securities price performance of companies that investors or analysts consider comparable to us;

actions by rating agencies related to the our our 2019 convertible senior notes, our 2020 senior notes, or our 2021 senior notes;

announcements of strategic developments, acquisitions and other material events by us or our competitors; and

changes in global financial markets and global economies and general market conditions, such as interest rates, commodity and equity prices and the value of financial assets.

ITEM 1B—Unresolved Staff Comments

None.

ITEM 2—Properties

Our principal executive offices are in Covington, Louisiana, where we lease approximately 65,000 square feet of office space under a lease with an initial term expiring in September 2025 and three additional five-year renewal periods. Our primary domestic operating office is located in Port Fourchon, Louisiana. We also maintain four international offices from which we operate our fleet of vessels in Mexico and Brazil, as set forth below. For more information, see "Management's Discussion and Analysis of Financial Condition and Results of Operations" included within this report. We believe that our facilities, including waterfront locations used for vessel dockage and certain vessel repair work, provide an adequate base of operations for the foreseeable future. Our principal properties as of December 31, 2014 are as follows:

Location	Description	Area Using Property	Owned/Leased
Covington, Louisiana, USA	Corporate Headquarters	Corporate	Leased
Hammond, Louisiana, USA	Warehouse	GoM	Owned
Port Fourchon, Louisiana, USA	Dock, Office, Warehouse, Yard	GoM	Leased
Paraiso, Tabasco, Mexico	Office	Mexico	Leased
Ciudad Del Carmen, Campeche, Mexico	Office	Mexico	Leased
Barra da Tijuca, Rio de Janeiro, Brazil	Office	Brazil	Leased
Macaé, Rio de Janeiro, Brazil	Office	Brazil	Leased
Houston, Texas, USA	Office	GoM	Leased

In addition to the foregoing, our revenues are principally derived from our vessels described in "Item 1—Business" of this Annual Report on Form 10-K.

Item 3—Legal Proceedings

The Company has made presentment of a claim to BP in the class action lawsuit arising from the Deepwater Horizon tragedy. Doing so has allowed the Company to preserve claims against BP under OPA 90 assuming the Company has claims that are compensable under the court-approved settlement reached between BP and class action plaintiffs.

In 2013, the Company voluntarily reported to federal and state authorities two incidents involving the improper discharge of limited amounts of water containing oil residues into the environment and in 2014 it voluntarily reported the discharge of sewage from a vessel. Since its reports, the Company has been advised with respect to the sewage discharge that a federal investigation has been closed. The Company has not been contacted or otherwise informed of

Table of Contents

the initiation of legal proceedings regarding the 2013 incidents. A further discussion of current legal proceedings is set forth in Note 10 to our consolidated financial statements.

Item 4—Mine Safety Disclosures

None.

PART II

Item 5—Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Our common stock, \$0.01 par value, trades on the New York Stock Exchange, or NYSE, under the trading symbol “HOS”. The following table sets forth, for the quarterly periods indicated, the high and low sale prices for our common stock as reported by the NYSE during 2014 and 2013.

	2014		2013	
	High	Low	High	Low
First Quarter	\$49.04	\$38.17	\$46.75	\$34.82
Second Quarter	\$47.08	\$37.44	\$56.13	\$39.25
Third Quarter	\$47.45	\$32.46	\$59.40	\$52.62
Fourth Quarter	\$33.54	\$19.16	\$59.93	\$47.02

On January 31, 2015, we had 26 holders of record of our common stock.

We have not previously declared or paid, and we do not plan to declare or pay in the foreseeable future, any cash dividends on our common stock. In October 2014, our Board of Directors approved the buyback of up to \$150 million of our common stock. We presently intend to retain all additional cash that our business generates to meet our working capital requirements, retire debt, buy our common stock and fund future growth. Any future payment of cash dividends or stock repurchases will depend upon the financial condition, capital requirements, plans to reduce our long-term debt and earnings of our Company, as well as other factors that our Board of Directors may deem relevant. In addition, the indentures governing our 2020 senior notes, our 2021 senior notes and the agreement governing our revolving credit facility include restrictions on our ability to pay cash dividends on our common stock. See "Item 7-Management’s Discussion and Analysis of Financial Condition and Results of Operations” and Note 6 to our consolidated financial statements for further discussion.

See "Item 12-Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters” for information regarding shares of common stock authorized for issuance under our equity compensation plans.

Repurchase of Common Stock

On October 28, 2014, our Board of Directors authorized us to repurchase up to \$150 million in shares of our common stock using different methods including, but not limited to, open-market purchases, privately negotiated transactions, accelerated share repurchases and Rule 10b5-1 trading plans. The timing and amount of the repurchases depends on several factors, such as market conditions, applicable legal requirements, available liquidity, the discretion of management and other appropriate factors. The repurchase program does not obligate us to acquire any particular amount of common stock and may be modified, suspended or discontinued at any time. As of December 31, 2014, we had repurchased and retired 891,396 shares at an average price of \$28.05 per share. The repurchased shares cost a total of \$25 million and represent roughly 2.5% of our total shares outstanding prior to the commencement of the program. As of February 11, 2015, no additional shares had been repurchased.

Table of Contents

The following table provides information with respect to purchases of common stock under the repurchase program during the fourth quarter of the year ended December 31, 2014 (in thousands, except for per share data):

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number (or Approximate Dollar Value) of Shares that May Be Purchased Under the Plans or Programs
October 1, 2014 - October 31, 2014	—	\$—	—	\$150,000
November 1, 2014 - November 30, 2014	618	\$28.92	618	\$132,117
December 1, 2014 - December 31, 2014	273	\$26.06	891	\$125,000

Item 6—Selected Financial Data

SELECTED HISTORICAL CONSOLIDATED FINANCIAL INFORMATION

(In thousands, except operating and per share data)

Our selected historical consolidated financial information as of and for the years ended December 31, 2014, 2013, 2012, 2011 and 2010, was derived from our audited historical consolidated financial statements prepared in accordance with generally accepted accounting principles, or GAAP. The data should be read in conjunction with and is qualified in its entirety by reference to “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and our historical consolidated financial statements and the notes to those statements included elsewhere in this Annual Report on Form 10-K. On August 29, 2013, we closed the sale of substantially all of the assets and business of our Downstream segment’s tug and tank barge fleet to Genesis Marine, LLC. The historical results for the Downstream segment and the gain on the sale of that segment have been presented as discontinued operations for all periods in the Selected Historical Consolidated Financial Information presented herein. See Note 13 of the Consolidated Financial Statements for more information.

	Year Ended December 31,				
	2014	2013	2012	2011	2010
Statement of Operations Data:

Table of Contents

- (1) Represents other operating income and expenses, including equity in income from investments and foreign currency transaction gains or losses.
For the years ended December 31, 2014, 2013 and 2012, the Company had no anti-dilutive stock options. Due to a net loss, we excluded, for the calculation of loss per share, the effect of equity awards representing the rights to acquire 1,209 shares of common stock for the year ended December 31, 2011 because the effect was anti-dilutive.
- (2) For the year ended December 31, 2010, stock options representing rights to acquire 400 shares of common stock were excluded from the calculation of diluted earnings per share because the effect was anti-dilutive after considering the exercise price of the options in comparison to the average market price, proceeds from exercise, taxes and related unamortized compensation. See Note 3 of our consolidated financial statements for more information about diluted shares outstanding.
- (3) Includes working capital (deficit) from discontinued operations in the amount of \$469, \$1,461, \$(1,750), \$210, \$(677), and as of December 31, 2014, 2013, 2012, 2011 and 2010, respectively.
- (4) Includes total assets from discontinued operations in the amount of \$470, \$2,337, \$176,277, \$183,472 and \$195,464 as of December 31, 2014, 2013, 2012, 2011 and 2010, respectively.
Excludes imputed original issue discount associated with our 2026 convertible senior notes in the amount of
- (5) \$11,093 as of December 31, 2012. These notes were putable by the holders to the Company on November 15, 2013 and therefore were classified as short-term debt. These notes were converted or redeemed in full by the Company in November 2013.
Excludes original issue discount associated with our 2014 senior notes in the amount of \$215 and \$279 as of December 31, 2011 and 2010, respectively; original issue discount associated with our 2017 senior notes in the amount of \$4,771, \$5,571 and \$6,305 as of December 31, 2012, 2011 and 2010, respectively; imputed original
- (6) issue discount associated with our 2026 convertible senior notes in the amount of \$23,566 and \$35,183 as of December 31, 2011, and 2010, respectively; and imputed original issue discount associated with our 2019 convertible senior notes in the amount of \$51,528, \$60,908 and \$69,699 as of December 31, 2014, 2013 and 2012, respectively.
- (7) See our discussion of EBITDA as a non-GAAP financial measure immediately following these footnotes.
Excluded from the Other Operating Data are the results of operations for our MPSVs, our shore-base facility, and vessel management services. Due to the fact that each of our MPSVs have a workload capacity and significantly higher income generating potential than each of our new generation OSVs, the
- (8) utilization and dayrate levels of our MPSVs could have a very large impact on our results of operations. For this reason, our consolidated operating results, on a period-to-period basis, are disproportionately impacted by the level of dayrates and utilization achieved by our five MPSVs.
We owned 61 new generation OSVs as of December 31, 2014. Our average number of new generation OSVs for the years ended December 31, 2014, 2013, 2012, 2011, and 2010, reflect the deliveries of certain vessels under our
- (9) fourth and fifth OSV newbuild programs. Please refer to Our Vessels on page 6 of this Form 10-K for more information about vessel names and placed in-service dates. Excluded from this data are ten conventional OSVs that were acquired in August 2007, nine of which have been sold on various dates in 2008, 2009, and 2010. Our sole remaining conventional OSV, which is stacked, is considered a non-core asset.
In response to weak market conditions, we elected to stack certain of our new generation OSVs on various dates
- (10) in 2009 and 2010. Based on improved market conditions, we had re-activated all of our stacked new generation OSVs by June 30, 2013. During 2014, we experienced weak market conditions for which we elected to stack certain of our new generation OSVs on various dates during the fourth quarter of 2014.
- (11) Utilization rates are average rates based on a 365-day year. Vessels are considered utilized when they are generating revenues.
- (12) Average dayrates represent average revenue per day, which includes charter hire, crewing services and net brokerage revenues, based on the number of days during the period that the OSVs generated revenue.
- (13) Effective dayrate represents the average dayrate multiplied by the average utilization rate.

Non-GAAP Financial Measures

We disclose and discuss EBITDA as a non-GAAP financial measure in our public releases, including quarterly earnings releases, investor conference calls and other filings with the Commission. We define EBITDA as earnings (net income) before interest, income taxes, depreciation and amortization. Our measure of EBITDA may not be comparable to similarly titled measures presented by other companies. Other companies may calculate EBITDA differently than we do, which may limit their usefulness as comparative measures.

We view EBITDA primarily as a liquidity measure and, as such, we believe that the GAAP financial measure most directly comparable to this measure is cash flows provided by operating activities. Because EBITDA is not a measure of financial performance calculated in accordance with GAAP, it should not be considered in isolation or as a substitute for operating income, net income or loss, cash flows provided by operating, investing and financing activities, or other income or cash flow statement data prepared in accordance with GAAP.

EBITDA is widely used by investors and other users of our financial statements as a supplemental financial measure that, when viewed with our GAAP results and the accompanying reconciliation, we believe provides additional information that is useful to gain an understanding of the factors and trends affecting our ability to service debt, pay deferred taxes and fund drydocking charges and other maintenance capital expenditures. We also believe the disclosure of EBITDA helps investors meaningfully evaluate and compare our cash flow generating capacity from quarter to quarter and year to year.

EBITDA is also a financial metric used by management (i) as a supplemental internal measure for planning and forecasting overall expectations and for evaluating actual results against such expectations; (ii) as a significant criteria for annual incentive cash bonuses paid to our executive officers and other shore-based employees; (iii) to compare to the EBITDA of other companies when evaluating potential acquisitions; and (iv) to assess our ability to service existing fixed charges and incur additional indebtedness.

