SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE
ACT OF 1934

For the fiscal year ended December 31, 2013

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file number: 001-35348

Intermolecular, Inc.

(Exact Name of Registrant as Specified in its Charter)

Delaware

(State or Other Jurisdiction of Incorporation or
Organization)

20-1616267

(I.R.S. Employer Identification No.)

3011 N. First Street

San Jose, California

95134

(Zip Code)

(Address of Principal Executive Offices)

(408) 582-5700

(Registrant's Telephone Number, Including Area Code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class

Common Stock, \$0.001 par value

Name of Each Exchange on Which Registered

The NASDAQ Global Select Market

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities
Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the
Act. Yes No

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of
the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was
required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Table of Contents

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer <input type="checkbox"/>	Accelerated filer <input checked="" type="checkbox"/>	Non-accelerated filer <input type="checkbox"/> (Do not check if a smaller reporting company)	Smaller reporting company <input type="checkbox"/>
--	---	--	---

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

As of June 28, 2013 (the last business day of the registrant's most recently completed second quarter), the aggregate market value of the registrant's common stock, par value \$0.001, held by non-affiliates of the registrant was \$164.8 million based upon the closing price reported for such date by the NASDAQ. Shares of the registrant's common stock held by executive officers and directors of the registrant and by each person who owned 10% or more of the outstanding common stock have been excluded because such persons may be deemed to be affiliates of the registrant. This determination of affiliate status is not necessarily a conclusive determination for other purposes.

As of March 3, 2014, the number of outstanding shares of the registrant's common stock, par value \$0.001 per share, was 46,803,328.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's Definitive Proxy Statement to be filed with the Commission pursuant to Regulation 14A in connection with the registrant's 2014 Annual Meeting of Stockholders, to be filed subsequent to the date hereof, are incorporated by reference into Part III of this Report. Such Definitive Proxy Statement will be filed with the Securities and Exchange Commission not later than 120 days after the conclusion of the registrant's fiscal year ended December 31, 2013. Except with respect to information specifically incorporated by reference in this Form 10-K, the Proxy Statement is not deemed to be filed as part of this Form 10-K.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

The following discussion and analysis should be read in conjunction with our audited consolidated financial statements and the related notes that appear elsewhere in this Annual Report on Form 10-K. This Annual Report on Form 10-K contains "forward-looking statements" within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended, or the Exchange Act, particularly in Part I, Item 1: "Business," Part I, Item 1A: "Risk Factors" and Part 2, Item 7: "Management's Discussion and Analysis of Financial Condition and Results of Operations." These statements are often identified by the use of words such as "may," "will," "expect," "believe," "anticipate," "intend," "could," "should," "estimate," or "continue," and similar expressions or variations. All statements other than statements of historical fact could be deemed forward-looking, including, but not limited to: any projections of financial information; any statements about historical results that may suggest trends for our business; any statements of the plans, strategies, and objectives of management for future operations; any statements of expectation or belief regarding future events, technology developments, our customers and collaborative development programs (CDPs), expenses, liquidity, cash flow, growth rates or enforceability of our intellectual property rights and related litigation expenses; and any statements of assumptions underlying any of the foregoing. Such forward-looking statements are subject to risks, uncertainties and other factors that could cause actual results and the timing of certain events to differ materially from future results expressed or implied by such forward-looking statements. Accordingly, we caution you not to place undue reliance on these statements. For Intermolecular, particular uncertainties that could affect future results include: our limited operating history; fluctuations in quarterly results; our ability to achieve profitability, which is dependent on, among other things, (i) customer acceptance of our HPC platform as an alternative to conventional research and development; (ii) our ability to collaborate with customers to develop technological innovations sought by our customers; (iii) whether our customers can successfully commercialize products that incorporate technology and IP developed during our CDPs with them, which may be challenging due to fluctuations in the number, price and timing of products sold by our customers and the shortening life cycles of those products, in each case impacting our licensing and royalty revenue; and (iv) our ability to successfully negotiate agreements for payment of license and royalty revenue with potential customers, and to monitor and enforce such agreements with existing customers; our dependence on a limited number of customers; the length of our sales cycles and the possibility that we will devote significant resources to a potential customer that may not result in material revenue, if any; rapid technological changes and market cyclicality in the semiconductor industry; the early stage of development of the clean energy sector and the challenges each industry within the sector faces; our ability to scale our development services to accommodate more CDPs; our ability to make the substantial research and development investments required to stay competitive in our business and to be able to address a wider range of markets and customers; our ability to adequately protect against potential conflicts of interest and breaches of confidentiality among our customers; our ability to work cooperatively with our customers' materials suppliers and equipment manufacturers; the ability of our suppliers to deliver sufficient quantities of materials in a timely manner; our ability to manage our future growth, including an increasing number of employees, customers and CDPs; our ability to scale our development efforts and secure new CDPs with new or existing customers and the timing of those CDPs; the degree to which existing CDPs are completed or expanded; our ability to realize any expected growth, synergies or benefits from acquisitions, strategic investments or joint ventures we may enter into; our potential need for additional capital to finance our business for purposes that could include potential acquisitions as well as repayment of debt; the potential loss of key personnel; our general ability to compete successfully in challenging markets; risk associated with transactions with related parties; potential warranty claims, product recalls and product liability for our HPC tools and for our customers' products that incorporate technology developed through our CDPs; the costs and risks associated with environmental, health and safety laws and regulations; global or regional economic, political and social circumstances that could adversely affect our business; business interruptions such as earthquakes and other natural disasters; our ability to use our tax credit carryforwards; our ability to effectively protect our intellectual property, including patents, trade secrets and other proprietary information; any potential involvement in intellectual property litigation; and any potential payments to our customers resulting from our intellectual property indemnification policies and obligations. For a discussion of some of the factors that could cause actual results to differ materially from our forward-looking statements, see the discussion on risk factors that appear in Part I, Item 1A: "Risk Factors"

of this Form 10-K and other risks and uncertainties detailed in this and our other reports and filings with the Securities and Exchange Commission, or SEC. The forward-looking statements in this Form 10-K represent our views as of the date of this Form 10-K. We anticipate that subsequent events and developments will cause our views to change. However, while we may elect to update these forward-looking statements at some point in the future, we have no current intention of doing so except to the extent required by applicable law. You should, therefore, not rely on these forward-looking statements as representing our views as of any date subsequent to the date of this Form 10-K.

Table of Contents

PART I

ITEM 1. BUSINESS

Overview

Intermolecular has pioneered a proprietary approach to accelerate research and development, innovation and time-to-market for the semiconductor and clean energy industries. Through paid collaborative development programs (CDPs) with our customers, we develop proprietary technology and intellectual property (IP) for our customers focused on advanced materials, processes, integration and device architectures. This technology enables our customers to bring optimized, high-volume manufacturing-ready integrated devices to market faster and with less risk than conventional approaches to research and development (R&D). We provide our customers with proprietary technology through various fee arrangements and grant them rights to associated IP, primarily through royalty-bearing licenses. Through paid CDPs and our own development, we have established a portfolio of greater than 1,000 patents and patent applications. Our proprietary approach is broadly applicable to high-volume integrated device markets, which include the markets for semiconductors, flat glass coatings and glass-based devices, solar cells, light-emitting diodes (LEDs), flat-panel displays, advanced batteries and other energy efficiency applications.

Our customers' integrated devices are typically manufactured using thin-film deposition of advanced materials through customized processes that create specific device architecture. It is increasingly necessary to evaluate a wider range of elements in the periodic table, as well as a broader range of processes, to develop advanced device structures capable of addressing particular application requirements. Our proprietary approach to R&D dramatically accelerates the experimentation required to evaluate different combinations of materials and processes.

Our approach consists of our proprietary high productivity combinatorial (HPC™) platform, coupled with our multi-disciplinary team of scientists and engineers. Our HPC platform consists of our Tempus™ processing tools, our unique, automated characterization methods, and our Informatics analysis software. Our platform is purpose-built for R&D using combinatorial process systems. Combinatorial processing is a methodology for experimentation, discovery and development that employs parallel and other high-throughput experimentation, which allows R&D experimentation to be performed at speeds up to 100 times faster than conventional R&D platforms, which are optimized for manufacturing rather than for R&D.

Our HPC platform allows us to perform up to 192 experiments on a single substrate as compared to traditional methods, which typically allow only a single experiment at a time. Our automated characterization systems and proprietary informatics and analytics software can handle the same high-throughput of our platform. Our multi-disciplinary team of approximately 200 scientists and engineers as of December 31, 2013 (of whom approximately 40% have Ph.D.s), designs customized workflows for our customers' specific applications using the HPC platform, and applies the workflows in collaboration with our customers. The combination of the HPC platform and our multi-disciplinary team generates significant competitive advantages for our customers. By accelerating innovation and enabling our customers to commercialize higher-performance and lower-cost integrated devices faster than through conventional methods of R&D, we provide them an opportunity to gain market share and generate higher margins, including through a first-mover advantage. See the section entitled "Our Solution" for an illustration of our approach.

Customers pay us development services fees during the CDPs, which typically last for one to three years. We typically initiate new customer engagements with "micro-CDPs," which are shorter and more narrow in scope than full CDPs; these are intended to give new customers an opportunity to become more familiar with our approach before making a long-term commitment.

Our customers receive rights to the technology and IP developed during the CDPs in exchange for license fees. When our customers commercialize products using this technology and IP, they pay us primarily through royalties. In certain cases, we sell HPC processing tools to our customers who pay a recurring license fee to operate those tools with our combinatorial processing capabilities.

We currently target large, high-volume semiconductor and high-growth emerging clean energy markets, including DRAM, non-volatile memory (including flash memory and embedded memory), complex logic, flat glass coatings and glass-based devices, solar cells, LEDs and other energy efficiency applications. Within these broad markets, we target customers that have track records of technological innovation, deploy significant R&D, manufacturing and sales

and marketing resources and are pursuing technical advancements that are critical to their success and strategy. Our customers include:

- ATMI, Inc. (ATMI)
- Elpida Memory, Inc. (Elpida; a wholly owned subsidiary of Micron Technology, Inc.)

Table of Contents

- First Solar, Inc. (First Solar)
- GLOBALFOUNDRIES Singapore Pte. Ltd (GLOBALFOUNDRIES)
- Guardian Industries Corp. (Guardian)
- Micron Technology, Inc. (Micron)
- SanDisk Corporation (SanDisk)
- Taiwan Semiconductor Manufacturing Company (TSMC)
- Toshiba Corporation (Toshiba)
- Ulyanovsk Center for Technology Transfer of the Russian Federation (UCTT)

Each of ATMI, First Solar, GLOBALFOUNDRIES, and Micron accounted for more than 10% of our revenue for the year ended December 31, 2013, and each of ATMI, Elpida, and GLOBALFOUNDRIES accounted for more than 10% of our revenue for the years ended December 31, 2012 and 2011. ATMI and Elpida have commenced shipping products incorporating technology developed through our CDPs and pay us licensing and royalty fees. To date, we have received the substantial majority of our revenue from customers in DRAM, flash memory, complex logic, materials and energy-efficient applications in flat glass. However, 2012 marked our first year with material revenue from our clean energy industry customers.

In February 2014, Toshiba and SanDisk notified us that they do not intend to enter into a renewal or extension with us of the development activities under our CDP agreement with them. As a result, from and after March 15, 2014, we will no longer provide services to Toshiba or SanDisk under our CDP agreement with them.

Industry Background

High-volume integrated devices serve large and growing markets, including the markets for semiconductors, flat glass, solar cells, LEDs, flat-panel displays, advanced batteries and other energy efficiency applications. Success in these markets requires rapid and cost-effective product innovation, fast time-to-market, competitive pricing, production scalability and the ability to achieve specific product performance requirements. These devices are typically manufactured using thin-film deposition of advanced materials through customized processes that create a specific device architecture. These device structures must then be scaled and integrated into cost-effective manufacturing processes to serve high-volume integrated device markets. Conventional R&D approaches are increasingly challenged by the ever increasing device complexity and the market need to accelerate innovation and time-to-market for the semiconductor and clean energy industries.

Semiconductor Industry

Since the inception of the semiconductor industry more than 50 years ago, innovation has been continually driven by consumer and enterprise demands for smaller, higher-performance, more power-efficient and less expensive electronic products. Recently, this innovation has been driven by broad end-market demand for smartphones, tablet computers, cloud computing, high-definition media, PCs, and advanced aerospace and industrial applications. The semiconductor industry is characterized by intense competition, with many semiconductor companies seeking to gain market advantage over competitors by expanding their broad product portfolios, using their deep design and/or process capabilities and leveraging their IP libraries. Increasingly, these companies are relying on combinations of advanced materials, processes, integration and device architectures to differentiate their products.

Historically, the pace of semiconductor innovation has been enabled by device scaling, in which, according to Moore's Law, the number of transistors in a design generally doubles every two years. This increasing density has reduced costs and improved capabilities over time, thereby driving market demand and growth. However, semiconductors are approaching the limitations of device scaling with the current set of materials and manufacturing processes.

Additionally, rapidly growing market demand for consumer mobile devices and applications has led to the need for development of semiconductor devices with increased system-level complexity and lower power consumption. Consequently, semiconductor manufacturers are turning to advanced materials, processes, integration and new device architectures to generate continued device scaling and deliver improved product performance and cost competitiveness. The reliance on advanced materials, processes, integration and new device architectures has in turn made advancements in semiconductor technology increasingly complex and expensive. Each new process node requires experimentation with more elements in the periodic table and more material combinations to deliver the desired physical and electrical characteristics for device performance and manufacturability. For example, the broad

adoption of copper interconnects enabled the industry to continue device scaling in the microprocessor field. However, this advancement required changes not only in materials, but also in processes, integration and device architectures, to achieve high-volume, cost-effective manufacturing. Accordingly, the transition was challenging and slow.

Table of Contents

Semiconductor manufacturing companies have used device scaling to shrink transistors and develop new process technology nodes to address customer requirements for lower cost and higher performance integrated circuits (ICs). However, advanced R&D and new fabrication facility costs have increased significantly over time, especially as the use of advanced materials and processes has become increasingly important to the development and introduction of the latest generation process technology nodes. The greater expertise and higher costs required to explore advanced materials, processes, integration and new device architectures have led to increased specialization among materials, capital equipment, semiconductor manufacturing and IC design companies. However, this specialization has left gaps in the industry knowledge base with respect to the complex interactions among materials science, process technology, device integration and the ability to scale to high-volume, high-performance IC production.

To succeed in the market and deliver an appropriate financial return, semiconductor companies are under intense pressure to rapidly develop optimized ICs and efficiently scale them to cost-effective production. Using advanced semiconductor materials, processes, integration and new architectures requires intensive, time-consuming experimentation because advanced materials are not well-understood, and accurate, robust models do not exist. As a result, semiconductor companies must increasingly rely on time-consuming and resource-intensive empirical R&D to develop innovative solutions and enable manufacturability at lower costs.

For example, we have observed that the flash memory industry is in the process of developing new architectures to address a growing problem of latency between a server's central processing unit and the associated enterprise storage system. Flash memory is well-suited to replace hard disk drives in enterprise storage, but the cost per gigabit of flash storage limits the spectrum of applicable use cases to those that are less cost-sensitive and demand ultra-high bandwidth. The performance and efficiency of a data center is largely determined by the quantity and rate at which data can be supplied from storage to the server for processing. Legacy data center architectures using hard disk drives cannot effectively supply the increasingly large quantities of process-critical data quickly enough to fully utilize the processing capacity of today's servers, leading to low levels of server utilization. Industry-leading flash memory manufacturers are developing new technologies using advanced materials, processes, integration and new device architectures for flash memory to decrease the cost per gigabit beyond traditional device scaling. The ability to bring down the cost of flash storage will accelerate the adoption of flash storage into the large enterprise storage market.

Clean Energy Industry

The emerging clean energy markets also depend on improvements in advanced materials, processes, integration and new device architectures. Clean energy markets, which we define to include the markets for glass coatings and glass-based devices, flat panel displays (FPDs), solar cells, LEDs, advanced batteries and other energy efficiency technologies, are in the early stages of technological evolution. Companies in clean energy markets are in the early stages of understanding materials, processes, integration, device architectures and manufacturing methodologies. As a result, those companies that successfully develop relevant, scalable proprietary materials and device technologies will likely have a competitive advantage over their peers in both time-to-market and price.

Decreasing prices, government policies and social awareness are driving growth in the clean energy markets and certain sectors have entered high-volume production. Reduced prices and improved performance relative to traditional alternatives generally catalyzed widespread adoption of new technologies. For example, LEDs for the general illumination market are currently more expensive to purchase than incandescent and fluorescent lighting. To increase penetration of the general lighting market, price reductions and improvements in performance, such as brightness, color and form factor will be critical. New advanced materials, improved process technologies and new device architectures will enable larger wafer sizes, less costly substrate materials, higher-volume production and improved yields for lower-cost and higher-performing LEDs.

Improved performance relative to traditional alternatives is also driving the need for new materials, process integration, device architectures and manufacturing methodologies in the FPD market. For example, growth in mobile devices and higher-resolution displays are driving the need for higher refresh rates and lower power consumption. This is introducing new material changes to the Thin Film Transistor (TFT) backplane which has historically been silicon-based. As a result, the display industry is exploring metal oxides as a future replacement TFT backplane that requires fundamental understanding of the materials and device integration in manufacturing.

Because of the early stages of technology development in the clean energy markets, there are significant opportunities for cost savings and competitive advantage. Market participants who resolve the price-performance challenges ahead of their competitors through advanced materials, processes, integration and new device architectures may greatly accelerate market adoption of their technologies and establish themselves as market leaders. These opportunities amplify the importance of empirical R&D to develop low-cost, high-performance solutions in these early-stage markets.

Table of Contents

Current Challenges with Innovation in High-Volume Integrated Device Markets

Advanced materials and device integration are driving forces behind technology advancement in high-volume integrated device markets. In addition, innovation in these markets and control of the resulting IP are critical to enable competitive differentiation. However, the existing approach used to explore new materials, processes, integration and device architectures (referred to as learning cycles) is complex and time-consuming.

Traditionally, device manufacturers have conducted conventional R&D using expensive high-volume manufacturing tools that are not specifically built for that purpose. Production tools typically can only run one process at a time, which leads to limited cycles of learning. Furthermore, using tools deployed in a production environment for R&D requires reserving tool time on high-volume manufacturing lines to evaluate each experiment, resulting in substantial opportunity costs for existing product manufacturing. High-volume manufacturing environments are also not conducive to R&D because these environments require stability to minimize risk and to reduce contamination that the research-based introduction of new materials, tools or processes may cause. Additionally, high-volume manufacturing is conducted by operators focused on repetitive, mistake-free processing, not on many cycles of data generation and analysis. In addition to some of the challenges above, certain clean energy device manufacturers use laboratory-scale tools for R&D, which do not address the scale-up requirements critical to high-volume manufacturing. These factors combine to increase development risks due to long learning cycles, limited data sets, narrow exploration capabilities and slow time-to-market.

Successful R&D programs require flexibility around experimentation and the introduction of new materials, chemicals, processes, integration flows and tools to derive the most efficient high-volume integrated device solutions. Furthermore, we believe they are best administered by scientists and engineers with experience across various disciplines of equipment, materials, integration, device architectures and processes to conduct successful experiments and derive optimized solutions.

The following existing approaches have been used to complement internal R&D, but each has specific limitations:

Equipment suppliers. Equipment suppliers provide high-volume manufacturing solutions that are not purpose-built for researching the interaction of advanced materials, processes, integration and device architectures. Additionally, they provide solutions that are not always uniquely tailored to specific customer applications.

Industry consortia. Industry consortia provide solutions that offer no competitive differentiation because the customer must share the IP with all consortium participants, including competitors.

Alliance partnerships. Alliance partnerships impose limitations on the overall outcome, as they are typically structured to find generic solutions rather than the solutions for a particular application. Additionally, these generic solutions are offered to a small set of competitors and are not customer-specific or application-specific.

University research. University research provides theoretical solutions requiring additional work and time to commercialize, since this work typically does not address manufacturing or commercialization challenges.

Third-party IP licensing. Third-party IP licensing is primarily used for defensive purposes or market access. Those who cross-license IP do not necessarily receive a solution that is specific to the customer, manufacturing process or application, and the received solution is not differentiated from what their competitors receive through the same license.

Substantially improved methodologies are required to generate the learning cycles necessary to accelerate innovation, improve product development and ensure manufacturing scalability of high-volume integrated devices. Further, companies require new ways to develop proprietary technology and obtain IP rights to support competitive advantage for their new products.

Our Solution

We have pioneered a proprietary approach to accelerate research and development, innovation and time-to-market for the semiconductor and clean energy industries. Using our approach, we develop technology and IP rights focused on advanced materials, processes, integration and device architectures in collaboration with our customers. This technology enables our customers to bring optimized, high-volume manufacturing-ready integrated devices and other products to market faster and with less risk than conventional approaches to R&D. Our proprietary HPC platform consists of our Tempus HPC processing

8

Table of Contents

tools, automated characterization, and informatics and analysis software. Our HPC platform increases R&D productivity because it is purpose-built for R&D and utilizes advanced combinatorial processing systems, which allow for experiments to be performed at speeds up to 100 times faster than traditional methods. We provide our customers with proprietary technology through various fee arrangements and grant them rights to IP developed during the collaboration, primarily through royalty-bearing licenses. Our multi-disciplinary team of approximately 200 scientists and engineers as of December 31, 2013, of whom approximately 40% have Ph.D.s, designs customized workflows for our customers' specific applications using our HPC platform, and applies the workflows in collaboration with our customers to develop proprietary technology for them.

The key elements of our HPC platform include the following:

Tempus HPC processing. We use our Tempus HPC processing tools to rapidly process different experiments consisting of various combinations of materials, processing parameters, sequencing and device structures. We are able to perform up to 192 experiments on a single substrate, as compared to conventional methods, which typically allow only a single experiment at a time.

Automated characterization. We use automated characterization systems to characterize the substrates processed by our Tempus HPC processing tools, thereby generating experimental data at a speed that matches our processing throughput.

Informatics and analysis software. We use our informatics and analysis software to automate experiment generation, characterization, data analysis and reporting (in each case matching our processing throughput), and to create an aggregated and searchable database of information that includes the experimental results we generate.

The following graphic illustrates how these elements combine to form our HPC platform:

Benefits to Our Customers

Our business model aligns our interests with those of our customers as we collaborate to develop optimized, differentiated, manufacturing-ready IP for high-volume integrated devices. We provide our customers with proprietary

Table of Contents

technology through various fee arrangements and grant them rights to IP developed during our CDPs, primarily through royalty-bearing licenses. Our differentiated platform solution and approach to collaborative engagements are designed to deliver the following significant benefits to our customers:

Accelerated time-to-market with better, lower-cost products. Faster processing of experiments, throughput-matched characterization and real-time data management and analysis allow additional learning cycles and broader exploration of materials and process solution combinations. In highly competitive markets, the resulting speed to market with improved, lower-cost products enables our customers to gain market share and improve profitability.

Development of application and manufacturing-ready IP tailored to our customers' specifications. When we engage in a CDP with our customers, we use our HPC platform and customized workflows to develop IP-protected, proprietary technology that is tailored to our customers' applications and ready for high-volume manufacturing. We provide our customers rights to the IP for their applications primarily through royalty-bearing licenses.

Increased R&D productivity and reduced technology risk. Using our combinatorial processes, we narrow the potential combinations of advanced materials, processes and device architecture solutions through a series of increasingly rigorous screening stages to guide the selection of solutions that meet device performance requirements and that are cost-efficient and ready for high-volume manufacturing. The combinatorial process of screening and evaluating these solutions and their manufacturability mitigates our customers' technology risk earlier in the development cycle.

Strengths

We have pioneered, developed and patented a proprietary platform and methodology for accelerating R&D in the semiconductor and clean energy markets. Our strengths include:

Proprietary and patented HPC platform. Our HPC platform employs proprietary and patented combinatorial methods to parallel and rapid-serial process up to 192 experiments on a single substrate as compared to conventional methods, which typically allow only a single experiment at a time. As of December 31, 2013, we owned or had exclusive rights within our field of use to 1,230 U.S. patents and patent applications (some of which also have foreign counterparts), which provide us with a competitive advantage in the use of combinatorial methods and systems in our target markets.

Flexible technology platform configurable for and extendable to multiple markets. Our HPC platform can be configured for many applications and extended to address the broad set of integrated device markets. Because of the similarities and synergies in materials deposition, manufacturing processes and device integration complexities across markets, our platform allows us to create customized workflows and support innovation across multiple markets.

Seasoned engineering team with multi-disciplinary expertise. We have assembled a multi-disciplinary team of approximately 200 scientists and engineers, of whom approximately 40% have Ph.D.s, with expertise across various disciplines, fields and technologies, including materials science, chemistry, physics, engineering, process equipment development, software and informatics, process development and integration, device technologies and device integration.

Deep expertise in advanced materials, processes, integration and device architectures. We have accelerated innovation for a broad set of customers across multiple markets. During a CDP, our team and our platform enable more rapid comprehension and learning about advanced materials, processes, integration and device architectures, some of which is applicable across markets. We aggressively protect IP that we generate with customers. IP such as materials characteristics, optimized processes and interoperability of systems and architectures can be applicable beyond the field of use of the CDP and can benefit new customers without impacting competitive differentiation of current customers.

Collaborative customer engagements leading to IP generation and strategic alignment. Customers pay us development service and HPC platform subscription fees during multi-year CDPs. We grant them rights to proprietary

technology and IP developed during our collaborations. As customers successfully commercialize products incorporating technology developed through the CDPs, we receive licensing fees and/or royalties. In certain cases, we sell HPC processing tools to our customers, and customers pay us a license fee for use of our

Table of Contents

HPC platform and associated software. This alignment of interests facilitates collaboration and open communication that improves development efficiencies and is more likely to result in innovative, differentiated products.

Attractive business model with contracted CDP revenue and recurring high-margin royalties. Our multi-year CDPs generate predictable CDP and services revenue from our customers. Our CDPs also establish the terms upon which we will receive licensing and royalty revenue from the sale of our customers' products that incorporate technology developed through our CDPs. These licensing and royalty arrangements create a business model with attractive margins and a high degree of near-term visibility. Licensing and royalty revenue over the past three years has accounted for 22%, 24%, and 27% of revenue in the years ended December 31, 2013, 2012 and 2011, respectively, and we expect the percentage will increase going forward as more of our customers license our developed technology and commercialize and ramp production of products incorporating technology developed through our CDPs.

Our Strategy

Our mission is to drive our customers' success by transforming R&D and accelerating innovation in markets that derive competitive advantage from the interaction of materials science, processes, integration and device architecture. To accomplish this, we:

Target large, high-volume semiconductor markets. We target customers in large, high-volume semiconductor markets, including DRAM, flash memory and complex logic. Success in these markets requires semiconductor companies to consistently remain at the leading edge of cost and performance, which demands innovation around materials science, processes, integration and device architectures.

Target large, high-growth, emerging clean energy markets. We target customers in large clean energy markets with high growth or continued high growth potential, including the markets for flat glass coatings and glass-based devices, thin film and crystalline solar cells, LEDs and other energy efficiency technologies. We believe we can deliver significant improvements in cost, performance and manufacturability in these markets with our HPC platform.

Engage with existing and potential market leaders in our target markets. We enter into CDPs with companies that are well-positioned to lead their markets. We engage with customers that have track records of technological innovation, deploy significant resources and are pursuing advancements that are critical to their success and strategy.

Create proprietary IP with our customers. We develop differentiated, IP-protected technologies with our customers, and we grant them rights to these technologies and IP, primarily through royalty-bearing licenses. We structure our customer engagements so that our business interests align with their market success.

Enhance our HPC platform and multi-disciplinary team. We continue to develop, broaden and protect our processing, characterization, data analysis and workflow capabilities. To enhance our existing platform, we recruit personnel with broad, highly technical skill sets.

- Explore and develop new technologies in high-volume integrated devices. We will continue to explore and internally develop new technologies and expertise to serve future customers in our targeted markets, including, in particular, clean energy. We will focus these efforts in markets that are in the early stages of development to speed innovation, capture value and facilitate success for customers.

Our Platform

HPC Workflows

We begin the development and discovery process by working with our customers to define the specific requirements that a new solution should have in order to meet the needs of a given application. These criteria can be beyond the performance attributes of currently available solution sets. We then apply the components of our HPC platform to develop and discover solution sets that match these criteria.

Once an experiment is processed, the data sets of each experiment are stored in a secure database and analyzed for desired properties. As with processing, our clean room labs include a broad array of characterization and metrology

instruments and software to evaluate different properties under a wide variety of process conditions. These properties include physical,

11

Table of Contents

electrical, mechanical, thermal, chemical, and optical properties. In general, we are able to design, process and characterize tens to hundreds of experiments in a single day.

To reach the point of commercialization or transfer to our customers' manufacturing process qualification, a solution set must progress through an extensive series of screening stages, as described below. Below is an illustration of the screening process of the HPC platform for use in evaluating materials, unit processes, and process sequences:

Primary Screening. Primary screening incorporates and focuses on materials discovery. Materials are screened for certain properties to select possible candidates for a next level of screening. In the initial primary screening there may be thousands of candidates that are subsequently reduced to hundreds of candidates.

Secondary Screening. Solution candidate materials from primary screening are advanced to secondary screening processes that will examine materials and unit process development. In this secondary screening, processes and integration are considered to narrow the candidates from hundreds of candidates to tens of candidates.

Tertiary Screening. Solution candidate materials and process conditions that continue to meet or exceed the defined criteria through the secondary screening stage are then either transferred to our customer or processed internally for additional characterization and scale up. These candidates are then characterized on a larger scale, and correlation of the desired process is developed to allow the transfer of the developed technology to a manufacturing scale process.

Manufacturing and Commercialization. Once a candidate has passed this development scale analysis, it is ready for commercialization and the customer will decide whether to commercialize the developed technology.

Secondary screening begins while primary screening is still ongoing, and while we are still generating additional primary screening candidates. Tertiary screening begins once we have identified a reasonable set of options from secondary screening, and while we are still generating additional secondary screening candidates. As these stages overlap, there may be feedback from later stages that is then incorporated back into an earlier stage to further optimize the selection of materials, unit processes and process sequences.

Table of Contents

Wet Processing Tools

We offer a series of wet processing tools that apply HPC methods to fluids-based applications such as cleans, deposition, wet etch, self-assembly, and surface treatment processes. These tools, which can be used alone or in combination, include:

- Tempus F-10. A stand-alone system used for primary screening through the automatic creation of formulations, especially those involving powders and viscous liquids.

Tempus F-20. A stand-alone system for materials and process screening, which is used for library creation as well as processing of wafer coupons. This product can be used for primary or secondary screening, depending on the reactor block design and the substrate type.

- Tempus F-30. A stand-alone system for integration and tertiary scale up screening, which is used to scale up the most promising results from primary and secondary screening to full patterned wafer processing.

Dry Processing Tools

In addition, we offer dry processing tools that apply HPC methods to vapor-based applications. Each of these tools can be used in primary, secondary and tertiary screening. These tools, which can be used alone or in combination, include:

Tempus P-30 HPC Physical Vapor Deposition (PVD). A 300mm chamber with the ability to use up to four PVD sources and three optional deposition methods (including DC, RF and pulse DC) on a vast range of film thicknesses and/or compositions and/or film stacks within each site-isolated region of a substrate.

Tempus A-30 HPC Atomic Layer Deposition (ALD). A 300mm chamber capable of site isolation of both metal and dielectric films across quadrants of the wafer, with the ability to introduce variation of film thickness and/or composition and/or film stacks within each quadrant.

- Tempus ST-30 Surface Treatment. A 300mm chamber capable of exposing critical layers pre or post dry deposition at variable temperatures to different chemistries which can be modulated by the chamber's downstream plasma source.

Tempus AP-30. A configurable platform with multiple A-30, P-30 or ST-30 chambers and common support modules to facilitate in-situ processing of ALD, PVD or Surface Treatment for rapid screening of thin-film metal alloys, dielectrics and multilayer stacks. Processes can be scaled to facilitate high-volume manufacturing.

