GOLDMAN SACHS GROUP INC Form 424B2 March 20, 2019

Filed Pursuant to Rule 424(b)(2)

Registration Statement No. 333-219206

GS Finance Corp.

\$4,000,000

Bearish Barrier Early Redeemable Market-Linked Notes With Daily Barrier Observation Linked to the S&P 500<sup>®</sup> Index due 2020

guaranteed by

The Goldman Sachs Group, Inc.

The notes do not bear interest. Unless your notes are automatically redeemed, the amount that you will be paid on your notes on the stated maturity date (March 23, 2020) is based on the performance of the S&P 500<sup>®</sup> Index as measured from and including the trade date (March 18, 2019) to and including the determination date (March 18, 2020).

By purchasing this note, you are taking the view that the final index level (the closing level of the index on the determination date) will be less than the initial index level of 2,832.94 by more than 0.50%, but not by more than 15.00%, and that your notes will not be automatically redeemed. If your notes are not automatically redeemed, the return on your notes may be less than 0.50% and will not be more than 15.00%.

Your notes will be automatically redeemed if, on any trading day from but excluding the original issue date to but excluding the determination date (a redemption observation date), the closing level of the index decreases below the barrier. The barrier is equal to 85.00% of the initial index level. If your notes are automatically redeemed, for each \$1,000 face amount of your notes, you will receive a payment on the corresponding redemption date (the third business day after the redemption observation date) equal to \$1,005 (representing a return of 0.50%). If your notes are automatically redeemed, the return on your notes will be 0.50%.

If your notes are not automatically redeemed, at maturity, for each 1,000 face amount of your notes, if the final index level is less than the initial index level, but not by more than 15.00%, you will receive a payment equal to the sum of (i) 1,000 plus (ii) 1,000 times the absolute value of the index return. The index return is the decrease in the final index level from the initial index level. For example, if the index return is -15.00%, your return will be +15.00%. If the final index level is (i) greater than or equal to the initial index level or (ii) less than the initial index level by more than 15.00%, at maturity you will only receive 1,005 (representing a return of 0.50%).

If your notes are not automatically redeemed, at maturity, for each \$1,000 face amount of your notes you will receive an amount in cash equal to:

if the index return is greater than or equal to zero, \$1,005;

if the index return is less than zero but greater than or equal to -15.00%, the sum of (i) \$1,000 plus (ii) the product of (a) \$1,000 times (b) the absolute value of the index return; or

if the index return is less than -15.00%, \$1,005.

You should read the disclosure herein to better understand the terms and risks of your investment, including the credit risk of GS Finance Corp. and The Goldman Sachs Group, Inc. See page S-11.

The estimated value of your notes at the time the terms of your notes are set on the trade date is equal to approximately \$984 per \$1,000 face amount. For a discussion of the estimated value and the price at which Goldman Sachs & Co. LLC would initially buy or sell your notes, if it makes a market in the notes, see the following page.

Original issue date:March 21, 2019Original issue price:100.00% of the face amountUnderwriting discount:1.1% of the face amount\*Net proceeds to the issuer:98.9% of the face amount\* UBS Financial Services Inc., as the selling agent, will receive a selling concession not in excess of 1.00% of the face amount.

Neither the Securities and Exchange Commission nor any other regulatory body has approved or disapproved of these securities or passed upon the accuracy or adequacy of this prospectus. Any representation to the contrary is a criminal offense. The notes are not bank deposits and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency, nor are they obligations of, or guaranteed by, a bank.

Goldman Sachs & Co. LLC

UBS Financial Services Inc. Selling Agent

Prospectus Supplement No. 5,360 dated March 18, 2019.

The issue price, underwriting discount and net proceeds listed above relate to the notes we sell initially. We may decide to sell additional notes after the date of this prospectus supplement, at issue prices and with underwriting discounts and net proceeds that differ from the amounts set forth above. The return (whether positive or negative) on your investment in notes will depend in part on the issue price you pay for such notes.

GS Finance Corp. may use this prospectus in the initial sale of the offered notes. In addition, Goldman Sachs & Co. LLC or any other affiliate of GS Finance Corp. may use this prospectus in a market-making transaction in a note after its initial sale. Unless GS Finance Corp. or its agent informs the purchaser otherwise in the confirmation of sale, this prospectus is being used in a market-making transaction.

#### Estimated Value of Your Notes

The estimated value of your notes at the time the terms of your notes are set on the trade date (as determined by reference to pricing models used by Goldman Sachs & Co. LLC (GS&Co.) and taking into account our credit spreads) is equal to approximately \$984 per \$1,000 face amount, which is less than the original issue price. The value of your notes at any time will reflect many factors and cannot be predicted; however, the price (not including GS&Co.'s customary bid and ask spreads) at which GS&Co. would initially buy or sell notes (if it makes a market, which it is not obligated to do) and the value that GS&Co. will initially use for account statements and otherwise is equal to approximately the estimated value of your notes at the time of pricing, plus an additional amount (initially equal to \$11 per \$1,000 face amount).

Prior to March 18, 2020, the price (not including GS&Co.'s customary bid and ask spreads) at which GS&Co. would buy or sell your notes (if it makes a market, which it is not obligated to do) will equal approximately the sum of (a) the then-current estimated value of your notes (as determined by reference to GS&Co.'s pricing models) plus (b) any remaining additional amount (the additional amount will decline to zero on a straight-line basis over the period from the time of pricing through March 17, 2020). On and after March 18, 2020, the price (not including GS&Co.'s customary bid and ask spreads) at which GS&Co. would buy or sell your notes (if it makes a market) will equal approximately the then-current estimated value of your notes determined by reference to such pricing models.

#### About Your Prospectus

The notes are part of the Medium-Term Notes, Series E program of GS Finance Corp. and are fully and unconditionally guaranteed by The Goldman Sachs Group, Inc. This prospectus includes this prospectus supplement and the accompanying documents listed below. This prospectus supplement constitutes a supplement to the documents listed below and should be read in conjunction with such documents:

#### Prospectus supplement dated July 10, 2017

#### Prospectus dated July 10, 2017

The information in this prospectus supplement supersedes any conflicting information in the documents listed above. In addition, some of the terms or features described in the listed documents may not apply to your notes.

#### SUMMARY INFORMATION

We refer to the notes we are offering by this prospectus supplement as the "offered notes" or the "notes". Each of the offered notes has the terms described below and under "Specific Terms of Your Notes" on page S-20. Please note that in this prospectus supplement, references to "GS Finance Corp.", "we", "our" and "us" mean only GS Finance Corp. and do not include its subsidiaries or affiliates, references to "The Goldman Sachs Group, Inc.", our parent company, mean only The Goldman Sachs Group, Inc. and do not include its subsidiaries or affiliates and references to "Goldman Sachs" mean The Goldman Sachs Group, Inc. together with its consolidated subsidiaries and affiliates, including us. Also, references to the "accompanying prospectus" mean the accompanying prospectus, dated July 10, 2017, and references to the "accompanying prospectus supplement" mean the accompanying prospectus supplement, dated July 10, 2017, for Medium-Term Notes, Series E, in each case of GS Finance Corp. and The Goldman Sachs Group, Inc. References to the "indenture" in this prospectus supplement mean the senior debt indenture, dated as of October 10, 2008, as supplemented by the First Supplemental Indenture, dated as of February 20, 2015, each among us, as issuer, The Goldman Sachs Group, Inc., as guarantor, and The Bank of New York Mellon, as trustee. This indenture, as so supplemented and as further supplemented thereafter, is referred to as the "GSFC 2008 indenture" in the accompanying prospectus supplement.

Investment Thesis

The notes are designed for investors who:

believe that the closing level of the underlying index will be greater than or equal to the lower barrier on every early redemption observation date (each day from but excluding the original issue date to but excluding the determination date) so that the notes will not be automatically redeemed early;

believe that, if the notes are not automatically redeemed early, a barrier event (described below) will not occur; take the bearish view that the final underlying index level will be less than the initial underlying index level by more than 0.50%, but not by more than 15.00%;

want limited exposure to the absolute value of the negative underlying index return if the final underlying index level is less than the initial underlying index level, assuming the notes are not automatically redeemed early and a barrier event does not occur;

believe that the absolute value of the negative underlying index return will be greater than 0.50%, but are willing to forgo exposure to the absolute value of the negative underlying index return if the notes are automatically redeemed early or if a barrier event occurs and, in either case, are willing to receive a 0.50% contingent return instead; are willing to accept that, if the notes are automatically redeemed early, the return on the note will be limited to 0.50%; and

are willing to accept that, if the notes are not automatically redeemed early, the return on the notes may be less than 0.50% and will not be more than 15.00% and, if a barrier event has occurred, the return on the notes will be limited to 0.50%.

The notes will be automatically redeemed early if, on any early redemption observation date, the closing level of the underlying index declines below the lower barrier of the initial underlying index level minus 15.00% of the initial underlying index level.

A barrier event will occur if the final underlying index level is (i) less than the lower barrier or (ii) greater than or equal to the initial underlying index level.

Key Terms

Issuer: GS Finance Corp.

Guarantor: The Goldman Sachs Group, Inc.