Table of Contents

The following table provides the detailed components of EBITDA from continuing operations as we define that term for the years ended December 31, 2014, 2013, 2012, 2011, and 2010 respectively (in thousands).

	Year Ended December 31,				
	2014	2013	2012	2011	2010
Components of EBITDA:					
Income (loss) from continuing operations	\$87,907	\$64,078	\$34,695	\$(3,520)) \$34,978
Interest, net:					
Debt obligations	30,733	47,352	57,869	59,649	55,183
Interest income	(1,086)) (2,515)) (2,167)) (829)) (528)
Total interest, net	29,647	44,837	55,702	58,820	54,655
Income tax expense (benefit)	52,367	36,320	21,384	(1,358)) 20,655
Depreciation	71,301	55,332	52,005	52,453	50,008
Amortization	44,149	30,630	21,670	15,457	14,677
EBITDA	\$285,371	\$231,197	\$185,456	\$121,852	\$174,973

The following table reconciles EBITDA from continuing operations to cash flows provided by operating activities for the years ended December 31, 2014, 2013, 2012, 2011, and 2010 respectively (in thousands).

	Year Ended December 31,				
	2014	2013	2012	2011	2010
EBITDA Reconciliation to GAAP:					
EBITDA	\$285,371	\$231,197	\$185,456	\$121,852	\$174,973
Cash paid for deferred drydocking charges	(43,609)) (35,875)) (39,211)) (16,832)) (13,153)
Cash paid for interest	(50,548)) (53,636)) (38,597)) (43,811)) (44,178)
Cash paid for taxes	(5,679)) (4,537)) (1,332)) (1,272)) (2,809)
Changes in working capital	(32,213)) 33,458	3,571	(13,297)) 4,274
Stock-based compensation expense	10,324	11,888	10,805	6,403	8,144
Loss on early extinguishment of debt	—	25,776	6,048	—	—
Changes in other, net	(540)) (1,204)) 2,125	(461)) (1,106)
Cash flows provided by operating activities	\$163,106	\$207,067	\$128,865	\$52,582	\$126,145

In addition, we also make certain adjustments, as applicable, to EBITDA for losses on early extinguishment of debt, stock-based compensation expense and interest income, to internally evaluate our performance based on the computation of ratios historically used in certain financial covenants of our credit agreements with various lenders. We believe that these ratios can be material components of financial covenants and, when applicable, failure to comply with such covenants could result in the acceleration of indebtedness or the imposition of restrictions on our financial flexibility. The recent changes to the applicable covenants contained in our credit facility are described in Note 6 of our consolidated financial statements included herein.

The following table provides certain detailed adjustments to EBITDA, as defined in our revolving credit facility for the years ended December 31, 2014, 2013, 2012, 2011, and 2010, respectively (in thousands).

Adjustments to EBITDA for Computation of Financial Ratios Used in Debt Covenants

	Year Ended December 31,				
	2014	2013	2012	2011	2010
Loss on early extinguishment of debt	\$—	\$25,776	\$6,048	\$—	\$—
Stock-based compensation expense	10,324	11,914	10,891	6,525	8,710
Interest income	1,086	2,515	2,167	829	528

Table of Contents

Set forth below are the material limitations associated with using EBITDA as a non-GAAP financial measure compared to cash flows provided by operating activities.

- EBITDA does not reflect the future capital expenditure requirements that may be necessary to replace our existing vessels as a result of normal wear and tear,

- EBITDA does not reflect the interest, future principal payments and other financing-related charges necessary to service the debt that we have incurred in acquiring and constructing our vessels,

- EBITDA does not reflect the deferred income taxes that we will eventually have to pay once we are no longer in an overall tax net operating loss carryforward position, as applicable, and

- EBITDA does not reflect changes in our net working capital position.

Management compensates for the above-described limitations in using EBITDA as a non-GAAP financial measure by only using EBITDA to supplement our GAAP results.

Item 7—Management’s Discussion and Analysis of Financial Condition and Results of Operations

The following management’s discussion and analysis of financial condition and results of operations should be read in conjunction with our historical consolidated financial statements and their notes included elsewhere in this Annual Report on Form 10-K. This discussion contains forward-looking statements that reflect our current views with respect to future events and financial performance. Our actual results may differ materially from those anticipated in these forward-looking statements or as a result of certain factors such as those set forth in our Forward Looking Statements disclaimer on page ii of this Annual Report on Form 10-K.

General

Over the last several months oil prices have fallen precipitously from a prevailing price during most of 2014 of over \$90 per barrel to an average price of approximately \$45 per barrel to date in 2015. The fall in price appears to be due to surplus oil, driven in part by a significant rise in U.S. shale oil production as well as other previously unavailable sources of supply. In addition, economic weakness in many regions of the world, notably Europe and China, has reduced the previously expected oil consumption growth rate. As a result of the reduction in oil prices, oil companies have significantly reduced their capital spending budgets for 2015. A Barclays survey of 225 E&P companies released in January 2015 noted that global E&P spending is projected to decline by at least 8%, while North American budgets are expected to fall by at least 14%. Oil prices have since fallen further, which may impact budgets even more than projected. Several major and independent oil companies with deepwater operations have announced capital spending reductions. We believe that the long-term nature of deepwater projects insulates them, somewhat, from a short-term fall in oil prices and that sanctioned or on-going projects will proceed. However, deepwater activities will be affected by lower prices, even if they are affected less than other activities. We have experienced requests by our deepwater customers for price reductions in order to help mitigate the impact that lower prices are having and will continue to have on oil company operating results and cashflows. In addition, sustained low prices may cause un-sanctioned projects to be delayed or cancelled altogether, which could be manifested in less activity later, even if oil prices recover. Many of our operations are in support of deepwater projects that are in their final stages or of projects that do not involve deepwater and are more susceptible to immediate wind-down. We cannot predict whether, and to what extent, or when oil prices will improve. For instance, shelf drilling activity in the GoM has declined substantially. The lack of a shelf market has impacted us in two ways. First, our low-spec DP-1 vessels in the GoM principally support shelf activities. Second, in prior periods of market over capacity, high-spec equipment has been able to displace low-spec equipment working on the shelf. However, that alternative market has deteriorated considerably. The recent and rapid decline in global oil prices has created great uncertainty in the industry for all of our core markets in 2015. In the GoM, aggressive cost cutting measures employed by our customers and the increased supply of high-spec OSVs have placed pressure on dayrates across the entire fleet. We expect 37 high-spec OSVs to deliver into the domestic market during 2015, including six of our own. During the fourth quarter of 2014, there was an average of 51 floating rigs available in the GoM, while an average of 40 were working. Today there are 51 rigs available and 44 are working. However, 10 floating rigs have contracts that will expire during 2015 and two are scheduled to leave the region. We do not know whether the remaining eight rigs will receive contract renewals for operations in the GoM. We also expect nine rigs to arrive in the GoM during 2015, eight of which are contracted. We have observed recently that, following arrival in the GoM, it can take several months for a rig to commence work, and, therefore, we do not know the timing of when operations of newly arrived rigs will begin. Given these market conditions, we anticipate our average dayrates and utilization levels to be adversely affected compared to our 2013 and 2014 results.

In Mexico, while the energy reform continues to progress, questions remain on the timing of the incremental activity expected in the deepwater GoM given the current oil price environment. We will continue to explore opportunities to place additional vessels into Mexico to support Pemex in its ongoing shallow water activity. Pemex recently announced a 15 year age restriction on vessels that are contracted to work directly or indirectly for Pemex. This restriction, if it remains in effect, together with the availability of newly built OSV tonnage on the world market, may adversely affect our ability to grow in Mexico through deployment of some of our vessels.

Table of Contents

In Brazil, lower oil prices combined with a significant corruption probe involving Petrobras have combined to create substantial uncertainty over the pace at which Petrobras can proceed with previously announced plans. The four vessels we currently have operating under long-term charter for Petrobras will end their initial term during 2015. It remains unclear whether Petrobras intends to open negotiations for extending the charters or, given the current oil price environment, will choose to allow the contracts to expire.

During the fourth quarter of 2014, in recognition of these weak market conditions, we cold stacked five 200 class OSVs and sold one such vessel. We have stacked two additional 200 class OSVs and five 240 class OSVs in the first quarter of 2015. By stacking vessels, we expect to reduce our cash outlays, however, we will also have fewer revenue producing units in service that can potentially contribute to our results.

Market conditions

As of February 11, 2015, we had 38% of our new generation OSV vessel-days contracted for the fiscal year ending December 31, 2015. Our forward OSV contract coverage for the fiscal year ending December 31, 2016 currently stands at 6%. MPSV contract coverage for the fiscal years ending December 31, 2015 and 2016 is currently 24% and 0%, respectively.

The principal threat facing all of our markets is the fall in oil prices and resultant reduction in capital spending by our customers.

Our Vessels

All of our current vessels are qualified under the Jones Act to engage in U.S. coastwise trade, except for six foreign-flagged new generation OSVs, two foreign-flagged well-stimulation vessels and two foreign-flagged MPSVs. As of December 31, 2014, our 56 active new generation OSVs and five MPSVs were operating in domestic and international areas as noted in the following table:

Operating Areas

Domestic	
GoM	36
Other U.S. coastlines ⁽¹⁾	6
	42
Foreign	
Brazil	4
Mexico	13
Middle East	1
Europe	1
	19
Total Active Vessels ⁽²⁾	61

⁽¹⁾ Includes six vessels that are currently supporting the military.

⁽²⁾ Excluded from this table are five new generation OSVs and one non-core conventional OSV that were stacked as of December 31, 2014.

OSV Newbuild Program #5. Our fifth OSV newbuild program consists of vessel construction contracts with three domestic shipyards to build four 300 class OSVs, five 310 class OSVs, ten 320 class OSVs, and five 310 class MPSVs. As of February 11, 2015, we had delivered and placed in service 16 vessels under such newbuild program. Delivery of the eight remaining vessels under this 24-vessel domestic newbuild program is expected to occur on various dates during 2015 and 2016. In October 2014, we announced plans to convert one of our newbuild HOSMAX 300 class OSVs that was previously placed in service under this newbuild program, the HOS Riverbend, into a 300 class MPSV flotel vessel. As a result of this newbuild program, the OSV-to-MPSV conversion and the recent agreement to sell four vessels to the U.S. Navy, we expect to own and operate 62 new generation OSVs as of December 31, 2015. These aggregate OSV vessel additions and divestitures result in a projected average new generation OSV fleet complement of 60.9 and 62.0 for fiscal years 2015 and 2016, respectively. With the addition of

the five MPSVs and the OSV-to-MPSV conversion, we expect to own and operate seven and ten MPSVs as of December 31, 2015 and 2016, respectively. These MPSV additions result in a projected average MPSV fleet complement of 5.9, 8.8 and 10.0 vessels for the fiscal years 2015, 2016 and 2017, respectively. The aggregate cost of our fifth OSV newbuild program, excluding construction period interest, is expected to be approximately \$1,265 million. For further information regarding our fifth OSV newbuild program, please refer to the Capital Expenditures and Related Commitments section.

Table of Contents

Operating Costs

Our operating costs are primarily a function of fleet size, areas of operations and utilization levels. The most significant direct operating costs are wages paid to vessel crews, maintenance and repairs, and marine insurance. Because most of these expenses are incurred regardless of vessel utilization, our direct operating costs as a percentage of revenues may fluctuate considerably with changes in dayrates and utilization. In the past, we have been able to realize meaningful reductions in our operating costs by stacking under-utilized vessels.

In certain foreign markets in which we operate, we are susceptible to higher operating costs, such as materials and supplies, crew wages, maintenance and repairs, taxes, importation duties, and insurance costs. Difficulties and costs of staffing international operations, including vessel crews, and language and cultural differences generally contribute to a higher cost structure in foreign locations compared to our domestic operations. We may not be able to recover higher international operating costs through higher dayrates charged to our customers. Therefore, when we increase our international complement of vessels, our gross margins may fluctuate depending on the foreign areas of operation and the complement of vessels operating domestically.

