FORM 10-K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended January 1, 2005

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File Number: 000-01649

NEWPORT CORPORATION

Edgar Filing: NEWPORT CORP - Form 10-K

(Exact name of registrant as specified in its charter)

Nevada
*(State or other jurisdiction of
incorporation or organization)*

94-0849175
*(IRS Employer
Identification No.)*

1791 Deere Avenue, Irvine, California 92606

(Address of principal executive offices) (Zip Code)

Registrant's telephone number, including area code: (949) 863-3144

Securities registered pursuant to Section 12(b) of the Act: None

Securities registered pursuant to Section 12(g) of the Act: Common Stock, Par Value \$0.1167 per share

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is an accelerated filer (as defined in Rule 12b-2 of the Exchange Act). Yes No

As of January 31, 2005, 43,044,265 shares of the registrant's sole class of common stock were outstanding. As of January 31, 2005, the aggregate market value of the common stock held by non-affiliates of the registrant was approximately \$676 million, calculated based upon the closing price of our common stock as reported by the Nasdaq Stock Market on July 2, 2004.

DOCUMENTS INCORPORATED BY REFERENCE

Edgar Filing: NEWPORT CORP - Form 10-K

Portions of the registrant's Proxy Statement for its Annual Meeting of Stockholders to be held on May 18, 2005 are incorporated by reference into Part III of this Annual Report on Form 10-K.

Table of Contents

This Annual Report on Form 10-K contains certain forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934 and we intend that such forward-looking statements be subject to the safe harbors created thereby. For this purpose, any statements contained in this Annual Report on Form 10-K except for historical information may be deemed to be forward-looking statements. Without limiting the generality of the foregoing, words such as may, will, expect, believe, intend, could, estimate, or continue or the negative or other variations thereof or comparable terminology are intended to identify forward-looking statements. In addition, any statements that refer to projections of our future financial performance, trends in our businesses, or other characterizations of future events or circumstances are forward-looking statements.

The forward-looking statements included herein are based on current expectations and involve a number of risks and uncertainties, all of which are difficult or impossible to predict accurately and many of which are beyond our control. As such, our actual results may differ significantly from those expressed in any forward-looking statements. Factors that may cause or contribute to such differences include, but are not limited to, those discussed in more detail in Item 1 (Business) of Part I and Item 7 (Management's Discussion and Analysis of Financial Condition and Results of Operations) of Part II of this Annual Report on Form 10-K. Readers should carefully review these risks, as well as the additional risks described in other documents we file from time to time with the Securities and Exchange Commission. In light of the significant risks and uncertainties inherent in the forward-looking information included herein, the inclusion of such information should not be regarded as a representation by us or any other person that such results will be achieved, and readers are cautioned not to place undue reliance on such forward-looking information. We undertake no obligation to revise the forward-looking statements contained herein to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.

PART I

ITEM 1. BUSINESS

General Description of Business

We are a global supplier of advanced technology products and systems to a wide range of industries, including microelectronics manufacturing, scientific research, aerospace and defense/security, life and health sciences and communications.

In July 2004, we acquired all of the issued and outstanding capital stock of Spectra-Physics, Inc. and certain related entities (collectively, Spectra-Physics). Spectra-Physics manufactures high-power solid-state, gas and dye lasers, high-power laser diodes, and ultrafast laser systems, as well as photonics instruments and components, including light sources, monochromators, spectroscopy instrumentation, optical filters, ruled and holographic diffraction gratings and crystals. We have incorporated Spectra-Physics' laser and laser-related technology business into our new Lasers Division, and we have combined Spectra-Physics' photonics businesses with our former Industrial and Scientific Technologies Division to create our new Photonics and Precision Technologies Division.

As a result of the Spectra-Physics acquisition, we now provide a significantly expanded product portfolio to our newly-aligned target customer end markets: scientific research, aerospace and defense/security; microelectronics (which is comprised primarily of semiconductor capital equipment customers); life and health sciences; and all other end markets (which includes general industrial and fiber optic communications customers). This extensive portfolio enables us to offer our customers an end-to-end resource for products that make, manage and measure light. We provide:

Edgar Filing: NEWPORT CORP - Form 10-K

high-power solid-state, gas and dye lasers and laser technology used in a wide array of applications, including scientific research, industrial and microelectronics manufacturing and life and health sciences;

components and integrated subsystems to manufacturers of semiconductor processing equipment, biomedical instrumentation and medical devices;

Table of Contents

advanced automated assembly and test systems for manufacturers of communications and electronics devices; and

a broad array of high-precision systems, components and instruments to commercial, academic and government customers worldwide.

Our products leverage our expertise in laser technology, photonics instrumentation, precision robotics and automation, sub-micron positioning systems, vibration isolation, and optical subsystems and are designed to enhance the capabilities and productivity of our customers manufacturing, engineering and research applications.

For over three decades we have serviced the needs of research laboratories for precision equipment. Since 1991, we have acquired a series of companies to expand our product offerings, technology base and geographic presence. Through these acquisitions and our internal development efforts, we have evolved from a provider of discrete components and instruments for research applications to a company that manufactures both components and integrated systems for research and commercial applications. In particular, during 2001, we acquired Kensington Laboratories, Inc. (KLI), a manufacturer of high-precision robotic and motion control equipment primarily for the semiconductor equipment industry, and during 2002 we acquired Micro Robotics Systems, Inc. (MRSI), a manufacturer of high-precision, fully-automated assembly and dispensing systems for back-end packaging applications in the semiconductor, microwave communications and fiber optic communications markets. The acquisition of Spectra-Physics significantly increased the scope of our expertise and product offerings in our target customer end markets, and approximately doubled our size with respect to revenue, number of employees and facilities. We will continue to pursue acquisitions of companies, technologies and complementary product lines that we believe will provide us with key technologies, give us access to new markets or otherwise further our strategic objectives. Conversely, from time to time we review our different businesses, including our acquired companies, to ensure that they are key to our strategic plans, and close or divest businesses that we determine are no longer of strategic importance. See Management's Discussion and Analysis of Financial Condition and Results of Operations Overview below, and Note 2 of the Notes to Consolidated Financial Statements beginning on page F-13 of this Annual Report on Form 10-K.

Products and Services

We develop and sell a broad range of lasers, components, instruments, subsystems and systems to markets where high-precision, efficient manufacturing, test, measurement and assembly are critical. Our products are used in mission-critical applications in industries including microelectronics manufacturing, aerospace and defense/security, life and health sciences and fiber optic device manufacturing. We also provide high-performance lasers, components, instruments and subsystems to commercial, academic and governmental research institutions worldwide. We develop, manufacture and market our products within three distinct business segments: Lasers, Photonics and Precision Technologies and Advanced Packaging and Automation Systems.

Lasers Division

Our Lasers Division offers a broad array of laser technology products and services with diverse applications to OEM and end-user customers in the scientific research, microelectronics, life and health sciences and industrial manufacturing markets. Our lasers and laser-based systems include ultrafast lasers and amplifiers, diode-pumped solid-state lasers, diode lasers, high-energy pulsed lasers, tunable lasers, air-cooled ion lasers, water-cooled ion lasers and nitrogen lasers. We have established close relationships with OEM customers involved in microelectronics, life and health sciences, analytical instrumentation and industrial manufacturing. In addition to supplying our existing lasers and laser systems to these customers, we also work closely with our OEM and industrial customers to develop laser and laser system designs optimized for their product and technology roadmaps. In addition to our OEM services, we offer a full range of laser technology solutions and accessories to our end-user customers, from complex laser systems to gas and diode lasers.

Table of Contents

Markets and Applications

The breadth of our laser technology addresses a wide range of applications. These include scientific research, microelectronics, life and health sciences, image recording and graphics, aerospace and defense/security, industrial manufacturing, marking and engraving.

Scientific Research. We are one of the world's leading suppliers of scientific lasers, with a forty-year history of working closely with the research community to pioneer new applications and technologies. Today, as a leader in ultrafast laser technology, we continue to break new ground in a variety of scientific research areas, including spectroscopy, ultrafast phenomena, multiphoton microscopy, terahertz imaging, optical coherence tomography, laser induced fluorescence, light detection and ranging, nonlinear optics, particle imaging velocimetry and laser cooling.

Microelectronics. Laser technology addresses a wide range of vital applications in the semiconductor and microelectronics market, from front-end yield management to back-end advanced packaging. Laser technology is also a key enabler of achievement of the industry roadmap of smaller feature sizes with increased functionalities. Our air-cooled ion, solid-state and ultrafast lasers are used in data storage, wafer inspection, semiconductor metrology, dynamic random access memory (DRAM) and static random access memory (SRAM) repair, lithography, wafer and component marking, resistor trimming, printed circuit board and flat panel display manufacturing applications.

Life and Health Sciences. Laser technology is widely used in the life and health sciences market, and we provide products for use in both biomedical diagnostic and analytical instrumentation and medical cosmetic and therapeutic applications. Our solid-state, ultrafast, gas and high-energy pulsed lasers are used in applications such as multiphoton and confocal microscopy, flow cytometry, matrix-assisted laser desorption/ionization time-of-flight (MALDI-TOF), laser microdissection, DNA microarrays and blood analysis to enable advancements in the fields of molecular biology, proteomics and drug discovery. Cosmetic and therapeutic applications are typically addressed with our diode lasers and include hair removal and a variety of dermatological and dental procedures.

Image Recording and Graphics. Our laser technology offers cost-effective light sources for image recording and graphics. Our product applications include pre-press, on-press, ultra-high speed printing, photo finishing, film subtitling and holography.

Aerospace and Defense/Security. Our Lasers Division has been providing rugged, reliable and precise products to the United States military and other government branches for more than forty years. Our laser products are used in target recognition and acquisition, light detection and ranging (LIDAR), range-finding, missile guidance and advanced weapons development. In addition, our forensic green continuous wave laser offers crime scene investigators and security experts an essential tool to uncover evidence in the laboratory or in the field, by illuminating fingerprints and other biomaterial.

Industrial Manufacturing, Marking and Engraving. Lasers are widely used in a number of industrial manufacturing applications. Our products are used in the areas of rapid prototyping, micromachining, heat-treating, welding and soldering, cutting, illumination, drilling and printing. We also offer laser solutions for high-precision marking and engraving.

Table of Contents

Products

The following table summarizes some of our laser and laser-based system product offerings by product category, and includes representative applications for each category:

Category	Products	Representative Applications
Ultrafast Lasers & Systems	Mai Tai one box femtosecond Ti:sapphire lasers	Femtosecond spectroscopy
	Tsunami ultrafast Ti:sapphire lasers	Materials processing
	Opal femtosecond optical parametric oscillator (OPO)	Multiphoton microscopy
	Spitfire Pro ultrafast Ti:sapphire amplifier	Optical coherence tomography
	Eclipse ultrafast amplifier	Semiconductor metrology
	Optical parametric amplifier systems	Terahertz imaging
		Time-resolved photoluminescence
Diode Pumped Solid State	BL series low power Q-switched lasers	Diamond processing
Q-Switched Lasers	V-Xtreme Q-switched neodymium yttrium aluminum garnet (Nd:YAG) lasers	Laser zone texturing
	Navigator I and II Q-switched lasers	Memory repair
	HIPPO diode pumped solid state Q-switched lasers	Microelectronics material processing
		Rapid prototyping

Edgar Filing: NEWPORT CORP - Form 10-K

DisQ-Markthin-disk lasers

Resistor trimming

Empowerseries pulsed green lasers

Sapphire scribing

Silicon micromachining

Solar cell scribing and cutting

Wafer marking

Pump source for Ti:sapphire lasers

Diode Pumped Solid State
Continuous Wave (CW)
and Quasi-CW Lasers

MG series CW solid state green lasers

Film subtitling

ZLM modulated CW lasers

Flow cytometry

3900S CW tunable Ti:sapphire lasers

Image recording

Millennia[®] Pro i/s CW lasers

Materials processing

Vanguard quasi-CW solid state lasers

Raman imaging

Semiconductor wafer inspection and metrology

Spectroscopy

Table of Contents

Category	Products	Representative Applications
Diode Lasers (Semiconductor)	Open heatsink diode laser bars	Graphics and printing
	Multi-bar modules	Hair removal
	Fiber-coupled diode laser bars	Material heat treatment and processing
	Fiber-coupled single emitter diodes	Medical therapeutic and cosmetic procedures
	Open heatsink single emitter diodes	Pump source for solid state lasers
	Integra industrial diode laser systems	Soldering and welding
High Energy Pulsed Nd:YAG & Tunable Lasers	Pro series pulsed Nd:YAG lasers	Flat-panel display manufacturing
	PIV series Nd:YAG lasers	Laser ablation
	INDI series compact Nd:YAG lasers	Laser cleaning
	LAB Series Nd:YAG lasers	LIDAR
	MOP® Series High Energy optical parametric oscillator (OPO)	Mass spectrometry
	Sirah dye lasers	Particle imaging velocimetry combustion diagnostics
		Plastic and ceramic components marking
		Remote sensing

Edgar Filing: NEWPORT CORP - Form 10-K

		Spectroscopy
Air-Cooled Ion Lasers	117 frequency-stabilized helium neon lasers	Confocal microscopy
	161 air-cooled ion lasers	DNA sequencing
	163 Advantage lasers	Flow cytometry
	163-FBR coupled Advantage lasers	Graphic arts and photo-processing
	177 air-cooled ion lasers	Laser doppler anemometry
	Solano air-cooled ion systems	Particle analysis
		Raman spectroscopy
		Semiconductor wafer inspection
		Spectroscopy

Table of Contents

Category	Products	Representative Applications
Water-Cooled Ion Lasers	BeamLo [®] argon ion, krypton and mixed gas laser systems	Confocal microscopy
	Stabilite [®] mixed gas ion lasers	Flow cytometry
		Laser-doppler velocimetry
		Laser light entertainment
		Light scattering
		Lithography
		Holography
	Spectroscopy	
Nitrogen Lasers	337-Si OEM nitrogen lasers	Fluorescence immunoassay
	Dye lasers	Fluorescence microscopy
	VSL-337 series nitrogen lasers	Laser microdissection
		Matrix-assisted laser desorption/ionization
	Spectroscopy	

Photonics and Precision Technologies Division

Edgar Filing: NEWPORT CORP - Form 10-K

Our Photonics and Precision Technologies Division's products and systems are used across a wide range of markets in applications that range from basic research and development activities to high-precision manufacturing. In addition, we sell subsystems to third parties that integrate our products into larger systems, particularly for semiconductor manufacturing and life and health sciences applications. With the acquisition of Spectra-Physics, we added the Oriel line of photonics instruments and components, including light sources, monochromators and spectroscopy instrumentation, as well as thin-film optical filters, ruled and holographic diffraction gratings and crystals. The division also offers automated and manually operated equipment used to assemble and test fiber optic telecommunications and data communications devices, addressing applications from pre-test to assembly and packaging to final device testing.

Our photonics and precision products address markets including semiconductor capital equipment, scientific research, aerospace and defense/security, life and health sciences and communications. We believe that purchasers of our Photonics and Precision Technologies Division's products develop an appreciation for the quality of our products which makes them more likely to buy integrated, automated systems from us as their needs for production and test systems grow. In addition to the products that are developed and manufactured by this division, we also distribute certain products that are developed and manufactured by third parties on a private label basis. This allows us to select best-in-breed products in these product lines, and to maximize the efficiency of our research and development efforts.

Table of Contents

The following table summarizes some of our Photonics and Precision Technologies Division's product offerings by product category, and includes representative applications for each category:

Category	Products	Representative Applications
Photonics Instruments and Systems	Power meters	Measurement of optical power for free space and fiber-directed laser light
	Laser diode instruments	Current drivers and temperature controllers for maintaining stability of laser diodes
	Light sources	Characterization of light emitted by lasers, light emitting diodes and broadband light sources
	Optical spectrum analyzers	
	Photonics test systems	Testing and characterization of optical fibers and passive fiber optic components
	Optical detectors	Chemical composition analysis
	Spectrometers and spectrographs	Colorimetry
	Monochromators	Manual to fully automated assembly and packaging of fiber optic components, using welding, soldering and epoxy attachment techniques
	Ultrafast laser pulse measurement systems	
	Fiber alignment and attachment systems	
Precision Micro- Positioning Devices, Systems and Subsystems	Precision air bearing stages	Precision positioning of semiconductor wafers for metrology and fabrication
	Motion systems	Sample sorting and sequencing for DNA research
	Linear and rotational stages	

Edgar Filing: NEWPORT CORP - Form 10-K

Vertical translation stages	High-precision positioning and motion control apparatus for manufacturing and test applications
Multi-axis positioning systems	Tracking and targeting test systems for aerospace and defense/security applications
Actuators	Precision alignment in fiber optic, telecommunication and laser device assembly
Simple and programmable motion controllers for linear stepping and direct current (DC) motors and piezo devices	Laser system alignment and beam steering for inspection, laser processing and communications
Manual fiber optic positioners	

Table of Contents

Category	Products	Representative Applications
Vibration Isolation Systems and Subsystems	Optical benches and support systems	Isolated platform for semiconductor lithography equipment
	Workstations	Foundation platforms for laser systems
	Active and passive isolation systems	Reduction of impact of external forces on high-precision research, manufacturing test and assembly systems
	Honeycomb, granite and rigid structures	
	Elastomeric mounts	Scanning electron microscope/atomic force microscope base isolation
		Workstation platforms for fiber optic device fabrication
Optics and Optical Hardware	Lenses	Components for research and product development activities
	Mirrors	Analytical instrumentation for life and health sciences
	Prisms and windows	Laser systems
	Thin-film filters and coatings	Deep ultraviolet illumination optics for semiconductor lithography
	Filters and attenuators	
	Collimators	Semiconductor wafer and mask inspection
	Ultrafast laser optics	Manual, high-precision alignment of optical instruments
	Beamsplitters and polarization optics	Electro-optical research

Edgar Filing: NEWPORT CORP - Form 10-K

Ruled and holographic diffraction gratings	Electro-optic sensors and imaging systems for defense/security applications
- Echelles	Optical measurement and communications systems
- Reflection	Spectroscopy
- Transmission	Ultrafast laser, terahertz imaging and laser fusion research
- Plano	
- Concave	
Optical mounts	
Bases and brackets	
Posts and rod systems	
Laser-to-fiber couplers	
Educational kits	

Table of Contents

Category	Products	Representative Applications	
Opto-Mechanical Subassemblies and Subsystems	Laser beam delivery and imaging assemblies	Semiconductor wafer defect inspection	
	Integrated electro-optic-mechanical subsystems	Semiconductor mask patterning	
	Objective lens systems	Optical coherence tomography for non-invasive diagnostics	
	Refractive beam shaper assemblies	Thin film measurement of semiconductor wafers	
	Fast steering mirrors	Laser beam stabilization for industrial metrology applications	
	Laser beam attenuators		High-speed cell sorting for genomic research
			Analytical instrumentation for life and health sciences
		Light detection and ranging	
		Optical data storage	
Crystals	Optical crystals	X-ray imaging for security, industrial and medical applications	
	Scintillation crystals	Infrared spectroscopy (FTIR) for quality assurance	
	Crystal imaging arrays	X-ray detection such as steel thickness gauging	
	Electro optics	Optical and acoustic applications including frequency doubling, optical modulators and Q switches	

Subassemblies

We offer subassemblies that are a value-added combination of standard and custom products drawn from our lasers, precision components, optics, motion control and vibration isolation product lines. We combine these items with additional engineering to create more highly integrated products to meet customer needs. These products are often subsystems of our OEM customers' products. We believe that this subassembly capability gives us a significant competitive advantage by differentiating us from competitors that offer a more limited product selection. We have used our capabilities in this area to develop and supply subassemblies to customers in a number of industries, most notably semiconductor equipment and life and health sciences. These products range from low level subassemblies to complete finished products.

Fiber Optic Device Engineering Services

Our experience in fiber optic device assembly, packaging and testing technology provides us with the expertise in the processes and technologies necessary to build high-precision fiber optic components. We apply this expertise to assist our customers in designing device packaging, developing manufacturing processes, developing and producing tooling and programming customized process automation software. These services help customers significantly reduce the development cycle for their products and improve the productivity, yields and quality of their manufacturing processes. In addition to helping customers become more productive, these services assist us in establishing a long-term relationship with our customers and allow us to identify additional opportunities for new products. We also offer device manufacturing and packaging services to enable customers to design and test new

Table of Contents

products. We believe that the extent of our capabilities and services in this area provides us with a key competitive advantage over other capital equipment suppliers to this market.

Advanced Packaging and Automation Systems Division

Within the semiconductor industry, the manufacturing of integrated circuits is often divided into two areas – front-end wafer processing and back-end packaging. Our Advanced Packaging and Automation Systems Division offers a broad array of automation subsystem products for semiconductor front-end wafer processing applications, and also supplies complete turnkey systems for advanced back-end packaging applications. These high-performance products provide our customers with the speed, accuracy, repeatability and dependability required for high-throughput production environments.

Semiconductor Front-End Technologies

Our Advanced Packaging and Automation Systems Division offers a variety of products for front-end semiconductor process applications, including automated wafer handling subsystems such as atmospheric robots, load ports and wafer alignment stations, as well as a family of equipment front end modules (EFEMs), which are an integrated combination of our subsystem products.

Atmospheric Wafer Handling Robots. We sell a full range of atmospheric robots that automate the handling of semiconductor wafers in the ultra-clean environment of a process or inspection tool. We hold a number of issued and pending patents on state-of-the-art edge-gripping robotic end effectors that are critical to enabling semiconductor equipment manufacturers to efficiently and reliably handle 300-millimeter wafers without contacting the backside of the wafer, an important technique in reducing particle contamination and the resultant yield losses. Our wafer handling robots also feature our patented automated teaching technology, which allows the robot to be programmed more accurately and more consistently, reducing setup time. All of our 300-millimeter wafer handling robots incorporate our patented optical sensing technology in the end effector to maximize the accuracy of the robot while simplifying the setup and calibration process.

Load Ports. Our automatic door opener system (ADO) is a load port for 300-millimeter wafers that serves as the physical interface between a process or inspection tool and the fabrication environment, allowing wafers to be efficiently and reliably loaded into the tool while maintaining an ultra-clean environment. The ADO is easy to install, conforms to industry standards, and is compatible with popular wafer transport pods, known in the industry as front-opening universal pods, or FOUPs. We hold a number of issued and pending patents on various features of this technology, including our latchkey opening mechanism, our wafer scanning mechanism and our alignment technique. The ADO provides throughput performance that is among the highest in the industry under Class 1 clean room conditions.

Wafer Alignment Stations. Our edge-gripping wafer prealigner is a patented design based on our innovative edge-grip wafer handling technology. This product enables our customers to rapidly and precisely align 300-millimeter wafers prior to insertion into the process or inspection module of the capital equipment, without contacting the backside of the wafer. This reduces losses due to particle contamination of the wafer, helping to improve process yields.

EFEMs. Our EFEM products combine our wafer handling robots, tracks, load ports and wafer prealigners with additional software and hardware engineering to produce an integrated front-end to our customers' equipment. The EFEMs incorporate the patented automated teaching, wafer scanning and alignment features of our robot and load port products, require no factory adjustment and can be installed on our customers' equipment in the field.

Table of Contents

Advanced Packaging Systems

We offer a line of automated chip assembly equipment, including die bonding and flip chip bonding systems, as well as epoxy-dispensing and flip chip underfill systems, that are used to manufacture microwave, optical, radio frequency (RF) and multi-chip modules.

Automated Assembly Systems. Our MRSI-605 AP Ultra-Precise Assembly Work Cell provides users with a high-speed, high-precision solution for the automated assembly of a variety of microelectronic and optoelectronic devices, such as microwave modules, optical modules, hybrid circuits and multichip modules. We also offer the MRSI-5005 OPTO Optical Assembly Work Cell, which is specially designed to produce extremely precise placements required for certain photonics applications.

Automated Dispensing Systems. Our MRSI-175 family of products provides users with high-speed, high-performance solutions for a range of automated dispensing applications. The MRSI-175Ag Conductive Epoxy Dispensing System is designed to provide the process control and dispensing capability required for demanding applications such as microwave modules, optical modules, hybrid circuits, multichip modules and semiconductor packaging. The MRSI-175UF Underfill Dispensing System is a high-speed, high-accuracy, automated dispenser designed for flip chip underfill applications.

Flip Chip Bonding Systems. Our MACH FC Plus Flip Chip Bonder is a high-speed, high-accuracy system for the automated assembly of flip chip devices. The system performs the various process steps of picking, flipping, fluxing, vision alignment and controlled die placement with asynchronous parallel motion, maximizing the system's throughput. Some of its many advanced features include eight-micron placement accuracy, closed-loop placement force control, a patent-pending flux well and advanced vision and lighting.

Financial information regarding our business segments, and our operations by geographic area, is included in Note 15 of the Notes to Consolidated Financial Statements included in this Annual Report on Form 10-K beginning on page F-38. A discussion of our net sales by end market and geographic area is included in Management's Discussion and Analysis of Financial Condition and Results of Operations below.