Automated Characterization

Immediately after processing substrates on our Tempus HPC processing tools, we use automated and customized characterization instruments to rapidly generate physical and electrical data from the experiments. The aggregated data is automatically loaded into our informatics data warehouse. As with processing, our clean room labs include a broad array of characterization and metrology instruments and software to evaluate different properties under a wide variety of process conditions. Our characterization instruments are optimized to match the throughput of our processing tools to maximize experimental learning cycles.

Informatics Software, Analysis and Services

Our informatics software has the ability to automate the capture and storage of HPC processing, characterization, and metrology data, and then to evaluate, summarize and securely distribute this data in real time to the appropriate parties. Additionally, we use our informatics software to leverage experiments processed and characterized in the past for a customer to increase the speed and effectiveness of the engagement. The key components of our informatics software include:

Workflow Management Software. Manages the design and process of experiments, metrology and collection of data and summarizes aggregated data for the various working teams in the form of status reports; provides our customers with real-time access to results of our experiments and analysis.

-

Analysis and Reporting Software. Provides data and analysis tools to evaluate process distributions, correlate electrical distributions, map defectivity distributions, perform spectral analysis and facilitate interactive creation of summary reporting.

Table of Contents

Security and Collaboration Management Software. Provides secure communication between geographically dispersed working teams, ensures the security of created documentation and presentations, manages the minutes for meetings, provides programs and project plans to coordinate working teams, shares summary reports across the working team and provides reviews of finished processes and status of ongoing processes.

Integration Services. Facilitate collaboration between our tools and the customer's process and metrology tools, automate the recipe loading, automate data collection and leverage software to customize reports.

Our Technology

Embedded throughout our hardware and software, our technology is based upon the parallel and/or rapid serial experimentation capabilities of combinatorial methods. High-productivity combinatorial methods generally refer to techniques that vary materials, unit processes, process, and device integration sequences across multiple regions of one or more substrates, the output of which can then be evaluated in parallel or rapid serial fashion. Our informatics software and analytical methods characterize and analyze these combinations of materials, unit processes, process, and device integration sequences for the most promising solutions in a structured, automated and throughput-matched fashion. The relationship between materials, processes, integration and device output are established earlier in the development process, so that performance and manufacturability considerations are taken into account from the outset, instead of late in the R&D process.

Although our approach is unique in the semiconductor and clean energy industries, combinatorial technology has been widely used in other industries, especially where new materials function as primary enablers of product innovation. Examples include the pharmaceutical, biotechnology, and energy sectors, where combinatorial techniques have been accelerating development since the early 1990s.

We are able to deploy and benefit from our proprietary combinatorial methods because of our multi-disciplinary technical team. The following shows important characteristics of our technical team:

Our Collaborative Development Programs

Our CDPs allow our customers to collaborate with our multi-disciplinary team on specific technical challenges. Our CDP work is primarily carried out at our facility in close collaboration with our customers. We have established strict processes and procedures to protect our customers' confidential information during these CDPs. In addition, we support device qualification for pilot manufacturing at our customers' manufacturing and development sites. Customer teams and our teams collaborate on development of new materials, unit processes, process modules and integration sequences, and qualify the supply chain for high-volume manufacturing. Our multi-disciplinary team can rapidly adapt our Tempus HPC platform to meet customer requirements and develop and optimize device and product technologies that will contribute to successful customer programs.

We typically initiate new customer engagements with smaller, customer-paid programs called micro-CDPs. Our micro-CDPs precede the full CDP. These are smaller programs that require significantly less investment from our customers but allow us to demonstrate the capabilities of our HPC platform to a customer without requiring them to commit to a longer-term

Table of Contents

agreement. We use these micro-CDPs to demonstrate the capabilities and value of our HPC platform to these new customers, with the objective of engaging with these customers in a full CDP.

Our CDPs are designed to result in the development of proprietary technology and IP for new devices, manufacturing process technology and materials, which we license to our customers for use in volume production. We provide our customers with proprietary technology through various fee arrangements and grant them rights to associated IP primarily through royalty-bearing licenses.

In the early stages of developing our business, we structured engagements with customers to allow us to continue to grow while also giving customers an opportunity to invest in our business and success. During 2013 we did not provide our customers or partners with opportunities to invest in our company, independent of their ability to do so in the open market.

Our Customers

Our customers include semiconductor device, semiconductor materials and equipment and clean energy market leaders, including ATMI, Elpida, First Solar, GLOBALFOUNDRIES, Guardian, Micron, SanDisk, TSMC, Toshiba and UCTT. Typically, our customers engage in CDPs with our team leveraging our HPC platform to develop and commercialize high-volume integrated devices using collaboratively developed technology. To date, ATMI and Elpida have already successfully developed products through their CDPs and we have granted them rights to the associated technology and IP rights through royalty-bearing licenses. Successes in our initial CDPs have led to expanded relationships and follow-on programs with existing customers for new products and applications.

The majority of our revenue during 2013 came from our four largest customers, ATMI, First Solar, GLOBALFOUNDRIES and Micron, which represented a combined 55% of our total revenue during the year ended December 31, 2013. The majority of our revenue during the two years ended December 31, 2012 and 2011 came from our three largest customers for those periods, ATMI, Elpida and GLOBALFOUNDRIES, which represented a combined 67% and 64%, respectively. We believe that the revenue concentration associated with these customers will likely decline as our other customers begin to transition technology developed through CDPs into licensing and royalty revenue and as we continue to enter into new CDPs with new and existing customers in the semiconductor and clean energy markets.

In February 2014, Toshiba and SanDisk notified us that they do not intend to enter into a renewal or extension with us of the development activities under our CDP agreement with them. As a result, from and after March 15, 2014, we will no longer provide services to Toshiba or SanDisk under our CDP agreement with them.

Intellectual Property

Our success depends in large part on our IP. We have patented and continue to seek patent protection for combinatorial methods and systems included in our HPC platform. We have also patented and continue to seek patent protection of innovations that result from applying our HPC platform to design, develop and manufacture ICs, solar cells, glass coatings and glass-based devices, LEDs and thin films for electronics, optical and energy applications (Program IP). We may develop Program IP either on our own or in collaboration with our customers through CDPs. As of December 31, 2013, we owned or had exclusive rights to 1,230 U.S. patents and patent applications (some of which also have foreign counterparts). Of the 904 U.S. patents and applications that we owned as of December 31, 2013, 44% are related to the HPC platform and 56% are related to Program IP. We also have a license to approximately 326 U.S. patents and applications granted to us by Symyx Technologies, Inc. (Symyx), a wholly-owned subsidiary of Accelrys, Inc. that exclusively provided us the right to use combinatorial methods to develop Program IP.

As of December 31, 2013, we owned 131 patents and 157 patent applications related to our HPC platform in the United States, and 52 patents and 47 patent applications in other jurisdictions. The expiration dates of these patent rights range from October 2014 to December 2033. We continue to file patent applications to seek protection for further advancements of our HPC platform. We own all rights to such patents and generally do not grant licenses to third parties under these patents other than in connection with their use of our HPC platform. Our patents and patent applications cover the following aspects of the HPC platform:

• Combinatorial systems and methods related to fluids-based processing.

• Combinatorial systems and methods related to vacuum-based processes, including deposition and etch.

Systems and methods for site-isolated processing.

Combinatorial systems and methods related to high-volume manufacturing.

Processing techniques using combinatorial and non-combinatorial methods.

We also have and seek patent protection for innovations we develop internally on our HPC Platform, either on our own or in collaboration with our customers through CDPs. Such innovations cover advancements in new materials, processes,

15

Table of Contents

process conditions, process sequences and device architectures in applications such as semiconductor memory, semiconductor complex logic, glass coatings and glass-based devices, solar cells and LEDs. As of December 31, 2013, we owned 109 patents and 288 patent applications in the U.S. covering Program IP, as well as 55 patent applications in other countries.

In most cases, we maintain an ownership interest in the Program IP that results from CDPs and we grant licenses under this Program IP to the CDP customer. Such licenses generally allow the CDP customer to have exclusivity for a limited term in a particular field. We keep the right to grant licenses under the CDP patents outside that field. Furthermore, if the CDP customer elects to not extend the term of exclusivity beyond the limited term, we have the right to grant licenses to third parties within the field. We assign separate teams for each CDP, maintain separate databases of experimental data and limit access to such databases only to the specific team that assists the CDP customer.

We may also develop Program IP internally where we believe such IP may have broad applicability in the relevant market. We are able to leverage this Program IP to begin CDPs with new customers. In addition, our ability to own the Program IP in these situations allows us to leverage learning and patent protection across industries and applications while providing our existing customers with the IP rights they desire to gain competitive advantage in their fields for the markets they serve.

Sales and Marketing

We sell and market our solutions worldwide through our own sales force by developing direct relationships with our customers. We have sales personnel located in Japan, Taiwan, Europe and the United States, including account managers, who are responsible for specific customer accounts. We have product marketing personnel, who provide business development support and application and workflow platform expertise.

Our business development and product marketing group focuses on our strategy, platform and technology roadmap, new platform introduction process, demand assessment and competitive analysis. The group coordinates new application evaluation and development both internally with our engineering teams and externally with new and existing customers. As market opportunities arise for our products and services, we intend to increase our sales and marketing efforts and further expand our business development and product marketing organization.

Manufacturing

We manufacture our HPC tools through partnerships with experienced contract manufacturers that manufacture and assemble sub-assemblies incorporating our designs. We believe that our third party manufacturers have adequate sources and supplies of the raw materials needed to manufacture our products. We believe that partnering with contract manufacturers provides us with access to the most current facilities and processes without significant capital outlay on our part, allowing us to focus our resources on R&D, product design and CDP support. Although we have historically relied on a small number of contract manufacturers for the manufacture and assembly of a majority of our workflow platforms, we have relationships with a variety of contract manufacturers and are not dependent on any single contract manufacturer.

Research and Development

We conduct R&D activities for CDPs and for internal research and development on both workflow platform development and application R&D. As of December 31, 2013, we employed a research and development team of 203 full-time employees. This R&D team includes many experienced engineers, scientists and managers with advanced degrees from leading universities around the world and experience with leading chip manufacturers, solar PV companies and equipment and materials suppliers. We believe these R&D professionals on our team have enabled us to develop our HPC platform, support customer CDPs, implement our technology roadmap rapidly and provide us with the foundation for our technology advancement in the future.

We devote a substantial portion of our resources to engineering of our next-generation platforms by integrating future generations of technology and developing standardized software and hardware modules. We work closely with multiple vendors during the development of new workflows or workflow modifications for use in our future platforms. The synergies among existing and new workflows often enable us to operate with adjacent vertical technologies such as clean energy markets. Our R&D expenses were \$24.5 million, \$21.8 million, and \$19.3 million for the years ended December 31, 2013, 2012 and 2011, respectively; this represented approximately 36%, 33%, and

36% of our revenue in those years, respectively.

Competition

The principal capabilities required to be competitive in our market include technical expertise, processes and integration capabilities, diversity of platform offerings, development speed and performance, quality and reliability of engineers, depth of collaboration with customers and technical support. We believe we compete favorably with respect to these factors because of the breadth of capabilities of our HPC platform, the depth of multi-disciplinary expertise of our internal research team and external engineering teams who collaborate with customers and our use of combinatorial processing and

Table of Contents

throughput matched characterization and analysis. These differentiating factors allow us to explore more comprehensive solution sets and provide faster solutions to our customers. We are not aware of any companies that currently compete or have to date competed with us in the use of combinatorial methods in semiconductor and clean energy R&D applications; however, we do believe that we compete for the R&D resources of our customers with third-party IP licensors, equipment suppliers, industry consortia, alliance partnerships and university research teams. In addition, many of our customers design, develop, manufacture and market solutions based on their own unique device architectures and develop their own intellectual property in-house.

A portion of our revenue is generated from the sales of end products by our customers, and our competitive position therefore is dependent on their competitive positions. The markets for our customers' products that incorporate technology developed through our CDPs are intensely competitive and characterized by rapid technological change. These changes result in frequent product introductions, short product development cycles and increased product capabilities typically representing significant price and performance improvements.

Environmental Regulation

We are subject to various foreign, federal, state and local environmental laws and regulations governing, among other matters, emissions and discharges of hazardous materials into the air and water, the use, generation, storage, handling, transportation and disposal of, and exposure to, hazardous materials and wastes, remediation of contamination and employee health and safety. In addition, under certain of these environmental laws, liability can be joint and several and without regard to comparative fault. Our operations involve the use of hazardous materials and produce hazardous waste, and we could become liable for any injury or contamination that could arise due to such use or disposal of these materials. Failure to comply with environmental laws and regulations or to obtain or maintain required environmental permits could result in the imposition of substantial civil and criminal fines and sanctions, could require operational changes or limits or the installation of costly equipment or otherwise lead to third party claims. Future environmental laws and regulations, stricter enforcement of existing laws and regulations, or the discovery of previously unknown contamination or violations of such laws and regulations could require us to incur costs, or become the basis for new or increased liabilities or subject us to fines or other sanctions.

Employees

As of December 31, 2013, we had a total of 253 full-time employees, consisting of 203 people engaged in CDPs and R&D activities and 50 people in sales and marketing, legal, finance and other general and administrative roles. None of our employees are represented by a labor union, and we consider our employee relations to be good. On February 3, 2014, we instituted a reduction in force as part of an overall plan to reduce our cost structure. This reduction in force constituted approximately 18% of our workforce, and is anticipated to be completed during the first quarter of 2014. Our CDPs are labor-intensive, and we evaluate our hiring needs on a project by project basis, taking into account current and anticipated CDP timelines and lifecycles, as well as the availability of highly-skilled scientists, engineers and other technical staff needed to support the CDPs. We believe our location in San Jose, California provides us with access to a large population of highly-skilled personnel who will be able to meet the technical requirements necessary to support our existing and new CDPs.

Financial Information about Segments and Geographic Areas; Backlog

We derive a significant portion of our revenue from customers that are based in foreign countries, particularly those based in Japan. Revenue generated from customers in Japan accounted for 19%, 20%, and 28% of total revenue for the years ended December 31, 2013, 2012 and 2011, respectively. We expect that a significant portion of our total future revenue will continue to be derived from companies based in Japan and other foreign countries.

For geographic information, see Note 12 to our consolidated financial statements included in this Form 10-K. We report all of our business activities as a single reporting segment.

Our backlog as of December 31, 2013 was \$56.4 million, of which \$30.4 million is scheduled to be recognized as revenue during 2014 and \$26.0 million is scheduled to be recognized as revenue in periods beyond 2014. As of December 31, 2012, we had backlog of approximately \$77.2 million.

Customer and Collaborative Agreements

The descriptions below contain only a summary of the material terms of the customer engagements entered into as of December 31, 2013, as well as any subsequent material amendments thereto, and do not purport to be complete. These

descriptions are qualified in their entirety by reference to the respective agreements.

Table of Contents

Collaborative Development Program Agreement with GLOBALFOUNDRIES

In June 2011, we entered into a CDP agreement with GLOBALFOUNDRIES to develop and improve certain semiconductor products. Under the agreement, we are providing development services to GLOBALFOUNDRIES and have granted to GLOBALFOUNDRIES a non-exclusive license to use our proprietary HPC platform (which includes a subscription to the platform and a license to the associated software) for the purpose of developing and improving certain semiconductor products. We agreed to dedicate certain resources to support the development activities under the CDP. We also granted GLOBALFOUNDRIES an option to purchase certain HPC processing tools.

Each party will own the rights arising out of the CDP technology solely created by its inventors (CDP IP). Rights arising out of the CDP technology that is created jointly will be jointly owned. We agreed that we would not grant a license under our rights in the CDP IP to any third party outside a certain field without the prior written consent of GLOBALFOUNDRIES.

When GLOBALFOUNDRIES commercializes products that incorporate the CDP IP, GLOBALFOUNDRIES will owe us royalties on sales of those products. GLOBALFOUNDRIES may grant sublicenses to use the CDP IP to third parties, but must share with us the royalties it receives from certain third party sublicenses. During the development period, GLOBALFOUNDRIES is paying us (i) fees for providing development services, (ii) subscription and license fees for use of the HPC platform, and (iii) certain pre-approved expenses and material costs.

The initial period for development activities under the CDP is three years, which period will automatically renew for additional one-year periods unless either party elects to terminate. The initial term of the agreement is five years from the date of the last sale of a product that incorporates CDP IP.

In February 2014, GLOBALFOUNDRIES agreed to accelerate the payment of all amounts that are due to us in 2014, which include (i) the fees due to us from them in exchange for us supplying full-time employees or contractors dedicated to supporting the development activities under the CDP in 2014 and (ii) the minimum payments due to us from them in exchange for the licenses granted by us to them for the calendar year 2014. We further agreed with GLOBALFOUNDRIES to suspend development activities under the CDP for the remainder of 2014, with the parties agreeing to discuss future collaborations for calendar year 2015.

Collaborative Development Program Agreement with Toshiba and SanDisk

In March 2010, we entered into a CDP agreement with Toshiba and SanDisk to develop certain memory technologies and related materials. Under the agreement, we are providing development services to Toshiba and SanDisk and we granted Toshiba and SanDisk non-exclusive use of our proprietary HPC platform (which includes a subscription to the platform and a license to the associated software). The initial period for the development activities was two years, with the option to extend for up to two additional one-year periods. In March 2012, we amended the CDP agreement to extend the initial term of development for an additional year (through March 2013). For this additional year, Toshiba and SanDisk retain their exclusive collaboration license in the field of memory chips.

Toshiba and SanDisk own the rights to the technology and IP arising out of the CDP (CDP IP) that is based on Toshiba or SanDisk background technology or that is solely developed by Toshiba or SanDisk. We own the rights to the technology and CDP IP that is solely developed by us and that is based on our background technology. Jointly developed technology and CDP IP that is based on our background technology is jointly owned. Patent rights based on technology resulting from design of experiments, or based on technology solely developed by us that is based on Toshiba or SanDisk background technology, is also jointly owned.

We granted Toshiba and SanDisk an exclusive license to the rights we own in the technology and CDP IP during the term of the CDP. After the conclusion of the CDP term, in exchange for payments, as applicable, Toshiba and SanDisk each shall have the option (i) to continue to maintain an exclusive license to certain or all of the CDP IP; (ii) to convert the exclusive license to non-exclusive; or (iii) to terminate the license to the CDP IP but retain a non-exclusive license to certain background IP.

Toshiba and SanDisk have agreed to pay us volume-based royalties on sales of products that incorporate the CDP IP, subject to certain minimum and maximum levels. Their obligations to pay royalties under the licenses we grant to them shall continue for the duration of the licenses. During the development period, Toshiba and SanDisk are paying us (i) fees for providing development services, (ii) subscription and license fees for use of the HPC platform and associated software, and (iii) certain pre-approved expenses and material costs. Toshiba or SanDisk may request that

we grant to other third parties a royalty-bearing license to the CDP IP.

18

Table of Contents

In March 2013, we agreed with Toshiba and SanDisk to extend development activities under the CDP through March 15, 2014, with us continuing to provide services and licenses to our technology in exchange for agreed-upon fees. We further agreed with Toshiba and SanDisk to reduce the minimum annual royalty levels due to us from them for the first two (2) years after the end of the extended development period. In February 2014, Toshiba and SanDisk notified us that they do not intend to enter into a renewal or extension with us of the development activities under the CDP. As a result, from and after March 15, 2014, we will no longer provide services to Toshiba or SanDisk under the CDP agreement. The terms of the ownership of the CDP IP and licenses under any IP rights resulting from the CDP IP remain unchanged, and Toshiba and SanDisk will continue to have an obligation to pay us royalties in connection with any future sales of products incorporating or using the CDP IP.

Advanced Memory Development Program Agreement with Elpida

In May 2008, we entered into an Advanced Memory Development Program Agreement with Elpida relating to a CDP to develop and improve certain advanced memory products. The Elpida agreement was supplemented and/or amended in August 2008, January 2009, May 2009, July 2010 and December 2012.

Under the agreement, we are providing development services to Elpida and we granted Elpida non-exclusive use of our proprietary HPC platform (which includes a subscription to the platform and a license to the associated software) for the purpose of developing and improving certain advanced memory products.

We own the rights for certain technology and IP arising out of the CDP (our CDP IP). Elpida owns the rights for certain other technology and IP arising out of the CDP (Elpida CDP IP). All other technology and IP arising out of the CDP is jointly owned by Elpida and us (joint CDP IP). We also granted Elpida an exclusive license to use our CDP IP and the joint CDP IP in certain fields during the term of the agreement.

Elpida has agreed to pay us royalties on sales of products that incorporate our technology, our CDP IP, Elpida CDP IP or joint CDP IP, subject to certain minimum and maximum levels. Elpida's obligation to pay royalties will continue for the duration of its licenses. During the development period Elpida is paying fees for development services, subscription and license fees for use of the HPC platform, and certain pre-approved expenses and material costs.

The current period for development activities and use of the HPC platform is through April 1, 2013, after which the exclusive license will convert to a non-exclusive license unless Elpida meets certain minimum quarterly sales thresholds from high-volume manufacturing of royalty-bearing products. In December 2012, we amended the agreement to (i) confirm that the CDP IP would be first utilized by Elpida in a product by January 1, 2013; and (ii) agree on an annual fee and payment schedule for Elpida's use of the CDP IP starting in 2013.

In February 2012, Elpida filed a petition for commencement of corporate reorganization proceedings under the Japan Corporate Reorganization Act in the Tokyo District Court. In July 2012, the trustees appointed by the Tokyo District Court entered into a sponsorship agreement with Micron pursuant to which Micron has agreed to purchase the outstanding stock of Elpida subject to various terms and conditions expressed therein including obtaining approval of the creditors. In October 2012, the Tokyo District Court referred Elpida's plan of reorganization for creditor voting. The voting ended on February 26, 2013. On February 28, 2013, Elpida announced that the reorganization plan was approved by the statutorily required majority of the creditors and was also approved by the Tokyo District Court. In July 2013, Elpida was acquired by Micron and became a wholly-owned subsidiary of Micron.

Collaborative Development Agreement with Micron Technology

In April 2013, we entered into a CDP agreement with Micron to develop and improve certain advanced memory products (the Micron CDP). Upon the acquisition of Elpida by Micron in July 2013, our prior CDP with Elpida was terminated, and the exclusive licenses that we previously granted to Elpida under the Elpida CDP transferred to Micron.

Under the Micron CDP, we are providing development services to Micron and granted Micron non-exclusive licenses to our HPC technology for the purpose of developing and improving certain advanced memory products. The development activities will be conducted in at least two separate development programs, one in the field of DRAM, and the other in the field of non volatile memory. The period of development activities for each development program is at least two years. We own the rights for certain technology and IP arising out of the Micron CDP (Micron CDP IP),

with Micron owning the rights for certain other technology and IP arising out of the Micron CDP. We also granted Micron exclusive and non-exclusive licenses under our rights in the Micron CDP IP in certain fields. Micron has agreed to pay us annual recurring success fees for a fixed duration (Success Fees) in the event that Micron commercially produces wafers, at a certain rate of production, that incorporate certain deliverables we provide to Micron. Micron has also agreed to pay us (i) certain fees at a fixed rate for providing development services to Micron and (ii) certain expenses and material costs subject to pre-approval. Micron may grant sublicenses under the Micron CDP IP or the Elpida CDP IP to various third parties, but in certain circumstances Micron must share with us the licensing fees it receives from such sublicenses. We may also grant sublicenses within certain fields under the Micron CDP IP

Table of Contents

to third parties, but in certain circumstances we must share with Micron the licensing fees we receive from such sublicensees. The initial term of the Micron CDP is three (3) years. Any obligation of Micron to pay Success Fees under the Micron CDP may continue after the end of the development programs.

ATMI Engagement

In November 2006, we entered into an alliance agreement (the "Alliance Agreement") with ATMI to develop advanced materials for semiconductor products under one or more individual CDPs as agreed between the parties from time to time. Each CDP would provide payments from ATMI to us (i) for providing development services to ATMI, (ii) for subscription and license fees for use of the HPC platform, and (iii) for certain pre-approved expenses and material costs. ATMI owns any technology and IP that it independently creates during the Alliance Agreement. We own the technology and IP we independently create. Unless modified by the terms of a CDP, we also own the technology arising out of the CDP and the HPC technology. The initial term of the activities under the Alliance Agreement is ten years.

The parties have collaborated on one CDP under the Alliance Agreement. Under that CDP, ATMI owns any technology and IP that it independently creates during the Alliance Agreement, as well as any materials manufacturing technology and associated IP rights that are created during the course of the Alliance Agreement (the Alliance Materials Manufacturing Technology). We own the technology and IP we independently create and, other than the Alliance Materials Manufacturing Technology, any other technology and IP that is created during the course of the Alliance Agreement (the Alliance IP). We granted to ATMI a limited, field-restricted, exclusive license to use the Alliance IP, with the right to sublicense, and ATMI has agreed to pay us royalties or share revenues on the sales or licenses of ATMI products that incorporate the Alliance IP. We retained the right to be the sole licensor of any Alliance IP to any IC manufacturers or original equipment manufacturers.

In July 2007, we entered into a Wets Workflow Purchase Agreement with ATMI, which was extended and amended through amendments in December 2007, December 2008, March 2009, August 2010, March 2011, October 2011, December 2012 and March 2013 (as amended, the ATMI Wets Workflow Agreement). Pursuant to this agreement, we agreed to sell to ATMI certain HPC processing tools and license informatics software related to liquid or fluids-based materials (Wets) used in semiconductor processing and manufacturing (collectively, the Wets Workflow). The Wets Workflow may only be used at certain designated sites and solely for the purpose of developing and commercializing materials, Wets processing processes, products and materials manufacturing technologies in a certain field. The agreement generally provides that ATMI is obligated to pay us royalties on products that incorporate any material identified, first synthesized, or discovered through use of any Wets Workflow (the ATMI Wets Products). However, the parties have agreed that for 2013, ATMI would instead pay a fixed fee to us in exchange for subscription and license fees for use of the HPC platform and related software and any volume-based royalties on the sale of the ATMI Wets Products during 2013.

During the term of the agreement, we have agreed not to enter into any joint marketing, sales or development agreements in certain fields with certain competitors of ATMI. During the term of the agreement and subject to economic terms, we also agreed not to ship certain elements of the Wets Workflow and certain other proprietary HPC processing tools to certain ATMI competitors for use in certain defined fields. We have agreed to evaluate ATMI materials for CDPs between us and integrated device manufacturers for an IC or solar application. We have agreed to recommend ATMI materials to our customers in these CDPs, provided that the ATMI materials are timely available, meet our customers' requirements and are cost competitive. If we identify an opportunity for ATMI and us to work in a joint development program or if ATMI introduces us to such an opportunity with an integrated device manufacturer, we and ATMI will enter into good faith negotiations to agree on an economic arrangement, unless ATMI does not have HPC-related resources available to contribute to such an opportunity. In addition, we agreed to introduce one of ATMI's workflows to one of our other customers in exchange for ATMI committing to providing its support to such customer. We are required to dedicate certain resources to supporting ATMI's use of the Wets Workflow. The agreement will continue in effect as long as any license granted under any applicable purchase order under the agreement remains in effect

In December 2008, we entered into a Dry Workflow Purchase Agreement with ATMI, which was extended through amendments in August 2010, March 2011, October 2011, December 2012 and March 2013 (as amended, the ATMI

Dry Workflow Agreement). Pursuant to the agreement, we agreed to sell to ATMI certain HPC processing tools and license informatics software related to vapor-based applications (Dry) used in semiconductor processing and manufacturing (collectively, the Dry Workflow). The agreement generally provides that ATMI is obligated to pay us royalties on products that incorporate any compounds or materials (or composition of compounds or materials) identified, first synthesized, or discovered in whole or in part through the use of the Dry Workflow, and any derivative thereof (the ATMI Dry Products). However, the parties agreed that for 2013, ATMI would instead pay a fixed fee to us in exchange for subscription and license fees for use of the HPC platform and related software. This payment was in lieu of any volume-based royalties on the sale of ATMI Dry Products during 2013. We are required to dedicate certain resources to supporting ATMI's use of the Dry Workflow. In addition, we provided support from October 2011 to August 2012 to a customer of ATMI who was utilizing the Dry Workflow

Table of Contents

ATMI purchased from us. The agreement will continue in effect as long as any license granted under any applicable purchase order under the agreement remains in effect.

In December 2013, we amended the Alliance Agreement, the ATMI Wets Workflow Agreement and the Dry Workflow Agreement, effective January 1, 2014. Under this amendment, ATMI will resume owing us royalties based on sales of ATMI Wets Products and ATMI Dry Products developed using our HPC technology. As part of making such royalty payments, ATMI will make minimum quarterly payments during calendar year 2014. ATMI will also pay us fees to license certain installed tools that ATMI previously purchased from us, while not renewing licenses for certain other installed tools that ATMI previously purchased from us. This amendment also terminates those previously agreed-upon provisions which had restricted us from entering into joint marketing, sales or development agreements in certain fields with certain competitors of ATMI and from selling certain tools and related products to certain ATMI competitors for use in certain fields.

First Solar Collaborative Development Programs

In June 2012, we entered into a CDP agreement with First Solar (Initial CDP) to accelerate the efficiency of First Solar's cadmium-telluride (CdTe) thin-film photovoltaic (PV) manufacturing technology. Under the Initial CDP, we agreed to provide development services to First Solar and we granted First Solar non-exclusive use of our proprietary HPC platform (which includes a subscription to the platform and a license to the associated software). Each party owns the rights arising out of the Initial CDP technology solely created by its inventors. Rights arising out of the Initial CDP technology that was created jointly is jointly owned (all IP collectively is Initial CDP IP). The initial term for the development activities in the Initial CDP was six months. The Initial CDP gave First Solar an election, exercisable within 90 days after the end of the initial term, to purchase our rights to the jointly owned CDP IP as well as the CDP IP that was created and owned by us. First Solar elected to exercise this purchase right in October 2012 (after slightly more than four months of development activity) pursuant to an Asset Purchase Agreement in exchange for a one-time fee payable to us within 90 days of the signing of the Asset Purchase Agreement.

In December 2012, we entered into another CDP agreement with First Solar (Second CDP). Under the Second CDP, we are providing development services to First Solar using our proprietary HPC platform for the purpose of improving the efficiency of First Solar's CdTe PV cell-based solar panels. First Solar has agreed to pay us fees for (i) providing the development services, and (ii) certain pre-approved expenses and material costs. Each party will own the rights arising out of the Second CDP technology solely created by its inventors. Rights arising out of the Second CDP technology that is created jointly will be jointly owned (all IP collectively is Second CDP IP). To the extent that we are successful in improving the efficiency of First Solar's CdTe solar panels, we agreed to grant First Solar a royalty bearing license under our rights in the Second CDP IP to use such IP as necessary to manufacture and sell any improved solar panels. For certain other incremental technology developed by us under this CDP, First Solar has a right for a fixed period of time to purchase the technology for a fixed amount.

In February 2013, we entered into a Tool Purchase and Informatics License Agreement (the "Purchase Agreement") with First Solar. Under the Purchase Agreement, First Solar will purchase certain equipment and we will grant First Solar non-exclusive licenses to our proprietary HPC platform and to our proprietary informatics software, for use solely with the purchased equipment for a fixed period. We will also provide warranty services on the equipment under the Purchase Agreement.

In connection with the signing of the Purchase Agreement, we also amended the Second CDP. The amendment modifies the fee terms in the Second CDP to reflect the purchase of equipment under the Purchase Agreement.

In April 2013, we again amended the Second CDP to modify timelines with respect to the provision of certain project deliverables. In December 2013, we further amended the Second CDP, extending the period of development activities through November 30, 2014, and agreeing with First Solar to reduce our obligation to provide full-time employees or contractors dedicated to development activities under the CDP, in return for reduced fees during calendar year 2014. The parties further agreed to modify the structure of royalties owed by First Solar to us, with First Solar agreeing to pay us royalties based on the sales of First Solar's CdTe solar panels that use CDP IP.

Guardian Collaborative Development Programs

We entered into our first CDP agreement with Guardian in February 2010 to collaborate on research and development tasks relating to liquid coatings for flat glass. We entered into our second CDP agreement with Guardian in July 2010

to collaborate on research and development tasks relating to sputtered coatings for flat glass.