Underlying index: the S&P 500<sup>®</sup> Index (Bloomberg symbol, "SPX Index"), as published by S&P Dow Jones Indices LLC; see "The Underlying Index" on page S-27

Specified currency: U.S. dollars ("\$")

Face amount: each note will have a face amount of \$1,000, or integral multiples of \$1,000 in excess thereof; \$4,000,000 in the aggregate for all the offered notes; the aggregate face amount of the offered notes may be increased if the issuer,

at its sole option, decides to sell an additional amount of the offered notes on a date subsequent to the date of this prospectus supplement

Denominations: \$1,000 and integral multiples of \$1,000 in excess thereof

Supplemental plan of distribution: GS Finance Corp. has agreed to sell to Goldman Sachs & Co. LLC ("GS&Co."), and GS&Co. has agreed to purchase from GS Finance Corp., the aggregate face amount of the offered notes specified on the front cover of this prospectus supplement. GS&Co. proposes initially to offer the notes to the public at the original issue price set forth on the cover page of the prospectus supplement, and to UBS Financial Services Inc. at such price less a concession not in excess of 1.00% of the face amount. See "Supplemental Plan of Distribution" on page S-38

Purchase at amount other than face amount: the amount we will pay you on an early redemption date or the stated maturity date for your notes will not be adjusted based on the issue price you pay for your notes, so if you acquire notes at a premium (or discount) to face amount and hold them to an early redemption date or the stated maturity date, it could affect your investment in a number of ways. The return on your investment in such notes will be lower (or higher) than it would have been had you purchased the notes at face amount. See "Additional Risk Factors Specific to Your Notes — If You Purchase Your Notes at a Premium to Face Amount, the Return on Your Investment Will Be Lower Than the Return on Notes Purchased at Face Amount and the Impact of Certain Key Terms of the Notes Will be Negatively Affected".

Supplemental discussion of U.S. federal income tax consequences: the notes will be treated as debt instruments subject to the special rules governing contingent payment debt instruments for U.S. federal income tax purposes. Under this treatment, it is the opinion of Sidley Austin llp that if you are a U.S. individual or taxable entity, you generally should be required to pay taxes on ordinary income from the notes over their term based on the comparable yield for the notes. In addition, any gain you may recognize on the sale, exchange, redemption or maturity of the notes will be taxed as ordinary interest income.

Automatic redemption feature: if, as measured on any early redemption observation date, the closing level of the underlying index is less than the lower barrier, your notes will be automatically redeemed early. If your notes are automatically redeemed early on any early redemption observation date, for each \$1,000 face amount of your notes, on the corresponding early redemption date, we will pay you an amount in cash equal to the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the contingent return.

Cash settlement amount (on any early redemption date): if your notes are automatically redeemed early on any early redemption observation date, for each \$1,000 face amount of your notes, on the corresponding early redemption date, we will pay you an amount in cash equal to the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the contingent return.

Cash settlement amount (on the stated maturity date): if your notes are not automatically redeemed early, for each \$1,000 face amount of your notes, we will pay you on the stated maturity date an amount in cash equal to:

if a barrier event has not occurred, the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the absolute value of the underlying index return; or

if a barrier event has occurred, the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the contingent return. Trade date: March 18, 2019

Original issue date (settlement date): March 21, 2019

Initial underlying index level: 2,832.94

Final underlying index level: the closing level of the underlying index on the determination date, except in the limited circumstances described under "Specific Terms of Your Notes — Payment of Principal on Stated Maturity Date — Consequences of a Market Disruption Event or a Non-Trading Day" on page S-22 and subject to adjustment as provided under "Specific Terms of Your Notes — Discontinuance or Modification of the Underlying Index" on page S-22

Underlying index return: the quotient of (i) the final underlying index level minus the initial underlying index level divided by (ii) the initial underlying index level, expressed as a percentage

Contingent return: 0.50%

Barrier event: the final underlying index level is (i) less than the lower barrier or (ii) greater than or equal to the initial underlying index level

Lower barrier: the initial underlying index level minus 15.00% of the initial underlying index level (rounded to the nearest one-hundredth)

Closing level: as described under "Specific Terms of Your Notes — Special Calculation Provisions — Closing Level" on page S-23

Early redemption observation dates: each day from but excluding the original issue date to but excluding the determination date, excluding any date or dates on which the calculation agent determines that a market disruption event occurs or is continuing or that the calculation agent determines is not a trading day

Early redemption dates: the third business day after each early redemption observation date

Stated maturity date: March 23, 2020, subject to adjustment as described under "Specific Terms of Your Notes — Stated Maturity Date" on page S-21

Determination date: March 18, 2020, subject to adjustment as described under "Specific Terms of Your Notes — Determination Date" on page S-21

No interest: the notes do not bear interest

No listing: the notes will not be listed on any securities exchange or interdealer market quotation system

Calculation agent: GS&Co.

Business day: as described under "Specific Terms of Your Notes — Special Calculation Provisions — Business Day" on page S-23

Trading day: as described under "Specific Terms of Your Notes — Special Calculation Provisions — Trading Day" on page S-23

CUSIP no.: 40056F4D4

ISIN no.: US40056F4D47

FDIC: the notes are not bank deposits and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency, nor are they obligations of, or guaranteed by, a bank

# HYPOTHETICAL EXAMPLES

#### (Hypothetical terms only. Actual terms may vary.)

The following examples are provided for purposes of illustration only. They should not be taken as an indication or prediction of future investment results and are intended merely to illustrate the impact that the various hypothetical underlying index levels on an early redemption observation date or the determination date could have on the cash settlement amount on an early redemption date or at maturity assuming all other variables remain constant.

The examples below are based on a range of underlying index levels that are entirely hypothetical; no one can predict what the underlying index level will be on any early redemption observation date, and no one can predict what the final underlying index level will be on the determination date. The underlying index has been highly volatile in the past — meaning that the underlying index level has changed considerably in relatively short periods — and its performance cannot be predicted for any future period.

The information in the following examples reflects hypothetical rates of return on the offered notes assuming that they are purchased on the original issue date at the face amount and held to an early redemption date or the stated maturity date. If you sell your notes in a secondary market prior to an early redemption date or the stated maturity date, your return will depend upon the market value of your notes at the time of sale, which may be affected by a number of factors that are not reflected in the examples below such as interest rates, the volatility of the underlying index, the creditworthiness of GS Finance Corp., as issuer, and the creditworthiness of The Goldman Sachs Group, Inc., as guarantor. In addition, the estimated value of your notes at the time the terms of your notes are set on the trade date (as determined by reference to pricing models used by GS&Co.) is less than the original issue price of your Notes — The Estimated Value of Your Notes At the Time the Terms of Your Notes Are Set On the Trade Date (as Determined By Reference to Pricing Models Used By GS&Co.) Is Less Than the Original Issue Price Of Your Notes" on page S-11 of this prospectus supplement. The information in the examples also reflects the key terms and assumptions in the box below.

Key Terms and AssumptionsFace amount\$1,000Lower barrierThe initial underlying index level minus 15.00% of the initial underlying index levelContingent return 0.50%The notes are not automatically redeemed early, unless otherwise indicated below

Neither a market disruption event nor a non-trading day occurs on any early redemption observation date or the originally scheduled determination date

No change in or affecting any of the underlying index stocks or the method by which the underlying index sponsor calculates the underlying index

Notes purchased on original issue date at the face amount and held to an early redemption date or the stated maturity date

For these reasons, the actual performance of the underlying index over the life of your notes, as well as the amount payable on any early redemption date or at maturity, may bear little relation to the hypothetical examples shown below or to the historical underlying index levels shown elsewhere in this prospectus supplement. For information about the historical levels of the underlying index during recent periods, see "The Underlying Index — Historical Closing Levels of the Underlying Index" below. Before investing in the offered notes, you should consult publicly available information to determine the levels of the underlying index between the date of this prospectus supplement and the date of your purchase of the offered notes.

Also, the hypothetical examples shown below do not take into account the effects of applicable taxes. Because of the U.S. tax treatment applicable to your notes, tax liabilities could affect the after-tax rate of return on your notes to a comparatively greater extent than the after-tax return on the underlying index stocks.

Hypothetical Payment on an Early Redemption Date

The example below shows hypothetical payment that we would pay on the corresponding early redemption date with respect to each \$1,000 face amount of the notes if the closing level of the underlying index is less than the lower barrier on an early redemption observation date.

If your notes are automatically redeemed early on any early redemption observation date (i.e., on the applicable early redemption observation date the closing level of the underlying index is less than the lower barrier), the cash settlement amount that we would deliver for each \$1,000 face amount of your notes on the applicable early redemption date would be the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the contingent return. If, for example, the closing level of the underlying index on an early redemption observation date were determined to be 70.000% of the initial underlying index level, your notes would be automatically redeemed early and the cash settlement amount that we would deliver on your notes on the corresponding early redemption date would be 100.500% of the face amount of your notes or \$1,005 for each \$1,000 of the face amount of your notes.

# Hypothetical Payment at Maturity

If your notes are not automatically redeemed early on any early redemption observation date (i.e., on each of the early redemption observation dates the closing level of the underlying index is equal to or greater than the lower barrier), the cash settlement amount we would deliver for each \$1,000 face amount of your notes on the stated maturity date will depend on the performance of the underlying index on the determination date, as shown in the table below. The table below assumes that the notes have not been automatically redeemed early on any early redemption observation date and reflects hypothetical cash settlement amounts that you could receive on the stated maturity date.

