TITLE OF EACH CLASS -----	NAME OF EACH EXCHANGE ON WHICH REGISTERED -----
American Depositary Shares representing BASF ordinary shares of no par value	New York Stock Exchange
BASF ordinary shares of no par value	New York Stock Exchange**

SECURITIES REGISTERED OR TO BE REGISTERED PURSUANT TO SECTION 12(G) OF THE ACT:

None
(Title of Class)

SECURITIES FOR WHICH THERE IS A REPORTING OBLIGATION PURSUANT TO SECTION 15(D)
OF THE ACT:

None
(Title of Class)

INDICATE THE NUMBER OF OUTSTANDING SHARES OF EACH OF THE ISSUER'S CLASSES OF
CAPITAL OR COMMON STOCK AS OF THE CLOSE OF THE PERIOD COVERED BY THE ANNUAL
REPORT.

As of December 31, 2001, there were 583,401,370 BASF ordinary shares of no
par value outstanding.

Indicate by check mark whether the registrant: (1) has filed all reports
required to be filed by Section 13 or 15(d) of the Securities Exchange Act of
1934 during the preceding 12 months (or for such shorter period that the
registrant was required to file such reports), and (2) has been subject to such
filing requirements for the past 90 days. Yes /X/ No / /

Indicate by check mark which financial statement item the registrant has
elected to follow. Item 17 / / Item 18 /X/

* BASF Corporation is also the name of a wholly owned subsidiary of the
Registrant in the United States.

** Not for trading, but only in connection with the registration of American
Depositary Shares.

BASF Aktiengesellschaft is incorporated as a stock corporation organized
under the laws of the Federal Republic of Germany. As used in this Annual
Report, "BASF Aktiengesellschaft" refers solely to the ultimate parent company
of the BASF Group. "BASF" refers to BASF Aktiengesellschaft and its consolidated
subsidiaries.

The Consolidated Financial Statements of BASF are based on the accounting
and valuation principles of the German Commercial Code (HANDELSGESETZBUCH) and
the German Stock Corporation Act (AKTIENGESETZ).

The accounting principles conform to U.S. generally accepted accounting
principles (U.S. GAAP) to the extent permissible under the German Commercial
Code, based upon the accounting standards issued by the German Accounting
Standards Board (GASB). The reconciliation of remaining significant deviations

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

to U.S. GAAP is described in Note 4 to the Consolidated Financial Statements included in Item 18.

The translation of euros into dollars has been made solely for the convenience of the reader at the noon buying rate of the Federal Reserve Bank of New York (the "Noon Buying Rate") on December 31, 2001, which was U.S. \$0.8901 = E1.00. No representation is made that such amounts in euros could have been or could be converted into dollars at that or any other exchange rate on such date or any other dates.

FORWARD-LOOKING INFORMATION MAY PROVE INACCURATE

This Annual Report contains certain forward-looking statements and information relating to BASF that are based on the current expectations, estimates and projections of its management and information currently available to BASF. These statements include, but are not limited to, statements about BASF's strategies, plans, objectives, expectations, intentions, expenditures, and assumptions and other statements contained in this Annual Report that are not historical facts. When used in this document, the words "anticipate," "believe," "estimate," "expect," "intend," "plan" and "project" and other similar expressions are generally intended to identify forward-looking statements.

These statements reflect the current views of BASF with respect to future events, are not guarantees of future performance and involve certain risks and uncertainties that are difficult to predict. In addition, certain forward-looking statements are based upon assumptions as to future events that may not prove to be accurate.

Many factors could cause the actual results, performance or achievements of BASF to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements. These factors include, among others:

- changes in general political, economic and business conditions in the countries or regions in which BASF operates;
- changes in the laws or policies of governments or other governmental or quasi-governmental activities in the countries in which BASF operates;
- changes in the composition of BASF Group companies and the successful integration of acquisitions, divestitures and joint venture activities;
- increased price competition and the introduction of competing products by other companies;
- the ability to develop, introduce and market innovative products and applications;
- the length and depth of product and industry business cycles, particularly in the automotive, construction, electrical and textile industries;

i

- changes in the demand for, supply of, and market prices of crude oil, refined products, natural gas and petrochemicals, including changes in production quotas in OPEC countries and the deregulation of the natural gas transmission industry in Europe;
- the cost and availability of feedstock and other raw materials, including naphtha, and the price of steam cracker products;

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- the ability to pass increases in raw material costs on to customers;
- changes in the degree of patent and other legal protection afforded to BASF's products;
- regulatory approval, particularly in the areas of fine chemicals, agricultural products and plant biotechnology, and market acceptance of new products;
- unexpected negative results from research and development and testing of current product candidates;
- the ability to maintain plant utilization rates and to implement planned capacity additions and expansions;
- the ability to reduce production costs by implementing technological improvements to existing plants;
- the existence of temporary industry surplus production capacity resulting from the integration and start-up of new world-scale plants;
- potential liability resulting from pending or future litigation, including litigation and investigations relating to antitrust violations in the vitamins business;
- potential liability for remedial actions under existing or future environmental regulations;
- changes in currency exchange rates, interest rates and inflation rates; and
- changes in business strategy and various other factors referenced in this Annual Report.

Many of these factors are macroeconomic in nature and are, therefore, beyond the control of BASF's management. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described herein as anticipated, believed, estimated, expected, intended, planned or projected. BASF does not intend, and does not assume any obligation, to update the forward-looking statements contained in this Annual Report.

