The Basel Framework, based on the International Convergence of Capital Measurement and Capital Standards: A Revised Framework issued by the Basel Committee on Banking Supervision, requires the disclosure of capital adequacy information to ensure the enhanced effectiveness of market discipline. Our disclosure is made under the Matters Separately Prescribed by the Commissioner of the Financial Services Agency Regarding Capital Adequacy Conditions, etc. pursuant to Article 19-2, Paragraph 1, Item 5, Subitem (d), etc. of the Ordinance for Enforcement of the Banking Law (Ministry of Finance Ordinance No. 10 of 1982) (the FSA Notice No. 15 of 2007).

We have adopted (a) the advanced internal ratings-based approach as a method to calculate the amount of credit risk weighted assets and (b) the advanced measurement approach as a method to calculate the amount equivalent to the operational risk.

We calculate capital adequacy ratios based on the revised FSA Notices (Standards for Determining the Status of Capital Adequacy for banks, in accordance with Banking Law Article 14-2 (the FSA Notice No. 19 of 2006), as amended, and Standards for Determining the Status of Capital Adequacy for bank holding companies, in accordance with Banking Law Article 52-25 (the FSA Notice No. 20 of 2006), as amended (the FSA Notice No. 20)) from the fiscal year ended March 31, 2013.

The tables for the six months ended September 30, 2012 and 2013, set forth under the heading Status of Capital Adequacy, are calculated based on the Basel II (Figures for former Mizuho Bank are calculated under the domestic standard. Figures for Mizuho Financial Group, former Mizuho Corporate Bank and Mizuho Trust & Banking are calculated under the international standard.) and Basel III Framework, respectively.

Notes:

- The above figures are calculated based on the International standard applied on a consolidated basis under the FSA Notice No. 20.
- As it is not possible to break down Mizuho Financial Group's common stock and preferred stock according to classes of stock, non-cumulative perpetual preferred stock is not stated separately from capital.
- In calculating the consolidated capital adequacy ratio, we underwent an examination following the procedures agreed with Ernst & Young ShinNihon LLC, on the basis of Treatment in implementing examination by agreed-upon procedures for calculating capital adequacy ratio (Industry Committee Practical Guideline No. 30 of the Japanese Institute of Certified Public Accountants). Note that this is not a part of the accounting audit performed on our consolidated financial statements. This consists of an examination under agreed-upon procedures performed by Ernst & Young ShinNihon LLC on a portion of the internal control structure concerning the calculation of the capital adequacy ratio and a report of the results to us. As such, they do not represent an opinion regarding the capital adequacy ratio itself nor the internal controls related to the calculation of the capital adequacy ratio.
- The amount of net deferred tax assets was ¥420.4 billion and the maximum amount of deferred tax assets that can be recorded without diminishing the amount of Tier 1 capital for the purpose of calculating capital adequacy ratio was ¥1,258.1 billion.
- The adjusted amount for credit risk-weighted assets is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the foundation internal ratings-based approach multiplied by the rate prescribed in the FSA Notice No. 20 over the required capital under the advanced internal ratings-based approach; and the adjusted amount for operational risk equivalent is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the basic indicator approach multiplied by the rate prescribed in the FSA Notice No. 20 over the required capital under the advanced measurement

approach.

- The above figures are calculated based on International standard applied on a consolidated basis under the FSA Notice No. 20.
- In calculating the consolidated capital adequacy ratio, we underwent an examination following the procedures agreed with Ernst & Young ShinNihon LLC, on the basis of Treatment in implementing examination by agreed-upon procedures for calculating capital adequacy ratio (Industry Committee Practical Guideline No. 30 of the Japanese Institute of Certified Public Accountants). Note that this is not a part of the accounting audit performed on our consolidated financial statements. This consists of an examination under agreed-upon procedures performed by Ernst & Young ShinNihon LLC on a portion of the internal control structure concerning the calculation of the capital adequacy ratio and a report of the results to us. As such, they do not represent an opinion regarding the capital adequacy ratio itself nor the internal controls related to the calculation of the capital adequacy ratio.

Actual losses are the sum of the net increase (decrease) in the amount of partial direct write-offs, specific reserve for possible losses on loans and general reserve for possible losses on loans (for claims against special attention obligors or below), etc., as well as tax-qualified direct write-offs, losses from sales of non-performing loans, losses from debt forgiveness and losses from debt-equity swaps during the relevant period. Equity exposure under the PD/LGD approach is not included in the amount of actual losses.