Sales and Marketing

We market and sell our products and services through our domestic and international sales organizations, an international network of independent distributors and sales representatives, product catalogs and our web site. Our domestic and international sales organizations are comprised of teams of field sales persons, which work closely with strategic account managers and internal sales support personnel based primarily in Irvine, California, Mountain View, California, Germany, France and Japan. We have aligned our domestic and international sales organizations along our two key categories of customers: end-users and OEM customers. These two categories of customers require very different selling approaches and support requirements. Our OEM subsystem and capital equipment customers often have unique technical specifications and manufacturing processes, and may require specific system, subsystem or component designs. This requires close cooperation between our sales personnel and distributors and our engineering staff, and can result in long sales cycles for our subsystem and capital equipment products.

We also actively market and sell our products in certain markets outside of North America through independent sales representatives and distributors. We have written agreements with most of our representatives and distributors. In some cases we have granted representatives and distributors exclusive authorization to sell certain of our products in a specific geographic area. These agreements generally have terms of one year which automatically renew on an annual basis, and are generally terminable by either party for convenience following a specified notice period. Most distributor agreements are structured to provide distributors with sales discounts below the domestic list price. Representatives are

Edgar Filing: NEWPORT CORP - Form 10-K

generally paid commissions for sales of products. No single independent representative or distributor accounted for more than 5% of our net sales in 2004.

We also market our standard products through our product catalogs and our web site. Our principal marketing tools for the scientific research market are our comprehensive product catalogs, The Newport Resource® and The

Table of Contents

Newport Oriel Light Resource. These catalogs provide detailed product information as well as extensive technical and applications data. We mail these catalogs to approximately 40,000 existing and potential customers. The Newport Resource is published in English, French, German and Japanese. New product supplements for each catalog are also distributed between publications. We also publish and distribute a variety of sales literature and product brochures relating to our other products and end markets. Our web site features an online catalog, providing customers with access to the latest information regarding our products, technical/tutorial and application related materials, sales information, a literature and information request form, and the ability to purchase a majority of our standard products.

Research and Product Development

We continually seek to improve our technological leadership position through internal research, product development and licensing, and acquisitions of complementary technologies. As of January 31, 2005, we had approximately 230 employees engaged in research and development. We continually work to enhance our existing products and to develop and introduce innovative new products to satisfy the needs of our customers. In addition, we regularly investigate new ways to combine components manufactured by our various divisions to produce innovative technological solutions for the markets we serve. Total research and development expenses were \$26.1 million, or 9.1% of net sales, in 2004, including the expenses of Spectra-Physics for the period after July 16, 2004, the date of acquisition, \$18.1 million, or 13.5% of net sales, in 2003, and \$24.4 million, or 14.9% of net sales, in 2002. Research and development expenses attributable to our Lasers Division, which consisted entirely of the expenses of Spectra-Physics after July 16, 2004, the date of acquisition, were \$7.8 million, or 9.2% of net sales to that segment, in 2004. Research and development expenses attributable to our Photonics and Precision Technologies Division were \$12.6 million, or 7.4% of net sales to that segment, in 2004, including the expenses of Spectra-Physics for the period after July 16, 2004, the date of acquisition, \$9.8 million, or 8.9% of net sales to that segment, in 2003, and \$10.5 million, or 9.0% of net sales to that segment, in 2002. Research and development expenses attributable to our Advanced Packaging and Automation Systems Division were \$5.7 million, or 18.7% of net sales to that segment, in 2004, \$8.3 million, or 33.0% of net sales to that segment, in 2003, and \$13.9 million, or 29.8% of net sales to that segment, in 2002.

We are committed to product development and expect to continue our investment in this area in the current and future years. We believe that the continual development or acquisition of innovative new products will be critical to our future success. Failure to develop, or introduce on a timely basis, new products or product enhancements that achieve market acceptance could have a material adverse effect on our business, operating results or financial condition.

Customers

We sell our products to a significant number of customers worldwide, in a wide range of diverse end markets, including semiconductor manufacturing and advanced packaging equipment, scientific research, aerospace and defense/security, life and health sciences and fiber optic communications. We believe that our diversification in this area minimizes our dependence on any single industry or group of customers. In 2004, no single customer represented 10% or more of our consolidated net sales for the year. In our Lasers Division, no single customer accounted for 10% or more of our net sales to that segment after July 16, 2004, the date of our acquisition of Spectra-Physics. Sales during 2004 to one customer of our Photonics and Precision Technologies Division totaled \$20.0 million, which represented 11.7% of our net sales to that segment for the year. Sales during 2004 to two customers of our Advanced Packaging and Automation Systems Division totaled \$11.9 million and \$3.4 million, which represented 39.2% and 11.2%, respectively, of our net sales to that segment for the year. We believe that our relationships with these key customers are good. However, if any of these key customers or any other key customer discontinues or reduces its relationship with us, or suffers downturns in its business, it could have a significant negative impact on our financial results on a short-term basis, and our business and results of operations could be harmed going forward if we are unable to sufficiently expand our customer base to replace the lost business.

Table of Contents**Competition**

The primary end markets that we serve include: scientific research, aerospace and defense/security; microelectronics (which is comprised primarily of semiconductor capital equipment customers); life and health sciences; and other end markets (which includes general industrial and fiber optic communications customers). These markets are intensely competitive and characterized by rapidly changing technology. A small number of competitors are dominant in certain of these markets. The products and systems developed and manufactured by our Photonics and Precision Technologies Division and our Lasers Division serve all of our target end markets. Our Advanced Packaging and Automation Systems Division serves primarily the microelectronics market. The following table summarizes our primary competitors for our principal product categories:

Product Category	Primary Competitors	
Lasers	Coherent, Inc.	Lightwave Electronics Corp.
	Excel Technology, Inc.	Rofin-Sinar Technologies, Inc.
	JDS Uniphase Corporation	Trumpf Group
	Jenoptik Laser Optik Systeme GmbH	
Photonics Instruments	Agilent Technologies, Inc.	Melles Griot, Inc.
	Coherent, Inc.	Ocean Optics, Inc.
	EXFO Electro-Optical, Inc.	Ophir Optronics Ltd.
	ILX Lightwave Corporation	Thorlabs, Inc.
Light Sources and Spectroscopy Instrumentation	Andor Technology	Photon Technology International
	Acton Research Corporation	Spectral Products
	Ocean Optics, Inc.	
Precision Micro-Positioning Devices, Systems and Subsystems Motion Systems	Aerotech Inc.	Danaher Corporation
	Anorad Corporation	Physik Instrumente
	Bookham, Inc.	
Vibration Isolation Systems and Subsystems	Kinetic Systems, Inc.	Technical Manufacturing Corp.
		Thorlabs, Inc.
Optics, Optical Hardware and Opto-Mechanical Subassemblies and Subsystems	Bookham, Inc.	LINOS Photonics
	CVI Laser Corporation	Melles Griot, Inc.
	Corning NetOptix	OptoSigma Corporation

Edgar Filing: NEWPORT CORP - Form 10-K

	Corning Tropol Corporation	Thorlabs, Inc.
	Holographix LLC	
Optical Filters	Barr Associates, Inc.	Optical Coating Laboratories, Inc.
	Chroma Technology Corp.	Omega Optical, Inc.
	Ferroperm EMC Filters ApS	Semrock, Inc.

	Horiba Jobin Yvon Ltd.	Spectrogon
Crystals	NKK	St. Gobain
	Shanghai Institute of Ceramics	
Fiber Optic Device Alignment and Assembly Systems	AOI Sansho	Suruga-Seiki Co., Ltd.
	Palomar Technologies	
Wafer Handling Robots and Load Ports	Asyst Technologies, Inc.	Kawasaki Heavy Industries, Ltd.
	Brooks Automation, Inc.	TDK Corporation
	Genmark Automation, Inc.	Yaskawa Electric Corp.
Automated Assembly and Dispensing Systems	Asymtek	Palomar Technologies
	Datacon Technology AG	Speedline Technologies, Inc.
	ESEC	

Table of Contents

In our semiconductor automation and fiber optic device assembly product lines, we also face competition from certain of our existing and potential customers who have developed or may develop their own systems, subsystems and components.

We believe that the primary competitive factors in our markets are:

product features and performance;

quality, reliability and service support;

customer relationships;

ability to manufacture and deliver products on a timely basis;

pricing; and

ability to customize products to customer specifications.

We believe that we currently compete effectively with respect to each of these factors. However, we may not be able to compete successfully in the future against existing or new competitors.

We compete in various markets against a number of companies, some of which have longer operating histories, greater name recognition and significantly greater technical, financial, manufacturing and marketing resources than we do. In addition, some of these companies have long established relationships with our customers and potential customers in our markets. In addition to current competitors, we believe that new competitors, some of whom may have substantially greater financial, technical and marketing resources than us, will seek to provide products to one or more of our markets in the future. Such future competition could harm our business.

Intellectual Property and Proprietary Rights

Our success and competitiveness depends to an extent on our technology and other intellectual property such as trade secrets, patents and trademarks. We protect our technology by controlling access to our proprietary information and by maintaining confidentiality agreements with our employees, consultants, customers and suppliers, and, in some cases, through the use of patents, trademark registrations and licenses. We have been granted approximately 340 patents in the U.S. and foreign jurisdictions, and we have approximately 95 additional patent applications pending. These issued patents cover various aspects of products in many of our key product categories, particularly our laser products. We also have trademarks registered in the U.S. and foreign jurisdictions. We will continue to actively pursue applications for new patents and trademarks as we deem appropriate.

Edgar Filing: NEWPORT CORP - Form 10-K

It is possible that, despite our efforts, other parties may use, obtain or try to copy our products and technology. Policing unauthorized use of our products and technology is difficult and time consuming. We cannot guarantee that the steps we take to protect our rights will prevent any misappropriation of our products or technology. This is particularly the case in foreign jurisdictions, where the intellectual property laws may not afford our intellectual property rights the same protection as the laws of the United States. We may in the future initiate claims or litigation against third parties for infringement of our proprietary rights in order to determine the scope and validity of our proprietary rights or the proprietary rights of our competitors, which claims could result in costly litigation and the diversion of our technical and management personnel.

In addition, infringement, invalidity, right to use or ownership claims by third parties may be asserted against us in the future. We expect that the number and significance of these matters will increase as our business expands. In particular, the laser industry is characterized by a very large number of patents, many of which are of questionable validity and some of which appear to overlap with other issued patents. As a result, there is a significant amount of uncertainty in the industry regarding patent protection and infringement. Any claims of infringement brought by third parties could result in protracted and costly litigation, and we could become subject to damages for

Table of Contents

infringement, or to an injunction preventing us from selling one or more of our products or using one or more of our trademarks. Such claims could also result in the necessity of obtaining a license relating to one or more of our products or current or future technologies, which may not be available on commercially reasonable terms or at all. Any intellectual property litigation and the failure to obtain necessary licenses or other rights or develop substitute technology could have a material adverse effect on our business, financial condition and results of operations.

Manufacturing

We manufacture lasers and laser systems at our facilities located in Mountain View, California, and we manufacture laser diodes in Tucson, Arizona. We manufacture instruments, components, subassemblies and systems at domestic facilities located in Irvine, California; Oroville, California; Richmond, California; Stratford, Connecticut; Franklin, Massachusetts; North Billerica, Massachusetts; and Rochester, New York, and at international facilities in Beaune-la Rolande, France; Brigueuil, France; and Margate, United Kingdom. In addition, we subcontract the manufacture of various products and components to a number of third-party subcontractors.

Our manufacturing processes are diverse and consist of: purchasing raw materials, principally stainless steel, aluminum and glass; processing the raw materials into components, subassemblies and finished products; purchasing components, assembling and testing components and subassemblies; and, for our larger products, assembling the subassemblies and components into integrated systems. We primarily design and manufacture our products internally, although on a limited basis, we purchase completed products from certain third-party suppliers and resell those products through our distribution system. Most of these completed products are produced to our specifications and carry our name and logo.

We currently procure various components and materials, such as the sheet steel used in some of our vibration isolation tables, and the laser crystals used in certain of our laser products, from single sources due to unique component designs as well as certain quality and performance requirements needed to manufacture our products. In addition, we manufacture certain components internally, and there are no readily available third-party suppliers of these components. If single-sourced components were to become unavailable in adequate amounts at acceptable quality levels or were to become unavailable on terms satisfactory to us, we would be required to purchase comparable components from other sources. While we believe that we would be able to obtain comparable replacement components from other sources in a timely manner, if we are unable to do so our business, results of operations or financial condition could be adversely affected.

Backlog

Our consolidated backlog of orders totaled \$110.2 million at January 1, 2005, and \$36.3 million at December 31, 2003. As of January 1, 2005, \$104.1 million of our consolidated backlog was scheduled to be shipped on or before December 31, 2005. Orders for many of the products we sell to the semiconductor equipment market, which comprise a significant portion of our sales, are often subject to cancellation or rescheduling by the customer without penalty, and we have from time to time experienced significant cancellations and pushouts of orders from these markets, which negatively affected our operating results in those periods. In addition, because we manufacture a significant portion of our standard catalog products for inventory, we often make shipments of these products upon or within a short time period following receipt of an order. As a result, our backlog of orders at any particular date may not be an accurate indicator of our sales for succeeding periods.

Investments

Edgar Filing: NEWPORT CORP - Form 10-K

From time to time we make investments in companies having operations or technologies in areas which are within or adjacent to our strategic focus when acquired. We currently hold minority ownership interests in a number of small, privately-held companies. These investments are designed to further our strategic objectives and to support our key business initiatives. We want to support growth in new technologies, particularly those related to our strategic markets, in order to create and expand markets for our products. While financial returns are not our primary goal, our strategic investment program seeks to invest in companies that can succeed and have a positive

Table of Contents

impact on their markets. At January 1, 2005, the total carrying value of all of our minority interest investments was \$4.4 million.

Investments in technology companies involve significant risks, including the risks that such companies may be unable to raise additional required operating capital on acceptable terms or at all, or may not achieve or maintain market acceptance of their technology or products. In the event that any of such risks occurs, the value of our investment could decline significantly. In addition, because there is no public market for the securities we acquire, our ability to liquidate our investments is limited, and such markets may not develop in the future. In 2002, two fiber optic component manufacturers in which we had made minority interest investments in prior years experienced severe financial difficulties, and each has shut down its operations and liquidated its assets. As a result, we recorded a charge of \$6.5 million to write down these investments to their estimated fair value. In 2004, we determined that a minority interest investment made in prior years in a manufacturer of precision mechanical components had incurred an other-than-temporary reduction in value. As a result, we recorded a charge of \$1.4 million to write down the investment to its estimated fair value. In the event that we are required to write down the carrying value of one or more of our investments in the future, our earnings could be materially and adversely affected.

Employees

As of January 31, 2005, we had approximately 2,000 employees worldwide. None of our employees are represented by a union. We believe that our relationships with our employees are good.

Government Regulation

Regulatory Compliance

Our lasers and laser-based systems are subject to the laser radiation safety regulations of the Radiation Control for Health and Safety Act administered by the Center for Devices and Radiological Health (CDRH) of the United States Food and Drug Administration (FDA). Among other things, these regulations require a laser manufacturer to file new product and annual reports, to maintain quality control and sales records, to perform product testing, to distribute appropriate operating manuals, to incorporate certain design and operating features in lasers sold to end-users and to certify and label each laser sold to end-users as one of four classes (based on the level of radiation from the laser that is accessible to users). Various warning labels must be affixed and certain protective devices installed depending on the class of product. The National Center for Devices and Radiological Health is empowered to seek fines and other remedies for violations of the regulatory requirements. We are also subject to comparable laser safety regulations with regard to laser products sold in Europe. We believe that we are currently in compliance with these regulations.

Environmental Regulation

Our operations are subject to various federal, state and local environmental protection regulations relating to the protection of the environment, including those governing discharges of pollutants into the air and water, the management and disposal of hazardous substances and wastes and the cleanup of contaminated sites. In the United States, we are subject to the federal regulation and control of the Environmental Protection Agency. Comparable authorities exist in other countries. Some of our operations require environmental permits and controls to prevent and reduce air and water pollution, and these permits are subject to modification, renewal and revocation by issuing authorities. Future developments, administrative actions or liabilities relating to environmental matters could have a material adverse effect on our business, results

of operations or financial condition.

Although we believe that our safety procedures for using, handling, storing and disposing of such materials comply with the standards required by state and federal laws and regulations, we cannot completely eliminate the risk of accidental contamination or injury from these materials. In the event of such an accident involving such materials, we could be liable for damages and such liability could exceed the amount of our liability insurance coverage and the resources of our business.

Table of Contents

Spectra-Physics Mountain View, California facility is an EPA-designated Superfund site and is subject to a cleanup and abatement order from the California Regional Water Quality Control Board. Spectra-Physics, along with several other entities with facilities located near the Mountain View, California facility, have been identified as Responsible Parties with respect to this Superfund site, due to releases of hazardous substances during the 1960s and 1970s. The site is mature, and investigations and remediation efforts have been ongoing for approximately 20 years. Spectra-Physics and the other Responsible Parties have entered into a cost-sharing agreement covering the costs of remediating the off-site groundwater impact. We have established reserves relating to the estimated cost of these remediation efforts, however our ultimate costs of remediation are difficult to predict. In addition, while we are not aware of any unresolved property damage or personal injury claims relating to this site, such claims could be made against us in the future. While Thermo Electron Corporation has agreed in connection with our purchase of Spectra-Physics to indemnify us, subject to certain conditions, for environmental liabilities relating to this site in excess of our reserves, this indemnity may not cover all liabilities relating to this site. In such event, our business, financial condition and results of operations could be adversely affected.

Availability of Reports

We make available free of charge on our web site at www.newport.com our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and any amendments to such reports, as soon as reasonably practicable after such reports are electronically filed with, or furnished to, the Securities and Exchange Commission. We will also provide electronic or paper copies of such reports free of charge, upon request made to our Corporate Secretary.

ITEM 2. PROPERTIES

Our corporate headquarters is located in Irvine, California. We lease this facility under a lease expiring in February 2012. Our primary manufacturing operations for each of our divisions are located in the following facilities:

Division	Primary Facility Locations	Approximate Facility Size
Lasers	Mountain View, California	159,000 square feet
	Tucson, Arizona	81,000 square feet
Photonics and Precision Technologies	Irvine, California	273,000 square feet
	Stratford, Connecticut	32,000 square feet
	Franklin, Massachusetts	47,000 square feet
	Rochester, New York	55,000 square feet
	Beaune-la Rolande, France	86,000 square feet
	Brigueuil, France	44,000 square feet
Advanced Packaging and Automation Systems	Margate, United Kingdom	16,500 square feet
	Richmond, California	139,000 square feet

Edgar Filing: NEWPORT CORP - Form 10-K

North Billerica, Massachusetts

48,000 square feet

We own portions of our Mountain View, California, Rochester, New York and Beaune-la Rolande, France facilities, and we own our Margate, United Kingdom facility. We lease all other facilities under leases with expiration dates ranging from 2006 to 2030. In addition to these primary facilities, we lease a number of other facilities worldwide for administration, research and development, light assembly, sales and/or service. We believe that our facilities are adequate for our current needs and that suitable additional or substitute space will be available in the future on commercially reasonable terms to accommodate expansion of our operations.

Table of Contents

ITEM 3. LEGAL PROCEEDINGS

From time to time, we may be involved in litigation relating to claims arising out of our operations in the normal course of business. We currently are not a party to any legal proceedings, the adverse outcome of which, in management's opinion, individually or in the aggregate, would have a material adverse effect on our results of operations, financial position or cash flows.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matters were submitted to a vote of security holders during the fourth quarter of the year ended January 1, 2005.

PART II

ITEM 5. MARKET FOR THE REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Price Range of Common Stock

Our common stock is traded on the Nasdaq National Market under the symbol NEWP. As of January 31, 2005, we had 1,206 common stockholders of record based upon the records of our transfer agent which do not include beneficial owners of common stock whose shares are held in the names of various securities brokers, dealers and registered clearing agencies. The following table reflects the high and low sales prices of our common stock for each quarterly period during the last two fiscal years:

<u>Quarter Ended</u>	<u>High</u>	<u>Low</u>
January 1, 2005	\$ 14.37	\$ 10.96
October 2, 2004	15.83	11.05
July 3, 2004	17.73	13.74
April 3, 2004	22.33	15.25
December 31, 2003	17.57	14.14
September 30, 2003	19.18	14.02
June 30, 2003	16.67	11.41
March 31, 2003	14.99	10.49

Dividends

We declared no dividends on our common stock during 2004 or 2003. We do not intend to pay cash dividends in the foreseeable future, however, we will periodically review this issue in the future based on changes in our financial position and investment opportunities, as well as

any changes in the tax treatment of dividends.

Table of Contents**Information Regarding Equity Compensation Plans**

The following table sets forth information with respect to securities authorized for issuance under our equity compensation plans as of January 1, 2005:

Equity Compensation Plan Information

Plan Category	Number of Securities to be Issued upon Exercise of Outstanding Options, Warrants and Rights (a)	Weighted-Average Exercise Price of Outstanding Options, Warrants and Rights (b)	Number of Securities Remaining Available for Future Issuance under Equity Compensation Plans (excluding securities reflected in column (a)) (c)
Equity Compensation Plans Approved by Security Holders	4,657,064	\$ 14.80	2,810,891
Equity Compensation Plans Not Approved by Security Holders ⁽¹⁾	569,715	\$ 47.17	
Total	5,226,779		2,810,891

⁽¹⁾ The number of shares and weighted average exercise price reflected in the table for equity compensation plans not approved by security holders exclude outstanding options to purchase 481,557 shares of our common stock at a weighted average exercise price of \$2.60, which were granted to employees and non-employees upon the assumption and conversion of former options to purchase shares of common stock of Micro Robotics Systems, Inc. (MRSI) in connection with our acquisition of MRSI in February 2002. These options were granted outside of a plan pursuant to individual nonqualified stock option agreements, and, therefore, no additional securities are available for future grants.

Equity Compensation Plans Not Approved by Security Holders

In November 1999, our Board adopted our 1999 Stock Incentive Plan (1999 Plan), pursuant to which nonqualified options to purchase shares of our common stock were granted to employees (excluding officers and members of our Board) from November 1999 until May 2001. In May 2001, upon the approval by our stockholders of our 2001 Stock Incentive Plan, the 1999 Plan was terminated for the purposes of future grants. As of January 1, 2005, options to purchase a total of 569,715 shares were outstanding under the 1999 Plan. All options granted under the 1999 Plan were granted at an exercise price equal to the fair market value of the common stock on the grant date, and generally vest in 25% increments on each of the first four anniversaries of the grant date. No option is exercisable more than ten years following the grant date. The right to exercise an option will terminate earlier in the event of termination of the continuous service (as defined in the option agreement) of the employee.

Table of Contents**ITEM 6. SELECTED FINANCIAL DATA**

The table below presents selected consolidated financial data of Newport and our subsidiaries as of and for the years ended January 1, 2005 and December 31, 2003, 2002, 2001 and 2000. The consolidated balance sheet data as of January 1, 2005 and December 31, 2003, and the consolidated statement of operations data for the years ended January 1, 2005, December 31, 2003 and December 31, 2002 have been derived from our audited consolidated financial statements included in this Annual Report on Form 10-K. The consolidated balance sheet data as of December 31, 2002, 2001 and 2000 and the consolidated statement of operations data for the years ended December 31, 2001 and December 31, 2000 have been derived from our audited consolidated financial statements not included in this Annual Report on Form 10-K.

The selected consolidated financial data set forth below should be read in conjunction with our consolidated financial statements and related notes thereto and Management's Discussion and Analysis of Financial Condition and Results of Operations included elsewhere in this Annual Report on Form 10-K.

- Effective in 2004, we changed to a conventional 52/53-week accounting fiscal year. Our fiscal year ends on the Saturday closest to December 31, and our fiscal quarters end on the Saturday closest to the end of each corresponding calendar quarter. Fiscal year 2004 (referred to herein as 2004) ended on January 1, 2005 and fiscal years 2003, 2002, 2001 and 2000 ended on December 31 of each respective year.
- In July 2004, we acquired Spectra-Physics, Inc. and certain related entities. The transaction was accounted for using the purchase method. See further discussion in Note 2 of Notes to Consolidated Financial Statements.

Table of Contents

- (3) In February 2002, we acquired all of the issued and outstanding capital stock of Micro Robotics Systems, Inc. The transaction was accounted for using the purchase method. See further discussion in Note 2 of Notes to Consolidated Financial Statements.
- (4) In February 2001, we acquired Kensington Laboratories, Inc. (KLI). The KLI acquisition was accounted for as a pooling of interests for all periods presented. In February 2001, we acquired Design Technology Corporation (DTC), a systems integrator specializing in the use of robotics and flexible automation solutions for manufacturing processes. The DTC acquisition was accounted for using the purchase method. In August 2000, we acquired Unique Equipment Co., (Unique), a systems integrator specializing in the use of robotics for the fiber optics and semiconductor industries. The Unique acquisition was accounted for as a pooling of interests for all periods presented.
- (5) For 2004, cost of sales includes \$3.3 million in asset impairment charges. For 2002 and 2001, cost of sales includes inventory reserves of \$28.7 million and \$22.7 million, respectively, related to restructuring activities. See further discussion in Note 4 of the Notes to Consolidated Financial Statements.
- (6) For all years presented, such amounts include restructuring, asset impairment, including goodwill, and other charges. For 2002 to 2004, see further discussion in Note 4 of the Notes to Consolidated Financial Statements.
- (7) Amount for 2001 includes \$9.2 million for investment banking, legal and accounting fees related to our acquisition of KLI and a charge of \$1.5 million related to accelerated vesting of stock options held by a retiring officer.
- (8) Includes write-downs of minority interest investments due to other-than-temporary impairments in value. See further discussion in Note 3 of the Notes to Consolidated Financial Statements.
- (9) We established a valuation allowance in 2002 against our deferred tax assets, due to uncertainty as to the timing and ultimate realization of those assets. See further discussion of income taxes in Note 9 of the Notes to Consolidated Financial Statements.
- (10) In 2002, our Board of Directors approved a plan to sell our operation in Plymouth, Minnesota and our Industrial Metrology Systems Division (IMSD). Both of these divestitures have been accounted for as discontinued operations for all periods presented. See further discussion in Note 2 of the Notes to Consolidated Financial Statements.
- (11) The cumulative effect of a change in accounting principle reflects our adoption of Statement of Financial Accounting Standards No. 142 as of January 1, 2002, which resulted in an impairment charge of \$14.5 million. See further discussion in Note 1 of Notes to Consolidated Financial Statements.
- (12) Share and per share amounts have been adjusted to reflect the May 2000 three-for-one stock split.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This Item contains forward-looking statements that involve risks and uncertainties and our actual results could differ materially from those anticipated in such statements as a result of various factors including those described in *Risks Relating To Our Business* on pages 38-47.

