Enclosures: Unaudited condensed financial statements as of September 30, 2015 and 2014 and for each of the three- and nine-month periods ended September 30, 2015 and 2014, prepared in accordance with IFRS, and related management's discussion.

Report

for the quarter and nine months ended 30 September 2015

- v Gold production of 974koz
- v Net debt at 30 September 2015 falls by 25% to \$2.319bn and net debt to adjusted EBITDA ratio improves to 1.56 times
- v CC&V sale completed with settlement of gross proceeds totaling \$819m and proceeds applied to repurchase \$779m of 8.5% bonds due 2020
- v Concluded a conditional investment agreement with Randgold Resources Limited that could form a JV to develop and operate Obuasi

Forward looking statements

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, total cash costs, all-in sustaining costs, all-in costs, cost savings and other operating results, return on equity, productivity improvements, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions, dispositions or joint venture transactions, AngloGold Ashanti's liquidity and capital resources and capital expenditures and the outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental health and safety issues, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements and forecasts are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic, social and political and market conditions, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, and business and operational risk management. For a discussion of such risk factors, refer to AngloGold Ashanti's annual reports on Form 20-F filed with the United States Securities and Exchange Commission. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

Non-GAAP financial measures

This communication may contain certain Non-GAAP financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use.

Financial and Operating Report

FINANCIAL AND CORPORATE REVIEW

Third quarter overview

AngloGold Ashanti delivered another consistent operating and financial performance for the third quarter of 2015, a marked reduction in debt levels, and strong cash flows despite a sharply lower gold price.

Cash inflow from operating activities was positive at \$243m, lower than the same quarter a year earlier at \$320m, due mainly to lower production from South Africa and Obuasi and a 12% lower received gold price.

AngloGold Ashanti conducted a successful tender offer for its 8.5%, seven year high-yield bonds due 2020 during the quarter at 107.5

US cents on the dollar, in order to reduce debt and therefore lower annual interest costs by about \$66m. This tender offer resulted in the repurchase of \$779m of the bonds (which had a total outstanding principal amount of \$1.25bn) at par value, plus a 7.5% premium on the majority of the bond repurchases, resulting in a cash premium of \$59m.

The International operations continued to deliver year-on-year cost reductions in the three months to 30 September 2015, with especially strong performances in this regard from Geita, Tropicana, and the operations in South America. Geita, Kibali, Cerro Vanguardia and AngloGold Ashanti Mineração also saw marked increases in production compared to the three months to 30 September 2014, offsetting lower output from South Africa and ounces lost from Obuasi (now in limited operations) and Cripple Creek & Victor (CC&V) (contributing only one month of production following its sale). South Africa continued to face challenges related to a poor safety performance and resultant regulatory stoppages. The group's reduced costs reflect the positive impact of lower oil prices particularly in Continental Africa and Australia, weaker currencies in South Africa, Brazil and Australia and continued operational and cost improvements.

Production was 974,000oz at an average total cash cost of \$735/oz, compared to 1.007Moz at \$718/oz the previous quarter and 1.128Moz at \$820/oz in the third quarter of 2014. Year-on-year costs benefited from improved production from the majority of the International Operations, weaker currencies and continued traction from cost saving initiatives. The 2% increase in total cash costs per ounce compared to the previous quarter was due mainly to adverse stockpile movements, higher power tariffs and mid-year wage increases.

These results show relentless cost discipline and continued delivery on our strategic commitments, Srinivasan Venkatakrishnan, Chief Executive Officer of AngloGold Ashanti, said. We've used self-help steps to significantly lower debt and interest, which will improve our cash-flow generation capacity.

Gold income decreased by \$279m from \$1,225m in the quarter ended 30 September 2014 to \$946m in the corresponding period of 2015, representing a 23% decrease year-on-year. The decrease was due to a \$158/oz, or 12% decrease in the gold price received from \$1,281/oz for the quarter ended 30 September 2014 to \$1,123/oz for the corresponding period in 2015 and a 147,000oz, or 13% decrease in gold sold from 1,101,000oz for the quarter ended 30 September 2014 to 954,000oz for the same period in 2015 due mainly to a decrease in production in South Africa and Australia.

Production costs decreased by \$168m from \$822m in the quarter ended 30 September 2014 to \$654m in the quarter ended 30 September 2015, representing a 20% decrease. The decrease was mainly due to a reduction in labour costs, fuel and power costs, consumable stores and service related costs as well as the weakening of some local currencies against the US dollar. Production costs in all business segments are largely incurred in local currency where the

relevant operation is located. US-dollar denominated production costs tend to be adversely impacted by local currency strength and favourably impacted by local currency weakness, assuming there are no other offsetting factors. AngloGold Ashanti's financial results can be influenced significantly by the fluctuations in the South African Rand, Brazilian Real, Australian Dollar, and, to a lesser extent, the Argentina Peso. During the quarter ended 30 September 2015 compared to the same period in 2014 all local currencies depreciated against the US dollar. The South African Rand depreciated by 21%, the Argentina Peso by 12%, the Australian Dollar by 28% and the Brazilian Real by 56%.

Fuel and power costs decreased from \$163m in the quarter ended 30 September 2014 to \$117m in the quarter ended 30 September 2015, which represents a \$46m, or 28%, decrease. The decrease was mainly due to decreased mining at Obuasi (the mine entered into a Limited Operation Phase during the first quarter of 2015) and the decrease in fuel prices.

Consumable store costs decreased by \$18m, or 12%, from \$151m in the quarter ended 30 September 2014 to \$133m in the quarter ended 30 September 2015. The decrease was due mainly to lower production at Obuasi and cost saving initiatives.

Labour costs declined by 21% from \$274m in the quarter ended 30 September 2014 to \$216m in the corresponding period of 2015. This was mainly due to rationalisation and restructuring across the group and lower production at Obuasi. Contractor costs declined by \$15m, or 12%, mainly in Australia, from \$127m in the quarter ended 30 September 2014 to \$112m in the quarter ended 30 September 2015. The decrease in contractor costs was primarily a result of negotiating lower contract rates and the lower utilisation of mine contractors.

Service-related costs decreased by \$23m, or 27%, from \$84m in the quarter ended 30 September 2014 to \$61m in the quarter ended 30 September 2015. The decrease was due to decreased services costs, decreased capital ore reserve development, decreased ore stockpile adjustments and decreased other production costs mainly in South Africa due to lower production and cost saving initiatives.

Cost of sales was \$830m for the quarter ended 30 September 2015 compared to \$999m for the corresponding period in 2014 due mainly to a \$160m decrease in cash operating costs. Included in cost of sales is amortisation of tangible and intangible assets and changes in gold inventory, which all together decreased from \$177m in the quarter ended 30 September 2014 to \$175m in the same period of 2015. Amortisation increased by \$3m mainly at Geita due to a shift in mining activity from Star & Comet to Nyankanga Cut 7 that was partially offset by a decrease in the South African operations due to lower production and lower capital spend. The gold inventory change was a decrease of \$18m in the quarter ended 30 September 2015 compared to a decrease of \$13m in the corresponding period in 2014. The greater decrease in the quarter ended 30 September 2015 was due to the timing of gold shipments at Geita.

Net loss attributable to equity shareholders, from continuing operations, decreased from a profit of \$28m in the quarter ended 30 September 2014 to a loss of \$76m in the same period of 2015. The decrease was mainly due to a \$96m provision for restructuring corresponding to 50% of the Obuasi carry value, the once-off bond repurchase premium of \$62m and the 113,000oz decrease in gold sold. The decrease was partially offset by the \$168m decrease in production costs and an impairment reversal of \$31m for Obuasi relating to reassessment of fair value.

All-in sustaining costs (AISC) were \$937/oz, a 9% improvement year-on-year. This reflects a significant reduction in total cash costs, which were down 10% year-on-year. All-in costs were 8% lower at \$1,024/oz.