In addition to the operating costs described above, we incur fixed charges related to the depreciation of our fleet and amortization of costs for routine drydock inspections and maintenance and repairs necessary to ensure compliance with applicable regulations and to maintain certifications for our vessels with the U.S. Coast Guard and various classification societies. The aggregate number of drydockings and other repairs undertaken in a given period determines the level of maintenance and repair expenses and marine inspection amortization charges. We capitalize costs incurred for drydock inspection and regulatory compliance and amortize such costs over the period between such drydockings, typically 30 months. Applicable maritime regulations require us to drydock our vessels twice in a five-year period for inspection and routine maintenance and repair. If we undertake a disproportionately large number of drydockings in a particular fiscal period, comparative results may be affected. While we can defer required drydockings of stacked vessels, we will be required to conduct such deferred drydockings prior to such vessels returning to service.

Critical Accounting Estimates

Our consolidated financial statements included in this Annual Report on Form 10-K have been prepared in accordance with accounting principles generally accepted in the United States. In many cases, the accounting treatment of a particular transaction is specifically dictated by generally accepted accounting principles. In other circumstances, we are required to make estimates, judgments and assumptions that we believe are reasonable based upon available information. We base our estimates and judgments on historical experience and various other factors that we believe are reasonable based upon the information available. Actual results may differ from these estimates under different assumptions and conditions. We believe that of our significant accounting policies discussed in Note 2 to our consolidated financial statements, the following may involve estimates that are inherently more subjective.

Carrying Value of Vessels. We depreciate our OSVs and MPSVs over estimated useful lives of 25 years each. Salvage value for our new generation marine equipment is typically 25% of the originally recorded cost for these asset types.

In assigning depreciable lives to these assets, we have considered the effects of both physical deterioration largely caused by wear and tear due to operating use and other economic and regulatory factors that could impact commercial viability. To date, our experience confirms that these policies are reasonable, although there may be events or changes in circumstances in the future that indicate that recovery of the carrying amount of our vessels might not be possible.

We presently review our vessels for impairment using the following asset groups: New Generation OSVs, MPSVs and Conventional OSV. As of December 31, 2014, we only had one remaining conventional OSV, which remains cold-stacked. Management has concluded that these groupings are currently appropriate because our vessels are highly mobile and are consistent based on the operating and marketing characteristics desired by our customers. When analyzing asset groups for impairment, we consider recent vessel sales, recent vessel appraisals, both historical and projected operating cash flows, operating income, and EBITDA based on current operating environment and future conditions that we can reasonably anticipate, such as inflation or prospective wage costs. These projections are based on, but not limited to, job location, current market dayrates included in recent sales proposals, utilization and contract coverage; along with anticipated market drivers, such as drilling rig movements, results of offshore lease sales and discussions with our customers regarding their ongoing drilling plans. When evaluating our one stacked Conventional

OSV, we use recent vessel sales and/or independent third-party appraisers to determine our estimate of undiscounted future cash flow. The vessel appraisers used for these assets are the same ones that are used by our lenders when vessels are appraised in secured financing arrangements. We have executed financing transactions in the ordinary

Table of Contents

course of our business, such as our revolving credit facility, requiring third-party appraisals for collateralized assets. Such appraisals are reviewed and considered in assessing whether an impairment exists.

If events or changes in circumstances as set forth above indicate that the asset group's carrying amount may not be recoverable, we would then be required to estimate the undiscounted future cash flows expected to result from the use of the asset group and its eventual disposition. If the sum of the expected future cash flows is less than the carrying amount of the vessel, we would be required to reduce the carrying amount to fair value. Examples of events or changes in circumstances that could indicate that the recoverability of the carrying amount of our asset groups should be assessed might include a significant change in regulations such as OPA 90, a significant decrease in the market value of the asset group and current period operating or cash flow losses combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with the asset group.

We reviewed ASC 360 regarding triggering events that would require an impairment analysis and concluded that there were no such events in 2014 or 2013. Our review gave consideration to the current market conditions, which include the recent commodity price decline and reduction in certain projected 2015 capital budgets for our customers. While we expect this environment to have a negative impact on vessel utilization and dayrates, we view the deepwater and ultra deepwater projects of our customers, which is the principal market for our vessel fleet, to be somewhat insulated from commodity price cycles compared to onshore shale and shallow shelf offshore exploration and production activities. However, continued commodity price declines or protracted extensions of the current price cycle could result in additional delays or cancellations of deepwater projects, which is a major indicator of fleet utilization. Should this occur, we will update our analysis of whether a triggering event has occurred. While the Company has historically operated its vessels predominately in the GoM, we will continue to deploy vessels to international markets as conditions warrant. Our technologically advanced vessels are capable of working in and are effectively mobilized to different markets so neither the geographic location of vessels, nor reduced drilling activity in a particular exploration area is considered on its own as an impairment trigger. It is Management's opinion that the fair values of all of our asset groups exceed their carrying values. In order for the fair values of any of our assets to be below their respective carrying values, current and projected effective dayrates would have to be significantly below the lowest levels experienced in our Company's history. In addition, those market conditions would have to be sustained for the remaining economic useful lives of each vessel class, which is also unlikely.

Recertification Costs. Our vessels are required by regulation to be recertified after certain periods of time. These recertification costs are incurred while the vessel is in drydock where other routine repairs and maintenance are performed and, at times, major replacements and improvements are performed. We expense routine repairs and maintenance as they are incurred. Recertification costs can be accounted for in one of two ways: (1) defer and amortize or (2) expense as incurred. We defer and amortize recertification costs over the length of time that the recertification is expected to last, which is generally 30 months. Major replacements and improvements, which extend the vessel's economic useful life or functional operating capability, are capitalized and depreciated over the vessel's remaining economic useful life. Inherent in this process are judgments we make regarding whether the specific cost incurred is capitalizable and the period that the incurred cost will benefit.

Mobilization Costs. Vessels will routinely move to and from international and domestic operating areas. Mobilization costs associated with relocating vessels typically include fuel, crew costs, vessel modifications, materials and supplies, importation taxes or other pre-positioning expenses required by the customer. The extent of mobilization costs incurred to relocate a vessel is directly related to the customer contract terms and area of operation. Some of our charter agreements provide for us to recover mobilization costs through billings to our customers. Unless mobilization costs are rebillable to customers, we expense these costs as incurred.

Revenue Recognition. We charter our vessels to customers under time charters based on a daily rate of hire and recognize revenue as earned on a daily basis during the contract period of the specific vessel.

Allowance for Doubtful Accounts. Our customers are primarily major and independent, domestic and international, oil and gas and oil service companies. Our customers are granted credit on a short-term basis and related credit risks are considered minimal. We usually do not require collateral. We provide an estimate for uncollectible accounts based primarily on management's judgment. Management uses the relative age of receivable balances, historical losses, current economic conditions and individual evaluations of each customer to make adjustments to the allowance for

doubtful accounts. Our historical losses have not been significant. However, because amounts due from individual customers can be significant, future adjustments to the allowance can be material if one or more individual customer's balances are deemed uncollectible.

Table of Contents

Income Taxes. We follow accounting standards for income taxes that require the use of the liability method of computing deferred income taxes. Under this method, deferred income taxes are provided for the temporary differences between the financial reporting basis and the tax basis of our assets and liabilities. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The assessment of the realization of deferred tax assets, particularly those related to tax net operating loss carryforwards and foreign tax credit carryforwards, involves the use of management's judgment to determine whether it is more likely than not that we will realize such tax benefits in the future prior to their expiration. In addition, each reporting period, we assess and adjust for any significant changes to our liability for unrecognized income tax benefits. We account for any interest and penalties relating to uncertain tax positions in general and administrative expenses.

Stock-Based Compensation Expense. All equity-settled share-based payments to employees and directors, including grants of stock options and restricted stock, are recognized in the income statement based on their fair values at the date of grant. All cash-settled share-based payments to employees and directors are recognized in the income statement based on their fair values at the end of the reporting period.

Legal Contingencies. We are involved in a variety of claims, lawsuits, investigations and proceedings, as described in Note 10 to our consolidated financial statements. We determine whether an estimated loss from a contingency should be accrued by assessing whether a loss is deemed probable and can be reasonably estimated. We assess our potential liability by analyzing our litigation and regulatory matters using available information. We develop our views on estimated losses in consultation with outside counsel handling our defense in these matters, which involves an analysis of potential results, assuming a combination of litigation and settlement strategies. Should developments in any of these matters cause a change in our determination such that we expect an unfavorable outcome and result in the need to recognize a material accrual, or should any of these matters result in a final adverse judgment or be settled for a significant amount, they could have a material adverse effect on our results of operations in the period or periods in which such change in determination, judgment or settlement occurs.

Results of Operations

The tables below set forth the average dayrates, utilization rates and effective dayrates for our new generation OSVs and the average number and size of such vessels owned during the periods indicated. These vessels generate a substantial portion of our revenues and operating profit. Excluded from the OSV information below is the results of operations for our MPSVs, our shore-base facility, and vessel management services. The Company does not provide average or effective dayrates for its MPSVs. MPSV dayrates are impacted by highly variable customer-required cost-of-sales associated with ancillary equipment and services, such as ROVs, accommodation units and cranes, which are typically recovered through higher dayrates charged to the customer. Due to the fact that each of our MPSVs have a workload capacity and significantly higher income generating potential than each of the Company's new generation OSVs, the utilization and dayrate levels of our MPSVs could have a very large impact on our results of operations. For this reason, our consolidated operating results, on a period-to-period basis, are disproportionately impacted by the level of dayrates and utilization achieved by our five MPSVs.

	Years Ended December 31,		
	2014	2013	2012
Offshore Supply Vessels:			
Average number of new generation OSVs ⁽¹⁾	57.4	50.7	51.0
Average number of active new generation OSVs ⁽²⁾	56.6	50.3	48.3
Average new generation OSV fleet capacity (DWT)	177,033	132,564	128,190
Average new generation vessel capacity (DWT)	3,076	2,609	2,514
Average new generation OSV utilization rate ⁽³⁾	79.6	% 83.7	% 83.2
Average new generation OSV dayrate ⁽⁴⁾	\$27,416	\$26,605	\$23,445
Effective dayrate ⁽⁵⁾	\$21,823	\$22,268	\$19,506

⁽¹⁾ We owned 61 new generation OSVs as of December 31, 2014. Our average number of new generation OSVs for the year ended December 31, 2014 reflects the deliveries of certain vessels under our fifth OSV newbuild program.

Please refer to Our Vessels on page 6 of this Form 10-K for more information about vessel names and placed in-service dates. Excluded from this data is one conventional OSV that we consider to be a non-core asset.

In response to weak market conditions, we elected to stack certain of our new generation OSVs on various dates in (2) 2009 and 2010. Based on improved market conditions, we had re-activated all of our stacked new generation OSVs as of June 30, 2013. During the fourth quarter of 2014, we

Table of Contents

elected to stack five new generation OSVs. Active new generation OSVs represent vessels that are immediately available for service during each respective period.

- (3) Utilization rates are average rates based on a 365-day year. Vessels are considered utilized when they are generating revenues.
- (4) Average dayrates represent average revenue per day, which includes charter hire, crewing services and net brokerage revenues, based on the number of days during the period that the OSVs generated revenue.
- (5) Effective dayrate represents the average dayrate multiplied by the average utilization rate.