Overview

The following is a discussion and analysis of certain factors that have affected our results of operations and financial condition during the periods included in the accompanying financial statements.

Acquisitions

In July 2004, we acquired all of the issued and outstanding capital stock of Spectra-Physics, Inc. and certain related entities (collectively, Spectra-Physics). Spectra-Physics manufactures high-power solid-state, gas and dye lasers, high-power laser diodes and ultrafast laser systems, as well as other photonics components and devices used in a wide range of applications, including scientific research, industrial and microelectronics manufacturing and analytical instrumentation for life and health sciences. The transaction was accounted for using the purchase method. Our results of operations for 2004 included the results of operations of Spectra-Physics from the date of acquisition on July 16, 2004. The acquisition has more than doubled our size in terms of revenue, number of employees and operating facilities. Accordingly, comparisons of financial results with the corresponding amounts in prior periods may not be meaningful. See further discussion in Note 2 of the Notes to Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K.

In February 2002, we acquired Micro Robotics Systems, Inc. (MRSI), a manufacturer of high-precision, automated assembly and dispensing systems. The transaction was accounted for using the purchase method. Our results of operations for 2002 included the results of operations of MRSI from the date of acquisition on February 15, 2002. See further discussion in Note 2 of the Notes to Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K.

This discussion includes the effects of the acquisitions of Spectra-Physics and MRSI from their respective dates of acquisition.

Divestitures

In August 2002, to increase the efficiency of our product development and manufacturing efforts, our Board of Directors approved management's plan to sell our operation in Plymouth, Minnesota, which manufactured high-precision motion stages for the semiconductor equipment, computer peripheral, fiber optic communications and life and health sciences markets. In the first quarter of 2003, due to the weak response from potential buyers, we shut down the operation and liquidated the majority of the remaining assets. This operation was included in our former Industrial and Scientific Technologies Division.

Edgar Filing: NEWPORT CORP - Form 10-K

In March 2002, to more efficiently deploy our resources to those areas that are critical to product development efforts for our strategic markets, our Board of Directors approved management's plan to sell our Industrial Metrology Systems Division (IMSD), including the business of CEJohansson AB, a Sweden-based global supplier of advanced metrology systems that we acquired in December 2000. The sale of IMSD was substantially completed in 2002. In February 2005, we settled an outstanding dispute with the purchaser of a portion of IMSD, resulting in a charge to discontinued operations of approximately \$0.6 million in the fourth quarter of 2004.

Both of these divestitures have been accounted for as discontinued operations for all periods presented.

Table of Contents

Fiscal Year End

Effective in 2004, we changed to a conventional 52/53-week accounting fiscal year. Our fiscal year ends on the Saturday closest to December 31, and our fiscal quarters end on the Saturday closest to the end of each corresponding calendar quarter. Fiscal year 2004 (referred to herein as 2004) ended on January 1, 2005 and fiscal years 2003 and 2002 ended on December 31, 2003 and 2002, respectively.

End Markets

In connection with our acquisition of Spectra-Physics in the third quarter of 2004, we realigned our end markets into four customer markets: scientific research, aerospace and defense/security; microelectronics (which is comprised primarily of semiconductor capital equipment customers); life and health sciences; and all other end markets (which includes general industrial and fiber optic communications customers). Our discussion of our results of operations includes comparisons within these end markets and our results for the fiscal years ended December 31, 2003 and 2002 have been reclassified to conform to this realignment.

Critical Accounting Policies and Estimates

Management's Discussion and Analysis of Financial Condition and Results of Operations is based on our consolidated financial statements included in this Annual Report on Form 10-K, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires our management to make estimates and assumptions that affect the reported amounts of assets and liabilities and related disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. On an ongoing basis, we evaluate these estimates and assumptions, including those related to allowance for doubtful accounts, inventory reserves, warranty obligations, restructuring reserves, asset impairment valuations, pension liabilities and income tax valuations. We base these estimates on historical experience and on various other factors which we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. These estimates and assumptions by their nature involve risks and uncertainties, and may prove to be inaccurate. In the event that any of our estimates or assumptions are inaccurate in any material respect, it could have a material adverse effect on our reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods.

The following critical accounting policies affect our more significant judgments and estimates used in the preparation of our consolidated financial statements.

Revenue Recognition

We recognize revenue after title to and risk of loss of products have passed to the customer (which typically occurs upon shipment), or delivery of the service has been completed, provided that persuasive evidence of an arrangement exists, the fee is fixed or determinable and collectibility is probable. We recognize revenue and related costs for arrangements with multiple deliverables, such as equipment and installation, as each element is delivered or completed based upon its relative fair value, determined based upon the price that would be charged on a standalone basis. However, if a portion of the total contract price is not payable until installation is complete, we defer revenue up to the amount that is not payable. We defer revenues for training until the service is completed. We recognize revenue for extended service contracts over the related

contract periods.

Our customers generally have 30 days from the original invoice date (generally 60 days for international customers) to return a standard catalog product purchase for exchange or credit. Catalog products must be returned in the original condition and meet certain other criteria. Product returns of catalog items have historically been insignificant and are charged against revenue in the period returned. Custom, option-configured and certain other products as defined in the terms and conditions of sale cannot be returned. For certain non-catalog products, we establish a sales return reserve based on the historical product returns.

Table of Contents

Accounts and Notes Receivable

We record reserves for specific receivables deemed to be at risk for collection, as well as a reserve based on our historical collections experience. We estimate the collectibility of customer receivables on an ongoing basis by reviewing past due invoices. A considerable amount of judgment is required in assessing the ultimate realization of these receivables, including the current credit-worthiness of each customer.

Certain of our Japanese customers provide us with promissory notes on the due date of the receivable. The payment date of the promissory notes is generally 90 days from the original receivable due date. Subsequently, certain of these promissory notes are sold with recourse to one of four banks within Japan that we do business with as part of line of credit agreements. Such transactions are conducted in the ordinary course of business. For balance sheet presentation purposes, amounts due to us under such promissory notes are reclassified from accounts receivable to current notes receivable. At January 1, 2005, total promissory notes receivable amounted to \$6.9 million. Promissory notes sold with recourse are included in both *notes receivable, net* and *short-term obligations* until the underlying note obligations are ultimately satisfied by payment of the note obligation by the customers to the banks. At January 1, 2005, such discounted note obligations included in *short-term obligations* were \$4.3 million. We did not have any notes receivable or notes sold with recourse outstanding at December 31, 2003.

Pension Plans

Several of our non-U.S. subsidiaries have defined benefit pension plans covering substantially all full-time employees at those subsidiaries. Some of the plans are unfunded, as permitted under the plans and applicable laws. For financial reporting purposes, the calculation of net periodic pension costs is based upon a number of actuarial assumptions, including a discount rate for plan obligations, an assumed rate of return on pension plan assets and an assumed rate of compensation increase for employees covered by the plan. All of these assumptions are based upon our judgment, considering all known trends and uncertainties. Actual results that differ from these assumptions would impact future expense recognition and the cash funding requirements of our pension plans.

Inventories

We state our inventories at the lower of cost (determined on either a first in, first-out (FIFO) or average cost basis) or fair market value and include materials, labor and manufacturing overhead. We write down excess and obsolete inventory to net realizable value. In assessing the ultimate realization of inventories, we make judgments as to future demand requirements and compare those requirements with the current or committed inventory levels. We record any amounts required to reduce the carrying value of inventory to net realizable value as a charge to cost of sales.

Warranty

Unless otherwise stated in our product literature or in our agreements with our customers, products sold by our Photonics and Precision Technologies Division generally carry a one-year warranty from the original invoice date on all product material and workmanship. Products of such division sold to original equipment manufacturer (OEM) customers generally carry longer warranties, typically 15 to 24 months. Products sold by our Lasers Division generally carry warranties that vary by product and product component, but generally range from 90 days to two years. In certain cases, such warranties are limited by amount of usage of the product. Defective products will be either repaired or replaced, generally at our option, upon meeting certain criteria. We accrue a provision for the estimated costs that may be incurred for product warranties

Edgar Filing: NEWPORT CORP - Form 10-K

relating to a product as a component of cost of sales at the time revenue for that product is recognized. While we engage in extensive product quality programs and processes, including actively monitoring and evaluating the quality of our component suppliers, our warranty obligations are affected by product failure rates, material usage and service delivery costs incurred in correcting a product failure. Should actual product failure rates, material usage and/or service delivery costs differ from our estimates, revisions to the estimated warranty obligation would be required which could adversely affect our operating results.

Table of Contents

Impairment of Assets

We assess the impairment of long-lived assets whenever events or changes in circumstances indicate that their carrying value may not be recoverable. The determination of related estimated useful lives and whether or not these assets are impaired involves significant judgments, related primarily to the future profitability and/or future value of the assets. Changes in our strategic plan and/or market conditions could significantly impact these judgments and could require adjustments to recorded asset balances. We hold minority interests in companies having operations or technologies in areas which are within or adjacent to our strategic focus when acquired, all of which are privately held and whose values are difficult to determine. We record an investment impairment charge in any reporting period where we believe an investment has experienced a decline in value that is other than temporary. Future changes in our strategic direction, adverse changes in market conditions or poor operating results of underlying investments could result in losses or an inability to recover the carrying value of the investments that may not be reflected in an investment's current carrying value, thereby possibly requiring an impairment charge in the future.

We perform annual impairment tests of our goodwill and other intangible assets in accordance with Statement of Financial Accounting Standards (SFAS) No. 142, *Goodwill and Other Intangible Assets*. Under SFAS No. 142, goodwill is no longer amortized but is subject to impairment tests based upon a comparison of the fair value of each of our reporting units, as defined, and the carrying value of the reporting units' net assets, including goodwill. SFAS No. 142 requires a review of goodwill and other intangible assets for impairment at least annually or when circumstances exist that would indicate an impairment of such goodwill or other intangible assets. We perform the annual impairment review as of the beginning of the fourth quarter of each year.

Income Taxes

We provide for income taxes based on the estimated effective income tax rate for the complete fiscal year. The income tax provision (benefit) is computed on the pretax income (loss) of the consolidated entities located within each taxing jurisdiction based on current tax law. Deferred taxes result from the future tax consequences associated with temporary differences between the recorded amounts of our assets and liabilities for tax and financial accounting purposes. A valuation allowance for deferred tax assets is recorded to the extent we cannot determine, in accordance with the provisions of SFAS No. 109, *Accounting for Income Taxes*, that the ultimate realization of the net deferred tax assets is more likely than not.

We currently have significant deferred tax assets, which are subject to periodic recoverability assessments. We recorded a valuation reserve in the third quarter of 2002 against our deferred tax assets pursuant to SFAS No. 109, due to the uncertainty as to the timing and ultimate realization of those assets. As such, we did not recognize any tax benefit on the losses recorded in 2003 and recorded a valuation allowance against deferred tax assets for the current period. For the foreseeable future, the Federal tax provision related to future earnings will be substantially offset by a reduction in the valuation reserve, and any future pretax losses will not be offset by a tax benefit due to the uncertainty of the recoverability of the deferred tax assets. Accordingly, future tax expense will consist primarily of certain required state income taxes and taxes in certain foreign jurisdictions.

Realization of our deferred tax assets is principally dependent upon our achievement of future taxable income, the estimation of which requires significant management judgment. Our judgments regarding future profitability may change due to many factors, including future market conditions and our ability to successfully execute our business plans and/or tax planning strategies. These changes, if any, may require material adjustments to these deferred tax asset balances.

Edgar Filing: NEWPORT CORP - Form 10-K

Acquired deferred tax assets and liabilities, and liabilities for prior tax returns at the date of purchase are based on management's best estimate of the ultimate settlement that will be accepted by the tax authorities. Management continually evaluates these matters. At the date of a material change in management's best estimate of items relating to an acquired entity's prior tax returns, and at the date that the items are settled with the tax authorities, any liability previously recognized is adjusted to increase or decrease the remaining balance of goodwill attributable to that acquisition.

Table of Contents

In connection with the acquisition of Spectra-Physics, we acquired \$25.4 million in domestic deferred tax liabilities and \$9.4 million in domestic deferred tax assets. The acquired net deferred tax liability of \$16.0 million reduced our previously recorded net deferred tax asset accordingly. The remainder of these deferred taxes were recorded as a reduction to goodwill.

On March 6, 2002, Congress passed the Job Creation and Worker Assistance Act of 2002 (2002 Tax Act). As part of the 2002 Tax Act, the carryback period for net operating losses increased from two to five years. As a result of the tax law change, federal net operating loss carryback benefits relating to the loss sustained during the year ended December 31, 2001 increased by approximately \$3.5 million. Such amounts have been included in the federal benefits amount reported for the year ended December 31, 2002.

On October 22, 2004, the American Jobs Creation Act of 2004 (AJCA) was signed into law. The AJCA provides several incentives for US multinational corporations and US manufacturers. Subject to certain limitations, the incentives include an 85% dividends received deduction for certain dividends from controlled foreign corporations that repatriate accumulated income abroad, and a deduction for domestic qualified production activities taxable income. The US Treasury Department is expected to issue guidance with regards to these provisions. Until this guidance is issued, we will not be able to evaluate whether to take advantage of this opportunity and the potential impact on our income tax provision, if any.

We are routinely under audit by federal, state or foreign tax authorities. These audits include questioning the timing and amount of deductions, the nexus of income among various tax jurisdictions and compliance with federal, state and local tax laws. In evaluating the exposure associated with various tax filing positions, we often accrue charges for probable exposures. During 2004, we concluded a number of tax examinations with favorable results. Therefore, during the annual evaluation of tax positions for 2004, we decreased the amount previously accrued for probable exposures. At January 1, 2005, we believe that we have appropriately accrued for probable exposures. To the extent we were to prevail in matters for which accruals have been established or be required to pay amounts in excess of reserves, our effective tax rate in a given financial statement period could be materially affected.

Accrued Restructuring Costs

2004 Restructuring Plan

In connection with the acquisition of Spectra-Physics, we began to formulate a restructuring plan in the third quarter of 2004 to consolidate certain locations and such preliminary plan was approved by our Board of Directors. We are still finalizing this plan with respect to the employee severance, relocation and facility closure costs required for certain locations. Changes in these costs with respect to Spectra-Physics locations will result in adjustments to goodwill. We expect to finalize such plan by the end of the second quarter of 2005.

This plan currently includes \$2.2 million for employee relocation and employee severance and related termination costs and \$3.2 million related to facility consolidations. The employee severance and relocation actions will involve approximately 100 to 125 employees across all functions and are expected to be completed by the end of 2005.

The following table summarizes the activity in accrued restructuring costs related to the purchase of Spectra-Physics that involve the payment of cash:

<u>(In thousands)</u>	<u>Employee Relocation and Severance</u>	<u>Facility Consolidation</u>	<u>Total</u>
Liabilities assumed in purchase accounting	\$ 2,171	\$ 3,186	\$ 5,357
Cash payments	(484)		(484)
Accrued restructuring at January 1, 2005	\$ 1,687	\$ 3,186	\$ 4,873

Table of Contents

The facility consolidation costs will be paid over the associated lease terms, which expire at various dates between 2007 and 2011. At January 1, 2005, \$2.1 million of these accrued restructuring costs were expected to be paid within one year and are included in current liabilities in *accrued restructuring costs* and \$2.8 million of accrued restructuring costs are included in long-term liabilities in *accrued restructuring costs and other liabilities*.

2002 Restructuring Plan

During 2002, in response to the continued severe downturn in the fiber optic communications market and the uncertainty with respect to the pace of recovery in the semiconductor equipment market, our Board of Directors approved a restructuring and cost reduction plan designed to bring our operating costs in line with our business outlook at that time.

The following table summarizes the activity in accrued restructuring costs related to our 2002 restructuring plan:

<i>(In thousands)</i>	Employee Severance	Facility Consolidation	Other	Total
Accrued restructuring at December 31, 2001	\$ 1,900	\$ 3,397	\$	\$ 5,297
Restructuring and asset impairment charges	3,079	9,151	203	12,433
Cash payments	(3,221)	(1,790)	(127)	(5,138)
Non-cash write-offs		(5,872)	(196)	(6,068)
Reversal of excess 2001 reserves		(550)		(550)
Reclassifications		(120)	120	
Accrued restructuring at December 31, 2002	1,758	4,216		5,974
Restructuring and asset impairment charges		651		651
Cash payments	(2,343)	(2,595)		(4,938)
Reclassifications	585	(585)		
Accrued restructuring at December 31, 2003		1,687		1,687
Restructuring and asset impairment charges		589		589
Cash payments		(1,443)		(1,443)
Accrued restructuring at January 1, 2005	\$	\$ 833	\$	\$ 833

As of January 1, 2005, \$0.8 million of facility-related accruals remained under our 2002 restructuring plan. The facility consolidation reserves will be paid over the associated lease terms, which expire at various dates between 2005 and 2008. At January 1, 2005 and December 31, 2003, \$0.6 million and \$1.1 million, respectively, of accrued restructuring costs were expected to be paid within one year and are included in current liabilities in *accrued restructuring costs*, and \$0.2 million and \$0.6 million, respectively, of accrued restructuring costs are included in long-term liabilities in *accrued restructuring costs and other liabilities*. Under our 2002 restructuring plan, we terminated a total of 331 employees, all of whom had been terminated by December 31, 2003.

Table of Contents**Results of Operations for the Years Ended January 1, 2005, December 31, 2003 and December 31, 2002**

The following table represents the results of operations for the periods indicated as a percentage of net sales:

	Percentage of Net Sales		
	For the Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Net sales	100.0%	100.0%	100.0%
Cost of sales	70.2	67.3	84.3
Gross profit	29.8	32.7	15.7
Selling, general and administrative expense	27.3	32.3	30.6
Research and development expense	9.1	13.5	14.9
Restructuring, impairment and other charges	21.5	1.3	7.2
Operating loss	(28.1)	(14.4)	(37.0)
Interest and other income (expense), net	(0.2)	5.9	6.3
Investment write-downs	(0.5)		(4.0)
Loss from continuing operations before income taxes	(28.8)	(8.5)	(34.7)
Income tax provision (benefit)	(0.5)	(0.6)	8.5
Loss from continuing operations	(28.3)	(7.9)	(43.2)
Loss from discontinued operations, net of income taxes	(0.2)	(1.9)	(9.3)
Cumulative effect of a change in accounting principle			(8.9)
Net loss	(28.5)%	(9.8)%	(61.4)%

Net Sales

For 2004, 2003 and 2002, our net sales totaled \$285.8 million, \$134.8 million and \$164.0 million, respectively. Net sales for 2004 increased \$151.0 million, or 112.0%, compared with 2003. The sales increase was due primarily to the addition of Spectra-Physics sales from the acquisition date of July 16, 2004, which contributed \$106.6 million. In addition, our existing businesses saw significant sales increases compared with 2003 in each of our primary end markets, which totaled \$44.4 million, a 32.9% increase compared with 2003. Net sales for 2003 decreased \$29.2 million, or 17.8%, compared with 2002. The decrease in net sales was due primarily to reductions in sales to the microelectronics market and the fiber optic communications market, both of which experienced significant downturns from 2002 levels, as well as to reductions in sales to our other end markets due to generally weak macro-economic conditions, offset in part by a slight increase in sales to the life and health sciences market.

Edgar Filing: NEWPORT CORP - Form 10-K

Net sales to the scientific research, aerospace and defense/security markets were \$104.0 million, \$49.1 million and \$51.1 million for 2004, 2003 and 2002, respectively. Net sales to these markets in 2004 increased by \$54.9 million, or 111.8%, compared with 2003. The increase was due primarily to the acquisition of Spectra-Physics, which contributed \$44.1 million. The increases were also attributable to sales increases in our existing businesses which totaled \$10.8 million, a 22.0% increase compared with 2003, due to the overall strength of the economy, our further penetration of the research market, sales of the new products we released during 2003 and 2004, and greater governmental spending on research, defense and homeland security, which led to higher demand for the components and subsystems we sell to customers in these markets. Net sales for 2003 decreased \$2.0 million, or 3.9%, compared with 2002, due primarily to generally weaker macro-economic conditions.

Net sales to the microelectronics market were \$95.5 million, \$51.3 million and \$65.8 million for 2004, 2003 and 2002, respectively. Net sales to this market in 2004 increased by \$44.2 million, or 86.2%, compared with 2003. The increase was due in part to sales increases in our existing businesses which totaled \$22.3 million, a 43.5% increase compared with 2003, due to heightened demand by semiconductor manufacturers for capital equipment, which led to

Table of Contents

higher demand for the components, subsystems and robots we sell to this market, offset in part by a reduction in sales of the turnkey systems we sell to back-end packaging customers in this market. In addition, our acquisition of Spectra-Physics contributed \$21.9 million to our net sales to this market in 2004. Sales to this market in 2003 decreased \$14.5 million, or 22.0%, compared with 2002. The decline reflected weakness in demand by semiconductor manufacturers for capital equipment, which led to a significant reduction in demand for the components, subsystems, robots and turnkey systems that we sell to this market, offset in part by the inclusion of sales from MRSI, which we acquired in February 2002.

Net sales to the life and health sciences market were \$40.1 million, \$10.8 million and \$8.6 million for 2004, 2003 and 2002, respectively. Net sales to this market in 2004 increased by \$29.3 million, or 271.3%, compared with 2003. The increase in 2004 was due primarily to the acquisition of Spectra-Physics, which contributed \$24.3 million. In addition, our existing businesses saw sales increases to this market totaling \$5.0 million, a 46.3% increase compared with 2003, due primarily to higher sales of products to one of our largest customers in this market. Net sales to this market in 2003 increased by \$2.2 million, or 25.6%, in 2003 compared with 2002. This increase was due primarily to higher sales of products to one of our largest customers in this market in 2003.

Net sales to our other end markets were \$46.2 million, \$23.6 million and \$38.5 million for 2004, 2003 and 2002, respectively. Net sales to this market in 2004 increased by \$22.6 million, or 95.8%, compared with 2003. The increase was due primarily to the acquisition of Spectra-Physics, which contributed \$16.3 million. In addition, our existing businesses saw sales increases to these markets totaling \$6.3 million, a 26.7% increase compared with 2003, due primarily to the overall strength of the economy. Sales to these markets in 2003 decreased \$14.9 million, or 38.7%, compared with 2002. The reduction in sales was due primarily to weak overall macro-economic conditions and a continued decline in sales to industrial customers supporting the telecommunications industry.

Domestic and international sales by end market were as follows:

Domestic Sales:

<i>(In thousands)</i>	Year Ended			Percentage Increase
	January 1, 2005	December 31, 2003	Increase	
Scientific research, aerospace and defense/security	\$ 53,333	\$ 27,405	\$ 25,928	94.6%
Microelectronics	79,758	45,391	34,367	75.7
Life and health sciences	27,316	9,815	17,501	178.3
Other end markets	17,463	9,774	7,689	78.7

Geographically, net sales to European customers were \$56.5 million, \$25.4 million and \$29.8 million for 2004, 2003 and 2002, respectively. Net sales to European customers increased \$31.1 million, or 122.4%, in 2004 compared with 2003, and decreased \$4.4 million, or 14.8%, in 2003 compared with 2002. Net sales to Pacific Rim customers were \$40.2 million, \$13.5 million and \$13.2 million for 2004, 2003 and 2002, respectively. Net sales to Pacific Rim customers increased \$26.7 million, or 197.8%, in 2004 compared with 2003, and increased \$0.3 million, or 2.3%, in 2003 compared with 2002. Net sales to other international customers were \$11.2 million, \$3.5 million and \$4.8 million for 2004, 2003 and 2002, respectively. Net sales to other international customers increased \$7.7 million, or 220.0%, in 2004 compared with 2003, and decreased \$1.3 million, or 27.1%, in 2003 compared with 2002. The increase in sales to international customers in 2004 compared with 2003 was due primarily to the addition of Spectra-Physics sales from the July 16, 2004 acquisition date, which contributed \$55.9 million to international sales in 2004. In addition, our existing businesses saw sales increases to international customers totaling \$9.6 million, a 22.6% increase compared with 2003. The decline in sales to international customers in 2003 compared with 2002 was due primarily to decreases in sales to our end markets as described above, primarily sales to customers in the fiber optic communications market.