Under the agreements, we are providing development services to Guardian and granted Guardian non-exclusive use of our proprietary HPC platform (which includes a subscription to the platform and a license to the associated

21

Table of Contents

software) for the purpose of developing and improving certain glass products. We own the rights for certain technology and IP arising out of the CDPs (CDP IP). Under the agreements, Guardian has the right to take either an exclusive or non-exclusive limited royalty-bearing license to the CDP IP owned by us. In either case, Guardian's obligation to pay royalties under the licenses granted by us will continue for the duration of the licenses. Exclusive licenses will be subject to certain minimum royalty payments. If Guardian elects to take a non-exclusive license, then we may be required to share with Guardian any licensing revenues we generate by granting licenses under our CDP IP to third parties.

Guardian has agreed to pay us royalties on sales of products covered by the licenses. In addition, during the development period, Guardian is paying us (i) fees for providing development services, (ii) subscription and license fees for use of the HPC platform, and (iii) certain pre-approved expenses and material costs.

In December 2013, we amended our two CDP agreements with Guardian to extend the period of development activities under these CDPs through January 31, 2014, with Guardian paying us the same monthly fee for our resources as previously agreed to by the parties. The parties further agreed in the amendment to negotiate the terms of an extension for both CDPs beyond January 31, 2014.

In February 2014, the parties agreed to further amend the two CDP agreements. Under this amendment, and effective January 31, 2014, development activities under the existing CDP agreements would be extended to January 31, 2017. During this extension period, we will provide Guardian with additional HPC technology and dedicated full-time employees (Resources) to support these continuing development activities, in exchange for additional monthly fees. Guardian also agreed to continue paying us specified royalties on sales of its products covered by the licenses we granted to them to the CDP IP, and also to pay a mutually agreed volume-based royalty when certain products include multiple elements of CDP IP. We have further agreed to share with Guardian a certain percentage of any royalties we receive from licensing to third parties certain CDP IP developed under the liquid coatings for flat glass CDP Agreement. Guardian may request us to increase the Resources, and on or after January 31, 2016, Guardian may request us to reduce the Resources. If the Resources are reduced, the monthly fees shall be proportionately reduced, but such reduction in fees will be offset by Guardian's payment of the royalties owed to us under the CDP Agreements for the licenses granted by us to Guardian for the CDP IP. Otherwise, Guardian must pay to us the difference between the original fees and the reduced fees not covered by the owed royalties. This amendment also provides that Guardian shall also have certain early termination rights for years two and three of the extension period, subject to the payment of early termination fees. The licenses to CDP IP and Guardian's royalty obligations shall survive the termination or expiration of this agreement.

Equipment Supply and Technology Licensing Agreements/Joint Development Program Agreement with UCTT

In September 2013, we entered into two Equipment Supply and Technology Licensing Agreements (the "Equipment Agreements") and a Joint Development Program Agreement (the "JDP Agreement") with UCTT to help UCTT establish a platform that accelerates the application of thin film coatings of various materials for industry. Under the Equipment Agreements, UCTT will purchase certain equipment from us, and we will grant UCTT non-exclusive licenses to our proprietary HPC technology and to our proprietary informatics software, for use solely with the purchased equipment and solely for the purpose of developing and commercializing materials and products incorporating such materials in the fields of glass coatings, photovoltaic devices, power electronics and displays (the "Field"), for a fixed period and, subject to payment of additional fees, for additional periods. We will also provide maintenance, support and warranty services on the equipment under the Equipment Agreements.

Under the JDP Agreement, UCTT will use the purchased equipment and assistance from our business and technical teams to engage in CDPs with third parties ("CDP Customers"). Such CDPs will provide R&D services and will sell or license intellectual property developed under the CDP to the CDP Customers in the Field. The profits earned by

UCTT from such R&D service fees and intellectual property license fees will be shared between us and UCTT depending on whether we brought UCTT that business and whether we will provide technical assistance to the CDP Customer. If UCTT wishes to sign CDPs with a party outside the Russian Federation (“Outside Third Parties”), it will need our prior written consent unless the Outside Third Party is named in an enumerated list agreed to by the parties, or has less than \$50M in annual revenue in the Field, or is located in the Commonwealth of Independent States or, for CDPs in the field of glass coatings, is located in and has a majority of assets in the European Union. For a period of five (5) years, we have agreed to not enter into an arrangement in the field of glass coatings with a third party without the prior consent of UCTT if such arrangement will be similar in structure to this JDP Agreement.

Table of Contents

In connection with entering into these three arrangements, we have committed to provide certain operating expense funding for UCTT; and we have certain contingent revenue which is subject to an earn-out clause related to business development activities included in the JDP Agreement.

Corporate and Available Information

We were originally incorporated as The BEP Group, Inc. in Delaware in June 2004. In November 2004, we changed our name to Intermolecular, Inc. We are headquartered in San Jose, California.

Our Internet address is www.intermolecular.com. Information included on our website is not part of this Form 10-K. We make available free of charge on our website our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and all amendments to those reports as soon as reasonably practicable after such material is electronically filed with or furnished to the SEC. See <http://ir.intermolecular.com>. In addition, copies of our annual reports are available free of charge upon written request. The SEC also maintains an Internet site that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. The address of that site is <http://www.sec.gov/cgi-bin/browse-edgar>.

ITEM 1A. RISK FACTORS

We describe our business risk factors below. You should carefully consider the risks described below together with the other information set forth in this Form 10-K, which could materially affect our business, financial condition or future results. The risks described below are not the only risks facing our company. Risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and operating results.

Risks Related to Our Business, Financial Condition and Results of Operations

We have a limited operating history, which makes it difficult for investors to evaluate our current business and future prospects.

We do not have a long history of operating results on which you can base your evaluation of our business. We are still proving our business model, and we have not yet demonstrated our ability to generate significant revenue, particularly licensing and royalty revenue (which represented 22%, 24%, and 27% of total revenue in fiscal years 2013, 2012 and 2011, respectively). As a result, it may be difficult for analysts and investors to evaluate our future prospects. If we do not generate significant licensing and royalty revenue, we may never achieve sustained profitability. Furthermore, because of our limited operating history and because the semiconductor and clean energy industries are rapidly evolving, we have limited experience in analyzing and understanding the trends that may emerge and affect our business. If we are unable to obtain significant licensing and royalty revenue from products that use or incorporate technology developed under our collaborative development programs ("CDPs"), our financial condition and results of operations would be materially and adversely affected.

Our operating results may fluctuate from quarter to quarter, which may make it difficult to predict our future performance.

Our revenue, expenses and operating results have fluctuated, and may in the future continue to fluctuate significantly from quarter to quarter due to a number of factors, many of which are outside our control. Factors that may contribute to these fluctuations include the following, as well as other factors described elsewhere in this Form 10-K:

our dependence on a limited number of customers;

the length of our sales cycles for CDPs, which makes it difficult to predict the timing of new or expanded CDPs;

the length of our development cycles for CDPs, which makes it difficult to predict the timeframe in which technology developed under CDPs will be available for commercialization;

fluctuations in the volume and prices of products manufactured and sold by our customers that use or incorporate technology developed under our CDPs ("CDP Products") and that generate licensing and royalty revenue for us;

our revenue mix, which may vary from quarter to quarter as (i) we enter into new CDPs and related customer arrangements; (ii) existing CDPs, particularly for significant customers, are completed, extended, or undergo a change in scope; (iii) licensing arrangements take effect; (iv) we enter into product sale transactions and/or (v)

Table of Contents

we enter into IP sale transactions;

the highly cyclical nature of and price volatility in the semiconductor industry;

the financial stability of any of our customers;

the timing and extent to which we enter into new CDPs or complete, extend the duration, expand the scope or reduce the duration or scope of existing CDPs;

one-time offsets to revenue associated with the vesting of contingent warrants issued to two of our customers that are currently outstanding;

non-cash charges relating to stock-based compensation, amortization of intangible assets, write-down expenses related to inventory, and impairment expenses related to long-lived assets;

any involvement in significant litigation, and in particular intellectual property litigation;

any payments resulting from our intellectual property indemnification policies and obligations;

any need for significant additional capital to finance our business;

any delay in shipments caused by shortages of components used or incorporated in products sold into the market, design errors, manufacturing problems, or difficulties or delays gaining required export licenses for such products;

warranty claims, product recalls and product liability for our HPC tools and for CDP Products; and

business interruptions such as earthquakes and other natural disasters.

You should not rely on quarter-to-quarter comparisons to predict our future performance. Unfavorable changes in any of these or other factors may adversely affect our business, financial condition and results of operations.

We have incurred operating losses since our inception and may not be able to achieve or maintain sustained profitability.

We have generated net losses each year since our inception, including \$8.8 million, \$0.8 million, and \$30.0 million for the fiscal years ended December 31, 2013, 2012 and 2011, respectively. Our accumulated deficit as of December 31, 2013 was \$110.1 million. We will need to significantly increase revenue and operating margins (through greater licensing revenue and other mechanisms) to achieve sustained profitability, which we may not be able to accomplish.

Our ability to achieve and maintain profitability will depend, in large part, on our success in addressing the following four challenges, as well as the other risk factors in this Item 1A:

We may be unable to achieve broad customer acceptance of our HPC platform and approach as an alternative to conventional research and development activities.

Historically, semiconductor companies have conducted R&D activities internally using conventional research methods, and they have vigorously protected the confidentiality of their R&D activities. In order for us to increase revenue, we must convince these companies that our technology and capabilities justify collaborating with us on their basic R&D programs. A significant cultural transition is required for a customer's internal R&D team to embrace us as

a collaborative partner. This contributes to the long sales cycles we experience, and may require us to make significant investments in the expansion of our sales and marketing efforts. We must also convince potential customers in the clean energy industry that our HPC platform and approach are useful tools in an emerging industry. We cannot assure you we will achieve the levels of customer acceptance necessary for us to maintain and grow a profitable business. Failure to achieve the necessary customer acceptance to extend or add current or new customer relationships would adversely affect our revenue and profitability.

Table of Contents

• We may be unable to successfully collaborate with all of our customers to achieve the technological innovations sought by our customers.

Even if we achieve sufficient levels of customer acceptance of our HPC platform as an effective tool for R&D, we will not achieve significant revenue or profitability from a CDP if a project to which we have devoted technology and significant resources fails to produce any measurable success or value to our customers in the form of differentiated technology and intellectual property. CDPs are extremely complex and time-consuming to implement and costly to maintain. We rely to some degree on the efforts and resources of the customer. Differences of opinion over the implementation and management of the program may occur, which could lead to material delays and/or a failure to achieve the successful development of technology. In addition, there are a limited number of CDPs to which we can commit our resources at any given time. For a variety of reasons, including but not limited to insufficient R&D budgets of our customers or us, we may fail to achieve the technological innovations sought by our customers in a reasonable amount of time or at all. We do not know whether our customers will have sufficient resources to maintain or increase the level of investment in R&D required for a successful CDP. If a customer reduces the scope of its CDP with us, it will result in a greater concentration of risk of success being placed upon the remaining scope of our engagement, and we cannot guarantee that the remaining scope of the engagement will lead to a successful result. If a CDP does not generate sufficient revenue to recover the upfront costs and cash we invested in the CDP, this would adversely affect our results of operations.

• Our customers may not be successful in commercializing products that use or incorporate technology and IP developed under our CDPs with them.

If we are successful in developing valuable technology for our customers, they still face significant challenges in commercializing products that use or incorporate such technology. The markets for products related to our engagements are intensely competitive and are characterized by rapid technological change. These changes result in frequent product introductions, short product life cycles and the necessity of continually increasing product capabilities. We cannot assure you that our customers will dedicate the resources necessary to successfully execute their business strategies for these products. Our customers are not contractually obligated to us to make or sell any CDP Products. They may not have the financial strength to cost-effectively manufacture the CDP Products at high volume and in quantities sufficient to meet demand, or the competitiveness to price, market and sell the CDP Products in intensely competitive markets. They may experience delays in shipments caused by shortages of components incorporated in the CDP Products, design errors or other manufacturing problems associated with the CDP Products. A decline in demand or average selling prices in the end markets for CDP Products could result in declining sales revenue for our customers and could adversely affect our business and results of operations. Any failure of a customer to achieve market success for CDP Products could also negatively affect such customer's willingness to work with us on other collaborations and could more generally harm our reputation and business prospects. Even if a customer is able to successfully commercialize a CDP Product, there may be a significant delay before we receive any licensing or royalty revenue due to the complexities inherent in production and manufacturing in our customers' target markets.

• Existing and potential customers may be resistant to paying license and royalty fees; and we may face challenges in monitoring and enforcing royalty agreements with existing customers.

Our royalty-bearing licenses with our customers lay the framework for ongoing royalty revenue from CDP Products. Although our R&D activities under CDPs generate revenue for us, in order to achieve profitability we must be able to structure, negotiate and enforce agreements for the calculation and payment of higher-margin license and royalty revenue. Unless we adequately demonstrate the value of our platform to our customers and potential customers, we may face resistance to structuring royalty arrangements in the future that are acceptable to us, or our customers and our potential customers may not agree to enter into royalty-bearing licenses with us at all.

If we are able to negotiate appropriate agreements, we will need to rely on our customers to make those payments on a timely basis. Licensing and royalty revenue we may receive in the future may be based on sales of CDP Products. In order to accurately report our financial results on a timely basis, we will need to receive timely, complete and accurate information from our customers regarding their sales and resulting payments they owe us. If the information that we receive is not timely, complete or accurate, we may not receive the full amount of revenue to which we are entitled under these arrangements on a timely basis, which could result in adjustments to our financial results in a future period. Although we typically have audit rights with these parties, performing this

Table of Contents

type of audit could be harmful to our collaborative relationships, expensive and time-consuming and may not be sufficient to reveal any discrepancies in a timeframe consistent with our financial reporting requirements.

If a project to which we have devoted technology and significant resources fails to produce any measurable success or value to our customer in the form of differentiated technology and intellectual property that our customer can successfully commercialize, we may not earn licensing and royalty revenue sufficient to recover our upfront investment in the CDP, which could adversely affect our revenue and profitability.

In some cases, the revenue we receive from our customers during the development stage is not sufficient for us to fully recover our costs and cash invested in HPC platforms dedicated to customer engagements, and our business model relies on licensing and royalty revenue based on the sales by our customers in the end-markets of CDP Products. Our CDPs involve complex R&D, and our ability to develop the differentiated technology and intellectual property sought by our customers is inherently uncertain and difficult to predict. If a project fails to produce any measurable value to a customer, or if we are otherwise not successful in maintaining and managing a CDP, we may not receive sufficient amounts of licensing and royalty revenue to recover our upfront investment in the CDP.

We depend on a limited number of customers, and a loss of any of them, or a significant reduction in revenue from any of them, would adversely affect our business, financial condition and results of operations.

Our customer base is highly concentrated. Revenue has historically come from a few customers, and we expect that revenue from a relatively small number of customers will continue to account for a high percentage of our revenue for the foreseeable future. Our four largest customers accounted for 55% of our revenue in the fiscal year ended December 31, 2013. Our three largest customers during 2012 and 2011 (all of which are in the semiconductor industry), accounted for 67% and 64% of our revenue in the fiscal years ended December 31, 2012 and 2011, respectively. Our largest customer accounted for 17%, 28%, and 29% of our revenue in each of these periods, respectively. Our concentration of customers is somewhat a reflection of the concentrated nature of manufacturers in the DRAM, flash memory and complex logic markets, and our revenue is and may continue to be heavily reliant on key high-volume customers. In addition, as with any of our customers, our profitability and success are dependent, in part, upon the receipt of licensing and royalty revenue on the sale of CDP Products by our customers, and we cannot control the timing of customer product introductions or their success or failure in the marketplace. The loss of any of these customers or a decrease or delay in the manufacturing or sales volumes of the CDP Products, or their failure to pay amounts due to us or renew, extend or maintain their existing relationships with us, and the related impact on our future anticipated licensing and royalty revenue, would materially and adversely affect our business, financial condition and results of operations, and we may not be able to replace the business from these customers. Additionally, any significant decrease in revenue from one or more key customers may require reductions in our employee workforce, which could reduce our ability to grow as well as expose us to an increased risk of employment and labor claims against us.

As an example, in February 2014 our customer GLOBALFOUNDRIES, Inc. ("GLOBALFOUNDRIES") suspended development activities under its CDP with us through the remainder of calendar year 2014. Accordingly, we have experienced a reduction in the scope of R&D activities, associated employee workforce and associated CDP revenue, which has adversely affected our business, financial condition and results of operations in the most recent fiscal quarter. Similarly, Toshiba and SanDisk have notified us that they do not desire to enter into a renewal or extension with us of the term of our CDP. From and after March 15, 2014, we will no longer provide services to Toshiba or SanDisk under the CDP, and Toshiba and SanDisk will no longer pay us fees for any further development services. In addition, our customer Elpida Memory, Inc. ("Elpida") filed for protection under the Corporate Reorganization Act in Japan in February 2012, and was subsequently acquired by Micron Technology, Inc. ("Micron"), a leading provider of memory chips, in July, 2013. Future filings for bankruptcy protection by existing customers or further consolidation among existing or potential customers may increase our dependence on a limited number of customers, which would

subject us to additional risk for the reasons set forth above.

Our sales cycles are long, and we commit significant resources to a project before we have any commitment that a potential customer may agree to use our platform or service. One or more failures to enter into a CDP after we have devoted significant resources to a project could adversely affect our business, financial condition and results of operations.

Our sales efforts require us to educate our potential customers about the benefits of our solutions, which often requires significant time and expense, including a significant amount of our senior management's time and effort. Our sales cycles to date have typically ranged from 9 to 24 months and may be even longer in the future. Furthermore, we need to target those individuals within a customer's organization who have overall responsibility for the profitability of their products. These

Table of Contents

individuals tend to be senior management or executive officers. We may face difficulty identifying and establishing contact with these individuals. In addition, our customers' technology and product pipelines are highly confidential and they may choose to withhold certain information from us during the sales cycle to protect their own proprietary technology. Our ability to implement our HPC platform and methodology is heavily dependent upon the information provided to us by our customers. If our customers reveal the complexities of their specifications after we enter into a CDP with them, that complexity may cause delays unanticipated at the time we entered into the program. During our sales cycles, we incur significant expenses and, in many cases, may begin to build new systems, configure, modify, expand or customize existing systems, develop software and design workflows to meet our customers' requirements prior to obtaining contractual commitments, without any assurance of resulting revenue. Where a potential customer engagement requires a new dedicated HPC platform, we may invest in new capacity ahead of a customer commitment. Our cycles to build, configure, modify, expand or customize the HPC platform to date have ranged from three to nine months and may be even longer in the future. Investment of time and expense in a particular customer engagement that does not ultimately result in material revenue will adversely affect our revenue and other results of operations. Other factors impacting the length of our sales cycles include, but are not limited to, the following:

- the limited number of customers that are appropriate sales targets for our platform and that are willing to enter into licensing agreements with us;

- our ability to enter into CDPs with customers who are or will become market leaders in larger, growing market segments;

- our customers' budgetary constraints and internal review procedures that must be completed to begin collaboration with us, including but not limited to those customers whose R&D expenditure and product purchasing decisions are impacted by potential delays in or cancellation of funding by governmental agencies; and

- the significant cultural transition required for a customer's internal R&D team to embrace us as a collaborative partner.

Semiconductor industry technology is rapidly changing. If we are unable to anticipate trends in technology development and introduce new technologies reflecting the latest innovations, it could adversely affect our business, financial condition and results of operations.

Our customers expect us to be continuously innovative in their sectors and expect that the technology developed under our CDPs will help them develop new products that keep pace with or push the limits of technological innovation. We rely heavily on the judgment of our management and advisers to anticipate the technology trends in the semiconductor industry and we must continually devote significant engineering resources to keep up with the rapidly growing and evolving varieties of semiconductor architecture, materials, applications, processes and equipment used in semiconductor design and manufacturing. In particular, we must be prepared for the cost, technical complexity and timing of a proposed industry transition from 300mm to 450mm wafers, as well as the possible industry transition to the use of extreme ultraviolet (EUV) lithography.

These innovations are inherently complex and require long development cycles. If we are not able to accurately predict industry changes, or if we are unable to adapt our HPC platform to meet our customers' needs on a timely basis, our existing solutions will be rendered obsolete and our existing and potential customers may choose to develop their own solutions internally as an alternative to ours. If we lose customers, it could have a material adverse impact on our results of operations.

The semiconductor industry is highly cyclical, subject to significant downturns, price volatility, and other dynamics that make the industry very unpredictable. These factors can have a material adverse impact on our business both

directly, and indirectly through the impact on our customers in the industry.

The semiconductor industry is highly cyclical and has been subject to significant economic downturns at various times, characterized by diminished product demand, accelerated erosion of average selling prices and production overcapacity. The semiconductor industry also periodically experiences increased demand and production capacity constraints. The timing and length of these cycles is extremely difficult to predict, which makes it challenging for us to forecast our operating results, make business decisions and identify risks that may affect our business, financial condition and results of operations. In addition, the semiconductor industry has historically experienced price volatility. Because the substantial majority of our revenue comes from customers in semiconductor industry, we may experience significant fluctuations in operating results due to the cyclical nature and price volatility of the industry.

27

Table of Contents

The industry has also been affected in recent years by uncertainty in the credit markets. For example, pressures in the DRAM sector caused financial difficulties for our customer, Elpida, before it was acquired by Micron. In addition, future uncertainty may cause sudden changes in our customers' manufacturing capacity requirements and spending, which depend in part on capacity utilization, demand for products using or incorporating our technology by consumers, inventory levels relative to demand, and access to affordable capital.

Industry consolidation (including but not limited to consolidation of semiconductor manufacturing towards foundries and large-scale manufacturers, and the subsequent concentration of research and innovation in manufacturing process development) has increased in recent years, and we may continue to see consolidation in the future. This will likely result in a smaller number of companies, but more large companies with greater financial resources - companies that may be less likely to become our customers than smaller companies with more limited R&D resources. Furthermore, if any of our existing customers is acquired, the acquiror may not continue to engage in a CDP with us or may choose to focus its product development and commercialization on technologies not covered by our CDP.

The clean energy sector includes a number of industries that are in a very early stage of development, each of which may experience economic challenges. As a result, we may not earn significant revenue from our initiatives in these industries for an extended period.

The clean energy industry is comprised of several sectors including energy-efficient glass, solar cells, light emitting diodes ("LEDs"), flat-panel displays, advanced batteries and other energy-efficiency technologies. Most sectors of the clean energy industry are in the very early stages of development. Many of the associated technologies have not yet achieved commercial viability in comparison to available alternatives, and may never achieve widespread market adoption. Many of the associated technologies will require substantial investments of capital to achieve scale, which may not be available on attractive terms, if at all. Certain technologies may depend on government subsidies to be commercially viable, and those subsidies may not be available from federal and state governments facing increasing financial constraints. If sectors of the clean energy industry take an extended period to achieve market acceptance, and to garner significant revenue, we may not earn material revenue from our initiatives in this area until market acceptance, if ever. Furthermore, it may be difficult for us to predict which clean energy companies and which technologies may become market leaders, and we may invest time and resources in collaborations with companies who are ultimately unsuccessful in the clean energy industry, which could adversely affect our operating results.

The clean energy industry may again experience a challenging environment as it has in the recent past. The demand for clean energy products is also influenced by macroeconomic factors such as global economic conditions. A global economic downturn that affects the availability of financing can slow enterprise clean energy projects; it can also affect individual customers, who may be reluctant to assume high up-front costs and will have more difficulty getting access to capital to cover those costs. Any negative market and industry trends in the clean energy industry could materially and adversely affect our existing and potential customers in the clean energy segment and ultimately have a negative impact on our clean energy business.

If a project to which we have devoted technology and significant resources fails to produce any measurable success or value to our customers in the form of differentiated technology and intellectual property that they may use in their products, we may not receive meaningful amounts of, or any, licensing and royalty revenue. In this case, we may not recover the upfront costs and cash invested in the CDP, which could adversely affect our results of operations. In addition, even if we successfully develop differentiated technology and intellectual property under a CDP that our customer is able to commercialize, there may be a significant delay before we receive any licensing or royalty revenue due to the complexities inherent in production and manufacturing in our target markets.

If we are unable to scale our development services to accommodate a greater volume of CDPs, our growth prospects would be limited and our business, financial condition and results could be adversely affected.

Our customers require a significant amount of individualized attention and many of our customers also require dedicated lab space at our facilities for CDPs. We have limited space and internal capacity, both in terms of personnel as well as capital equipment resources, to meet these types of demands for our customers. In addition, because of the significant confidentiality concerns associated with the projects and products we work on and the restrictions on resource and information sharing we have implemented in response, we are not able to fully capitalize upon economies of scale. If the demand for our services and products exceeds our capacity to meet such demand, we may be required to turn down potential opportunities, which would cause us to lose potential revenue, and our potential customers may take their business to a competitor or decide

Table of Contents

to develop or expand internal R&D capabilities. If we are unable to scale our development services to meet demand, our growth may be hindered and our business and operating results could be adversely affected.

We may be unable to make the substantial R&D investments required to remain competitive in our business.

The semiconductor and clean energy industries require substantial investment in R&D to develop and bring to market new and enhanced technologies and products. To remain competitive, we anticipate that we will need to increase our levels of R&D expenditures to keep pace with the development efforts of our customers. We are continually working to develop and broaden our HPC platform, including our software and informatics capabilities, to address a wider range of markets and customers for multiple applications within semiconductors, flat glass, solar cells, LEDs, flat-panel displays, advanced batteries and other energy-efficiency technologies. This is an extremely complex and costly process. We expect R&D expenses to increase in absolute dollars for the foreseeable future, due to the increasing complexity and number of platforms and solutions we plan to develop both for our customers and internally, the expansion of our customer base and any associated increase in upfront R&D costs.

Although we are making progress in certain areas, we have limited expertise and experience in other fields. We may be required to invest significantly greater resources than anticipated in our R&D efforts. If we are unable to build new systems, or configure, modify, expand or customize existing systems for these applications and develop our expertise to support these fields, our business growth might be limited, and our business and results of operations could be materially and adversely affected.

Our strategy includes conducting proprietary R&D efforts in collaboration with and on behalf of multiple customers. Any failure on our part to adequately protect against potential conflicts of interest and breaches of confidentiality by us would harm our reputation and our relationships with our customers, and our business prospects and operating results would be materially and adversely affected. Moreover, some customers may hesitate to grant us access to their proprietary information, which could impair our ability to provide value for such customers.

Our strategy includes conducting proprietary R&D efforts in collaboration with and on behalf of customers who in some cases may have overlapping interests and technologies. We seek to structure our collaborative agreements and business practices to minimize any potential conflicts among customers and the possibility of any breaches of confidentiality. We may need access to some of our customers' proprietary information, and they may be reluctant to share it with us because of the risk of a potential conflict between us and/or our customers and other potential customers and the risk of a breach of confidentiality. In an effort to address these significant potential conflicts of interest and confidentiality concerns, we have implemented internal restrictions on resource and information sharing. However, we cannot ensure that our customers will perceive these measures to be adequate and effective, or that they will be, in all circumstances. Our failure to adequately and effectively address these concerns could result in our inability to attract new customers or retain existing customers, or lead to our having incomplete information with respect to existing customers that could impair our ability to fully address the customers' needs and demonstrate the value of our technology to the customers. Even though we make significant efforts to isolate each development activity from other development activities, we may fail to meet our contractual confidentiality commitments to one or more customers. Moreover, even if we meet these commitments, conflicts of interest between a customer and us, or between or among customers, could nevertheless arise. In either event, we may become involved in a dispute with our customers regarding the solutions developed during the collaboration or the rights to these solutions, including possible litigation. Disputes of this nature could harm the relationship between us and our customers, have a material adverse effect on our ability to enter into new CDPs and cause our revenue and operating results to decline significantly.

Our business strategy requires us to evaluate, integrate and develop elements of our customers' value chains, including development and manufacturing processes. Our ability to evaluate these effectively may sometimes depend on the

cooperation from our customers' materials suppliers and equipment manufacturers as well as access to their data and tools. If these third parties do not cooperate with us or provide us access to the necessary data, materials, tools or equipment, we may not be able to deliver effective solutions to our customers, which would adversely affect our business and results of operations.

We have to evaluate multiple elements of our customers' value chains to help them test and develop end products that meet their specifications, including the materials, tools and equipment used by them during the manufacturing process. Our ability to evaluate a customer's value chain effectively may sometimes depend on cooperation from such customer's materials suppliers and equipment manufacturers and on access to their data and tools. Our evaluation of the materials and equipment in the value chain must be unbiased to maintain credibility with our customers, and our evaluation sometimes results in

Table of Contents

recommendations that our customers change materials and tools providers or equipment manufacturers. Our recommendations may negatively impact our relationships with materials and tools providers and equipment manufacturers. Tensions in our relationships with these providers and manufacturers may cause these parties to limit or deny our access to their newest materials and equipment, which would in turn limit our ability to complete our development activities with our customers or control the quality of the combinatorial methods applied to our development efforts on their behalf, which would adversely affect our business and operations.

Failure of our suppliers to timely deliver sufficient quantities of the components or materials that we use in our collaborations may result in delays or other disruptions in executing our CDPs, which could adversely affect our business, financial condition and results of operations.

We have historically relied on a small number of contract manufacturing companies for the manufacture and assembly of a majority of our HPC tools. While we are not dependent on any single contract manufacturing company, key parts of our tools are currently available only from a limited number of sources. In addition, components of our capital equipment are available from only a few suppliers. If supplies from these vendors are delayed or interrupted for any reason, we may not be able to get equipment or components for our tools or our own research efforts in a timely fashion or in sufficient quantities or under acceptable terms, if at all. Even though alternative sources of supply would be available, it could be time-consuming and expensive for us to qualify new vendors and work with them to integrate our designs into the tools they manufacture for us. In addition, we depend upon our vendors to provide components of appropriate quality and reliability. Consequently, if supplies from these vendors were delayed or interrupted for any reason, it could materially and adversely affect our business.

Our future growth may present challenges to our management and administrative systems and resources, which could adversely affect our business, financial condition and results of operations.

In order to successfully expand our business we will need to continue to grow in all operational areas and to successfully integrate new employees. In particular, we expect continued growth as we expand our R&D capacity for current and additional CDPs. The expansion of our business may place a strain on our management, as well as our operational systems and facilities, which may make it difficult for us to implement our business strategy. We have experienced employment and labor claims against us by our employees in the past, and we may experience such claims in the future. For example, on August 23, 2013, we received a copy of a complaint from the California Division of Labor Standards and Enforcement filed by an employee claiming that the employee is owed back pay due to an incorrect classification as an exempt employee for overtime purposes. Subsequently, we were informed of similar claims by fourteen other current and former employees and contractors. On January 16, 2014, we participated in a mediation with the attorney who represents these fifteen claimants. This mediation did not result in a settlement of the subject claims, and on February 18, 2014, the claimants filed a lawsuit against us in the United States District Court for the Northern District of California. The addition of new employees may also increase the likelihood of employment and labor claims against us.

To effectively manage our operations and growth, we must continue to expend funds to enhance our operational, legal, financial and management controls, reporting systems and procedures, and to attract and retain sufficient numbers of talented employees. If we are unable to implement these enhancements efficiently, effectively and quickly, we will not be able to successfully grow our business as planned. Our future operating results will also depend on our management's ability to:

- improve our R&D efforts;
- improve our sales, marketing and customer support programs;

- enhance our operational and financial control systems;
- expand, train and manage our employee base and promptly replace departing employees with key skills; and
- effectively address new issues related to our growth as they arise.

We may not manage our expansion successfully, which could materially and adversely affect our business, financial condition and results of operations.

Table of Contents

Acquisitions, strategic investments or joint ventures may harm our business and operating results, cause us to incur debt or assume contingent liabilities, or dilute our stockholders.