The levels in the left column of the table below represent hypothetical final underlying index levels and are expressed as percentages of the initial underlying index level. The amounts in the middle column represent the hypothetical cash settlement amounts, based on the corresponding hypothetical final underlying index level (expressed as a percentage of the initial underlying index level), assuming that a barrier event does not occur (i.e., the final underlying index level is less than the initial underlying index level but has not decreased below the lower barrier), and are expressed as percentages of the face amount of a note (rounded to the nearest one-thousandth of a percent). The amounts in the right column represent the hypothetical cash settlement amounts, based on the corresponding hypothetical final underlying index level (expressed as a percentage of the initial underlying index level), assuming that a barrier event occurs (i.e., the final underlying index level is equal to or greater than the initial underlying index level or has decreased below the lower barrier), and are expressed as percentages of the face amount of a percent). Thus, a hypothetical cash settlement amount of 100.000% means that the value of the cash payment that we would deliver for each \$1,000 of the outstanding face amount of the offered notes on the stated maturity date would equal 100.000% of the face amount of a note, based on the corresponding hypothetical final underlying index level (expressed as a percentage of the initial underlying index level) and the assumptions noted above.

The Notes Have Not Been Automatically Redeemed Early

Hypothetical Final Underlying Index Level (as Percentage of Initial	Hypothetical Cash Settlement Amount (as	
Underlying Index Level)	Percentage of Face Amount)	
	Barrier Event Has Not	Barrier Event Has
	Occurred	Occurred
175.000%	N/A	100.500%
160.000%	N/A	100.500%
150.000%	N/A	100.500%
140.000%	N/A	100.500%
125.000%	N/A	100.500%
120.000%	N/A	100.500%
110.000%	N/A	100.500%
105.000%	N/A	100.500%
100.000%	N/A	100.500%
99.750%	100.250%	N/A
99.500%	100.500%	N/A
99.000%	101.000%	N/A
95.000%	105.000%	N/A
85.000%	115.000%	N/A
84.999%	N/A	100.500%
75.000%	N/A	100.500%
60.000%	N/A	100.500%
50.000%	N/A	100.500%
25.000%	N/A	100.500%
0.000%	N/A	100.500%

If, for example, a barrier event has occurred and the final underlying index level were determined to be 25.000% of the initial underlying index level, the cash settlement amount that we would deliver on your notes at maturity would be 100.500% of the face amount of your notes, as shown in the table above. Similarly, if a barrier event has occurred and the final underlying index level were determined to be 175.000% of the initial underlying index level, the cash settlement amount that we would deliver on your notes, as shown in the table above.

If, for example, a barrier event has not occurred and the final underlying index level were determined to be 85.000% of the initial underlying index level, the absolute value of the underlying index return would be 15.000% and the cash settlement amount that we would deliver on your notes at maturity would be 115.000% of the face amount of your notes, as shown in the table above. However, you will benefit from the absolute value of the underlying index return only if a barrier event has not occurred. Because a barrier event will occur if the final underlying index level is below the lower barrier (the initial underlying index level minus 15.00% of the initial underlying index level, rounded to the nearest one-hundredth) or at or above the initial underlying index level, the cash settlement amount that we will deliver at maturity if a barrier event has not occurred will be limited to a maximum of 115.000% (representing a maximum return of 15.000%) of the face amount. As a result, you would not benefit from a final underlying index level that is below the lower barrier or at or above the initial underlying index level. In fact, a final underlying index level that is at or above the initial underlying index level or below the lower barrier will cause the cash settlement amount that we will deliver at maturity to be limited to 100.500% (representing a contingent return of 0.500%) of the

face amount.

The following chart also shows a graphical illustration of the hypothetical cash settlement amounts (expressed as a percentage of the face amount of your notes) that we would pay on your notes on the stated maturity date, if the final underlying index level (expressed as a percentage of the initial underlying index level) were any of the hypothetical levels shown on the horizontal axis. The chart shows that, if a barrier event occurs (i.e., the final underlying index level is less than the lower barrier or the final underlying index level is equal to or greater than the initial underlying index level), it would result in a hypothetical payment amount of 100.500% of the face amount of the notes (the horizontal line that crosses the 100.500% marker on the vertical axis). The chart also shows that, if a barrier event does not occur, it would result in a hypothetical payment amount that is greater than 100.000%, but less than or equal to 115.000%, of the face amount of the notes (the section above the 100.000% marker on the vertical axis but on or below the 115.000% marker on the vertical axis).

The cash settlement amounts shown above are entirely hypothetical; they are based on market prices for the underlying index stocks that may not be achieved on an early redemption observation date or the determination date and on assumptions that may prove to be erroneous. The actual market value of your notes on the stated maturity date or at any other time, including any time you may wish to sell your notes, may bear little relation to the hypothetical cash settlement amounts shown above, and these amounts should not be viewed as an indication of the financial return on an investment in the offered notes. The hypothetical cash settlement amounts on notes held to the stated maturity date in the examples above assume you purchased your notes at their face amount and have not been adjusted to reflect the actual issue price you pay for your notes. The return on your investment (whether positive or negative) in your notes will be affected by the amount you pay for your notes. If you purchase your notes for a price other than the face amount, the return on your investment will differ from, and may be significantly lower than, the hypothetical returns suggested by the above examples. Please read "Additional Risk Factors Specific to Your Notes — The Market Value of Your Notes May Be Influenced by Many Unpredictable Factors" on page S-14.

Payments on the notes are economically equivalent to the amounts that would be paid on a combination of other instruments. For example, payments on the notes are economically equivalent to a combination of a bond bought by the holder and one or more options entered into between the holder and us. Therefore, the terms of the notes may be impacted by the various factors mentioned on page S-14 in the section "Additional Risk Factors Specific to Your Notes — The Market Value of Your Notes May Be Influenced by Many Unpredictable Factors". The discussion in this paragraph does not modify or affect the terms of the notes or the U.S. federal income tax treatment of the notes, as described elsewhere in this prospectus supplement.

We cannot predict the actual final underlying index level or what the market value of your notes will be on any particular trading day, nor can we predict the relationship between the underlying index level and the market value of your notes at any time prior to the stated maturity date. The actual amount that you will receive on an early redemption date or at maturity and the rate of return on the offered notes will depend on whether or not the notes are automatically redeemed early and the actual closing level of the underlying index on any early redemption observation date and the actual final underlying index level determined by the calculation agent as described above. Moreover, the assumptions on which the hypothetical returns are based may turn out to be inaccurate. Consequently, the amount of cash to be paid in respect of your notes on an early redemption date or the stated maturity date may be very different from the information reflected in the examples above.

#### ADDITIONAL RISK FACTORS SPECIFIC TO YOUR NOTES

An investment in your notes is subject to the risks described below, as well as the risks and considerations described in the accompanying prospectus and in the accompanying prospectus supplement. You should carefully review these risks and considerations as well as the terms of the notes described herein and in the accompanying prospectus and the accompanying prospectus supplement. Your notes are a riskier investment than ordinary debt securities. Also, your notes are not equivalent to investing directly in the underlying index stocks, i.e., the stocks comprising the underlying index to which your notes are linked. You should carefully consider whether the offered notes are suited to your particular circumstances.

The Estimated Value of Your Notes At the Time the Terms of Your Notes Are Set On the Trade Date (as Determined By Reference to Pricing Models Used By GS&Co.) Is Less Than the Original Issue Price Of Your Notes

The original issue price for your notes exceeds the estimated value of your notes as of the time the terms of your notes are set on the trade date, as determined by reference to GS&Co.'s pricing models and taking into account our credit spreads. Such estimated value on the trade date is set forth above under "Estimated Value of Your Notes"; after the trade date, the estimated value as determined by reference to these models will be affected by changes in market conditions, the creditworthiness of GS Finance Corp., as issuer, the creditworthiness of The Goldman Sachs Group, Inc., as guarantor, and other relevant factors. The price at which GS&Co. would initially buy or sell your notes (if GS&Co. makes a market, which it is not obligated to do), and the value that GS&Co. will initially use for account statements and otherwise, also exceeds the estimated value of your notes as determined by reference to these models. As agreed by GS&Co. and the distribution participants, this excess (i.e., the additional amount described under "Estimated Value of Your Notes") will decline to zero on a straight line basis over the period set forth above under "Estimated Value of Your Notes". Thereafter, if GS&Co. buys or sells your notes it will do so at prices that reflect the estimated value determined by reference to such pricing models at that time. The price at which GS&Co. will buy or sell your notes at any time also will reflect its then current bid and ask spread for similar sized trades of structured notes.

In estimating the value of your notes as of the time the terms of your notes are set on the trade date, as disclosed above under "Estimated Value of Your Notes", GS&Co.'s pricing models consider certain variables, including principally our credit spreads, interest rates (forecasted, current and historical rates), volatility, price-sensitivity analysis and the time to maturity of the notes. These pricing models are proprietary and rely in part on certain assumptions about future events, which may prove to be incorrect. As a result, the actual value you would receive if you sold your notes in the secondary market, if any, to others may differ, perhaps materially, from the estimated value of your notes determined by reference to our models due to, among other things, any differences in pricing models or assumptions used by others. See "— The Market Value of Your Notes May Be Influenced by Many Unpredictable Factors" below.

The difference between the estimated value of your notes as of the time the terms of your notes are set on the trade date and the original issue price is a result of certain factors, including principally the underwriting discount and commissions, the expenses incurred in creating, documenting and marketing the notes, and an estimate of the difference between the amounts we pay to GS&Co. and the amounts GS&Co. pays to us in connection with your notes. We pay to GS&Co. amounts based on what we would pay to holders of a non-structured note with a similar maturity. In return for such payment, GS&Co. pays to us the amounts we owe under your notes.