Table of Contents

YEAR ENDED DECEMBER 31, 2014 COMPARED TO YEAR ENDED DECEMBER 31, 2013

Summarized financial information for the years ended December 31, 2014 and 2013, respectively, is shown below in the following table (in thousands, except percentage changes):

	Year Ended December 31,		Increase (Decrease)		
	2014	2013	\$ Change	% Change	
Revenues:					
Domestic	\$490,314	\$415,898	\$74,416	17.9	%
Foreign	144,479	132,247	12,232	9.2	%

Income from discontinued operations, net of tax	618	47,315	(46,697)	(98.7))%
Net income	\$88,525	\$111,393	\$(22,868)	(20.5))%

Revenues. Revenues for 2014 increased by \$86.6 million, or 15.8%, to \$634.8 million compared to \$548.1 million for 2013. Our weighted-average active operating fleet for 2014 was approximately 61 vessels compared to 54 vessels for 2013. These higher revenues primarily resulted from the full or partial-period contribution of 20 vessels that were placed in service under our fifth OSV newbuild program since 2013 or returned to service under our 200 class OSV retrofit program since 2012 and, to a lesser extent, an increase in revenues from the MPSV fleet. Vessels placed in-service under our fifth OSV newbuild program and our OSV retrofit program accounted for increases of \$102.5 million and \$17.7 million, respectively, in revenues during 2014 compared to 2013. Revenues from our MPSVs that were in service during each of the twelve months ended December 31, 2014 and 2013 increased by \$35.3 million, or 27.5%, primarily due to higher spot dayrates earned by one of our MPSVs performing flotel services in the GoM. These higher revenues were partially offset by a \$73.4 million decrease in revenue for our remaining vessels that were in service during each of the twelve months ended December 31, 2014 and 2013 due to soft market conditions and 128 incremental days out-of-service for regulatory drydockings compared to 2013. Our new generation OSV average dayrates were \$27,416 for 2014 compared to \$26,605 for 2013, an increase of \$811, or 3.0%. Our new generation OSV utilization was 79.6% for 2014 compared to 83.7% for 2013. This decrease in utilization was primarily due to soft spot market conditions for our high-spec OSVs operating in the GoM and the incremental vessel-days out-of-service for regulatory drydockings during 2014 compared to 2013. Domestic revenues increased by \$74.4 million during 2014 due to the full or partial-period contribution of 14 vessels added to our fleet under our fifth OSV newbuild program on various dates during 2013 and 2014. Foreign revenues increased by \$12.2 million primarily due to the relocation of an MPSV from the GoM to foreign markets during 2014. Foreign revenues comprised 22.8% of our total revenues for 2014 compared to 24.1% for 2013.

Operating expenses. Operating expenses were \$296.5 million, an increase of \$57.3 million, or 23.9%, for 2014 compared to \$239.2 million for 2013. Newly constructed vessels under our fifth OSV newbuild program and upgraded vessels placed in service under our 200 class OSV retrofit program during 2013 and 2014 accounted for approximately \$55.0 million of the higher operating costs. Aggregate cash operating expenses are projected to be in the range of \$265.0 million to \$280.0 million for 2015. Our cash operating expense estimate is exclusive of any

additional repositioning expenses we may incur in connection with the potential relocation of more of our current spot or expiring term vessels into international markets or back to the GoM and any customer-required cost-of-sales related to future contract fixtures that are typically recovered through higher dayrates.

Table of Contents

Depreciation and Amortization. Depreciation and amortization expense was \$29.5 million, or 34.3%, higher for 2014 compared to 2013. This increase is primarily due to the full or partial-period contribution of 14 newbuild vessels that were placed in service on various dates during 2013 and 2014, as well as the higher cost basis of six vessels redelivered under our 200 class OSV retrofit program in 2013. The increase in amortization is primarily due to a higher per-vessel average in shipyard costs for vessel regulatory drydockings given the shift in our fleet mix to a higher percentage of much larger high-spec vessels and, to a lesser extent, incremental amortization recorded for the accelerated regulatory drydocking of vessels during 2014. Depreciation and amortization expense is expected to increase from current levels as the vessels under our current newbuild and conversion programs are placed in-service and when any newly constructed vessels undergo their initial 30-month and 60-month recertifications.

General and Administrative Expenses. General and administrative expenses of \$54.2 million increased by \$0.8 million, or 1.5%, during 2014 compared to 2013. This increase in G&A expenses was primarily the result of the growth of our shoreside support team related to our on-going newbuild program and expanding international operations. This increase was partially offset due to the valuation of our stock-based compensation expense, which was driven lower by the recent decline in our stock price, and lower shoreside incentive compensation expense. General and administrative expenses as a percentage of revenues were 8.5% for 2014 compared to 9.7% for 2013. Our general and administrative expenses are expected to increase to the approximate annual range of \$55 million to \$60 million for 2015, or slightly above 2014 levels, commensurate with our fleet growth, expanding international operations and increased complexity of the active fleet. We expect to remain within our historical range of G&A-to-revenue margins, as well as those of our domestic public OSV peer group.

Gain on Sale of Assets. During 2014, we sold a non-core 220 class OSV that resulted in an aggregate gain of approximately \$0.8 million (\$0.5 million after-tax or \$0.01 per diluted share). During 2013, we sold certain non-core marine assets, including two 220 class OSVs, that resulted in an aggregate gain of approximately \$1.6 million (\$1.0 million after-tax or \$0.03 per diluted share).

Operating Income. Operating income decreased by \$1.7 million to \$169.4 million during 2014 compared to 2013 for the reasons discussed above. Operating income as a percentage of revenues was 26.7% for 2014 compared to 31.2% for 2013.

Loss on Early Extinguishment of Debt. On March 14, 2013, we commenced a cash tender offer for all of the \$250.0 million in aggregate principal amount of our 2017 senior notes. Approximately 94% of such senior notes were validly tendered during the designated tender period, which ended on March 27, 2013. The remaining 2017 senior notes were redeemed on May 13, 2013. During 2013, we recorded a loss on early extinguishment of debt of approximately \$25.8 million (\$16.1 million after-tax or \$0.44 per diluted share), which was comprised of the tender offer costs, the write-off of unamortized financing costs and original issue discount, and a bond redemption premium. There was no such transaction in 2014.

Interest Expense. Interest expense decreased \$16.6 million during 2014 compared to 2013 primarily due to lower interest expense resulting from the November 2013 retirement of our convertible senior notes due 2026. During 2014, we capitalized interest of \$33.2 million, or roughly 52% of our total interest costs, compared to capitalized interest of \$31.2 million, or roughly 40% of our total interest costs, for 2013.

Interest Income. Interest income decreased by \$1.4 million to \$1.1 million for 2014 compared to \$2.5 million for 2013. Our average cash balance decreased to \$307.9 million for 2014 compared to \$663.4 million for 2013. The average interest rate earned on our invested cash balances was approximately 0.4% during the fiscal years ended December 31, 2014 and December 31, 2013. The decrease in average cash balance was due to cash outflows associated with our fifth OSV newbuild program in 2014 and the retirement of all of our outstanding \$250 million aggregate principal amount of 2026 convertible senior notes in November 2013.

Income Tax Expense. Our effective tax rate was 37.3% and 36.2% for 2014 and 2013, respectively. During 2014, our income tax expense primarily consisted of deferred taxes. Our income tax rate is different from the federal statutory rate primarily due to expected state tax liabilities and items not deductible for federal income tax purposes. The lower tax rate for 2013 was primarily attributable to the tax benefit taken in 2013 in connection with the re-pricing of the net deferred tax liabilities on the balance sheet as a result of the sale of the Downstream segment.

Income from Continuing Operations. Operating performance increased year-over-year by \$23.8 million for reported income from continuing operations of \$87.9 million for 2014 compared to \$64.1 million for 2013. Excluding the after-tax loss on early extinguishment of debt, income from continuing operations would have been \$80.2 million for the twelve months ended December 31, 2013 compared to \$87.9 million for the same period in 2014. This increase in

Table of Contents

income from continuing operations for 2014 was primarily due to higher operating income based on the full or partial-period contribution of 14 vessels placed in service under our fifth OSV newbuild program discussed above and a \$15.2 million decrease in net interest expense. Income from continuing operations for 2013 was adversely impacted by a \$25.8 million pre-tax loss on early extinguishment of debt in connection with the tender offer purchase and redemption of our 2017 senior notes.

Discontinued Operations. On August 29, 2013, we closed the sale of substantially all of our Downstream assets to Genesis Marine, LLC. As a result of this transaction, the current and historical operating results of these vessels for 2014 and 2013 have been restated and reflected as discontinued operations. Excluded from the sale were three older, lower-horsepower tugs considered to be non-core assets. During the twelve months ended December 31, 2014, these three tugs were sold for net cash proceeds of \$1.6 million. These sales resulted in a pre-tax gain of approximately \$0.9 million (\$0.6 million after-tax or \$0.02 per diluted share). Operating income during 2013 for this segment included a gain on sale of assets of approximately \$60.0 million (\$38.1 million after-tax or \$1.04 per diluted share).

The following table details financial highlights for fiscal years ended December 31, 2014, and 2013, respectively, related to our Downstream segment that was sold in August 2013 (in thousands):

	Year Ended December 31,	
	2014	2013
Revenue	\$ 12	\$43,318
Gain on sale of assets	867	60,076
Operating income	555	74,278
Income from discontinued operations, net of tax	618	47,315

Table of Contents

YEAR ENDED DECEMBER 31, 2013 COMPARED TO YEAR ENDED DECEMBER 31, 2012

Summarized financial information for the years ended December 31, 2013 and 2012, respectively, is shown below in the following table (in thousands, except percentage changes):

	Year Ended December 31,		Increase (Decrease)		
	2013	2012	\$ Change	% Change	
Revenues:					
Domestic	\$415,898	\$301,430	\$114,468	38.0	%
Foreign	132,247	161,879	(29,632)	(18.3))%
	548,145	463,309	84,836	18.3	%

Income from discontinued operations, net of tax	47,315	2,322	44,993	>100.0	%
Net income	\$111,393	\$37,017	\$74,376	>100.0	%

Revenues. Revenues for 2013 increased by \$84.8 million, or 18.3%, to \$548.1 million compared to \$463.3 million for 2012 due to improved Upstream market conditions. Our weighted-average active operating fleet for 2013 was approximately 54 vessels compared to 52 vessels for 2012. These higher revenues primarily resulted from increased demand for our high-spec OSVs, including four newly constructed vessels placed in service under our fifth OSV newbuild program, and MPSVs operating in the GoM. Vessels placed in-service under our fifth OSV newbuild program accounted for an \$11.8 million increase in revenues during 2013. Revenue from our four-vessel MPSV fleet increased by \$33.3 million, or 35.0%, for 2013 compared to 2012. Our new generation OSV average dayrates were \$26,605 for 2013 compared to \$23,445 for 2012, an increase of \$3,160, or 13.5%. Our new generation OSV utilization was 83.7% for 2013 compared to 83.2% for 2012. Domestic revenues increased by \$114.5 million during 2013 due to improved spot market activity in the GoM. Foreign revenues decreased by \$29.6 million primarily due to an average of four fewer vessels deployed to foreign regions during 2013 compared to 2012. Foreign revenues comprised 24.1% of our total revenues for 2013 compared to 34.9% for 2012.

Operating expenses. Operating expenses were \$239.2 million, an increase of \$12.8 million, or 5.6%, for 2013 compared to \$226.5 million for 2012. Newly constructed vessels placed in service during 2013 accounted for approximately \$7.3 million of the higher operating costs. The remaining increase in operating expenses was driven by an increase in the number of active vessels in our fleet during 2013 compared to 2012 and by the full-year impact of the April 2012 mariner wage increases on 2013 operating expenses. The increase in the number of active vessels in our fleet is primarily due to the partial-period contribution of four newly constructed vessels under our fifth OSV newbuild program.

Depreciation and Amortization. Depreciation and amortization expense was \$12.3 million, or 16.7%, higher for 2013 compared to 2012. This increase is primarily due to the contribution of four OSVs that were placed in service during 2013, as well as the higher cost basis of vessels redelivered to the Company under its 200 class OSV retrofit program. The increase in amortization is primarily due to a higher per-vessel average in shipyard costs for vessel regulatory drydockings given the shift in our fleet mix to a higher percentage of larger high-spec OSVs and MPSVs.

General and Administrative Expenses. General and administrative expenses of \$53.4 million increased by \$8 million, or 18.3%, during 2013 compared to 2012. This increase in G&A expenses was primarily the result of higher

Table of Contents

shoreside incentive compensation expense. General and administrative expenses as a percentage of revenues were 9.7% for 2013 compared to 9.8% for 2012.

Gain (Loss) on Sale of Assets. During 2013, we sold certain non-core marine assets that resulted in an aggregate gain of approximately \$1.6 million (\$1.0 million after-tax or \$0.03 per diluted share). During 2012, we sold certain non-core shoreside assets that resulted in an aggregate loss of approximately \$0.4 million (\$0.2 million after-tax or \$0.01 per diluted share). The gain on sale of our Downstream segment is reflected in discontinued operations.