We have made and may in the future make strategic investments or acquisitions or enter into joint ventures with third parties where there is an opportunity to expand the potential applications and reach of our capabilities, including our HPC platform. Exploring and implementing any investments, acquisitions or joint ventures may place strain upon our ability to manage our future growth and may divert management attention from our core businesses. There are also other risks associated with this strategy. We cannot assure you that we will be able to make investments or acquire businesses on satisfactory terms, that any business acquired by us or in which we invest will be integrated successfully into our operations or be able to operate profitably, or that we will be able to realize any expected growth, synergies or benefits from such investments, acquisitions or joint ventures. Our relative inexperience in effecting such transactions heightens these risks. In addition, to finance any acquisitions, investments or joint ventures, we may utilize our existing funds, or might need to raise additional funds through public or private equity or debt financings. We may be unable to obtain financing to fund future acquisitions or investments on attractive terms, or at all. Additionally, equity financings may result in dilution to our stockholders. We cannot predict the number, timing or size of investments, acquisitions or joint ventures, or the effect that any such transactions might have on our operating results.

Our financial obligation to Silicon Valley Bank (“SVB”) could adversely affect our financial health and our ability to raise additional capital to fund our operations and limit our ability to react to changes in the economy or our industry.

On May 31, 2013, we entered into a loan and security agreement (“Loan Agreement”) with SVB pursuant to which SVB made available to us loans under a revolving line to refinance existing indebtedness (including the repayment of all remaining principal and accrued interest under the secured promissory note that we issued to Symyx Technologies, Inc. in November 2011) and for working capital and general business purposes, in a principal amount of up to \$26.5 million. Under the Loan Agreement, SVB funded an initial credit extension in the principal amount of \$25.0 million on May 31, 2013.

On November 29, 2013, we elected to convert the entire \$25.0 million of outstanding advances under the Loan Agreement into a term loan, as provided by the Loan Agreement. We are obligated to pay interest at the applicable rate and \$0.5 million of principal on a quarterly basis. The term loan is scheduled to mature on November 30, 2016, at which time we would be obliged to pay all outstanding principal and accrued and unpaid interest on that date. At our option, we may prepay the outstanding principal balance of the term loan in full or in part, subject to a pre-payment fee of 0.25% of the outstanding principal balance of the term loan if the term loan is outstanding for less than one year. During the fiscal year ended December 31, 2013, we paid SVB \$0.4 million of interest under the Loan Agreement.

Our obligations to SVB will require us to dedicate a substantial portion of our cash flow from operations to payments on interest and principal, thus reducing the availability of our cash flow to fund working capital, capital expenditures, research and development efforts, execution of our business strategy and other general corporate purposes. Such limitations increase our vulnerability to adverse general economic and industry conditions and limit our flexibility in planning for, or reacting to, changes in the economy, our industry and new opportunities that may arise. In addition, we granted SVB a security interest in substantially all of our assets, excluding all intellectual property. Under the Loan Agreement, we cannot grant an interest in our intellectual property to any other person. We are also subject to certain affirmative and negative covenants under the Loan Agreement, including limitations on our ability to: undergo certain change of control events; dispose of our assets; merge or acquire other entities; create, incur, assume, guarantee or be liable with respect to indebtedness; grant liens on any assets; make any dividends in cash; and make or permit any payment on subordinated debt, in each case subject to certain exceptions. In addition, we are subject to a financial covenant under which, if our unrestricted cash, cash equivalents and other short-term investments are less than \$60 million, we must maintain a ratio of our short-term assets (including cash, net accounts receivable and

short-term investments) to certain liabilities (including our outstanding and owed obligations to SVB and any other liabilities maturing in less than one year) of 1.5:1.0. Under the Loan Agreement, subject to certain exceptions, we are also required to maintain with SVB our primary operating and other deposit accounts and securities accounts. The Loan Agreement also includes several potential events of default such as payment default, material adverse change conditions and insolvency conditions that could cause interest to be charged at the rate that is otherwise applicable plus 5.0%. Any uncured events of default may result in SVB's right to declare all outstanding obligations immediately due and payable and to exercise any other remedies permitted under the Loan Agreement. These obligations and restrictions may make it more difficult for us to borrow funds in the future to fund working capital, capital expenditures and other purposes, which could materially and adversely affect our business, financial condition and results of operations.

Table of Contents

We may need additional capital in the future to finance our business.

Our future capital requirements may be substantial as we continue to develop our business and expand our collaborative development efforts. Although we believe that, based on our current level of operations and anticipated growth, our existing cash, cash equivalents and marketable securities, as well as our access to capital pursuant to the Loan Agreement with SVB, will provide adequate funds for ongoing operations, planned capital expenditures and working capital requirements for at least the next 12 months, we may need additional capital if our current plans and assumptions change. In particular we may be required to raise additional capital if we choose to expand our business through strategic investments or acquisitions. Our need for additional capital will depend on many factors, including our rate of revenue growth, our expansion of our sales and marketing activities and overhead expenses, the timing and extent of our spending to support our R&D efforts and our ability to expand CDPs in the semiconductor and clean energy industries, whether we are successful in obtaining anticipated levels of payments from customers, the financial stability of our customers, whether we can enter into additional collaborations in our target industries and markets, the progress and scope of collaborative R&D projects performed by us and our customers, the effect of any acquisitions of other businesses or technologies that we may make in the future, the filing, prosecution, maintenance and enforcement of patent claims, how much we need to develop or enhance our solutions or HPC platform and any necessary responses to competitive pressures.

If our capital resources are insufficient to meet our capital requirements, and our revenue is insufficient to support any of these activities, then we will have to raise additional funds. If future financings involve the issuance of equity securities, our then-existing stockholders may suffer dilution. If we raise additional future debt financing, we may be subject to restrictive covenants similar or more restrictive than those we are subject to under the Loan Agreement with SVB, which would further limit our ability to conduct our business. We may not be able to raise sufficient funds on terms that are favorable to us, if at all. If we fail to raise sufficient funds and continue to incur losses, our ability to fund our operations, take advantage of strategic opportunities, develop products or technologies or otherwise respond to competitive pressures could be significantly limited. If this happens, we may be forced to delay or terminate R&D programs, curtail or cease operations, obtain funds through collaborative and licensing arrangements that may require us to relinquish commercial rights, or grant licenses on terms that are not favorable to us. If adequate funds are not available, we may not be able to successfully execute our business plan or continue our business.

If we lose one or more of our key personnel without obtaining adequate replacements in a timely manner, or if we are unable to retain and recruit skilled personnel, our operations could become disrupted and the growth of our business could be delayed or restricted.

Our success depends, in large part, on the continued contributions of our senior management team, in particular, the services of Mr. David Lazovsky, our President and Chief Executive Officer, and Dr. Tony Chiang, our Chief Technology Officer. If we lose the services of Mr. Lazovsky or Dr. Chiang, it could slow the execution of our business plan, hinder our development processes and impair our sales efforts, and searching for a replacement could divert our other senior management's time and increase our operating expenses. In addition, our customers could become concerned about our future strategy and operations, which could harm our reputation.

None of our senior management is bound by written employment contracts to remain with us for a specified period. The loss of any of our senior management could harm our ability to implement our business strategy and respond to the rapidly changing market conditions in which we operate. Upon hiring or promotion, new senior management personnel must spend a significant amount of time learning our technology, business model and management systems and their new roles, in addition to performing their regular duties. Accordingly, until new senior personnel become familiar with our technology, business model and systems or with their new roles, we may experience disruption to our ongoing operations. Moreover, the loss of a member of our senior management or our professional staff would require the remaining management to divert attention to seeking a replacement.

Our future success and competitiveness depends on our ability to retain and motivate our unique team of highly skilled scientists and engineers, and to recruit and hire similarly qualified replacements for any who leave the company. These scientists and engineers have expertise across various disciplines, fields and technologies, including engineering, materials science, process development and integration, equipment, device process technologies and device integration. In addition, as we grow, we will have to continue to retain, attract and motivate qualified and talented personnel, including our scientists and engineers, management, sales and marketing and legal and finance personnel. Because our CDPs are customer-specific and project-specific and last for a significant period of time, the loss of key scientists or engineers or other personnel could have an adverse effect on a particular CDP and on our ability to deliver results to a customer in a timely manner or at all. We do not know whether we will be able to retain all of these employees or hire appropriate replacements for any who leave the

Table of Contents

company, as we continue to pursue our business strategy. Competition for personnel is intense in the semiconductor and clean energy industries.

We may encounter difficulties in hiring qualified scientists and engineers because there is a limited pool of scientists and engineers with the specialized expertise required to understand and implement our platform in conjunction with our customers. Further, we may have difficulty or delays in obtaining deemed export licenses for some scientists and engineers who we may wish to hire, in obtaining visas permitting entry for some of our employees who are foreign nationals into the United States, and in obtaining visas permitting entry into other key countries for several of our key personnel, which could disrupt our ability to strategically locate our personnel. The loss of the services of key employees or our inability to retain, attract and motivate qualified scientists and engineers could have a material adverse effect on our business, financial condition and results of operations.

If we cannot compete successfully in our industry, our results of operations and financial condition would be adversely affected.

Competition in our markets may intensify in the future, which could slow our ability to grow or execute our strategy and could lead to increased pricing pressure, negatively impacting our revenue and ability to attain and maintain profitability. Our current and potential customers may choose to develop their own methods to accelerate R&D activities, including their own combinatorial development methods internally, particularly if we are slow in developing or deploying our solutions or improving them to meet market needs. We currently face indirect competition from the internal R&D groups of our current and potential customers, particularly those of our customers who work with us to develop knowledge of combinatorial methods and who may then use our methods independently. Several of them also design, develop, manufacture and market semiconductor and clean energy products based on their own solutions or other architectures and develop their own intellectual property internally. They often compete with each other and with us in various applications. Our customers are generally much larger and have significantly greater resources than us. We also face indirect competition from university collaborations, consortia and alliance partnerships. In addition, there may be other providers of high-throughput or combinatorial solutions for the design of and accelerating R&D relating to integrated devices of which we are not aware and there may be new entrants to the industry in the future, particularly if acceptance of these solutions grows. In addition, we believe that the demand for solutions that address the need for better integration between the design and manufacturing processes may encourage direct competitors to enter into our market. Other potential competitors include fabrication facilities that may decide to offer solutions competitive with ours as part of their value proposition to their customers. If these potential competitors change the pricing environment or are able to attract industry partners or customers faster than we can, we may not be able to grow and execute our strategy as quickly or at all.

A substantial portion of our revenue is derived from business arrangements with related parties, and such arrangements could create conflicts of interest that could adversely affect our business and results of operations.

Some of our customers and other business partners hold a significant stake in our capital stock. Related party transactions disclosed in our financial statements accounted for \$12.8 million (19.0%) of our revenue in the year ended December 31, 2013 and \$21.1 million (31.6%) and \$21.0 million (39.0%) of our revenue for the years ended December 31, 2012 and 2011, respectively. ATMI, which beneficially owned approximately 5.6% of our outstanding stock as of December 31, 2013, accounted for \$8.4 million (12.5%) of our revenue during the year ended December 31, 2013 and \$16.5 million (24.7%) and \$15.8 million (29.3%) of our revenue for years ended December 31, 2012 and 2011, respectively. For more information about these transactions, see Note 11 to our consolidated financial statements in this Form 10-K.

We believe that the transactions and agreements that we have entered into with related parties are on terms that are at least as favorable as could reasonably have been obtained at such time from unrelated third parties. However, these

relationships could create, or appear to create, potential conflicts of interest when our board of directors is faced with decisions that could have different implications for us and our related parties or their affiliates. In addition, conflicts of interest may arise between us and our related parties and their affiliates. The appearance of conflicts, even if such conflicts do not materialize, might adversely affect the public's perception of us, as well as our relationship with other companies and our ability to enter into new relationships in the future, including new CDPs with competitors of such related parties, which could have a material adverse effect on our ability to do business.

We may be subject to warranty claims, product recalls and product liability.

From time to time, we may be subject to warranty or product liability claims relating to our HPC tools that could result in unanticipated expenses as we compensate affected customers for product quality issues. Although we maintain

Table of Contents

product liability insurance, the insurance is subject to significant deductibles and there is no guarantee that coverage will be available or adequate to protect against all such claims. Alternatively, we may elect to self-insure with respect to certain matters. If an HPC tool sold to our customers is recalled, we may incur repair, return and/or replacement costs, contract damage claims from our customers and reputational harm. Costs or payments made in connection with warranty and product liability claims and product recalls could materially and adversely affect our financial condition and results of operations.

Our inability to effectively manage our inventory could adversely affect our revenue and profitability.

Our CDPs generally consist of our provision of services to our customers, our licensing to customers of IP related to the CDP, and the sale of specialized tools to customers with which CDP activities are undertaken. For these specialized tools, we typically plan production and inventory levels based on internal forecasts of customer demand. These forecasts can be highly unpredictable and can fluctuate substantially, which could lead to excess inventory write-downs and resulting negative impacts on revenue and profitability. In addition, innovation in our industry, or the use of R&D methodologies other than our HPC technology, could render significant portions of our inventory obsolete. If we overestimate our customers' requirements, we may have excess inventory, which could lead to obsolete inventory and unexpected costs. Conversely, if we underestimate our customers' requirements, we may have inadequate inventory, which could lead to foregone revenue opportunities, loss of potential market share and damage to customer relationships as product deliveries may not be made on a timely basis, disrupting our customers' CDP activity schedules. Additionally, our estimates of excess and obsolete inventory may prove to be inaccurate, in which case the provision required for excess and obsolete inventory may be understated or overstated. Although we make every effort to ensure the accuracy of our forecasts of future product demand, any significant unanticipated change in demand or technological developments could have a significant impact on the value of our inventory and operating results.

Compliance with environmental, health and safety laws and regulations could increase costs or cause us to incur substantial liabilities.

We are subject to various foreign, federal, state and local environmental laws and regulations governing, among other matters, emissions and discharges of hazardous materials into the air and water, the use, generation, storage, handling, transportation and disposal of, and exposure to, hazardous materials and wastes, remediation of contamination and employee health and safety. In addition, under certain of these environmental laws, liability can be joint and several and without regard to comparative fault. Our operations involve the use of hazardous materials and produce hazardous waste, and we could become liable for any injury or contamination that could arise due to such use or disposal of these materials. Failure to comply with environmental laws and regulations could result in the imposition of substantial civil and criminal fines and sanctions, could require operational changes or limits or the installation of costly equipment or otherwise lead to third party claims. Future environmental laws and regulations, stricter enforcement of existing laws and regulations, or the discovery of previously unknown contamination or violations of such laws and regulations could require us to incur costs or become the basis for new or increased liabilities, which could impair our operations and adversely affect our business and results of operations.

Global or regional economic, political and social conditions could adversely affect our business, financial condition and results of operations.

We operate in multiple jurisdictions throughout the world and are subject to foreign business, political and economic risks. In particular, we are subject to risks arising from adverse changes in global economic conditions. Global economic uncertainties in the key markets of many of our customers may cause our customers to delay or reduce R&D and technology purchases and investments. The impact of this on us is difficult to predict, but if businesses defer using our HPC platform or licensing our technology, require fewer CDPs or development tools, or if consumers defer

purchases of new products that use or incorporate technology developed under our CDPs, our revenue could decline. A decline in revenue would have an adverse effect on our results of operations and our financial condition.

In addition, some of our largest customers are located outside of the United States, primarily in Asia, which further exposes us to foreign risks. Also, a substantial portion of the consumer products market that serves as the end-market for the products we help our customers to develop is located in Asia. As a result, our operations are subject to substantial influence by political and economic conditions. Reduced end user demand as well as disruptions to the supply chain for our customers resulting from these or other events could lead to a reduction in our revenue and an adverse impact on our financial condition. Our licensing and royalty revenue is derived from sales of products that use or incorporate technology developed under our CDPs. To the extent that sales for these products are denominated in U.S. dollars, the currency conversion and foreign exchange laws and regulations in the foreign countries in which we do business may delay or preclude us from receiving payment from our customers, which would have an adverse impact on our operations and financial condition. Additionally, to

Table of Contents

the extent that sales for these customer products are denominated in a foreign currency, an increase in the value of the U.S. dollar relative to such foreign currencies could also adversely affect our licensing and royalty revenue irrespective of the volume of such products sold, which could adversely affect our business and operating results.

We derive a significant portion of our revenue from customers in foreign countries. We expect that a significant portion of our total future revenue will continue to be derived from companies based in foreign countries. If the U.S. dollar increases in value relative to the currencies in any of these countries, the cost of our CDPs, which have historically been billed in U.S. dollars, will be more expensive to existing and potential customers in those countries, which could adversely affect our ability to generate new or expand existing CDPs.

We are also subject to general geopolitical risks in connection with international operations, such as political, social, and economic instability, terrorism, interference with information or communication of networks or systems, potential hostilities, changes in diplomatic and trade relationships, and disease outbreaks, and any disruptive effect these events would have on our business operations. Although to date we have not experienced any material adverse effect on our operations as a result of these types of factors, we cannot assure investors that these factors will not have a material adverse effect on our business, financial condition, and operating results or require us to modify our current business practices. Inconsistencies among, and unexpected changes in, a wide variety of foreign laws and regulatory environments with which we are not familiar, including, among other issues, with respect to employees, currency controls, foreign exchange, protection of our intellectual property, and a wide variety of operational regulations and trade and export controls under domestic, foreign, and international law may also have unexpected, adverse impacts on our operations and financial condition.

Business interruptions could delay or prevent our business activities, which could have a material adverse effect on our business, financial condition and results of operations.

Our headquarters are located in the San Francisco Bay Area near known earthquake fault zones and are vulnerable to significant damage from earthquakes. We are also vulnerable to other types of natural disasters and other events that could disrupt our operations, such as cybersecurity breaches, terrorist acts and other events that may be beyond our control. We do not carry insurance for earthquakes and we may not carry sufficient business interruption insurance to compensate us for losses that may occur. Our business can also be impacted if our customers experience business interruptions as a result of events such as the 2011 earthquake and tsunami in Japan. Any losses or damages we or our customers incur could have a material adverse effect on our cash flows and success as an overall business.

Our ability to use our net operating loss carryforwards to offset future taxable income, and our ability to use our tax credit carryforwards, may be subject to certain limitations.

In general, a corporation that undergoes an "ownership change" under Section 382 of the Internal Revenue Code is subject to limitations on its ability to utilize its pre-change net operating loss carryforwards ("NOLs") to offset future taxable income and its ability to utilize tax credit carryforwards. As of December 31, 2013, we reported U.S. federal NOLs in the amount of approximately \$52.0 million. In general, an "ownership change" occurs if the aggregate stock ownership of certain stockholders (generally, 5% shareholders, applying certain aggregation and look-through rules) increases by more than 50 percentage points over such stockholders' lowest percentage ownership during the testing period (generally, three years). We have not determined whether an ownership change has occurred in the past. If we have experienced an ownership change in the past, our ability to utilize NOLs and tax credit carryforwards could be limited. Furthermore, future changes in our stock ownership, such as certain stock issuances and transfers between stockholders, some of which changes are outside of our control, could result in ownership changes under Section 382 of the Internal Revenue Code. For these reasons, we may not be able to utilize a material portion of our NOLs and tax credit carryforwards, even if we attain profitability.

According to the American Taxpayer Relief Act of 2012 (HR 8) signed into law on January 3, 2013, the federal research credit, which was allowed to expire on January 1, 2012, was retroactively extended through 2013. The federal research credit for the retroactive extensions is reflected in the 2013 tax provision.

Table of Contents

Specific Risks Relating to Our Intellectual Property

We may be unable to effectively protect our intellectual property, which would negatively affect our ability to compete.

We depend on our proprietary HPC platform for our success and ability to compete. If others are able to reproduce our technology, our business will suffer significantly unless we can prevent them from competing with us. As of December 31, 2013, we owned or had exclusive licenses to 1,230 U.S. patents and patent applications (some of which also have foreign counterparts), which we believe protect our rights in our HPC platform and our rights in the technology developed under the CDPs. While we have been filing patent applications to seek protection for the further advancements of our HPC platform, patent laws provide only limited protection. Furthermore, we may not be able to sustain the high rate of patenting we maintained in the previous two years due to the expense and resource-intensiveness of the patenting process. For these and other reasons, we cannot assure you that we have sought or that we will seek patent protection of all our rights in our HPC platform and our rights in the technology developed under our CDPs in all jurisdictions. We also cannot assure you that all maintenance fees have been paid or that all filings have been made with the appropriate regulatory or governmental authorities with respect to any IP rights (including patents) registered or applied for outside of the U.S. that we purchase. In addition, patent protection in foreign countries may be limited or unavailable where we need this type of protection. A more detailed description of how we protect our IP rights (including patents) is set forth in Part I, Item 1: “Business - Intellectual Property” of this Form 10-K.

The patent positions of technology companies, including ours, are often uncertain and involve complex legal and factual questions. We will be able to protect our proprietary rights from unauthorized use by third parties only to the extent that our proprietary technologies are covered by valid and enforceable patents or are effectively maintained as trade secrets or other forms of legal protection. We apply for patents covering our HPC platform and further advancements of our HPC platform as we deem appropriate. However, we may not obtain patents on all inventions for which we seek patents. Further, any patent claims we file for may be challenged during prosecution or any patent claims we are issued may be challenged after issuance. This may result in the claims being narrowed in scope or extinguished as a result of these challenges. Additional uncertainty may result from the recent and ongoing consideration and passage of patent reform legislation by the United States Congress, legal precedent as handed down by the United States Federal Circuit and Supreme Court as they determine legal issues concerning the scope and construction of patent claims and inconsistent interpretation of patent laws by the lower courts. For these reasons, among others, our existing patents and any future patents we obtain may not be sufficiently effective in preventing others from practicing our technologies or from developing similar or superior products. In that case, our revenue and operating results could decline.

Our strategy includes obtaining patent protection for technology developed in collaboration with our customers. A portion of our revenue from our customers derives from the licenses granted by us to our customers under these patents. In certain instances our ability to obtain patent protection may require customer approval. If the customer does not provide its approval, we cannot proceed with patent protection and the technology will be subject to trade secret protection only. If we are unable to obtain patent protection, we would not be able to enforce patent rights to the technologies in question.

We have developed in the past, and may develop in the future, patented technology with U.S. federal government funding. When new technologies are developed with U.S. government funding, the government obtains certain rights in any resulting patents, including a nonexclusive license authorizing the government to use the invention for non-commercial purposes. These rights may permit the government to disclose our confidential information to third parties and to exercise “march-in” rights to use or allow third parties to use our patented technology. The government can exercise its march-in rights if it determines that action is necessary because we fail to achieve practical application

of the U.S. government-funded technology, because action is necessary to alleviate health or safety needs, to meet requirements of federal regulations, or to give preference to U.S. industry. In addition, U.S. government-funded technology may be subject to restrictions on transfer to foreign entities, and some U.S. government-funded data may be subject to public disclosure under the Freedom of Information Act.

Many of our customers and competitors have significant operations outside the United States. However, foreign laws may not afford us sufficient protections for our intellectual property, and we may not always seek patent protection outside the United States. We believe that our success depends, in part, upon our ability to obtain international protection for our IP rights. However, the laws and judicial systems of some foreign countries may not be as comprehensive as those of the United States and may not be sufficient to protect or enforce our proprietary rights abroad. Accordingly, our international competitors could obtain foreign patent protection for, and market overseas, products and technologies for which we are seeking patent protection in the United States, and may also be able to successfully enforce such patents in such foreign countries against us or against our customers.

Table of Contents

Confidentiality agreements with employees and others may not adequately prevent disclosures of trade secrets and other proprietary information.

We rely in part on confidentiality and trade secret protection to protect our confidential and proprietary information and processes. However, trade secrets are difficult to protect. We have taken measures to protect our trade secrets and proprietary information, but these measures may not be effective. We require new employees and consultants to execute confidentiality agreements upon the commencement of an employment or consulting arrangement with us. These agreements generally require that all confidential information developed by the individual or made known to the individual by us during the course of the individual's relationship with us be kept confidential and not disclosed to third parties. These agreements also generally provide that all rights in and to the inventions conceived by the individual in the course of rendering services to us shall be assigned to us. Nevertheless, employees, collaborators or consultants may still disclose or misuse our confidential information, and we may not be able to meaningfully protect such information or our trade secrets. In addition, others may independently develop substantially equivalent information or techniques or otherwise lawfully gain access to our trade secrets, and thereafter communicate this information to others without maintaining its confidentiality. Costly and time-consuming litigation could be necessary to enforce and determine the scope of our proprietary rights, and failure to obtain or maintain trade secret protection or enforce our trade secrets could adversely affect our competitive business position.

Significant litigation over intellectual property in the industry may cause us to become involved in costly and lengthy litigation, which could subject us to liability, require us to stop licensing our developed technology or force us to develop new technology.

Whether or not patents are granted to us, litigation may be necessary to enforce our IP rights, to defend against a claim of infringement of IP rights of others or to determine the validity and scope of our proprietary rights or the proprietary rights of others. Because infringement is a fact-intensive inquiry, and because patent applications in the United States and many foreign jurisdictions are typically not published until eighteen months after filing (or, in some cases, are not published until they issue as patents), we cannot be certain that we do not now, and will not in the future, infringe a third party's patent rights. We may also become party to claims by our customers to IP rights developed by us in connection with a CDP. If our customers become involved in disputes with third parties over allegations that our customers' practice of our IP rights infringes the IP rights of such third parties, it may also become necessary for us to become involved in such disputes.

Any claim, even if without merit, could be time consuming to defend, result in costly litigation, or require us to enter into licensing agreements, resulting in unexpected operating costs and reduction in our operating profit. Moreover, our opponents in any litigation may have significantly more resources with which to defend against or assert claims in the litigation. A successful claim of infringement against us in connection with the use of our technologies could force us to stop using our technologies that incorporate the infringed IP; pay substantial monetary damages or royalties; grant cross-licenses to third parties relating to our own IP; obtain a license from the owner of the infringed IP, which may not be available to us on acceptable terms or at all; or re-engineer our platform or products to avoid further IP infringement, which may be technically impossible or commercially infeasible. The occurrence of any of these eventualities could adversely affect our business. Even if we are successful in defending such a claim, litigation could also divert our resources, including our managerial and engineering resources. Any infringement claim or other litigation against or by us could have a material negative effect on our business.

Our intellectual property indemnification policies and obligations may adversely impact our business and operating results.

Any assertion by a third party asserting ownership or other rights to technology developed under our CDPs could result in our customers becoming the target of litigation and we may be bound to indemnify our customers under the

terms of our license agreements. These obligations could result in substantial expenses to us, which could have a material adverse effect on our business, financial condition and results of operations. In addition to the time and expense required for us to satisfy our support and indemnification obligations to our customers, any litigation could severely disrupt or shut down the business of our customers, which in turn could damage our relations with them and have a material adverse effect on our reputation, business, financial condition and results of operations.

Table of Contents

Risks Related to Ownership of Our Common Stock

Our stock price may be volatile, which may cause the value of our common stock to decline and subject us to securities class action litigation.

The market price of our common stock could be subject to significant fluctuations. Market prices for securities of early stage companies have historically been particularly volatile. The stock markets in general have experienced price and volume fluctuations that have affected, and continue to affect, the market prices of equity securities of many companies. A portion of most future fluctuations in our stock price will likely be related to the risk factors described in this section. However, as is the case for many companies with volatile stock prices, price fluctuations may be disproportionate, or even unrelated, to their operating performance. In the past, many companies that have experienced volatility in the market price of their stock have become subject to securities class action litigation. We may be the target of this type of litigation in the future. Securities litigation against us could result in substantial costs and divert our management's attention from other business concerns, which could seriously harm our business. Factors that could contribute to volatility in our stock price include but are not limited to the following:

- fluctuations in our financial results or outlook, or those of our customers or of companies perceived to be similar to us;

- changes in estimates of our financial results or recommendations by securities analysts;

- changes in market valuations of similar companies;

- changes in our capital structure, such as future issuances of securities or the incurring of debt;

- announcements by us or our competitors of significant contracts, acquisitions or strategic alliances; and

- litigation involving us, our general industry or both;

- additions or departures of key personnel;

- regulatory developments in the U.S., countries in Asia, and/or other foreign countries;

- investors' general perception of us; and

- general economic and political conditions in the US and globally, such as recessions, interest rate changes and international currency fluctuations.

We have incurred and will continue to incur increased costs and demands upon management as a result of complying with the laws and regulations affecting public companies, which could harm our results of operations.

As a public company, we have incurred and will continue to incur significant accounting, legal and other expenses that we did not incur as a private company, including costs associated with public company reporting requirements. We have incurred and will continue to incur costs associated with existing and evolving corporate governance requirements, including requirements under Section 404 and other provisions of the Sarbanes-Oxley Act, as well as rules implemented by the Securities Exchange Commission, or SEC, and the exchange on which we list our common stock. These rules and regulations have substantially increased our financial and legal compliance costs and may cause further increases in the future. These rules and regulations also make it more expensive for us to maintain director and officer liability insurance.

If we experience material weaknesses or otherwise fail to maintain an effective system of internal controls in the future, we may not be able to accurately report our financial condition or results of operations, which may adversely affect investor confidence in our company and, as a result, the value of our common stock.

As a public company, we are required, under Section 404 of the Sarbanes-Oxley Act, to conduct a comprehensive evaluation of our disclosure controls and procedures over financial reporting. The results of this assessment need to be included in our annual report and we are required to disclose any material weaknesses identified by our management in our internal control over financial reporting, as well as an opinion from our independent registered public accounting firm on the effectiveness of our internal control over financial reporting. A material weakness is a control deficiency or combination of

38

Table of Contents

control deficiencies that results in more than a remote likelihood that a material misstatement of annual or interim financial statements will not be prevented or detected.

We devoted significant resources to hiring personnel and compiling the system and processing documentation necessary to perform the evaluation needed to comply with Section 404 for the year ended December 31, 2013. In future years, we may need to devote more resources to Section 404 compliance, and we may not be able to complete our annual evaluations, testing and any required remediations in a timely fashion. During the evaluation and testing process, if we identify one or more material weaknesses in our internal control over financial reporting, we will be unable to assert that our internal controls are effective. Lack of effective controls could severely inhibit our ability to accurately report our financial condition or results of operations. We cannot assure you that there will not be material weaknesses and/or significant deficiencies in our internal controls in the future. If we are unable to conclude that our internal control over financial reporting is effective, or if our independent registered public accounting firm were to issue an adverse opinion on the effectiveness of our internal control over financial reporting, we could lose investor confidence in the accuracy and completeness of our financial reports, which would cause the price of our common stock to decline.

The concentration of our capital stock ownership by our executive officers, directors and 5% stockholders will limit your ability to influence corporate matters.

Our executive officers, directors, current five percent or greater stockholders and entities affiliated with them together beneficially owned approximately 73.1% of our common stock outstanding as of December 31, 2013. Entities affiliated with Redpoint Ventures, entities affiliated with CMEA Ventures and entities affiliated with U.S. Venture Partners beneficially owned approximately 16.3%, 11.8% and 9.2%, respectively, of our common stock outstanding as of December 31, 2013. This significant concentration of share ownership may adversely affect the trading price for our common stock because investors often perceive disadvantages in owning stock in companies with concentrated stock ownership. Also, these stockholders, acting together, will be able to influence our management and affairs and determine the outcome of matters requiring stockholder approval, including the election of directors and the approval of significant corporate transactions, such as mergers, consolidations or the sale of substantially all of our assets. Consequently, this concentration of ownership may have the effect of delaying or preventing a change of control, including a merger, consolidation or other business combination involving us, or discouraging a potential acquiror from making a tender offer or otherwise attempting to obtain control, even if that change of control would benefit our other stockholders.

A significant portion of our total outstanding shares may be sold into the public market at any given time, which could cause the market price of our common stock to drop significantly, even if our business is doing well.

If our existing stockholders sell, or if the market believes our existing stockholders will sell, substantial amounts of our common stock in the public market, the market price of our common stock could decline significantly. As of December 31, 2013, we had 46,486,372 shares of common stock outstanding. All of these shares can be resold at any time, subject in some cases to the volume limitations and other restrictions of Rule 144 promulgated under the Securities Act of 1933, as amended, or the Securities Act, and upon the lapse of our right of repurchase with respect to any unvested shares. Certain of our officers and directors sell shares from time to time pursuant to 10b5-1 automated sales plans, and investors may react negatively to any insiders disposing of shares of our stock.

In addition, as of December 31, 2013, the holders of 17,080,613 shares of our common stock are entitled to certain rights with respect to the registration of such shares under the Securities Act. If we register such shares of common stock, these stockholders could sell those shares in the public market without being subject to the volume and other restrictions of Rule 144.