Adjusted earnings before interest, tax, depreciation and amortisation (Adjusted EBITDA) were \$291m, compared with \$383m in the third quarter of 2014, mainly due to lower earnings as a result of a 12% decline in the realised gold price from \$1,281/oz to \$1,123/oz and a 11% reduction in ounces sold over this period. Adjusted EBITDA for the previous quarter was \$391m. As at 30 September 2015, total borrowings (including a bank overdraft) amounted to \$2,762m and cash and cash equivalents amounted to \$392m compared to \$3,693m and \$557m, respectively, a year earlier.

The International operations (excluding CC&V) delivered production of 702,000oz at a total cash cost of \$657/oz and AISC of \$826/oz, representing a year-on-year improvement of 16% and 14% in total cash costs and AISC respectively, despite a 7% reduction in output due mainly to the cessation of underground mining at Obuasi as well as lower production at Siguiri and Sunrise Dam. Geita, Kibali, Iduapriem, Cerro Vanguardia and AngloGold Ashanti Mineração delivered strong performances, while Tropicana, Geita and the Americas (excluding CC&V) delivered significant year-on-year reductions in costs.

The South African operations produced 253,000oz of gold in the quarter ended 30 September 2015, a 19% decrease from the same quarter of last year, primarily due to safety stoppages that affected the whole region, and lower grades from the West Wits operations. AISC was up 5% to \$1,176/oz reflecting a 6% increase in total cash costs to \$959/oz due to lower production and increases in power tariffs.

Weaker local currencies against the US dollar in the third quarter of 2015 compared to the third quarter of 2014 contributed to the reduction in group operating costs as our currency basket depreciated against the US dollar as follows: the South African Rand by 21%, the Australian dollar by 28%, the Brazilian Real by 56% and the Argentina Peso by 11%. For the South African region, these movements were not enough to offset challenges faced during the quarter.

Total capital expenditure (including equity accounted entities and discontinued operations) during the third quarter of 2015 was \$207m, compared with \$261m (includes \$37m for CC&V) in the third quarter of 2014 and \$230m in the previous quarter. This reduction reflects greater efficiencies, scheduling of some expenditure, the positive impact of weaker currencies against the US dollar and lower capital requirements at Kibali and Obuasi. CC&V only includes one month of capital expenditure following the completion of the sale of the mine during the quarter. Of the total capital spent, project capital expenditure during the quarter amounted to \$50m, including discontinued operations. Capital expenditure at continuing operations is expected to increase in the last quarter of the year, given normal seasonal patterns of investment at our operations, and slower-than-anticipated spending in South Africa in the nine months of the year, principally due to safety stoppages.

The formation of the Obuasi joint venture with Randgold Resources Limited (Randgold) (assuming satisfaction of all closing conditions) will result in a loss of control of the assets and liabilities and accordingly 100% of the Obuasi carry value has been transferred to held for sale in the balance sheet. Immediately prior to the classification as held-for-sale, the recoverable amount of Obuasi reflected an impairment reversal of \$31m – refer to note 5. Randgold is expected to ultimately purchase 50% of the shares and the shareholder loan in the joint venture for a nominal cash consideration. Consequently in accordance with IFRS and in terms of the conditional investment agreement signed, a \$96m provision for the restructuring of the ownership of Obuasi has been included in Provisions on the balance sheet

and in Special items on the income statement.

At the end of the third quarter of 2015, net debt was \$2.319bn compared to \$3.076bn in the previous quarter and \$2.952bn for the same quarter a year ago mainly due to the proceeds received on the sale of CC&V and the subsequent tender offer on the 8.5% high yield bonds due in 2020. This reduction in debt has resulted in a net debt to Adjusted EBITDA ratio of 1.56 times, compared with 1.95 times at the end of June 2015. Accordingly, debt levels remain well below the covenant of net debt to Adjusted EBITDA of 3.5.

Summary of quarter-on-prior-year-quarter operating and cost improvements:

CORPORATE UPDATE

As announced on 16 September 2015, AngloGold Ashanti and Randgold have concluded a conditional investment agreement aimed at the formation of a joint venture to redevelop and operate AngloGold Ashanti's Obuasi gold mine

in Ghana. Under the terms of the agreement, Randgold will lead and fund a development plan designed to rebuild Obuasi as a viable long-life mining business with competitive cost structures and returns.

Our announcement of the partnership with Randgold followed on a range of improvements in order to revive, modernise and mechanise the Obuasi mine, which we have effected since 2012. The mine has been on limited operating phase since the end of 2014, having ceased underground production, but continuing to process tailings, and has progressed to a feasibility study.

The development plan is expected to build on this feasibility study. If the development plan meets both parties investment criteria, and assuming all other conditions are satisfied, AngloGold Ashanti and Randgold will form a new joint venture company. Both companies will then be jointly responsible for funding the redevelopment of Obuasi. A Randgold group entity will be appointed as operator of the mine.

SOUTH AFRICA WAGE TALKS

On 2 October 2015, AngloGold Ashanti, through the collective bargaining process overseen by the Chamber of Mines, reached a three- year agreement with the National Union of Mineworkers (NUM), Solidarity and the United Association of South Africa (UASA) in respect of wages and conditions of service for the period from 1 July 2015 to 30 June 2018. These three unions comprise 59% of the South African workforce, with another 6% having no union affiliation. The Association of Mineworkers and Construction Union (AMCU),, which represents 35% of AngloGold Ashanti s employees in South Africa, has not signed the agreement. Given that the majority of employees have agreed to the offer, it will be extended, in terms of the South Africa s Labour Relations Act, to all employees regardless of their respective union affiliations. The wage agreement reached includes the following:

- i Category 4-8 employees and B-lower officials, an increase of R750 per month in year 1, R775 per month in year 2 and R800 per month in year 3, as well as a R100 per month increase in living-out allowance in year 1.
- i Miners, Artisans and Officials, an increase of 6% on standard rate of pay in year 1, and 6% or CPI (whichever is the greater) in years 2 and 3.

AngloGold Ashanti is in the process of engaging its employees through their union representatives, including AMCU s, on the implementation of the wage agreement.

OPERATING HIGHLIGHTS

The **South Africa region** produced 253,000oz at a total cash cost of \$959/oz for the third quarter of 2015 compared to 314,000oz at a total cash cost of \$902/oz in the same quarter last year. The region s performance was severely hampered by safety-related challenges, with five fatalities recorded over the period. Approximately 47,000oz of production was lost due to these safety related stoppages. Mponeng s production for the quarter was most affected by fatalities that occurred at the mine and the resultant interruptions. Despite currency weakness and concerted efforts to contain inflationary pressures, the total cash costs were adversely impacted by lower production levels and increases in power tariffs.

The West Wits region operations produced 108,000oz at a total cash cost of \$944/oz compared to 153,000oz at a total cash cost of \$825/oz in the same quarter last year. The third quarter s performance was negatively impacted by safety-related disruptions. TauTona s total cash costs improved by 10% year-on-year as the mine embarked on a number of initiatives to combat cost challenges particularly in the labour and energy categories. The 41% decrease in production and 39% increase in total cash costs at Mponeng were due mainly to safety-related stoppages as well as the implementation of a de-risk plan. Initiatives are underway to systematically improve skills of supervisors and mining teams to improve productivity, particularly at Mponeng.

Vaal River operations produced 93,000oz at a total cash cost of \$962/oz compared to 107,000oz at a total cash cost of \$940/oz in the same quarter last year. The region s production performance was also negatively affected by regulatory safety-related stoppages with approximately 31,000oz of lost production. Despite the operational challenges, Moab Khotsong remained the lowest cost producer for the South African region at a total cash cost of \$876/oz.

Surface Operations produced 48,000oz at a total cash cost of \$984/oz, compared to 52,000oz at a total cash cost of \$1,048/oz in the same quarter last year. Production was negatively affected by a substantial reduction in head grade. Plans are underway to upgrade the Kopanang marginal ore dump material via a screening process which is expected to improve grades. Operations at Mine Waste Solutions were aided by the commissioning of East pump station, thereby improving availability. The Buffels 4 pump station was decommissioned, resulting in reduced maintenance and electricity costs.