Operating Income. Operating income increased by \$53.5 million to \$171.1 million during 2013 compared to 2012 for the reasons discussed above. Operating income as a percentage of revenues was 31.2% for 2013 compared to 25.4% for 2012.

Loss on Early Extinguishment of Debt. On March 14, 2013, we commenced a cash tender offer for all of the \$250.0 million in aggregate principal amount of our 2017 senior notes. Approximately 94% of such senior notes were validly tendered during the designated tender period, which ended on March 27, 2013. The remaining 2017 senior notes were redeemed on May 13, 2013. During 2013, we recorded a loss on early extinguishment of debt of approximately \$25.8 million (\$16.1 million after-tax or \$0.44 per diluted share), which was comprised of the tender offer costs, the write-off of unamortized financing costs and original issue discount, and a bond redemption premium. During 2012, we recorded an aggregate loss on early extinguishment of debt of approximately \$6.0 million (\$3.7 million after-tax or \$0.11 per diluted share) related to a similar tender offer for our 2014 senior notes.

Interest Expense. Interest expense decreased \$10.5 million during 2013 compared to 2012 primarily due to higher capitalized interest attributable to vessels under construction. During 2013, we capitalized interest of \$31.2 million, or roughly 40% of our total interest costs, compared to capitalized interest of \$11.0 million, or roughly 16% of our total interest costs, for 2012. This net decrease in interest expense, due to capitalized interest, was offset by the incurrence of \$16.6 million of incremental interest expense (including \$6.3 million of incremental original issue discount) related to the issuances of senior notes in March 2012 and March 2013, and convertible senior notes in August 2012. See "Liquidity and Capital Resources" for further discussion.

Interest Income. Interest income increased by \$0.3 million to \$2.5 million for 2013 compared to \$2.2 million for 2012. Our average cash balance increased to \$663.4 million for 2013 compared to \$500.8 million for 2012. The average interest rate earned on our invested cash balances was approximately 0.4% during the fiscal years ended December 31, 2013 and December 31, 2012, respectively. The increase in average cash balance was primarily due to the sale of our active Downstream fleet, which resulted in net cash proceeds of approximately \$227.5 million in the aggregate, after deal costs, and our March 2013 bond refinancing, which resulted in net cash proceeds of \$173.9 million.

Income Tax Expense. Our effective tax rate was 36.2% and 38.1% for 2013 and 2012, respectively. The lower tax rate for 2013 compared to 2012 was primarily attributable to the tax benefit taken in 2013 as a result of the re-pricing of the net deferred tax liabilities on the balance sheet as a result of the sale of the Downstream segment. During 2013, our income tax expense primarily consisted of deferred taxes. Our income tax rate is different from the federal statutory rate primarily due to expected state tax liabilities and items not deductible for federal income tax purposes.

Income from Continuing Operations. Operating performance increased year-over-year by \$29.4 million for reported income from continuing operations of \$64.1 million for 2013 compared to \$34.7 million for 2012. This increase in income from continuing operations for 2013 was primarily due to higher operating income based on improved market conditions discussed above and a \$10.5 million decrease in interest expense. Income from continuing operations for 2013 was adversely impacted by a \$25.8 million pre-tax loss on early extinguishment of debt.

Discontinued Operations. On August 29, 2013, we closed the sale of substantially all of our Downstream assets to Genesis Marine, LLC. As a result of this transaction, the current and historical operating results of these vessels for 2013 and 2012 have been restated and reflected as discontinued operations. Operating income for this segment included a gain on sale of assets of approximately \$60.0 million (\$38.1 million after-tax or \$1.04 per diluted share). During 2013, the operating financial performance of these vessels was favorably impacted by increased demand for movements of petroleum based products in the GoM.

Table of Contents

The following table details financial highlights for fiscal years ended December 31, 2013, and 2012, respectively, related to our Downstream segment that was sold in August 2013 (in thousands):

	Year Ended December 31,	
	2013	2012
Revenue	\$43,318	\$49,429
Gain on sale of assets	60,076	624
Operating income	74,278	3,663
Income from discontinued operations, net of tax	47,315	2,322
Liquidity and Capital Resources		

Our capital requirements have historically been financed with cash flows from operations, proceeds from issuances of our debt and common equity securities, borrowings under our credit facilities and cash received from the sale of assets. We require capital to fund on-going operations, remaining obligations under our expanded fifth OSV newbuild program, vessel recertifications, discretionary capital expenditures and debt service and may require capital to fund potential future vessel construction, retrofit or conversion projects, acquisitions or stock repurchases. The nature of our capital requirements and the types of our financing sources are not expected to change significantly for 2015. We have reviewed all of our debt agreements as well as our liquidity position and projected future cash needs. Despite volatility in commodity markets, we remain confident in our current financial position, the strength of our balance sheet and the short- and long-term viability of our business model. To date, our liquidity has not been materially impacted and we do not expect that it will be materially impacted in the near-future due to such volatility. We believe that our cash on-hand, projected operating cash flow and available borrowing capacity under our recently amended and extended revolving credit facility will be more than sufficient to operate the Company and meet all of its near-term obligations, including milestone construction payments for the contracted vessels under our expanded fifth OSV newbuild program.

As of December 31, 2014, we had total cash and cash equivalents of \$185.1 million. We also have a \$300 million revolving credit facility, expandable up to \$500 million, which is undrawn as of February 11, 2015. Excluding any cash requirements for potential new growth opportunities that may arise, our current cash on-hand and our internal cash flow projections indicate that our \$300 million revolving credit facility should be sufficient to meet our liquidity needs for the foreseeable future. As of December 31, 2014, we had posted letters of credit for \$0.8 million and had \$299.2 million of credit available under our revolving credit facility. The full undrawn credit amount of such facility is available for all uses of proceeds, including stock buy-backs and working capital, if necessary. However, the primary intended use of the facility is the potential future construction or acquisition of assets that generate additional EBITDA.

On October 28, 2014, our Board of Directors authorized us to repurchase up to \$150 million in shares of our common stock from time to time, \$25 million of which was used to buy-back 891,396 shares during the fourth quarter of 2014. Any future repurchases under this program will be funded from our cash on-hand, cash flow from operations and/or cash proceeds from the divestiture of non-core assets.

Although we expect to continue generating positive working capital through our operations, events beyond our control, such as a further significant decline in commodity prices, renewed regulatory-driven delays in the issuance of drilling plans and permits in the GoM, declines in expenditures for exploration, development and production activity, any extended reduction in domestic consumption of refined petroleum products and other reasons discussed under the Forward Looking Statements on page ii and "Item 1A—Risk Factors" of this Annual Report on Form 10-K, may affect our financial condition, results of operations or cash flows. None of our funded debt instruments mature any sooner than September 2019. Our currently undrawn revolving credit facility matures in February 2020, unless our 2020 senior notes remain outstanding on October 1, 2019, in which case the facility would mature on such date. See further discussion of these refinancing conditions in the Contractual Obligations section below.

Depending on the market demand for our vessels, long-term debt maturities and other growth opportunities that may arise, we may require additional debt or equity financing. We currently expect to generate sufficient cash flows from operations to meet our obligations under our fifth OSV newbuild program, commercial capital expenditures, scheduled recertifications of vessels and maintenance capital expenditures. We also currently expect to generate

sufficient cash from operating activities to pay our annually recurring cash debt service and re-pay our long-term debt upon maturity. However, it is possible that, due to events beyond our control, including those described in our Risk

Table of Contents

Factors, should such need for additional financing arise, we may not be able to access the capital markets on attractive terms at that time or otherwise obtain sufficient capital to meet our maturing debt obligations or finance growth opportunities that may arise. We will continue to closely monitor our liquidity position, as well as the state of the global capital and credit markets.

Cash Flows

Operating Activities. We rely primarily on cash flows from operations to provide working capital for current and future operations. Cash flows from operating activities were \$163.1 million in 2014, \$207.1 million in 2013, and \$128.9 million in 2012. Operating cash flows in 2014 were unfavorably affected by soft market conditions for our OSVs operating in the GoM, which were partially offset by an increase in the weighted-average number of vessels in our operating fleet. Cash flows from operations for 2014 reflect full or partial-period contributions from 14 vessels that were placed in service under our fifth OSV newbuild program on various dates during 2013 and 2014. Operating cash flows in 2013 were favorably affected by then improved market conditions for our high-spec OSVs and MPSVs operating in the GoM and, to a lesser extent, an increase in the weighted-average number of vessels in our operating fleet. Cash flows from operations for 2013 reflect partial-period contributions from four new generation OSVs that were delivered under our fifth OSV newbuild program. Operating cash flows in 2012 were favorably affected by an increase in our weighted-average active operating fleet and then improved market conditions. Cash flows from operations for 2012 reflect partial-period contributions from four new generation OSVs that were stacked during the prior year and were re-activated in 2012.

Investing Activities. Net cash used in investing activities was \$401.5 million in 2014, \$526.6 million in 2013, and \$255.3 million in 2012. Cash utilized during 2014 primarily consisted of construction costs incurred for our fifth OSV newbuild program and capital improvements made to our existing operating fleet, which were partially offset by approximately \$7.2 million in aggregate net cash proceeds from the sale of non-core assets. Cash utilized during 2013 primarily consisted of construction costs incurred for our fifth OSV newbuild program and capital improvements made to our existing operating fleet, which were partially offset by approximately \$16.0 million in aggregate net cash proceeds from the sale of non-core assets. Cash utilized during 2012 primarily consisted of construction costs incurred for our fifth OSV newbuild program and capital improvements made to our existing operating fleet, which were partially offset by approximately \$3.0 million in aggregate net cash proceeds from the sale of non-core assets.

Financing Activities. Net cash provided by (used in) financing activities was \$(19.7) million in 2014, \$(61.3) million in 2013, and \$334.4 million in 2012. Net cash used in financing activities for 2014 primarily resulted from the repurchase of our common stock. See Note 7 to our consolidated financial statements for further information regarding the common stock repurchase. Net cash used in financing activities for 2013 primarily resulted from the repurchase and retirement of our 2017 senior notes and the redemption of our 2026 convertible senior notes. These outflows were partially offset by the issuance of our 2021 senior notes. Net cash provided by financing activities for 2012 primarily resulted from the issuance of our 2020 senior notes and the issuance of our 2019 convertible senior notes.

On March 2, 2012, we commenced a tender offer and solicitation of consents relating to the repurchase of our existing 2014 senior notes. The tender offer expired on March 29, 2012. On March 2, 2012, we also completed the private placement of our 2020 senior notes, resulting in offering proceeds of approximately \$367.4 million, net of estimated transaction costs. In connection with the tender offer and related consent solicitation, we used \$259.9 million of such proceeds to repurchase approximately 84% of our outstanding \$300 million aggregate principal amount of 2014 senior notes. The \$47.8 million of remaining 2014 senior notes were redeemed on April 30, 2012. The remaining net proceeds were used for shipyard milestones relating to our 200 class OSV retrofit program and our fifth OSV newbuild program. As a result of the repurchase of the 2014 senior notes, we recorded a pre-tax loss on early extinguishment of debt of approximately \$6.0 million (\$3.7 million after-tax or \$0.11 per diluted share).

On August 13, 2012, we completed the private placement of \$300.0 million in aggregate principal amount of 2019 convertible senior notes, which generated net cash proceeds of \$266.0 million. These 2019 convertible senior notes have a cash coupon of 1.500% and a conversion price of 37.5% higher than the closing stock price on August 7, 2012 of \$39.16. In conjunction with this offering, we also entered into separate convertible senior note hedge transactions that increased the conversion price from \$53.85 to \$68.53. After funding the 2019 convertible senior note hedge

transactions, the remaining proceeds, along with other available sources of cash, were used to retire the outstanding 2026 convertible senior notes that were called by the Company in November 2013.