<Analysis>

Actual losses of ¥22.5 billion in the period from October 1, 2012 through September 30, 2013 increased by ¥9.3 billion compared with the period from October 1, 2011 through September 30, 2012. This was due mainly to an increase in losses from residential mortgage exposure offset in part by a decrease in losses from corporate exposure.

2. Actual losses are the sum of the net increase (decrease) in the amount of partial direct write-offs, specific reserves for possible losses on loans and general reserves for possible losses on loans (for claims against special attention obligors or below), etc., as well as tax-qualified direct write-offs, losses from sales of non-performing loans, losses from debt forgiveness and losses from debt-equity swaps during the relevant period. Equity exposure under the PD/LGD approach is not included in the amount of actual losses.

parameters used in the calculation of required capital for an underlying asset when applying the supervisory formula (e.g., PD); and

with respect to underlying assets classified as securitization exposure, the conservative application of risk weights used in the ratings-based approach.

Table of Contents**n Market risk****Trading activities**

The following table shows VaR (Value at Risk) figures of our trading activities:

| | For the six months ended September 30, 2012 | For the fiscal year ended March 31, 2013 | (Billions of yen) For the six months ended September 30, 2013 |
|--|---|---|--|
| End of period | 3.3 | 3.5 | 5.8 |
| Maximum | 4.3 | 4.6 | 7.0 |
| Minimum | 2.6 | 2.6 | 3.3 |
| Average | 2.8 | 3.4 | 5.4 |
| The number of cases where assumptive losses exceeded VaR during the period | 1 | 1 | 1 |

Notes:

1. Amount of market risk (VaR) is calculated based on the internal model.
2. The multiplication factor for the calculation of market risk equivalent is determined by the number of cases where assumptive losses exceeded VaR before 250 business days prior to the end of period.
3. Our group companies which conduct trading activities are Mizuho Bank, Mizuho Trust & Banking and Mizuho Securities, etc.

VaR method:

| | |
|------------------------|--|
| Linear risk: | variance co-variance model |
| Non-linear risk: | Monte-Carlo simulation |
| VaR | Simple aggregation of linear risk and non-linear risk |
| Quantitative standard: | 1. confidence interval: one-tailed 99.0%; 2. holding period: 1 day; and 3. historical observation period of one year (265 business days) |

VaR (Value at Risk)

The VaR method measures the maximum possible loss that could be incurred due to market movements within a certain time period (or holding period) and degree of probability (or confidence interval).

Back testing

The Back testing is one of the methods to evaluate the effectiveness of market risk measurements calculated using the VaR method that compares VaR and amount of losses (we compare VaR with assumptive profits and losses). The number of cases where assumptive losses exceeded VaR is the number of times in which losses exceeded VaR during the corresponding period.

The following table shows stressed VaR figures of our trading activities:

| | |
|------------------------|--|
| Linear risk: | variance co-variance model |
| Non-linear risk: | Monte-Carlo simulation |
| Stressed VaR | Simple aggregation of linear risk and non-linear risk |
| Quantitative standard: | 1. confidence interval: one-tailed 99.0%; 2. holding period: 1 day; and 3. historical observation period of one year of significant financial stress (265 business days) |

Stressed VaR

The stressed VaR measurement is based on a continuous 12-month period of significant financial stress.

Table of Contents**Outlier criteria**

The following table shows results of calculations under the outlier framework:

| | Amount of loss | Broadly-defined capital | (Billions of yen) Loss ratio to capital |
|--------------------------------|----------------|-------------------------|--|
| As of September 30, 2012 | 427.4 | 7,665.1 | 5.5% |
| As of March 31, 2013 | 499.1 | 8,344.5 | 5.9% |
| As of September 30, 2013 | 340.8 | 8,806.6 | 3.8% |
| Effect of yen interest rate | 88.2 | n.a. | n.a. |
| Effect of dollar interest rate | 186.8 | n.a. | n.a. |
| Effect of euro interest rate | 43.7 | n.a. | n.a. |

Outlier criteria

As part of the capital adequacy requirements under Basel III, the losses arising from a banking book in hypothetical interest rate shock scenarios under certain stress conditions are calculated and compared with the sum of Tier 1 and Tier 2 capital. If the interest rate risk of the banking book leads to an economic value decline of more than 20% of the sum of Tier 1 and Tier 2 capital, we will be deemed an outlier and may be required to reduce the banking book risk or adopt other responses.

Interest rate shock scenario under stress conditions in outlier criteria

For the interest rate shock scenario used in connection with the calculations under the outlier framework, we generate annual rate fluctuation data for five years derived from daily raw historical interest rate data of the past six years and then apply the actual fluctuation data at a 99.0% confidence level to the shock scenario.