ITEM 3. KEY INFORMATION

SELECTED FINANCIAL DATA

The following selected financial data for each of the years in the five-year period ended December 31, 2001 are excerpted from the Consolidated Financial Statements of BASF, which have been audited by Deloitte & Touche GmbH, independent accountants during this period. These data are set forth in accordance with generally accepted accounting principles in Germany (German GAAP) and U.S. GAAP for all periods presented.

Since 1998, BASF's accounting and valuation methods conform with U.S. GAAP to the extent permissible under the German Commercial Code, which represents German GAAP. See Notes 1 and 4 to the Consolidated Financial Statements in Item 18 for further information. As a result, the selected financial data presented below in accordance with German GAAP for 1997 are not directly comparable to the German GAAP data for 1998, 1999 and 2000. In 2001, BASF changed its accounting for income taxes and the method of depreciating certain fixed assets as

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

described in Note 2 to the Consolidated Financial Statements. As a result, the selected financial data for 2001 are not directly comparable to that of prior years. The selected financial data presented below in accordance with U.S. GAAP for the years 1999, 2000 and 2001 have been derived from the Consolidated Financial Statements included in Item 18. The reconciliation of the differences between German GAAP and U.S. GAAP is described in Note 4 to the Consolidated Financial Statements.

The translation of euros into dollars for 2001 has been made solely for the convenience of the reader at the noon buying rate of the Federal Reserve Bank of New York (the "Noon Buying Rate") on December 31, 2001, which was U.S. \$0.8901 = E1.00. No representation is made that such euro amounts could have been or could be converted into dollars at that or any other exchange rate on such date or any other dates.

DIVIDENDS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The Board of Executive Directors and the Supervisory Board of BASF Aktiengesellschaft propose dividends based on BASF Aktiengesellschaft's year-end unconsolidated financial statements. The proposal is then voted on at BASF's Annual Meeting. The Annual Meeting is usually convened during the second quarter of each year.

5

Since all BASF Shares are in bearer form, dividends are either remitted to the custodian bank on behalf of the stockholder, generally within two days following the Annual Meeting, or, in the case of stockholders personally possessing certificates, available immediately following the Annual Meeting upon submission of the dividend coupon therefor at the offices of BASF Aktiengesellschaft in Ludwigshafen, Germany, or the offices of BASF Aktiengesellschaft's appointed paying agents. See "Item 10. Additional Information" for further information.

Record holders of BASF's American Depositary Receipts (ADRs) on the dividend record date will be entitled to receive payment in full of the declared dividend in respect of the year for which it is declared. Cash dividends payable to ADR holders will be paid to The Bank of New York, as depositary, in euros and, subject to certain exceptions, will be converted by the depositary into U.S. dollars. The amount of dividends received by holders of ADRs may be affected by fluctuations in exchange rates. See "Exchange Rate Information" for further information.

The following table lists the annual dividends payable per BASF Share in euros and the U.S. dollar equivalent in each of the years indicated. The table also discloses the dividend amount per BASF Share for 2001 proposed by the Supervisory Board and the Board of Executive Directors for approval at the Annual Meeting to be held on April 30, 2002. The table does not reflect the related tax credits available to eligible taxpayers. See "Item 10. Additional Information -- Taxation of Dividends" for further information.

YEAR ENDED DECEMBER 31, -----	DIVIDEND PAID FOR EACH BASF SHARE	
-----	E	\$
-----	-----	-----
2001.....	1.30	1.16
2000.....	2.00(1)	1.88
1999.....	1.13	1.03
1998.....	1.12	1.19
1997.....	1.02	1.13

(1) Thereof special dividend of equity charged with 45% corporation tax.

The euro dividend amounts are translated solely for the convenience of the reader into U.S. dollars (rounded to the nearest cent) at the Noon Buying Rate on the dividend payment date. For the dividend proposed to be paid in 2002 for the year ended December 31, 2001, the euro amount is translated into U.S. dollars (rounded to the nearest cent) on the basis of the Noon Buying Rate for the conversion from U.S. dollars into euros at the Noon Buying Rate on December 31, 2001 of \$0.8901 = E1.00.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

EXCHANGE RATE INFORMATION

On January 1, 2002 the euro became the sole legal tender for business transactions in Germany and the other eleven countries participating in the European Monetary Union.

Since January 4, 1999, BASF Shares have been quoted in euros on the Frankfurt Stock Exchange.

Fluctuations in the exchange rate between the euro and the U.S. dollar will affect, among other things, the U.S. dollar amount received by holders of BASF's ADRs upon conversion by the Depositary of any cash dividends paid in euros on BASF Shares. It will also affect the U.S. dollar equivalent of the euro price of BASF Shares on the Frankfurt Stock Exchange, which will affect the market price of the ADRs on the New York Stock Exchange.

The table below sets forth, for the periods and dates indicated, the high, low, period-average and period-end Noon Buying Rates for euros expressed in U.S. dollars for one euro. No

6

representation is made that the euro or U.S. dollar amounts referred to herein could have been or could be converted into U.S. dollars or euros, as the case may be, at any particular rate.

YEAR ----	U.S. DOLLAR FOR ONE EURO			
	HIGH	LOW	PERIOD AVERAGE (1)	PERIOD END
2001.....	0.9520	0.8370	0.8909	0.8901
2000.....	1.0335	0.8270	0.9207	0.9388
1999.....	1.1812	1.0016	1.0588	1.0071
1998.....	1.2178	1.0548	1.1121	1.1733
1997.....	1.2689	1.0398	1.1244	1.0871

 (1) The average of the Noon Buying Rates on the last business day of each full month during the relevant period.