The results of our international operations are subject to currency fluctuations. As the value of the U.S. dollar weakens relative to other currencies, sales in those currencies convert to more U.S. dollars; conversely, when the value of the U.S. dollar strengthens relative to other currencies, sales in those countries convert to fewer U.S. dollars. Currency fluctuations did not have a material impact on our results for 2004 compared with 2003 and 2002.

We expect net sales to be flat to down slightly in the first quarter of 2005 compared with the fourth quarter of 2004 due to the continuing softness in the microelectronics market and the historical seasonality in the scientific research market, offset by increases in sales to our other markets. However, our business is subject to risks arising from market conditions in our primary end markets, as well as from general economic conditions.

We expect that our sales to the scientific research, aerospace and defense/security markets will be flat to down slightly in the first quarter of 2005 compared with the fourth quarter of 2004 due to the record fourth quarter sales level and the historical seasonality in the scientific research market. Overall, we expect that our sales to these markets will fluctuate from period to period in line with changes in overall research and defense spending levels, but will increase over time as we increase our penetration of these markets.

Table of Contents

We expect our sales to the microelectronics market to decrease slightly in the first quarter of 2005 compared with the fourth quarter of 2004 and remain flat to slightly down for the next few quarters thereafter, consistent with the overall trend in this market. However, the duration and extent of this downturn is difficult to predict and represents a significant uncertainty with respect to our future operating results.

We expect our sales to the life and health sciences market for the first quarter of 2005 to be flat to up slightly compared with the fourth quarter of 2004 due to increased sales to one of our largest customers in this market. In general, we expect our sales to this market to fluctuate on a quarter to quarter basis in the short term due to our concentration of significant OEM customers in this market, but to increase over time as we increase our penetration of this market.

Gross Margin

Gross margin was 29.8%, 32.7% and 15.7% for 2004, 2003 and 2002, respectively. Gross margin for 2004 was positively impacted by the addition of Spectra-Physics sales, which carried higher overall gross margins, from the July 16, 2004 acquisition date, but this impact was more than offset by charges to cost of sales for acquisition, integration and other items. These included \$8.6 million, or 3.0% of net sales, related to the sale of acquired inventory that had been written up to an amount that includes a normal selling margin in accordance with SFAS No. 141, *Business Combinations*, and sold during the second half of 2004. These also included a charge of \$9.4 million, or 3.3% of net sales, that was comprised of \$4.7 million of inventory associated primarily with certain discontinued product lines that we reserved for and are in the process of disposing of, and \$4.7 million for inventory that we wrote off and disposed of in 2004 due to facility consolidations. In addition, gross margins in 2004 were negatively impacted by charges to cost of sales of \$1.8 million related to the impairment of certain intangible assets of our APAS division and \$1.5 million related to the impairment of an intellectual property intangible asset. These impairment charges are discussed in more detail in Note 4, Restructuring, Impairment and Other Charges, of the Notes to Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K.

Our overall gross margins in 2003 were negatively impacted by previously capitalized underabsorbed overhead costs. Products sold in 2003 were produced during periods in which substantial unabsorbed overhead costs were allocated to inventory. These variances, which were caused primarily by lower sales volume and production activity, were capitalized when the inventory was produced and are charged to cost of sales when the related products are sold. The negative effect of these capitalized variances was offset in part by the cost reduction actions that we implemented during the second half of 2002 and throughout 2003, including facility consolidations and headcount reductions. Gross margin for 2002 included charges to cost of sales for increased inventory reserves of \$28.7 million, or 17.5% of net sales, as part of the 2002 cost reduction plans discussed previously. In addition to the increased inventory reserve charge, 2002 gross margins were also negatively impacted by underabsorbed overhead costs caused by significantly lower overall sales volume and lower fixed overhead absorption in 2002, offset in part by lower sales to OEM customers.

In the next several quarters, we expect gross margins to continue to improve from the 2004 levels, due primarily to reduced levels of inventory write-offs and previously capitalized variances, and to the positive effects of adding the results of Spectra-Physics, which generally has higher overall gross margins, for a full year. In addition, we expect gross margins to be positively impacted by the results of our integration actions due to increased manufacturing efficiencies.

Selling, General and Administrative (SG&A) Expense

SG&A expense totaled \$77.9 million, or 27.3% of net sales, \$43.6 million, or 32.3% of net sales, and \$50.2 million, or 30.6% of net sales of 2004, 2003 and 2002, respectively. The increase in absolute dollars in 2004 compared with 2003 was attributable primarily to the addition of

Edgar Filing: NEWPORT CORP - Form 10-K

\$22.6 million of SG&A expense of Spectra-Physics from the acquisition date of July 16, 2004 and to \$3.2 million of amortization of acquired intangible assets related to the acquisition. The remainder of the increase in SG&A expense in 2004 compared with 2003 was attributable primarily to an increase in variable selling expenses and incentive compensation associated with the higher sales volume, increased accounting and auditing fees due to our increased size, and outside consulting fees related to compliance with Section 404 of the Sarbanes-Oxley Act of 2002.

Table of Contents

SG&A expense for 2002 included expenses in the third quarter of \$2.5 million, or 1.5% of net sales, for costs incurred in connection with our cost reduction initiatives. The decrease in absolute dollars in 2003 compared with 2002 was attributable primarily to the impact of the significant cost reduction actions we commenced in 2003. The benefits of these cost reduction actions were offset in part by the inclusion of a full year of SG&A expense relating to MRSI, which we acquired in February 2002, and for which there was not a full year of costs in 2002, and by higher legal expenses incurred in 2003 to protect our intellectual property.

We expect that SG&A expense for the first quarter of 2005 will again be impacted significantly by acquisition and integration charges. In general, we expect that SG&A expense will fluctuate as a percentage of sales in the future based on our sales level in any given period. Because the majority of our SG&A expense is fixed in the short term, these fluctuations will likely not be in proportion to the changes in net sales.

Research and Development (R&D) Expense

R&D expense totaled \$26.1 million or 9.1% of net sales, \$18.1 million, or 13.5% of net sales and \$24.4 million, or 14.9% of net sales, for 2004, 2003 and 2002, respectively. R&D expense increased \$8.0 million, or 44.2%, in 2004 compared with 2003. This increase was attributable primarily to the addition of expenses for Spectra-Physics from the acquisition date of July 16, 2004, which were \$9.6 million, offset in part by reductions in R&D spending in the fiber optic communications area, as well as by the results of our efforts to maximize the focus and efficiency of our R&D activities.

R&D expense decreased \$6.3 million, or 25.8%, in 2003 compared with 2002. This decrease was attributable primarily to reductions in R&D spending in the fiber optic communications area, as well as our efforts to maximize the focus and efficiency of our R&D efforts, offset in part by the inclusion of a full year of R&D expenses associated with the operations of MRSI, for which there was not a full year of costs in 2002.

We expect that R&D expense in the first quarter of 2005 will be comparable with the fourth quarter level. We believe that the continued development and advancement of our key products and technologies is critical to our future success, and we intend to continue to invest in key R&D initiatives, while working to ensure that the efforts are focused and the funds are deployed efficiently. In general, we expect that R&D expense as a percentage of net sales will fluctuate in the future based on our sales level in any given period. Because of our commitment to continued product development, and because the majority of our R&D expense is fixed in the short term, these fluctuations will likely not be in proportion to the changes in net sales.

Restructuring, Impairment and Other Charges

Restructuring, impairment and other charges totaled \$61.4 million, \$1.7 million and \$11.9 million for 2004, 2003, and 2002, respectively. The following table summarizes these charges:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002

Edgar Filing: NEWPORT CORP - Form 10-K

Asset impairment, including goodwill	\$ 59,804	\$	\$
2002 restructuring plan charge	589	651	11,883
Severance	969	1,054	
	\$ 61,362	\$ 1,705	\$ 11,883

In the fourth quarter of 2004, we completed our annual review of goodwill and other intangible assets and determined that goodwill and other intangible assets at our Advanced Packaging and Automation Systems Division were impaired. In addition, in the third and fourth quarters of 2004, we reviewed fixed assets at facilities impacted by the integration of Spectra-Physics and identified duplicate and unnecessary assets. As a result of these actions, we recorded restructuring, impairment and other charges in 2004 for impairment of goodwill and other acquired assets of approximately \$59.8 million.

Table of Contents

During 2002, in response to the continued severe downturn in the fiber optic communications market and the uncertainty with respect to the pace of recovery in the semiconductor equipment market, our Board of Directors approved a restructuring and cost reduction plan designed to bring our operating costs in line with our business outlook at that time. In connection with this plan, we recorded a charge of \$11.9 million in 2002. In 2004 and 2003, we increased our estimate of the required reserve for facility consolidations under this plan by \$0.6 million and \$0.7 million, respectively, to reflect settlements of our remaining lease obligations for certain leases as well as revised estimates of future sublease income.

Restructuring, impairment and other charges in 2004 also included severance costs of \$1.0 million for cost reduction actions taken in 2004 as part of the integration of Spectra-Physics. Such charges for 2003 included severance costs of \$1.0 million for cost reduction actions taken in 2003 for employees that were not included in the original 2002 restructuring charge.

These restructuring, impairment and other charges are discussed in more detail in Note 4, Restructuring, Impairment and Other Charges, of the Notes to Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K.

Interest and Other Income (Expense), Net

Interest and other expense, net, totaled \$0.6 million for 2004, compared with interest and other income, net of \$8.0 million and \$10.3 million for 2003 and 2002, respectively. Interest and other expense, net was negatively impacted in 2004 compared with 2003 by lower interest income earned due to lower yields on cash and marketable securities and lower overall balances of cash and marketable securities due to the cash paid to fund the cash portion of the purchase price for Spectra-Physics. In addition, such amount was negatively impacted by increased interest expense due to the debt issued to fund the purchase price of Spectra-Physics and interest expense on lines of credit we assumed in the acquisition. Interest and other expense, net in 2004 was also negatively impacted by a charge of \$1.7 million for losses on sales of marketable securities prior to their maturity in order to fund the cash portion of the purchase price for Spectra-Physics. The decrease in interest and other income, net in 2003 compared with 2002 was due primarily to lower interest earned due to lower yields on cash and marketable securities.

We expect to incur interest and other expense, net, in future periods, due primarily to interest expense incurred on short-term and long-term debt, offset in part by interest earned on cash and marketable securities.

Investment Write-Downs

In 2004, we determined that a minority interest investment made in prior years in a manufacturer of precision mechanical components had incurred an other-than-temporary reduction in value. As a result, we recorded a charge of \$1.4 million to write down the investment to its estimated fair value.

In 2002, two fiber optic component manufacturers in which we had made minority interest investments in prior years experienced severe financial difficulties. Each manufacturer has shut down its operations and liquidated its assets. As a result, we recorded a charge of \$6.5 million to write down these investments to their estimated fair value.

Income Taxes

Our effective tax rates from continuing operations were 1.6%, 7.1% and (24.6%) for 2004, 2003 and 2002, respectively. During 2004, the Internal Revenue Service and the California Franchise Tax Board completed certain examinations of MRSI. Based on the favorable conclusions of these examinations, we recorded a reduction in MRSI's tax contingency reserve of approximately \$3.0 million. The net income tax benefit of \$1.3 million recorded in 2004 was attributable to this reduction in tax contingency reserve, offset in part by certain required state income taxes and taxes in certain foreign jurisdictions.

In 2003, we recorded an income tax benefit of \$0.8 million, compared with a \$14.0 million income tax expense in 2002. The income tax benefit in 2003 was attributable to Federal income tax refunds and refundable foreign income tax incentives related to research and development, and to the favorable settlement of various IRS

Table of Contents

examinations. The income tax expense in 2002 resulted from a valuation allowance that was recorded against a portion of our deferred tax assets pursuant to SFAS No. 109, due to the uncertainty as to the timing and ultimate realization of those assets. As such, we did not recognize any tax benefit on the losses recorded in these periods.

We have recorded a valuation reserve against our deferred tax assets pursuant to SFAS No. 109, due to the uncertainty as to the timing and ultimate realization of those assets. As such, for the foreseeable future, the Federal tax provision related to future earnings will be substantially offset by a reduction in the valuation reserve, and any future pretax losses will not be offset by a tax benefit due to the uncertainty of the recoverability of the deferred tax assets. Accordingly, we expect that current and future tax expense will consist primarily of certain required state income taxes and taxes in certain foreign jurisdictions.

Liquidity and Capital Resources

Net cash provided by our operating activities of \$17.8 million for 2004 was attributable primarily to the cash provided by our results of operations, a decrease in inventories and an increase in accounts payable and accrued expenses due to the timing of payments, offset in part by an increase in accounts and notes receivable as a result of higher sales at the end of the fourth quarter and cash paid for accrued restructuring costs.

Net cash provided by investing activities of \$5.1 million for 2004 consisted primarily of net proceeds from the sale of marketable securities of \$190.4 million, offset by net cash used in the acquisition of Spectra-Physics of \$179.0 million and net purchases of property, plant and equipment of \$6.0 million.

Net cash provided by financing activities of \$4.8 million for 2004 consisted of proceeds of \$4.5 million received from the issuance of common stock in connection with stock option and employee stock purchase plans and net proceeds from short-term borrowings of \$0.6 million, offset in part by payments of capital lease obligations of \$0.3 million.

At January 1, 2005, we had cash and cash equivalents of \$41.4 million and marketable securities of \$66.7 million. The majority of these securities are invested in one portfolio managed by a professional investment management firm, under the oversight of our senior financial management team. This portfolio manager invests the funds allocated in accordance with our Investment Policy, which is reviewed regularly by our senior financial management and the Audit Committee of our Board of Directors. In 2004, we used approximately \$179 million of cash to acquire Spectra-Physics, and we used additional cash for acquisition, integration and related items. We expect that our cash balances will fluctuate in the future based on factors such as cash used in or provided by ongoing operations, acquisitions or divestitures, investments in other companies, share repurchases, capital expenditures and contractual obligations, and changes in interest rates.

At January 1, 2005, we had in place a \$5.0 million revolving line of credit expiring December 1, 2005. Certain of the marketable securities that are being managed by the lending institution collateralize the line of credit. The line bears interest at either the prevailing prime rate, or the prevailing London Interbank Offered Rate (2.39% at January 1, 2005) plus 1.5%, at our option, and an unused line fee of 0.25% per year. At January 1, 2005, there were no balances outstanding under the line of credit, with \$2.3 million available under the line, after considering outstanding letters of credit totaling approximately \$2.7 million.

Edgar Filing: NEWPORT CORP - Form 10-K

At January 1, 2005, we had in place two revolving lines of credit totaling 1.5 billion yen (\$14.4 million at January 1, 2005) at two Japanese banks expiring as follows: \$10.6 million on November 30, 2005 and \$3.8 million on March 31, 2005. The lines are not secured and bear interest at the prevailing bank rate. At January 1, 2005, we had \$12.9 million outstanding under these lines of credit, with \$1.5 million available for borrowing. In addition, we had in place four lines of credit totaling 800 million yen (\$7.7 million at January 1, 2005) to be used to sell notes receivable with recourse at four Japanese banks. These lines have no expiration date and bear interest at the bank's prevailing rate. At January 1, 2005, we had \$4.3 million outstanding under these lines, with \$3.4 million available for the sale of notes receivable. The weighted average interest rate on all borrowings on these lines under these lines was 1.6%.

Table of Contents

In July 2004, as part of the purchase price for Spectra-Physics, we issued an unsecured promissory note to Thermo Electron Corporation in the principal amount of \$50 million, which bears interest at 5% per annum, payable quarterly, and is due and payable in full on July 16, 2009.

In 2003, we announced that our Board of Directors had approved a share repurchase program. The Board authorized us to purchase up to 3.9 million shares, or 10% of our then outstanding stock. The purchases may be made from time to time in the open market or in privately negotiated transactions, and the timing and amount of the purchases will be based on factors including our share price, cash balances, expected cash requirements and general business and market conditions. During 2003, we repurchased 285,529 shares under this program at a cost of \$4.5 million. We did not make any purchases under this program in 2004, and any future purchases will depend on the aforementioned factors.

We lease certain of our manufacturing and office facilities and equipment under non-cancelable operating leases, certain of which contain renewal options. In addition to the base rent, we are generally required to pay insurance, real estate taxes and other operating expenses and, in some cases, additional rentals based on increases in the Consumer Price Index.

As of January 1, 2005, we had no material purchase obligations. Our long-term debt, and capital and operating lease obligations at January 1, 2005 are summarized as follows:

<i>(In thousands)</i>	<u>Capital Leases</u>	<u>Operating Leases</u>	<u>Long-Term Debt</u>	<u>Total Obligations</u>
Payments Due By Period:				
2005	\$ 259	\$ 9,755	\$	\$ 10,014
2006	177	8,045		8,222
2007	177	6,219		6,396
2008	177	4,480		4,657
2009	177	2,949	50,000	53,126
Thereafter	1,592	7,793		9,385
Total minimum lease payments	2,559	\$ 39,241	\$ 50,000	\$ 91,800
Less amount representing interest	(822)			
Present value of net minimum capital lease payments	\$ 1,737			

We believe our current working capital position, together with our expected future cash flows from operations will be adequate to fund our operations in the ordinary course of business, anticipated capital expenditures, debt payment requirements and other contractual obligations for the foreseeable future. However, this belief is based upon many assumptions and is subject to numerous risks (see *Risks Relating To Our Business* on pages 38-47), and there can be no assurance that we will not require additional funding in the future.

We have no present agreements or commitments with respect to any material acquisitions of other businesses, products, product rights or technologies or any material capital expenditures. However, we will continue to evaluate acquisitions of and/or investments in products, technologies, capital equipment or improvements or companies that complement our business and may make such acquisitions and/or investments in the future. Accordingly, there can be no assurance that we will not need to obtain additional sources of capital in the future to finance any such acquisitions and/or investments. We cannot assure you that any such financing would be available, or that, if available, such

financing would be obtainable on terms favorable to us and would not be dilutive.

Table of Contents**New Accounting Standards**

In December 2004, the Financial Accounting Standards Board (FASB) issued SFAS No. 123R, *Share-Based Payment*. SFAS No. 123R requires employee stock options and rights to purchase shares under stock participation plans to be accounted for under the fair value method, and eliminates the ability to account for these instruments under the intrinsic value method prescribed by Accounting Principles Board (APB) Opinion No. 25, and allowed under the original provisions of SFAS No. 123. SFAS No. 123R requires the use of an option pricing model for estimating fair value, which is amortized to expense over the option vesting periods. The requirements of SFAS No. 123R are effective for fiscal periods beginning after June 15, 2005. We are currently assessing the impact that the adoption of SFAS No. 123R will have on our consolidated results of operations. Although the assessment is ongoing, management believes the impact will be material to our consolidated results of operations. If we had applied the provisions of SFAS No. 123R to the financial statements for the period ended January 1, 2005, our net loss would have been increased by approximately \$16.6 million. However, due to the alternative option pricing models and assumptions, the lower numbers of options granted in recent years, and the lower valuations of such options compared with options granted previously, this figure will likely not be representative of the impact to future results of operations. SFAS No. 123R allows for either prospective recognition of compensation expense or retrospective recognition. The retrospective method may be applied either to all prior years in which SFAS No. 123 was effective or only to prior interim periods in 2005 before adoption of SFAS No. 123R. We are currently evaluating these transition methods.

In November 2004, the FASB issued SFAS No. 151, *Inventory Costs - An Amendment of ARB No. 43, Chapter 4*. SFAS No. 151 clarifies that abnormal amounts of idle facility expense, freight, handling costs and spoilage should be expensed as incurred and not included in overhead. Further, SFAS No. 151 requires that allocation of fixed and production facilities overhead to conversion costs should be based on the normal capacity of the production facilities. The provisions in SFAS No. 151 are effective for inventory costs incurred during fiscal years beginning after June 15, 2005. We are currently evaluating the impact of the adoption of this standard, but we do not believe that the adoption of SFAS No. 151 will have a significant effect on our results of operations or financial position.

In March 2004, the FASB approved the consensus reached on the Emerging Issues Task Force (EITF) Issue No. 03-1, *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*. It provides guidance for identifying other-than-temporarily impaired investments. EITF 03-1 also provides new disclosure requirements for investments that are deemed to be temporarily impaired. In September 2004, the FASB issued a FASB Staff Position (FSP) EITF 03-1-1 that delays the effective date of the measurement and recognition guidance in EITF 03-1 until further notice. The disclosure requirements of EITF 03-1 were effective for annual financial statements with fiscal years ending after December 15, 2003 and are reflected in our consolidated financial statements and related notes included in this Annual Report on Form 10-K. After the FASB reaches a final decision on the measurement and recognition provisions, we will evaluate the impact of the adoption of the accounting provisions of EITF 03-1.

In December 2003, the FASB issued SFAS No. 132R, *Employers' Disclosures about Pensions and Other Postretirement Benefits*. The statement provides disclosure requirements for defined benefit pension plans and other post-retirement benefit plans. The statement was effective for annual financial statements with fiscal years ending after December 15, 2003, and for interim periods beginning after December 15, 2003. We adopted SFAS No. 132R during 2004. The adoption of SFAS No. 132R did not have any impact on our results of operations or financial position.

Table of Contents

RISKS RELATING TO OUR BUSINESS

The following is a summary of certain risks we face in our business. They are not the only risks we face. Additional risks of which we are not presently aware or that we currently believe are immaterial may also harm our business and results of operations. The trading price of our common stock could decline due to the occurrence of any of these risks, and investors could lose all or part of their investment. In assessing these risks, investors should also refer to the other information contained or incorporated by reference in our other filings with the Securities and Exchange Commission.

We may not be able to effectively or completely integrate the business and operations of Spectra-Physics or future acquisitions, which could materially harm our operating results.

In connection with our acquisition of Spectra-Physics, we face several significant challenges in integrating the business and operations of Spectra-Physics with our own. We may not be able to achieve the integration in an effective, complete, timely or cost-efficient manner. The acquisition of Spectra-Physics approximately doubled our size, including with respect to revenue, number of employees and facilities. The acquisition and integration of Spectra-Physics with our operations involves substantial risks, including:

our overall ability to integrate and manage Spectra-Physics operations, products and personnel;

our ability to integrate the products of Spectra-Physics so that they complement our own;

our ability to continue the development of the Spectra-Physics products and underlying technology;

our ability to manufacture and sell the Spectra-Physics products;

a decline in the demand for the Spectra-Physics products in the marketplace;

our ability to retain and expand the customer base of Spectra-Physics;

customer dissatisfaction or performance problems with the Spectra-Physics products;

our ability to integrate the international operations of Spectra-Physics, particularly in those countries in which we have not had prior operations;

our ability to retain key personnel who remained employed with Spectra-Physics following the acquisition;

our ability to expand our financial and management controls and reporting systems and procedures to integrate and manage Spectra-Physics;

our ability to realize expected synergies resulting from the acquisition;

diversion of management's time and attention;

administrative integration and elimination of redundancies;

assumption of unknown or contingent liabilities, or other unanticipated events or circumstances;

our ability to maintain the competitiveness of Spectra-Physics and its products and technology in the marketplace; and

Table of Contents

the need to incur or record significant cash or non-cash charges or write down the carrying value of intangible assets obtained in the Spectra-Physics acquisition, which could adversely impact our cash flow or lower our earnings in the period or periods for which we incur such charges or write down such assets.

The business and operations of Spectra-Physics may not achieve the anticipated revenues and operating results. We may in the future choose to close or divest certain sectors or divisions of Spectra-Physics, which could require us to record losses and/or spend cash relating to such closures or divestitures. Any of the foregoing risks could materially harm our business, financial conditions and results of operations.

In addition, we have in the past, and expect in the future, to achieve growth through a combination of internally developed new products and acquisitions. In recent years we have acquired several companies and technologies in addition to Spectra-Physics, and we expect to continue to pursue acquisitions of other companies, technologies and complementary product lines in the future to expand our product offerings and technology base to further our strategic goals. We have faced and continue to face the same and other similar risks as referenced above in connection with our prior acquisitions, and we expect that we would face the same and other similar risks as referenced above in connection with any such future acquisitions.

Our operating results are difficult to predict, and if we fail to meet the expectations of investors and/or securities analysts, the market price of our common stock will likely decline significantly.

Our operating results in any given quarter have fluctuated and will likely continue to fluctuate. These fluctuations are typically unpredictable and can result from numerous factors including:

fluctuations in our customers' capital spending, industry cyclicality (particularly in the semiconductor industry), levels of government funding available to our customers, and other economic conditions within the markets we serve;

demand for our products and the products sold by our customers;

the level of orders within a given quarter and preceding quarters;

the timing and level of cancellations and delays of orders for our products;

the timing of product shipments within a given quarter;

our timing in introducing new products;

variations in the mix of products we sell in each of the markets in which we do business;

changes in our pricing policies or in the pricing policies of our competitors or suppliers;

Edgar Filing: NEWPORT CORP - Form 10-K

market acceptance of any new or enhanced versions of our products;

the availability and cost of key components and raw materials we use to manufacture our products;

our ability to manufacture a sufficient quantity of our products to meet customer demand;

fluctuations in foreign currency exchange rates;

timing of new product introductions by our competitors; and

our levels of expenses.

Table of Contents

We may in the future choose to change prices, increase spending, or add or eliminate products in response to actions by competitors or in an effort to pursue new market opportunities. These actions may also adversely affect our business and operating results and may cause our quarterly results to be lower than the results of previous quarters.