The **Continental Africa Region** s production was 349,000oz at a total cash cost of \$687/oz compared to 410,000oz at a total cash cost of \$799/oz in the same quarter last year. Production was down 15% reflecting the loss of ounces from Obuasi moving to limited operations, technical challenges experienced at Siguiri that led to unplanned maintenance, and Mali s scaled-back production, which were partially offset by good performance from Kibali, Iduapriem and Geita. Total cash costs decreased 14% reflecting higher grade production from Geita, the efficiency of lower mining unit costs, together with the benefits of lower fuel costs.

In the **DRC**, Kibali s attributable production was 72,000oz at a total cash cost of \$658/oz compared to 65,000oz at a total cash cost of \$563/oz in the same quarter last year. Production was 11% higher as a result of a 26% increase in tonnage throughput with consistent plant operations following the completion of the ramp up of the oxide plant. Total cash costs increased by 17% compared to same quarter last year as a result of the higher mining cost related to the 12% decrease in recovered grade. The shaft sink was completed to a depth of 760m. Shaft fit out commenced.

In **Ghana**, Iduapriem produced 49,000oz at a total cash cost of \$1,034/oz compared to 45,000oz at a total cash cost of \$866/oz in the same quarter last year. Production increased 9% as a result of a 13% increase in recovered grade as the mine treated higher grade ore from the Ajopa pit, partly offset by 5% lower tonnage throughput as a result of power availability constraints in the country. Total cash costs, however, increased mainly due to the higher mining costs as a

result of resumption of mining operations following a period of limited mining operations when the focus for the last year was chiefly on the processing of stockpiled material.

Obuasi, which is currently in a limited operating phase following the suspension of underground mining operations last year, produced 13,000oz at a total cash cost of \$922/oz from tailings retreatment and remnant stockpile processing. The current quarter's operational performance is therefore not comparable to previous periods. Development of the decline has continued and reached 26 Level together with activities such as pumping, care of underground and surface infrastructure. Following the announced investment agreement aimed at creating a joint venture to redevelop and operate Obuasi, Randgold is currently conducting a due diligence exercise and working on a development plan for the mine.

In the **Republic of Guinea**, Siguiri produced 52,000oz at a total cash cost of \$854/oz compared to 72,000oz at a total cash cost of \$741/oz in the same quarter last year. Production decreased as a result of a 21% decrease in recovered grade due to depletion of higher grade ore sources and an 8% decrease in tonnage throughput due to unplanned maintenance. The 15% increase in total cash costs was due mainly to lower grades and was partly offset by lower input costs, especially fuel prices.

In **Mali**, Morila produced 7,000oz at a total cash cost of \$938/oz compared to 10,000oz at a total cash cost of \$1,525/oz in the same quarter last year. Production decreased as a result of a planned decrease in recovered grade compared to the higher grade tonnes sourced from the satellite pit commissioned in the latter part of the previous year, and a 14% decrease in tonnes treated. Total cash costs however decreased due to the completion of mining activities and lower production cost in line with reduced operational activities.

Sadiola produced 17,000oz at a total cash cost of \$679/oz compared to 21,000oz at a total cash cost of \$981/oz in the same quarter last year. Production declined due to a planned decrease in recovered grade, as a result of limited operational flexibility in the oxide operations. Total cash cost decreased by 31% due to lower processing, and general and administration costs, together with the cumulative benefit of the implemented cost management initiatives.

Yatela's closure process has transitioned to the implementation phase with consultation with the relevant regulatory authorities in Mali continuing on the closure plans and necessary consent to commence the closure activities. The current quarter's operational performance is therefore not comparable to previous periods.

In **Tanzania**, Geita produced 138,000oz at a total cash cost of \$483/oz compared to 116,000oz at a total cash cost of \$715/oz in the same quarter last year. Production increased as a result of the 26% increase in recovered grade realised from access to the higher grade ore sources stripped in the Nyankanga pit last year. This was partly offset by a 6% decrease in plant throughput, due to planned maintenance. Total cash costs decreased by 32% primarily as a result of the higher production, the efficiency of lower mining unit costs together with the benefits of lower fuel and reagent prices.

In the **Americas**, production from continuing operations was 219,000oz at a total cash cost of \$570/oz compared to 195,000oz at a total cash cost of \$702/oz in the same quarter last year. Production was down due to lower production at Serra Grande as a result of lower feed grade.

Brazil operations produced 148,000oz at a total cash cost of \$538/oz in the third quarter of 2015 compared to 133,000oz at a total cash cost of \$724/oz in the same quarter last year.

AngloGold Ashanti Mineração produced 123,000oz at a total cash cost of \$483/oz compared to 101,000oz at a total cash cost of \$699/oz in the same quarter last year. Production increased 22% due to 27% higher feed grades, partially offset by 6% lower tonnage treated. The higher grades from both Cuiabá and Corrego do Sítio complexes were in accordance with changes to the mine plan.

Total cash costs decreased due to higher production, efficiency initiatives, local currency depreciation, and higher by-product production. These items were partially offset by wage increases effective from August, following annual wage negotiations.

Serra Grande produced 25,000oz at a total cash cost of \$804/oz compared to 32,000oz at a total cash cost of \$803/oz in the same quarter last year. Production decreased as a result of lower feed grade, partially offset by higher tonnage treated. Lower fleet availability affected production for a portion of the quarter, with efforts under way to claw back these ounces in the latter part of the year as grades improve at Mina III, and as the Open Pit Orebody V production speeds up. Total cash costs remained flat as lower production was partially offset by the local currency depreciation and stockpile movements.

In **Argentina**, Cerro Vanguardia produced 71,000oz at a total cash cost of \$630/oz compared to 62,000oz at a total cash cost of \$656/oz in the same quarter last year. Production was 15% higher mainly due to higher grades as well as operational efficiencies. Total cash costs were 4% lower than the same quarter last year mainly due to higher by-product production and favourable exchange rates. These positive effects were partially offset by inflationary effects including salary increments and lower deferred stripping adjustments.

In line with the group's cost discipline, various initiatives continued during the quarter, focusing on efficiencies and production improvements, particularly in underground mine expansion, increased mill throughput, silver recovery, and capital expenditure. Additionally, production improvements are being analysed, with an aim to improve future production profile.

The **Australia** region produced 134,000oz at a total cash cost of \$718/oz for the third quarter of 2015, compared to 152,000oz at a total cash cost of \$861/oz in the same quarter last year. Production was negatively impacted by lower than anticipated mined grades at Sunrise Dam.

Sunrise Dam's production was 51,000oz at a total cash cost of \$996/oz compared to 68,000oz at a total cash cost of \$982/oz in the third quarter of 2014. Production was significantly impacted by lower than anticipated mined grades resulting in a lower head grade through the mill. The highly variable nature of the mineralisation, which is typical of coarse gold deposits, has contributed to poor grade reconciliation. This has been exacerbated by the location of the zones being mined in 2015 which are on the periphery of the main lodes and are less continuous and more variable than those mined in 2014. It is expected that the Vogue style of mineralisation scheduled for mining in 2016 will be similar to the zones mined in 2014.

To improve our ability to predict mined grade, changes have been made to grade control modelling. A new sample splitter that is designed to work more effectively with the underground reverse circulation (RC) drill rigs used for grade control is expected to be commissioned in the last quarter of the year.

The mine continued to perform well, delivering above anticipated ore tonnage of 727,000t, with 1,700m of operational development and 878m of underground capital development completed in the quarter. Mill throughput of 975,000t resulted from excellent plant availability and utilisation.

Tropicana's gold production was 83,000oz at a total cash cost of \$500/oz compared to 84,000oz at a total cash cost of \$721/oz in the same quarter last year. Mill throughput remained steady at 1.1 Mt and the average gold recovery remained constant at approximately 90%. The mine continued to perform well and grade mined benefited from ongoing excellent reconciliations to the Ore Reserve. Despite lower production, total cash costs decreased as a result of the favourable exchange rate and the differences in deferred stripping volumes between the comparative periods. The mill optimisation study continued with the objective of increasing throughput.