The high and low exchange rates for the euro for each month during the previous six months is set forth below:

MONTH -----	U.S. DOLLAR FOR ONE EURO	
	HIGH	LOW
February, 2002.....	0.8778	0.8613
January, 2002.....	0.9031	0.8594
December, 2001.....	0.9044	0.8773
November, 2001.....	0.8975	0.8770
October, 2001.....	0.9168	0.8906
September, 2001.....	0.9310	0.8868

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The Noon Buying Rate for the euro on March 4, 2002 was quoted by the Federal Reserve Bank of New York at 0.8705 U.S. dollars for one euro.

As of January 4, 1999, the commencement date of euro trading, the Noon Buying Rate for the euro was quoted at \$1.1812 = E1.00.

Because a substantial portion of the BASF Group's revenues and expenses are denominated in currencies other than the euro, results of operations and cash flows may be materially affected by movements in the exchange rate between the euro and the respective currencies to which the Group is exposed. For a discussion of the effect exchange rate fluctuations have on the BASF Group's business and operations, the effect of the adoption of the euro on the Group's operations and also the hedging techniques used to manage the Group's exposure to such fluctuations, see "Item 5. Operating and Financial Review and Prospects -- Exchange Rate Exposure and Risk Management" and "Item 11. Quantitative and Qualitative Disclosures about Market Risk."

RISK FACTORS

BASF's business, financial condition or results of operations could suffer material adverse effects due to any of the following risks. While all the risks considered material are described below, these are not the only risks BASF faces. Additional risks not known by BASF or not presently considered material may also impair BASF's business operations.

CONTINUING WEAKNESS IN THE MARKET FOR CHEMICAL PRODUCTS AND IN THE GLOBAL ECONOMY GENERALLY MAY ADVERSELY AFFECT BASF'S SALES AND EARNINGS

Continued weak demand for chemical products in the United States, as well as ongoing economic weakness in Europe and Asia would have an adverse effect on both sales and earnings. Those areas that are subject to commoditization, such as BASF's basic inorganic chemicals,

7

petrochemicals, intermediates and plastics operations, are particularly vulnerable, whereas BASF's agricultural, nutrition, cosmetics operations and natural gas trading are less likely to suffer.

CHANGES IN REGULATORY CONTROLS COULD REDUCE THE PROFITABILITY OF BASF'S CURRENT PRODUCTS AND COULD DELAY BASF'S INTRODUCTION OF NEW PRODUCTS

BASF must comply with a broad range of regulatory controls on the testing, manufacture and marketing of many of its products. These regulatory controls are particularly strict in the United States. BASF expects that regulatory controls worldwide, and especially in the European Union (E.U.), will become increasingly demanding. A proposed new E.U. chemicals policy could require a significant increase in safety testing for chemical products. These safety tests could be very cost intensive and time consuming and could lead to increased costs and reduced operating margins for BASF's chemical products.

In addition, a proposed E.U. directive on emissions trading, if implemented, could reduce BASF's growth opportunities, especially in Europe. The directive requires carbon dioxide emissions to be reduced by 21% in Germany and 7.5% in Belgium, in each case based on 1990 carbon dioxide emission levels. Compliance with this directive could require significant capital expenditures by BASF and could limit BASF's ability to pursue its growth strategy.

BASF IS EXPOSED TO FOREIGN CURRENCY AND INTEREST RATE RISKS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF conducts a significant portion of its operations outside of Europe and therefore is exposed to risks associated with the fluctuations of foreign currencies. BASF is subject to interest rate risks in the ordinary course of its business.

Risk management is centralized at BASF Aktiengesellschaft and BASF Group companies designated for that purpose, and BASF hedges against financial risks through derivative instruments such as forward exchange contracts, currency options, interest rate and currency swaps and combined instruments. There can be no assurance, however, that BASF's hedging strategy will be effective and that foreign currency and interest rate fluctuations will not adversely affect BASF's results of operations. See "Item 11. Quantitative and Qualitative Disclosures About Market Risk" and Note 28 to the Consolidated Financial Statements for additional information about the nominal value and market value of BASF's financial instruments.

BASF is also subject to credit risks to the extent that counterparties to transactions may not be able to perform their contractual obligations. Although BASF aims to limit the risk of default by entering into transactions only with top-rated financial institutions and by adhering to fixed limits, defaults with respect to significant contracts may adversely affect BASF's operating results.

SIGNIFICANT VARIATIONS IN THE COST AND AVAILABILITY OF RAW MATERIALS, ENERGY, PRECURSORS AND INTERMEDIATES MAY ADVERSELY AFFECT BASF'S OPERATING RESULTS

BASF uses significant amounts of raw materials and energy in manufacturing a wide variety of products. Significant variations in the cost and availability of raw materials, energy, precursors and intermediates may adversely affect BASF's operating results. To control these price and supply risks, BASF purchases raw materials through long-term contracts and on spot markets, which allows BASF to obtain favorable prices for a portion of its raw materials, if for example excess quantities on the spot markets lead to a short-term price reduction. Supply contracts for the most strategically important raw materials are negotiated and concluded centrally for the BASF Group. For more information, see "Item 4. Information on the Company -- Supplies and Raw Materials."

8

BASF's individual business units constantly monitor changes in their relevant supply markets and take action to minimize their risks accordingly. If raw material costs rise despite these measures, it is not always possible to pass the full effect of the increases on to BASF's customers in the prices for BASF's products. Significant increases in the costs of raw materials could materially adversely affect BASF's earnings.