In addition to the factors discussed above, the value and quoted price of your notes at any time will reflect many factors and cannot be predicted. If GS&Co. makes a market in the notes, the price quoted by GS&Co. would reflect any changes in market conditions and other relevant factors, including any deterioration in our creditworthiness or perceived creditworthiness of The Goldman Sachs Group, Inc. These changes may adversely affect the value of your notes, including the price you may receive for your notes in any market making transaction. To the extent that GS&Co. makes a market in the notes, the quoted price will reflect the estimated value determined by reference to GS&Co.'s pricing models at that time, plus or minus its then current bid and ask spread for similar sized trades of structured notes (and subject to the declining excess amount described above).

Furthermore, if you sell your notes, you will likely be charged a commission for secondary market transactions, or the price will likely reflect a dealer discount. This commission or discount will further reduce the proceeds you would receive for your notes in a secondary market sale.

There is no assurance that GS&Co. or any other party will be willing to purchase your notes at any price and, in this regard, GS&Co. is not obligated to make a market in the notes. See "— Your Notes May Not Have an Active Trading Market" below.

#### The Notes Are Subject to the Credit Risk of the Issuer and the Guarantor

Although the return on the notes will be based on the performance of the underlying index, the payment of any amount due on the notes is subject to the credit risk of GS Finance Corp., as issuer of the notes, and the credit risk of The Goldman Sachs Group, Inc., as guarantor of the notes. The notes are our unsecured obligations. Investors are dependent on our ability to pay all amounts due on the notes, and therefore investors are subject to our credit risk and to changes in the market's view of our creditworthiness. Similarly, investors are dependent on the ability of The Goldman Sachs Group, Inc., as guarantor of the notes, to pay all amounts due on the notes, and therefore are also subject to its credit risk and to changes in the market's view of its creditworthiness. See "Description of the Notes We May Offer — Information About Our Medium-Term Notes, Series E Program — How the Notes Rank Against Other Debt" on page S-4 of the accompanying prospectus supplement and "Description of Debt Securities We May Offer — Guarantee by The Goldman Sachs Group, Inc." on page 42 of the accompanying prospectus.

The Potential for the Value of Your Notes to Increase Will Be Limited

If your notes are automatically redeemed early, the cash settlement amount on the relevant early redemption date for each \$1,000 face amount of your notes will be limited to \$1,005 (representing a return of 0.50%), regardless of the closing level of the underlying index on such early redemption observation date.

If your notes are not automatically redeemed early, the cash settlement amount at maturity will be based on the absolute value of the underlying index return. If a barrier event has not occurred, your return on the notes will equal the absolute value of the underlying index return, limiting your cash settlement amount to no less than \$1,000.00 and no more than \$1,150.00 for each \$1,000 face amount of your notes. This means that the cash settlement amount on your notes is limited to 100%, on the lower end of the range, and 115.00%, on the higher end of the range (representing a return of between 0%, on the lower end of the range, and 15.00%, on the higher end of the range) of the face amount. However, if a barrier event has occurred, your return on the notes will be 0.50% and the cash settlement amount that we will deliver at maturity will be equal to \$1,005 for each \$1,000 face amount of your notes. As a result, you would not benefit from a final underlying index level on the determination date that is at or above the initial underlying index level or below the lower barrier. In fact, a final underlying index level on the determination date that is equal to or above the initial underlying index level or below the lower barrier will cause the cash settlement amount that we will deliver at maturity to be limited to 100.50% (representing a return of 0.50%) of the face amount. Further, you should be aware that, even if a barrier event has not occurred, the cash settlement amount that we will deliver at maturity will be less than 100.50% (representing less than the contingent return of 0.50%) of the face amount if the final underlying index level is less than 100.00% but greater than 99.50% of the initial underlying index level.

A Lower Lower Barrier Below Which the Notes Will be Automatically Redeemed Early and/or a Lower or Higher Final Underlying Index Level at Which a Barrier Event Will Be Triggered May Reflect Greater Expected Volatility of the Underlying Index, and Greater Expected Volatility Generally Indicates An Increased Risk of Declines or Increases in the Level of the Underlying Index and, Potentially, a Return Limited to the Contingent Return at Maturity

The economic terms for the notes, including the lower barrier (below which the notes will be automatically redeemed early) and the final underlying index levels at which a barrier event will be triggered, are based, in part, on the expected volatility of the underlying index at the time the terms of the notes are set. "Volatility" refers to the frequency and magnitude of changes in the level of the underlying index.

Higher expected volatility with respect to the underlying index as of the trade date generally indicates a greater expectation as of that date that (i) the closing level of the underlying index on any early redemption observation date will be less than the lower barrier, in which case your notes will be automatically redeemed early, or (ii) the final

underlying index level on the determination date could ultimately be less than the lower barrier or greater than or equal to the initial underlying index level, in which case a barrier event will occur, which would result in a return limited to the contingent return on your investment in the notes. At the time the terms of the notes are set, higher expected volatility will generally be reflected in a lower lower barrier (below which the notes will be automatically redeemed early) and/or a lower or higher final underlying index level at which a barrier event will be triggered, as compared to otherwise comparable notes issued by the same issuer with the same maturity (taking into account any ability of the issuer to redeem the notes prior to maturity) but with a different underlying index. However, there is no guarantee that the lower lower barrier below which the notes will be automatically redeemed early or a lower or higher final underlying index level at which a barrier event will be triggered, all set for your notes on the trade date, will adequately compensate you, from a risk-potential reward perspective, for the greater risk of receiving a return limited to the contingent return on your investment in the notes.

A relatively lower lower barrier (below which the notes will be automatically redeemed early), which would decrease the potential risk of the notes being automatically redeemed early and of receiving a return limited to the contingent return on

your investment in the notes, may generally indicate an increased risk that your notes will be automatically redeemed early on any early redemption date. Similarly, a relatively lower or a relatively higher final underlying index level at which a barrier event will be triggered (as compared to otherwise comparable securities), which would decrease the potential risk of receiving a return limited to the contingent return on your investment in the notes, may generally indicate an increased risk that the level of the underlying index will decrease or increase substantially. This would result in a return limited to the contingent return on your investment in the notes if the final underlying index level is (i) less than the lower barrier or (ii) equal to or greater than the initial underlying index level, in which case a barrier event will be triggered on the determination date. Further, a relatively lower lower barrier or a relatively higher final underlying index level at which a barrier event will be triggered may not indicate that the notes have a greater likelihood of a return greater than the contingent return based on the performance of the underlying index.

You should not take the historical volatility of the underlying index as an indication of its future volatility. You should be willing to accept the downside or upside market risk of the underlying index and the potential to receive a return limited to the contingent return on your investment in the notes.

The Return on Your Notes May Change Significantly Despite Only a Small Change in the Underlying Index Level

Your ability to participate in any change in the level of the underlying index over the life of your notes will be limited and the return on your notes may change significantly despite only a small change in the underlying index level. If your notes are not automatically redeemed early and a barrier event has occurred, your return on your notes is limited to the contingent return. Accordingly, if the underlying index return is positive, the amount payable for each of your notes may be significantly less than it would have been had you invested directly in the underlying index stocks. Similarly, while a decrease in the level of the underlying index of 15.00% will result in a return on the notes equal to 15.00%, a decrease greater than 15.00% (below the lower barrier) will result in a return on the notes equal to the contingent return. Accordingly, if a barrier event occurs and the underlying index return is negative, you will not receive the benefit of the absolute value of the underlying index return.

Further, if your notes are not automatically redeemed early, a barrier event does not occur and the final underlying index level is less than the initial underlying index level but greater than 99.50% of the initial underlying index level, your return on the notes will be less than the contingent return notwithstanding the benefit from the absolute value of the underlying index return.

The Notes Are Bearish Investments

Your notes are bearish investments and, by purchasing these notes, you believe the notes will not be redeemed early and you are taking the bearish view that the final underlying index level will decline but will be greater than or equal to 85.00% of the initial underlying index level. This is generally the inverse view to a bullish investment where an investor takes the bullish view that the level of the relevant underlying index will increase throughout the life of the notes. Your notes provide an opportunity to participate in the depreciation of the underlying index if your notes are not automatically redeemed early, whereby you will receive more than the contingent return if the final underlying index level is less than the initial underlying index level by more than 0.50%, but is equal to or greater than 85.00% of the initial underlying index level.

Your Notes Are Subject to Automatic Redemption

We will call and automatically redeem all, but not part, of your notes on an early redemption date, if the closing level of the underlying index is less than the lower barrier. Therefore, the term for your notes may be reduced to as few as four days after the original issue date. You may not be able to reinvest the proceeds from an investment in the notes at a comparable return for a similar level of risk in the event the notes are redeemed early prior to maturity. In addition,

if your notes are automatically redeemed early, you will only receive \$1,005 for each \$1,000 face amount of your notes (representing a return of 0.50%) regardless of the level of the underlying index at that time.

Your Notes Do Not Bear Interest

You will not receive any interest payments on your notes. As a result, even if the cash settlement amount payable for each of your notes on the stated maturity date exceeds the face amount of your notes, the overall return you earn on your notes may be less than you would have earned by investing in a non-indexed debt security of comparable maturity that bears interest at a prevailing market rate.

Past Underlying Index Performance is No Guide to Future Performance

The actual performance of the underlying index over the life of the notes, as well as the amount payable at maturity, may bear little relation to the historical closing level of the underlying index or to the hypothetical return examples set forth elsewhere in this prospectus supplement. We cannot predict the future performance of the underlying index.

We May Sell an Additional Aggregate Face Amount of the Notes at a Different Issue Price

At our sole option, we may decide to sell an additional aggregate face amount of the notes subsequent to the date of this prospectus supplement. The issue price of the notes in the subsequent sale may differ substantially (higher or lower) from the original issue price you paid as provided on the cover of this prospectus supplement.

