**Metso to supply a grinding system to Boliden in Sweden**

(Helsinki, Finland, March 22, 2007) Metso Corporation (NYSE: MX; OMXH: MEO1V)

Metso Minerals will supply a grinding system for a new concentrator at Boliden's Aitik mine in Gällivare, Northern Sweden. The new concentrator, with the grinding circuit, is scheduled to start operation in 2010. The value of the equipment order is approximately EUR 39 million.

Metso's order comprises two AG (autogenous) mills and two pebble mills, complemented by engineering, erection and start-up services. Metso has also signed a two-year contract to maintain the grinding circuit, including spare and wear parts and tools. The AG mills of 11,58 m by 13,72 m in diameter are the largest ever supplied by Metso Minerals.

The new concentrator will replace the current concentrator at Aitik. With the new concentrator, Boliden intends to expand the processing capacity of the Aitik mine from approximately 18 million tons to 36 million tons of ore per annum. The Aitik mine is one of Europe's largest producers of copper, and also a major producer of gold and silver. Boliden is one of the leading mining and smelting companies in the world with operations in Sweden, Finland, Norway and Ireland. Its main products are copper, zinc, lead, gold and silver. With the net sales of approximately EUR 3.8 billion in 2006, Boliden employs some 4,500 people.

**Metso** is a global engineering and technology corporation with 2006 net sales of approximately EUR 5 billion. Its 25,500 employees in more than 50 countries serve customers in the pulp and paper industry, rock and minerals processing, the energy industry and selected other industries.