CYCLICALITY MAY ADVERSELY AFFECT BASF'S OPERATING MARGINS

The results of BASF's Chemicals, Plastics & Fibers and Performance Products segments are affected by cyclicalities in various industries in which they operate, including the automotive, construction, electric and electronics as well as the textile industries. BASF's strategy to deal with these risks is to constantly expand its cyclically resilient businesses, such as agrochemicals, active ingredients for pharmaceuticals and nutrition, and trading and transmission of natural gas. In cyclical businesses, BASF seeks to maintain cost leadership. There can be no assurance, however, that BASF's strategies will be effective in countering the cyclicalities of the industries in which the Chemicals, Plastics & Fibers and Performance Products segments operate. If BASF's strategies are not effective, BASF's operating margins may suffer.

THE RESULTS OF BASF'S CROP PROTECTION BUSINESS ARE DEPENDENT ON WEATHER CONDITIONS AND CAN BE AFFECTED BY LOCAL AND REGIONAL ECONOMIC CIRCUMSTANCES

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Sales volumes of BASF's crop protection products are subject to the agricultural sector's dependency on weather conditions. Adverse weather conditions in a particular growing season could materially adversely affect the results of operations of BASF's crop protection business. In addition, BASF's crop protection products typically are sold pursuant to contracts with long payment terms. These extended payment periods make BASF's crop protection business susceptible to losses from receivables during local or regional economic crises and may adversely affect BASF's operating results.

FAILURE TO SUCCESSFULLY INVEST IN NEW BUSINESSES OR PROJECTS MAY ADVERSELY AFFECT BASF'S OPERATING RESULTS AND GROWTH STRATEGY

Integration of existing and newly acquired businesses requires difficult decisions with respect to staffing levels, facility consolidation and resource allocation. BASF must also plan carefully to ensure that established product lines and brands retain or increase their market position. Any failure to combine businesses successfully could harm BASF's operating results.

BASF's business also requires investments in large-scale projects. These projects are often long-term and very complex, requiring substantial planning to ensure smooth transitions among the various stages of the project and to ensure that the project is completed on schedule. Complications and delays associated with an investment in a large-scale project could adversely affect BASF's ability to pursue its growth strategy and remain competitive.

FAILURE TO DEVELOP NEW PRODUCTS AND PRODUCTION TECHNOLOGIES MAY HARM BASF'S COMPETITIVE POSITION AND OPERATING RESULTS

BASF's operating results significantly depend on the development of commercially viable new products and production technologies. BASF devotes substantial resources to research and development. Because of the lengthy development process, technological challenges and intense competition, there can be no assurance that any of the products BASF is currently developing, or may begin to develop in the future, will become market-ready and achieve substantial commercial success. If BASF is unsuccessful in developing new products and production processes in the future, its competitive position and operating results may suffer.

9

BASF IS DEPENDENT UPON HIRING AND RETAINING HIGHLY QUALIFIED MANAGEMENT AND TECHNICAL PERSONNEL

Competition for highly qualified management and technical personnel is intense in the industries in which BASF operates. BASF's future success depends in part on its continued ability to hire, assimilate and retain highly skilled employees. There can be no assurance that BASF will continue to be successful in attracting highly qualified employees in the future.

BASF IS SUBJECT TO THE RISKS ASSOCIATED WITH THE USE OF INFORMATION TECHNOLOGY

BASF is dependent upon technology for the distribution of information within the BASF Group and to customers and suppliers. This information technology is subject to risks associated with defects, errors, failures and computer viruses. To control potential risks in the information technology area, BASF uses the latest hardware and software and has integrated uniform information technology infrastructures, backup systems, replicated databases, virus and access protection, encoding systems and a high degree of internal networking. There can be no assurance, however, that BASF's information technology systems will not fail and cause material disruptions to BASF's business.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF IS SUBJECT TO SECURITY RISKS

Assessing security risks on a worldwide basis and determining their potential impact on BASF has become an extremely difficult undertaking since the terrorist attacks in the United States. BASF's corporate security is in close contact with local security offices through its group-wide network, and takes controlled precautionary steps with the help of constantly updated security measures and recommendations (travel restrictions, tighter access controls for production plants, up-dating of rescue and evacuation plans, emergency services, etc.) to protect the company and its employees.

LITIGATION COULD HARM BASF'S OPERATING RESULTS AND CASH FLOWS

For further information see "Item 8. Financial Information -- Legal Proceedings" and Note 26 to the Consolidated Financial Statements.

10

ITEM 4. INFORMATION ON THE COMPANY

HISTORY AND DEVELOPMENT OF THE COMPANY

BASF Aktiengesellschaft was incorporated as a stock corporation under the laws of the Federal Republic of Germany on January 30, 1952 under the name "Badische Anilin- und Soda-Fabrik AG." In 1973, the company changed its name to BASF Aktiengesellschaft. BASF Aktiengesellschaft's headquarters are located in Ludwigshafen, Germany; its registered office is located at Carl Bosch Strasse 38, 67056 Ludwigshafen, Federal Republic of Germany, telephone 011-49-621-60-0. The company's agent for U.S. federal securities law purposes is BASF Corporation, located at 3000 Continental Drive-North, Mount Olive, New Jersey 07828-1234, telephone (973) 426-2600.

Although BASF Aktiengesellschaft was incorporated in 1952, it traces its historical origins to 1865, when a stock corporation was founded under the name "Badische Anilin- und Soda-Fabrik" and began producing coal tar dyestuffs. The company rapidly gained a leading position in the world dye market. In the early 1900s, Badische Anilin- und Soda-Fabrik began transforming itself into a multifaceted chemicals company.