If You Purchase Your Notes at a Premium to Face Amount, the Return on Your Investment Will Be Lower Than the Return on Notes Purchased at Face Amount and the Impact of Certain Key Terms of the Notes Will be Negatively Affected

The cash settlement amount you will be paid on your notes on the stated maturity date or on an early redemption date will not be adjusted based on the issue price you pay for the notes. If you purchase notes at a price that differs from the face amount of the notes, then the return on your investment in such notes held to the stated maturity date will differ from, and may be substantially less than, the return on notes purchased at face amount. If you purchase your notes at a premium to face amount and hold them to the stated maturity date, the return on your investment in the notes will be lower than it would have been had you purchased the notes at face amount or a discount to face amount.

The Return on Your Notes Will Not Reflect Any Dividends Paid on the Underlying Index Stocks

The underlying index sponsor calculates the level of the underlying index by reference to the prices of the underlying index stocks, without taking account of the value of dividends paid on those underlying index stocks. Therefore, the return on your notes will not reflect the return you would realize if you actually owned the underlying index stocks included in the underlying index and received the dividends paid on those underlying index stocks. You will not receive any dividends that may be paid on any of the underlying index stocks by the underlying index stock issuers. See "— You Have No Shareholder Rights or Rights to Receive Any Underlying Index Stock" below for additional information.

The Market Value of Your Notes May Be Influenced by Many Unpredictable Factors

When we refer to the market value of your notes, we mean the value that you could receive for your notes if you chose and are able to sell them in the open market before the stated maturity date. A number of factors, many of which are beyond our control and impact the value of bonds and options generally, will influence the market value of your notes, including:

whether your notes are automatically redeemed early;

the level of the underlying index;

the volatility — i.e., the frequency and magnitude of changes — in the level of the underlying index;

the dividend rates of the underlying index stocks;

economic, financial, regulatory, political, military and other events that affect stock markets generally and the underlying index stocks, and which may affect the level of the underlying index;

interest rates and yield rates in the market;

• the time remaining until your notes mature; and

our creditworthiness and the creditworthiness of The Goldman Sachs Group, Inc., whether actual or perceived, including actual or anticipated upgrades or downgrades in our credit ratings or the credit ratings of The Goldman Sachs Group, Inc. or changes in other credit measures.

These factors will influence the price you will receive if you sell your notes before maturity, including the price you may receive for your notes in any market-making transaction. If you sell your notes before maturity, you may receive less than the face amount of your notes.

You cannot predict the future levels of the underlying index based on its historical fluctuations. The actual level of the underlying index over the life of the notes may bear little or no relation to the historical closing level of the underlying index or to the hypothetical examples shown elsewhere in this prospectus supplement.

If the Level of the Underlying Index Changes, the Market Value of Your Notes May Not Change in the Same Manner

Your notes may trade quite differently from the performance of the underlying index. Changes in the level of the underlying index may not result in a comparable change in the market value of your notes. Even if the level of the underlying index decreases below the initial underlying index level (but remains greater than the lower barrier) during the life of the notes, the market value of your notes may not increase by the same amount. We discuss some of the reasons for this disparity under "— The Market Value of Your Notes May Be Influenced by Many Unpredictable Factors" above.

#### Other Investors in the Notes May Not Have the Same Interests as You

Other investors in the notes are not required to take into account the interests of any other investor in exercising remedies or voting or other rights in their capacity as securityholders or in making requests or recommendations to Goldman Sachs as to the establishment of other transaction terms. The interests of other investors may, in some circumstances, be adverse to your interests. For example, certain investors may take short positions (directly or indirectly through derivative transactions) on assets that are the same or similar to your notes, underlying index, underlying index stocks or other similar securities, which may adversely impact the market for or value of your notes.

You Have No Shareholder Rights or Rights to Receive Any Underlying Index Stock

Investing in your notes will not make you a holder of any of the underlying index stocks. Neither you nor any other holder or owner of your notes will have any rights with respect to the underlying index stocks, including any voting rights, any right to receive dividends or other distributions, any rights to make a claim against the underlying index stocks or any other rights of a holder of the underlying index stocks. Your notes will be paid in cash and you will have no right to receive delivery of any underlying index stocks.

Anticipated Hedging Activities by Goldman Sachs or Our Distributors May Negatively Impact Investors in the Notes and Cause Our Interests and Those of Our Clients and Counterparties to be Contrary to Those of Investors in the Notes

Goldman Sachs expects to hedge our obligations under the notes by purchasing listed or over-the-counter options, futures and/or other instruments linked to the underlying index or the underlying index stocks. Goldman Sachs also expects to adjust the hedge by, among other things, purchasing or selling any of the foregoing, and perhaps other instruments linked to the underlying index or the underlying index stocks, at any time and from time to time, and to unwind the hedge by selling any of the foregoing on or before the determination date for your notes. Alternatively, Goldman Sachs may hedge all or part of our obligations under the notes with unaffiliated distributors of the notes which we expect will undertake similar market activity. Goldman Sachs may also enter into, adjust and unwind hedging transactions relating to other index-linked notes whose returns are linked to changes in the level of the underlying index or the underlying index stocks, as applicable.

In addition to entering into such transactions itself, or distributors entering into such transactions, Goldman Sachs may structure such transactions for its clients or counterparties, or otherwise advise or assist clients or counterparties in entering into such transactions. These activities may be undertaken to achieve a variety of objectives, including: permitting other purchasers of the notes or other securities to hedge their investment in whole or in part; facilitating transactions for other clients or counterparties that may have business objectives or investment strategies that are inconsistent with or contrary to those of investors in the notes; hedging the exposure of Goldman Sachs to the notes including any interest in the notes that it reacquires or retains as part of the offering process, through its market-making activities or otherwise; enabling Goldman Sachs to comply with its internal risk limits or otherwise manage firmwide, business unit or product risk; and/or enabling Goldman Sachs to take directional views as to relevant markets on behalf of itself or its clients or counterparties that are inconsistent with or contrary to the views and objectives of the investors in the notes.

Any of these hedging or other activities may adversely affect the level of the underlying index — directly or indirectly by affecting the price of the underlying index stocks — and therefore the market value of your notes and the amount we will pay on your notes at maturity. In addition, you should expect that these transactions will cause Goldman Sachs or its clients, counterparties or distributors to have economic interests and incentives that do not align with, and that may be directly contrary to, those of an investor in the notes. Neither Goldman Sachs nor any distributor will have any obligation to take, refrain from taking or cease taking any action with respect to these transactions based on the

potential effect on an investor in the notes, and may receive substantial returns on hedging or other activities while the value of your notes declines. In addition, if the distributor from which you purchase notes is to conduct hedging activities in connection with the notes, that distributor may otherwise profit in connection with such hedging activities and such profit, if any, will be in addition to the compensation that the distributor receives for the sale of the notes to you. You should be aware that the potential to earn fees in connection with hedging activities may create a further incentive for the distributor to sell the notes to you in addition to the compensation they would receive for the sale of the notes.

Goldman Sachs' Trading and Investment Activities for its Own Account or for its Clients, Could Negatively Impact Investors in the Notes

Goldman Sachs is a global investment banking, securities and investment management firm that provides a wide range of financial services to a substantial and diversified client base that includes corporations, financial institutions, governments and individuals. As such, it acts as an investor, investment banker, research provider, investment manager, investment advisor, market maker, trader, prime broker and lender. In those and other capacities, Goldman Sachs purchases, sells or holds a broad array of investments, actively trades securities, derivatives, loans, commodities, currencies, credit default

swaps, indices, baskets and other financial instruments and products for its own account or for the accounts of its customers, and will have other direct or indirect interests, in the global fixed income, currency, commodity, equity, bank loan and other markets. Any of Goldman Sachs' financial market activities may, individually or in the aggregate, have an adverse effect on the market for your notes, and you should expect that the interests of Goldman Sachs or its clients or counterparties will at times be adverse to those of investors in the notes.

Goldman Sachs regularly offers a wide array of securities, financial instruments and other products into the marketplace, including existing or new products that are similar to your notes, or similar or linked to the underlying index or underlying index stocks. Investors in the notes should expect that Goldman Sachs will offer securities, financial instruments, and other products that will compete with the notes for liquidity, research coverage or otherwise.

Goldman Sachs' Market-Making Activities Could Negatively Impact Investors in the Notes

Goldman Sachs actively makes markets in and trades financial instruments for its own account and for the accounts of customers. These financial instruments include debt and equity securities, currencies, commodities, bank loans, indices, baskets and other products. Goldman Sachs' activities include, among other things, executing large block trades and taking long and short positions directly and indirectly, through derivative instruments or otherwise. The securities and instruments in which Goldman Sachs takes positions, or expects to take positions, include securities and instruments of the underlying index or underlying index stocks, securities and instruments similar to or linked to the foregoing or the currencies in which they are denominated. Market making is an activity where Goldman Sachs buys and sells on behalf of customers, or for its own account, to satisfy the expected demand of customers. By its nature, market making involves facilitating transactions among market participants that have differing views of securities and instruments. As a result, you should expect that Goldman Sachs will take positions that are inconsistent with, or adverse to, the investment objectives of investors in the notes.

If Goldman Sachs becomes a holder of any securities of the underlying index or underlying index stocks in its capacity as a market-maker or otherwise, any actions that it takes in its capacity as securityholder, including voting or provision of consents, will not necessarily be aligned with, and may be inconsistent with, the interests of investors in the notes.

