Cash Flow Hedges

Certain of our consolidated VIEs have foreign currency swaps that qualify for hedge accounting treatment. For those that have qualified, we have designated the derivative as a hedge of the variability in cash flows of a forecasted transaction or of amounts to be received or paid related to a recognized asset ("cash flow" hedge). We expect to continue this hedging activity for a weighted-average period of approximately 13 years. The remaining derivatives in our consolidated VIEs that have not qualified for hedge accounting have been designated as held for other investment purposes ("non-qualifying strategies").

We have an interest rate swap agreement related to 5.5 billion yen variable interest rate Samurai notes that we issued in July 2011 (see Note 6). By entering into this contract, we swapped the variable interest rate to a fixed interest rate of 1.475%. We have designated this interest rate swap as a hedge of the variability in our interest cash flows associated with the variable interest rate Samurai notes. The notional amount and terms of the swap match the principal amount and terms of the variable interest rate Samurai notes, and the swap had no value at inception. Changes in the fair value of the swap contract are recorded in other comprehensive income (loss) as the hedge is deemed effective. Should any portion of the hedge be deemed ineffective, that ineffective portion would be reported in net earnings.

The following table presents the components of the gain or loss on derivatives that qualified as cash flow hedges. Derivatives in Cash Flow Hedging Relationships

(In millions) Recognized in Other Comprehensive Income (Effective Portion) Derivative Gain Recognized in I (Ineffective Port	ncome
Three Months Ended March 31, 2013:	
Foreign currency swaps \$(7))
Total \$(7) \$(1)
Three Months Ended March 31, 2012:	
Foreign currency swaps \$(12)	
Total \$(12) \$0	

There was no gain or loss reclassified from accumulated other comprehensive income (loss) into earnings related to our designated cash flow hedges for the three-month periods ended March 31, 2013 and 2012. As of March 31, 2013, deferred gains and losses on derivative instruments recorded in accumulated other comprehensive income that are expected to be reclassified to earnings during the next twelve months are immaterial. Fair Value Hedges

We designate and account for foreign currency forwards as fair value hedges when they meet the requirements for hedge accounting. These foreign currency forwards hedge the foreign currency exposure of certain dollar-denominated fixed maturity securities within the investment portfolio of our Aflac Japan segment. We recognize gains and losses on these derivatives and the related hedged items in current earnings within derivative and other gains (losses). The change in the fair value of the foreign currency forwards related to the changes in the difference between the spot rate and the forward price is excluded from the assessment of hedge effectiveness. The following table presents the gains and losses on derivatives and the related hedged items in fair value hedges.

Fair	Value	Hedging	Relationships

Foreign currency forwards	Fixed-maturity securities	\$(609)	\$(5)	\$(604)	\$603	\$(1)

⁽¹⁾ Fair value hedging program began in September 2012

Net Investment Hedge

Our primary exposure to be hedged is our net investment in Aflac Japan, which is affected by changes in the yen/dollar exchange rate. To mitigate this exposure, we have taken the following courses of action. First, Aflac Japan maintains an investment portfolio of dollar-denominated securities on behalf of Aflac U.S., which serves as an economic currency hedge of a portion of our investment in Aflac Japan. The functional currency for these investments is the U.S. dollar. The related investment income and realized/unrealized investment gains and losses are also denominated in U.S. dollars. The foreign exchange gains and losses related to this portfolio are taxable in Japan and the U.S. when the securities mature or are sold. Until maturity or sale, deferred tax expense or benefit associated with the foreign exchange gains or losses are recognized in other comprehensive income.

Second, we have designated a majority of the Parent Company's yen-denominated liabilities (Samurai and Uridashi notes and yen-denominated loans - see Note 6) as nonderivative hedges of the foreign currency exposure of our investment in Aflac Japan. We recognized a gain in other comprehensive income on our non-derivative hedging instruments of \$69 million and \$49 million for the three-month periods ended March 31, 2013, and 2012, respectively. Our net investment hedge was effective during the three-month periods ended March 31, 2013, and 2012. There was no gain or loss reclassified from accumulated other comprehensive income into earnings related to our net investment hedge during the three-month periods ended March 31, 2013 and 2012.

Non-qualifying Strategies

For our derivative instruments in consolidated VIEs that do not qualify for hedge accounting treatment, all changes in their fair value are reported in current period earnings within derivative and other gains (losses). The amount of gain or loss recognized in earnings for our VIEs is attributable to the derivatives in those investment structures. While the change in value of the swaps is recorded through current period earnings, the change in value of the available-for-sale fixed income or perpetual securities associated with these swaps is recorded through other comprehensive income. We have cross-currency interest rate swap agreements related to our \$400 million of senior notes due February 2017 and \$350 million of senior notes due February 2022 (see Note 6). The notional amounts and terms of the swaps match the principal amount and terms of the senior notes. By entering into these cross-currency swaps, we economically converted our \$400 million liability into a 30.9 billion yen liability and reduced the interest rate on this debt from 2.65% in dollars to 1.22% in yen. We also economically converted our \$350 million liability into a 27.0 billion yen liability and reduced the interest rate on this debt from 4.00% in dollars to 2.07% in yen.

We also have cross-currency interest rate swap agreements related to our \$500 million subordinated debentures due September 2052 (see Note 6). The notional amounts of the swaps matches the principal amount of the subordinated debentures, but the swaps will mature in September 2017. By entering into these cross-currency swaps, we economically converted our \$500 million liability into a 39.2 billion yen liability and reduced the interest rate on this debt from 5.50% in dollars to 4.41% in yen.

In order to hedge foreign exchange risk for certain expected profit repatriation in yen from Aflac Japan scheduled to occur in July 2013, we entered into foreign exchange options as part of a foreign exchange collar strategy to establish

a minimum U.S. dollar amount that will be received in exchange for 25 billion yen. See Note 11 for discussion of further hedging activity that occurred subsequent to March 31, 2013.

The following table presents the gain or loss recognized in income on non-qualifying strategies.

Offsetting of Financial Instruments and Derivatives

The tables below summarize the balance sheet offsetting of financial instruments. Our financial instruments that are subject to balance sheet offsetting consist of derivatives (interest rate swaps, foreign currency swaps, foreign currency forwards, foreign currency options, and credit default swaps) and security lending transactions (see Note 3). In accordance with GAAP, our policy is to not offset financial instruments in the Consolidated Balance Sheets.

5. FAIR VALUE MEASUREMENTS

Fair Value Hierarchy

GAAP specifies a hierarchy of valuation techniques based on whether the inputs to those valuation techniques are observable or unobservable. These two types of inputs create three valuation hierarchy levels. Level 1 valuations reflect quoted market prices for identical assets or liabilities in active markets. Level 2 valuations reflect quoted market prices for similar assets or liabilities in an active market, quoted market prices for identical or similar assets or liabilities in non-active markets or model-derived valuations in which all significant valuation inputs are observable in active markets. Level 3 valuations reflect valuations in which one or more of the significant inputs are not observable in an active market.

The following tables present the fair value hierarchy levels of the Company's assets and liabilities that are measured and carried at fair value on a recurring basis.