SAFETY

Tragically, there were five fatalities during the quarter in the South Africa region. Falls-of-ground remain the cause of most of these incidents, with seismicity an ongoing challenge to manage in this regard. The All Injury Frequency Rate (AIFR), the broadest measure of progress, was 6.48 per million hours worked for the quarter, a 17% improvement from the same quarter last year.

Safety remains our highest priority, a critical focus area in our strategic objectives and we remain committed to a zero harm work environment and a sustainable resilient safety ethos within our organisation in line with our values. A review of the Group's safety strategy is underway, as part of the effort to improve performance in this regard.

UPDATE ON CAPITAL PROJECTS

Kibali

Construction of the metallurgical facility and infrastructure

A concentrate de-sliming cyclone circuit providing more capacity at the ultra fine grind circuit was commissioned during the quarter. This is expected to facilitate the increase in sulphide ore treatment from 2016. The first phase of the new lined tailings storage facility was also completed during the quarter, providing capacity for 2016 carbon in leach tailings deposition. The first phase of Ambarau, the second hydropower station, was completed and commissioning is currently in progress.

Declines

Development remains on track with plan. The paste plant is now operating according to plan, with the first two stopes successfully backfilled. Total development metres of 2,702 were achieved in the third quarter.

Vertical shaft

Shaft sinking was completed in July 2015 and work for the remainder of the quarter focused on equipping the shaft, with the programme 15 days ahead of schedule as at the end of the quarter. The next milestone, expected in the fourth quarter, will be the completion of the equipping from lode level to crusher level and the swinging down of the equipment for the off-shaft development.

TECHNOLOGY

1. Reef Boring

1.1 Small range:

The HPE machine was moved to the new test block where advanced geological drilling predetermined the drill layout and 2 holes were drilled in the undulated reef package. A stage gate was implemented and three more holes are expected to be drilled in the fourth quarter. No further drilling is planned in the small reefs as the geology is hampering drilling.

1.2 Medium Range:

Installation and commissioning of the MK IV machine was successful. Constraints were encountered with the installation of the conveyor belt and a new chain design is currently being tested. The machine has drilled 2 holes in the last quarter since its commissioning.

In the third quarter the MK III prototype machines have drilled 26 holes in the different prototype sites. New designs for mechanical anchoring were tested to speed up the pinning and setup times. This design has led to an improvement

in the machines performance quarter on quarter from 102.4 hours/hole to 85.45 hours/hole. Mechanical anchors will be rolled out to all other MK III machines.

New collector bins were manufactured and delivered to TauTona mine. Installation is expected to commence in the next quarter.

1.3 Machine Manufacturing:

The MK III machine from Moab Khotsoeng mine is expected to be redeployed at TauTona mine for drilling in the VCR site. Machine 3 is currently at the original equipment manufacturer for repairs and modifications and is expected to return to TauTona and to act as a replacement unit for the current MK III machines when sent for maintenance.

2. Ore body Knowledge and Exploration

Trial 7 originally scheduled for the first quarter was delayed due to multiple factors and is expected to continue drilling during the fourth quarter. Manufacturing of the fit for purpose drill rig is on schedule as at the end of the quarter.

3. Ultra High Strength Backfill

The outcome of the previous trials show that optimum pumping distances can be reached with product temperatures between 20°C and 30°C. The surface tests were successful up to a 1,000m within these temperature ranges. Trials continued in the third quarter on temperatures between 30°C and 40°C, simulating the underground product temperature. Results from the test indicated that maximum product cannot exceed 35°C. Trials were successful at 35°C, reaching a pumping distance of 600m. All indications are that a 1,000m could be reached at this temperature.

EXPLORATION UPDATE

Exploration and evaluation costs during the third quarter of 2015 were \$33m compared to \$35m during the same period in 2014.

BROWNFIELDS EXPLORATION

In **South Africa**, four deep surface drilling sites were in operation during the quarter, one on the Moab Khotsoeng mine and three at Mponeng (WUDLs). All the surface drilling is designed to ameliorate risk to the deepening projects at Mponeng and Moab Khotsoeng.

In **Tanzania**, drilling focused on Mineral Resource delineation drilling at Matandani North and Geita Hill Underground, Vertical Seismic Profile (VSP) drilling at Nyankanga and Geita Hill, metallurgical drilling at Matandani and sterilisation drilling for the proposed WD1 extension. A total of 16 holes (4,844m) were drilled.

An updated Star and Comet geological model was developed and used to support the upcoming underground drilling programme. A total of 15 geological sections were defined, on the back of relogging of over 100 holes, and used to develop the 3D model.

In **Guinea**, at Siguiri gold mine, a total of 6,852m of RC and diamond drilling (DD) was completed. The drilling focused on the fresh rock infill drilling programme and oxide reconnaissance drilling in Block 1. The fresh rock infill drilling continued at Bidini, with 4,520m RC and 948m DD completed in the North and South pits. The drilling is progressing slowly and is on hold due to poor ground conditions and flooding of pit bottom. Geometallurgical data collection at Bidini and Kami also took place during the quarter, as part of ongoing work and in support of the combination plant Feasibility Study.

In **Ghana**, at Obuasi gold mine, no exploration work was conducted. At Iduapriem, a total of RC (1,553m) and DD (2,123m) was drilled at Block 5. A number of encouraging intercepts were returned and a Mineral Resource model update is ongoing.

In the **Democratic Republic of the Congo** at Kibali, exploration along the KZ trend focused on seven higher priority targets from the first quarter data review: Kalimva-Ikamva, Mengu Hill, Sessenge SW, Oere Libala, Tete, Bakangwe and Megi.

In **Mali**, at Sadiola RC drilling (2,998m) was completed at Sadiola North and Tabakoto to test for and to upgrade oxide Mineral Resources. At Sadiola North, the drilling followed up on intersections from the first phase of drilling mainly outside the planned pit. Results from the Sadiola North drilling confirmed the northern continuity of the shallow SE dipping mineralisation. Geological modelling of Sadiola North was completed and Mineral Resource modelling is now in progress.

In **Argentina**, drilling activities continued in the quarter at Cerro Vanguardia with 16,940m completed. Field work with trenching and channel sampling to advance targets to drill stage continued.

In **Brazil**, exploration continued at the Cuiabá, Lamego and Córrego do Sítio production centres for AGABM with 17,260m drilled collectively in the surface and underground drilling programmes during the quarter. The 2015 programme remains focused on Mineral Resource conversion. Geological modelling continued for near mine target generation.

At Serra Grande, 15,540m of drilling were completed as infill drilling programmes continued in the Mineral Resource conversion programmes. Mapping and sampling was in progress for target delineation.

In **Colombia**, drilling started to test targets generated from soil sampling within the Gramalote JV tenements and infill drilling in the saprolite horizon. During this quarter, 2,550m were completed. At La Colosa, 1,510m were drilled during the quarter as the site investigation, hydrology and geotechnical programmes for the year continued. The Quebradona JV programme continued with 2,850m drilled during the quarter. The focus remains on infill and delineation drilling for the higher grade copper-gold mineralisation in the upper part of the deposit.

At Sunrise Dam in **Australia**, underground DD (15,631m) targeted extensions to the underground Mineral Resource in the Vogue South, Cosmo North, Cosmo East zones and the Dolly Corridor with encouraging results.

At Tropicana, drilling continued in the immediate mine environment, with diamond holes testing targets at the Tropicana Pit Extensions, Swizzler and Crouching Tiger areas. A total of 18,173m of RC and 18,270m of DD were completed. Work continues to test down dip extensions to known mineralisation at the Tropicana pit and system extensions to the south of the Havana pit at Havana South and Crouching Tiger.

GREENFIELDS EXPLORATION

During the third quarter of 2015, greenfields exploration activities were undertaken in Australia, Colombia and Brazil. Greenfields exploration completed 5,661m of RC and DD. Total expenditure for the quarter was \$5m.