We also registered approximately \$12.6 million shares of our common stock reserved for issuance under our equity plans. These shares can be freely sold in the public market upon issuance, subject to vesting restrictions and the lock-up restrictions described above.

If securities or industry analysts do not publish or cease publishing research or reports about us, our business or our market, or if they change their recommendations regarding our stock adversely, our stock price and trading volume could decline.

The trading market for our common stock will be influenced by the research and reports that industry or securities analysts may publish about us, our business, our market or our competitors. If any of the analysts who may cover us change their recommendation regarding our stock adversely, or provide more favorable relative recommendations about our

Table of Contents

competitors, our stock price would likely decline. If any analyst who may cover us were to cease coverage of our company or fail to regularly publish reports on us, we could lose visibility in the financial markets, which in turn could cause our stock price or trading volume to decline.

Anti-takeover provisions contained in our certificate of incorporation and bylaws, as well as provisions of Delaware law, could impair a takeover attempt.

Our amended and restated certificate of incorporation and our amended and restated bylaws contain provisions that could delay or prevent a change in control of our company. These provisions could also make it more difficult for stockholders to elect directors and take other corporate actions. These provisions include:

• staggered board of directors;

• authorizing the board to issue, without stockholder approval, preferred stock with rights senior to those of our common stock;

• authorizing the board to amend our bylaws and to fill board vacancies until the next annual meeting of the stockholders;

• prohibiting stockholder action by written consent;

• limiting the liability of, and providing indemnification to, our directors and officers;

• eliminating the ability of our stockholders to call special meetings; and

• requiring advance notification of stockholder nominations and proposals.

Section 203 of the Delaware General Corporation Law prohibits, subject to some exceptions, “business combinations” between a Delaware corporation and an “interested stockholder,” which is generally defined as a stockholder who becomes a beneficial owner of 15% or more of a Delaware corporation's voting stock, for a three-year period following the date that the stockholder became an interested stockholder.

These and other provisions in our amended and restated certificate of incorporation and our amended and restated bylaws could discourage potential takeover attempts, reduce the price that investors might be willing to pay in the future for shares of our common stock and result in the market price of our common stock being lower than it would be without these provisions.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

Facilities

Our facilities currently consist of an aggregate of approximately 146,000 square feet of office, research and development clean room space in San Jose, California, pursuant to a lease that expires in 2025. For our CDP engagements, as of December 31, 2013, we were using approximately 67% of the capacity of our clean room space in San Jose. We have historically expanded and invested in our facilities to support the growth of our CDPs and we expect to be able to continue to do so on commercially reasonable terms as we engage in new CDPs in the future. We have no reason to believe that additional space that we may need in the future will not be available on commercially reasonable terms.

ITEM 3. LEGAL PROCEEDINGS

On August 23, 2013, we received a copy of a complaint from the California Division of Labor Standards and Enforcement ("DLSE") filed by an employee in the company's research and development group claiming that the employee is owed back pay due to an incorrect classification as an exempt employee for overtime purposes. We have commenced a review of the employee's claim as well as a review of our policies regarding classification of employees for overtime purposes. On

40

Table of Contents

January 16, 2014, we participated in mediation with the attorney who represents the employee that filed the claim with the DLSE, as well as fourteen other current and former employees and contractors who are similarly situated. This mediation did not result in a settlement of the subject claims, and on February 18, 2014, the claimants filed a lawsuit against us in the United States District Court for the Northern District of California. We believe we have meritorious defenses to the claims and intend to vigorously defend against them in this regard. While we cannot predict the outcome of this matter, or of any legal or administrative proceedings related to this matter that have commenced or may be commenced in the future, we believe the amount of probable loss related to this matter will not have a material adverse effect on our business, operating results, financial condition or cash flows. Nevertheless, as of December 31, 2013, the Company accrued its best estimate of the expense associated with the matter.

From time to time, we may become involved in other legal proceedings and claims arising in the ordinary course of our business, including but not limited to legal proceedings and claims brought by employees or former employees relating to working conditions or other issues. We are not currently a party to any legal proceedings the outcome of which, if determined adversely to us, we believe would individually or in the aggregate have a material adverse effect on our business, operating results, financial condition or cash flows.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER REPURCHASE OF EQUITY SECURITIES

Market Information for Common Stock

Our common stock has been listed on The NASDAQ Global Select Market, or NASDAQ, under the symbol "IMI" since our initial public offering on November 18, 2011. The following table sets forth on a per share basis, for the periods indicated, the low and high sale prices of our common stock as reported by NASDAQ.

	Low	High
Fiscal Year Ended December 31, 2013		
First Quarter	\$8.25	\$10.69
Second Quarter	\$7.00	\$10.20
Third Quarter	\$5.46	\$7.54
Fourth Quarter	\$4.86	\$6.41
	Low	High
Fiscal Year Ended December 31, 2012		
First Quarter	\$5.01	\$9.55
Second Quarter	\$5.87	\$7.75
Third Quarter	\$6.40	\$8.00
Fourth Quarter	\$6.31	\$9.28

As of March 3, 2014, there were approximately 45 holders of record of our common stock. In addition, a substantially greater number of stockholders may be "street name" or beneficial holders, whose shares are held of record by banks, brokers and other financial institutions.

Dividend Policy

We have never declared or paid any cash dividends on our common stock. We currently intend to retain any future earnings for use in the operation and expansion of our business, and currently do not plan to declare or pay any dividends on shares of our common stock in the foreseeable future. Subject to the foregoing, the payment of cash dividends in the future, if any, will be at the discretion of our board of directors and will depend upon a number of factors, including our earnings, capital requirements, requirements under the Delaware General Corporation Law, restrictions and covenants pursuant to any credit facilities we may enter into, our overall financial condition and any other factors deemed relevant by our board of directors.

Table of Contents

Performance Graph

The following graph compares our total common stock return with the total return for (i) the NASDAQ Composite Index (^IXIC) and (ii) Philadelphia Stock Exchange Semiconductor Index (SOX) for the period from November 18, 2011 (the date our common stock commenced trading on the NASDAQ) through December 31, 2013. The figures represented below assume an investment of \$100 in our common stock at the closing price of \$9.50 on November 18, 2011 and in the NASDAQ Composite Index and Philadelphia Stock Exchange Semiconductor Index on November 18, 2011 and the reinvestment of dividends into shares of common stock. The comparisons in the table are required by the SEC and are not intended to forecast or be indicative of possible future performance of our common stock. This graph shall not be deemed "soliciting material" or to be "filed" for purposes of Section 18 of the Exchange Act or otherwise subject to the liabilities under that Section, and shall not be deemed to be incorporated by reference into any of our filings under the Securities Act or the Exchange Act.

ITEM 6. SELECTED FINANCIAL DATA

The following selected consolidated financial data should be read together with our consolidated financial statement and accompanying notes and "Management's Discussion and Analysis of Financial Condition and Results of Operations" appearing elsewhere in this Form 10-K. The selected consolidated financial data in this section is not intended to replace our consolidated financial statements and the accompanying notes. Our historical results are not necessarily indicative of our future results.

We derived the consolidated statements of operations data for 2013, 2012 and 2011 and the consolidated balance sheets data as of December 31, 2013 and 2012 from our audited consolidated financial statements appearing elsewhere in this filing. The consolidated statements of operations data for 2010 and 2009 and the consolidated balance sheets data as of December 31, 2011, 2010 and 2009 have been derived from our audited consolidated financial statements not included in this filing. The data should be read in conjunction with the consolidated financial statements, related notes, and other financial information included herein.

Non-GAAP Financial Measure

We believe that the use of adjusted EBITDA and adjusted earnings, both non-GAAP financial measures, are helpful for an investor in determining whether to invest in our common stock. We include both adjusted EBITDA and adjusted earnings in this Annual Report on Form 10-K because (i) we seek to manage our business to consistent levels of adjusted EBITDA and adjusted earnings, (ii) these measures are a key basis upon which our management assesses our operating performance, (iii) they are primary metrics investors use in evaluating companies' performance in our industry and (iv) they are factors in the evaluation of the performance of our management in determining compensation. We define adjusted EBITDA as net income (loss) less interest, provision for income taxes, depreciation and amortization expense, non-cash impairment charges, non-cash revenue adjustments as a result of common stock warrants issued to customers, derivative mark-to-market adjustments and stock-based compensation expense. We define adjusted earnings as net income (loss) less non-cash revenue adjustments as a result of common stock warrants issued to customers, derivative mark-to-market adjustments and stock-based compensation expense.

We use adjusted EBITDA as a key performance measure because we believe it facilitates operating performance comparisons from period to period by excluding potential differences caused by variations in capital structures, tax positions (such as the impact of changes in effective tax rates or fluctuations in permanent differences or discrete quarterly items), the impact of depreciation and amortization expense, the impact of non-cash impairment charges, the non-cash impact of common stock warrants issued to customers and the impact of stock-based compensation expense. We believe adjusted EBITDA and similar measures are widely used by investors, securities analysts, ratings agencies and other interested parties in our industry as a measure of financial performance and debt-service capabilities. Our use of adjusted EBITDA has limitations as an analytical tool, and you should not consider it in isolation or as a substitute for analysis of our results as reported under GAAP. Some of these limitations are:

- Adjusted EBITDA does not reflect our cash expenditures for capital equipment or other contractual commitments; Although depreciation and amortization are non-cash charges, the assets being depreciated and amortized may have to be replaced in the future, and adjusted EBITDA does not reflect cash capital expenditure requirements for such replacements;
- Adjusted EBITDA does not reflect changes in, or cash requirements for, our working capital needs;
- Adjusted EBITDA does not reflect the significant interest expense or the cash requirements necessary to service interest or principal payments on our indebtedness;
- Adjusted EBITDA does not reflect certain tax payments that may represent a reduction in cash available to us; and
- Other companies, including companies in our industry, may calculate adjusted EBITDA measures differently, which reduces their usefulness as a comparative measure.

Table of Contents

We also believe adjusted earnings and similar measures are also widely used by investors, securities analysts, ratings agencies and other interested parties in our industry as a measure of financial performance and debt-service capabilities. Our use of adjusted earnings has limitations as an analytical tool, and you should not consider it in isolation or as a substitute for analysis of our results as reported under GAAP. Some of these limitations are:

- Adjusted earnings do not reflect our cash expenditures for capital equipment or other contractual commitments;
- Adjusted earnings do not reflect changes in, or cash requirements for, our working capital needs; and
- Other companies, including companies in our industry, may calculate adjusted earnings measures differently, which reduces their usefulness as a comparative measure.

Because of these limitations, adjusted EBITDA and adjusted earnings should not be considered as a measure of discretionary cash available to us to invest in the growth of our business. When evaluating our performance, you should consider adjusted EBITDA and our adjusted earnings alongside other financial performance measures, including our net loss and other GAAP results.

The following tables present a reconciliation of adjusted EBITDA and our adjusted earnings to our net loss, the most comparable GAAP measure, for each of the periods indicated:

Adjusted EBITDA:	Years Ended December 31,				
	2013	2012	2011	2010	2009
	(in thousands)				
Net loss	\$ (8,819)	\$ (756)	\$ (30,015)	\$ (1,778)	\$ (5,254)
Non-GAAP adjustments:

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Our Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") is provided in addition to the accompanying consolidated financial statements and notes to assist readers in understanding our results of operations, financial condition, and cash flows. Our MD&A is organized as follows:

• **Overview.** Discussion of our business and overall analysis of financial and other highlights affecting the Company in order to provide context for the remainder of MD&A.

• **Strategy.** Our overall strategy.

• **Basis of Presentation.** A summary of the primary elements of our financial results.

• **Critical Accounting Estimates.** Accounting estimates that we believe are most important to understanding the assumptions and judgments incorporated in our reported financial results and forecasts.

• **Results of Operations.** An analysis of our financial results comparing the year ended December 31, 2013 to the year ended December 31, 2012.

• **Liquidity and Capital Resources.** An analysis of changes in our balance sheets and cash flows, and discussion of our financial condition and potential sources of liquidity.

The following discussion and analysis should be read in conjunction with our audited consolidated financial statements and the related notes that appear elsewhere in this Annual Report on Form 10-K. This Annual Report on Form 10-K contains "forward-looking statements" within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended, or the Exchange Act. These statements are often identified by the use of words such as "may," "will," "expect," "believe," "anticipate," "intend," "could," "should," "estimate," or "continue," and similar expressions or variations. Such forward-looking statements are subject to risks, uncertainties and other factors that could cause actual results and the timing of certain events to differ materially from future results expressed or implied by such forward-looking statements. Factors that could cause or contribute to such differences include, but are not limited to, those discussed in the section titled "Risk Factors," set forth in Part I, Item 1A of this Annual Report on Form 10-K and elsewhere in this report. The forward-looking statements in this Annual Report on Form 10-K represent our views as of the date of this Annual Report on Form 10-K. We anticipate that subsequent events and developments will cause our views to change. However, while we may elect to update these forward-looking statements at some point in the future, we have no current intention of doing so except to the extent required by applicable law. You should, therefore, not rely on these forward-looking statements as representing our views as of any date subsequent to the date of this Annual Report on Form 10-K.

Overview

We have pioneered a proprietary approach to accelerate research and development, innovation and time-to-market for the semiconductor and clean energy industries. Through paid collaborative development programs ("CDPs") with our customers, we develop proprietary technology and intellectual property ("IP") for our customers focused on advanced materials, processes, integration and device architectures. This technology enables our customers to bring optimized, high-volume manufacturing-ready integrated devices to market faster and with less risk than conventional approaches to research and development ("R&D"). We provide our customers with proprietary technology through various fee arrangements and grant them rights to associated IP, primarily through royalty-bearing licenses. Through paid CDPs and our own development, we have established a portfolio of greater than 1,200 patents and patent applications. Our proprietary approach is broadly applicable to high-volume integrated device markets, which include the markets for semiconductors, flat glass coatings and glass-based devices, solar cells, light-emitting diodes ("LEDs"), flat-panel displays, advanced batteries and other energy efficiency applications.

We were founded in 2004 and are headquartered in San Jose, California. Our total revenue increased to \$67.4 million for the year ended December 31, 2013 from \$66.8 million for the year ended December 31, 2012. Our net loss increased to \$8.8 million for the year ended December 31, 2013 from a net loss of \$0.8 million for the year ended December 31, 2012. Our backlog as of December 31, 2013 was \$56.4 million, of which \$30.4 million is scheduled to be recognized as revenue during 2014 and \$26.0 million is scheduled to be recognized as revenue in periods beyond 2014. As of December 31, 2012, we had backlog of approximately \$77.2 million. Since inception, we have incurred net losses leading to an accumulated deficit of \$110.1 million as of December 31, 2013.

Table of Contents

Strategy

Our mission is to drive our customers' success by transforming R&D and accelerating innovation in markets that derive competitive advantage from the interaction of materials science, processes, integration and device architecture. We currently target high-volume semiconductor and high-growth emerging clean energy markets, including DRAM, stand-alone non-volatile memory, embedded memory, complex logic, flat glass coatings and glass-based devices, solar cells, LEDs, displays and energy-efficiency technologies. Within these broad markets, we target customers that have track records of technological innovation, deploy significant resources and are pursuing technical advancements that are critical to their success and strategy, including ATMI, Elpida (a wholly owned subsidiary of Micron Technology), First Solar, GLOBALFOUNDRIES, Guardian Industries, Micron Technology, SanDisk, Taiwan Semiconductor Manufacturing Company ("TSMC") and Toshiba. ATMI and Elpida have commenced shipping products incorporating technology developed through our CDPs and pay us licensing and royalty fees. To date, we have received the majority of our revenue from customers in DRAM, stand-alone non-volatile memory, complex logic, solar cells, and energy-efficiency applications in flat glass coatings and glass-based devices, and we have not yet received a material amount of revenue from customers in embedded memory, LEDs, displays and other energy-efficiency technologies.

Basis of Presentation

How We Generate Revenue

Our customer engagement process generates revenue in three ways: CDP and services revenue; product revenue; and licensing and royalty revenue. CDPs are our primary engagement model with customers and are structured to result in licensing and/or royalty revenue. When we initially engage with a customer, we generate revenue from micro-CDPs, CDPs and licensing of our high productivity combinatorial ("HPC") platform. Our micro-CDPs are smaller, customer-paid programs that require significantly less investment from our customers but allow us to demonstrate the capabilities of our HPC platform to a customer without requiring them to commit to a multi-year agreement. We use these micro-CDPs to demonstrate the capabilities and value of our HPC platform to these new customers, with the objective of engaging with these customers in a full CDP. When technology developed through CDPs is incorporated in our customers' commercialized products, we generate licensing and/or royalty revenue. In certain cases, we sell HPC processing tools to our customers who pay a recurring license fee to operate those tools with our combinatorial processing capabilities.

	Years Ended December 31,		
	2013	2012	2011
	(in thousands)		
Revenue:			
CDP and services revenue	\$45,744	\$47,468	\$36,733
Product revenue	6,726	3,495	2,717
Licensing and royalty revenue	14,936	15,864	14,380
Total revenue	\$67,406	\$66,827	\$53,830

CDP and services revenue. CDP revenue may include payments for full time equivalent employees, milestone payments, subscription payments for dedicated and shared workflow tools used in the CDP and reimbursed payments for consumables and outside services from third parties. Individual CDPs typically range from one to three years. Services revenue outside of CDPs is substantially comprised of support and maintenance fees and extended warranty agreements. CDP and services revenue is recognized in a manner consistent with activities performed. During the year ending December 31, 2014, as a result of certain CDPs being completed in 2014, we expect a decrease in CDP and services revenue.

Product revenue. Product revenue consists of sales of our workflow hardware and embedded software. In support of our business strategy, we selectively sell our proprietary tools to increase opportunities for CDPs and licensing fees

and royalties. As our other revenue streams increase we expect our product revenue to decrease as a percentage of our overall revenue. Product revenue is recognized upon shipment (title and risk of loss passed to the customer), and customer acceptance, if required, is achieved.

Licensing and royalty revenue. Licensing and royalty revenue consists of licensing fees and royalties for granting our customers rights to our proprietary technology and IP. Specifically, this includes licensing the HPC capabilities of our workflows, licensing our informatics and analysis software, and licensing fees and royalties on products commercialized by our customers that incorporate technology developed through our CDPs. In certain

Table of Contents

instances, minimum license fees and royalties may be guaranteed by customer contracts and are recognized as revenue ratably over the related periods. During 2012, in connection with a CDP, we recognized revenue on the sale of intellectual property that was developed during the term of the CDP. Over the long term, we expect licensing and royalty revenue to be an increasing and significant component of our revenue. During the three months ending March 31, 2014, we expect an increase in licensing and royalty revenue attributable to an accelerated payment from a customer in connection with an amended CDP agreement.

Our revenue growth has been primarily driven by the adoption of our collaboration model and HPC platform leading to new CDPs, strategic sales of our proprietary workflow tools and licensing and royalty revenue from products commercialized by our customers that incorporate technology developed through our CDPs. Successful CDPs result in the commercialization of products whereby we receive licensing fees and royalties over the course of the respective product cycles. Certain of our semiconductor customers have already commenced shipping products incorporating technology developed through our CDPs, which generate associated licensing and royalty revenue. Our revenue mix may vary from quarter to quarter as we enter into new CDPs and related customer arrangements, existing CDPs are completed or expanded and licensing and royalty arrangements generate revenue.

Prior to entering into a new CDP, we negotiate licensing fees and royalty rates for technology to be developed in CDPs. The fees and rates are negotiated with each customer on the basis of multiple factors including the size of the servable market of the technology to be developed, the value contribution of the technology to the customer's product, and the anticipated overall margin structure of the customer's product. Licensing fees and royalty rates are set for each CDP-developed technology. While royalty rates vary, when working with device manufacturers, we typically target 1-2% of their projected end-product revenue for each CDP-developed technology. When working with suppliers to device manufacturers, we typically target higher royalty rates depending on the anticipated value contribution of the technology to their product. Licensing fees and royalty rates are structured in a variety of ways including fixed quarterly fees, percentage of revenue and fee per product.

Our proprietary platform was initially created to address critical development challenges in the semiconductor industry and we began generating revenue in 2006. The applicability of our platform to address similar challenges in adjacent vertical markets such as clean energy markets has created, and we believe will continue to create, new market opportunities for us. We began generating revenue from customers in the clean energy industry during the year ended December 31, 2010, and continued to generate revenue from customers in the clean energy industry through 2013. We believe collaborating with companies in the clean energy industry will accelerate the long-term growth of our business. The following table sets forth our revenue by customer end market:

	Years Ended December 31,		
	2013	2012	2011
	(in thousands)		
Semiconductor	\$46,905	\$55,181	\$49,655
Clean energy	20,501	11,646	4,175
Total	\$67,406	\$66,827	\$53,830

Key Financial Metrics

We monitor the key financial metrics set forth below to help us evaluate growth trends, establish budgets, measure the effectiveness of our sales and marketing efforts, manage our human resources and assess operational efficiencies. Revenue growth and mix. We monitor revenue from CDPs for existing and new customers, applications and the resulting licensing fees and royalties. As our customer engagements progress, we expect licensing and royalty revenue to be an increasing and significant component of our revenue. We are broadening our development and sales efforts by expanding CDPs in the semiconductor industry resulting from the adoption of our HPC platform for technology development and engaging in CDPs with companies in the clean energy industry as we believe this will accelerate the future growth of our business.

Backlog. We monitor our backlog as it represents the aggregate value of contracted business not yet recognized. Our backlog consists of future revenue that our customers are contractually committed to pay in our CDPs and guaranteed licensing and royalty revenue for our developed technology and intellectual property. Our backlog as of December 31, 2013 was \$56.4 million, of which \$30.4 million is scheduled to be recognized as revenue during 2014, and \$26.0

million is scheduled to be recognized as revenue in future periods beyond 2014.

Adjusted EBITDA. We monitor our adjusted EBITDA to measure the profitability of our business. We use adjusted EBITDA as a key performance measure because we believe it facilitates operating performance comparisons from period to period by excluding potential differences caused by variations in capital structures, tax positions (such as the impact of changes

Table of Contents

in effective tax rates or fluctuations in permanent differences or discrete quarterly items), interest expense or the cash requirements necessary to service interest or principal payments on our indebtedness, the impact of depreciation and amortization expense, the non-cash impact of the mark-to-market of our derivative liability as a result of the Symyx asset purchase transaction and common stock warrants issued to customers and the impact of stock-based compensation expense. See "Selected Consolidated Financial Data—Non-GAAP Financial Measure" for a reconciliation of adjusted EBITDA to our net income (loss), the most comparable GAAP measure.

Adjusted earnings. We monitor our adjusted earnings to measure the profitability of our business. We use adjusted earnings as a performance measure because we believe it facilitates operating performance comparisons from period to period by excluding potential differences caused by variations in capital structures, the non-cash impact of the mark-to-market of our derivative liability as a result of the Symyx asset purchase transaction and common stock warrants issued to customers and the impact of stock-based compensation expense. See "Selected Consolidated Financial Data—Non-GAAP Financial Measure" for a reconciliation of our adjusted earnings to our net income (loss), the most comparable GAAP measure.

Factors Affecting our Performance

Reliance on our customers' success. Our success is tied to our customers' ability to successfully commercialize the products that incorporate technology developed through CDPs. We believe that we significantly improve our customers' ability to succeed in their end markets, but if they are unable to do so, the longer-term licensing and royalty revenue that we expect may be delayed or may not materialize. We attempt to manage this risk by carefully selecting projects and only participating in opportunities that we deem to have significant potential for long-term success.

Exposure to semiconductor memory and solar power end markets. Our performance is linked to the end markets in which our customers operate. Certain of these markets, such as the semiconductor memory markets and the solar panel market, have historically shown significant price volatility as a result of imbalances in supply and demand. As such, these markets have been traditionally challenging for participants. We attempt to manage this end market risk by participating in multiple end markets and by selecting customers that we believe will be successful in those markets.

Revenue mix and royalty rates. Our revenue from CDPs and product sales vary from contract to contract depending on the customer's requirements and the scope of the collaboration. The gross profit from CDPs and product sales may vary based on the size and scope of the contract. Our royalty rates vary from contract to contract depending on multiple factors, including the industry, the scope of our collaboration, and the degree to which our IP is central to the development of a given product. Individual royalty opportunities vary depending on the end market size and the duration of the specific end product life cycle. The gross profit from licensing and royalty revenue may vary based on the size and scope of the contract. We target an average gross margin contribution that is consistent across the industries and end markets we serve.

Long sales cycles. Our sales cycles are long, and we commit significant resources to and incur significant expenses for a project before a potential customer commits to use our HPC platform or CDPs. To be successful, we must establish contact with potential customers, often with senior management or executive officers, and educate them about the benefits of our HPC platform. Our sales cycles to date have typically ranged from 9 to 24 months and may be even longer in the future. Investment of time and resources in a particular customer engagement that does not ultimately result in material revenue will adversely affect our revenue and results of operations.

Customer concentration. Due to the concentrated nature of manufacturers in the DRAM, flash memory and complex logic markets, our revenue is and may continue to be concentrated to key high-volume customers. For example, our four largest customers in the year ended December 31, 2013, three of which are in the semiconductor industry, accounted for 55% of our revenue. We believe there is an opportunity to expand our engagements with these customers into new applications over time. In addition, because our platform is broadly applicable to semiconductors, flat glass coatings and glass-based devices, solar cells, LEDs, flat-panel displays, advanced batteries and other energy-efficient technologies, we believe we have significant opportunities to engage with a broad range of customers.

Related Party Transactions. Some of our customers and other business partners hold a significant stake in our capital stock. Related party transactions disclosed in our financial statements accounted for \$12.8 million and \$21.1 million, or 19.0% and 31.6%, respectively, of our revenue for the years ended December 31, 2013 and 2012. ATMI, which beneficially owns approximately 5.6% of our capital stock as of December 31, 2013, accounted for \$8.4 million and

\$16.5 million, or 13.0% and 24.7%, respectively, of our revenue for the years ended December 31, 2013 and 2012. We believe that the transactions and agreements that we have entered into with related parties are on terms that are at least as favorable as could reasonably have been obtained at such time from third parties. However, these relationships could create, or appear to create, potential conflicts of interest when our board of directors is faced with decisions that could have different implications for us and our related parties or their affiliates. In addition, conflicts of interest may arise between us and our related parties and their affiliates. The appearance of conflicts, even if such conflicts do not materialize, might adversely affect the public's perception

Table of Contents

of us, as well as our relationship with other companies and our ability to enter into new relationships in the future, including new CDPs with competitors of such related parties, which could have a material adverse effect on our ability to do business.

Warrants Issued in Connection with a CDP

In March 2010, in connection with a CDP, we issued contingent warrants to two customers to purchase an aggregate of up to 822,368 shares of our common stock at a cash exercise price of \$6.08288 per share. The exercise price was equal to the price of the then-most recent sale of preferred stock. These warrants become exercisable for four months after an election by the holders to license technology developed through the associated CDP. If either of the customers elect to license this technology, we will record a one-time, non-cash charge based on the fair value of these warrants as measured on the date of election against any revenue derived from these agreements. The fair value will be determined using the Black-Scholes option pricing model and may be significant. This election is available to the customers through May 2014. Had the election been made on December 31, 2013 the fair value of these warrants would have been \$20,000.

In June 2011, in connection with a CDP, we issued a fully vested and exercisable warrant to a customer to purchase 411,000 shares of our common stock at a cash exercise price of \$8.30824 per share. The exercise price was equal to the price of the then-most recent sale of preferred stock. This warrant was fully exercised in connection with our initial public offering in November 2011. The fair value of the warrant as measured on the date of grant using the Black-Scholes options pricing model was \$312,000 and was recognized as a reduction of revenue derived from the agreement during the year ended December 31, 2011.

Cost of Revenue and Operating Expenses**Cost of Revenue**

The following table sets forth our cost of revenue by revenue category:

	Years Ended December 31,		
	2013	2012	2011
	(in thousands)		
Cost of revenues:			
Cost of CDP and services revenue	\$29,063	\$26,492	\$23,761
Cost of product revenue	3,175	1,635	953
Cost of licensing and royalty revenue	247	276	755
Total cost of revenues	\$32,485	\$28,403	\$25,469

Our cost of revenue is variable and depends on the product mix and type of revenue earned in each period relating to our customer programs. As customers commercialize products that incorporate technology developed through our CDPs, we expect our cost of revenue to decrease as a percentage of total revenue when licensing and royalty revenue become an increasing component of our revenue. As a result of our asset purchase transaction with Symyx Technologies, Inc. ("Symyx"), the amortization of acquired patents is being recorded in cost of revenue.

Cost of CDP and services revenue. Our cost of CDP and services revenue is primarily comprised of salaries and other personnel-related expenses (including stock-based compensation) for our collaborative research and development scientists, engineers and development fab process operations employees. Additionally, our cost of revenue includes costs of wafers, targets, materials, program-related supplies, third-party professional fees and depreciation of equipment used in CDPs.

Cost of product revenue. Our cost of product revenue primarily includes our cost of products sold. Our cost of product revenue will fluctuate based on the type of product and configuration sold. Cost of product revenue is recognized upon product shipment and customer acceptance, if required. The variability in cost of product revenue as a percentage of revenue is related to the quantity and configuration of products sold during the period.

Cost of licensing and royalty revenue. Our cost of licensing and royalty revenue prior to January 1, 2012 included license fees paid to Symyx. As part of our completion of the Symyx asset purchase transaction in November 2011, in connection with our initial public offering, we no longer have an obligation to pay licensing fees to Symyx for any

period on or after January 1, 2012. In 2012 and 2013, our cost of licensing and royalty revenue has been, and we expect will continue to be, primarily comprised of the amortization of acquired patents and licensing obligations.

Table of Contents**Research and Development**

Our R&D expenses consist of costs incurred for development and continuous improvement of our HPC platform, expansion of software capabilities and application research and development that are not associated with customer programs. R&D costs include personnel-related expenses (including stock-based compensation expenses) for our technical staff as well as consultant costs, parts and prototypes, wafers, chemicals, supply costs, facilities costs, utilities costs related to laboratories and offices occupied by technical staff, depreciation on equipment used by technical staff, and outside services, such as machining and third-party R&D costs. Overhead costs that are not allocated to a customer program are recognized as expenses within R&D. We expect our research and development expense to increase modestly in absolute dollars in the near-term periods as we continue to devote resources to develop and improve our HPC platform and extend the applicability of our platform to a broader set of applications within the industries we serve.

Sales and Marketing

Our sales and marketing expenses consist primarily of personnel-related costs (including stock-based compensation) for our sales and marketing employees, as well as payments of commissions to our sales employees, facility costs and professional expenses. Professional expenses consist of external website and marketing communication consulting costs and market research. We expect sales and marketing expense to remain relatively flat in absolute dollars in the near-term periods.

General and Administrative

General and administrative expenses consist primarily of personnel-related costs (including stock-based compensation) as well as professional services and facilities costs related to our executive, finance, legal, human resources, management information systems and information technology functions. Professional services consist of outside accounting, information technology, consulting and legal costs. We also incur significant accounting and legal costs related to compliance with rules and regulations enacted by the Securities and Exchange Commission, including the additional costs of achieving and maintaining compliance with Section 404 of the Sarbanes-Oxley Act, as well as additional insurance, investor relations and other costs associated with being a public company. We expect that general and administrative expense will increase modestly in absolute dollars in the near-term periods.

Interest (Expense) Income, net

Interest expense historically consisted of interest accrued on our note payable to Symyx in connection with the Symyx asset purchase transaction that closed in November 2011, which was paid in full in May 2013 with a credit facility from Silicon Valley Bank. Interest expense after May 2013 consists primarily of interest accrued on our credit facility, which was converted in November 2013 to a three year note payable with Silicon Valley Bank. Interest income represents interest earned on our cash, cash equivalents and short-term investments. We expect interest income will vary each reporting period depending on our average investment balances during the period and market interest rates.