In the mid-1920s, Badische Anilin- und Soda-Fabrik AG was merged into I.G. Farbenindustrie AG ("I.G. Farben"), a group formed from Germany's principal chemical and pharmaceutical companies, including Bayer AG ("Bayer") and Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning ("Hoechst").

Following World War II, the Allied High Commission for Germany -- formed by the United States, United Kingdom, France and the former Soviet Union to administer occupied Germany -- seized the assets of I.G. Farben. Based on Law No. 35 of the Allied High Commission, the assets were later partially dispersed to 12 newly incorporated companies, including Hoechst, Bayer and Badische Anilin- und Soda-Fabrik AG. Under Law No. 35, Badische Anilin- und Soda-Fabrik AG assumed no debts, liabilities and obligations of I.G. Farben, except for certain liabilities expressly provided for in the regulation issued by the Allied High Commission.

In the 1950s and 1960s, BASF started to expand beyond its domestic operations by building both production and sales facilities outside Germany and by establishing partnerships and joint ventures in Europe, North America and South America. In 1958, BASF established a U.S. joint venture with The Dow Chemical Company, significantly strengthening its operations. In 1969, BASF acquired Wyandotte Chemicals Corp., further expanding its base of operations in

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

the United States. These companies formed the nucleus of BASF Corporation, into which BASF consolidated its North American activities in 1985.

In 1969, BASF acquired the German oil company Wintershall AG. Since then, BASF has significantly strengthened and developed its exploration and marketing of oil and gas by entering into a strategic partnership with Gazprom of Russia, one of the world's leading natural gas producers. In 1993, BASF and Gazprom established the joint venture WINGAS to market and distribute gas in Central and Eastern Europe.

In 1975, BASF broadened its base in pharmaceuticals by acquiring a majority interest in Knoll AG. BASF purchased the remaining interests in Knoll in 1982. BASF acquired Boots Pharmaceuticals of the United Kingdom in 1995, strengthening its presence in the North American pharmaceuticals market. In 2001, BASF sold its pharmaceuticals business to Abbott Laboratories Inc. of Abbott Park, Illinois.

BUSINESS OVERVIEW

INTRODUCTION

BASF is a transnational chemical company that aims to increase and sustain its corporate value through growth and innovation. The company's product range includes high-performance

11

products, including chemicals, plastics, coatings systems, dispersions, agricultural products, fine chemicals as well as crude oil and natural gas.

BASF is comprised of the parent company, BASF Aktiengesellschaft of Ludwigshafen, Germany, and 153 consolidated subsidiaries. The company has customers in more than 170 countries and operates production sites in 39 countries.

For the year ended December 31, 2001, BASF reported sales of E32,500 million, income from operations of E1,217 million, extraordinary income of E6,121 million and net income after taxes and minority interests of E5,858 million. Based on customer location, BASF's activities in Europe accounted for 55% of BASF's total sales in 2001; North America (which includes the United States, Mexico and Canada) accounted for 24% of sales; the Asia, Pacific Area, Africa region accounted for 14% of sales; and South America accounted for 7% of sales.

BUSINESS SEGMENTS

BASF has five separate business segments: Chemicals, Plastics & Fibers, Performance Products, Agricultural Products & Nutrition and Oil & Gas. These business segments encompass BASF's 12 operating divisions. In 2001, these divisions were reorganized to further optimize BASF's value-adding chains by bundling additional product groups which rely on similar technologies and value-adding chains. For financial reporting purposes, the two operating divisions of BASF's Agricultural Products & Nutrition business segment are separate reportable operating segments: Agricultural Products and Fine Chemicals. After receiving clearance from the Federal Trade Commission and the European Union Commission, BASF sold its pharmaceuticals business on March 2, 2001 to Abbott Laboratories Inc. of Abbott Park, Illinois. Pursuant to the requirements of U.S. GAAP, BASF's pharmaceuticals activities are disclosed as discontinued operations as described in Item 18, Note 3 to the Consolidated Financial Statements. For additional information on BASF's pharmaceuticals activities as discontinued operations, see also Notes 4 and 5 to the Consolidated Financial Statements in Item 18.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CHEMICALS

BASF produces a full range of chemicals in a highly integrated approach to manufacturing. BASF's chemical production starts with basic petrochemicals and inorganic chemicals substantially for captive use within the company and extends to specialty intermediates and related products sold to external customers. BASF sells its chemicals to a multitude of industries, particularly the chemical, construction, automotive and electronics industries. The segment comprises the Inorganics, Petrochemicals and Intermediates divisions. On July 1, 2001, the former Specialty Chemicals division was dissolved, and its glycols and alkylene oxides (for example, ethylene oxide and propylene oxide) product lines were transferred to the Petrochemicals division. Polyurethane intermediates -- primarily, aniline -- were transferred from the Intermediates division to the Polyurethanes division of the Plastics & Fibers segment.

PLASTICS & FIBERS

BASF is one of the world's largest producers of plastics and is also a manufacturer of fiber products. The segment's products include styrenic plastics, engineering and high-performance plastics, thermoplastics, foams, nylon fibers, nylon intermediates and polyurethanes. The segment comprises the Styrenics, Performance Polymers and Polyurethanes divisions. On July 1, 2001, the former operating divisions Engineering Plastics and Fiber Products were combined into the Performance Polymers division. Polyurethane intermediates -- primarily, aniline -- were transferred to the Polyurethanes division from the Intermediates division of the Chemicals segment.