You Should Expect That Goldman Sachs Personnel Will Take Research Positions, or Otherwise Make Recommendations, Provide Investment Advice or Market Color or Encourage Trading Strategies That Might Negatively Impact Investors in the Notes

Goldman Sachs and its personnel, including its sales and trading, investment research and investment management personnel, regularly make investment recommendations, provide market color or trading ideas, or publish or express independent views in respect of a wide range of markets, issuers, securities and instruments. They regularly implement, or recommend to clients that they implement, various investment strategies relating to these markets, issuers, securities and instruments. These strategies include, for example, buying or selling credit protection against a default or other event involving an issuer or financial instrument. Any of these recommendations and views may be negative with respect to the underlying index or underlying index stocks or other securities or instruments similar to or linked to the foregoing or result in trading strategies that have a negative impact on the market for any such securities or instruments, particularly in illiquid markets. In addition, you should expect that personnel in the trading and investing businesses of Goldman Sachs will have or develop independent views of the underlying index or underlying index stocks, the relevant industry or other market trends, which may not be aligned with the views and objectives of investors in the notes.

Goldman Sachs Regularly Provides Services to, or Otherwise Has Business Relationships with, a Broad Client Base, Which May Include the Sponsor of the Underlying Index or the Issuers of the Underlying Index Stocks or Other Entities That Are Involved in the Transaction

Goldman Sachs regularly provides financial advisory, investment advisory and transactional services to a substantial and diversified client base, and you should assume that Goldman Sachs will, at present or in the future, provide such services or otherwise engage in transactions with, among others, the sponsor of the underlying index or the issuers of the underlying index stocks, or transact in securities or instruments or with parties that are directly or indirectly related to the foregoing. These services could include making loans to or equity investments in those companies, providing financial advisory or other investment banking services, or issuing research reports. You should expect that Goldman Sachs, in providing such services, engaging in such transactions, or acting for its own account, may take actions that have direct or indirect effects on the underlying index or underlying index stocks, as applicable, and that such actions could be adverse to the interests of investors in the notes. In addition, in connection with these activities, certain Goldman Sachs personnel may have access to confidential material non-public information about these parties that would not be disclosed to Goldman Sachs employees that were not working on such transactions as Goldman Sachs has established internal information barriers that are designed to preserve the confidentiality of non-public information. Therefore, any such confidential material non-public information would not be shared with Goldman Sachs employees involved in structuring, selling or making markets in the notes or with investors in the notes.

In this offering, as well as in all other circumstances in which Goldman Sachs receives any fees or other compensation in any form relating to services provided to or transactions with any other party, no accounting, offset or payment in respect of the notes will be required or made; Goldman Sachs will be entitled to retain all such fees and other amounts, and no fees or other compensation payable by any party or indirectly by holders of the notes will be reduced by reason of receipt by Goldman Sachs of any such other fees or other amounts.

The Offering of the Notes May Reduce an Existing Exposure of Goldman Sachs or Facilitate a Transaction or Position That Serves the Objectives of Goldman Sachs or Other Parties

A completed offering may reduce Goldman Sachs' existing exposure to the underlying index or underlying index stocks, securities and instruments similar to or linked to the foregoing or the currencies in which they are denominated, including exposure gained through hedging transactions in anticipation of this offering. An offering of notes will effectively transfer a portion of Goldman Sachs' exposure (and indirectly transfer the exposure of Goldman Sachs' hedging or other counterparties) to investors in the notes.

The terms of the offering (including the selection of the underlying index or underlying index stocks, and the establishment of other transaction terms) may have been selected in order to serve the investment or other objectives of Goldman Sachs or another client or counterparty of Goldman Sachs. In such a case, Goldman Sachs would typically receive the input of other parties that are involved in or otherwise have an interest in the offering, transactions hedged by the offering, or related transactions. The incentives of these other parties would normally differ from and in many cases be contrary to those of investors in the notes.

As Calculation Agent, GS&Co. Will Have the Authority to Make Determinations that Could Affect the Value of Your Notes, When Your Notes Mature and the Amount You Receive at Maturity

As calculation agent for your notes, GS&Co. will have discretion in making various determinations that affect your notes, including determining the final underlying index level on the determination date and whether a barrier event has occurred, which we will use to determine the amount we must pay on the stated maturity date; determining whether your notes will be automatically redeemed early; determining whether to postpone the determination date because of a market disruption event or a non-trading day; the early redemption observation dates; the early redemption dates and the stated maturity date; the default amount; and any amount payable on your notes. See "Specific Terms of Your Notes" below. The calculation agent also has discretion in making certain adjustments relating to a discontinuation or modification of the underlying index. See "Specific Terms of Your Notes — Discontinuance or Modification of the Underlying Index" below. The exercise of this discretion by GS&Co. could adversely affect the value of your notes and may present GS&Co. with a conflict of interest. We may change the calculation agent at any time without notice and GS&Co. may resign as calculation agent at any time upon 60 days' written notice to us.

The Policies of the Underlying Index Sponsor and Changes That Affect the Underlying Index or the Underlying Index Stocks Could Affect the Payment Amount on Your Notes and Their Market Value

The policies of the underlying index sponsor concerning the calculation of the level of the underlying index, additions, deletions or substitutions of underlying index stocks and the manner in which changes affecting the underlying index stocks or their issuers, such as stock dividends, reorganizations or mergers, are reflected in the level of the underlying index could affect the level of the underlying index and, therefore, the cash settlement amount on your notes on the stated maturity date and the market value of your notes before that date. The cash settlement amount on your notes and their market value could also be affected if the underlying index sponsor changes these policies, for example, by changing the manner in which it calculates the level of the underlying index or the method by which it constructs the underlying index, or if the underlying index sponsor discontinues or suspends calculation or publication of the level of the underlying index, in which case it may become difficult to determine the market value of your notes. If events

such as these occur, or if the closing level of the underlying index is not available on the determination date because of a market disruption event or for any other reason, the calculation agent — which initially will be GS&Co., our affiliate — may determine the closing level of the underlying index on the determination date — and thus the cash settlement amount on the stated maturity date — in a manner it considers appropriate, in its sole discretion. We describe the discretion that the calculation agent will have in determining the closing level of the underlying index on the determination date and the cash settlement amount on your notes more fully under "Specific Terms of Your Notes — Discontinuance or Modification of the Underlying Index" and "— Role of Calculation Agent" below.

Except to the Extent The Goldman Sachs Group, Inc. Is One of the Companies Whose Common Stock Comprises the S&P 500<sup>®</sup> Index, There Is No Affiliation Between the Underlying Index Stock Issuers or the Underlying Index Sponsor and Us

The common stock of The Goldman Sachs Group, Inc. is one of the underlying index stocks comprising the S&P 500<sup>®</sup> Index. We are not otherwise affiliated with the issuers of the underlying index stocks or the underlying index sponsor. As we have told you above, however, we or our affiliates may currently or from time to time in the future own securities of, or

engage in business with, the underlying index sponsor or the underlying index stock issuers. Neither we nor any of our affiliates have participated in the preparation of any publicly available information or made any "due diligence" investigation or inquiry with respect to the underlying index or any of the other underlying index stock issuers. You, as an investor in your notes, should make your own investigation into the underlying index and the underlying index stock issuers. See "The Underlying Index" below for additional information about the underlying index.

Neither the underlying index sponsor nor any of the other underlying index stock issuers are involved in the offering of your notes in any way and none of them have any obligation of any sort with respect to your notes. Thus, neither the underlying index sponsor nor any of the other underlying index stock issuers have any obligation to take your interests into consideration for any reason, including in taking any corporate actions that might affect the market value of your notes.

Your Notes May Not Have an Active Trading Market

Your notes will not be listed or displayed on any securities exchange or included in any interdealer market quotation system, and there may be little or no secondary market for your notes. Even if a secondary market for your notes develops, it may not provide significant liquidity and we expect that transaction costs in any secondary market would be high. As a result, the difference between bid and asked prices for your notes in any secondary market could be substantial.

The Calculation Agent Can Postpone the Determination Date If a Market Disruption Event or a Non-Trading Day Occurs or is Continuing

If the calculation agent determines that, on the date that would otherwise be the determination date, a market disruption event has occurred or is continuing or if such date is not a trading day, the determination date will be postponed until the first following trading day on which no market disruption event occurs or is continuing. In no event, however, will such date be postponed to a date later than the originally scheduled stated maturity date or, if the originally scheduled stated maturity date is not a business day, later than the first business day after the originally scheduled stated maturity date. Moreover, if the determination date is postponed to the last possible day, but a market disruption event occurs or is continuing on that day or that day is not a trading day, that day will nevertheless be the determination date.

If the calculation agent determines that the closing level of the underlying index that must be used to determine the cash settlement amount is not available on the determination date, either because of a market disruption event, a non-trading day or for any other reason (other than as described under "Specific Terms of Your Notes — Payment of Principal on the Stated Maturity Date — Discontinuance or Modification of the Underlying Index" below), the calculation agent will nevertheless determine the final underlying index level based on its assessment, made in its sole discretion, of the level of the underlying index at the applicable time on that day.