Other Income (Expense), net

Other income consists of municipal economic development grant proceeds. Prior to 2012, other income (expense), net also consists of the change in fair value of our preferred stock warrants and derivative liability and other income. Prior to the exercise of the preferred stock warrant we issued in connection with a line of credit, we had classified the warrant as a liability and remeasured it to fair value at each balance sheet date with the corresponding gain or loss from the adjustment recorded as other income (expense), net. Following the exercise of the warrant in connection with our initial public offering in November 2011, the warrant is no longer outstanding and will not be remeasured at each balance sheet date. In connection with entering into the Symyx asset purchase transaction we recorded a derivative liability representing the value of the guaranteed return to Symyx and reimbursement of 50% of the underwriting discounts and commissions payable in connection with our initial public offering. We adjusted the fair value of the derivative liability to market value at each balance sheet date with the final remeasurement occurring upon the consummation of our initial public offering that closed in November 2011 with the change in the market value of the derivative liability recorded in other income (expense), net. Effective as of the Company's initial public offering in November 2011 these preferred stock warrants and derivative liability are no longer outstanding.

Provision for Income Taxes

We are subject to taxes in the United States as well as other tax jurisdictions or countries in which we conduct business. Earnings from our non-U.S. activities are subject to local country income tax and may be subject to current U.S. income tax. To date, we have incurred net losses and have not recorded any U.S. federal income tax benefits as these losses have been offset by valuation allowances. As of December 31, 2013, we had net operating loss carryforwards for federal and state income tax purposes of approximately \$52.0 million and \$49.2 million, respectively. Of these amounts, \$13.9 million and

Table of Contents

\$13.1 million, respectively, represent federal and state tax deductions from stock-based compensation which will be recorded as an adjustment to additional paid-in capital when they reduce taxes payable. In addition, we had \$6.4 million in U.S. federal R&D credit and \$6.9 million in California R&D credit carryforwards to offset future income tax liabilities. Our ability to use our net operating loss carryforwards to offset future taxable income and our ability to use our tax credit carryforwards to offset future income tax liabilities may be subject to certain limitations arising from "ownership changes" within the meaning of Section 382 of the Internal Revenue Code.

Planned Restructuring

During February 2014, and after experiencing a reduced level of CDP activity with two of our largest customers from 2013, we instituted a reduction in work force, which is anticipated to be completed during the first quarter of 2014, as part of an overall plan to reduce our cost structure. The reduction in force constitutes approximately 18% of our workforce. As a result of the reduction in force, we expect to incur total expenses relating to termination benefits of approximately \$1.1 million, which primarily represents cash expenditures we expect to pay out over the next three months. We expect to record these charges during the three months ending March 31, 2014.

Critical Accounting Policies and Estimates

Our consolidated financial statements have been prepared in conformity with generally accepted accounting principles in the United States and include our accounts and the accounts of our wholly-owned subsidiaries. The preparation of our consolidated financial statements requires our management to make estimates, assumptions and judgments that affect the reported amounts of assets and liabilities and disclosures for contingent assets and liabilities as of the date of the financial statements, and the reported amounts of revenue and expenses during the applicable periods.

Management bases its estimates, assumptions and judgments on historical experience and on various other factors that are believed to be reasonable under the circumstances. Different assumptions and judgments would change the estimates used in the preparation of our consolidated financial statements which, in turn, could change the results from those reported. Our management evaluates its estimates, assumptions and judgments on an ongoing basis.

The critical accounting policies requiring estimates, assumptions and judgments that we believe have the most significant impact on our consolidated financial statements are described below.

Revenue Recognition

We generate revenue from three principal sources: CDPs and other services, which also includes other R&D services and product maintenance and support; product sales; and technology licensing and/or sales and royalty fees. It is possible for our customers to work with us across multiple areas of our business, and certain of our customer arrangements involve the delivery or performance of multiple products, services or licenses. For example, product sale arrangements include product maintenance and support, and CDPs and other R&D services include licensing of technology and may also include sales of products or developed technology.

For multiple-element transactions entered into on or after January 1, 2011, we recognize revenue using estimated selling prices of the delivered goods and services. We have not established VSOE for the determination of estimated selling price of elements, and since third-party evidence is not available for those elements where vendor-specific objective evidence of selling price cannot be determined, we evaluate factors to determine estimated selling prices ("ESP") for all other elements. In multiple-element arrangements where hardware and software are sold as part of the solution, revenue is allocated to recognize hardware and software using the relative selling prices of each of the deliverables in the arrangement.

CDP and services revenue - We enter into CDPs with customers under which we conduct R&D activities jointly with the customer. These agreements specify minimum levels of research effort required to be performed by us. Payments received under the agreements are not refundable if the research effort is not successful. Historically, we have not provided any refunds under these arrangements.

We retain rights to certain elements of technology developed during the course of performance, which the customer has an option to license in the future under the terms defined in the agreement. We typically recognize revenue from these arrangements on a time and materials basis. Most arrangements with customers have fixed monthly fees and requirements to provide regular reporting of R&D activities performed. Payments received prior to performance are deferred and recognized as revenue when earned over future performance periods.

Product maintenance and support services revenue is included in CDP and services revenue. These services entitle customers to receive product updates and enhancements or technical support and maintenance, depending on the offering. The related revenue is recognized ratably over the period the services are delivered. We do not have vendor-specific objective evidence of selling price for our product maintenance and support services.

Table of Contents

Product revenue - We recognize revenue from the sale of products generally once delivery has occurred (title and risk of loss have passed to the customer), and customer acceptance, if required, has been achieved.

Licensing and royalty revenue - We recognize revenue for licenses to IP when earned pursuant to the terms of the agreements. Time-based license revenue is recognized ratably over the license term. Sales of intellectual property or developed technology are recognized upon the transfer of ownership. License and royalty revenue that becomes triggered by specific customer actions, such as exercise of a license option or by sales volume, is recognized when they occur based on royalty reports or other information received from the licensee, generally one quarter in arrears. Minimum and prepaid royalties and license fees are recognized ratably over the related periods. Our product sales include software that is considered essential to the product's functionality. We also sell software with advanced features that can be used independent of products sold or in conjunction with products sold, which is considered non-essential to the product's functionality. Software related revenue is included in licensing and royalty revenue and is recognized ratably over the license period once delivered.

Stock-Based Compensation

We recognize compensation costs related to stock options and shares of restricted stock granted to employees based on the estimated fair value of the awards on the date of grant, net of estimated forfeitures. We estimate the grant date fair value for stock options, and the resulting stock-based compensation expense, using the Black-Scholes option-pricing model. The grant date fair value of the stock-based awards is generally recognized on a straight-line basis over the requisite service period, which is generally the vesting period of the respective awards.

The fair value of the awards granted are calculated using the Black-Scholes option valuation model, which requires the use of highly subjective and complex assumptions which determine the fair value of share-based awards, including the expected term and the price volatility of the underlying stock. These assumptions include:

Expected Term - The expected term represents the period that the stock-based awards are expected to be outstanding. For option grants that are considered to be "plain vanilla," we used the simplified method to determine the expected term as provided by the SEC. The simplified method calculates the expected term as the average of the time-to-vesting and the contractual life of the options.

Expected Volatility - The expected volatility is derived from historical volatilities of several unrelated, publicly listed peer companies over a period approximately equal to the expected term of the award because we have limited information on the volatility of our common stock since we have a limited trading history. When making the selections of our industry peer companies to be used in the volatility calculation, we considered the size, operational and economic similarities to our principal business operations.

Expected Dividend Rate - The expected dividend rate was assumed to be zero as we have never paid dividends and have no current plans to do so.

Risk-Free Interest Rate - The risk-free interest rate is based on the U.S. Treasury yield in effect at the time of grant for zero coupon U.S. Treasury notes with maturities approximately equal to the expected term of the awards.

In addition to the assumptions used in the Black-Scholes option-pricing model, we must also estimate a forfeiture rate to calculate the stock-based compensation for our awards. Our forfeiture rate is based on an analysis of our actual forfeitures. We will continue to evaluate the appropriateness of the forfeiture rate based on actual forfeiture experience, analysis of employee turnover and other factors. Quarterly changes in the estimated forfeiture rate can have a significant impact on our stock-based compensation expense as the cumulative effect of adjusting the rate is recognized in the period the forfeiture estimate is changed. If a revised forfeiture rate is higher than the previously estimated forfeiture rate, an adjustment is made that will result in a decrease to the stock-based compensation expense recognized in the financial statements. If a revised forfeiture rate is lower than the previously estimated forfeiture rate, an adjustment is made that will result in an increase to the stock-based compensation expense recognized in the financial statements.

We will continue to use judgment in evaluating the expected volatility, expected terms and forfeiture rates utilized for our stock-based compensation calculations on a prospective basis. As we continue to accumulate additional data related to our common stock and stock option exercises, we may have refinements to the estimates of our expected volatility, expected terms and forfeiture rates, which could materially impact our future stock-based compensation expense.

In valuing our common stock equity grants prior to our initial public offering in November 2011, we determined a business enterprise value of our company by taking a weighted combination of the enterprise values calculated under two valuation approaches, an income approach and a market approach. The income approach estimates the present value of future estimated cash flows, based upon forecasted revenue and costs. These future cash flows are discounted to their present values using a discount rate which is derived from an analysis of the cost of capital of comparable publicly traded companies in the

Table of Contents

same industry or similar lines of business as of each valuation date and is adjusted to reflect the risks inherent in the projected cash flows. The market approach estimates the fair value of a company by applying market multiples of comparable publicly traded companies in the same industry or similar lines of business which are based on key metrics implied by the enterprise values or acquisition values of the comparable publicly traded companies. The results of the income approach and the market approach were then weighted evenly to determine the fair value of our business. This fair value was then allocated to each of our classes of stock according to assumptions made by our board of directors regarding the likelihood of various liquidity events and an analysis of the rights and preferences of our various securities.

As of December 31, 2013 we had \$11.5 million of unrecognized stock-based compensation expense, net of estimated forfeitures, that is expected to be recognized over a weighted average period of 2.8 years. In future periods, our stock-based compensation expense is expected to increase as a result of our existing unrecognized stock-based compensation to be recognized as these awards vest and as we issue additional stock-based awards to attract and retain employees.

The intrinsic value of all outstanding awards as of December 31, 2013 was \$13.2 million based on the \$4.92 per share closing sale price for our common stock on December 31, 2013.

Revenue

Our revenue increased by \$0.6 million, or 1%, to \$67.4 million during the year ended December 31, 2013 from \$66.8 million during the year ended December 31, 2012 due to increases in product revenue that were partially offset by decreases in both CDP and services and licensing and royalty revenue.

CDP and services revenue decreased by \$1.7 million, or 4%, to \$45.7 million during the year ended December 31, 2013 from \$47.5 million during the year ended December 31, 2012. This decrease was primarily attributable to a \$14.2 million decrease in revenue from the scheduled completion and reduction of CDP and service agreements. This is partially offset by \$4.2 million in revenue derived from the extension and expansion of existing customer engagements, combined with \$8.3 million in revenue derived from new customer engagements. Of the growth from the new customer engagements \$7.5 million in revenue was derived from two CDPs.

Product revenue increased by \$3.2 million, or 92%, to \$6.7 million during the year ended December 31, 2013 from \$3.5 million during the year ended December 31, 2012. This increase was attributable to the configuration and number of workflow sales that were completed during the year ended December 31, 2013.

Licensing and royalty revenue decreased by \$0.9 million, or 6%, to \$14.9 million during the year ended December 31, 2013 from \$15.9 million during the year ended December 31, 2012. This decrease was primarily attributable to a \$4.4 million reduction in scheduled minimum license fees guaranteed by customer contracts, which was partially offset by a \$3.4 million increase in minimum license fees from new and existing customer contracts.

The following table presents revenue by geographic region (based on invoiced locations) during the years ended December 31, 2013 and 2012 in dollars (in thousands) and as a percentage of revenue for the periods presented:

Table of Contents

	Years Ended December 31,					
	2013		2012			
	Revenues	% of Revenues	Revenues	% of Revenues		
	(in thousands)		(in thousands)			
United States	\$47,752	71	% \$51,045	76		%
Japan	12,691	19	% 13,594	20		%
APAC other	2,958	4	% 2,066	4		%
Europe and Middle East	4,005	6	% 122	—		%
Total	\$67,406	100	% \$66,827	100		%

Cost of Revenue

Cost of revenue increased by \$4.1 million, or 14%, to \$32.5 million during the year ended December 31, 2013 from \$28.4 million during the year ended December 31, 2012. This change is a result of a \$2.3 million increase in direct labor, materials and other costs associated with CDP programs, including a \$1.0 million inventory reserve for parts not associated with a bill of material and having no alternative use and a \$1.5 million increase in direct product costs consistent with increased product revenue.

Gross Margin

Our gross profit as a percentage of net revenues, or gross margin, has been and will continue to be affected by a variety of factors, including the mix of CDP and services revenue, product revenue, and licensing and royalty revenue recognized during the period. We achieve a higher gross margin on licensing and royalty revenue as compared to CDP and services and product revenue.

Gross margin was 51.8% during the year ended December 31, 2013 compared to 57.5% for the year ended December 31, 2012. This decrease is primarily attributable to the decreased CDP and services revenue relative to the cost of sales to support these customer engagements. To the extent that we are successful in growing our revenue and increasing licensing and royalty revenue as a percentage of revenue we expect our gross margins to increase as a percentage of total revenue.

Research and Development

R&D expenses increased by \$2.7 million, or 12%, to \$24.5 million during the year ended December 31, 2013 from \$21.8 million during the year ended December 31, 2012. The change is primarily attributable to \$2.4 million in higher personnel costs as a result of increased headcount, costs incurred and accrued related to the employee classification matter, as discussed in Note 5 to our consolidated financial statements in this Form 10-K, and higher stock-based compensation expense, as well as \$0.8 million in engineering parts and other expenses associated with new application development. These costs were partially offset by a \$0.5 million decrease in depreciation expense due to an asset impairment expense related to the retirement of assets previously supporting new application development during the year ended December 31, 2012. Research and development expense included stock-based compensation of \$1.3 million and \$0.9 million during the years ended December 31, 2013 and 2012, respectively.

Sales and Marketing

Sales and marketing expenses increased by \$1.0 million, or 19%, to \$6.5 million during the year ended December 31, 2013 from \$5.4 million during the year ended December 31, 2012. The change is primarily due to higher personnel costs related to increased wages, stock-based compensation and other related benefits. Sales and marketing expense included stock-based compensation of \$1.2 million and \$0.8 million during the years ended December 31, 2013 and

2012, respectively.

General and Administrative

General and administrative expenses increased by \$1.1 million, or 10%, to \$12.0 million during the year ended December 31, 2013 from \$10.9 million during the year ended December 31, 2012. This increase is primarily attributable to \$1.2 million in higher personnel costs related to increased headcount, wages, stock-based compensation and other related benefits. These costs are partially offset by a \$0.1 million decrease in professional fees and other administrative expenses. General and administrative expense included stock-based compensation of \$1.6 million and \$1.0 million during the years ended December 31, 2013 and 2012, respectively.

58

Table of Contents

(Loss) Income from Operations

Our operating loss increased by \$8.3 million, to an operating loss of \$8.0 million during the year ended December 31, 2013 from an operating income of \$0.3 million during year ended December 31, 2012. To the extent we are successful in growing our revenue and increasing licensing and royalty revenue as a percentage of our total revenue, and if our expenses increase at a slower rate than our revenue, we expect that our income from operations will increase in the future. Our operating expenses increased by \$4.8 million to \$43.0 million during the year ended December 31, 2013 from \$38.1 million during the year ended December 31, 2012. We expect operating expenses to increase modestly in absolute dollars in the near-term periods as we continue to strategically invest in research and development and capital resources.

Interest Expense, net

On May 31, 2013, we entered into a loan and security agreement with Silicon Valley Bank (“SVB”) and repaid the remaining principal and accrued interest under the secured promissory note that we issued to Symyx in November 2011.

Interest expense, net decreased by \$0.2 million to \$0.8 million during the year ended December 31, 2013 from \$1.0 million during the year ended December 31, 2012 and is primarily comprised of interest expense associated with our note payable to Symyx and to a lesser extent interest on our new credit facility with SVB. On November 29, 2013, we converted our credit facility with SVB into a term loan with a fixed interest rate of 3.25%.

Other Income, net

Other income, net for the years ended December 31, 2013 and 2012 consists of municipal development grant proceeds and foreign exchange gains and losses that were not significant during either period.

Income Tax Provision

Provision for income taxes during the years ended December 31, 2013 and 2012 consisted of income taxes on our foreign entities and were not significant during either period.

Net Loss

Our net loss increased by \$8.1 million, to a net loss of \$8.8 million during the year ended December 31, 2013 from a net loss of \$0.8 million during the year ended December 31, 2012. The difference between operating income and net loss during the year ended December 31, 2013 is primarily comprised of interest expense associated with our note payable to Symyx and interest on our credit facility and subsequently term loan with SVB.

Revenue

Our revenue increased by \$13.0 million, or 24%, to \$66.8 million during the year ended December 31, 2012 from \$53.8 million during the year ended December 31, 2011 due to increases in CDP and services revenue, product revenue and licensing and royalty revenue.

CDP and services revenue increased by \$10.7 million, or 29%, to \$47.5 million during the year ended December 31, 2012 from \$36.7 million during the year ended December 31, 2011. This increase was primarily attributable to \$14.9 million in revenue derived from the extension and expansion of existing customer engagements and new customer engagements that commenced during the year ended December 31, 2012. These increases include a non-recurring amount of \$0.8 million related to the expiration of a customer's purchase option and a performance incentive in the amount of \$0.8 million. Partially offsetting these increases is a \$4.2 million decrease in revenue from the scheduled completion and reduction of government service contracts and other CDP and service agreements. Of the growth from existing and new customer engagements, \$10.8 million in revenue was derived from two CDPs.

Product revenue increased by \$0.8 million, or 29%, to \$3.5 million during the year ended December 31, 2012 from \$2.7 million during the year ended December 31, 2011. This increase was attributable to the shipment of elements of workflow hardware and embedded software that was completed during the year ended December 31, 2012.

Licensing and royalty revenue increased by \$1.5 million, or 10%, to \$15.9 million during the year ended December 31, 2012 from \$14.4 million during the year ended December 31, 2011. This increase was primarily attributable to the purchase of developed technology by one of our clean energy customers during the three months ended December 31, 2012 combined with an increase in scheduled minimum license fees guaranteed by customer contracts, which was partially offset by a decrease in minimum license fees guaranteed by other customer contracts.

The following table presents revenue by geographic region (based on invoiced locations) during the years ended December 31, 2012 and 2011 in dollars (in thousands) and as a percentage of revenue for the periods presented:

Table of Contents

	Years Ended December 31,					
	2012		2011			
	Revenues	% of Revenues	Revenues	% of Revenues		
	(in thousands)		(in thousands)			
United States	\$51,045	76	% \$35,573	66		%
Japan	13,594	20	% 15,148	28		%
APAC other	2,066	4	% 2,934	5		%
Europe and Middle East	122	—	% 175	1		%
Total	\$66,827	100	% \$53,830	100		%

Cost of Revenue

Cost of revenue increased by \$2.9 million, or 12%, to \$28.4 million during the year ended December 31, 2012 from \$25.5 million during the year ended December 31, 2011. This change is directly attributable to increased CDP and services revenue and product revenue recognized from new and ongoing customer engagements, which resulted in a \$2.7 million increase in direct labor, materials and other costs associated with these programs, including a \$0.3 million asset impairment expense related to retired assets previously supporting a customer CDP program, and a \$0.7 million increase in direct product costs consistent with increased product revenue. This increase was partially offset by a decrease in cost of licensing and royalty revenue from the elimination of royalty payments to Symyx in connection with the Symyx asset purchase agreement that closed in November 2011, which eliminated our obligation to pay Symyx a 5% royalty on all HPC-derived revenue. The elimination of the royalty obligation was partially offset by the amortization of Symyx-acquired IP and licensing obligations that collectively approximated \$0.8 million during the year ended December 31, 2012.

Cost of revenue as a percentage of revenue decreased from 47% during the year ended December 31, 2011 to 43% during the year ended December 31, 2012. This decrease is primarily related to the elimination of royalty payments to Symyx in connection with the Symyx asset purchase agreement that closed in November 2011, which eliminated our obligation to pay Symyx a 5% royalty on all HPC-derived revenue and growth in CDP and services and licensing and royalty revenue. Furthermore, to the extent we are successful in growing our revenue and increasing licensing and royalty revenue as a percentage of revenue we expect our cost of revenue as a percentage of total revenue to decline.

Research and Development

R&D expenses increased by \$2.6 million, or 13%, to \$21.8 million during the year ended December 31, 2012 from \$19.3 million during the year ended December 31, 2011. The change is primarily attributable to \$3.7 million in higher personnel costs as a result of increased headcount and higher stock-based compensation expense and \$0.6 million in asset impairment expense related to retired assets previously supporting platform prototypes for new application development. These costs were partially offset by a \$0.8 million decrease in facility and occupancy-related costs due in part to the elimination of costs from our prior facility, which ended in October 2011 as well as a decrease in R&D expenses due to an increase in the use of equipment for CDPs resulting in an increase in the allocation of expenses to cost of revenue during the year ended December 31, 2012 as compared to the year ended December 31, 2011.

Sales and Marketing

Sales and marketing expenses increased by \$1.1 million, or 27%, to \$5.4 million during the year ended December 31, 2012 from \$4.3 million during the year ended December 31, 2011. Increased personnel costs associated with headcount growth that resulted in increased wages, stock-based compensation and other employee related benefits of approximately \$1.0 million and bad debt expense related to pre-bankruptcy Elpida accounts receivable of approximately \$0.2 million. These costs were partially offset by a \$0.1 million decrease in general sales and marketing related expenses.

General and Administrative

General and administrative expenses increased by \$2.3 million, or 27%, to \$10.9 million during the year ended December 31, 2012 from \$8.5 million during the year ended December 31, 2011. The increase is primarily attributable to \$1.4 million in higher professional fees that include legal and accounting services associated with being a public company, and \$1.3 million in higher personnel costs as a result of increased headcount. The increase was partially

offset by the elimination of \$0.5 million in costs from our prior facility, which ended in October 2011.

Income (loss) from Operations

Our operating loss decreased by \$4.0 million to an operating income of \$0.3 million during the year ended December 31, 2012 from an operating loss of \$3.7 million during the year ended December 31, 2011. To the extent we are successful in

61

Table of Contents

growing our revenue and increasing licensing and royalty revenue as a percentage of our total revenue, and if our expenses increase at a slower rate than our revenue, we expect that our income from operations will increase in the future. Our operating expenses increased by \$6.1 million to \$38.1 million during the year ended December 31, 2012 from \$32.1 million during the year ended December 31, 2011. We expect our operating expenses to continue to increase as we expand and invest in our business, making investments in both personnel and capital resources leading to increased depreciation expense.

Interest Expense, net

Interest expense, net decreased by \$0.9 million to an expense of \$1.0 million during the year ended December 31, 2012 from an expense of \$0.1 million during the year ended December 31, 2011. The decrease is primarily attributable to interest expense associated with our note payable to Symyx.

Other Income (Expense), net

Other income (expense), net increased by \$26.2 million to an income of \$15,000 during the year ended December 31, 2012 from an expense of \$26.2 million during the year ended December 31, 2011. This change was primarily due to the prior year change in value of the Symyx purchase right derivative that was finalized as part of the closing of the Symyx asset purchase transaction in November 2011 and to a lesser extent the conversion and subsequent exercise of our outstanding preferred stock warrant liability in connection with our initial public offering in November 2011. Both were no longer outstanding or subject to remeasurement during the year ended December 31, 2012.

Provision for Income Taxes

Provision for income taxes for the years ended December 31, 2012 and 2011 consisted primarily of foreign income taxes and were not significant during these periods.

Net Loss

Our net loss decreased by \$29.3 million to a net loss of \$0.8 million during the year ended December 31, 2012 from a net loss of \$30.0 million during the year ended December 31, 2011. The difference between income from operations and net loss during the year ended December 31, 2012 was primarily related to the prior year mark-to-market change in the valuation of the Symyx purchase right derivative that resulted in an expense of \$25.9 million combined with the current year interest expense associated with our note payable to Symyx.

Table of Contents

Quarterly Results of Operations

You should read the following tables presenting our quarterly results of operations in conjunction with the consolidated financial statements and related notes contained elsewhere in this Form 10-K. We have prepared the unaudited information on the same basis as our audited consolidated financial statements. Please note that our operating results for any quarter are not necessarily indicative of results for any future quarters or for a full year. Our unaudited quarterly results of operations for the eight quarters ended December 31, 2013 were as follows (in thousands, except share and per share amounts):

	Three Months Ended							
	December 31, 2013 (unaudited)	September 30, 2013	June 30, 2013	March 31, 2013	December 31, 2012	September 30, 2012	June 30, 2012	March 31, 2012
Revenue:

Table of Contents**Liquidity and Capital Resources**

Prior to our initial public offering in November 2011, we substantially satisfied our capital and liquidity needs through private placements of redeemable convertible preferred stock and, to a lesser extent, cash flow from operations. As of December 31, 2013, we had \$72.1 million of cash and cash equivalents and \$67.4 million of net working capital.

During the year ended December 31, 2011, we closed a private placement of our Series E redeemable convertible preferred stock for \$24.9 million in net proceeds and completed our initial public offering which provided us with aggregate net proceeds of \$49.2 million. In connection with the consummation of our initial public offering in November 2011, we also received \$6.4 million in proceeds from the exercise of common stock warrants.

As of December 31, 2013, we had debt outstanding of \$25.0 million related to a term loan with SVB. We are obligated to pay interest at a fixed rate of 3.25% and \$0.5 million of principal on a quarterly basis. The term loan matures on November 30, 2016 and we are obligated to pay all outstanding principal and accrued and unpaid interest on that date. At our option, we may prepay the outstanding principal balance of the term loan in full or in part, subject to a pre-payment fee of 0.25% of the outstanding principal balance of the term loan if the term loan is outstanding for less than one year. The term loan was converted on November 29, 2013 from a revolving line with SVB that was funded on May 31, 2013 in the amount of \$25.0 million, which was used to pay a portion of the outstanding Symyx debt of \$26.5 million. Our obligations under the term loan require us to dedicate a substantial portion of our cash flow from operations to payments on interest and principal at or prior to maturity, thus reducing the availability of our cash flow to fund working capital, capital expenditures, research and development efforts, execution of our business strategy and other general corporate purposes. Such limitations increase our vulnerability to adverse general economic and industry conditions and limit our flexibility in planning for, or reacting to, changes in the economy, our industry and new opportunities that may arise. In addition, our obligations under the term loan and the security interests granted in favor of SVB may make it more difficult for us to borrow funds in the future to fund working capital, capital expenditures and other purposes, which could materially and adversely affect our business, financial condition and results of operations.

To date, we have incurred significant losses. During the years ended December 31, 2013, 2012 and 2011, we incurred net losses of \$8.8 million, \$0.8 million, and \$30.0 million. As of December 31, 2013, our accumulated deficit was \$110.1 million.

We believe that we have the financial resources needed to meet business requirements for the next 12 months.

However, our forecast of the period of time through which our financial resources will be adequate to meet business requirements are forward-looking statements and involve risks and uncertainties. Our future capital requirements will depend on many factors, many of which are set forth in greater detail under the caption "Risk Factors," but generally include without limitation our rate of revenue growth, our expansion of our sales and marketing activities and overhead expenses, the timing and extent of our spending to support our R&D efforts and our ability to expand CDPs in the semiconductor and clean energy industries, whether we are successful in obtaining payments from customers, the financial stability of our customers, whether we can enter into additional collaborations in our target industries, the progress and scope of collaborative R&D projects performed by us and our customers, the effect of any acquisitions of other businesses or technologies that we may make in the future, the filing, prosecution and enforcement of patent claims, how much we need to develop or enhance our solutions or HPC platform and any necessary responses to competitive pressures. To the extent that existing cash and cash equivalents and cash from operations are insufficient to fund our operations, we may need to raise additional funds through public or private equity or debt financing. We may also seek to invest in or acquire complementary businesses, applications or technologies, any of which could also require us to seek additional equity or debt financing. Additional funds may not be available on terms favorable to us or at all. We maintain almost all of our cash in the United States and therefore are not subject to restrictions or tax obligations as we access the cash.

Cash Flows

The following summary of our cash flows for the periods indicated has been derived from our consolidated financial statements included elsewhere in this filing:

	Years Ended December 31,		
	2013	2012	2011

Edgar Filing: INTERMOLECULAR INC - Form 10-K

	(in thousands)		
Net cash provided by (used in) operating activities	\$7,779	\$3,486	\$(8,156)
Net cash used in investing activities	\$(15,119)	\$(7,834)	\$(13,468)
Net cash provided by financing activities	\$1,140	\$1,629	\$79,562
Cash Flows from Operating Activities			

64

Table of Contents

We experienced positive cash flows from operating activities during the years ended December 31, 2013 and 2012, and experienced negative cash flows from operating activities during the year ended December 31, 2011.

Net cash provided by operating activities during the year ended December 31, 2013 of \$7.8 million was primarily attributable to our net loss of \$8.8 million offset by non-cash charges of \$9.4 million of depreciation and amortization and \$5.5 million in stock-based compensation. Cash flow from our operating assets and liabilities increased \$1.7 million primarily as a result of an increase in accrued liabilities of \$1.8 million and decrease in accounts receivable of \$1.3 million, offset by an increase in inventory of \$1.3 million.

Net cash provided by operating activities during the year ended December 31, 2012 of \$3.5 million was primarily attributable to our net loss of \$0.8 million offset by non-cash charges of \$8.0 million of depreciation and amortization, \$3.7 million in stock-based compensation, and \$0.9 million related to retired assets previously supporting a customer collaborative development program and platform prototypes for new application development. Cash flow from our operating assets and liabilities decreased \$8.4 million primarily as a result of a \$9.5 million reduction in deferred revenue related to timing of customer prepayments and \$1.5 million in inventory, offset by an increase related to accounts receivable of \$2.8 million due to collections and \$0.4 million in prepaid and other assets. The decline in deferred revenue is primarily related to the earn out of customer prepayments for licensing and royalty related revenues. During 2008, we received a customer prepayment for minimum royalties to be earned during the years 2009 through 2012 in the amount of \$10 million. As of December 31, 2012, the full amount of that prepayment had been recognized.

Net cash used in operating activities during the year ended December 31, 2011 of \$8.2 million was primarily attributable to our net loss of \$30.0 million and non-cash charges of \$24.5 million due to our derivative liability as a result of the consummation of the Symyx asset purchase transaction, \$7.1 million of depreciation and amortization, and \$2.4 million in stock-based compensation. The net decline in cash flow from our operating assets and liabilities of \$13.1 million was primarily as a result of an \$8.3 million reduction in deferred revenue related to timing of customer prepayments, \$2.7 million in prepaid and other assets, and \$7.0 million in accounts receivable, offset by an increase in accrued and other liabilities of \$5.4 million. The decline in deferred revenue is primarily related to the earn out of customer prepayments for licensing and royalty related revenues.

Cash Flows from Investing Activities

Our investing activities consist primarily of purchases and sales of short-term investments, capital expenditures to purchase property and equipment and our investments in intangible assets relating to our patents and trademarks. In the future, we expect we will continue to make modest capital expenditures to support our operations and incur costs to protect our investment in our developed technology and IP.

During the year ended December 31, 2013, cash used in investing activities was \$15.1 million as a result of \$13.5 million in capital expenditures and \$1.6 million in capitalized patent and trademark costs.

During the year ended December 31, 2012, cash used in investing activities was \$7.8 million as a result of \$6.6 million in capital expenditures and \$1.3 million in capitalized patent and trademark costs.

During the year ended December 31, 2011, cash used in investing activities was \$13.5 million as a result of \$12.8 million in capital expenditures and \$0.8 million in capitalized patent and trademark costs, offset by a \$0.2 million decrease in restricted cash.

Cash Flows from Financing Activities

To date, we have financed our operations primarily with proceeds from the sale of our redeemable convertible preferred stock and proceeds received from our initial public offering.

During the year ended December 31, 2013, cash provided by financing activities was \$1.1 million, primarily as a result of receipt of \$25.0 million from a credit line with SVB that was subsequently converted to a term loan during the year and to a lesser extent proceeds from the exercise of common stock options for \$2.7 million. This was offset by payment of our promissory note payable to Symyx for \$26.5 million, to which the \$25.0 million received from SVB was applied.