In addition, we often recognize a substantial portion of our sales in the last month of the quarter. Thus, unexpected variations in timing of sales, particularly for our higher-priced, higher-margin products such as our laser products, can cause significant fluctuations in our quarterly operating results. Orders expected in one quarter could shift to another period due to changes in the anticipated timing of customers' purchase decisions or rescheduled delivery dates requested by our customers. Our operating results for a particular quarter or year may be adversely affected if our customers, particularly our largest customers, cancel or reschedule orders, or if we cannot fill orders in time due to unexpected delays in manufacturing, testing, shipping, and product acceptance. Also, we base our manufacturing on our forecasted product mix for the quarter. If the actual product mix varies significantly from our forecast, we may not be able to fill some orders during that quarter, which would result in delays in the shipment of our products and could shift sales to a subsequent period. In addition, our expenses for any given quarter are typically based on expected sales, and if sales are below expectations in any given quarter, the adverse impact of the shortfall on our operating results may be magnified by our inability to adjust spending quickly to compensate for the shortfall.

Due to these and other factors, we believe that quarter-to-quarter comparisons of results from operations, or any other similar period-to-period comparisons, should not be construed as reliable indicators of our future performance. In any period, our results may be below the expectations of market analysts and investors, which would likely cause the trading price of our common stock to drop.

We are highly dependent on the semiconductor equipment industry, which is volatile and unpredictable.

A substantial portion of our current and expected future business comes from sales of components, subsystems and laser products to manufacturers of semiconductor fabrication, metrology and wafer inspection equipment and sales of capital equipment to integrated semiconductor device manufacturers. The semiconductor market has historically been characterized by sudden and severe cyclical variations in product supply and demand. The timing, severity and duration of these market cycles are difficult to predict, and we may not be able to respond effectively to these cycles. The continuing uncertainty in this market severely limits our ability to predict our business prospects or financial results in this market.

During industry downturns, our revenues from this market will decline suddenly and significantly. Our ability to rapidly and effectively reduce our cost structure in response to such downturns is limited by the fixed nature of many of our expenses in the near term and by our need to continue our investment in next-generation product technology and to support and service our products. In addition, due to the relatively long manufacturing lead times for some of the systems and, subsystems we sell to this market, we may incur expenditures or purchase raw materials or components for products we cannot sell. Accordingly, downturns in the semiconductor capital equipment market may materially harm our operating results. Conversely, when upturns in this market occur, we must be able to rapidly and effectively increase our manufacturing capacity to meet increases in customer demand that may be extremely rapid, and if we fail to do so we may lose business to our competitors and our relationships with our customers may be harmed.

A limited number of customers account for a significant portion of our sales to the microelectronics market, and if we lose any of these customers or they significantly curtail their purchases of our products, our results of operations would be harmed.

Our sales to the microelectronics market (which is comprised primarily of semiconductor capital equipment customers) constituted 33.4%, 38.0% and 40.2% of our consolidated net sales for the year ended January 1, 2005 (which includes Spectra-Physics' results of operations for the

Edgar Filing: NEWPORT CORP - Form 10-K

period after July 16, 2004, the date of acquisition), and for the years ended December 31, 2003 and 2002, respectively. We rely on a limited number of customers for a significant portion of our sales to this market. Our top five customers in this market comprised approximately

Table of Contents

56.5%, 62.0%, and 69.8% of our sales to this market for the year ended January 1, 2005 (which includes Spectra-Physics' results of operations for the period after July 16, 2004, the date of acquisition), and for the years ended December 31, 2003 and 2002, respectively. No single customer in this market comprised 10% or more of our consolidated net sales in 2004. If any of our principal customers discontinues its relationship with us, replaces us as a vendor for certain products or suffers downturns in its business, our business and results of operations could be harmed significantly. In addition, because a relatively small number of companies dominate the front-end equipment portion of this market, and because those companies rarely change vendors in the middle of a product's life cycle, it may be particularly difficult for us to replace these customers if we lose their business.

The microelectronics market is characterized by rapid technological change, frequent product introductions, changing customer requirements and evolving industry standards. Because our customers face uncertainties with regard to the growth and requirements of these markets, their products and components may not achieve, or continue to achieve, anticipated levels of market acceptance. If our customers are unable to deliver products that gain market acceptance, it is likely that these customers will not purchase our products or will purchase smaller quantities of our products. We often invest substantial resources in developing our systems and subsystems in advance of significant sales of these systems and/or subsystems to such customers. A failure on the part of our customers' products to gain market acceptance, or a failure of the semiconductor capital equipment market to grow would have a significant negative effect on our business and results of operations.

A significant portion of our future growth is dependent on the growth of 300mm semiconductor wafer processes and lower than expected demand for equipment designed for these processes could negatively impact our revenues.

A significant portion of our expected future system and subsystem business in the semiconductor capital equipment market is comprised of products for the fabrication, inspection and metrology of 300mm semiconductor wafers. Wafer fabrication, inspection and metrology equipment for 300mm wafers is in an early stage of its adoption, and is expected to be driven by the need for the ability to manufacture more semiconductor chips at lower cost. The deployment of such equipment requires a significant capital investment by semiconductor manufacturers, and many semiconductor manufacturers have delayed plans to deploy such equipment until market conditions improve. In addition, certain industry analysts have recently forecasted more conservative capital equipment spending and slower adoption of new technologies by semiconductor manufacturers in future periods. If the demand for capital equipment for 300mm wafers does not increase, or increases more slowly than expected, demand for our system and subsystem products will likewise be adversely affected, and our business and results of operations could be harmed significantly.

Many of the markets and industries that we serve are subject to rapid technological change, and if we do not introduce new and innovative products or improve our existing products, our business and results of operations will be negatively affected.

Many of our markets are characterized by rapid technological advances, evolving industry standards, shifting customer needs and new product introductions and enhancements. Products in our markets often become outdated quickly and without warning. We depend to a significant extent upon our ability to enhance our existing products, to anticipate and address the demands of the marketplace for new and improved technology, either through internal development or by acquisitions, and to be price competitive. If we or our competitors introduce new or enhanced products, it may cause our customers to defer or cancel orders for our existing products. In addition, because certain of our markets experience severe cyclicity in capital spending, if we fail to introduce new products in a timely manner we may miss market upturns, and may fail to have our products or subsystems designed into our customers' products. We may not be successful in acquiring, developing, manufacturing or marketing new products on a timely or cost-effective basis. If we fail to adequately introduce new, competitive products on a timely basis, our business and results of operations would be harmed.

Table of Contents

We offer products for multiple industries and must face the challenges of supporting the distinct needs of each of the markets we serve.

We offer products for a number of markets, including semiconductor capital equipment, scientific research, aerospace and defense/security, life and health sciences and fiber optic communications. Because we operate in multiple markets, we must work constantly to understand the needs, standards and technical requirements of several different industries and must devote significant resources to developing different products for these industries. Product development is costly and time consuming. Many of our products are used by our customers to develop, manufacture and test their own products. As a result, we must anticipate trends in our customers' industries and develop products before our customers' products are commercialized. If we do not accurately predict our customers' needs and future activities, we may invest substantial resources in developing products that do not achieve broad market acceptance. Our decision to continue to offer products to a given market or to penetrate new markets is based in part on our judgment of the size, growth rate and other factors that contribute to the attractiveness of a particular market. If our product offerings in any particular market are not competitive or our analyses of a market are incorrect, our business and results of operations would be harmed.

Because the sales cycle for some of our products is long and difficult to predict, and certain of our orders are subject to rescheduling or cancellation, we may experience fluctuations in our operating results.

Many of our capital equipment, system and subsystem products are complex, and customers for these products require substantial time to make purchase decisions. These customers often perform, or require us to perform extensive configuration, testing and evaluation of our products before committing to purchasing them. The sales cycle for our capital equipment, system and subsystem products from initial contact through shipment typically varies, is difficult to predict and can last as long as one year. The orders comprising our backlog are often subject to cancellation and changes in delivery schedules by our customers without significant penalty. We have from time to time experienced order rescheduling and cancellations that have caused our revenues in a given period to be materially less than would have been expected based on our backlog at the beginning of the period. If we experience such rescheduling and/or cancellations in the future, our operating results will fluctuate from period to period. These fluctuations could harm our results of operations and cause our stock price to drop.

If we are delayed in introducing our new products into the marketplace, or if our new products contain defects, our operating results will suffer.

Because certain of our products, particularly lasers, are sophisticated and complex, we may experience delays in introducing new products or enhancements to our existing products. If we do not introduce our new products or enhancements into the marketplace in a timely fashion, our customers may choose to use competitors' products. In addition, because certain of our markets, such as the semiconductor equipment market, are highly cyclical in nature, if we fail to timely introduce new products in advance of an upturn in the market's cycle, we may be foreclosed from selling products to many customers until the next cycle. As such, our inability to introduce new or enhanced products in a timely manner could cause our business and results of operations to suffer. In addition, our products may contain defects or undetected errors. As a result, we could incur substantial expenses in fixing any defects or undetected errors, which could result in damage to our competitive position and harm our business and results of operations.

We face significant risks from doing business in foreign countries.

Our business is subject to risks inherent in conducting business internationally. For the year ended January 1, 2005 (which includes Spectra-Physics' results of operations for the period after July 16, 2004, the date of acquisition), and for the years ended December 31, 2003 and 2002, our international revenues accounted for approximately 37.8%, 31.5% and 29.1%, respectively, of total net sales, with a substantial

Edgar Filing: NEWPORT CORP - Form 10-K

portion of international sales originating in Europe. We expect that international revenues will continue to account for a significant percentage of total net sales for the foreseeable future, and that, in particular, the proportion of our sales to Asian customers will increase as a result of the purchase of Spectra-Physics. Our international operations expose us to various risks, which include:

Table of Contents

adverse changes in the political or economic conditions in countries or regions where we manufacture or sell our products;

challenges of administering our business globally;

compliance with multiple and potentially conflicting regulatory requirements including export requirements, tariffs and other trade barriers;

longer accounts receivable collection periods;

overlapping, differing or more burdensome tax structures;

adverse currency fluctuations;

differing protection of intellectual property;

difficulties in staffing and managing each of our individual foreign operations;

increased risk of exposure to terrorist activities; and

trade restrictions and licensing requirements.

In addition, fluctuations in foreign exchange rates could affect the sales price in local currencies of our products in foreign markets, potentially making our products less price competitive. Such exchange rate fluctuations could also increase the costs and expenses of our foreign operations or require us to modify our current business practices. If we experience any of the risks associated with international business, our business and results of operations could be significantly harmed.

We face substantial competition, and if we fail to compete effectively, our operating results will suffer.

The markets for our products are intensely competitive, and we believe that competition from both new and existing competitors will increase in the future. We compete in several specialized markets, against a limited number of companies in each market. We also face competition in some of our markets from our existing and potential customers who have developed or may develop products that are competitive to ours, or who engage subcontract manufacturers to manufacture subassembly products on their behalf. Many of our existing and potential competitors are more established, enjoy greater name recognition and possess greater financial, technological and marketing resources than we do. Other competitors are small and highly specialized firms that are able to focus on only one aspect of a market. We compete on the basis of product performance, features, quality, reliability and price and on our ability to manufacture and deliver our products on a timely basis. We may not be able to compete successfully in the future against existing or new competitors. In addition, competitive pressures may force us to reduce our prices, which could negatively affect our operating results. If we do not respond adequately to competitive challenges, our business and results of operations would be harmed.

If we fail to protect our intellectual property and proprietary technology, we may lose our competitive advantage.

Our success and ability to compete depend in large part upon protecting our proprietary technology. We rely on a combination of patent, trademark and trade secret protection and nondisclosure agreements to protect our proprietary rights. The steps we have taken may not be sufficient to prevent the misappropriation of our intellectual property, particularly in foreign countries where the laws may not protect our proprietary rights as fully as in the United States. The patent and trademark law and trade secret protection may not be adequate to deter third party infringement or misappropriation of our patents, trademarks and similar proprietary rights. In addition, patents issued to us may be challenged, invalidated or circumvented. Our rights granted under those patents may not provide

Table of Contents

competitive advantages to us, and the claims under our patent applications may not be allowed. We have in the past and may in the future be subject to or may initiate interference proceedings in the United States Patent and Trademark Office, which can demand significant financial and management resources. The process of seeking patent protection can be time consuming and expensive and patents may not be issued from currently pending or future applications. Moreover, our existing patents or any new patents that may be issued may not be sufficient in scope or strength to provide meaningful protection or any commercial advantage to us. We may in the future initiate claims or litigation against third parties for infringement of our proprietary rights in order to determine the scope and validity of our proprietary rights or the proprietary rights of our competitors, which claims could result in costly litigation, the diversion of our technical and management personnel and the assertion of counterclaims by the defendants, including counterclaims asserting invalidity of our patents. For example, we have notified several manufacturers of semiconductor wafer handling robots and load ports that we believe that they are infringing upon certain of our U.S. patents, and may institute litigation against one or more of such companies in the future. We will take such actions where we believe that they are of sufficient strategic or economic importance to us to justify the cost.

We have experienced, and may in the future experience, intellectual property infringement claims, which could be costly and time-consuming to defend.

We have from time to time received communications from third parties alleging that we are infringing certain trademarks, patents or other intellectual property rights held by them. Whenever such claims arise, we evaluate their merits. Any claims of infringement brought by third parties could result in protracted and costly litigation, and we could become subject to damages for infringement, or to an injunction preventing us from selling one or more of our products or using one or more of our trademarks. Such claims could also result in the necessity of obtaining a license relating to one or more of our products or current or future technologies, which may not be available on commercially reasonable terms or at all. Any intellectual property litigation and the failure to obtain necessary licenses or other rights or develop substitute technology may divert management's attention from other matters and could have a material adverse effect on our business, financial condition and results of operations. In addition, the terms of our customer contracts typically require us to indemnify the customer in the event of any claim of infringement brought by a third party based on our products. Any such claims of this kind may have a material adverse effect on our business, financial condition or results of operations.

If we are unable to attract new employees and retain and motivate existing employees, our business and results of operations will suffer.

Our ability to maintain and grow our business is directly related to the service of our employees in each area of our operations. Our future performance will be directly tied to our ability to hire, train, motivate and retain qualified personnel. Competition for personnel in the technology marketplace is intense, and if we are unable to hire sufficient numbers of employees with the experience and skills we need or to retain our employees, our business and results of operations would be harmed.

Our reliance on sole-source and limited source suppliers could result in delays in production and distribution of our products.

We obtain some of the materials used to build our systems and subsystems, such as the sheet steel used in some of our vibration isolation tables, and the laser crystals used in certain of our laser products, from single or limited sources due to unique component designs as well as specialized quality and performance requirements needed to manufacture our products. If our components or raw materials are unavailable in adequate amounts at acceptable quality levels or are unavailable on satisfactory terms, we may be required to purchase them from alternative sources, if available, which could increase our costs and cause delays in the production and distribution of our products. If we do not obtain comparable replacement components from other sources in a timely manner, our business and results of operations will be harmed. Many of our suppliers require long lead-times to deliver the quantities of components that we need. If we fail to accurately forecast our needs, or if we fail to obtain sufficient quantities of components that we use to manufacture our products, then delays or reductions in production and shipment could occur, which would harm our business and results of operations.

Table of Contents

Our products could contain defects, which would increase our costs and harm our business.

Certain of our products, especially our laser and automation products, are inherently complex in design and require ongoing regular maintenance. Further, the manufacture of these products often involves a highly complex and precise process. As a result of the technical complexity of these products, design defects, changes in our or our suppliers' manufacturing processes or the inadvertent use of defective materials by us or our suppliers could adversely affect our manufacturing yields and product reliability, which could in turn harm our business, operating results, financial condition and customer relationships.

We provide warranties for our products, and we accrue allowances for estimated warranty costs at the time we recognize revenue for the sale of the products. The determination of such allowances requires us to make estimates of product return rates and expected costs to repair or replace the products under warranty. We establish warranty reserves based on historical warranty costs for our products. If actual return rates or repair and replacement costs differ significantly from our estimates, adjustments to recognize additional cost of sales may be required in future periods.

Our customers may discover defects in our products after the products have been fully deployed and operated under peak stress conditions. In addition, some of our products are combined with products from other suppliers, which may contain defects. As a result, should problems occur, it may be difficult to identify the source of the problem. If we are unable to identify and fix defects or other problems, we could experience, among other things:

loss of customers;

increased costs of product returns and warranty expenses;

damage to our brand reputation;

failure to attract new customers or achieve market acceptance;

diversion of development and engineering resources; or

legal action by our customers.

The occurrence of any one or more of the foregoing factors could seriously harm our business, financial condition and results of operations.

Our products are subject to potential product liability claims which, if successful, could adversely effect our results of operations.

We are exposed to significant risks for product liability claims if personal injury or death results from the use of our products. We may experience material product liability losses in the future. We currently maintain insurance against product liability claims. However, our

Edgar Filing: NEWPORT CORP - Form 10-K

insurance coverage may not continue to be available on terms that we accept, if at all. This insurance coverage also may not adequately cover liabilities that we incur. Further, if our products are defective, we may be required to recall or redesign these products. A successful claim against us that exceeds our insurance coverage level, or any claim or product recall, could have a material adverse effect on our business, financial condition and results of operations.

Table of Contents

While we believe we currently have adequate internal control over financial reporting, we are required to evaluate our internal control over financial reporting under Section 404 of the Sarbanes-Oxley Act of 2002, and any adverse results from such evaluation could result in a loss of investor confidence in our financial reports and have an adverse effect on our stock price.

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002 (Section 404), we are required to furnish a report by our management each year on our internal control over financial reporting. This report contains, among other matters, an assessment of the effectiveness of our internal control over financial reporting as of the end of our fiscal year, including a statement as to whether or not our internal control over financial reporting is effective. This assessment must include disclosure of any material weaknesses in our internal control over financial reporting identified by management. This report must also contain a statement that our auditors have issued an attestation report on management's assessment of such internal controls.

The Committee of Sponsoring Organizations of the Treadway Commission (COSO) provides a framework for companies to assess and improve their internal control systems. Auditing Standard No. 2 provides the professional standards and related performance guidance for auditors to attest to, and report on, management's assessment of the effectiveness of internal control over financial reporting under Section 404. Management's assessment of internal controls over financial reporting requires management to make subjective judgments and, particularly because Section 404 and Auditing Standard No. 2 are newly effective, some of the judgments will be in areas that may be open to interpretation and therefore the report may be uniquely difficult to prepare and our auditors may not agree with our assessments.

Spectra-Physics, which now constitutes over half of our business, was formerly a division of a much larger organization with more complex and integrated internal control processes, causing our review of those internal controls over financial reporting to be time-consuming and costly. While we currently believe that the internal control over financial reporting of Spectra-Physics is effective, we are still performing the system and process documentation and evaluation relating to Spectra-Physics needed to comply with Section 404 and, as permitted by the Securities and Exchange Commission, will not complete such work until 2005. During this process, if our management identifies one or more material weaknesses in our internal control over financial reporting, we will be unable to assert such internal control is effective.

If we are unable to assert each year that our internal control over financial reporting is effective (or if our auditors are unable to attest that our management's report is fairly stated or they are unable to express an opinion on the effectiveness of our internal controls), we could lose investor confidence in the accuracy and completeness of our financial reports, which would have an adverse effect on our stock price. In addition, if any such unidentified material weaknesses were to result in fraudulent activity and/or a material misstatement or omission in our financial statements, we could suffer losses and be subject to civil and criminal penalties, all of which could have a material adverse effect on our business, financial condition and results of operations.

Our financial results could be adversely affected by changes in the accounting rules governing the recognition of stock-based compensation expense.

We measure compensation expense for our employee stock compensation plans under the intrinsic value method of accounting prescribed by APB Opinion No. 25, *Accounting for Stock Issued to Employees*. Recently, the Financial Accounting Standards Board has adopted changes to the accounting rules concerning the recognition of stock option compensation expense which would require us to account for equity compensation under the fair value method of accounting prescribed by SFAS No. 123R, *Share-Based Payment*. We provide disclosures of our operating results as if we had applied the fair value method of accounting on a pro forma basis in accordance with SFAS No. 123, *Accounting for Stock-Based Compensation*. Beginning in the third quarter of 2005, we and other companies currently using the intrinsic value method will be required to measure compensation expense using the fair value method, which will adversely affect our results of operations by significantly increasing our equity compensation expense.

Table of Contents

Compliance with environmental regulations and potential environmental liabilities could adversely affect our financial results.

Our operations are subject to various federal, state and local environmental protection regulations relating to the protection of the environment, including those governing discharges of pollutants into the air and water, the management and disposal of hazardous substances and wastes and the cleanup of contaminated sites. In the United States, we are subject to the federal regulation and control of the Environmental Protection Agency. Comparable authorities are involved in other countries. Some of our operations require environmental permits and controls to prevent and reduce air and water pollution, and these permits are subject to modification, renewal and revocation by issuing authorities. Future developments, administrative actions or liabilities relating to environmental matters could have a material adverse effect on our business, results of operations or financial condition.

Although we believe that our safety procedures for using, handling, storing and disposing of such materials comply with the standards required by state and federal laws and regulations, we cannot completely eliminate the risk of accidental contamination or injury from these materials. In the event of such an accident involving such materials, we could be liable for damages and such liability could exceed the amount of our liability insurance coverage and the resources of our business.

Spectra-Physics Mountain View, California facility is an EPA-designated Superfund site and is subject to a cleanup and abatement order from the California Regional Water Quality Control Board. Spectra-Physics, along with several other entities with facilities located near the Mountain View, California facility, have been identified as Responsible Parties with respect to this Superfund site, due to releases of hazardous substances during the 1960s and 1970s. The site is mature, and investigations and remediation efforts have been ongoing for approximately 20 years. Spectra-Physics and the other Responsible Parties have entered into a cost-sharing agreement covering the costs of remediating the off-site groundwater impact. We have established reserves relating to the estimated cost of these remediation efforts, however our ultimate costs of remediation are difficult to predict. In addition, while we are not aware of any unresolved property damage or personal injury claims relating to this site, such claims could be made against us in the future. While Thermo Electron Corporation has agreed in connection with our purchase of Spectra-Physics to indemnify us, subject to certain conditions, for environmental liabilities relating to this site in excess of our reserves, this indemnity may not cover all liabilities relating to this site. In such event, our business, financial condition and results of operations could be adversely affected.

Natural disasters or power outages could disrupt or shut down our operations, which would negatively impact our operations.

We are headquartered, and have significant operations, in the State of California and other areas where our operations are susceptible to damages from earthquakes, floods, fire, loss of power or water supplies, or other similar contingencies. If any of our facilities were to experience a catastrophic loss or significant power outages, it could disrupt our operations, delay production, shipments and revenue, and result in large expenses to repair or replace the facility, any of which would harm our business. We are predominantly uninsured for losses and interruptions caused by earthquakes.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The principal market risks (i.e., the risk of loss arising from adverse changes in market rates and prices) to which we are exposed are foreign exchange rates which may generate translation and transaction gains and losses and interest rate risk.

Foreign Currency Risk

Operating in international markets sometimes involves exposure to volatile movements in currency exchange rates. The economic impact of currency exchange rate movements on our operating results is complex because such changes are often linked to variability in real growth, inflation, interest rates, governmental actions and other factors.

Table of Contents

These changes, if material, may cause us to adjust our financing and operating strategies. Consequently, isolating the effect of changes in currency does not incorporate these other important economic factors.

From time to time we use forward exchange contracts to mitigate the risks associated with certain foreign currency transactions entered into in the ordinary course of business, primarily foreign currency denominated receivables and payables. We do not engage in currency speculation. The forward exchange contracts generally require us to exchange U.S. dollars for foreign currencies at maturity, at rates agreed to at inception of the contracts. If the counterparties to the exchange contracts (AA or A+ rated banks) do not fulfill their obligations to deliver the contracted currencies, we could be at risk for any currency related fluctuations. Transaction gains and losses are included in our current net loss in our statement of operations. Net foreign exchange gains and losses were not material to our reported results of operations for the last three years.

Our operating income from international operations totaled \$5.1 million in 2004, and our operating loss from international operations was \$0.6 million and \$0.1 million for 2003 and 2002, respectively. As currency exchange rates change, translation of the statements of operations of international operations into U.S. dollars affects the year-over-year comparability of operating results. We do not generally hedge translation risks because cash flows from international operations are generally reinvested locally. We do not enter into hedges to minimize volatility of reported earnings because we do not believe it is justified by the exposure or the cost.

Changes in currency exchange rates that would have the largest impact on translating our future international operating profit include the euro, British pound, Japanese yen, Canadian dollar and Taiwan dollar. We estimate that a 10% change in foreign exchange rates would not have had a material effect on our reported net loss for the year ended January 1, 2005. We believe that this quantitative measure has inherent limitations because, as discussed in the first paragraph of this section, it does not take into account any governmental actions or changes in either customer purchasing patterns or financing and operating strategies.

Interest Rate Risk

The interest rates we pay on certain of our debt instruments are subject to interest rate risk. Our collateralized line of credit bears interest at either the prevailing prime rate, or the prevailing London Interbank Offered Rate plus 1.5%, at our option. Our investments in marketable securities, which totaled \$66.7 million at January 1, 2005, are sensitive to changes in the general level of U.S. interest rates. We estimate that a 10% change in the interest rate earned on our investment portfolio or a 10% change in interest rates on our line of credit would not have had a material effect on our net loss for 2004.