12

PERFORMANCE PRODUCTS

The Performance Products segment produces a number of BASF's high-value chemicals. Among the segment's products are surfactants, pigments, automotive and industrial coatings, dispersions and adhesive raw materials. BASF also is a leading producer of acrylic acid and its derivatives as well as polymers such as superabsorbents, which are used to manufacture sanitary care products. Formerly known as the Colorants & Finishing Products segment, the segment was renamed and consists of the Performance Chemicals, Coatings and Functional Polymers divisions. On July 1, 2001, the Colorants division and Specialty Chemicals division were merged to form the Performance Chemicals division. The polyvinylpyrrolidone (PVP) product line for technical applications was transferred to the Functional Polymers division from the Fine Chemicals segment.

AGRICULTURAL PRODUCTS & NUTRITION: AGRICULTURAL PRODUCTS AND FINE CHEMICALS

The Agricultural Products & Nutrition segment conducts its activities through its Agricultural Products and Fine Chemicals divisions, which are separate reportable operating segments. The segment produces a variety of agricultural products, covering herbicides, fungicides and insecticides. BASF is also a leading supplier of fine chemicals, including vitamins; carotenoids; pharmaceutical active ingredients; polymers for pharmaceuticals, cosmetics and human nutrition; aroma chemicals; UV (ultraviolet) filters; amino acids; and feed enzymes. The segment, which was formerly known as the Health & Nutrition segment, was renamed after BASF sold its pharmaceuticals business on March 2, 2001 to Abbot Laboratories Inc. of Abbott Park, Illinois, after receiving clearance from the Federal Trade Commission and the European Union Commission.

OIL & GAS

BASF operates its Oil & Gas segment through BASF's subsidiary Wintershall AG and its corresponding subsidiaries and affiliates. The main activities of the

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Oil & Gas segment are the exploration and production of crude oil and natural gas and, together with Wintershall AG's partner Gazprom of Russia, the marketing, distribution and trading of natural gas in Central and Eastern Europe.

BASF'S FINANCIAL TARGET

BASF aims to achieve a premium on the company's cost of capital.

GROUP STRATEGY

BASF's goal is to increase and sustain the company's corporate value through growth and innovation. As the world's largest chemical company based on sales of E32,500 million in 2001, BASF aims to capitalize on the opportunities that are emerging from the restructuring process currently affecting the global chemical industry. BASF's long-term strategy and activities are guided by the principles of Sustainable Development and by the company's stated values and principles.

BASF's strategy is based on the following principles:

EXPANDING PROFITABLE BUSINESSES:

In optimizing its portfolio, BASF's goal is to expand highly profitable business activities and concentrate on its core competencies. To achieve this growth, BASF draws on the commercial benefits of its innovations, expands manufacturing capacities for specific products and actively manages its portfolio. BASF discontinues business activities which are unlikely to show long-term profitability as part of the company's product portfolio and acquires innovative businesses with a high potential for growth. From 1992 to 2001, BASF sold businesses which, at the time of their divestiture, generated sales valued at approximately E11 billion. During the same period, the company acquired businesses which, at the time of their acquisition, generated sales valued at

13

approximately E9.5 billion. In production, BASF also enters into strategic alliances with the aim of achieving profitable growth in our key businesses and value-adding chains.

ENHANCING BASF'S LONG-TERM COMPETITIVENESS:

BASF believes that cost leadership is crucial to the company's long-term competitiveness. To achieve this, BASF uses the cost efficiencies offered by integrated large-scale plants and by the technological advances in its production processes. BASF relies on the technology platforms in its research and development units to develop and implement process and product innovations effectively.

BASF's goal is to operate the most competitive sites in the chemical industry. BASF believes that to continue to secure its long-term performance in the chemicals business, it must use the highly integrated nature of its major manufacturing sites (referred to by the company as VERBUND sites -- a German word for "integrated") as effectively and extensively as possible while consolidating the company's portfolio of production sites. Where appropriate, BASF capitalizes on the cost advantages of its Verbund structures by building new plants at existing Verbund sites or by building new Verbund sites such as those in Nanjing, China, and Kuantan, Malaysia. For customers who place a high value on being served locally, BASF can gain a competitive advantage by operating regional sites for manufacturing customized products.

BASF's marketing and sales competence and its access to competitively-priced raw materials, energy and precursors are also of strategic importance.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CREATING VALUE FOR BASF'S CUSTOMERS:

BASF aims to be the preferred partner for its strategic customers. In response to growing pressures in its commodities business, BASF is turning to modern e-commerce solutions to contain costs. In its non-commodities businesses, the company aims to provide added value by expanding the scope of its customer services.

BASF believes that by working closely with innovative customers the company can exploit the potential of its research and development activities more effectively to develop the customized solutions customers want. Therefore the company believes it has an advantage over its competitors, thereby enhancing the company's earnings potential.

INVESTING IN GROWTH MARKETS:

BASF focuses its resources on expanding selected businesses in specific regions. Building production capacities in growth markets is a crucial element of BASF's strategy, as it allows the company to supply regional markets locally. Local production also increases the company's flexibility in high growth markets and reduces the risks posed by temporary currency fluctuations and weak regional growth.

BASF estimates that by 2010 the chemical market in Asia -- excluding Japan -- will be approximately as large as the market for chemicals in Europe. Therefore, Asia is a key market for BASF. The company aims to establish itself quickly as one of the most important chemical manufacturers in this emerging market. In Europe and North America, BASF is concentrating its resources on growth markets in which the company believes it has competitive advantages over other chemical producers.

BASF aims to be among the top three suppliers in all of the markets it serves. The company already derives more than two-thirds of its sales from product groups in which it is one of the top three suppliers, and it aims to further increase this proportion.