In **Colombia**, drilling was initiated on the Guintar project, which is situated 40km west of Medellin. 166m of DD was completed in the first hole of an 8 hole, 3,000m diamond drill programme. GUI-001 was collared in gravels and at 14m intersected hornfelsed sediments and breccias with significant pyrrhotite and pyrite in fractures, stringers and fine stockworks. This is associated with minor disseminated chalcopyrite and molybdenite. Assay results are awaited.

In **Australia**, at the Tropicana JV, a total of 16,685m of aircore (AC), 1,909m of RC and 1,313m of DD was completed across the Madras, Masala and other Tropicana Belt prospects within 25km to 50km of the Tropicana gold mine. Assays returned in the quarter for Madras and Masala were disappointing.

At the Mullion Project in New South Wales, a total of 2,273m of DD was completed to follow up bedrock targets identified from the previous ground geophysical surveys. At the Strawbridge and Pindabunna Projects in Western Australia, planned regional aeromagnetic geophysical surveys were completed in the third quarter. Target generation and first pass field work are continuing.

In **Brazil**, the Pe Quente Project has been downgraded and the joint venture has been exited. Project generation activities in Brazil are ongoing.

Independent auditor's review report on the Condensed Consolidated Financial Statements for the quarter and nine months ended 30 September 2015 to the Shareholders of AngloGold Ashanti Limited

We have reviewed the condensed consolidated financial statements of AngloGold Ashanti Limited (the company) contained in the accompanying quarterly report on pages 11 to 40, which comprise the accompanying condensed consolidated statement of financial position as at 30 September 2015, the condensed consolidated income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows for the quarter and nine months then ended, and selected explanatory notes.

Directors' Responsibility for the Condensed Consolidated Financial Statements

The directors are responsible for the preparation and presentation of these condensed consolidated financial statements in accordance with the International Financial Reporting Standard, IAS 34 Interim Financial Reporting as issued by the International Accounting Standards Board (IASB), the SAICA Financial Reporting Guides, as issued by the Accounting Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of condensed consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express a conclusion on these interim financial statements based on our review. We conducted our review in accordance with International Standard on Review Engagements (ISRE) 2410, Review of Interim Financial Information Performed by the Independent Auditor of the Entity. This standard requires us to conclude whether anything has come to our attention that causes us to believe that the interim financial statements are not prepared in all material respects in accordance with the applicable financial reporting framework. This standard also requires us to comply with relevant ethical requirements.

A review of interim financial statements in accordance with ISRE 2410 is a limited assurance engagement. We perform procedures, primarily consisting of making enquiries of management and others within the entity, as appropriate, and applying analytical procedures and evaluating the evidence obtained.

The procedures performed in a review are substantially less than and differ in nature from those performed in an audit conducted in accordance with International Standards on Auditing. Accordingly, we do not express an audit opinion on these financial statements.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the accompanying condensed consolidated financial statements of the company for the quarter and nine months ended 30 September 2015 are not prepared, in all material respects, in accordance with International Financial Reporting Standard, IAS 34 Interim Financial Reporting as issued by the IASB, the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council and the requirements of the Companies Act of South Africa.

The reviewed financial statements for the quarter and nine months ended 30 September 2015 have been prepared by the corporate accounting staff of AngloGold Ashanti Limited headed by Mr John Edwin Staples (BCompt (Hons); CGMA), the Group's Chief Accounting Officer. This process was supervised by Ms Kandimathie Christine Ramon (CA (SA)), the Group's Chief Financial Officer and Mr Srinivasan Venkatakrishnan (BCom; ACA (ICAI)), the Group's Chief Executive Officer. The financial statements for the quarter and nine months ended 30 September 2015 were reviewed, but not audited, by the Group's statutory auditors, Ernst & Young Inc.

Notes

for the quarter and nine months ended 30 September 2015

1. Basis of preparation

The financial statements in this quarterly report have been prepared in accordance with the historic cost convention except for certain financial instruments which are stated at fair value. The group's accounting policies used in the preparation of these financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2014 except for the adoption of new standards and interpretations effective for the year beginning 1 January 2015.

Further, the comparative periods have been restated to separate continuing operations from discontinued operations in accordance with IFRS 5, as a consequence of the disposal of the Cripple Creek & Victor operations in the United States (note 9).

The financial statements of AngloGold Ashanti have been prepared in compliance with IAS 34, IFRS as issued by the International Accounting Standards Board, the South African Institute of Chartered Accountants Financial Reporting Guides as issued by the Accounting Practices Committee, Financial Reporting Pronouncements as issued by Financial Reporting Standards Council, JSE Listings Requirements and in the manner required by the South African Companies Act, 2008 (as amended) for the preparation of financial information of the group for the quarter and nine months ended 30 September 2015. These interim financial statements should be read in conjunction with the company's audited consolidated financial statements and the notes thereto as at and for the years ended 31 December 2014 and 2013.

Subject to other factors and unforeseen circumstances, quarter one production is generally lower than production during the rest of the year as a result of the ramp-up of operations after annual holiday production declines.

Orders placed and outstanding on capital contracts at the prevailing rate of exchange ⁽¹⁾	146	161	178	290

⁽¹⁾ Includes capital commitments relating to associates and joint ventures.
Rounding of figures may result in computational discrepancies.

Liquidity and capital resources

To service the above capital commitments and other operational requirements, the group is dependent on existing cash resources, cash generated from operations and borrowing facilities.

Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to foreign investment, exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In addition, distributions from joint ventures are subject to the relevant board approval.

The credit facilities and other finance arrangements contain financial covenants and other similar undertakings. To the extent that external borrowings are required, the group's covenant performance indicates that existing financing facilities will be available to meet the above commitments. To the extent that any of the financing facilities mature in the near future, the group believes that sufficient measures are in place to ensure that these facilities can be refinanced.

15. Non-current assets and liabilities held for sale

Obuasi gold mine

Effective 16 September 2015, the company announced that it had concluded a conditional investment agreement with Randgold which aimed at the formation of a joint venture to redevelop the Obuasi gold mine in Ghana. Obuasi, located in the Ashanti region of Ghana, 320 kilometres northwest of the capital Accra, is a large, high-grade deposit with proven and probable ore reserves (as reported by AngloGold Ashanti in their 2014 Annual Report) of 24.53Mt at 6.70g/t for 5.29Moz. At the end of 2014, AngloGold Ashanti converted Obuasi to limited operations, ceasing underground production, retrenching the workforce, but continuing to process tailings and starting a feasibility study on the redevelopment of the mine. Development of the decline ramp has continued over this period. The development plan will build on this feasibility study with the intention of establishing a more focused, efficient, mechanised high-grade operation. It is included in the Continental Africa Region reporting segment and was acquired in the AngloGold and Ashanti Goldfields merger in 2004.

The formation of the joint venture (assuming all pre-closing conditions are met) will result in loss of control of the assets and liabilities and accordingly 100% of the assets and liabilities of Obuasi have been transferred to held-for-sale. Immediately prior to classification as held-for-sale, the recoverable amount of Obuasi reflected an impairment reversal of \$31m. Refer to note 5. Under the terms of the agreement, Randgold will lead and fund the development plan designed to rebuild the mine as a viable long-life mining business. Randgold will operate the mine.

Management's assumptions for the recoverable amount of Obuasi include:

The gold price assumption represents management's best estimate of the future price of gold. In arriving at the estimated long-term gold price, management considered all available market information, including current prices, historical averages, and forward-pricing curves. A long term real gold price of \$1,200/oz is based on a range of economic and market conditions that are expected to exist over the remaining useful life of the asset.

The life of mine plan as at 30 September takes into account the following:

Proved and probable reserves;

Value beyond proved and probable (including exploration potential) determined using the gold price assumption referred to above;

In determining the recoverable amount, based on value in use, the real pre-tax rate of 9.8% used, which was derived from the Group's weighted average cost of capital (WACC) and risk factors consistent with the

basis in prior years;

Cash flows used in the mine plan are based on a life of mine plan;

Variable operating cash flows are increased at local Consumer Price Index rates.