The sensitivity analyses described in the interest rate and foreign exchange discussions above disregard the possibility that rates can move in opposite directions and that gains from one category may or may not be offset by losses from another category and vice versa.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

The financial statements required by this item are included in Part IV, Item 15 of this Annual Report on Form 10-K and are presented beginning on page F-1. The supplementary financial information required by this item is included in Note 16, Supplementary Quarterly Consolidated Financial Data (Unaudited), of the Notes to Consolidated Financial Statements on page F-41.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Our chief executive officer and our chief financial officer, after evaluating our disclosure controls and procedures (as defined in Securities Exchange Act of 1934 (Exchange Act) Rules 13a-15(e) and 15-d-15(e)) as of the end of the period covered by this Annual Report on Form 10-K (Evaluation Date) have concluded that as of the Evaluation Date, our disclosure controls and procedures are effective to ensure that information we are required to disclose in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms.

Management's Annual Report on Internal Control over Financial Reporting

Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934. Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. This process includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures are being made only in accordance with authorizations of our management and directors; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on our financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of the internal control over financial reporting to future periods are subject to risk that the internal control may become inadequate because of changes in conditions, or that the degree of compliance with policies or procedures may deteriorate.

Management's Assessment of the Effectiveness of our Internal Control over Financial Reporting

Management has evaluated the effectiveness of our internal control over financial reporting as of January 1, 2005. In conducting its evaluation, management used the framework set forth in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our evaluation under such framework, our management has concluded that our internal control over financial reporting was effective as of January 1, 2005.

Scope of Management's Report on Internal Control over Financial Reporting

Edgar Filing: NEWPORT CORP - Form 10-K

The scope of management's assessment of the effectiveness of our internal control over financial reporting as of January 1, 2005 includes all of our businesses except for Spectra-Physics, Inc. and its related entities (Spectra-Physics) which were acquired on July 16, 2004. The acquired Spectra-Physics businesses constituted approximately \$84 million of total assets as of January 1, 2005, and approximately \$107 million of net sales for the year then ended. In accordance with guidance issued by the Securities and Exchange Commission, our management is permitted to exclude Spectra-Physics from its assessment as of January 1, 2005. We are in the process of documenting and evaluating our internal control over financial reporting for Spectra-Physics and will complete such work before the end of 2005.

Table of Contents

Attestation Report

Ernst & Young LLP, the independent registered public accounting firm that audited our consolidated financial statements included in this Annual Report on Form 10-K, has issued an attestation report on our management's assessment of our internal control over financial reporting. Such attestation report is included below under the heading Attestation Report of Independent Registered Public Accounting Firm.

Attestation Report of Independent Registered Public Accounting Firm

Report of Independent Registered Public Accounting Firm

on Internal Control Over Financial Reporting

The Board of Directors and Stockholders

Newport Corporation

We have audited management's assessment, included in the accompanying Management's Annual Report on Internal Control Over Financial Reporting appearing above, that Newport Corporation maintained effective internal control over financial reporting as of January 1, 2005, based on criteria established in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Newport Corporation's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Edgar Filing: NEWPORT CORP - Form 10-K

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As indicated in the accompanying Management's Annual Report on Internal Control Over Financial Reporting, management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of Spectra-Physics, Inc. and its related entities (Spectra-Physics), acquired in 2004, which are included in the 2004 consolidated financial statements of Newport Corporation and represented approximately \$84 million of total assets as of January 1, 2005 and approximately \$107 million of net sales for the year then ended. Our audit of internal control over financial reporting of Newport Corporation also did not include an evaluation of the internal control over financial reporting of Spectra-Physics.

Table of Contents

In our opinion, management's assessment that Newport Corporation maintained effective internal control over financial reporting as of January 1, 2005, is fairly stated, in all material respects, based on the COSO criteria. Also, in our opinion, Newport Corporation maintained, in all material respects, effective internal control over financial reporting as of January 1, 2005, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Newport Corporation as of January 1, 2005 and December 31, 2003, and the related consolidated statements of operations, comprehensive loss and stockholders' equity, and cash flows for each of the three years in the period ended January 1, 2005, and our report dated March 14, 2005, expressed an unqualified opinion thereon.

/s/ Ernst & Young LLP

Orange County, California

March 14, 2005

Changes in Internal Control Over Financial Reporting

There was no change in our internal control over financial reporting that occurred during the fourth quarter of 2004 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders

Newport Corporation

We have audited the accompanying consolidated balance sheets of Newport Corporation as of January 1, 2005 and December 31, 2003, and the related consolidated statements of operations, comprehensive loss and stockholders' equity, and cash flows for each of the three years in the period ended January 1, 2005. Our audits also included the financial statement schedule listed in Item 15(a). These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Newport Corporation at January 1, 2005 and December 31, 2003, and the consolidated results of its operations and its cash flows for each of the three years in the period ended January 1, 2005, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

As described in Note 1 of the Notes to Consolidated Financial Statements, effective January 1, 2002, the Company adopted Statement of Financial Accounting Standards No. 142, *Goodwill and Other Intangible Assets*.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of Newport Corporation's internal control over financial reporting as of January 1, 2005, based on criteria established in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 14, 2005 expressed an unqualified opinion thereon.

NEWPORT CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 ORGANIZATION AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization

Newport Corporation (Newport or the Company) is a global supplier of advanced technology products and systems to a wide range of industries, including microelectronics manufacturing, scientific research, aerospace and defense/security, life and health sciences and communications. The Company develops and sells a broad range of lasers, components, instruments, subsystems and systems to markets where high-precision, efficient manufacturing, test, measurement and assembly are critical. The Company's products are used in mission-critical applications in industries including microelectronics manufacturing, aerospace and defense/security, life and health sciences and fiber optic device manufacturing. The Company also provides high-performance lasers, components, instruments and subsystems to commercial, academic and governmental research institutions worldwide.

Basis of Presentation

The accompanying financial statements include the accounts of the Company and its wholly owned subsidiaries. All significant intercompany transactions and balances have been eliminated in consolidation.

Effective in 2004, the Company changed to a conventional 52/53-week accounting fiscal year. The Company's fiscal year ends on the Saturday closest to December 31, and its fiscal quarters end on the Saturday closest to the end of each corresponding calendar quarter. Fiscal year 2004 (referred to herein as 2004) ended on January 1, 2005 and fiscal years 2003 and 2002 ended on December 31, 2003 and 2002, respectively.

Business Segments

The Company develops, manufactures and markets its products within three distinct business segments, Lasers, Photonics and Precision Technologies and Advanced Packaging and Automation Systems. In July 2004, the Company acquired all of the issued and outstanding capital stock of Spectra-Physics, Inc. and certain related entities (collectively, Spectra-Physics). Spectra-Physics manufactures high-power solid-state, gas and dye lasers, high-power laser diodes, and ultrafast laser systems, as well as other photonic components and devices used in a wide range of applications, including scientific research, industrial and microelectronic manufacturing and medical diagnostics. The Company incorporated the laser and laser-related technology business of Spectra-Physics into a new business segment, the Lasers Division, and combined Spectra-Physics' photonics business with the Company's former Industrial and Scientific Technologies Division to create a new Photonics and Precision Technologies Division. Also in 2004, the Company reclassified certain fiber optic communications product lines from its Advanced Packaging and Automation Systems Division to its former Industrial and Scientific Technologies Division. All prior period financial information has been reclassified to reflect these new segments.

Foreign Currency Translation

The functional currency for the Company's international operations is the local currency. Assets and liabilities for these locations are translated into U.S. dollars using current rates of exchange in effect at the balance sheet dates. The resulting translation gains and losses are included as a component of stockholders' equity. Items of income and expense for the Company's international locations are translated using the monthly average exchange rates in effect for the period in which the items occur. Realized foreign currency transaction gains and losses are included in the results of operations.

Derivative Instruments

The Company recognizes all derivative financial instruments in the consolidated financial statements at fair value regardless of the purpose or intent for holding the instrument. The accounting for changes in the fair value (i.e., gains or losses) of a derivative instrument depends on whether it has been designated and qualifies as part of a

Table of Contents

hedging relationship and further, on the type of hedging relationship. The Company does not engage in currency speculation; however, the Company uses forward exchange contracts to mitigate the risks associated with certain foreign currency transactions entered into in the ordinary course of business, primarily foreign currency denominated receivables and payables. Such contracts do not qualify for hedge accounting and accordingly, changes in fair values are reported in the statement of operations. The forward exchange contracts generally require the Company to exchange U.S. dollars for foreign currencies at maturity, at rates agreed to at the inception of the contracts. If the counterparties to the exchange contracts (AA or A+ rated banks) do not fulfill their obligations to deliver the contracted currencies, the Company could be at risk for any currency related fluctuations. Transaction gains and losses are included in the statements of operations in *interest and other income (expense), net*.

There were no forward exchange contracts outstanding at January 1, 2005 and December 31, 2003.

Cash and Cash Equivalents and Marketable Securities

The Company considers cash-on-hand and highly liquid investments with an original maturity of three months or less at the date of purchase to be cash equivalents. Investments with original maturities exceeding three months at the date of purchase are classified as marketable securities. All marketable securities are classified as available for sale and are recorded at market value using the specific identification method; unrealized gains and losses are reflected in *accumulated other comprehensive income* in the accompanying balance sheets.

Accounts and Notes Receivable

The Company records reserves for specific receivables deemed to be at risk for collection, as well as a reserve based on the Company's historical collections experience. The Company estimates the collectibility of customer receivables on an ongoing basis by reviewing past due invoices. A considerable amount of judgment is required in assessing the ultimate realization of these receivables, including the current credit-worthiness of each customer.

Certain of the Company's Japanese customers provide the Company with promissory notes on the due date of the receivable. The payment date of the promissory notes is generally 90 days from the original receivable due date. Subsequently, certain of these promissory notes are sold with recourse to one of four banks within Japan that the Company does business with as part of line of credit agreements. Such transactions are conducted in the ordinary course of business. For balance sheet presentation purposes, amounts due to the Company under such promissory notes are reclassified from accounts receivable to current notes receivable. At January 1, 2005, total promissory notes receivable amounted to \$6.9 million. Promissory notes sold with recourse are included in both *notes receivable, net* and *short-term obligations* until the underlying note obligations are ultimately satisfied by payment of the note obligation by the customers to the banks. At January 1, 2005, such discounted note obligations included in *short-term obligations* in the accompanying consolidated balance sheet were \$4.3 million. The Company did not have any notes receivable or notes sold with recourse outstanding at December 31, 2003.

Concentrations of Credit Risk

Financial instruments that potentially subject the Company to concentrations of credit risk primarily consist of cash and cash equivalents, marketable securities, foreign exchange contracts and accounts receivable. The Company maintains cash and cash equivalents with and purchases its foreign exchange contracts from major financial institutions and performs periodic evaluations of the relative credit standing of

Edgar Filing: NEWPORT CORP - Form 10-K

these financial institutions in order to limit the amount of credit exposure with any one institution. Substantially all of the Company's marketable securities are managed by a professional investment management firm, under the oversight of the Company's senior financial management team and the Audit Committee of the Company's Board of Directors. Such portfolio manager invests the funds in accordance with the Company's investment policy, which limits the amounts that may be invested with one issuer.

The Company's customers are concentrated in the microelectronics, aerospace and defense/security, life and health sciences, scientific research and fiber optic communications markets, and their ability to pay may be influenced by the prevailing macroeconomic conditions present in these markets. Receivables from the Company's customers are

F-8

Table of Contents

generally unsecured. To reduce the concentration risk and the overall risk of collection, the Company performs ongoing evaluations of its customers' financial condition. For the year ended January 1, 2005, no customer accounted for 10% or more of the Company's net sales or 10% or more of the Company's gross accounts receivable as of the end of such year. For the year ended December 31, 2003, one customer accounted for 10.2% of the Company's net sales, and accounted for 6.6% of the Company's gross accounts receivable as of the end of such year. For the year ended December 31, 2002, one customer accounted for 10.9% of the Company's net sales, and accounted for 8.2% of the Company's gross accounts receivable as of the end of such year.

Inventories

Inventories are stated at the lower of cost, determined on either a first-in, first-out (FIFO) or average cost basis, or fair market value and include materials, labor and manufacturing overhead. The Company writes down excess and obsolete inventory to net realizable value. In assessing the ultimate realization of inventories, the Company makes judgments as to future demand requirements and compares those requirements with the current or committed inventory levels. Amounts required to reduce the carrying value of inventory to net realizable value are recorded as a charge to cost of sales.

Property and Equipment

Property and equipment are stated at cost less accumulated depreciation. Depreciation expense includes amortization of assets under capital leases. Depreciation is recorded principally on the straight-line method over the estimated useful lives of the assets as follows:

Buildings and improvements	3 to 40 years
Machinery and equipment	2 to 20 years
Office equipment	3 to 10 years

Leasehold improvements are amortized over the shorter of their estimated useful life or the remaining lease term.

Intangible Assets, including Goodwill

Intangible assets, other than goodwill and trademarks and trade names, are amortized on a straight-line basis over their estimated useful lives as follows:

Developed technology	10 to 16 years
Customer relationships	10 years
Backlog	6 months
Other	2 to 15 years

Trademarks and trade names are subject to annual impairment testing and are not amortized.

Goodwill represents the excess of the purchase price over the fair value of the net assets of acquired entities. On January 1, 2002, the Company adopted Statement of Financial Accounting Standards (SFAS) No. 142, *Goodwill and Other Intangible Assets*. Under SFAS No. 142, goodwill is no longer amortized but is subject to impairment tests based upon a comparison of the fair value of each of the Company's reporting units, as defined, and the carrying value of the reporting units' net assets, including goodwill. Pursuant to SFAS No. 142, upon adoption the Company tested its goodwill and other intangible assets for impairment and recorded an impairment charge of \$14.5 million as the cumulative effect of a change in accounting principle as of January 1, 2002. SFAS No. 142 requires a review of goodwill and other intangible assets for impairment at least annually or when circumstances exist that would indicate an impairment of such goodwill or other intangible assets. The Company performs the annual impairment review as of the beginning of the fourth quarter of each year.

Table of Contents

Investments

The Company holds minority interest investments in companies having operations or technologies in areas which are within or adjacent to its strategic focus when acquired. The Company accounts for minority interest investments in common stock under the cost method for investments in companies over which it does not have the ability to exercise significant influence and under the equity method for investments in companies over which it does have the ability to exercise significant influence. All of the Company's current minority interest investments are accounted for using the cost method.

Long-Lived Assets

The Company assesses the impairment of long-lived assets, other than goodwill and other intangible assets, whenever events or changes in circumstances indicate that their carrying value may not be recoverable. The determination of related estimated useful lives and whether or not these assets are impaired involves significant judgments, related primarily to the future profitability and/or future value of the assets. Changes in the Company's strategic plan and/or market conditions could significantly impact these judgments and could require adjustments to recorded asset balances. Long-lived assets, including minority interest investments in companies which are privately-held and whose values are difficult to determine, are evaluated for other-than-temporary impairment at least annually in the fourth quarter of each year, as well as whenever an event or change in circumstances has occurred that could have a significant adverse effect on the fair value of long-lived assets. The Company records an investment impairment charge in any reporting period where it believes a long-lived asset has experienced a decline in value that is other-than-temporary.

Warranty

Unless otherwise stated in the Company's product literature or in its agreements with customers, products sold by the Company's Photonics and Precision Technologies Division generally carry a one-year warranty from the original invoice date on all product material and workmanship. Products of such division sold to original equipment manufacturer (OEM) customers generally carry longer warranties, typically 15 to 24 months. Products sold by the Company's Lasers Division generally carry warranties that vary by product and product component, but generally range from 90 days to two years. In certain cases, such warranties are limited by amount of usage of the product. Defective products will be either repaired or replaced, generally at the Company's option, upon meeting certain criteria. The Company accrues a provision for the estimated costs that may be incurred for warranties relating to a product as a component of cost of sales at the time revenue for that product is recognized.

Environmental Reserves

The Company accrues for losses associated with environmental remediation obligations when such losses are probable and reasonably estimable. Accruals for estimated losses from environmental remediation obligations generally are recognized no later than completion of the remedial feasibility study. Such accruals are adjusted as further information develops or circumstances change. Costs of future expenditures are discounted to their present value. Recoveries of environmental remediation costs from other parties are recognized as assets when their receipt is deemed probable.

Revenue Recognition

The Company recognizes revenue after title to and risk of loss of products have passed to the customer (which typically occurs upon shipment), or delivery of the service has been completed, provided that persuasive evidence of an arrangement exists, the fee is fixed or determinable and collectibility is probable. The Company recognizes revenue and related costs for arrangements with multiple deliverables, such as equipment and installation, as each element is delivered or completed based upon its relative fair value, determined based upon the price that would be charged on a standalone basis. However, if a portion of the total contract price is not payable until installation is complete, the Company defers revenue up to the amount that is not payable. Revenues for training are deferred until the service is completed. Revenues for extended service contracts are recognized over the related contract periods.

F-10

Table of Contents

Customers generally have 30 days from the original invoice date (generally 60 days for international customers) to return a standard catalog product purchase for exchange or credit. Catalog products must be returned in the original condition and meet certain other criteria. Product returns of catalog items have historically been insignificant and are charged against revenue in the period returned. Custom, option-configured and certain other products as defined in the terms and conditions of sale cannot be returned. For certain non-catalog products, the Company establishes a sales return reserve based on the historical product returns.

Advertising

The Company expenses the costs of advertising as incurred, except for the costs of its product catalogs, which are accounted for as prepaid supplies until they are distributed to customers or are no longer expected to be used. Capitalized catalog costs at January 1, 2005 and December 31, 2003 were not significant. Advertising costs, including the costs of the Company's participation at industry trade shows, were \$3.0 million, \$2.1 million and \$2.9 million for 2004, 2003 and 2002, respectively.

Shipping and Handling Costs

Shipping and handling costs of \$2.1 million, \$1.7 million, and \$1.8 million were included in *selling, general and administrative expense* for 2004, 2003 and 2002, respectively.

Research and Development

All research and development costs are expensed as incurred.

Income Taxes

The Company provides for income taxes based on the estimated effective income tax rate for the complete fiscal year. The income tax provision (benefit) is computed on the pretax income (loss) of the consolidated entities located within each taxing jurisdiction based on current tax law. Deferred taxes result from the future tax consequences associated with temporary differences between the recorded amounts of the assets and liabilities of the Company for tax and financial accounting purposes. A valuation allowance for deferred tax assets is recorded to the extent the Company cannot determine, in accordance with the provisions of SFAS No. 109, *Accounting for Income Taxes*, that the ultimate realization of net deferred tax assets is more likely than not.

Income (Loss) per Share

Basic income (loss) per share is computed by dividing net income (loss) by the weighted average number of shares of common stock outstanding during the periods, excluding restricted stock. *Diluted* income per share is computed using the weighted average number of shares of common

Edgar Filing: NEWPORT CORP - Form 10-K

stock outstanding during the periods plus the dilutive effects of common stock equivalents (restricted stock and stock options) outstanding during the periods, determined using the treasury stock method. *Diluted* loss per share excludes the antidilutive effects of common stock equivalents outstanding during the periods.

Stock-Based Compensation

The Company applies the intrinsic value based method of accounting prescribed by Accounting Principles Board (APB) Opinion No. 25, *Accounting for Stock Issued to Employees* and related Interpretations in accounting for its stock-based compensation and complies with the disclosure provisions of SFAS No. 123, *Accounting for Stock-Based Compensation*. Accordingly, no compensation expense is recognized for employee stock options with exercise prices equal to or greater than the Company's stock price at the date of grant. Costs related to restricted stock grants, representing the difference between the grant date fair value of the award and the purchase price, if any, of the related shares are fixed at the date of grant and amortized over the vesting period. Pro forma amounts adjusted for the effect of recording compensation cost for the Company's stock option and employee stock purchase

F-11

Table of Contents

plans (determined based upon the fair value at the grant date for awards under these plans consistent with the methodology prescribed under SFAS No. 123) is presented below:

(In thousands, except per share amounts)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Net loss reported	\$ (81,436)	\$ (13,160)	\$ (100,618)
Employee compensation expense under fair value method	(16,556)	(18,185)	(15,710)
Net loss pro forma	\$ (97,992)	\$ (31,345)	\$ (116,328)
Basic and diluted loss per share reported	\$ (1.99)	\$ (0.34)	\$ (2.65)
Basic and diluted loss per share pro forma	\$ (2.40)	\$ (0.81)	\$ (3.06)

The fair value of each option grant in 2004, 2003 and 2002 was estimated as of the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Expected annual volatility	74.3%	70.6%	84.5%
Risk-free interest rate	3.4%	2.9%	4.2%
Expected turnover rate	12.9%	12.9%	12.9%
Expected life (years)	5.0	5.0	5.0
Annualized dividend yield			

The pro forma amounts shown for the impact of SFAS No. 123 are not necessarily indicative of future results because of the phase-in rules and differences in number of grants, stock price and assumptions for future years.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates. Significant estimates made in preparing the consolidated financial statements include (but are not limited to) the allowance for doubtful accounts, inventory reserves, warranty obligations, pension liabilities, restructuring reserves, asset impairment valuations and income tax valuations.

Reclassifications

Certain reclassifications have been made to prior year amounts to conform to the current year presentation.

Recent Accounting Pronouncements

In December 2004, the Financial Accounting Standards Board (FASB) issued SFAS No. 123R, *Share-Based Payment*. SFAS No. 123R requires employee stock options and rights to purchase shares under stock participation plans to be accounted for under the fair value method, and eliminates the ability to account for these instruments under the intrinsic value method prescribed by APB Opinion No. 25, and allowed under the original provisions of SFAS No. 123. SFAS No. 123R requires the use of an option pricing model for estimating fair value, which is amortized to expense over the service periods. The requirements of SFAS No. 123R are effective for fiscal periods beginning after June 15, 2005. The Company is currently assessing the impact that the adoption of SFAS No. 123R will have on its consolidated results of operations. Although the assessment is ongoing, management believes the impact will be material to the Company's consolidated results of operations. If the Company had applied the provisions of SFAS No. 123R to the financial statements for the period ended January 1, 2005, the Company's net

Table of Contents

loss would have been increased by approximately \$16.6 million. However, due to the alternative option pricing models and assumptions, the lower numbers of options granted in recent years, and the lower valuations of such options compared with options granted previously, this figure may not be representative of the impact to future results of operations. SFAS No. 123R allows for either prospective recognition of compensation expense or retrospective recognition. The retrospective method may be applied either to all prior years in which SFAS No. 123 was effective or only to prior interim periods in 2005 before adoption of SFAS No. 123R. The Company is currently evaluating these transition methods.

In November 2004, the FASB issued SFAS No. 151, *Inventory Costs - An Amendment of ARB No. 43, Chapter 4*. SFAS No. 151 clarifies that abnormal amounts of idle facility expense, freight, handling costs and spoilage should be expensed as incurred and not included in overhead. Further, SFAS No. 151 requires that allocation of fixed and production facilities overhead to conversion costs should be based on normal capacity of the production facilities. The provisions in SFAS No. 151 are effective for inventory costs incurred during fiscal years beginning after June 15, 2005. The Company is currently evaluating the impact of the adoption of this standard, but does not believe that the adoption of SFAS No. 151 will have a significant effect on its results of operations or financial position.

In March 2004, the FASB approved the consensus reached on the Emerging Issues Task Force (EITF) Issue No. 03-1, *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*. It provides guidance for identifying other-than-temporarily impaired investments. EITF 03-1 also provides new disclosure requirements for investments that are deemed to be temporarily impaired. In September 2004, the FASB issued a FASB Staff Position (FSP) EITF 03-1-1 that delays the effective date of the measurement and recognition guidance in EITF 03-1 until further notice. The disclosure requirements of EITF 03-1 are effective for fiscal years ending after December 15, 2003 and are reflected herein. After the FASB reaches a final decision on the measurement and recognition provisions, the Company will evaluate the impact of the adoption of the accounting provisions of EITF 03-1.

In December 2003, the FASB issued SFAS No. 132R, *Employers' Disclosures about Pensions and Other Postretirement Benefits*. The statement provides disclosure requirements for defined benefit pension plans and other post-retirement benefit plans. The statement was effective for annual financial statements with fiscal years ending after December 15, 2003, and for interim periods beginning after December 15, 2003. The Company adopted SFAS No. 132R during 2004. The adoption of SFAS No. 132R did not have any impact on the Company's results of operations or financial position.

NOTE 2 ACQUISITIONS, INVESTMENTS AND DIVESTITURES

Acquisitions

Spectra-Physics

In July 2004, the Company acquired all of the issued and outstanding capital stock of Spectra-Physics. Spectra-Physics manufactures high-power solid-state, gas and dye lasers, high-power laser diodes, and ultrafast laser systems, as well as other photonic components and devices used in a wide range of applications, including scientific research, industrial and microelectronics manufacturing and analytical instrumentation for life and health sciences. The combination creates a leading photonics company with an integrated technology mix.

Edgar Filing: NEWPORT CORP - Form 10-K

The transaction was accounted for using the purchase method. The Company's results of operations for 2004 included the results of operations of Spectra-Physics from the date of acquisition on July 16, 2004.