Certain Considerations for Insurance Companies and Employee Benefit Plans

Any insurance company or fiduciary of a pension plan or other employee benefit plan that is subject to the prohibited transaction rules of the Employee Retirement Income Security Act of 1974, as amended, which we call "ERISA", or the Internal Revenue Code of 1986, as amended, including an IRA or a Keogh plan (or a governmental plan to which similar prohibitions apply), and that is considering purchasing the offered notes with the assets of the insurance company or the assets of such a plan, should consult with its counsel regarding whether the purchase or holding of the offered notes could become a "prohibited transaction" under ERISA, the Internal Revenue Code or any substantially similar prohibition in light of the representations a purchaser or holder in any of the above categories is deemed to make by purchasing and holding the offered notes. This is discussed in more detail under "Employee Retirement

Income Security Act" below.

Your Notes Will Be Treated as Debt Instruments Subject to Special Rules Governing Contingent Payment Debt Instruments for U.S. Federal Income Tax Purposes

The notes will be treated as debt instruments subject to special rules governing contingent payment debt instruments for U.S. federal income tax purposes. If you are a U.S. individual or taxable entity, you generally will be required to pay taxes on ordinary income from the notes over their term based on the comparable yield for the notes, even though you generally will not receive any payments from us until maturity. This comparable yield is determined solely to calculate the amount on which you will be taxed prior to maturity and is neither a prediction nor a guarantee of what the actual yield will be. In addition, any gain you may recognize on the sale, exchange, redemption or maturity of the notes will be taxed as ordinary interest income. If you are a secondary purchaser of the notes, the tax consequences to you may be different. Please see "Supplemental Discussion of U.S. Federal Income Tax Consequences" below for a more detailed discussion. Please also consult your tax advisor concerning the U.S. federal income tax and any other applicable tax consequences to you of owning your notes in your particular circumstances.

Foreign Account Tax Compliance Act (FATCA) Withholding May Apply to Payments on Your Notes, Including as a Result of the Failure of the Bank or Broker Through Which You Hold the Notes to Provide Information to Tax Authorities

Please see the discussion under "United States Taxation — Taxation of Debt Securities — Foreign Account Tax Compliance Act (FATCA) Withholding" in the accompanying prospectus for a description of the applicability of FATCA to payments made on your notes. The discussion in that section is hereby modified to reflect regulations proposed by the Treasury Department indicating its intent to eliminate the requirements under FATCA of withholding on gross proceeds from the sale, exchange, maturity or other disposition of relevant financial instruments. The Treasury Department has indicated that taxpayers may rely on these proposed regulations pending their finalization.

#### SPECIFIC TERMS OF YOUR NOTES

We refer to the notes we are offering by this prospectus supplement as the "offered notes" or the "notes". Please note that in this prospectus supplement, references to "GS Finance Corp.", "we", "our" and "us" mean only GS Finance Corp. and do not include its subsidiaries or affiliates, references to "The Goldman Sachs Group, Inc.", our parent company, mean only The Goldman Sachs Group, Inc. and do not include its subsidiaries or affiliates and references to "Goldman Sachs" mean The Goldman Sachs Group, Inc. together with its consolidated subsidiaries and affiliates, including us. Also, references to the "accompanying prospectus" mean the accompanying prospectus, dated July 10, 2017, and references to the "accompanying prospectus supplement" mean the accompanying prospectus supplement, dated July 10, 2017, for Medium-Term Notes, Series E, in each case of GS Finance Corp. and The Goldman Sachs Group, Inc. Please note that in this section entitled "Specific Terms of Your Notes", references to "holders" mean those who own notes registered in their own names, on the books that we or the trustee maintain for this purpose, and not those who own beneficial interests in notes registered in street name or in notes issued in book-entry form through The Depository Trust Company. Please review the special considerations that apply to owners of beneficial interests in the accompanying prospectus, under "Legal Ownership and Book-Entry Issuance".

The offered notes are part of a series of debt securities, entitled "Medium-Term Notes, Series E", that we may issue under the indenture from time to time as described in the accompanying prospectus and accompanying prospectus supplement. The offered notes are also "indexed debt securities", as defined in the accompanying prospectus.

This prospectus supplement summarizes specific financial and other terms that apply to the offered notes, including your notes; terms that apply generally to all Series E medium-term notes are described in "Description of Notes We May Offer" in the accompanying prospectus supplement. The terms described here supplement those described in the accompanying prospectus supplement and the accompanying prospectus and, if the terms described here are inconsistent with those described there, the terms described here are controlling.

In addition to those terms described under "Summary Information" in this prospectus supplement, the following terms will apply to your notes:

No interest: we will not pay interest on your notes

Specified currency:

U.S. dollars ("\$") Form of note:

global form only: yes, at DTC non-global form available: no Denominations: each note registered in the name of a holder must have a face amount of \$1,000, or an integral multiple of \$1,000 in excess thereof

Defeasance applies as follows:

full defeasance: no covenant defeasance: no Other terms:

the default amount will be payable on any acceleration of the maturity of your notes as described under "— Special Calculation Provisions" below

a business day for your notes will not be the same as a business day for our other Series E medium-term notes, as described under "— Special Calculation Provisions" below

a trading day for your notes will be as described under "--- Special Calculation Provisions" below

Please note that the information about the settlement date or trade date, issue price, underwriting discount and net proceeds to GS Finance Corp. on the front cover page or elsewhere in this prospectus supplement relates only to the initial issuance and sale of the notes. We may decide to sell additional notes on one or more dates after the date of this prospectus supplement, at issue prices and with, underwriting discounts and net proceeds that differ from the amounts set forth on the front cover page or elsewhere in this prospectus supplement. If you have purchased your notes in a market-making transaction after the initial issuance and sale of the notes, any such relevant information about the sale to you will be provided in a separate confirmation of sale.

We describe the terms of your notes in more detail below.

#### Underlying Index, Underlying Index Sponsor and Underlying Index Stocks

In this prospectus supplement, when we refer to the underlying index, we mean the underlying index specified on the front cover page, or any successor underlying index, as it may be modified, replaced or adjusted from time to time as described under "— Payment of Principal on Stated Maturity Date — Discontinuance or Modification of the Underlying Index" below. When we refer to the underlying index sponsor as of any time, we mean the entity, including any successor sponsor, that determines and publishes the underlying index as then in effect. When we refer to the underlying index stocks that comprise the underlying index as then in effect, after giving effect to any additions, deletions or substitutions.

Automatic Redemption Feature

If, as measured on any early redemption observation date, the closing level of the underlying index is less than the lower barrier, your notes will be automatically redeemed early. If your notes are automatically redeemed early on any early redemption observation date, on the corresponding early redemption date, for each \$1,000 face amount of your notes, you will receive an amount in cash equal to the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the contingent return. No further payments will be made on the notes since your notes will no longer be outstanding.

#### Payment of Principal on Stated Maturity Date

If your notes are not automatically redeemed early, for each \$1,000 face amount of your notes, we will pay you on the stated maturity date an amount in cash equal to:

if a barrier event has not occurred, the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the absolute value of the underlying index return; or

if a barrier event has occurred, the sum of (i) \$1,000 plus (ii) the product of \$1,000 times the contingent return. The underlying index return is calculated by subtracting the initial underlying index level from the final underlying index level and dividing the result by the initial underlying index level, with the quotient expressed as a percentage.

The initial underlying index level is 2,832.94. The calculation agent will determine the final underlying index level, which will be the closing level of the underlying index on the determination date. However, the calculation agent will have discretion to adjust the closing level on the determination date or to determine it in a different manner as described under "— Consequences of a Market Disruption Event or a Non-Trading Day" and "— Discontinuance or Modification of the Underlying Index" below.

A barrier event occurs when, the final underlying index level is (i) less than the lower barrier or (ii) greater than or equal to the initial underlying index level. The lower barrier is the initial underlying index level minus 15.00% of the initial underlying index level (rounded to the nearest one-hundredth). The contingent return is 0.50%.

#### Stated Maturity Date

The stated maturity date is March 23, 2020, unless that day is not a business day, in which case the stated maturity date will be the next following business day. If the determination date is postponed as described under "— Determination Date" below, the stated maturity date will be postponed by the same number of business day(s) from but excluding the originally scheduled determination date to and including the actual determination date.

#### Determination Date

The determination date is March 18, 2020, unless the calculation agent determines that a market disruption event occurs or is continuing on that day or that day is not otherwise a trading day. In that event, the determination date will be the first following trading day on which the calculation agent determines that a market disruption event does not occur and is not continuing. In no event, however, will the determination date be postponed to a date later than the originally scheduled stated maturity date or, if the originally scheduled stated maturity date is not a business day, later than the first business day after the originally scheduled stated maturity date. If the determination date is postponed to the last possible day, but a market disruption event occurs or is continuing on that day or such day is not a trading day, that day will nevertheless be the determination date.

#### Early Redemption Observation Dates

The early redemption observation dates are each day from but excluding the original issue date to but excluding the determination date, excluding any date or dates on which the calculation agent determines that a market disruption event occurs or is continuing or that the calculation agent determines is not a trading day.

Early Redemption Dates

The early redemption dates are the third business day after each early redemption observation date.

#### Consequences of a Market Disruption Event or a Non-Trading Day

If a market disruption event occurs or is continuing on a day that would otherwise be the determination date or such day is not a trading day, then the determination date will be postponed as described under "— Determination Date" above.

If the calculation agent determines that the closing level of the underlying index that must be used to determine the cash settlement amount is not available on the determination date because of a market disruption event, a non-trading day or for any other reason (other than as described under "— Discontinuance or Modification of the Underlying Index" below), then the calculation agent will nevertheless determine the final underlying index level based on its assessment, in good faith in its sole discretion, of the level of the underlying index on that day.