On March 14, 2013, we commenced a tender offer and solicitation of consents relating to the repurchase of our existing 2017 senior notes. The tender offer expired on April 10, 2013. On March 28, 2013, we also completed the private placement of \$450 million of 2021 senior notes, resulting in offering proceeds of approximately \$442.4 million,

Table of Contents

net of estimated transaction costs. In connection with the tender offer, related consent solicitation, and related redemption, we used \$269.3 million of such proceeds to repurchase approximately all of our outstanding \$250 million aggregate principal amount of 2017 senior notes. As a result of the repurchase of the 2017 senior notes, we recorded a pre-tax loss on early extinguishment of debt of approximately \$25.8 million (\$16.1 million after-tax or \$0.44 per diluted share).

On November 15, 2013, we completed the conversion and redemption of all of our outstanding \$250 million aggregate principal amount of 2026 convertible senior notes. We elected to redeem the 2026 convertible senior notes on November 15, 2013, or the Redemption Date, at a redemption price of 100% of the principal amount thereof and accrued and unpaid interest to, but excluding, the Redemption Date. Holders of approximately \$249.6 million in aggregate principal amount of the 2026 convertible senior notes elected to convert prior to the previously announced redemption date of November 15, 2013. The conversions of the 2026 convertible senior notes were settled based on the applicable conversion rate of 20.6260 shares of our common stock per \$1,000 principal amount of notes, which equates to a conversion price of \$48.48 per share, and on the volume-weighted average price of our common stock during the Observation Period (as defined in the Indenture governing the 2026 convertible senior notes) of October 8, 2013 through November 11, 2013. We satisfied our conversion obligations to holders by paying cash equal to the aggregate principal amount of the 2026 convertible senior notes converted and delivering shares of our common stock in settlement of all conversion obligations in excess of the principal amount (except that we paid cash in lieu of issuing fractional shares). In total, we delivered 728,411 shares of our common stock to the converting holders, which were provided to us by the counterparties to the previously disclosed convertible note hedge transactions entered into in 2006 concurrently with the pricing of the 2026 convertible senior notes. This prevented the equity dilution that would otherwise have resulted from the share delivery requirements of the conversion. The number of shares of our common stock outstanding after the conversion was the same as immediately prior to the conversion. The remaining \$0.4 million in aggregate principal amount of the 2026 convertible senior notes was redeemed on November 15, 2013 at a redemption price of 100% of the principal amount thereof plus accrued and unpaid interest to, but excluding, the Redemption Date. The cash payment obligations related to the conversion and redemption were funded with cash on-hand.

Discontinued Operations. Net cash provided by discontinued operations was \$4.0 million in 2014, \$244.1 million in 2013, and \$12.1 million in 2012. Net cash provided by discontinued operations in 2014 primarily resulted from the sale of our final three older, lower-horsepower tugs. Net cash provided by discontinued operations in 2013 primarily resulted from the sale of substantially all of the assets related to the Downstream segment to Genesis Marine, LLC for approximately \$230 million in gross cash proceeds. The proceeds from the asset sale have been reinvested in the construction of vessels under our fifth OSV newbuild program. Net cash provided by discontinued operations in 2012 primarily resulted from operations of the Downstream segment.

Commitments and Contractual Obligations

The following table sets forth our aggregate contractual obligations as of December 31, 2014 (in thousands).

Contractual Obligations	Total	Less than 1 Year	1-3 Years	3-5 Years	Thereafter
Vessel construction commitments ⁽¹⁾	\$232,609	\$198,706	\$33,903	\$—	\$—
5.000% senior notes due 2021 ⁽²⁾	450,000	—	—	—	450,000
5.875% senior notes due 2020 ⁽³⁾	375,000	—	—	—	375,000
1.500% convertible senior notes due 2019 ⁽⁴⁾	300,000	—	—	300,000	—
Interest payments ⁽⁵⁾	289,923	49,031	98,063	98,063	44,766
Operating leases ⁽⁶⁾	41,958	2,928	4,623	4,765	29,642
Total	\$1,689,490	\$250,665	\$136,589	\$402,828	\$899,408

Vessel construction commitments reflect contractual milestone payments for our fifth OSV newbuild program. The total project costs for the currently contracted 24-vessel program are expected to be \$1,265.0 million, excluding capitalized construction period interest. From the inception of this program through December 31, 2014, we have incurred \$1,032.4 million, or 81.6%, of total expected project costs.

- (2) Our 2021 senior notes, with a fixed interest rate of 5.000% per year, mature on March 1, 2021.
- (3) Our 2020 senior notes, with a fixed interest rate of 5.875% per year, mature on April 1, 2020.
Our 2019 convertible senior notes, with a fixed interest rate of 1.500% per year, mature on September 1, 2019 and currently include \$51,528 of non-cash original issue discount. Holders of the convertible senior notes may require
- (4) that such notes be repurchased at their option pursuant to certain types of corporate transactions described in Note 6 of our consolidated financial statements included herein. The debt maturities reflected in the table above assume that the holders of our convertible senior notes do not require that such notes be repurchased prior to their maturity in September 2019.

Table of Contents

Interest payments relate to our 2021 senior notes due March 1, 2021, our 2020 senior notes due April 1, 2020 and (5) our 2019 convertible senior notes due September 1, 2019 with semi-annual interest payments of \$11.3 million payable March 1 and September 1, \$11.0 million payable April 1 and October 1, and \$2.3 million payable March 1 and September 1, respectively. Non-cash interest expense has been excluded from the table above.

(6) Included in operating leases are commitments for a shore-base port facility, office space, office equipment and vehicles. See “Item 2—Properties” for additional information regarding our leased office space and other facilities.

Debt

As of December 31, 2014, the Company had the following outstanding long-term debt (in thousands, except effective interest rate):

	Total Debt	Effective Interest Rate	Semi-Annual Cash Interest Payment	Payment Dates
5.875% senior notes due 2020 (1)	\$375,000	6.08 %	\$ 11,000	April 1 and October 1
5.000% senior notes due 2021 (1)	450,000	5.21 %	11,300	March 1 and September 1
1.500% convertible senior notes due 2019, net of original issue discount of \$51,528	248,472	6.23 %	2,300	March 1 and September 1
	\$1,073,472			

The senior notes do not require any payments of principal prior to their stated maturity dates, but pursuant to the (1) indentures under which the 2020 and 2021 senior notes were issued, we would be required to make offers to purchase such senior notes upon the occurrence of specified events, such as certain asset sales or a change in control.

On February 6, 2015, we amended and extended our revolving credit facility to extend the maturity date, modify covenants and reduce the collateral coverage of such facility. The \$300.0 million revolving credit facility remains undrawn as of February 11, 2015. With the revolving credit facility, we have the option of borrowing at a variable rate of interest equal to (i) London Interbank Offered Rate, or LIBOR, plus a margin of 2.0% to 3.0% or (ii) the greatest of the Prime Rate, the Federal Funds Effective Rate plus 1/2 of 1% or LIBOR, plus 1.0%; plus in each case an applicable margin. The applicable margin for each base rate is determined by a pricing grid, which is based on a new total debt-to-capitalization ratio, as defined in the credit agreement governing the revolving credit facility, as amended. The applicable LIBOR margin for the amended revolving credit facility ranges from 200 to 300 basis points. Unused commitment fees are payable quarterly at the annual rate of 37.5 to 50.0 basis points of the unused portion of the borrowing base of the new revolving credit facility, based on the defined total debt-to-capitalization ratio. For additional information with respect to our revolving credit facility, our 2020 senior notes, our 2021 senior notes, and our 2019 convertible senior notes, please refer to Note 6 of our consolidated financial statements included herein. The credit agreement governing the revolving credit facility and the indentures governing our 2020 senior notes and 2021 senior notes impose certain operating and financial restrictions on us. Such restrictions affect, and in many cases limit or prohibit, among other things, our ability to incur additional indebtedness, make capital expenditures, redeem equity, create liens, sell assets and make dividend or other restricted payments. For the quarter ended December 31, 2014, we were in compliance with all of our debt covenants. We continuously review our debt covenants and report to our lenders our compliance with financial ratios on a quarterly basis. We also consider such covenants in evaluating transactions that will have an effect on our financial ratios.

Capital Expenditures and Related Commitments

The following table sets forth the amounts incurred for our fifth OSV newbuild program, before construction period interest, during the year ended December 31, 2014 and since such program’s inception, as well as the estimated total project costs for such program (in millions):

For the Year	Incurred	Estimated	Projected
--------------	----------	-----------	-----------

Edgar Filing: HORNBECK OFFSHORE SERVICES INC /LA - Form ARS

	Ended December 31, 2014	Since Inception	Program Totals ⁽¹⁾	Delivery Dates ⁽¹⁾
Growth Capital Expenditures: OSV Newbuild Program #5 ⁽²⁾	\$315.9	\$1,032.4	\$1,265.0	2Q2013-4Q2016

Estimated Program Totals and Projected Delivery Dates are based on internal estimates and are subject to change due to delays and possible cost overruns inherent in any large construction project, including, without limitations, shortages of equipment, lack of shipyard availability, unforeseen engineering problems, work stoppages, weather interference, unanticipated cost increases, the inability to obtain necessary certifications and approvals and shortages of materials, component equipment or skilled labor. All of the above historical and budgeted capital expenditure project amounts for our newbuild program represent estimated cash outlays and do not include any allocation of capitalized construction period interest.

Table of Contents

Projected delivery dates correspond to the first and last vessels that are contracted with shipyards for construction and delivery under our currently active program, respectively.

Our fifth OSV newbuild program consists of vessel construction contracts with three domestic shipyards to build four 300 class OSVs, five 310 class OSVs, ten 320 class OSVs and five 310 class MPSVs. As of February 11, (2) 2015, we had placed 16 vessels in service under such program. The remaining eight vessels under this 24-vessel domestic newbuild program are currently expected to be placed in service as follows: five in the remainder of 2015 and three in 2016. Please refer to Our Vessels on page 6 of this Form 10-K for more information about vessel names and placed-in-service dates.

The following table summarizes the costs incurred, prior to the allocation of construction period interest, for the purposes set forth below for the years ended December 31, 2014, 2013, and 2012, and a forecast for the fiscal year ending December 31, 2015 (in millions):

	Year Ended December 31,			
	2015 Forecast	2014 Actual	2013 Actual	2012 Actual
Maintenance and Other Capital Expenditures:				
Maintenance Capital Expenditures				
Deferred drydocking charges ⁽¹⁾	\$19.6	\$43.6	\$35.9	\$39.2
Other vessel capital improvements ⁽²⁾	6.2	23.7	10.9	9.2
	25.8	67.3	46.8	48.4
Other Capital Expenditures				
200 class OSV retrofit program ⁽³⁾	—	0.1	48.0	2.3
Commercial-related vessel improvements ⁽⁴⁾	35.7	31.3	14.7	3.1
Miscellaneous non-vessel additions ⁽⁵⁾	30.9	9.6	3.9	3.3
	66.6	41.0	66.6	8.7
Total:	\$92.4	\$108.3	\$113.4	\$57.1

(1) Deferred drydocking charges for 2015 include the projected recertification costs for 9 OSVs.

(2) Other vessel capital improvements include costs for discretionary vessel enhancements, which are typically incurred during a planned drydocking event to meet customer specifications.

Our 200 class OSV retrofit program consisted of a vessel construction contract with a domestic shipyard to (3) upgrade and stretch six of our Super 200 class DP-1 OSVs converting them into 240 class DP-2 OSVs. The total project costs for such program, which commenced in December 2012 and was completed in November 2013, was \$50.4 million. These vessel improvement costs have resulted in higher dayrates charged to customers.

Commercial-related vessel improvements include items, such as cranes, ROVs, helidecks, living quarters, and (4) other specialized vessel equipment which costs are typically included in and offset, in whole or in part, by higher dayrates charged to customers.

(5) Non-vessel capital expenditures are primarily related to information technology and shore-side support initiatives.

Inflation

To date, general inflationary trends have not had a material effect on our operating revenues or expenses.

Item 7A—Quantitative and Qualitative Disclosures About Market Risk

We have not entered into any derivative financial instrument transactions to manage or reduce market risk or for speculative purposes, other than the convertible note hedge and warrant transactions entered into concurrently with our convertible note offerings in August 2012. Such transactions were entered into to mitigate the potential dilutive effect of the conversion feature of the convertible notes on our common stock. A hypothetical 25% change from our closing share price of \$24.97 to \$31.21 as of December 31, 2014 would not have had an impact on such warrant transactions because the strike price of the warrants associated with the convertible notes is \$68.53.