The newly formed joint venture will own the entire issued ordinary share capital in AngloGold Ashanti (Ghana) Limited which is the sole legal and beneficial owner of the Mining Leases. Randgold will purchase 50% of the shares and the shareholder loan in the joint venture for a nominal cash consideration. A provision for the restructuring of the ownership of Obuasi has been included in Provisions in the statement of financial position and recognised in Special items in the income statement. Refer to note 5.

Randgold is expected to deliver the new development plan to both parties' boards by 31 January 2016. Formation of the joint venture is conditional subject to a number of conditions precedent of which the initial conditions must be satisfied by the Approval Date, 19 February 2016. Subject to the transaction completing, Randgold and AngloGold Ashanti will each fund their pro rata share of the agreed costs incurred in implementing the development plan from the Approval Date and certain other agreed costs from the date of the Agreement. Randgold will also assume responsibility for its proportionate share of certain liabilities arising under guarantees given by AngloGold Ashanti in relation to the liabilities of its Ghanaian subsidiaries.

CC&V

Effective 31 March 2015, the company announced its plan to identify a joint arrangement partner or a purchaser in respect of its interest in CC&V gold mine in Colorado in the United States for full value. The CC&V gold mine is a surface mining operation which provides oxidised ore to a crusher and valley leach facility, one of the largest in the world. It is included in the Americas reporting segment and was acquired by AngloGold Ashanti in 1999. The mine produced 211,000 ounces of gold in 2014.

At 31 March 2015, the company assumed that it was reasonable that a transaction resulting in a sale of 50% of the mine, structured as a joint operation, was possible and thus accounted for 50% of the assets and liabilities as held for sale. On 8 June 2015, the company announced that it had agreed to sell 100% of CC&V to Newmont Mining Corporation (Newmont) for \$820m in cash, plus a net smelter return royalty. As at 30 June 2015, all conditions precedent in the agreement had not yet been fulfilled and as a result the transaction for the sale had not yet been recognised. Subsequently, on 3 August 2015, the transaction closed and proceeds of \$819.4m were received, which factored in estimated closing adjustments. The company realised a loss on disposal of \$10m (note 9).

16. Financial risk management activities**Borrowings**

The \$1.25bn bonds are carried at fair value. The rated bonds are carried at amortised cost and their fair values are their closing market values at the reporting date. The interest rate on the remaining borrowings is reset on a short-term floating rate basis, and accordingly the carrying amount is considered to approximate fair value.

	As at

Carrying amount	2,762	3,730	3,721	3,680
Fair value	2,582	3,725	3,606	3,684
Derivatives				

The fair value of derivatives is estimated based on ruling market prices, volatilities, interest rates and credit risk and includes all derivatives carried in the statement of financial position.

Embedded derivatives are included as derivatives on the statement of financial position.

The group uses the following hierarchy for determining and disclosing the fair value of financial instruments:

Level 1: quote prices (unadjusted) in active markets for identical assets or liabilities;

Level 2: inputs other than quoted prices included in level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

Level 3: inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following tables set out the group's financial assets and liabilities measured at fair value by level within the fair value hierarchy:

Type of instrument

Dollar million	Sep 2015				Jun 2015				Dec 2014				Sep 2014

On 24 August 2015, AngloGold Ashanti announced that its wholly owned subsidiary, AngloGold Ashanti Holdings plc (AGAH), was offering to buy back up to \$810m in aggregate principal amount of its outstanding 8.5% high-yield bonds that mature in 2020, as part of its strategy to reduce debt and lower interest payment. On 25 September 2015, 62.34% of the notes were settled for a

total consideration of \$850m consisting of a \$779m principal payment, a tender premium, being the difference between the par value of the bond and the redemption price of \$58m and interest of US\$13m. Included in the tender premium on the \$1.25bn bond (note 5) was a realised fair value loss of \$11.5m being the difference between the fair value on redemption date and the redemption price.

- (1) Groundwater pollution - AngloGold Ashanti Limited has identified groundwater contamination plumes at certain of its operations, which have occurred primarily as a result of seepage from mine residue stockpiles. Numerous scientific, technical and legal studies have been undertaken to assist in determining the magnitude of the contamination and to find sustainable remediation solutions. The group has instituted processes to reduce future potential seepage and it has been demonstrated that Monitored Natural Attenuation (MNA) by the existing environment will contribute to improvements in some instances. Furthermore, literature reviews, field trials and base line modelling techniques suggest, but have not yet proven, that the use of phyto-technologies can address the soil and groundwater contamination. Subject to the completion of trials and the technology being a proven remediation technique, no reliable estimate can be made for the obligation.

- (2) Deep groundwater pollution - The group has identified a flooding and future pollution risk posed by deep groundwater in certain underground mines in Africa. Various studies have been undertaken by AngloGold Ashanti Limited since 1999. Due to the interconnected nature of mining operations, any proposed solution needs to be a combined one supported by all the mines located in these gold fields. As a result, in South Africa, the Mineral and Petroleum Resources Development Act (MPRDA) requires that the affected mining companies develop a Regional Mine Closure Strategy to be approved by the Department of Mineral Resources. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for the obligation.
- (3) Litigation - On 11 October 2011, AngloGold Ashanti (Ghana) Limited (AGAG) terminated Mining and Building Contractors Limited's (MBC) underground development agreement, construction on bulkheads agreement and diamond drilling agreement at Obuasi mine. The parties reached agreement on the terms of the separation and concluded a separation agreement on 8 November 2012. On 20 February 2014, AGAG was served with a writ issued by MBC claiming a total of \$97m. AGAG filed a motion with the trial court requesting a stay of proceedings pending arbitration. On 5 May 2014, the court refused AGAG's application to submit the matter to arbitration. AGAG subsequently appealed this decision to the Court of Appeal and filed a Stay of Proceedings at the lower court, which was granted on 11 June 2014. The Court of Appeal heard the appeal on 14 October 2015, and stated that judgement will be delivered on 3 December 2015.
- (4) Litigation - AGAG received a summons on 2 April 2013 from Abdul Waliyu and 152 others in which the plaintiffs allege that they were or are residents of the Obuasi municipality or its suburbs and that their health has been adversely affected by emissions and/or other environmental impacts arising in connection with the current and/or historical operations of the Pompora Treatment Plant (PTP) which was decommissioned in 2000. The plaintiffs alleged injuries include respiratory infections, skin diseases and certain cancers. The plaintiffs subsequently did not timely file their application for directions, but AGAG intends to allow some time to pass prior to applying to have the matter struck out for want of prosecution. On 24 February 2014, executive members of the PTP (AGAG) Smoke Effect Association (PASEA), sued AGAG by themselves and on behalf of their members (undisclosed number) on grounds similar to those discussed above, as well as economic hardships as a result of constant failure of their crops. On 26 January 2015, the Court issued an order allowing the plaintiffs to procure an expert from the Environmental Protection Agency (EPA) to undertake environmental and chemical assessments in the areas around the PTP. However, the plaintiffs subsequently informed the Court that the EPA will not be able to conduct such assessments, and the matter was adjourned to 8 December 2015. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for AGAG's obligation in either matter.
- (5) Occupational Diseases in Mines and Works Act (ODMWA) litigation - On 3 March 2011, in Mankayi vs. AngloGold Ashanti, the Constitutional Court of South Africa held that section 35(1) of the Compensation for Occupational Injuries and Diseases Act, 1993 does not cover an employee who qualifies for compensation in respect of compensable diseases under the Occupational Diseases in Mines and Works Act, 1973 (ODMWA). This judgement allows such qualifying employee to pursue a civil claim for damages against the employer. Following the Constitutional Court decision, AngloGold Ashanti has become subject to numerous claims relating to silicosis and other Occupational Lung Diseases (OLD), including several potential class actions and individual claims.