The purchase price for Spectra-Physics, which resulted in the recognition of goodwill of \$175.3 million, was determined by arms-length negotiation between management and Thermo Electron Corporation, Spectra-Physics' former parent, taking into account a number of factors, including the value of the assets, the historical and projected financial performance of Spectra-Physics and the valuations of certain recently acquired companies with comparable businesses and financial performance.

F-13

Table of Contents

The Company finalized its purchase price allocation for the acquisition in the fourth quarter of 2004, which resulted in a reduction of goodwill of approximately \$2.7 million. This reduction was primarily due to an increase in the estimated fair value of acquired property and equipment based upon internal appraisals, a reduction in the estimated restructuring liability related to certain acquired entities and the final income tax accounting. However, the Company is still in the process of finalizing its restructuring plans related to certain acquired entities and has recorded an estimated liability based upon the preliminary plans approved by the Company's Board of Directors. The Company expects that these items will be resolved and finalized by the end of the second quarter of 2005. The excess of the purchase price over the estimated fair value of the net assets acquired of approximately \$175.3 million was recorded as goodwill, which is generally not deductible for tax purposes.

Below is a summary of the purchase price, assets acquired and liabilities assumed:

(In thousands, except share amounts)

Consideration paid:	
Cash paid	\$ 174,870
3,220,300 shares of common stock, valued based upon the average price two days before and after the measurement date	48,079
Debt (\$50 million, 5% interest payable quarterly, principal due in full July 16, 2009, discounted to market value)	46,382
Other costs, primarily professional fees	5,958
	<u>\$ 275,289</u>
Assets acquired and liabilities assumed:	
Current assets	\$ 93,355
Goodwill	175,252
Purchased intangible assets (including in-process R&D of \$0.3 million)	58,400
Other assets	37,671
Current liabilities	(77,967)
Long-term liabilities	(11,422)
	<u>\$ 275,289</u>

The number of shares of the Company's common stock issued was determined by dividing \$50.0 million by the 20-day average closing price of the Company's common stock ending two days before the acquisition date of July 16, 2004, which was \$15.53 per share. The fair value of the Company's common stock issued was determined using an average price of \$14.93, which was the average closing price of the Company's common stock two days before and after the measurement date of July 14, 2004.

The debt was valued at approximately \$46.4 million on the date of acquisition, based upon the present value of cash flows, using a discount rate of 6.75% in order to reflect a market rate of interest for similar debt with similar characteristics.

Identifiable intangible assets consist of the following:

<u>(In thousands)</u>	Estimated Fair Value	Weighted Average Amortization	Estimated Annual
-----------------------	-------------------------	----------------------------------	---------------------

Edgar Filing: NEWPORT CORP - Form 10-K

		Period	Amortization
Developed technology	\$ 24,500	10-16 years	\$ 1,801
Customer relationships	19,500	10 years	1,950
Backlog	2,200	6 months	2,200
<hr/>			
Amortizable purchased intangible assets	46,200		
Trademark/tradename	11,900	Indefinite	
<hr/>			
	\$ 58,100		
<hr/>			

F-14

Table of Contents

Approximately \$0.3 million of the purchase price represented purchased in-process technology that has not yet reached technological feasibility and has no alternative future use and has been expensed.

Supplemental Pro Forma Information (Unaudited)

The financial information below summarizes the combined results of operations of the Company and Spectra-Physics, on a pro forma basis, as though the companies had been combined as of the beginning of each period presented. This pro forma financial information is presented for information purposes only and is not necessarily indicative of the results of operations that would have been achieved had the acquisition taken place at the beginning of each period presented. The pro forma condensed combined statement of operations for the year ended January 1, 2005 includes the historical results of the Company including Spectra-Physics from the date of acquisition on July 16, 2004, plus the historical results of Spectra-Physics from January 1, 2004 to July 16, 2004. The pro forma condensed combined statement of operations for the year ended December 31, 2003 includes the historical results of the Company, plus the historical results of Spectra-Physics for the year ended December 31, 2003:

<u>(In thousands)</u>	<u>Unaudited</u>	
	<u>Years Ended</u>

Pro forma net loss	(67,850)	(27,398)
Pro forma basic and diluted net loss per share	\$ (1.55)	\$ (0.65)

MRSI

In February 2002, the Company acquired Micro Robotics Systems, Inc. (MRSI), a manufacturer of high-precision, automated assembly and dispensing systems for back-end packaging applications in the semiconductor, microwave communications and fiber optic communications markets. The transaction was accounted for using the purchase method. The Company's results of operations for 2002 included the results of operations of MRSI from the date of acquisition on February 15, 2002.

The purchase price for MRSI was determined by arms-length negotiation between management and MRSI, taking into account a number of factors, including the historical and projected financial performance of MRSI and the valuations of companies with comparable businesses and financial performance.

The Company finalized the purchase price allocation for this acquisition in the third quarter of 2002 based on the final valuation of the intangible assets and the final tax accounting, which resulted in an increase to goodwill of approximately \$2.0 million. The excess of the purchase price over the net assets acquired of \$46.5 million was recorded as goodwill, which is not deductible for tax purposes.

Table of Contents

Below is a summary of the purchase price, assets acquired and liabilities assumed:

(In thousands, except share amounts)

Consideration paid:	
997,284 shares of common stock, valued at the date of acquisition	\$ 23,117

Investments

Edgar Filing: NEWPORT CORP - Form 10-K

In 2003, the Company purchased a minority interest in NEXX Systems, Inc., a privately-held developer of flip chip processing equipment for back-end semiconductor manufacturing applications, for \$3.7 million. In 2004, the Company invested an additional \$0.4 million. The Company's total investment to date is \$4.1 million and is reflected in *investments and other assets* in the consolidated balance sheet. The Company is accounting for this investment using the cost method of accounting.

Divestitures

In August 2002, to increase the efficiency of the Company's product development and manufacturing efforts, the Company's Board of Directors approved a plan to sell the Company's operation in Plymouth, Minnesota, which manufactured high-precision motion stages for the semiconductor equipment, computer peripheral, fiber optic communications and life and health sciences markets. As a result, the Company recorded an impairment charge of \$3.4 million to write down the assets of the Plymouth operation to their estimated fair value of \$2.6 million. In the

Table of Contents

first quarter of 2003, due to the weak response from potential buyers, the Company shut down the operation and liquidated the majority of the remaining assets, which resulted in an additional loss of \$0.6 million. This operation was included in the Company's former Industrial and Scientific Technologies Division.

In March 2002, to more efficiently deploy the Company's resources to those areas that are critical to product development efforts for the Company's strategic markets, the Company's Board of Directors approved a plan to sell the Company's Industrial Metrology Systems Division (IMSD), including the business of CEJohansson AB, a Sweden-based global supplier of advanced metrology systems that was acquired in December 2000. The sale of IMSD was substantially completed in 2002 for cash of approximately \$9.8 million. In February 2005, the Company settled an outstanding dispute with the purchaser of a portion of IMSD, resulting in a charge to discontinued operations of approximately \$0.6 million in the fourth quarter of 2004.

Both of these divestitures have been accounted for as discontinued operations for all periods presented.

The net sales and loss before income taxes of divestitures that were included in discontinued operations consist of the following:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Net sales	\$	\$ 2,041	\$ 10,274
Loss before income taxes	(568)	(2,605)	(15,209)

The estimated and realized losses recognized on divestitures consist of the following:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Realized loss on disposal	\$	\$ (572)	\$ (3,428)
Estimated loss on disposal			(3,415)

NOTE 3 SUPPLEMENTAL BALANCE SHEET, STATEMENT OF OPERATIONS AND CASH FLOW INFORMATION

Cash and Cash Equivalents and Marketable Securities

Cash and cash equivalents and marketable securities consist of the following:

<u>(In thousands)</u>	<u>January 1, 2005</u>	<u>December 31, 2003</u>
Cash and cash equivalents	\$ 41,443	\$ 11,795
Marketable Securities:

	<u>66,739</u>	<u>255,507</u>
	<u>\$ 108,182</u>	<u>\$ 267,302</u>

F-17

Table of Contents

All marketable securities are classified as available for sale and are recorded at market value using the specific identification method; unrealized gains and losses are reflected in *accumulated other comprehensive income* in the accompanying balance sheets. The aggregate fair value of available for sale securities and aggregate amount of unrealized gains and losses for available for sale securities at January 1, 2005 were as follows:

<u>(In thousands)</u>	Aggregate Fair Value	Aggregate Amount of Unrealized	
		Gains	Losses
U.S. government and agency debt securities	\$ 19,491	\$	\$ (95)
Corporate debt securities	32,825	10	(33)
Asset-backed securities	12,768		(84)
Foreign government debt securities	1,655		
	<u>\$ 66,739</u>	<u>\$ 10</u>	<u>\$ (212)</u>

Included in the above are asset-backed securities with an aggregate fair value of \$1.4 million which have been in an unrealized loss position for 12 months or longer.

The aggregate fair value of available for sale securities and the aggregate amount of unrealized gains and losses for available for sale securities at December 31, 2003 were as follows:

<u>(In thousands)</u>	Aggregate Fair Value	Aggregate Amount of Unrealized	
		Gains	Losses
U.S. government and agency debt securities	\$ 133,893	\$ 36	\$ (1)
Corporate debt securities	88,420	31	(34)
Asset-backed securities	30,027		(35)
Other debt securities	3,167		
	<u>\$ 255,507</u>	<u>\$ 67</u>	<u>\$ (70)</u>

The contractual maturities of available for sale securities at January 1, 2005 were as follows:

<u>(In thousands)</u>	
0 - 1 Year	\$ 19,207

Edgar Filing: NEWPORT CORP - Form 10-K

1	2 Years	15,719
2	3 Years	12,784
3	5 Years	5,476
	More than 5 years	13,553
		<u>66,739</u>
		<u>\$ 66,739</u>

The gross realized gains and gross realized losses on sales of available for sale securities consist of the following:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Gross realized gains	\$ 386	\$ 3,989	\$ 2,307
Gross realized losses	(1,934)	(1,076)	(283)
	<u>\$ (1,548)</u>	<u>\$ 2,913</u>	<u>\$ 2,024</u>

In connection with the acquisition of Spectra-Physics in July 2004, the Company realized a loss of \$1.7 million on sales of marketable securities prior to their maturity in order to fund the cash portion of the purchase price.

Table of Contents*Inventories*

Inventories consist of the following:

<u>(In thousands)</u>	<u>January 1, 2005</u>	<u>December 31, 2003</u>
Raw materials and purchased parts	\$ 46,413	\$ 33,372
Work in process	20,178	7,463

Investment Write-Downs

In 2004, the Company determined that a minority interest investment made in prior years in a manufacturer of precision mechanical components had incurred an other-than-temporary reduction in value. As a result, the Company recorded a charge of \$1.4 million to write-down the investment to its estimated fair value.

In 2002, two fiber optic component manufacturers in which the Company had made minority interest investments in prior years experienced severe financial difficulties. Each manufacturer has shut down its operations and liquidated its assets. As a result, the Company recorded a charge of \$6.5 million to write-down these investments to their estimated fair value.

NOTE 4 RESTRUCTURING, IMPAIRMENT AND OTHER CHARGES

The following table summarizes restructuring, impairment and other charges:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Asset impairment, including goodwill	\$ 59,804	\$	\$
2002 restructuring plan charge	589	651	11,883
Severance	969	1,054	
	\$ 61,362	\$ 1,705	\$ 11,883

Asset Impairment, Including Goodwill

In the fourth quarter of 2004, the Company completed its annual review of goodwill and other intangible assets and determined that goodwill and other intangible assets at its Advanced Packaging and Automation Systems Division were impaired. Due to the reduced market demand for semiconductor capital equipment, this division experienced a severe slow-down in sales and orders in the third quarter of 2004, which continued into the fourth quarter. As a result, the losses at this division substantially increased during this period. These factors led to a reduced forecast and outlook for this division, which led to the determination that these assets were impaired. The Company used a combination of valuation techniques, including the present value of future cash flows and the fair value of

Table of Contents

comparable businesses, in order to determine the fair value of the division. As a result, the Company recognized impairment of goodwill of approximately \$56.6 million and other acquired intangible assets of approximately \$2.7 million, of which approximately \$1.8 million was charged to *cost of sales*. The remainder of these charges were included in *Restructuring, Impairment and Other Charges* in the accompanying consolidated statement of operations.

In the third quarter of 2004, the Company performed an impairment analysis on an intellectual property intangible asset that it had previously purchased from a third party. The Company determined in the third quarter of 2004 that this asset was no longer strategic as a result of the acquisition of Spectra-Physics and that there was a limited current or future market demand for the products that would be produced with this technology. The Company used the present value of forecasted cash flows to determine the fair value of this intangible asset, which resulted in an impairment charge of approximately \$1.5 million in the third quarter of 2004. Such amount was charged to *cost of sales* in the accompanying consolidated statement of operations.

In the third and fourth quarters of 2004, the Company reviewed fixed assets at facilities impacted by the integration of Spectra-Physics and identified duplicate and unnecessary assets. As a result, the Company recorded an impairment charge of approximately \$2.3 million. Substantially all of these assets were sold or abandoned in 2004, with the remaining amount held for sale and subsequently sold in the first quarter of 2005. The remaining amount of these assets held for sale at January 1, 2005 was not significant. The Company determined the fair value of these assets using quoted used equipment market prices. The impairment charge was included in *Restructuring, Impairment and Other Charges* in the accompanying consolidated statement of operations.

The classification of these asset impairment charges in the accompanying consolidated statement of operations is as follows:

<u>(In thousands)</u>	<u>Cost of Sales</u>	<u>Restructuring, Impairment and Other Charges</u>	<u>Total</u>
Year ended January 1, 2005			
Goodwill impairment	\$	\$ 56,624	\$ 56,624
Intangible asset impairment	3,280	853	4,133
Fixed asset impairment		2,327	2,327
	<u>\$ 3,280</u>	<u>\$ 59,804</u>	<u>\$ 63,084</u>

All such amounts have been excluded from the Company's business segments, due to the nature of such charges.

2002 Restructuring Plan

During 2002, in response to the continued severe downturn in the fiber optic communications market and the uncertainty with respect to the pace of recovery in the semiconductor equipment market, the Board of Directors of the Company approved a restructuring and cost reduction plan designed to bring its operating costs in line with its business outlook at that time. As a result of the 2002 restructuring plan, the Company recorded restructuring charges of \$3.1 million for employee severance and related termination costs, \$9.1 million related to facility

Edgar Filing: NEWPORT CORP - Form 10-K

consolidations and \$0.2 million related to other activities. In addition, the Company recorded charges of \$1.5 million related to closure and consolidation of facilities, and \$1.0 million related to consignment and demonstration inventory that was deemed to be obsolete or slow moving, both of which were included in *selling, general and administrative expense* for 2002 in the accompanying consolidated statement of operations. The Company also established additional reserves for excess and obsolete inventory of \$28.7 million, which were included in *cost of sales* for 2002 in the accompanying consolidated statement of operations. Also in 2002, actions related to the Company's 2001 restructuring plan were completed, resulting in an excess restructuring reserve of \$0.5 million. This amount was used to reduce the 2002 restructuring and asset impairment charges and the related accrued restructuring costs.

F-23

Table of Contents

In 2004 and 2003, the Company increased the estimate of the required reserve for facility consolidations by \$0.6 million and \$0.7 million, respectively, to reflect settlements of its remaining lease obligations for certain leases as well as revised estimates of future sublease income.

The restructuring and impairment charges, inventory reserves and other charges related to the 2002 restructuring plan were classified in the accompanying consolidated statements of operations for the years ended January 1, 2005, December 31, 2003 and December 31, 2002 as follows:

(In thousands)	Cost of Sales	Restructuring, Impairment and Other Charges	Selling, General and Administrative Expenses	Total
Year ended December 31, 2002				
Inventory reserves	\$ 28,686	\$	\$	\$ 28,686
Facility consolidation and severance		12,433		12,433
Other charges			2,533	2,533
Reversal of excess 2001 reserves		(550)		(550)
Total for year ended December 31, 2002	\$ 28,686	\$ 11,883	\$ 2,533	\$ 43,102
Year ended December 31, 2003				
Adjustment to facility consolidation estimate	\$	\$ 651	\$	\$ 651
Total for year ended December 31, 2003	\$	\$ 651	\$	\$ 651

Adjustment to facility consolidation estimate	\$	\$ 589	\$	\$ 589
Total for year ended January 1, 2005	\$	\$ 589	\$	\$ 589

The 2002 restructuring and impairment charges, inventory reserves and other charges relate to the following business segments:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Advanced Packaging and Automation Systems	\$	\$	\$ 17,995
Photonics and Precision Technologies			13,224
Non-segment related	589	651	11,883
	\$ 589	\$ 651	\$ 43,102

Severance

Severance costs of \$1.0 million for cost reduction actions taken in 2004 as part of the integration of Spectra-Physics were included in *restructuring, impairment and other charges* in the accompanying consolidated statement of operations in 2004. In addition, severance costs of \$1.0 million for cost reduction actions taken in 2003 for employees that were not included in the original 2002 restructuring charge were included in *restructuring, impairment and other charges* in 2003. All such amounts have been excluded from the Company's business segments, due to the nature of such charges.

Table of Contents**NOTE 5 ACCRUED RESTRUCTURING COSTS***2004 Restructuring Plan*

In connection with the acquisition of Spectra-Physics, the Company began to formulate a restructuring plan in the third quarter of 2004 to consolidate certain locations and such preliminary plan was approved by the Company's Board of Directors. The Company is still finalizing this plan with respect to the employee severance, relocation and facility closure costs required for certain locations. Changes in these costs will result in adjustments to goodwill. The Company expects to finalize such plan by the end of the second quarter of 2005.

This plan currently includes \$2.2 million for employee relocation and employee severance and related termination costs and \$3.2 million related to facility consolidations. The employee severance and relocation actions will involve approximately 100 to 125 employees across all functions and are expected to be completed by the end of 2005.

The following table summarizes the activity in accrued restructuring costs related to the purchase of Spectra-Physics that involve the payment of cash:

<u>(In thousands)</u>	<u>Employee Relocation and Severance</u>	<u>Facility Consolidation</u>	<u>Total</u>
Liabilities assumed in purchase accounting	\$ 2,171	\$ 3,186	\$ 5,357
Cash payments	(484)		(484)
Accrued restructuring at January 1, 2005	\$ 1,687	\$ 3,186	\$ 4,873

The facility consolidation costs will be paid over the associated lease terms, which expire at various dates between 2007 and 2011. At January 1, 2005, \$2.1 million of these accrued restructuring costs were expected to be paid within one year and were included in current liabilities in *accrued restructuring costs* and \$2.8 million of accrued restructuring costs were included in long-term liabilities in *accrued restructuring costs and other liabilities* in the accompanying consolidated balance sheets.

2002 Restructuring Plan

The following table summarizes the activity in accrued restructuring costs related to the 2002 restructuring plan:

<u>(In thousands)</u>	<u>Employee Severance</u>	<u>Facility Consolidation</u>	<u>Other</u>	<u>Total</u>
-----------------------	-------------------------------	-----------------------------------	--------------	--------------

Edgar Filing: NEWPORT CORP - Form 10-K

Accrued restructuring at January 1, 2005	\$	\$ 833	\$	\$ 833

As of January 1, 2005, \$0.8 million of facility-related accruals remained under the Company's 2002 restructuring plan. The facility consolidation reserves will be paid over the associated lease terms, which expire at various dates.

Table of Contents

between 2005 and 2008. At January 1, 2005 and December 31, 2003, \$0.6 million and \$1.1 million, respectively, of accrued restructuring costs were expected to be paid within one year and were included in current liabilities in *accrued restructuring costs*, and \$0.2 million and \$0.6 million, respectively, of accrued restructuring costs were included in long-term liabilities in *accrued restructuring costs and other liabilities* in the accompanying consolidated balance sheets. Under the 2002 restructuring plan, a total of 331 employees were terminated, all of whom had been terminated by December 31, 2003.

NOTE 6 DEBT AND LINES OF CREDIT*Long-term debt*

The purchase price for the Company's acquisition of Spectra-Physics included a \$50.0 million unsecured promissory note bearing interest at 5% per annum. Interest on this note is payable quarterly, with the principal due in full on July 16, 2009. The Company recorded the note at \$46.4 million, reflecting a discount of approximately \$3.6 million, in order to reflect a market rate of interest of 6.75% for similar debt with similar characteristics. This discount is being amortized on a straight line basis until maturity.

Lines of Credit

At January 1, 2005, the Company had in place a \$5.0 million revolving line of credit expiring December 1, 2005. Certain of the marketable securities that are being managed by the lending institution collateralize the line of credit. The line bears interest at the prevailing prime rate, or the prevailing London Interbank Offered Rate (2.39% at January 1, 2005) plus 1.5%, at the Company's option, and an unused line fee of 0.25% per year. At January 1, 2005, there were no balances outstanding under the line of credit, with \$2.3 million available under the line, after considering outstanding letters of credit totaling approximately \$2.7 million.

At January 1, 2005, the Company had in place two revolving lines of credit totaling 1.5 billion yen (\$14.4 million at January 1, 2005) at two Japanese banks expiring as follows: \$10.6 million on November 30, 2005 and \$3.8 million on March 31, 2005. The lines are not secured and bear interest at the prevailing bank rate. At January 1, 2005, the Company had \$12.9 million outstanding under these lines of credit, with \$1.5 million available for borrowing. In addition, the Company had in place four lines of credit totaling 800 million yen (\$7.7 million at January 1, 2005) to be used to sell notes receivable with recourse at four Japanese banks. These lines have no expiration date and bear interest at the bank's prevailing rate. At January 1, 2005, the Company had \$4.3 million outstanding under these lines, with \$3.4 million available for the sale of notes receivable. The weighted average interest rate on all borrowings on these lines under these lines was 1.6%. Amounts outstanding under these lines of credit were included in *short term obligations* in the accompanying consolidated balance sheets. There were no amounts outstanding under these lines of credit at December 31, 2003.

Table of Contents**NOTE 7 NET LOSS PER SHARE**

The following table sets forth the numerator and denominator used in the computation of net loss per share:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Numerator for basic and diluted net loss per share:			
Loss from continuing operations	\$ (80,868)	\$ (10,555)	\$ (70,909)
Loss from discontinued operations	(568)	(2,605)	(15,209)
Cumulative effect of a change in accounting principle			(14,500)
Net loss	\$ (81,436)	\$ (13,160)	\$ (100,618)
Denominator for basic and diluted net loss per share:			
Weighted average shares outstanding	40,961	38,750	38,036
Weighted unvested restricted stock outstanding	(123)	(65)	(66)
Denominator for basic and diluted net loss per share:	40,838	38,685	37,970

Common stock equivalents of 1,733, 1,254 and 1,487 have been excluded from the denominator for purposes of calculating diluted loss per share for the years ended January 1, 2005, December 31, 2003 and December 31, 2002, respectively, as their inclusion would be antidilutive due to the net losses incurred.

NOTE 8 COMMITMENTS AND CONTINGENCIES

The Company leases certain of its manufacturing and office facilities and equipment under non-cancelable operating leases, certain of which contain renewal options. In addition to the base rent, the Company is generally required to pay insurance, real estate taxes and other operating expenses and, in some cases, additional rent based on increases in the Consumer Price Index.

Future minimum rental commitments under terms of these leases at January 1, 2005 were as follows:

(In thousands)	Capital Leases	Operating Leases	Total Obligations
Payments Due By Period:			
2005	\$ 259	\$ 9,755	\$ 10,014

Edgar Filing: NEWPORT CORP - Form 10-K

2006	177	8,045	8,222
2007	177	6,219	6,396
2008	177	4,480	4,657
2009	177	2,949	3,126
Thereafter	1,592	7,793	9,385
	<u>2,559</u>	<u>\$ 39,241</u>	<u>\$ 41,800</u>
Total minimum lease payments			
	(822)		
Less amount representing interest			
	<u>\$ 1,737</u>		
Present value of net minimum capital lease payments			

F-27

Table of Contents

The Company has subleased several of its facilities. Future minimum rentals to be received by the Company under non-cancelable subleases at January 1, 2005 were as follows:

<u>(In thousands)</u>	<u>Operating Leases</u>
Payments Due By Period:	
2005	\$ 683
2006	510
2007	302
2008	4
	<hr/>
Total minimum sublease payments	\$ 1,499
	<hr/>

Rental expense from continuing operations under all leases totaled \$10.2 million, \$4.3 million and \$6.4 million for 2004, 2003 and 2002, respectively.

Sale/Leaseback

In 2003, the Company completed a sale/leaseback facility refinancing for one of the Company's facilities, receiving proceeds of \$2.0 million. The transaction is accounted for as a capital lease with a term of 15 years. The Company realized a gain of \$0.3 million on the transaction, which was deferred and is being recognized over the life of the lease.

Environmental Reserves

Spectra-Physics' Mountain View, California facility is an EPA-designated Superfund site and is subject to a cleanup and abatement order from the California Regional Water Quality Control Board. Spectra-Physics, along with several other entities with facilities located near its Mountain View, California facility, have been identified as Responsible Parties with respect to this Superfund site, due to releases of hazardous substances during the 1960s and 1970s. The site is mature, and investigations and remediation efforts have been ongoing for approximately 20 years. Spectra-Physics and the other Responsible Parties have entered into a cost-sharing agreement covering the costs of remediating the off-site groundwater contamination, pursuant to which Spectra-Physics is responsible for 30% of the remediation costs.