Changes in interest rates may result in changes in the fair market value of our financial instruments, interest income and interest expense. Our financial instruments that are exposed to interest rate risk are cash equivalents and long-term

borrowings. Due to the short duration and conservative nature of our cash equivalent investment portfolio, we do not expect any material loss with respect to our investments. The book value for cash equivalents is considered to be representative of its fair value. A hypothetical 10% change in interest rates as of December 31, 2014 would have had no material impact on such investments, interest income or interest expense.

Changes in interest rates would not impact the interest expense for our long-term fixed interest rate 2020 senior notes, 2021 senior notes, and 2019 convertible senior notes. However, changes in interest rates would impact the fair market value of such notes. In general, the fair value of debt with a fixed interest rate will increase as interest rates fall.

Conversely, the fair value of debt will decrease as interest rates rise. The currently outstanding 2020 senior notes accrue interest at a rate of 5.875% per annum and mature on April 1, 2020 and the effective interest rate on such notes is 6.08%.

Table of Contents

The currently outstanding 2021 senior notes accrue interest at the rate of 5.000% per annum and mature on March 1, 2021 and the effective interest rate on such notes is 5.21%. Our outstanding 2019 convertible senior notes accrue interest at the rate of 1.500% and mature on September 1, 2019. The effective interest rate on such notes, after taking into account the accretion of imputed original issue discount, is 6.23%.

In connection with our 2019 convertible senior notes, we are a party to outstanding convertible note hedge transactions with respect to our common stock. The counterparties to such transactions are Barclays Bank PLC; JP Morgan Chase Bank, National Association, London Branch; and Wells Fargo Bank, National Association. We are not currently aware of any collection issues with regard to any of these counterparties.

We estimate the fair value of our 2020 senior notes, 2021 senior notes and 2019 convertible senior notes, all of which are publicly traded, by using quoted market prices. The fair value of our undrawn revolving credit facility, when there are outstanding balances, approximates its carrying value. The face value, carrying value and fair value of our total debt was \$1,125.0 million, \$1,073.5 million and \$955.0 million, respectively, as of December 31, 2014.

As of December 31, 2014, we had no amounts outstanding under our variable interest rate revolving credit facility. Therefore it is not subject to interest rate risk.

We have operations in international markets, which include two of our primary geographic regions of Brazil and Mexico. As of December 31, 2014, we had time charters for 19 of our vessels working in foreign markets. Although most of our time charter contracts are denominated U.S. Dollars, we do collect time charter payments and value added tax, or VAT, payments in local currencies for four vessels, which creates an exchange risk related to currency fluctuations. We also frequently acquire other vessel equipment for our active vessels that are denominated in foreign currencies, which creates an exchange risk to foreign currency fluctuations related to the payment terms of such commitments or purchases. To date, we have not hedged against any foreign currency rate fluctuations associated with foreign currency VAT payments or other foreign currency denominated transactions arising in the normal course of business. We continually monitor the currency exchange risks associated with conducting international operations. To date, gains or losses associated with such fluctuations have not been material. However, as we further expand our operations in international markets, we may become exposed to certain risks typically associated with foreign currency fluctuation.

Item 8—Financial Statements and Supplementary Data

The financial statements and supplementary information required by this Item appear on pages F-1 through F-29 of this Annual Report on Form 10-K.

Item 9—Changes in and Disagreements with Accountants on Accounting and Financial Disclosures

None.

Item 9A—Controls and Procedures

Disclosure Controls and Procedures

Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of our disclosure controls and procedures (as such term is defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the “Exchange Act”)) as of the end of the period covered by this report. Based on that evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of the end of such period, our disclosure controls and procedures were effective to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission’s rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosures.

Management’s Report on Internal Control Over Financial Reporting

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rule 13(a)-15(f) or Rule 15d-15(f) under the Exchange Act. Internal control over financial reporting is a process to provide reasonable assurance regarding the reliability of our financial reporting for

Table of Contents

external purposes in accordance with U.S. generally accepted accounting principles. Internal control over financial reporting includes maintaining records that, in reasonable detail, accurately and fairly reflect our transactions; providing reasonable assurance that transactions are recorded as necessary for preparation of our financial statements in accordance with U.S. generally accepted accounting principles; providing reasonable assurance that receipts and expenditures of company assets are made in accordance with authorizations of the Company's management and board of directors; and providing reasonable assurance that unauthorized acquisition, use or disposition of company assets that could have a material effect on our financial statements would be prevented or detected on a timely basis. Because of its inherent limitations, internal control over financial reporting is not intended to provide absolute assurance that a misstatement of our financial statements would be prevented or detected. In addition, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2014, utilizing the criteria set forth in the report entitled Internal Control—Integrated Framework issued in 2013 by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based upon such assessment, our management concluded that our internal control over financial reporting was effective as of December 31, 2014.

Ernst & Young LLP, an independent registered public accounting firm, who audited our consolidated financial statements included in this Form 10-K, has issued an attestation report on our internal control over financial reporting which is included herein.

There were no changes in our internal controls over financial reporting that occurred during the year ended December 31, 2014 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of
Hornbeck Offshore Services, Inc.

We have audited Hornbeck Offshore Services, Inc.'s internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) (the COSO criteria). Hornbeck Offshore Services, Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Hornbeck Offshore Services, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Hornbeck Offshore Services, Inc. and subsidiaries as of December 31, 2014 and 2013, and the related consolidated statements of operations, comprehensive income (loss), changes in stockholders' equity and cash flows for each of the three years in the period ended December 31, 2014 of Hornbeck Offshore Services, Inc. and our report dated February 25, 2015 expressed an unqualified opinion thereon.

Item 9B—Other Information

Glossary of Terms

"2014 senior notes" or "2014 notes" means 6.125% senior notes due 2014;

"2017 senior notes" or "2017 notes" means 8.000% senior notes due 2017;

"2019 convertible senior notes" or "2019 notes" means 1.500% convertible senior notes due 2019;

"2020 senior notes" or "2020 notes" means 5.875% senior notes due 2020;

"2021 senior notes" or "2021 notes" means 5.000% senior notes due 2021;

"2026 convertible senior notes" or "2026 notes" means 1.625% convertible senior notes due 2026;

"AHTS" means anchor-handling towing supply;

"ASC" means Financial Accounting Standards Board Accounting Standards Codification;

"average dayrate" means, when referring to OSVs or MPSVs, average revenue per day, which includes charter hire, crewing services and net brokerage revenues, based on the number of days during the period that the OSVs or MPSVs, as applicable, generated revenue. For purposes of vessel brokerage arrangements, this calculation excludes that portion of revenue that is equal to the cost of in-chartering third-party equipment paid by customers;

"BOEM" means the Bureau of Ocean Energy Management;

"BSEE" means the Bureau of Safety and Environmental Enforcement;

"cabotage laws" means laws pertaining to the privilege of operating vessels in the navigable waters of a nation;

"coastwise trade" means the transportation of merchandise or passengers by water, or by land and water, between points in the United States, either directly or via a foreign port;

"conventional" means, when referring to OSVs, vessels that are at least 30 years old, are generally less than 200' in length or carry less than 1,500 deadweight tons of cargo when originally built and primarily operate, when active, on the continental shelf;

"deepwater" means offshore areas, generally 1,000' to 5,000' in depth;

"Deepwater Horizon incident" means the subsea blowout and resulting oil spill at the Macondo well site in the GoM in April 2010 and subsequent sinking of the Deepwater Horizon drilling rig;

"deep-well" means a well drilled to a true vertical depth of 15,000' or greater, regardless of whether the well was drilled in the shallow water of the Outer Continental Shelf or in the deepwater or ultra-deepwater;

"DOI" means U.S. Department of the Interior and all its various sub-agencies, including effective October 1, 2011 the Bureau of Ocean Energy Management ("BOEM"), which handles offshore leasing, resource evaluation, review and administration of oil and gas exploration and development plans, renewable energy development, National Environmental Policy Act analysis and environmental studies, and the Bureau of Safety and Environmental Enforcement ("BSEE") which is responsible for the safety and enforcement functions of offshore oil and gas operations, including the development and enforcement of safety and environmental regulations, permitting of offshore exploration, development and production activities, inspections, offshore regulatory programs, oil spill response and newly formed training and environmental compliance programs; BOEM and BSEE being successor entities to the Bureau of Ocean Energy Management, Regulation and Enforcement ("BOEMRE"), which effective June 2010 was the successor entity to the Minerals Management Service;

"domestic public company OSV peer group" includes Gulfmark Offshore, Inc. (NYSE:GLF), SEACOR Holdings Inc. (NYSE:CKH) and Tidewater Inc. (NYSE:TDW);

Table of Contents

“DP-1”, “DP-2” and “DP-3” mean various classifications of dynamic positioning systems on new generation vessels to automatically maintain a vessel’s position and heading through anchor-less station-keeping;

“DWT” means deadweight tons;

“effective dayrate” means the average dayrate multiplied by the average utilization rate;

“EIA” means the U.S. Energy Information Administration;

“EPA” means United States Environmental Protection Agency;

“flotel” means on-vessel accommodations services, such as lodging, meals and office space;

“GAAP” means United States generally accepted accounting principles;

“GoM” means the U.S. Gulf of Mexico;

“high-specification” or “high-spec” means, when referring to new generation OSVs, vessels with cargo-carrying capacity of greater than 2,500 DWT (i.e., 240 class OSV notations or higher), and dynamic-positioning systems with a DP-2 classification or higher; and, when referring to jack-up drilling rigs, rigs capable of working in 400-ft. of water depth or greater, with hook-load capacity of 2,000,000 lbs. or greater, with cantilever reach of 70-ft. or greater; and minimum quarters capacity of 150 berths or more and dynamic-positioning systems with a DP-2 classification or higher;

“IHS-CERA” means the division of IHS Inc. focused on providing knowledge and independent analysis on energy markets, geopolitics, industry trends and strategy;

“IHS-Petrodata” means the division of IHS Inc. focused on providing data, information, and market intelligence to the offshore energy industry;

“IRM” means inspection, repair and maintenance, also known as “IMR,” or inspection, maintenance and repair, depending on regional preference;

“Jones Act” means the U.S. cabotage law known as the Merchant Marine Act of 1920, as amended;

“Jones Act-qualified” means, when referring to a vessel, a U.S.-flagged vessel qualified to engage in domestic coastwise trade under the Jones Act;

“long-term contract” means a time charter of one year or longer in duration;

“Macondo” means the well site location in the deepwater GoM where the Deepwater Horizon incident occurred as well as such incident itself;

“MPSV” means a multi-purpose support vessel;

“MSRC” means the Marine Spill Response Corporation;

“new generation” means, when referring to OSVs, modern, deepwater-capable vessels subject to the regulations promulgated under the International Convention on Tonnage Measurement of Ships, 1969, which was adopted by the United States and made effective for all U.S.-flagged vessels in 1992 and foreign-flagged equivalent vessels;

“OPA 90” means the Oil Pollution Act of 1990;

“OSV” means an offshore supply vessel, also known as a “PSV,” or platform supply vessel, depending on regional preference;

“PEMEX” means Petroleos Mexicanos;

“Petrobras” means Petroleo Brasileiro S.A.;

“public company OSV peer group” means SEACOR Holdings Inc. (NYSE:CKH), GulfMark Offshore, Inc. (NYSE:GLF), Tidewater Inc. (NYSE:TDW), Farstad Shipping (NO:FAR), Solstad Offshore (NO:SOFF), Deep Sea Supply

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders

Hornbeck Offshore Services, Inc.

We have audited the accompanying consolidated balance sheets of Hornbeck Offshore Services, Inc. and subsidiaries as of December 31, 2014 and 2013, and the related consolidated statements of operations, comprehensive income (loss), changes in stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2014. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Hornbeck Offshore Services, Inc. and subsidiaries at December 31, 2014 and 2013, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2014, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Hornbeck Offshore Services, Inc.'s internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) and our report dated February 25, 2015 expressed an unqualified opinion thereon.