AngloGold Ashanti, Anglo American South Africa, Gold Fields, Harmony Gold and Sibanye Gold announced in November 2014 that they have formed an industry working group to address issues relating to compensation and medical care for OLD in the gold mining industry in South Africa. DRDGold, ARM and Village Main Reef also joined the industry working group, but Village Main Reef has since given notice to withdraw from the working group. The companies have begun to engage all stakeholders on these matters, including government, organised labour, other mining companies and legal representatives of claimants who have filed legal suits against the companies. Essentially, the companies are seeking a comprehensive solution which deals both with the legacy compensation issues and future legal frameworks, and which, whilst being fair to employees, also ensures the future sustainability of companies in the industry. These legal proceedings are being defended, and the status of the proceedings are set forth below.

AngloGold Ashanti, along with other mining companies including Anglo American South Africa, ARM, Gold Fields, Harmony, DRDGold, Village Main Reef, Randgold and Exploration, and Sibanye, were served with a consolidated class action application on 21 August 2013, as well as a request for an amendment to alter the scope of the classes previously proposed by these representatives. The applicants request certification of two industry-wide classes: a Silicosis Class and a Tuberculosis Class, which each cover current and former underground mineworkers who worked on the mines from 12 March 1965 and who have contracted the respective diseases (or the dependents of mineworkers who died of those diseases). The applicants envisage a two-stage process in the class action. The first stage is to resolve common issues and the second stage allows the individuals to opt in to the class to make their claims against the respondent mining companies.

If the Court declines to certify the Silicosis and Tuberculosis Classes, then the applicants request that the Court certify 32 distinct classes – one for each respondent mining company named in the application composed of the current and former mineworkers who have contracted silicosis or tuberculosis (or the dependents of mineworkers who died of those diseases).

Arguments in the class action certification were heard between 12 and 23 October 2015.

In October 2012, AngloGold Ashanti received a further 31 individual summonses and particulars of claim relating to silicosis and/or other OLD. The total amount claimed in the 31 summonses is approximately \$6m (2014: \$7m). On or about 3 March 2014, AngloGold Ashanti received an additional 21 individual summonses and particulars of claim relating to silicosis and/or other OLD. The total amount claimed in the 21 summonses is approximately \$3m (2014: \$4m). On or about 24 March 2014, AngloGold Ashanti received a further 686 individual summonses and particulars of claim relating to silicosis and/or other OLD. The total amount claimed in the 686 summonses is approximately \$84m (2014: \$100m). On or about 1 April 2014, AngloGold Ashanti received a further 518 individual summonses and particulars of claim relating to silicosis and/or other OLD. The total amount claimed in the 518 summonses is approximately \$68m (2014: \$81m).

On 9 October 2014, AngloGold Ashanti and the plaintiffs' attorneys agreed to refer all of the individual claims to arbitration. The court proceedings have been suspended as a result of entering into the arbitration agreement. The arbitration is scheduled to commence on 19 April 2016 when the first 31 claims will be addressed. No hearings have been scheduled on the other individual claims.

It is possible that additional class actions and/or individual claims relating to silicosis and/or other OLD will be filed against AngloGold Ashanti in the future. AngloGold Ashanti will defend all current and subsequently filed claims on their merits. Should AngloGold Ashanti be unsuccessful in defending any such claims, or in otherwise favourably resolving perceived deficiencies in the national occupational disease compensation framework that were identified in the earlier decision by the Constitutional Court, such matters would have an adverse effect on its financial position, which could be material. The company is unable to reasonably estimate its share of the amounts claimed.

- (6) Other tax disputes - In November 2007, the Departamento Nacional de Produção Mineral (DNPM), a Brazilian federal mining authority, issued a tax assessment against AngloGold Ashanti Brazil Mineração Ltda (AABM) in the amount of \$12m (2014: \$18m) relating to the calculation and payment by AABM of the financial contribution on mining exploitation (CFEM) in the period from 1991 to 2006. AngloGold Ashanti Limited's subsidiaries in Brazil are involved in various other disputes with tax authorities. These disputes involve federal tax assessments including income tax, royalties, social contributions and annual property tax. The amount involved is approximately \$10m (2014: \$14m). Management is of the opinion that these taxes are not payable.
- (7) VAT disputes - Mineração Serra Grande S.A. (MSG) received a tax assessment in October 2003 from the State of Minas Gerais related to VAT on gold bullion transfers. The tax administrators rejected the company's appeals against the assessment. The company is now appealing the dismissal of the case. The assessment is approximately \$10m (2014: \$15m).
- (8) Tax dispute - In January 2013, AngloGold Ashanti Colombia S.A. (AGAC) received notice from the Colombian Tax Office (DIAN) that it disagreed with the company's tax treatment of certain items in the 2010 and 2011 income tax returns. On 23 October 2013, AGAC received the official assessments from the DIAN which established that an estimated additional tax of \$20m (2014: \$27m) will be payable if the tax returns are amended. Penalties and interest for the additional taxes are expected to be \$108m (2014: \$135m). The company believes that it has applied the tax legislation correctly. AGAC subsequently challenged the DIAN's ruling by filing lawsuits before the Administrative Tribunal of Cundinamarca (trial court for tax litigation) on 26 March 2015 and on 6 April 2015.
- (9) Tax dispute - On 12 July 2013, Cerro Vanguardia S.A. (CVSA) received a notification from the Argentina Tax Authority (AFIP) requesting corrections to the 2007, 2008 and 2009 income tax returns of about \$12m (2014: \$14m) relating to the non-deduction of tax losses previously claimed on hedge contracts. The AFIP is of the view that the financial derivatives

could not be considered as hedge contracts, as hedge contract losses could only be offset against gains derived from the same kind of hedging contracts. Penalties and interest on the disputed amounts are estimated at a further \$32m (2014: \$39m). CVSA and AFIP have corresponded on this issue over the past several years and while management is of the opinion that the taxes are not payable, the government continues to assert its position regarding the use of the financial derivatives. CVSA filed an appeal with the Tax Court on 19 June 2015.

- (10) Sales tax on gold deliveries – In 2006, MSG received two tax assessments from the State of Goiás related to the payments of state sales taxes at the rate of 12% on gold deliveries for export from one Brazilian state to another during the period from February 2004 to the end of May 2006. The first and second assessments were approximately \$62m and \$39m as at 31 December 2013, respectively. Various legal proceedings have taken place over the years with respect to this matter, as previously disclosed. On 5 May 2014, the State of Goiás published a law which enables companies to settle outstanding tax assessments of this nature. Under this law, MSG settled the two assessments in May 2014 by paying \$14m in cash and by utilising \$29m of existing VAT credits. The utilisation of the VAT credits was confirmed by the State of Goiás during the third quarter of 2015. The cash settlement was further set off by an indemnity from Kinross of \$6m.

- (11) Mill contractor claims - On 3 August 2015, AngloGold Ashanti and Newmont concluded the sale of the CC&V mine in Colorado to Newmont. As part of the negotiated transaction, the parties agreed to a cost/recovery sharing arrangement relative to cost claims asserted for or against CC&V based on work performed by contractors during the design and manufacture of the High Grade Mill. Under the agreement, AGA has the right to manage any negotiation, settlement, or legal proceedings associated with each cost claim. The maximum total value of the cost claims asserted against CC&V, by three contractors, is \$29m. Similarly, CC&V will have cost claims against the mill design contractor. On 25 September 2015, AGA filed on behalf of CC&V a demand for arbitration against all contractors. All parties have subsequently entered into a Stay Agreement whereby most legal proceedings are tolled for a period of sixty (60) days. Negotiations with all parties continue.

- (12) Indemnity - As part of the acquisition by AngloGold Ashanti of the remaining 50% interest in MSG during June 2012, Kinross Gold Corporation (Kinross) has provided an indemnity to a maximum amount of BRL255m against the specific exposures discussed in items 7 and 10 above. In light of the settlement described in item 10 above, at 30 September 2015, the company has estimated that the maximum contingent asset is \$6m (2014: \$9m).