During the year ended December 31, 2012, cash provided by financing activities was \$1.6 million, primarily as a result of the receipt of \$2.4 million from the exercise of common stock options, offset by payment of \$0.8 million related to our promissory note payable to Symyx.

During the year ended December 31, 2011, cash provided by financing activities was \$79.6 million, primarily as a result of the receipt of \$49.2 million in net proceeds from our initial public offering in November 2011 and \$24.9 million in net proceeds from the sale of our Series E redeemable convertible preferred stock in March and June 2011. In addition, we received

Table of Contents

\$6.4 million in proceeds from the exercise of common stock warrants and \$0.5 million in proceeds from the exercise of common stock options. Funds received from financing activities were offset by a onetime payment of selling stockholder offering costs of \$1.4 million in connection with obligations under the Symyx asset purchase transaction. Contractual Obligations and Commitments

The following summarizes our contractual obligations as of December 31, 2013 (in thousands):

	Payments Due by Period				
	Total	Less Than One Year	1 - 3 Years	3 - 5 Years	More Than 5 Years
	(in thousands)				
Operating lease obligations	\$27,712	\$1,286	\$6,410	\$4,980	\$15,036
Term loan	25,000	2,000	23,000	—	—
Contractual interest payments on term loan	2,169	664	1,505	—	—
Purchase obligations(1)	1,191	1,191	—	—	—
Total	\$56,072	\$5,141	\$30,915	\$4,980	\$15,036

(1) Purchase obligations consist of firm, non-cancelable agreements to purchase property and equipment and inventory related items.

Operating lease agreements represent our obligations to make payments under our non-cancelable lease agreement for our facility in San Jose, California. During the year ended December 31, 2013, we made regular lease payments of \$1.5 million under this operating lease agreement.

On October 16, 2013, we entered into an amendment to the original lease agreement for our facility at 3011 N. First Street, San Jose, California with SBC&D Co. (the "Lessor"). The amendment provides for an extension of the term of the lease for a period of approximately one hundred thirty-nine (139) months from the effective date, which was contingent upon Lessor acquiring title to the facility. Lessor successfully acquired title in November 2013 and our lease obligation under the amended agreement as of December 31, 2013 is \$27.7 million.

On November 29, 2013, we converted our credit facility with SVB into a term loan in the amount of \$25 million that bears interest at a fixed rate equal to 3.25%. We are obligated to pay interest at the applicable rate and \$0.5 million of principal on a quarterly basis. The term loan matures on November 30, 2016 and we are obligated to pay all outstanding principal and accrued and unpaid interest on that date. At our option, we may prepay the outstanding principal balance of the term loan in full or in part, subject to a pre-payment fee of 0.25% of the outstanding principal balance of the term loan if the term loan is outstanding for less than one year.

Off-Balance Sheet Arrangements

As of December 31, 2013, we did not have any relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purpose entities, which would have been established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes.

Recent Accounting Pronouncements

See Note 1 of the Notes to Consolidated Financial Statements included in this Form 10-K for recent accounting pronouncements that could have an effect on us.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to market risks in the ordinary course of our business. Market risk represents the risk of loss that may impact our financial position due to adverse changes in financial market prices and rates. Our market risk exposure is primarily a result of fluctuations in interest rates and foreign currency exchange rates. We do not hold or issue financial instruments for trading purposes.

Interest Rate Sensitivity

Our exposure to market risk for changes in interest rates relates primarily to our investment portfolio and our outstanding debt obligations. Our cash, cash equivalents and investment accounts as of December 31, 2013 totaled \$72.1 million, consisting of cash and money market funds with maturities of less than three months from the date of purchase. Our

Table of Contents

primary exposure to market risk is interest income sensitivity, which is affected by changes in the general level of the interest rates in the United States. However, because of the short-term nature of the instruments in our portfolio, a sudden change in market interest rates would not be expected to have a material impact on our consolidated financial condition or our results of operation.

On November 29, 2013 we converted our credit facility with SVB into a term loan with a principal amount of \$25 million with SVB that bears interest at a fixed rate equal to 3.25%. We are obligated to pay interest at the applicable rate and \$0.5 million of principal on a quarterly basis. The term loan matures on November 30, 2016 and we are obligated to pay all outstanding principal and accrued and unpaid interest on that date. As the rates on the loan are fixed we do not have any further exposure to changes in our interest expense as a result of changes in rates. However, in the event we enter into other long-term debt arrangements, we could be subject to fluctuations in interest rates which could have a material impact on our future financial condition and results of operation. In addition, the Loan Agreement also includes several potential events of default such as payment default, material adverse change conditions and insolvency conditions that could cause interest to be charged at the rate that is otherwise applicable plus 5.0%. As of December 31, 2013, we were in compliance with the covenants in the Loan Agreement. If we are ever unable to meet the covenants in the Loan Agreement, we could also be required to renegotiate the terms of credit under the Loan Agreement, including the interest rate, and there can be no assurance that any renegotiated terms of credit would not materially impact our earnings.

Foreign Currency Exchange Risk

As we expand internationally, our consolidated results of operations and cash flows will become increasingly subject to fluctuations due to changes in foreign currency exchange rates. Our revenue is denominated in U.S. dollars. Our expenses are generally denominated in the currencies in which our operations are located, which is primarily in the United States, with an insignificant portion of expenses incurred in our wholly-owned subsidiaries in Hong Kong and Japan and our wholly-owned branch in Taiwan in their local currencies. The effect of a hypothetical 10% change in foreign currency exchange rates applicable to our business would not have a material impact on our consolidated financial statements. To date, we have not entered into any material foreign currency hedging contracts although we may do so in the future.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders

Intermolecular, Inc.:

We have audited the accompanying consolidated balance sheets of Intermolecular, Inc. and subsidiaries as of December 31, 2013 and 2012, and the related consolidated statements of operations, comprehensive loss, redeemable convertible preferred stock and of stockholders' equity (deficit), and cash flows for each of the years in the three-year period ended December 31, 2013. We also have audited Intermolecular, Inc.'s internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control - Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Intermolecular, Inc.'s management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in Item 9A. Our responsibility is to express an opinion on these consolidated financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Intermolecular, Inc. and subsidiaries as of December 31, 2013 and 2012, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 2013, in conformity with U.S. generally accepted accounting principles. Also in our opinion, Intermolecular, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control - Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) .

INTERMOLECULAR, INC. AND SUBSIDIARIES

Notes to Consolidated Financial Statements

1. Summary of Significant Accounting Policies

Business

Intermolecular, Inc. and subsidiaries (the "Company") is headquartered in San Jose, California and has wholly-owned subsidiaries in Hong Kong and Japan and a wholly-owned branch in Taiwan.

The Company develops and applies high productivity combinatorial research and development technologies to accelerate research and development, innovation and time to market for the semiconductor and clean energy industries. The Company creates high productivity combinatorial systems and methods, which allow the Company to perform collaborative research and development services, sell high productivity combinatorial systems, and license and sell intellectual property to customers.

The Company's consolidated financial statements have been prepared on a going-concern basis, which contemplates the realization of assets and the settlement of liabilities and commitments in the normal course of business. Since inception, the Company has incurred net losses and has accumulated a deficit of \$110.1 million and \$101.3 million as of December 31, 2013 and 2012, respectively.

Basis of Presentation

The Company's consolidated financial statements have been prepared in conformity with accounting principles generally accepted in the United States of America ("GAAP") and include the accounts of the Company and its consolidated subsidiaries. All intercompany transactions and balances have been eliminated during consolidation.

Initial Public Offering

On November 23, 2011, the Company completed an initial public offering of its common stock in which the Company sold and issued 5,681,796 shares of its common stock and a selling stockholder sold 3,968,204 shares of the Company's common stock, in each case at a public offering price of \$10.00 per share. The Company raised a total of \$56.8 million in gross proceeds from the initial public offering, or approximately \$49.2 million in net proceeds after deducting underwriting discounts and commissions of \$4.0 million and other offering costs of approximately \$3.6 million.

Use of Estimates

The preparation of the accompanying consolidated financial statements in conformity with GAAP requires management to make estimates and assumptions about future events. These estimates and the underlying assumptions affect the amounts of assets and liabilities reported, disclosures about contingent assets and liabilities, and reported amounts of revenue and expenses. Management uses estimates and judgments in determining recognition of revenues, valuations of accounts receivable, inventories, intangible assets, debt, capital stock, warrants and assumptions used in the calculation of income taxes and stock-based compensation, among others. These estimates and assumptions are based on management's best estimates and judgment. Management evaluates its estimates and assumptions on an ongoing basis using historical experience and other factors and adjusts such estimates and assumptions when facts and circumstances dictate. As future events and their effects cannot be determined with precision, actual results could differ significantly from these estimates.

Concentration of Credit Risk

Financial instruments that potentially subject the Company to concentration of credit risk consist of cash, cash equivalents and accounts receivable. The Company's cash and cash equivalents consist of demand deposits and money market accounts maintained with high quality financial institutions. The Company's accounts receivable consist of non-interest bearing balances due from credit-worthy customers.

Cash and Cash Equivalents

The Company considers all highly liquid investments purchased with a remaining maturity of three months or less to be cash equivalents. The Company's cash equivalents are comprised of money market funds and are maintained with

high quality financial institutions.

75

Table of Contents

Inventory

Inventories are stated at the lower of cost or market value, with cost determined on an average cost basis. Current inventories consist of work-in-process for products that are expected to be sold in the next twelve months. Noncurrent inventories consist of raw materials in the amount of \$6.5 million and \$2.4 million as of December 31, 2013 and December 31, 2012, respectively, and work-in-process for products that are not expected to be sold during the next twelve months in the amount of zero and \$0.8 million as of December 31, 2013 and December 31, 2012, respectively. Inventories in excess of salable amounts and spare parts inventories that are considered obsolete are recorded as a cost of revenue in the period in which they occur. The Company expensed \$1.0 million related to inventory write-offs during the year ended December 31, 2013. The Company did not have material write-offs during the year ended December 31, 2012 or 2011.

Property and Equipment

Property and equipment are stated at cost less accumulated depreciation and amortization. Depreciation of equipment is recognized on a straight-line basis over the estimated useful lives of the equipment, generally ranging from three to five years. Leasehold improvements are amortized over the shorter of the lease term or the estimated useful life of the assets. Maintenance and repairs that do not extend the life of or improve an asset are expensed in the period incurred.

Intangible Assets

Intangible assets consist of issued and pending patents and trademarks as a result of third-party legal fees incurred in the patent and trademark application processes and patents acquired in connection with the Symyx asset purchase transaction disclosed in note 5. Intangible assets with finite lives are amortized on a straight-line basis over their useful lives, while intangible assets without finite lives are not amortized. Upon the issuance of pending patent and trademark applications, the period of benefit will be determined. Patents, upon issuance, have a maximum life of 20 years from their application filing date. Trademarks, upon issuance, have an indefinite life and will not be amortized.

Impairment of Long-Lived Assets

The Company evaluates its long-lived assets, which consist of property and equipment and intangible assets, for indicators of possible impairment when events or changes in circumstances indicate the carrying amount of an asset may not be recoverable. Impairment exists if the carrying amounts of such assets exceed the estimates of future net undiscounted cash flows expected to be generated by such assets. Should impairment exist, the impairment loss would be measured based on the excess carrying value of the asset over the estimated fair value of the asset. The Company had no impairment of long-lived assets during the years ended December 31, 2013 and 2011. During the year ended December 31, 2012, the Company recorded impairment expenses in the amount of \$0.9 million related to retired assets previously supporting a customer collaborative development program and platform prototypes for new application development.

Revenue Recognition

The Company derives its revenue from three principal sources: collaborative development programs and other services; product sales; and technology licensing and royalty fees. Revenue is recognized when all of the following criteria are met:

- Persuasive evidence of an arrangement exists;
- Delivery has occurred;
- The fee is fixed or determinable; and
- Collectability of the fee is probable.

Persuasive evidence of the arrangement represents a written contract signed by both the Company and the customer, or a customer purchase order. The Company assesses whether a price is fixed or determinable by, among other things, reviewing

contractual terms and conditions related to payment terms. The Company assesses collectability based on factors such as the

customer's creditworthiness and past collection history, if applicable. If collection is not probable, revenue recognition is deferred until receipt of payment.

Collaborative development programs and other services—The Company enters into collaborative development programs ("CDPs") and other research and development service agreements with customers under which the Company conducts research and development activities jointly with the customer. The agreements specify minimum levels of research effort required to be performed by the Company. Payments received under the agreements are not refundable if the research effort is not successful. The Company retains rights to certain elements of technology developed in the course of its performance, which the customer has an option to license in the future under the terms defined in the agreement. Most arrangements with customers have fixed monthly fees and requirements to provide regular reporting of research and

Table of Contents

development activities performed and revenue is recognized in a manner consistent with the fixed monthly fee. Payments received prior to performance are deferred and recognized as revenue when earned over future performance periods.

The Company considers arrangements that include specifically identified, dedicated equipment to contain a lease provision, as these arrangements convey the right to the customer to use specific equipment and provide the ability to the customer to direct the use of the equipment as well as control more than a minor amount of the output of the equipment. To date the Company has determined these arrangements to contain operating leases, with a lease term that corresponds to the term of the CDP arrangement. The amount of revenue allocated for the lease element is based on its relative fair value, but the impact of the allocation does not change the amount of revenue recognized for the total arrangement as the lease term is generally consistent with the CDP term. Operating lease income recorded in CDP and services revenue during the three years ended December 31, 2013, 2012, and 2011 was \$6.9 million, \$9.7 million, and \$5.4 million, respectively.

Future minimum operating lease payments associated with CDP arrangements that contain operating leases were \$0.8 million and \$8.4 million as of December 31, 2013 and December 31, 2012, respectively.

Product maintenance and support services - Included in collaborative development programs and other services revenue, these services entitle customers to receive product updates and enhancements or technical support and maintenance, depending on the offering. The related revenue is recognized ratably over the period the services are delivered.

Product revenue - The Company recognizes revenue from the sale of products once delivery has occurred (title and risk of loss have passed to the customer), and customer acceptance, if required, has been achieved.

Licensing and royalty revenue - The Company recognizes revenue for licenses to intellectual property when earned pursuant to the terms of the agreements. Time-based license revenue is recognized ratably over the license term.

Licensing and royalty revenue that becomes triggered by specific customer actions, such as exercise of a license option or by sales volume, is recognized when it occurs based on royalty reports or other information received from the licensee. Minimum and prepaid royalties and license fees are recognized ratably over the related periods. Revenue on the sale of intellectual property is recognized in full when title transfers if there are no remaining deliverables related to the intellectual property purchase.

Software - The Company includes software with product sales that is considered essential to the product's functionality. The Company also sells software with advanced features that can be used independent of products sold or in conjunction with products sold, which is considered non-essential to the product's functionality. Software related revenue is included in licensing and royalty revenue and is recognized ratably over the license period once delivered.

Multiple-element arrangements - Certain of the Company's customer arrangements involve the delivery or performance of multiple products, services or licenses. Product sale arrangements include product maintenance and support. Collaborative development programs and other research and development services include licenses of technology and may also include sales of products. For multiple-element arrangements entered into after January 1, 2011 that include hardware products containing software essential to the hardware product's functionality, undelivered software elements that relate to the hardware product's essential software, and undelivered non-software services, the Company allocates revenue to all deliverables based on their relative selling prices. For multiple-element arrangements entered into prior to January 1, 2011 that included hardware products containing software essential to the hardware product's functionality, undelivered software elements that related to the hardware product's essential software, and undelivered non-software services, the Company assessed whether there was objective and reliable evidence of fair values of all undelivered elements. The Company could not establish vendor-specific objective evidence of selling price ("VSOE") for undelivered elements and recognized revenue once the last element of the multiple-element arrangement was delivered.

The Company evaluates whether a delivered element has value to the customer without the remaining undelivered elements by determining whether the delivered element could be sold by the Company, or resold by the customer, on a stand-alone basis. The Company concluded that all of its products and services deliverables have value to the customers on a stand-alone basis, as all these deliverables have been or could be sold and used by customers on a stand-alone basis. Intellectual property license arrangements have value on a stand-alone basis if the customer could

purchase and use them without the remaining elements of the arrangement. Essential and non-essential software deliverables used in conjunction with products sold after January 1, 2011 are evaluated as to whether industry specific software accounting guidance applies to the product as well as the related software. In instances where software is considered essential to the functionality of the product, only the software portion and post contract support is evaluated under industry specific software accounting guidance. For transactions entered into prior to January 1, 2011, the Company assessed whether there was objective and reliable evidence of fair values of all undelivered elements. Fair values of such elements were determined by reference to the Company-specific objective evidence, such as pricing of these elements when sold separately, substantive renewal prices for product maintenance and support and time-based licenses, or other available evidence. If the fair value of any undelivered elements in a multiple-element arrangement could not be objectively determined, revenue was deferred until all elements were delivered. If product maintenance and support and time-based licenses were the only undelivered elements without objective and reliable evidence of fair value, all revenue from the arrangement was amortized over the longer of the product maintenance and support term or

Table of Contents

license period. For purposes of classification in the consolidated statements of operations, revenue is allocated between collaborative development programs and services revenue, product revenue and licensing and royalty revenue based on objective and reliable evidence of fair value for any elements for which it exists or based on the relative stated invoice amount for elements for which objective and reliable evidence of fair value does not exist.

For all transactions entered into on or after January 1, 2011, the Company recognizes revenue using estimated selling prices of the delivered goods and services based on a hierarchy of methods as required by GAAP. The Company has not established VSOE for the determination of estimated selling price of elements, and since third-party evidence ("TPE") is not available for those elements where vendor-specific objective evidence of selling price cannot be determined, the Company evaluates factors to determine its estimated selling prices ("ESP") for all other elements. In multiple-element arrangements where hardware and software are sold as part of the solution, revenue is allocated to the hardware and software as a group using the relative selling prices of each of the deliverables in the arrangement based upon the aforementioned selling price hierarchy.

Deferred Revenue

Deferred revenue represents amounts collected from customers for which the related revenue has not been recognized, because one or more of the revenue recognition criteria have not been met, net of the associated costs. The current portion of deferred revenue represents the amount that is expected to be recognized as revenue within one year from the balance sheet date. When deferred revenues are recognized as revenues, the associated deferred costs are also recognized as cost of revenues.

Accounts Receivable and Allowance for Doubtful Accounts

Trade accounts receivable are recorded at invoiced amounts and unbilled contractually obligated amounts. Trade accounts receivable are presented net of allowances for doubtful accounts, if applicable, and do not bear interest. The allowance for doubtful accounts is based on the Company's assessment of the collectability of its customer accounts. The Company reviews the allowance by considering certain factors such as historical experience, industry data, credit quality, age of balances and current economic conditions that may affect customers' ability to pay. The Company did not have any allowances for doubtful accounts as of December 31, 2013. As of December 31, 2012 the Company had an allowance related to outstanding accounts receivable from Elpida that were subject to proceedings under the Corporate Reorganization Act in Japan. During 2013 Elpida was acquired by Micron and the outstanding accounts receivable from Elpida were settled as a result of the acquisition.

Allowance for doubtful accounts are as follows (in thousands):

	Balance at Beginning of Period	Additions Charged to Revenues	Deductions (1)	Balance at End of Period
Allowance for doubtful accounts:				
2013	\$170	\$—	\$(170)) \$—
2012	\$—	\$170	\$—	\$170
2011	\$—	\$—	\$—	\$—

(1) Deductions related to the allowance for doubtful accounts written off against the allowance and recoveries.

Table of Contents

Concentration of Revenue and Accounts Receivable

Significant customers are those that represent more than 10% of the Company's total revenue or accounts receivable. For each significant customer, including related parties, revenue as a percentage of total revenue and accounts receivable as a percentage of total accounts receivable are as follows:

	Revenue			Accounts Receivable		
	Years Ended			As of	As of	
	December 31,			December 31,	December 31,	
	2013	2012	2011	2013	2012	
Customer A	13	% 25	% 29	% *	*	
Customer B	17	% 28	% 17	% 13	% 25	%
Customer C (1)	*	14	% 18	% —	% *	
Customer D	*	*	*	15	% 12	%
Customer E	12	% *	—	% 14	% 40	%
Customer F (1)	13	% —	% —	% 41	% —	%

* less than 10%

(1) Customer C was acquired by Customer F as of July 31, 2013. Revenue and accounts receivable attributed to Customers C and F are combined under Customer F for periods after July 31, 2013.

Cost of Revenue

Cost of revenue is primarily comprised of salaries and other personnel-related expenses for collaborative research and development scientists, engineers and development fab process operations employees. Additionally, cost of revenue includes wafers, targets, materials, program-related supplies, depreciation on equipment used in collaborative development programs and allocated facility-related costs. Product cost of revenue primarily includes cost of products sold. Cost of licensing and royalty includes related party license fees paid to Symyx during the year ended December 31, 2011. During the years ended December 31, 2013 and 2012, cost of licensing and royalty primarily included amortization of acquired patents and licensing obligations.

Research and Development

Research and development expenses, including direct and allocated expenses, are expensed as incurred. Research and development costs include salaries of technical staff, consultant costs, research and development parts and prototypes, wafers, chemicals, research and development supply costs, facilities rental, utilities costs related to laboratories and offices occupied by technical staff, depreciation on equipment used by technical staff, and outside services, such as machining and third-party research and development costs.

Software Development Costs

The costs to develop software have not been capitalized as the technological feasibility of the related software is not established until substantially all product development is complete and the related product is available for general release.

Income Taxes

Income taxes have been accounted for under the asset and liability method. Deferred tax assets and liabilities are determined based on the difference between the financial statement and tax basis of assets and liabilities as measured by the enacted tax rates that will be in effect when these differences reverse. Accordingly, realization of any deferred tax assets is dependent on future taxable income against which these deductions, losses and credits can be utilized. The Company assesses the likelihood that the deferred tax assets will be recovered and establishes a valuation allowance to the extent the Company believes that it is more likely than not that all or some portion of the asset will not be realized due to the inability to generate sufficient taxable income in the period and/or of the character necessary to utilize the benefit of the deferred tax asset. The Company recorded a full valuation allowance against its deferred tax assets as of December 31, 2013 and 2012. Based on the available evidence, the Company believed it was more likely than not that it would not be able to utilize its deferred tax assets in the future. The Company intends to maintain a full valuation allowance until and if sufficient evidence exists to support all or a portion of its reversal.

Table of Contents

The Company regularly reviews its tax positions for benefits to be realized. A tax position must be more likely than not to be sustained upon examination to justify recognition of a benefit for that position. The amount recognized is measured as the largest amount of benefit that is more likely than not to be realized upon settlement. The Company's policy is to recognize interest and penalties related to income tax matters as income tax expense. As of December 31, 2013, the Company has not recognized any interest or penalties associated with unrecognized tax benefits.

Stock-Based Compensation

The Company applies the fair value recognition and measurement provisions of ASC 718 Compensation — Stock Compensation. Stock-based compensation is recorded at fair value as of the grant date, determined using the Black-Scholes option-pricing model, and recognized as an expense over the employee's requisite service period (generally the vesting period), which the Company has elected to amortize on a straight-line basis.

The Company accounts for stock options issued to nonemployees based on the fair value of the options determined using the Black-Scholes option-pricing model. The fair value of stock options granted to nonemployees is remeasured each reporting period as the stock options vest and the resulting change in value, if any, is recognized in the Company's consolidated statements of operations during the period the related services are rendered.

Employee Savings Plan

The Company has a savings plan in the United States that qualifies under Section 401(k) of the Internal Revenue Code. Participating employees may contribute up to the statutory limits. The Company is not committed to make and has not made employer contributions to the plan to date.

Segment Information

The Company operates in one reportable segment. The Company's chief operating decision-maker, its chief executive officer, reviews its operating results on an aggregate basis and manages its operations as a single operating segment.

Fair Value of Financial Instruments

The Company measures and reports its cash equivalents and preferred stock warrant liabilities at fair value. Fair value is defined as the exchange price that would be received for an asset or an exit price paid to transfer a liability in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. Valuation techniques used to measure fair value must maximize the use of observable inputs and minimize the use of unobservable inputs. The fair value hierarchy defines a three-level valuation hierarchy for disclosure of fair value measurements as follows:

Level I - Unadjusted quoted prices in active markets for identical assets or liabilities;

Level II - Inputs other than quoted prices included within Level I that are observable, unadjusted quoted prices in markets that are not active, or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the related assets or liabilities; and

Level III - Unobservable inputs that are supported by little or no market activity for the related assets or liabilities.

The categorization of a financial instrument within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

The Company's financial instruments consist of Level I assets and Level III liabilities. Level I securities include highly liquid money market funds and certificates of deposit. The Company does not hold any Level II instruments. Level III liabilities that were measured at fair value on a recurring basis during 2011 consisted of preferred stock warrant liabilities. There were no Level III liabilities during 2013 or 2012. The fair values of preferred stock warrants were measured using the Black-Scholes option-pricing model. Inputs used to determine estimated fair value include the estimated fair value of the underlying stock at the valuation measurement date, the remaining contractual term of the warrants, risk-free interest rates, expected dividends and the expected volatility of the underlying stock. In connection with the Company's initial public offering in November 2011, outstanding preferred stock warrants were converted to common stock warrants and subsequently exercised.

Foreign Currency

The functional currency of foreign subsidiaries is the U.S. dollar and foreign currency transaction gains and losses are recorded in other income (expense), net.

Table of Contents

Net Loss per Share of Common Stock

The Company's basic net loss per share of common stock is calculated by dividing the net loss by the weighted average number of shares of common stock outstanding for the period. The diluted net loss per share of common stock is computed by giving effect to all potential common stock equivalents outstanding for the period determined using the if-converted method for convertible securities and the treasury stock method for all other common stock equivalents. For purposes of this calculation, redeemable convertible preferred stock, options to purchase common stock, common stock subject to repurchase, warrants to purchase redeemable convertible preferred stock and warrants to purchase common stock are considered to be common stock equivalents but have been excluded from the calculation of diluted net loss per share of common stock as their effect is antidilutive.

Recent Accounting Pronouncements

In September 2011, the FASB issued an update to ASC 350 Intangibles-Goodwill and Other ("ASC 350"): Testing Goodwill for Impairment. The update gives an entity an option to first assess qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If, after assessing the totality of events or circumstances, an entity determines it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, then performing the two-step impairment test is unnecessary. An entity has the option to bypass the qualitative assessment for any reporting unit in any period and proceed directly to performing the first step of the two-step goodwill impairment test. An entity may resume performing the qualitative assessment in any subsequent period. Under the amendments, an entity no longer is permitted to carry forward its detailed calculation of a reporting unit's fair value from a prior year as previously permitted by ASC 350. The Company adopted this update to ASC 350 in the first quarter of 2013 without any impact on its financial position, results of operations or cash flows.

2. Fair Value of Financial Instruments

The Company measures and reports its cash equivalents at fair value on a recurring basis. During 2011 the Company measured preferred stock warrant liabilities at fair value. The Company did not have any preferred stock warrant liabilities or other financial liabilities that are measured and reported at fair value during 2013 and 2012 as all preferred stock was converted to common stock as part of the initial public offering during 2011. The following tables set forth the fair value of the Company's cash equivalents and short-term investments by level within the fair value hierarchy (in thousands):

	As of December 31, 2013			
	Fair Value	Level I	Level II	Level III
Assets:				
Money market funds	\$49,117	\$49,117	\$—	\$—
Total assets measured at fair value	\$49,117	\$49,117	\$—	\$—
	As of December 31, 2012			
	Fair Value	Level I	Level II	Level III
Assets:				
Money market funds	\$70,488	\$70,488	\$—	\$—
Total assets measured at fair value	\$70,488	\$70,488	\$—	\$—

The following table sets forth a summary of the changes in the fair value of the Company's Level III financial liabilities (in thousands):

	Years Ended December 31,		
	2013	2012	2011
Fair value—beginning of period	\$—	\$—	\$215
Initial fair value of derivative liability	—	—	2,842

Less accumulated depreciation	(35,481) (27,073
Property and equipment, net	\$28,485	\$24,058

On May 31, 2013, the Company entered into a loan and security agreement ("Loan Agreement") with Silicon Valley Bank ("SVB") pursuant to which SVB made available to the Company a loan to refinance existing indebtedness (including the repayment of all remaining principal and accrued interest under the secured promissory note that the Company issued to Symyx Technologies, Inc. ("Symyx") in November 2011) and for working capital and general business purposes, in a principal amount of up to \$26.5 million. Upon repayment, the Symyx note was terminated and Symyx released all security interests and other liens held as security in connection with the Symyx note. Under the Loan Agreement, and as of December 31, 2013, SVB held a security interest in substantially all of the Company's assets, excluding all intellectual property. As of December 31, 2012 all tangible property and equipment was pledged as collateral against the note payable issued in connection with the closing of the asset purchase transaction with Symyx.

As discussed in Note 1, Impairment of Long-Lived Assets, during the year ended December 31, 2012, the Company recorded impairment-related expenses in the amount of \$0.9 million related to retired assets previously supporting a customer collaborative development program and platform prototypes for new application development. These impairment expenses are included in accumulated depreciation.

The following table presents depreciation expense included in the Consolidated Statement of Operations and includes amortization of leasehold improvements (in thousands):

	Years Ended December 31,		
	2013	2012	2011
Depreciation expense	\$8,781	\$7,411	\$6,992

The Company maintained dedicated equipment to support contractual customer capacity requirements as part of certain collaborative development programs that are classified as lab equipment and machinery and had a net book value of \$1.8 million and \$5.9 million as of December 31, 2013 and December 31, 2012, respectively.

4. Intangible Assets

Intangible assets consist of the following (in thousands):

	As of December 31, 2013	As of December 31, 2012
Patents issued	\$4,893	\$3,932
Patents pending	4,224	3,386
Trademarks	40	40
Total intangible assets	9,157	7,358
Less patent amortization	(1,302) (687
Intangible assets, net	\$7,855	\$6,671

Table of Contents

Amortization commences upon patent issuance. The useful life of the patents, once approved, will not exceed 20 years, and will depend on the nature of the patent. The average estimated amortization period of the Company's current portfolio is approximately 17 years from the date of patent issuance. The average estimated remaining amortization period of patents acquired as part of the Symyx asset purchase transaction is approximately 4 years. The following table presents patent amortization expense included in the Consolidated Statement of Operations (in thousands):

	Years Ended December 31,		
	2013	2012	2011
Amortization expense	\$615	\$588	\$81

Estimated future aggregate annual amortization expense for both issued and pending intangible assets is as follows (in thousands):

As of December 31:

2014	\$730
2015	699
2016	627
2017	580
2018	500
Thereafter	4,679
Total	\$7,815

5. Commitments and Contingencies

Leases

The Company entered into an operating lease agreement in May 2010 that was set to expire in May 2015. Rent expense was being recognized on a straight-line basis over the lease term. In October 2013, the Company and SBC&D Co. (the "Lessor") entered into a first amendment (the "First Amendment") to the Original Lease Agreement (as defined below) for the Company's facility at 3011 N. First Street, San Jose, California.

The First Amendment amended the original lease agreement dated May 2010 ("Original Lease Agreement") between the Company and Novellus Systems, Inc. (the "Landlord"), contingent upon the Lessor acquiring title to the facility from Landlord (such date, the "Effective Date"), which occurred in November 2013 pursuant to a purchase agreement dated October 2013 between Lessor and Landlord.

The amendment provides for (i) extension of the term of the lease for a period of approximately one hundred thirty-nine (139) months from the Effective Date, (ii) elimination of the early termination option contained within the Original Lease Agreement and (iii) elimination of the cap with respect to the payments the Company makes for the operating costs of the facility or Lessor's obligation to provide certain other utilities to the facility. The First Amendment will maintain the rental rate of the Original Lease Agreement through February 2016 and will increase the monthly basic rent to \$196,000 effective March 2016 and automatically increase 2.5% each year thereafter through the end of the extended term of the lease. In addition, the First Amendment provides the Company with four months of free rent and a tenant improvement allowance of \$1.0 million in the aggregate to be paid to the Company in equal installments over the course of the ten months after the Effective Date to be used for the modification, refurbishment, construction or installation of improvements to the facility.