14

RELYING ON THE DIVERSE SKILLS OF BASF'S EMPLOYEES:

BASF considers its committed and skilled employees to be one of the company's particular strengths and also believes the company benefits from the national and cultural diversity of its staff. Furthermore, BASF considers teamwork to be an asset and believes it has an impact in particular on the effectiveness of the company's research and development activities.

BASF believes the new corporate organization, which came into effect in 2001 as part of BASF's FIT FOR THE FUTURE program, will strengthen the company's ties to customers, support its market presence and help foster a greater entrepreneurial spirit.

CHEMICALS

SEGMENT OVERVIEW

BASF's Chemicals segment is one of the largest chemical producers in the world based on sales. The Chemicals segment produces a wide range of products, from basic petrochemicals and inorganic chemicals to higher-value intermediates, allowing BASF to exploit fully the benefits of its Verbund approach to integration.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The following table sets forth the Chemicals segment's sales to third parties, percentage of total BASF sales, intersegmental transfers, income from operations and capital expenditures for the last three years:

		2001		2000		1999

(EUROS IN MILLIONS)						
Sales to third parties.....	E	4,494	E	4,504	E	3
Percentage of total BASF sales.....		14%		13%		
Intersegmental transfers.....	E	2,452	E	2,408	E	2
Income from operations.....	E	362	E	640	E	
Capital expenditures.....	E	929	E	774	E	

The Chemicals segment produces a wide variety of chemicals that are sold to a multitude of industries, including the chemical, construction, automotive, electrical, electronics, detergents, colorants, coatings and health and nutrition industries.

The Chemicals segment exemplifies the benefits of BASF's Verbund approach to integration because its divisions both intensively consume and manufacture products along the company's core value-adding chains. Virtually all products that the segment sells to external customers are produced within this integrated network. Although most of the segment's sales are to external customers, approximately 35% of the segment's total sales are intersegmental transfers to other BASF operations for the manufacture of higher-value products. The products manufactured for captive use include many basic and intermediate chemicals.

On July 1, 2001, the former Specialty Chemicals division was dissolved, and its glycols and alkylene oxides (for example, ethylene oxide and propylene oxide) product lines were transferred to the Petrochemicals division. All other Specialty Chemicals operations were transferred to the Performance Chemicals division. Polyurethane intermediates -- primarily, aniline -- were transferred from the Intermediates division to the Polyurethanes division of the Plastics & Fibers segment. In 2000, the former Petrochemicals & Inorganics and Industrial Chemicals divisions were reorganized into the Inorganics and Petrochemicals divisions. As part of this reorganization, technical nitrogen products were transferred from Other (the former Fertilizers division) to the Inorganics division. Data for the Chemicals segment from 1999 and 2000 have been restated to reflect these reorganizations.

15

The divisions comprising the Chemicals segment and their principal products are:

INORGANICS:

MAJOR PRODUCTS

- Inorganic basic chemicals such as chlorine, sodium hydroxide, nitric acid and sulfuric acid, as well as sodium and ammonium salts
- Glues and impregnating resins including

PRIMARY APPLICATIONS

- Used as starting materials for propylene oxide, polyvinyl chloride, superabsorbents, fertilizers and other high-value chemicals
- Wood-to-wood adhesives and bonding

|--|---|

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- Specialty intermediates
- For paper manufacturing, polymers, textiles, leather products, pharmaceuticals as well as agricultural products

SEGMENT STRATEGY

The competitiveness of the Chemicals segment depends upon cost leadership, achieved through economies of scale, state of the art technology and efficient production processes. BASF's capital expenditures and research and development efforts are focused on building world-scale plants, as well as on developing new technologies, processes and products.

The Chemicals segment's strategy is to maintain its leading market position in Europe, improve its cost structure in North America, and expand its operations in Asia. In Europe, BASF acquired the SISAS Group's production activities in Feluy, Belgium, in mid-2001. The acquisition strengthened the Chemical segment's activities in key products including butanediol and its derivatives as well as phthalic anhydride. In North America, BASF and its partner, TotalFinaElf S.A., started operation of the world's largest liquids steam cracker at TotalFinaElf's refinery in Port Arthur, Texas, in the fourth quarter of 2001. The steam cracker supplies propylene, ethylene and other products to BASF's Verbund sites in Geismar, Louisiana, and Freeport, Texas. In Asia, BASF has a number of major projects underway. These include the expansion of the new Verbund site in Kuantan, Malaysia. BASF began manufacturing at the site in mid-2000, and in April 2001 an oxo alcohol and syngas complex went on stream. BASF is also constructing a new Verbund site in Nanjing, China. BASF expects plants at the Nanjing site to begin operations in 2005.

In 2001, the Chemicals segment invested approximately E109 million in research and development. Research activities are focused on improving value-adding production chains that serve the segment and on developing higher-value products. BASF is developing new products and production processes, in particular for organic and inorganic intermediates and industrial chemicals.

17

The main capital expenditure projects of the Chemicals segment currently include:

LOCATION -----	PROJECT -----	PROJECTED ANNUAL CAPACITY AT COMPLETION OF PROJECT ----- (METRIC TONS)	PROJEC START-U OPERATI -----
Kuantan, Malaysia	Butanediol	100,000 (1)	200
Freeport, Texas	Neopentylglycols	60,000	200
Port Arthur, Texas	Butadiene	410,000 (2)	200
Ludwigshafen, Germany	Polytetrahydrofuran	56,000	200
	Formaldehyde	480,000	200
	Glyoxal	60,000	200
Tarragona, Spain	Propylene	350,000 (3)	200

-
- (1) Conducted through a joint venture between BASF (60%) and PETRONAS (40%) (capacity reflects total joint venture capacity).
 - (2) Conducted through a joint venture between Shell Chemical Company (60%), BASF (24%) and TotalFinaElf S.A. (16%) (capacity reflects total joint venture capacity).
 - (3) Conducted through a joint venture between BASF (51%) and SONATRACH (49%) (capacity reflects total joint venture capacity).