#### Discontinuance or Modification of the Underlying Index

If the underlying index sponsor discontinues publication of the underlying index and the underlying index sponsor or anyone else publishes a substitute underlying index that the calculation agent determines is comparable to the underlying index, and approves as a successor underlying index, or if the calculation agent designates a substitute underlying index, then the calculation agent will determine the amount payable on an early redemption date or on the stated maturity date, as applicable, by reference to the substitute underlying index. We refer to any substitute underlying index approved by the calculation agent as a successor underlying index.

If the calculation agent determines that the publication of the underlying index is discontinued and there is no successor underlying index, the calculation agent will determine the applicable closing level of the underlying index used to determine the amount payable on an early redemption date or the stated maturity date, as applicable, by a computation methodology that the calculation agent determines will as closely as reasonably possible replicate the underlying index.

If the calculation agent determines that the underlying index, the stocks comprising the underlying index or the method of calculating the underlying index is changed at any time in any respect — including any split or reverse split and any addition, deletion or substitution and any reweighting or rebalancing of the underlying index or of the underlying index stocks and whether the change is made by the underlying index sponsor under its existing policies or following a modification of those policies, is due to the publication of a successor underlying index, is due to events affecting one or more of the underlying index stocks or their issuers or is due to any other reason — and is not otherwise reflected in the level of the underlying index, then the calculation agent will be permitted (but not required) to make such adjustments in the underlying index or the method of its calculation as it believes are appropriate to ensure that the closing level of the underlying index on an early redemption observation date or the final underlying index level on the determination date used to determine the amount payable on an early redemption date or the stated maturity date, as applicable, is equitable.

All determinations and adjustments to be made by the calculation agent with respect to the underlying index may be made by the calculation agent in its sole discretion. The calculation agent is not obligated to make any such adjustments.

#### Default Amount on Acceleration

If an event of default occurs and the maturity of your notes is accelerated, we will pay the default amount in respect of the principal of your notes at the maturity, instead of the cash settlement amount on the stated maturity date as

described earlier. We describe the default amount under "- Special Calculation Provisions" below.

For the purpose of determining whether the holders of our Series E medium-term notes, which include your notes, are entitled to take any action under the indenture, we will treat the outstanding face amount of your notes as the outstanding principal amount of that note. Although the terms of the offered notes differ from those of the other Series E medium-term notes, holders of specified percentages in principal amount of all Series E medium-term notes, together in some cases with other series of our debt securities, will be able to take action affecting all the Series E medium-term notes, including your notes, except with respect to certain Series E medium-term notes if the terms of such notes specify that the holders of specified percentages in the principal amount of all such notes must also consent to such action. This action may involve changing some of the terms that apply to the Series E medium-term notes, accelerating the maturity of the Series E medium-term notes after a default or waiving some of our obligations under the indenture. In addition, certain changes to the indenture and the notes that only affect certain debt securities may be made with the approval of holders of a majority of the principal amount of such affected debt securities. We discuss these matters in the accompanying prospectus under "Description of Debt Securities We May Offer — Default, Remedies and Waiver of Default" and "— Modification of the Debt Indentures and Waiver of Covenants".

#### Manner of Payment

Any payment on your notes at maturity will be made to an account designated by the holder of your notes and approved by us, or at the office of the trustee in New York City, but only when your notes are surrendered to the trustee at that office. We also may make any payment in accordance with the applicable procedures of the depositary.

#### Modified Business Day

As described in the accompanying prospectus, any payment on your notes that would otherwise be due on a day that is not a business day may instead be paid on the next day that is a business day, with the same effect as if paid on the original due date. For your notes, however, the term business day may have a different meaning than it does for other Series E medium-term notes. We discuss this term under "— Special Calculation Provisions" below.

#### Role of Calculation Agent

The calculation agent in its sole discretion will make all determinations regarding the underlying index, the final underlying index level, the stated maturity date, the determination date, market disruption events, business days, trading days, the underlying index return, the absolute value of the underlying index return, the closing levels of the underlying index on each early redemption observation date, whether a barrier event occurs and the cash settlement amount on your notes at maturity. Absent manifest error, all determinations of the calculation agent will be final and binding on you and us, without any liability on the part of the calculation agent.

Please note that GS&Co., our affiliate, is currently serving as the calculation agent as of the date of this prospectus supplement. We may change the calculation agent for your notes at any time after the date of this prospectus supplement without notice and GS&Co. may resign as calculation agent at any time upon 60 days' written notice to us.

Special Calculation Provisions

#### **Business** Day

When we refer to a business day with respect to your notes, we mean a day that is a New York business day as described under "Description of Debt Securities We May Offer — Calculations of Interest on Debt Securities — Business Days" on page 21 in the accompanying prospectus.

#### Trading Day

When we refer to a trading day with respect to the underlying index, we mean a day on which the respective principal securities markets for all of the underlying index stocks are open for trading, the underlying index sponsor is open for business and the underlying index is calculated and published by the underlying index sponsor.

#### Closing Level

When we refer to the closing level of the underlying index on any trading day, we mean the official closing level of the underlying index or any successor underlying index published by the underlying index sponsor on such trading day.

#### Default Amount

The default amount for your notes on any day (except as provided in the last sentence under "— Default Quotation Period" below) will be an amount, in the specified currency for the principal of your notes, equal to the cost of having a qualified financial institution, of the kind and selected as described below, expressly assume all of our payment and other obligations with respect to your notes as of that day and as if no default or acceleration had occurred, or to undertake other obligations providing substantially equivalent economic value to you with respect to your notes. That cost will equal:

the lowest amount that a qualified financial institution would charge to effect this assumption or undertaking, plus the reasonable expenses, including reasonable attorneys' fees, incurred by the holder of your notes in preparing any documentation necessary for this assumption or undertaking.

During the default quotation period for your notes, which we describe below, the holder and/or we may request a qualified financial institution to provide a quotation of the amount it would charge to effect this assumption or undertaking. If either party obtains a quotation, it must notify the other party in writing of the quotation. The amount referred to in the first bullet point above will equal the lowest—or, if there is only one, the only— quotation obtained, and as to which notice is so given, during the default quotation period. With respect to any quotation, however, the party not obtaining the quotation may object, on reasonable and significant grounds, to the assumption or undertaking by the qualified financial institution providing the quotation and notify the other party in writing of those grounds within two business days after the last day of the default quotation period, in which case that quotation will be disregarded in determining the default amount.

# Default Quotation Period

The default quotation period is the period beginning on the day the default amount first becomes due and ending on the third business day after that day, unless:

no quotation of the kind referred to above is obtained, or

every quotation of that kind obtained is objected to within five business days after the day the default amount first becomes due.

If either of these two events occurs, the default quotation period will continue until the third business day after the first business day on which prompt notice of a quotation is given as described above. If that quotation is objected to as described above within five business days after that first business day, however, the default quotation period will continue as described in the prior sentence and this sentence.

In any event, if the default quotation period and the subsequent two business day objection period have not ended before the determination date, then the default amount will equal the principal amount of your notes.

#### **Qualified Financial Institutions**

For the purpose of determining the default amount at any time, a qualified financial institution must be a financial institution organized under the laws of any jurisdiction in the United States of America, Europe or Japan, which at that time has outstanding debt obligations with a stated maturity of one year or less from the date of issue and that is, or whose securities are, rated either:

A-1 or higher by Standard & Poor's Ratings Services or any successor, or any other comparable rating then used by that rating agency, or

P-1 or higher by Moody's Investors Service, Inc. or any successor, or any other comparable rating then used by that rating agency.

Market Disruption Event

With respect to any given trading day, any of the following will be a market disruption event:

a suspension, absence or material limitation of trading in underlying index stocks constituting 20% or more, by weight, of the underlying index on their respective primary markets, in each case for more than two consecutive hours of trading or during the one -half hour before the close of trading in that market, as determined by the calculation agent in its sole discretion, or

a suspension, absence or material limitation of trading in option or futures contracts relating to the underlying index or to underlying index stocks constituting 20% or more, by weight, of the underlying index in the respective primary markets for those contracts, in each case for more than two consecutive hours of trading or during the one-half hour before the close of trading in that market, as determined by the calculation agent in its sole discretion, or

underlying index stocks constituting 20% or more, by weight, of the underlying index, or option or futures contracts, if available, relating to the underlying index or to underlying index stocks constituting 20% or more, by weight, of the underlying index are not trading on what were the respective primary markets for those underlying index stocks or contracts, as determined by the calculation agent in its sole discretion,

and, in the case of any of these events, the calculation agent determines in its sole discretion that the event could materially interfere with the ability of GS Finance Corp. or any of its affiliates to unwind all or a material portion of a hedge that could be effected with respect to the offered notes. For more information about hedging by GS Finance Corp. and/or any of its affiliates, see "Use of Proceeds" and "Hedging" below.

The following events will not be market disruption events:

a limitation on the hours or numbers of days of trading, but only if the limitation results from an announced change in the regular business hours of the relevant market, and

a decision to permanently discontinue trading in option or futures contracts relating to the underlying index or to any underlying index stock.

For this purpose, an "absence of trading" in the primary securities market on which an underlying index stock is traded, or on which option or futures contracts relating to the underlying index or an underlying index stock are traded, will not include any time when that market is itself closed for trading under ordinary circumstances. In contrast, a suspension or limitation of trading in an underlying index stock or in option or futures contracts, if available, relating to the underlying index or an underlying index or an underlying index stock or those contracts, by reason of:

 $\ensuremath{\mathbf{a}}$  price change exceeding limits set by that market, S-24

an imbalance of orders relating to that underlying index stock or those contracts, or