The following table presents rent expense included in the Consolidated Statement of Operations (in thousands):

	Years Ended December 31,		
	2013	2012	2011
Rent expense	\$1,377	\$1,297	\$1,961

Table of Contents

Future commitments and obligations under this operating lease to be satisfied as they become due over the term are as follows (in thousands):

As of December 31:

The years ending December 31,	
2014	\$1,286
2015	1,758
2016	2,253
2017	2,399
2018	2,459
Thereafter	17,557
Total	\$27,712

During 2013, the Company made payments in the amount of \$1.5 million related to this operating lease. The first month of free rent was December 2013.

Symyx Asset Purchase and Note Payable

On July 28, 2011, the Company entered into an agreement with Symyx Technologies, Inc., a related party at the time of the agreement ("Symyx"), pursuant to which the Company agreed to use commercially reasonable efforts to allow Symyx to sell in the Company's initial public offering a total of 3,968,204 shares of common stock held by them, and Symyx agreed to sell such shares in the offering, transfer to the Company all patents held by them that relate to combinatorial processing and terminate future royalty obligations under the Symyx agreements to the extent they would have accrued after December 31, 2011. The Company completed this asset purchase in connection with the closing of its initial public offering in November 2011. In addition, the Company reimbursed Symyx for 50% of the underwriting discounts and commissions payable by them in connection with the sale of their common stock in the offering, which amount was equal to approximately \$1.4 million.

In connection with entering into the agreement the Company recorded a derivative liability representing the value of the guaranteed return to Symyx and reimbursement of 50% of the underwriting discounts and commissions payable in connection with the offering. The Company recorded the liability at inception because it had effectively issued a written option that requires the Company to settle with a cash payment to Symyx. The initial fair value of the contract as of the date of the agreement was determined using a hybrid model utilizing a probability-weighted expected return model and a Monte Carlo Simulation model to be \$2.8 million, which incorporates parameters such as the volatility of the Company's stock price, the time value of the feature, the strike price on the guarantee, the likelihood of an initial public offering, and the obligation to pay a portion of Symyx's selling costs. Between July 28, 2011 and the date of the offering, the Company adjusted the fair value of the derivative liability to market value, with changes in the market value recorded in other income (expense), net, in the Company's Consolidated Statement of Operations. On July 28, 2011, the Company recorded an intangible asset in the amount of \$2.8 million that represents the value of the intangible assets that was transferred by Symyx to the Company upon the completion of the offering.

During 2011 and until the completion of the Company's initial public offering on November 23, 2011, the Company recorded charges to other income (expense), net in the amount of \$25.9 million that represents the change in value of the derivative liability. The following table sets forth a summary of the changes in the fair value of the Company's derivative liability related to the Symyx asset purchase transaction (in thousands):

Minimum return to Symyx	\$67,000
Proceeds to Symyx from offering	(39,682)
Initial fair value of derivative liability	(2,842)
Reimbursement of offering related expenses	1,389
Mark-to-market adjustment	\$25,865

In connection with the consummation of the Symyx asset purchase transaction in November 2011, the Company issued Symyx a secured promissory note in a principal amount equal to \$27.3 million with a term of 24 months and an interest

Table of Contents

rate equal to 4%. The note was payable in quarterly installments, each in an amount equal to the greater of \$0.5 million that quarter or the amount of accrued interest, with a balloon payment at maturity, if applicable. The note was also pre-payable by the Company at any time without penalty or premium, and was secured by tangible personal property, excluding intellectual property. On May 31, 2013, the Company used \$25.0 million of the net proceeds from a revolving line with SVB and \$1.5 million of cash to retire and repay all remaining principal and accrued interest due on the note. Over the life of the Symyx note the Company paid a total of \$29.0 million, of which approximately \$1.6 million related to interest.

The following table presents payments made during the years ended December 31, 2013 and 2012 in connection with the note payable to Symyx (in thousands):

	Years Ended December 31, 2013		
	Principal	Interest	Total
Symyx payments	\$26,516	\$437	\$26,953
	Year Ended December 31, 2012		
	Principal	Interest	Total
Symyx payments	\$804	\$1,196	\$2,000

Silicon Valley Bank Loan Agreement

On May 31, 2013, the Company entered into a loan and security agreement (“Loan Agreement”) with SVB pursuant to which SVB made available to the Company loans under a revolving line to refinance existing indebtedness (including the repayment of the Symyx note) and for working capital and general business purposes, in a principal amount of up to \$26.5 million. Under the Loan Agreement, SVB funded an initial credit extension in the principal amount of \$25 million on May 31, 2013 and agreed to fund, subject to customary conditions, additional credit extensions under the revolving line on or prior to November 30, 2013. The Loan Agreement has a financial covenant that requires the Company to maintain a certain level of liquidity, and as of December 31, 2013, the Company was compliant with the terms of that loan covenant. Prior to November 30, 2013, the Company had the option to convert all or any part of the outstanding advances under the revolving line into a term loan, which could only be used once. The revolving line advances bear interest at a floating rate equal to the greater of 2.75% or the prime rate (customarily defined) minus 0.50%. On November 29, 2013 the Company converted the revolving line into a term loan for \$25 million with SVB that bears interest at a fixed rate equal to 3.25%. The Company is obligated to pay interest at the applicable rate and \$0.5 million of principal on a quarterly basis. The term loan matures on November 30, 2016 and the Company is obligated to pay all outstanding principal and accrued and unpaid interest on that date. At the Company's option, the Company may prepay the outstanding principal balance of the term loan in full or in part, subject to a pre-payment fee of 0.25% of the outstanding principal balance of the term loan if the term loan is outstanding for less than one year.

The following table presents payments made during the year ended December 31, 2013 for interest owed under the terms of the Loan Agreement (in thousands):

	Years Ended December 31, 2013		
	Principal	Interest	Total
SVB payments	\$—	\$350	\$350

Estimated principal payments related to the SVB term loan are as follows (in thousands):

As of December 31:

2014	\$2,000
2015	2,000
2016	21,000
Total	\$25,000
Litigation	

Table of Contents

On August 23, 2013, the Company received a copy of a complaint from the California Division of Labor Standards and Enforcement ("DLSE") filed by an employee in the Company's research and development group claiming that the employee is owed back pay due to an incorrect classification as an exempt employee for overtime purposes. The Company commenced a review of the employee's claim as well as a review of the Company's policies regarding classification of employees for overtime purposes. The Company also agreed to enter mediation with the attorney who represents the employee that filed the claim with the DLSE as well as fourteen other current and former employees who are similarly situated. This mediation did not result in a settlement of the subject claims, and on February 18, 2014, the claimants filed a lawsuit against the Company in the United States District Court for the Northern District of California. The Company believes it has meritorious defenses to the claims and intends to vigorously defend against any of them in this regard. Nevertheless, as of December 31, 2013, the Company accrued its best estimate of the amount of probable loss associated with the matter and classified the resulting expense as research and development in its Consolidated Statements of Operations. While the Company cannot predict the outcome of this matter, or of any legal or administrative proceedings related to this matter that have commenced or may be commenced in the future, the Company believes the matter will not have a material adverse effect on its business, operating results, financial condition or cash flows.

6. Redeemable Convertible Preferred Stock

On November 23, 2011, the closing date of the Company's initial public offering, and pursuant to the amended and restated certificate of incorporation, all outstanding shares of redeemable convertible preferred stock converted into an aggregate of 29,230,708 shares of common stock.

	Conversion Rate	Preferred Stock Shares	Common Stock Shares
Series A	1-for-2	8,399,831	4,199,912
Series B	1-for-2	22,780,964	11,390,477
Series C	1-for-2	14,686,698	7,343,345
Series D	1-for-2	6,575,832	3,287,915
Series E	1-for-2	6,018,122	3,009,059
		58,461,447	29,230,708

Redeemable Convertible Preferred Stock

During the year ended December 31, 2011, the Company issued 6,018,122 shares of Series E at \$4.15 per share, resulting in net cash proceeds of \$24.9 million.

Measurement of Redeemable Securities

The shares contained redemption features that were not solely within the Company's control. Accordingly, all shares of redeemable convertible preferred stock, were classified as temporary equity rather than as a component of stockholders' equity (deficit) in the Company's consolidated balance sheets for all periods prior to conversion. The carrying value of redeemable convertible preferred stock was recorded at its fair value at the date of issue. In accordance with the standard, the Company accounted for changes in the redemption value over the period from the date of issuance to the earliest redemption date using the interest method to a value equal to the fair value, as determined by the Company using the most recent round of redeemable convertible preferred stock financing as an estimate for the fair value, of its redeemable convertible preferred stock over the period from the date of issuance to the earliest redemption date on June 14, 2016. As the Company did not have a round of redeemable preferred stock financing around December 31, 2009 or December 31, 2010, the Company determined the fair value by selecting a value that approximated an increase in value on a consistent basis between the Series D round (December 31, 2008) and the Series E round (June 14, 2011). The increases in the redemption value increases the value of the redeemable convertible preferred stock and decreases the additional paid-in capital and accumulated deficit balances.

Estimated Redemption Values

In evaluating the fair value of preferred stock and the related preferred stock accretion leading up to the Company's initial public offering the Company considered the potential impact of the appreciation on the fair value of common stock between the June 14, 2011 Series E second closing as well as the convergence of the preferred stock and common stock prices as the likelihood of an initial public offering increased. The Company determined that following

the filing of its registration statement on Form S-1 on July 29, 2011 a redemption was no longer probable given the decrease in the likelihood of a redemption occurring. Accordingly, effective July 29, 2011 the Company was no longer accreting its redeemable convertible

86

Table of Contents

preferred stock to its redemption value. Upon the completion of its initial public offering all mandatorily convertible preferred stock and related preferred stock accretion were reclassified to additional paid-in capital.

7. Warrants

Preferred Stock Warrants

In connection with the loan and security agreement obtained in November 2005, the Company issued a warrant to purchase 168,747 shares of Series B redeemable convertible preferred stock at a price of \$0.44 per share. The Series B warrants were exercisable immediately and had a contractual term of seven years. The fair value of the warrant on the date of issuance was \$37,000 which was recognized as interest expense over the term of the loan and security agreement. The fair value of the warrant was determined using the Black-Scholes option-pricing model and was remeasured at each reporting period. In connection with the Company's initial public offering which closed on November 23, 2011, the preferred stock warrants were remeasured to their current value prior to their conversion to common stock warrants and subsequent exercise. As of December 31, 2013, 2012 and 2011 there were no preferred stock warrants outstanding. During the year ended December 31, 2011, the remeasurement of the warrant liability resulted in the recognition of remeasurement losses of \$0.6 million, which was recorded as other income (expense), net on the Consolidated Statement of Operations.

Common Stock Warrants

During the year ended December 31, 2007, the Company issued warrants to purchase 817,500 shares of common stock in connection with certain collaboration agreements with exercise prices ranging from \$1.50 to \$3.76 per share and five year terms. During the year ended December 31, 2011, the Company recognized expenses related to the issuances and vesting of these warrants in the amount of \$1,000. In connection with the Company's initial public offering these warrants were exercised and are no longer outstanding.

During the year ended December 31, 2008, the Company issued warrants to purchase 90,000 shares of common stock for consulting services with an exercise price of \$2.04 per share and a ten year term. These warrants vested over four years. During the years ended December 31, 2013, 2012 and 2011, the Company recognized expenses related to the issuances and vesting of these warrants in the amount of zero, \$13,000, and \$52,000, respectively. As of December 31, 2013 and 2012, these warrants to purchase shares of common stock remained outstanding.

During the year ended December 31, 2010, the Company issued warrants to purchase 822,368 shares of common stock in connection with certain collaboration agreements with an exercise price of \$6.08 per share and approximately two year terms, of which 411,184 were granted to a related party. These warrants will become exercisable upon election of specified licenses by the holders prior to the expiration of the warrants. During 2011, these warrants were granted an extension of approximately two years to make the licensing election and during 2013 the Company modified these warrants to allow for cashless "net exercise" of the warrants at the customers' option. The modification did not change the exercise price or any other terms of the warrants. Upon a license election by the holders, the Company will record the fair value of these warrants as measured on the date of election against any related revenue derived from these agreements. As of December 31, 2013, the holders have not elected the license option.

During the year ended December 31, 2011, the Company issued a warrant to purchase 411,000 shares of common stock in connection with a collaboration agreement with an exercise price of \$8.31 per share and a term of eighteen months. The warrant was exercisable immediately. The warrant did not contain a net exercise provision and therefore could only be exercised on a cash basis upon surrender of the warrants. The fair value of the warrant as measured on the date of grant was \$312,000 and was recognized as a reduction of revenue derived from the agreement. The Company also issued a warrant to purchase 2,500 shares of common stock in connection with services that were provided to the Company with an exercise price of \$0.20 per share and a term of eighteen months. The warrant was exercisable immediately. The fair value of the warrant as measured on the date of grant was \$29,000 and was recognized in general and administrative expenses. In connection with the Company's initial public offering both of these warrants were exercised.

In total, the Company had 912,368 outstanding warrants to purchase shares of common stock as of December 31, 2013 and 2012. Of these outstanding warrants, 90,000 were exercisable as of December 31, 2013 and 2012. During the years ended December 31, 2013, 2012 and 2011, the Company recognized expenses related to the issuances and vesting of these warrants in the amount of zero, \$13,000, and \$82,000, respectively. Additionally, during the year

ended December 31, 2011, the Company recognized a reduction to revenue in the amount of \$312,000 related to the issuance and vesting of a warrant granted to a customer in connection with a collaboration agreement.

Table of Contents

8. Stock-Based Compensation

On October 26, 2011, the Board of Directors approved the 2011 Equity Incentive Plan ("2011 Plan"). A total of 4,225,648 shares of common stock were reserved for future issuance under the 2011 Plan, which became effective on November 17, 2011. The Company has a 2004 Equity Incentive Plan ("2004 Plan"), but no longer grants stock options under this plan. Cancelled or forfeited stock option grants under the 2004 Plan will be added to the total amount of shares available for grant under the 2011 Plan. In addition, shares authorized but unissued as of November 17, 2011 under the 2004 Plan were added to shares available for grant under the 2011 Plan. The 2011 Plan contains an "evergreen" provision, pursuant to which the number of shares available for issuance under the 2011 Plan may be increased on the first day of the fiscal year, in an amount equal to the least of (a) 2,535,389 shares, (b) 4.5% of the outstanding Shares on the last day of the immediately preceding fiscal year or (c) such number of shares determined by the Board of Directors. During 2013 the Company registered an additional 1,982,113 shares under its 2011 Plan. The 2011 Plan allows the Company to award stock options (incentive and non-qualified), restricted stock, restricted stock units, stock appreciation rights, deferred stock awards, dividend equivalents, performance awards, stock payments, performance shares and other incentive awards, or any combination thereof to employees, officers, directors and consultants of the Company. The exercise price of incentive stock options, which may only be granted to employees, granted under the 2011 Plan to participants with less than 10% voting power of all classes of stock of the Company or any parent or subsidiary company may not be less than 100% of the fair market value of the Company's common stock on the date of the grant. The exercise price of incentive stock options granted under the 2011 Plan to participants with 10% or more voting power of all classes of stock of the Company or any parent or subsidiary company may not be less than 110% of the fair market value of the Company's common stock on the date of the grant. Options granted under the 2011 Plan generally expire ten years from the date of grant and are generally exercisable at any time after the date of grant when the shares are vested. Incentive and nonstatutory stock options granted generally vest at a rate of 25% on the first anniversary of the commencement or grant date and 1/48th each month thereafter. Incentive stock options granted to participants with 10% or more of the voting power of all classes of the Company's common stock on the date of grant have a maximum term of five years from the date of grant.

Restricted stock award and restricted stock unit ("RSUs") activity for the periods presented is as follows:

	Number of Stock RSUs Outstanding	Weighted-Average Grant Date Fair Value
Balance as of December 31, 2011	—	\$—
Granted	274,070	6.48
Vested	—	—
Forfeited	(19,207) 6.49
Balance as of December 31, 2012	254,863	6.48
Granted	814,000	8.47
Vested	(74,985) —
Forfeited	(143,527) 8.56
Balance as of December 31, 2013	850,351	\$7.99
Vested and expected to vest as of December 31, 2013	695,488	

Typically, vesting of RSUs occurs over four years and is subject to the employee's continuing service to the Company. The aggregate intrinsic value of RSUs outstanding at December 31, 2013 and 2012 was \$4.2 million and \$2.3 million, respectively.

RSUs that vested during 2013 had fair values of \$0.5 million as of the vesting date. No RSUs vested during 2012.

The following table presents details on grants made by the Company for the following periods:

	Years Ended December 31, 2013		Years Ended December 31, 2012	
	Shares Granted	Weighted- Average Grant Date Fair Value	Shares Granted	Weighted- Average Grant Date Fair Value
Stock options	1,720,242	\$4.16	1,339,129	\$4.50
RSUs	814,000	\$8.47	274,070	\$6.48

As of December 31, 2013 and December 31, 2012, the Company had reserved shares of common stock for issuance as follows:

	December 31, 2013	December 31, 2012
Number of stock options outstanding	6,468,743	7,426,417
Number of RSUs outstanding	850,351	254,863
Shares available for future grant	5,238,699	5,001,956
Number of warrants outstanding	912,368	912,368
Total shares reserved	13,470,161	13,595,604

Table of Contents

The Company recognized stock-based compensation expense for awards granted to its employees and nonemployees as follows (in thousands):

	Years Ended		
	December 31,		
	2013	2012	2011
Cost of revenue	\$1,453	\$1,011	\$622
Research and development	1,301	872	462
Sales and marketing	1,175	774	770
General and administrative	1,554	995	588
Total stock-based compensation	\$5,483	\$3,652	\$2,442

The following table presents stock-based compensation expense, net of estimated forfeitures, by grant type (in thousands):

	Years Ended		
	December 31,		
	2013	2012	2011
Stock options	\$3,906	\$3,369	\$2,442
Restricted stock awards and restricted stock units (RSUs)	1,577	283	—
Total stock-based compensation	\$5,483	\$3,652	\$2,442

The following table presents unrecognized compensation expense, net of estimated forfeitures, related to the Company's equity compensation plans as of December 31, 2013, which is expected to be recognized over the following weighted-average periods, (in thousands, except for weighted-average period):

	Unrecognized Compensation Expense	Weighted- Average Period (in years)
Stock options	\$7,298	2.7
RSUs	\$4,219	2.9

There were no capitalized stock-based compensation costs or recognized stock-based compensation tax benefits during the years ended December 31, 2013 and 2012.

Additional information regarding options outstanding as of December 31, 2013 is as follows:

Range of Exercise Prices	Options Outstanding		Weighted-Average Exercise Price per Share	Options Exercisable	
	Options Outstanding	Weighted-Average Remaining Contractual Life (Years)		Exercisable	Weighted-Average Exercise Price per Share
\$0.00 - \$1.50	637,991	2.0	\$0.58	637,991	\$0.58
\$1.51 - \$3.00	2,225,689	5.2	2.18	2,168,575	2.17

	6,468,743	6.7	\$4.96	3,957,414	\$3.40

Table of Contents

Determining Fair Value of Stock Options

The fair value of each grant of stock options was determined by the Company and its board of directors using the methods and assumptions discussed below. Each of these inputs is subjective and generally requires significant judgment to determine.

Valuation Method—The Company estimates the fair value of its stock options using the Black-Scholes option-pricing model.

Expected Term—The expected term represents the period that the stock-based awards are expected to be outstanding. For option grants that are considered to be "plain vanilla," the Company used the simplified method to determine the expected term as provided by the Securities and Exchange Commission. The simplified method calculates the expected term as the average of the time-to-vesting and the contractual life of the options.

Expected Volatility—The expected volatility was based on the historical stock volatilities of several of the Company's publicly listed peers over a period approximately equal to the expected term of the options as the Company did not have a sufficient trading history to use the volatility of its own common stock.

Fair Value of Common Stock—The fair value of the common stock underlying the stock options, prior to our initial public offering in November 2011, had been determined by the Company's board of directors. Because there was no public market for the Company's common stock prior to November 2011, the board of directors determined the fair value of the common stock at the time of the option grant by considering a number of objective and subjective factors including valuations of comparable companies, sales of redeemable convertible preferred stock to unrelated third parties, operating and financial performance, lack of liquidity of capital stock and general and industry-specific economic outlook, amongst other factors.

Risk-Free Interest Rate—The risk-free interest rate is based on the U.S. Treasury yield curve in effect at the time of grant for zero coupon U.S. Treasury notes with maturities approximately equal to the expected term of the options.

Expected Dividend—The expected dividend has been zero as the Company has never paid dividends and does not expect to pay dividends.

Summary of Assumptions—The fair value of the employee stock options were estimated on the grant dates using a Black-Scholes option-pricing model with the following weighted average assumptions:

	Years Ended			
	December 31,			
	2013	2012	2011	
Expected term (in years)	6.0	6.0	6.0	
Risk-free interest rate	1.4	% 1.1	% 2.1	%
Expected volatility	59	% 60	% 57	%
Expected dividend rate	—	% —	% —	%

9. Net Loss per Share of Common Stock

The following table sets forth the computation of the Company's basic and diluted net loss per share of common stock during the years ended December 31, 2013, 2012 and 2011 (in thousands, except for share and per share amounts):

	Years Ended December 31,		
	2013	2012	2011
Net loss attributable to common stockholders	\$ (8,819) \$ (756) \$ (38,675
Shares used in computing net loss per share of common stock, basic and diluted	44,958,120	42,966,448	9,698,880
Net loss per share of common stock, basic and diluted	\$ (0.20) \$ (0.02) \$ (3.99

The following outstanding shares of common stock equivalents were excluded from the computation of diluted net loss per share of common stock for the periods presented because including them would have been antidilutive:

Table of Contents

	Years Ended December 31,		
	2013	2012	2011
Stock options to purchase common stock	6,468,743	7,426,417	8,229,597
RSUs	850,351	254,863	—
Common stock subject to repurchase	—	7,500	15,000
Common stock warrants	912,368	912,368	912,368

10. Income Taxes

The Company follows FASB ASC 740, Income Taxes, for the computation and presentation of its tax provision. For the year ended December 31, 2013, the income tax provision of \$17,000 represents a provision for income taxes of \$16,000 related to foreign income taxes and state minimum income taxes of \$1,000.

The provision for annual income taxes consisted of the following (in thousands):

	As of December 31,		
	2013	2012	2011
Current:			
U.S. Federal	\$—	\$—	\$—
State	1	1	1
Foreign	16	50	42
Total current	\$17	\$51	\$43
Deferred:			
U.S. Federal	\$—	\$—	\$—
State	—	—	—
Foreign	—	—	—
Total deferred	—	—	—
Total provision for income taxes	\$17	\$51	\$43

The reconciliation of federal statutory income tax to the Company's provision for income taxes is as follows (in thousands):

	As of December 31,		
	2013	2012	2011
Expected provision at statutory federal rate	\$(3,080)	\$(247)	\$(10,482)
State tax—net of federal benefit	1	1	1
U.S. federal research credit	(2,272)	—	(870)
Non deductible expenses	28	131	763
Others	(9)	31	6
Change in valuation allowance	5,349	135	10,625
Provision for income taxes	\$17	\$51	\$43

As of December 31, 2013, the Company's foreign subsidiaries had accumulated approximately \$0.3 million of earnings that have been reinvested in their operations. The Company has not provided U.S. tax on these earnings as the reinvestment is considered permanent in duration.

Table of Contents

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Significant components of the Company's deferred tax assets and liabilities are as follows (in thousands):

	As of December 31,	
	2013	2012
Deferred tax assets:		
Net operating loss federal and state	\$ 15,411	\$ 12,515
Research and foreign tax credits	8,727	5,810
Accrued compensation and vacation	595	1,201
Deferred revenue, other accruals and reserves	2,188	574
Stock-based compensation	3,262	1,822
Patents	5,929	8,118
Gross deferred tax assets	36,112	30,040
Valuation allowance	(35,496)	(29,199)
Total deferred tax asset	616	841
Deferred tax liabilities:		
Property and equipment	616	841
Total deferred tax liabilities	616	841
Net deferred tax assets	\$—	\$—

The Company established valuation allowances for U.S. federal and state deferred tax assets. The valuation allowances require an assessment of both positive and negative evidence when determining whether it is more likely than not that deferred tax assets are recoverable. Such assessment is required on a jurisdiction by jurisdiction basis. During the year ended December 31, 2013, the Company continued to maintain the valuation allowances for U.S. federal and state deferred tax assets. The Company intends to maintain a full valuation allowance until sufficient positive evidence exists to support reversal. The valuation allowance for deferred tax assets was \$35.5 million and \$29.2 million as of December 31, 2013 and 2012, respectively. The increase in the valuation allowance during the years ended December 31, 2013 and 2012 was \$6.3 million and \$2.1 million, respectively.

As of December 31, 2013, the Company has net operating loss carryforwards for U.S. federal and state income tax purposes of approximately \$52.0 million and \$49.2 million, respectively. Of these amounts, \$13.9 million and \$13.1 million, respectively, represent federal and state tax deductions from stock-based compensation which will be recorded as an adjustment to additional paid-in capital when they reduce taxes payable. The U.S. federal net operating loss carryforwards will start to expire in 2026 while for state purposes, the net operating losses will begin to expire in 2018. Utilization of the Company's net operating loss carryforwards and tax credits may be subject to substantial annual limitation due to the ownership change limitations provided by the Internal Revenue Code and similar state provisions. Such an annual limitation could result in the expiration of the net operating loss before utilization. The Company has not determined whether an ownership change has occurred.

In addition, the Company has \$6.4 million U.S. federal R&D credit and \$6.9 million California R&D credit carryforwards to offset future income tax liabilities. U.S. federal R&D tax credits can be carried forward for 20 years and will start to expire in 2025. California R&D credits can be carried forward indefinitely.

Uncertain Tax Positions

For the year ended December 31, 2013, the total amount of unrecognized tax benefits excluding interest thereon was \$2.7 million, none of which would impact the effective tax rate if realized during the year. The Company has not accrued interest and penalties related to the unrecognized tax benefits reflected in the financial statements for the years ended December 31, 2013, 2012 and 2011. Although the timing and outcome of income tax audits is highly uncertain, unrecognized tax benefits are not expected to decrease in the next twelve months.

Table of Contents

The following table summarizes the activity related to unrecognized tax benefits (in thousands):

	As of December 31,		
	2013	2012	2011
Unrecognized benefit—beginning of period	\$1,840	\$1,401	\$1,067
Gross increase—prior period tax positions	274	38	—
Gross decreases—prior period tax positions	(90) —	(113
Gross increases—current period tax positions	632	401	447
Unrecognized benefit—end of period	\$2,656	\$1,840	\$1,401

The Company's U.S. federal, state and local and foreign income tax returns are subject to audit by relevant tax authorities. The Company's income tax reporting periods beginning with tax year ended December 31, 2010 for the U.S., and tax year ended December 31, 2009 for the Company's major state and local jurisdictions remain generally open to audit by relevant tax authorities. In addition, the tax years from December 31, 2004 remain open for state and local jurisdictions and the tax years from December 31, 2005 remain open for U.S. federal taxes due to certain net operating loss and credit positions.

11. Related Party Transactions

In March 2013, the Company amended the CDP agreement that it had entered into in March 2010 with a related party and that it and the related party had amended in March 2012. Under the amended agreement, the two companies will work together to conduct research and development and other activities. Depending on the output of the research and development, the primary rightholder will be the Company or the other party. However, if the other party is not the primary rightholder, it will be able to license the developed technology from the Company. The other party's vice chairman of the board of directors is a director of the Company and is also a managing member of a significant shareholder of the Company. As of December 31, 2013, this shareholder was a beneficial owner of approximately 9.2% of the Company's common stock. As of December 31, 2013 and December 31, 2012 the Company had accounts receivable in the amount of \$0.1 million and \$0.4 million, respectively, and had a deferred revenue balance in the amount of \$0 and \$0.1 million, respectively, related to the amended agreement. The following table presents related party revenue included in the Consolidated Statement of Operations from this amended agreement (in thousands):

	Years Ended December 31,		
	2013	2012	2011
Related party revenue	\$4,365	\$4,544	\$5,237

In November 2006, the Company entered into an Alliance Agreement with a related party that was a beneficial owner of approximately 5.6% of the Company's common stock as of December 31, 2013. The other party and the Company each have an independent board member that serves on both companies' boards of directors. Under the agreement, the two companies will work together to conduct research and development and other activities with respect to materials and high productivity combinatorial technology for use in semiconductor applications. Depending on the output of the research and development, the primary rightholder could be either company. However, the party that is not the primary rightholder will be assigned the right to use the output property. Under the agreement, the other party will pay the Company fees for services and both parties may provide royalties to the other for licensed technology sold to third parties. Since November 2006, the agreement has been amended numerous times with the last amendment signed in December 2013. As of December 31, 2013 and December 31, 2012 the Company had accounts receivable in the amount of \$0.1 million and \$0.6 million, respectively, and had a deferred revenue balance in the amount of \$0.4 million and \$0.7 million, respectively, related to the amended agreement. The following table presents related party revenue and cost of revenue included in the Consolidated Statement of Operations from the amended agreement (in thousands):

	Years Ended December 31,		
	2013	2012	2011
Related party revenue	\$8,449	\$16,524	\$15,756
Related cost of revenue	\$4	\$55	\$78

12. Information about Geographic Areas

94

Table of Contents

Revenue

Revenue by geography is based on the billing address of the customer. The following table sets forth revenue by geographic area (in thousands):

	Years Ended December 31,		
	2013	2012	2011
United States	\$47,752	\$51,045	\$35,573
Japan	12,691	13,594	15,148
APAC other	2,958	2,066	2,934
Europe and Middle East	4,005	122	175
Total	\$67,406	\$66,827	\$53,830

Long-Lived Assets

Substantially all of the Company's long-lived assets are located in the U.S. An insignificant amount of long-lived assets reside in the Company's foreign subsidiaries and branches in Hong Kong, Japan and Taiwan.

13. Subsequent Event

On February 3, 2014, the Company instituted a reduction in force, which is anticipated to be completed during the first quarter of 2014, as part of an overall plan to reduce the Company's cost structure. The reduction in force constituted approximately 18% of the Company's workforce. As a result of the reduction in force, the Company expects to incur total expenses relating to termination benefits of approximately \$1.1 million, which primarily represents cash expenditures the Company expects to pay out over the next three months. The Company expects to record these charges during the three months ending March 31, 2014.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Our management, including our Chief Executive Officer and Chief Financial Officer, evaluated the effectiveness of our disclosure controls and procedures as of December 31, 2013. The term "disclosure controls and procedures," as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act, means controls and other procedures of a company that are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. In designing and evaluating the disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable, and not absolute, assurance of achieving the desired objectives. In reaching a reasonable level of assurance, management necessarily applies its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Based on this evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective as of December 31, 2013 at the reasonable assurance level.

Changes in Internal Control Over Financial Reporting

There was no change in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) that occurred during the quarterly period ended December 31, 2013 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rule 13a-15(f) or 15d-15(f) of the Securities Exchange Act of 1934. Our internal control over financial reporting is a process designed by, or under the supervision of, our Chief Executive Officer and Chief Financial Officer, and effected by our board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Our management, including our Chief Executive Officer and Chief Financial Officer, does not expect that our disclosure controls and procedures or internal control over financial reporting will prevent all errors and all fraud. A control system, no matter how well designed and implemented, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. Further, the design of a control system must reflect the fact that there are resource constraints and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues within a company are detected. The inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple errors or mistakes. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people or by management override of the controls. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and may not be detected. Also, projections of any evaluation of effectiveness to future periods are subject to the risk

that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Table of Contents

Our management assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2013, utilizing the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in Internal Control—Integrated Framework (1992 framework). Based on our management's assessment, we believe that, as of December 31, 2013, our internal control over financial reporting was effective based on those criteria. The effectiveness of our internal control over financial reporting as of December 31, 2013 has been audited by KPMG LLP, an independent registered public accounting firm, as stated in their report which is included in Item 8 of this Annual Report on Form 10-K.

ITEM 9B. OTHER INFORMATION

None.