Table of Content

HORNBECK OFFSHORE SERVICES, INC. AND SUBSIDIARIES
 NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Organization

Nature of Operations

Hornbeck Offshore Services, Inc., or the Company, was incorporated in the state of Delaware in 1997. The Company, through its subsidiaries, operates offshore supply vessels, or OSVs, multi-purpose support vessels, or MPSVs, and a shore-base facility to provide logistics support and specialty services to the offshore oil and gas exploration and production industry, primarily in the U.S. Gulf of Mexico, or GoM, Latin America and select international markets. All significant intercompany accounts and transactions have been eliminated. Certain reclassifications associated with discontinued operations have been made to prior period results to conform to current year presentation. As discussed further in Note 13, the Company sold substantially all of its Downstream assets in August 2013.

2. Summary of Significant Accounting Policies

Revenue Recognition

The Company charters its OSVs and MPSVs to clients under time charters based on a daily rate of hire and recognizes revenue as earned on a daily basis during the contract period of the specific vessel.

Deferred revenue represents payments received from customers or billings submitted to customers in advance of providing vessel access through time charters or other contracted arrangements.

Cash and Cash Equivalents

Cash and cash equivalents consist of all highly liquid investments in money market funds, deposits and investments available for current use with an initial maturity of three months or less.

Accounts Receivable

Accounts receivable consists of trade receivables net of reserves and amounts to be rebilled to customers.

Property, Plant and Equipment

Property, plant and equipment is recorded at cost. Depreciation and amortization of equipment and leasehold improvements are computed using the straight-line method based on the estimated useful lives of the related assets. Major modifications and improvements, which extend the useful life of the vessel, are capitalized and amortized over the remaining useful life of the vessel. Gains and losses from retirements or other dispositions are recognized as incurred. Salvage values for new generation marine equipment are estimated to be 25% of the originally recorded cost. The estimated useful lives by classification are as follows:

Offshore supply vessels	25 years
Multi-purpose support vessels	25 years
Non-vessel related property, plant and equipment	3-28 years

See “Impairment of Long-Lived Assets” below for more information.

Deferred Charges

The Company’s vessels are required by regulation to be recertified after certain periods of time. The Company defers the drydocking expenditures incurred due to regulatory marine inspections and amortizes the costs on a straight-line basis over the period to be benefited from such expenditures (generally 30 months). Financing charges are amortized over the term of the related debt.

Table of Contents

HORNBECK OFFSHORE SERVICES, INC. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Deferred charges also include prepaid lease expenses related to the Company's shore-base port facility. Such prepaid lease expenses are being amortized on a straight-line basis over the effective remaining term of the lease.

Mobilization Costs

The Company incurs mobilization costs to transit its vessels to and from certain regions and/or for long-term contracts. These costs, which are typically expensed as incurred, include, but are not limited to, fuel, crew wages, vessel modification and pre-positioning expenses, materials and supplies and importation taxes. The Company incurred mobilization costs of \$1.5 million, \$2.7 million and \$1.4 million during 2014, 2013 and 2012, respectively, associated with the mobilization and pre-positioning of vessels to or from different geographic locations.

Income Taxes

Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases.

Deferred tax assets and liabilities are measured using currently enacted tax rates. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date. The provision for income taxes includes provisions for federal, state and foreign income taxes. Interest and penalties relating to uncertain tax positions are recorded as general and administrative expenses. In addition, the Company provides a valuation allowance for deferred tax assets if it is more likely than not that such items will either expire before the Company is able to realize the benefit or the future deductibility is uncertain. As a result of the sale of the Downstream segment during the third quarter of 2013, the Company believed that certain state operating loss carryforwards would not be realizable and thus recorded a valuation allowance of \$0.9 million for the year ended December 31, 2013. During the third quarter of 2014, the Company recorded an additional \$0.1 million related to these state operating losses. No valuation allowances were recorded for the year ended December 31, 2012.

Use of Estimates

The preparation of financial statements in conformity with United States generally accepted accounting principles requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates.

Legal Liabilities

In the ordinary course of business, the Company may become party to lawsuits, administrative proceedings, or governmental investigations. These matters may involve large or unspecified damages or penalties that may be sought from the Company and may require years to resolve. The Company records a liability related to a loss contingency to such legal matters in accrued liabilities if the Company determines the loss to be both probable and estimable. The liability is recorded for an amount that is management's best estimate of the loss, or when a best estimate cannot be made, the minimum loss amount of a range of possible outcomes. Significant judgment is required in estimating such liabilities, the results of which can vary significantly from the actual outcomes of lawsuits, administrative proceedings or governmental investigations.

Concentration of Credit Risk

Customers are primarily major and independent, domestic and international, oil and oil service companies, as well as national oil companies and the U.S. military. The Company's customers are granted credit on a short-term basis and related credit risks are considered minimal. The Company usually does not require collateral. The Company provides an estimate for uncollectible accounts based primarily on management's judgment using the relative age of customer balances, historical losses, current economic conditions and individual evaluations of each customer to make adjustments to the allowance for doubtful accounts.

Table of ContentsHORNBECK OFFSHORE SERVICES, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

The following table represents the allowance for doubtful accounts (in thousands):

	December 31,		
	2014	2013	2012
Balance, beginning of year	\$3,411	\$3,028	\$1,253
Changes to provision	282	383	1,775
Balance, end of year	\$3,693	\$3,411	\$3,028

Impairment of Long-Lived Assets

When events or circumstances indicate that the carrying amount of long-lived assets to be held and used or intangible assets might not be recoverable, the expected future undiscounted cash flows from the assets are estimated and compared with the carrying amount of the assets. If the sum of the estimated undiscounted cash flows is less than the carrying amount of the assets, an impairment loss is recorded. The impairment loss is measured by comparing the fair value of the assets with their carrying amounts. Fair value is determined based on discounted cash flow or appraised values, as appropriate. No triggering events occurred in 2014, 2013 or 2012 and the Company did not record any impairment losses related to its long-lived assets during these periods. The Company's review gave consideration to the current market conditions, which include the recent commodity price decline and reduction in certain projected 2015 capital budgets for its customers. While the Company expects this environment to have a negative impact on vessel utilization and dayrates, the Company views the deepwater and ultra deepwater projects of its customers, which is the principal market for its vessel fleet, to be somewhat insulated from commodity price cycles compared to onshore shale and shallow shelf offshore exploration and production activities. However, continued commodity price declines or protracted extensions of the current price cycle could result in additional delays or cancellations of deepwater projects, which is a major indicator of fleet utilization. Should this occur, the Company will update its analysis of whether a triggering event has occurred.

Recent Accounting Pronouncements

On May 28, 2014, the Financial Accounting Standards Board, or FASB, issued Accounting Standards Update (ASU) No. 2014-09, "Revenue from Contracts with Customers" (Topic 606), which supersedes the revenue recognition requirements in FASB Accounting Standard Codification (ASC) Topic 605, "Revenue Recognition." ASU No. 2014-09 requires entities to recognize revenue in a way that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. ASU 2014-09 requires retrospective application and will be effective for financial statements issued for fiscal years beginning after December 15, 2016, and interim periods within those fiscal years. Early application is not permitted. The Company is evaluating the effect of this new standard on its financial statements.

Table of Contents

HORNBECK OFFSHORE SERVICES, INC. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

3. Earnings Per Share

Basic earnings per common share was calculated by dividing net income by the weighted average number of common shares outstanding during the period. Diluted earnings per common share was calculated by dividing net income by the weighted average number of common shares outstanding during the year plus the effect of dilutive securities. Weighted average number of common shares outstanding was calculated by using the sum of the shares determined on a daily basis divided by the number of days in the period. The table below reconciles the company's earnings per share (in thousands, except for per share data):

	Year Ended December 31,		
	2014	2013	2012

Diluted earnings per common share from continuing operations	\$2.40	\$1.76	\$0.97
Diluted earnings per common share from discontinued operations	0.01	1.29	0.06
Diluted earnings per common share	\$2.41	\$3.05	\$1.03

(1) Income from continuing operations for the year ended December 31, 2013 includes a pre-tax loss on early extinguishment of debt of \$25.8 million. Income from continuing operations for the year ended December 31, 2012 includes a pre-tax loss on early extinguishment of debt of \$6.0 million. See Note 6 for further information regarding the Company's debt.

(2) On August 29, 2013, the Company closed the sale of its Downstream segment. See Note 13 for further discussion of this transaction.

(3) The Company had no anti-dilutive stock options for the years ended December 31, 2014, 2013 and 2012. Stock options are anti-dilutive when the exercise price of the options is greater than the average market price of the common stock for the period or when the results from operations are a net loss.

(4) For the year ended December 31, 2012, the 2026 convertible senior notes retired in November 2013 were not dilutive and for the years ended December 31, 2014, 2013 and 2012 the 2019 convertible senior notes issued in August 2012 were not dilutive, as the average price of the Company's stock was less than the effective conversion price of such notes. It is the Company's stated intention to redeem the principal amount of our 2019 convertible senior notes in cash and the Company has used the treasury method for determining potential dilution in the diluted earnings per share computation. See Note 6 for further information.

(5) Dilutive restricted stock is expected to fluctuate from quarter to quarter depending on the Company's performance compared to a predetermined set of performance criteria. See Note 8 for further information regarding certain of the Company's restricted stock awards.

4. Defined Contribution Plan

The Company offers a 401(k) plan to all full-time employees. Employees must be at least eighteen years of age and have completed three months of service to be eligible for participation. Participants may elect to defer up to 60% of

their compensation, subject to certain statutorily established limits. The Company may elect to make annual matching and profit sharing contributions to the 401(k) plan. During the years ended December 31, 2014, 2013 and 2012, the Company made contributions to the 401(k) plan of approximately \$6.0 million, \$5.2 million, and \$4.0 million, respectively. In response to weak market conditions, the Company temporarily ceased matching contributions to the 401(k) plan effective January 1, 2015.

5. Property, Plant and Equipment

Property, plant and equipment consisted of the following (in thousands):

	December 31,	
	2014	2013
Offshore supply vessels and multi-purpose support vessels	\$2,283,883	\$1,754,412
Non-vessel related property, plant and equipment	104,789	102,136
Less: Accumulated depreciation	(390,774) (324,630
	1,997,898	1,531,918
Construction in progress	461,588	593,456
	\$2,459,486	\$2,125,374

In November 2011, the Company announced, and has since expanded, its fifth OSV newbuild program. The program consists of vessel construction contracts with three domestic shipyards to build four 300 class OSVs, five 310 class OSVs, ten 320 class OSVs and five 310 class MPSVs. As of December 31, 2014, the Company has placed 14 vessels in-service under its fifth newbuild program. Subsequent to year-end, the Company placed in service two additional vessels under such program. The eight remaining vessels under this 24-vessel domestic newbuild program are currently expected to be placed in service as follows: five in the remainder of 2015 and three in 2016. Based on current contracts and internal estimates, the aggregate total cost of this program, before construction period interest, is expected to be approximately \$1,265.0 million. From the inception of this program through December 31, 2014, the Company has incurred \$1,032.4 million, or 81.6%, of total expected project costs.

In February 2015, the Company agreed to sell four of its 250EDF class OSVs currently chartered to the U.S. Navy and to subsequently operate such vessels for the Navy under an operations and maintenance (O&M) contract, which contains an initial term and annual renewal options spanning a 10-year operating period. These arrangements are subject to final documentation. In order for the Navy to continue receiving the unique capabilities of these vessels, Congress has required their purchase from the Company, provided an agreement could be reached. The details of this transaction are currently being finalized and are expected to be completed in late-February with the O&M contract beginning immediately upon closing of each respective vessel sale. However, the currently negotiated sales price for the vessels is greater than their gross book values as of December 31, 2014.

6. Long-Term Debt

As of the dates indicated below, the Company had the following outstanding long-term debt (in thousands):

	December 31,	
	2014	2013
5.875% senior notes due 2020	\$375,000	\$375,000
5.000% senior notes due 2021	450,000	450,000
1.500% convertible senior notes due 2019, net of original issue discount of \$51,528 and \$60,908	248,472	239,092
Revolving credit facility due 2020	—	—
	\$1,073,472	\$1,064,092