- (13) Royalty - As a result of the sale of the interest in the Tau Lekoa Gold Mine during 2010, the group is entitled to receive a royalty on the production of a total of 1.5Moz by the Tau Lekoa Gold Mine and in the event that the average monthly rand price of gold exceeds R180,000/kg (subject to an inflation adjustment). Where the average monthly rand price of gold does not exceed R180,000/kg (subject to an inflation adjustment), the ounces produced in that quarter do not count towards the total 1.5Moz upon which the royalty is payable. The royalty is determined at 3% of the net revenue (being gross revenue less state royalties) generated by the Tau Lekoa assets. Royalties on 587,889oz (2014: 507,471oz) produced have been received to date.

- (14) Royalty - As a result of the sale of Navachab during the second quarter of 2014, AngloGold Ashanti will receive a net smelter return paid quarterly for seven years from 1 July 2016, determined at 2% of ounces sold during the relevant quarter subject to a minimum average gold price of \$1,350 and capped at a maximum of

18,750 ounces sold per quarter.

- (15) Royalty - As a result of the sale of CC&V as announced on 8 June 2015, AngloGold Ashanti will receive a net smelter return paid quarterly in arrears at the rate of 2.5% of the net revenue, after refining and smelting costs, based upon the product of the average spot gold price and gold ounces produced in the relevant quarter from (i) underground mining operations at CC&V and (ii) open pit mining operations which were not part of AGA's most recent open pit mining business plan for CC&V where such open pit mining operations extract ore having a grade of at least 0.1166 troy ounces per ton.

18. Concentration of tax risk

There is a concentration of tax risk in respect of recoverable value added tax, fuel duties and appeal deposits from the Tanzanian government.

The recoverable value added tax, fuel duties and appeal deposits are summarised as follows:

	Sep 2015 US Dollar million
Recoverable value added tax	6
Appeal deposits	1

19. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

20. Announcements

AngloGold Ashanti completes sale of CC&V On 3 August 2015, AngloGold Ashanti announced the closing of its sale of the CC&V mine in the United States to Newmont for US\$820 million in cash, subject to customary closing adjustments, plus a net smelter return royalty. The sale was originally announced on 8 June 2015. At the closing, AngloGold Ashanti received US\$819.4 million in cash, which factors in estimated closing adjustments.

AngloGold Ashanti Holdings plc offers to repurchase bonds to cut debt, interest On 24 August 2015, AngloGold Ashanti announced that its wholly owned subsidiary, AngloGold Ashanti Holdings plc (AGAH), was offering to buy back up to \$810,000,000 in aggregate principal amount of its outstanding 8.5% high-yield bonds that mature in 2020, as part of its strategy to reduce debt and lower interest payment.

Partnership to revive Obuasi Gold Mine On 16 September 2015, Randgold Resources Limited (Randgold) and AngloGold Ashanti concluded a conditional investment agreement (the Agreement) aimed at the formation of a joint venture to redevelop and operate AngloGold Ashanti's Obuasi gold mine in Ghana. Under the terms of the Agreement, Randgold will lead and fund a development plan designed to rebuild Obuasi as a viable long-life mining business with an attractive cost structure and returns.

AngloGold Ashanti announces final results of offer to repurchase bonds On 25 September 2015, AngloGold Ashanti announced the final results of the offer to buy back up to \$810,000,000 in aggregate principal amount of the outstanding 8.5% high-yield bonds that mature in 2020, held by AGAH. An aggregate principal amount of the bonds equal to \$779,271,000 was validly tendered and accepted for purchase by AGAH.

AngloGold Ashanti reaches three-year wage deal with majority of SA employees On 2 October 2015, AngloGold Ashanti reached a three-year wage deal with the majority of its employees in South Africa, providing certainty to operations that accounted for little over a quarter of its total production in the past year. NUM, Solidarity and UASA accepted AngloGold Ashanti's offer. These unions comprise the majority of the Company's workforce in South Africa at around 59%, with non-unionised employees increasing that figure to 65%. Under South Africa's Labour Relations Act, the increase agreed will extend to all employees, regardless of union affiliation.

21. Supplemental condensed consolidating financial information

AngloGold Ashanti Holdings plc (IOMco), a 100 percent wholly-owned subsidiary of AngloGold Ashanti, has issued debt securities which are fully and unconditionally guaranteed by AngloGold Ashanti Limited (being the Guarantor). Refer to Note 17 Contingencies . IOMco is an Isle of Man registered company that holds certain of AngloGold Ashanti's operations and assets located outside South Africa (excluding certain operations and assets in the United States of America which was sold effective 3 August 2015 and Namibia which was sold effective 30 June 2014). The following is condensed consolidating financial information for the Company as of 30 September 2015, 30 June 2015, 31 December 2014 and 30 September 2014 and for the three months ended 30 September 2015, 30 June 2015 and 30 September 2014 and for the nine months ended 30 September 2015 and 30 September 2014, with a separate column for each of AngloGold Ashanti Limited as Guarantor, IOMco as Issuer and the other subsidiaries of the Company combined (the Non-Guarantor Subsidiaries). For the purposes of the condensed consolidating financial information, the Company carries its investments under the equity method. The following supplemental condensed consolidating financial information should be read in conjunction with the Company's condensed consolidated financial statements.

Non-GAAP disclosure

From time to time AngloGold Ashanti Limited may publicly disclose certain Non-GAAP financial measures in the course of its financial presentations, earnings releases, earnings conference calls and otherwise.

The financial items price received, price received per ounce, total cash costs, total cash costs per ounce, production costs, total production costs per ounce, all-in sustaining costs, all-in sustaining costs per ounce, all-in costs per ounce, Net debt and adjusted EBITDA have been determined using industry guidelines and practices and are not measures under IFRS. An investor should not consider these items in isolation or as alternatives to production costs, profit/(loss) applicable to equity shareholders, profit/(loss) before taxation, cash flows from operating activities or any other measure of financial performance presented in accordance with IFRS.

The Gold Institute provided definitions for the calculation of total cash costs and total production costs and during June 2013 the World Gold Council published a Guidance Note on all-in sustaining costs. The calculation of total cash costs, total cash costs per ounce, total production costs, total production costs per ounce, all-in sustaining costs and all-in sustaining costs per ounce may vary significantly among gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies. However, we believe that total cash costs, total production costs, all-in sustaining costs and all-in costs in total by mine and per ounce by mine are useful indicators to investors and management of a mine's performance because they provide:

an indication of a mine's profitability, efficiency and cash flows;

the trend in costs as the mine matures over time on a consistent basis; and

an internal benchmark of performance to allow for a comparison against other mines, both within the AngloGold Ashanti group.

Price received gives an indication of revenue earned per unit of gold sold and includes gold income and realised non-hedge derivatives in its calculation and serves as a benchmark of performance against the spot price of gold.

Net debt and Adjusted EBITDA (as defined in the Revolving Credit Agreements) are inputs used for the calculation of compliance with the financial maintenance covenants as set out in the group's revolving credit facility agreements.

The group uses certain Non-GAAP performance measures and ratios in managing the business and may provide users of this financial information with additional meaningful comparisons between current results and results in prior operating periods. Non-GAAP financial measures should be viewed in addition to, and not as an alternative to, the reported operating results or any other measure of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures that other companies use.

(1) Adjusting for non-controlling interest of items included in calculation, to disclose the attributable portions only. Other consists of heap leach inventory.

(2) Attributable costs and related expenses of associates and equity accounted joint ventures are included in the calculation of total cash costs per ounce and total production costs per ounce.

(3) Attributable portion.

(4) In addition to the operational performances of the mines, all-in sustaining cost per ounce, all-in cost per ounce, total cash costs per ounce and total production costs per ounce are affected by fluctuations in the currency exchange rate. AngloGold Ashanti reports all-in sustaining cost per ounce and all-in cost per ounce calculated to the nearest US dollar amount and gold sold in ounces. AngloGold Ashanti reports total cash costs per ounce and total production costs per ounce calculated to the nearest US dollar amount and gold produced in ounces.

(5) Corporate includes non-gold producing subsidiaries.