As of January 1, 2005, the estimated costs to complete the remediation were approximately \$1.4 million, and the Company has established reserves equal to the present value of the estimated cost of the remediation. In connection with Newport's purchase of Spectra-Physics, Thermo Electron Corporation (Spectra-Physics' former parent) agreed, subject to certain conditions, to indemnify the Company for costs relating to clean-up requirements or third party claims relating to this site that arise prior to July 16, 2014, to the extent such costs are in excess of these reserves.

Edgar Filing: NEWPORT CORP - Form 10-K

Below is a summary of the Company's environmental reserves, which were included in *accrued restructuring costs and other liabilities* in the accompanying consolidated balance sheets:

<u>(In thousands)</u>	<u>January 1, 2005</u>
Estimated undiscounted environmental liability	\$ 1,375
Less discount (at 7% per annum)	(481)
Net liability	<u>\$ 894</u>

F-28

Table of Contents

Estimated payments for future fiscal years were as follows:

<u>(In thousands)</u>	<u>Estimated Aggregate Amortization Expense</u>
2005	\$ 192
2006	113
2007	113
2008	115
2009	115
Thereafter	727
	<u>\$ 1,375</u>

The Company expects payments to extend through approximately 2014.

Other Contingencies

The Company is currently involved in an arbitration proceeding initiated in November 2003 relating to claims arising out of the Company's acquisition of MRSI. As part of this arbitration, the Company has made certain claims against the former MRSI shareholders, including misrepresentation and breach of warranty. In addition, the representative of the former MRSI shareholders has made certain claims against the Company, including misrepresentation and breach of warranty, seeking damages of up to \$9.0 million. The Company believes that such claims are without merit, and intends to defend its position vigorously. The parties are currently discussing a negotiated settlement of these disputes.

From time to time, the Company may be involved in litigation relating to claims arising out of its operations in the normal course of business. Except as stated above, the Company currently is not a party to any legal proceedings, the adverse outcome of which, in management's opinion, individually or in the aggregate, would have a material adverse effect on its consolidated results of operations, financial position or cash flows.

NOTE 9 INCOME TAXES

United States and foreign taxable earnings (losses) from continuing operations before income taxes were as follows:

<u>(In thousands)</u>	<u>Years Ended</u>		
	<u>January 1,</u>	<u>December 31,</u>	<u>December 31,</u>
	<u>2005</u>	<u>2003</u>	<u>2002</u>

	<u>\$ (82,196)</u>	<u>\$ (11,367)</u>	<u>\$ (56,898)</u>

F-29

Table of Contents

The income tax provision (benefit) based on loss from continuing operations consists of the following:

(In thousands)	Years Ended		
	January 1, 2005	December 31, 2003	December 31, 2002
Current:			
Federal	\$ (3,214)	\$ (709)	\$ (3,491)
State	95	140	429
Foreign	1,137	(243)	70
	<u>(1,982)</u>	<u>(812)</u>	<u>(2,992)</u>
Deferred:			
Federal			17,299
State			
Foreign	654		(296)
	<u>654</u>	<u></u>	<u>17,003</u>
	<u>\$ (1,328)</u>	<u>\$ (812)</u>	<u>\$ 14,011</u>

During 2004, the Internal Revenue Service and the California Franchise Tax Board completed their examinations of the 2002 consolidated net operating loss carryback claim of MRSI to years ended in September 1995 through 2001 and the short-period year ended February 2002. During 2004, the California Franchise Tax Board completed its examination related to 1996. Based primarily on the favorable conclusions of these examinations, the Company recorded a reduction in its tax contingency reserve of approximately \$3.0 million.

During 2003, the Internal Revenue Service completed its examination related to the years 1996 and 1997. Based on the favorable conclusion of the examination, the Company recorded a reduction in its tax contingency reserve of approximately \$0.5 million.

On March 6, 2002, Congress passed the Job Creation and Worker Assistance Act of 2002 (2002 Tax Act). As part of the 2002 Tax Act, the carryback period for net operating losses increased from two to five years. As a result of the tax law change, federal net operating loss carryback benefits relating to the loss sustained during the year ended December 31, 2001 increased by approximately \$3.5 million. Such amounts have been included in the federal benefits amount reported for the year ended December 31, 2002.

The income tax provision (benefit) that is based on loss from continuing operations differs from the amount obtained by applying the statutory tax rate as follows:

(In thousands)	Years Ended
	January 1,

Edgar Filing: NEWPORT CORP - Form 10-K

	<u>2005</u>	<u>December 31, 2003</u>	<u>December 31, 2002</u>
Income tax benefit at statutory rate	\$ (28,769)	\$ (3,978)	\$ (19,914)
Increase (decrease) in taxes resulting from:			
Goodwill impairment	20,747		
State tax (net of federal benefit)	62		
Foreign rate variance	1,154	(36)	(168)
Income tax credits	(260)	(541)	(3,152)
Increase in valuation allowance	8,519	4,562	38,048
Tax exempt income		(247)	(1,118)
Favorable settlement of tax contingency	(2,955)	(505)	
Other, net	174	(67)	315
	<u>\$ (1,328)</u>	<u>\$ (812)</u>	<u>\$ 14,011</u>

No income tax provision (benefit) has been allocated to discontinued operations.

F-30

Table of Contents

Deferred tax assets and liabilities determined in accordance with SFAS No. 109, *Accounting for Income Taxes*, reflect the impact of temporary differences between amounts of assets and liabilities for tax and financial reporting purposes. Tax laws measure such amounts and the expected future tax consequences of net operating loss carryforwards.

Temporary differences and net operating loss carryforwards, which give rise to deferred tax assets and liabilities recognized in the balance sheets, were as follows:

(In thousands)	January 1,	December 31,
	2005	2003
Deferred tax assets:		
Net operating loss carryforwards	\$ 56,239	\$ 52,233
Accruals and other items not currently deductible for tax purposes	18,664	14,387
Tax credit carryforwards	15,485	14,976
Capital loss carryforwards	2,687	3,228
Valuation allowance	(64,227)	(63,349)
Total deferred tax assets	28,848	21,475
Deferred tax liabilities:		
Purchased intangible assets	22,788	1,544
Accruals not currently taxable	4,418	1,778
Accelerated depreciation methods used for tax purposes	1,640	1,642
Other basis differences	654	
State taxes	2	1,611
Total deferred tax liabilities	29,502	6,575
Net deferred tax assets (liabilities)	\$ (654)	\$ 14,900

Acquired deferred tax assets and liabilities, and liabilities for prior tax returns at the date of purchase are based on management's best estimate of the ultimate settlement that will be accepted by the tax authorities. Management continually evaluates these matters. At the date of a material change in management's best estimate of items relating to an acquired entity's prior tax returns, and at the date that the items are settled with the tax authorities, any liability previously recognized is adjusted to increase or decrease the remaining balance of goodwill attributable to that acquisition.

In connection with the acquisition of Spectra-Physics, the Company acquired \$25.4 million in domestic deferred tax liabilities and \$9.4 million in domestic deferred tax assets. The acquired net deferred tax liability of \$16.0 million reduced the Company's previously recorded net deferred tax asset accordingly. The remainder of these deferred taxes were recorded as a reduction to goodwill.

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. Management considers taxable income in carryback years, the scheduled reversal of deferred tax liabilities, tax planning strategies and projected future taxable income in making this assessment. As of January 1, 2005, due to uncertainties surrounding the realization of the cumulative federal, state, and foreign net operating losses sustained

Edgar Filing: NEWPORT CORP - Form 10-K

during 2004, 2003 and 2002, the Company has a valuation allowance against a portion of the gross deferred tax assets.

The Company has a valuation allowance of \$64.2 million against its deferred tax assets as of January 1, 2005. When recognized, \$8.3 million of the tax benefits relating to any reversal of the valuation allowance will be accounted for as an increase in stockholders' equity for certain tax deductions from employee stock options, \$0.2 million will reduce goodwill and the remaining amount will be accounted for as a reduction of income tax expense.

At January 1, 2005, the Company has federal, state, and foreign net operating loss carryforwards totaling approximately \$147.0 million, \$64.0 million, and \$5.0 million, respectively. Federal net operating loss

F-31

Table of Contents

carryforwards begin to expire in 2020; state net operating loss carryforwards begin to expire in 2010. The majority of the Company's foreign net operating loss carryforwards may be carried forward indefinitely, although some will begin to expire in 2010.

Due to the change of ownership provision of the Tax Reform Act of 1986, utilization of the Company's net operating loss carryforwards may be subject to an annual limitation against taxable income in future periods. As a result of the annual limitation, a portion of these carryforwards may expire before ultimately becoming available to reduce future income tax liabilities.

The Company has federal and state income tax credit carryforwards of \$7.8 million and \$7.7 million, respectively, which expire in years 2005 through 2023. The Company has federal capital loss carryforwards of approximately \$6.7 million which expire in 2007.

Undistributed earnings of the Company's historic and acquired foreign subsidiaries for which no U.S. federal or state liability has been recorded amounted to approximately \$6.1 million and \$4.3 million at January 1, 2005 and December 31, 2003, respectively. These undistributed earnings are considered to be indefinitely reinvested. Accordingly, no provision for U.S. federal and state income taxes or foreign withholding taxes has been provided on such undistributed earnings. Determination of the potential amount of unrecognized deferred U.S. income tax liability and foreign withholding taxes is not practicable because of the complexities associated with its hypothetical calculation; however, unrecognized foreign tax credits would be available to reduce some portion of the U.S. liability.

On October 22, 2004, the American Jobs Creation Act of 2004 (AJCA) was signed into law. The AJCA provides several incentives for U.S. multinational corporations and U.S. manufacturers. Subject to certain limitations, the incentives include an 85% dividends received deduction for certain dividends from controlled foreign corporations that repatriate accumulated income abroad, and a deduction for domestic qualified production activities taxable income. The U.S. Treasury Department is expected to issue guidance with regards to these provisions. Until this guidance is issued, we will not be able to evaluate whether to take advantage of this opportunity and the potential impact on our income tax provision, if any.

NOTE 10 STOCK PLANS

In 2001, the Company's Board of Directors and stockholders approved the 2001 Stock Incentive Plan (2001 Plan). The purposes of the 2001 Plan are to enhance the Company's ability to attract, motivate and retain the services of qualified employees, officers and directors, consultants and other service providers upon whose judgment, initiative and efforts the success of the Company's business largely depends, by providing them with an opportunity to participate in the ownership of the Company and thereby have an interest in the success and increased value of the Company. Options have been granted to directors, officers and employees at exercise prices not less than the fair market value on the dates of grants for terms of not more than ten years. Accordingly, no charges have been made to income in accounting for these options. The tax benefits, if any, resulting from the exercise of options are credited to capital in excess of par value. The fair market value of restricted stock at date of grant is amortized to expense over the vesting period, which is generally two to five years.

The 2001 Plan authorizes the Company to grant options and/or rights to purchase up to 6,000,000 shares of Common Stock, including such number of shares as was formerly available for grant under the Company's 1992 Stock Option Plan and 1999 Stock Incentive Plan (Prior Plans), subject to adjustment in the number and kind of shares subject to the 2001 Plan and to outstanding shares in the event of stock splits, stock dividends or certain other similar changes in the capital structure of the Company. Upon the adoption of the 2001 Plan by the Company's stockholders, the Prior Plans were terminated for purposes of future grants.

Table of Contents

In 2002, in connection with the Company's acquisition of MRSI, the Company's Board of Directors approved the assumption and conversion of all options to purchase shares of MRSI common stock held by each MRSI optionee into options to purchase the Company's common stock at the conversion ratio set forth in the Agreement and Plan of Merger relating to such acquisition. The Company granted options to purchase a total of 1,087,541 shares to the former MRSI optionees pursuant to individual nonqualified stock option agreements effective as of the date of the closing of the acquisition. The difference in value between the Company's stock price at the date of acquisition and the option exercise price is included in the purchase price allocation of MRSI.

The following table summarizes stock option and restricted stock activity for the years ended January 1, 2005, December 31, 2003 and December 31, 2002.

	Available for Option Grant or Award	Outstanding			Weighted Average Exercise Price of Option

The Company maintains an Employee Stock Purchase Plan (Purchase Plan) to provide employees of the Company with an opportunity to purchase common stock through payroll deductions. The purchase price is 85% of the lower of the fair market value of the stock on the first or last day of each quarter. The Purchase Plan, originally established on January 1, 1995, was amended and restated effective April 1, 2003, extending the term of the Plan for a period of ten (10) years expiring March 31, 2013, and increasing the number of shares of common stock authorized for issuance thereunder by an additional 2,000,000 shares. The amended and restated Purchase Plan was approved by the Company's Board of Directors in March 2003 and was approved by the stockholders in May 2003. An aggregate of 3,950,000 shares of common stock were authorized for issuance under the Purchase Plan. There were 197,316, 163,151 and 206,200 shares issued under the Purchase Plan during 2004, 2003 and 2002, respectively.

At January 1, 2005, the Company had reserved 8,519,227 shares of common stock for future issuance under its stock incentive plans and assumed stock options and had reserved 1,872,230 shares under the Purchase Plan.

NOTE 11 STOCKHOLDER EQUITY TRANSACTIONS

In April 2003, the Board of Directors of the Company approved a share repurchase program, authorizing the purchase up to 3.9 million shares, or 10% of the Company's then-outstanding stock. The purchases may be made from time to time in the open market or in privately negotiated transactions, and the timing and amount of the purchases will be based on factors including the Company's share price, cash balances, expected cash requirements and general business and market conditions. During 2003, the Company repurchased 285,829 shares at a cost of \$4.5 million. The Company did not repurchase any shares under this plan in 2004.

NOTE 12 FAIR VALUES OF FINANCIAL INSTRUMENTS

Edgar Filing: NEWPORT CORP - Form 10-K

The estimated fair value of the Company's financial instruments has been determined using available market information and valuation methodologies. Considerable judgment is required in estimating fair values. Accordingly, the estimates may not be indicative of the amounts the Company could realize in a current market exchange.

The following methods and assumptions were used to estimate the fair value of each class of financial instruments for which it is practicable to estimate that value.

Cash and Cash Equivalents

The carrying amount approximates fair value because of the short maturity of these instruments.

F-34

Table of Contents*Marketable Securities*

Marketable securities are classified as available for sale and are carried at fair value in the accompanying balance sheet. The fair values are based upon quoted market prices.

Investments

Included in *investments and other assets* in the accompanying balance sheets are other long-term minority interest investments in companies that are carried at cost. The estimated fair value of the investments is calculated based upon the indicated fair value using the most recent valuation or financing transaction completed by those entities.

Short-Term Obligations

The carrying amount of short-term obligations approximates fair value due to their short maturity and variable rates of interest which approximate current market rates.

Long-Term Debt

The fair value of the Company's long-term debt is estimated based on the current rates for similar issues or on the current rates offered to the Company for debt of similar remaining maturities.

The estimated fair values of the Company's financial instruments were as follows:

<u>(In thousands)</u>	<u>January 1, 2005</u>		<u>December 31, 2003</u>	
	<u>Carrying Amount</u>	<u>Fair Value</u>	<u>Carrying Amount</u>	<u>Fair Value</u>
Cash and cash equivalents	\$ 41,443	\$ 41,443	\$ 11,795	\$ 11,795
Marketable securities	66,739	66,739	255,507	255,507
Investments	4,432	5,455	3,912	3,912
Short-term obligations	17,186	17,186		
Long-term debt	46,716	46,716		

NOTE 13 DEFINED CONTRIBUTION PLAN

The Company sponsors a 401(k) defined contribution plan. Generally, all U.S. employees are eligible to participate in and contribute to this plan. The Company makes certain safe harbor matching contributions to this plan based on participating employees' contributions to the plan and their total compensation. Expense recognized in continuing operations for the plan totaled \$2.8 million, \$2.0 million and \$2.7 million for 2004, 2003 and 2002, respectively. 2004 expense includes the matching contributions for employees of Spectra-Physics from the date of acquisition of July 16, 2004.

NOTE 14 DEFINED BENEFIT PENSION PLANS

Several of the Company's non-U.S. subsidiaries have defined benefit pension plans covering substantially all full-time employees at those subsidiaries. Some of the plans are unfunded, as permitted under the plans and applicable laws. For financial reporting purposes, the calculation of net periodic pension costs is based upon a number of actuarial assumptions, including a discount rate for plan obligations, an assumed rate of return on pension plan assets and an assumed rate of compensation increase for employees covered by the plan. All of these assumptions are

Table of Contents

based upon management's judgment, considering all known trends and uncertainties. Actual results that differ from these assumptions would impact future expense recognition and the cash funding requirements of the Company's pension plans.

The information below includes pension plan information related to Spectra-Physics from the date of acquisition on July 16, 2004. The measurement date for the amounts shown below is as of January 1, 2005. Pension plan information related to the Company's subsidiaries for 2003 and 2002 is not included as such information was not material. Net periodic benefit costs for the plans in aggregate included the following components:

<u>(In thousands)</u>	<u>Year Ended January 1, 2005</u>
Service cost	\$ 258
Interest cost on projected benefit obligation	306
Expected return on plan assets	(97)
Recognized net actuarial (gain) loss	18
Amortization of unrecognized gain	30
	<u>\$ 515</u>

The activity under and the balance sheet impact of the Company's defined benefit plans is as follows:

<u>(In thousands)</u>	<u>January 1, 2005</u>
Change in benefit obligation:	
Benefit obligation, acquisition date	\$ 15,932
Service cost	258
Interest cost	306
Contributions by plan participants	7
Actuarial (gains) losses	(48)
Benefits paid	(1,615)
Currency translation adjustment	495
	<u>15,335</u>
Change in plan assets:	
Fair value of plan assets, acquisition date	4,664
Company contributions	635
Contributions by plan participants	7
Actual return on plan assets	66
Benefits paid	(1,539)
Currency translation adjustment	133
	<u>3,966</u>
Fair value of plan assets, end of year	<u>3,966</u>
Funded status	(11,369)

Edgar Filing: NEWPORT CORP - Form 10-K

Unrecognized net actuarial gain	(41)
Net amount recognized	<u>\$ (11,410)</u>
Amounts recognized in the balance sheet:	
Accrued pension liability	<u>\$ (11,410)</u>

The aggregate projected benefit obligation, accumulated benefit obligation and fair value of plan assets were \$15.3 million, \$13.7 million and \$4.0 million, respectively, at January 1, 2005.

F-36

Table of Contents

Estimated benefit payments for the next 10 years were as follows:

<u>(In thousands)</u>	<u>Estimated Benefit Payments</u>
2005	\$ 211
2006	336
2007	1,365
2008	318
2009	626
Thereafter	2,340
	<u>\$ 5,196</u>

The Company expects to contribute approximately \$0.5 million to the plans during 2005.

The weighted average rates used to determine the net periodic benefit costs were as follows:

	<u>Year ended January 1, 2005</u>
Discount rate	4.3%
Rate of increase in salary levels	3.1%
Expected long-term rate of return on assets	4.1%

The weighted average rates used to determine benefit obligations at the respective periods were as follows:

	<u>January 1, 2005</u>
Discount rate	4.2%
Rate of increase in salary levels	3.0%
Expected long-term rate of return on assets	4.1%

In determining the expected long-term rate of return on plan assets, the Company considers the relative weighting of plan assets, the historical performance of total plan assets and individual asset classes, and economic and other indicators of future performance. In addition, the Company may consult with and consider the opinions of financial and other professionals in developing appropriate return benchmarks.

Edgar Filing: NEWPORT CORP - Form 10-K

Plan assets were held in the following categories as a percentage of total plan assets:

	January 1, 2005
Cash	18%
Equity securities	
Debt securities	
Real estate	
Pooled funds of insurance companies	82
	100%

The Company's pension assets listed above are invested in pooled funds of insurance companies. Currently, such pooled funds are invested in debt securities, equity securities, real estate and cash. Asset management objectives include maintaining an adequate level of diversification to reduce interest rate and market risk and providing adequate liquidity to meet immediate and future benefit payment requirements. Such pooled funds may, from time to time, use derivatives, but only in a risk management capacity.

Table of Contents

Other Pension-Related Assets

As of January 1, 2005, the Company had assets with an aggregate market value of approximately \$5.6 million, which it has set aside in connection with its German pension plans. Such funds are being held and invested by the insurance company administering these plans, in accordance with German pension laws. Such funds at January 1, 2005 are invested in debt securities 89%, real estate 7% and equity securities 4%. Because these assets are not assets of the pension plan and could be accessed by the Company, they are not included in the funded status shown above. Such assets were included in *investment and other assets* in the accompanying combined balance sheet.

NOTE 15 BUSINESS SEGMENT INFORMATION

The operating segments reported below are the segments of the Company for which separate financial information is available and for which operating results are evaluated regularly by the Chief Executive Officer in deciding how to allocate resources and in assessing performance.

The Company develops, manufactures and markets its products within three distinct business segments, Lasers, Photonics and Precision Technologies (PPT) and Advanced Packaging and Automation Systems (APAS). The Lasers business segment was added in 2004 as a result of the acquisition of Spectra-Physics. The Company's previously reported Industrial and Scientific Technologies Division has been combined with Spectra-Physics' Photonics business to create the new PPT business segment. The 2004 business segment information includes the operations of Spectra-Physics from the date of acquisition on July 16, 2004.

Also in 2004, the Company reclassified certain fiber optic communications product lines from its APAS Division to its former Industrial and Scientific Technologies Division. All prior periods have been restated to reflect this change in business segment reporting.

The Lasers Division offers a broad array of laser technology products and services with diverse applications to OEM and end-user customers in the microelectronics, scientific research, life and health sciences and industrial manufacturing markets. The division's lasers and laser-based systems include diode-pumped solid-state lasers, ultrafast lasers, oscillators and amplifiers, high-energy pulsed lasers, tunable lasers, semiconductor lasers, high-power water-cooled ion lasers, air-cooled ion lasers, nitrogen lasers, and high-power helium neon lasers.

The PPT Division's products and systems are used across a wide range of markets in applications that range from basic research and development activities to high-precision manufacturing. With the acquisition of Spectra-Physics, the Company added the Oriel line of photonics instruments and components, including light sources, monochromators and spectroscopy instrumentation, as well as thin-film optical filters, ruled and holographic diffraction gratings and crystals. In addition, the division sells subsystems to third parties that integrate these products into larger systems, particularly for semiconductor manufacturing and life and health sciences applications. The division also offers automated and manually operated equipment used to assemble and test fiber optic telecommunications and data communications devices, addressing applications from pre-test to assembly and packaging to final device testing. The PPT Division's photonics and precision products address markets including microelectronics, scientific research, aerospace and defense/security, life and health sciences and communications.

The APAS Division offers a broad array of automation subsystem products for semiconductor front-end wafer processing applications, and also supplies complete turnkey systems for advanced back-end packaging applications. These high-performance products provide the Company's customers with the speed, accuracy, repeatability and dependability required for high-throughput production environments.

The Company measures operating income reported for each business segment, which includes only the costs that are directly attributable to the operations of that segment, and excludes certain corporate expenses, interest expense, income taxes, and restructuring and other non-recurring charges.

F-38

Table of Contents

Selected segment financial information for the Company's reportable segments for the years ended January 1, 2005, December 31, 2003 and December 31, 2002 were as follows:

<u>(In thousands)</u>	<u>Lasers</u>	<u>Photonics and Technologies</u>	<u>Advanced Packaging and Automation Systems</u>	<u>Total</u>
Year ended January 1, 2005				
Sales to external customers	\$ 84,331	\$ 171,211	\$ 30,239	\$ 285,781
Depreciation and amortization	2,153	6,111	3,145	11,409
Segment income (loss)	6,664	24,924	(8,866)	22,722
Segment assets	258,410	199,867	22,331	480,608
Expenditures for long-lived assets	2,273	2,206	472	4,951
Year ended December 31, 2003				
Sales to external customers		\$ 112,515	\$ 22,274	\$ 134,789
Depreciation and amortization		4,880	3,138	8,018
Segment income (loss)		9,364	(15,397)	(6,033)
Segment assets		107,445	86,313	193,758
Expenditures for long-lived assets		3,016	354	3,370
Year ended December 31, 2002				
Sales to external customers		\$ 126,376	\$ 37,618	\$ 163,994
Depreciation and amortization		5,281	1,919	7,200
Segment income (loss), including \$13.2 million and \$18.0 million of inventory reserves and other costs described in Note 4, for PPT and APAS, respectively		167	(39,664)	(39,497)
Segment assets		97,621	87,780	185,401
Expenditures for long-lived assets		7,504	804	8,308

The following reconciles segment income (loss) to consolidated income (loss) from continuing operations before income taxes:

<u>(In thousands)</u>	<u>Years Ended</u>		
	<u>January 1, 2005</u>	<u>December 31, 2003</u>	<u>December 31, 2002</u>
Segment income (loss)	\$ 22,722	\$ (6,033)	\$ (39,497)
Impairment and integration-related charges to cost of sales	(22,328)		
Unallocated operating expenses	(12,129)	(11,642)	(9,297)
Restructuring, impairment, integration and other charges (1)	(68,482)	(1,705)	(11,883)
Interest and other income (expense), net	(560)	8,013	10,269
Investment write-downs	(1,419)		(6,490)
Consolidated loss from continuing operations before income taxes	\$ (82,196)	\$ (11,367)	\$ (56,898)

(1) 2004 amounts include approximately \$7.1 million in integration related costs that were not allocated to business segments due to their nature.