INORGANICS

OVERVIEW

BASF's Inorganics division sells approximately 400 products of which approximately 55% are allocated for captive use. This allows BASF's other divisions to benefit from reduced energy, transportation and infrastructure costs and from improved efficiencies in purchasing and logistics. These internal transfers, which are sold at market prices, include large amounts of chlorine, sodium hydroxide, ammonia, formaldehyde, methanol and nitric acid as startup materials to create higher-value products. This captive use within BASF provides steady demand that helps maintain good capacity utilization rates at the division's production plants. The remaining amount is sold to external customers worldwide from a broad range of industries.

The principal raw materials used in the Inorganics division are natural gas, sulfur and salt. The division purchases approximately 30% of its raw materials from other BASF operations. Natural gas, the main raw material, is acquired through BASF's joint venture WINGAS GmbH. All other principal raw materials are purchased from external sources. BASF does not rely on any dominant supplier for the raw materials of its Inorganics division.

The most important production site for the Inorganics division is BASF's Verbund site in Ludwigshafen, Germany, where the division produces its entire range of products. The division also produces basic inorganic chemicals such as ammonia, chlorine, sodium hydroxide, formaldehyde, nitric acid and sulfuric acid at the company's Verbund site in Antwerp, Belgium.

Cost leadership is vital for the Inorganics division due to the commodity pricing structure for many of its products. BASF believes its integrated approach to manufacturing in world-scale plants helps the division control costs and compete effectively in its key product areas. Offering customers inorganic specialties and innovative products, especially in the areas of electronic grade chemicals, catalysts and powder injection molding is also important for BASF to maintain a competitive edge and thus contributes to BASF's profitability. BASF aims to expand its business in inorganic

18

specialties and catalysts for which the company can obtain higher margins. For example, in 2001, BASF expanded the production capacity in Ludwigshafen, Germany, of hydroxylamine; a chemical used in manufacturing electronic products.

The Inorganics division's sales to third parties were E677 million in 2001.

PRODUCTS

The Inorganics division has four major product lines:

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

INORGANIC CHEMICALS

BASF produces inorganic chemicals through value-adding chains of production based on nitrogen, sulfur and sodium chloride. Products range from basic chemicals such as chlorine, sodium hydroxide, nitric acid and sulfuric acid to products such as sodium salts and ammonium salts. More than half of these products are for captive use within BASF's Verbund. The remaining products are sold primarily to other chemical companies.

GLUES AND IMPREGNATING RESINS

BASF offers a wide variety of tailor-made, wood-to-wood adhesives. These adhesives are used to bind together the particles, fibers and strands found in all types of particleboards, and are also used for surface bonding of wooden components. In addition, BASF produces impregnating resins, which are used to manufacture decorative paper and laminated flooring. BASF is also a producer of glues and impregnating resin raw materials such as ammonia, formaldehyde, methanol, urea and melamine. Europe is the primary market for this group of products.

INORGANIC SPECIALTIES AND ELECTRONIC GRADE CHEMICALS

BASF offers a wide range of inorganic specialties which includes carbonyl iron powder, hydroxylamine free base, hydroxylammonium sulfate, boron trifluoride and BASF's innovative Catamold-Registered Trademark- line of products for powder injection molding of metal and ceramic components. The Catamold-Registered Trademark- line is especially suited for manufacturing tiny, intricate devices such as watch casings and orthodontic appliances. BASF sells these products globally to manufacturers in the automotive, construction and medical sectors, among other industries. BASF also produces some inorganic specialties in electronic grade, such as hydroxylamine free base, for use in manufacturing semiconductors, light-emitting diodes, flat screens and plasma screens.

CATALYSTS

Catalysts are substances that are frequently added to chemical processes to facilitate the target reaction. Developing and manufacturing catalysts plays an important role in BASF's strategy to protect and expand its technological leadership because catalysts often help increase product yields. BASF's catalysts are used mainly in internal processes and are also sold to customers around the world.

19

The production capacities as of December 31, 2001 for the Inorganics division's major products are as follows:

PRODUCT -----	ANNUAL PRODUCTION CAPACITY (METRIC TONS) -----	PRIMARY APPLICATIONS -----
Ammonia.....	1,255,000	<ul style="list-style-type: none"> - Fertilizers - Glues and impregnating resins - Dyestuffs - Animal nutrition - Fiber products
Chlorine.....	460,000	<ul style="list-style-type: none"> - Plastics

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

		- Solvents
		- Inorganic salts
Formaldehyde condensation products	750,000	- Glues and impregnating resins
Formaldehyde.....	510,000	- Glues and impregnating resins
		- Solvents
Methanol.....	450,000	- Glues and impregnating resins
		- Chemical intermediates
		- Solvents
		- Vitamins
Sulfuric acid and oleum.....	720,000	- Fiber products
Sulfur dioxide.....	150,000	- Bleaching and reducing agents
Sodium hydroxide.....	470,000	- Chemicals
Urea.....	545,000	- Fertilizers
		- Glues and impregnating resins

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for 80% of the Inorganics division's sales to external customers; North America for 9%; South America for 2%; and the Asia, Pacific Area, Africa region for 9%. Besides BASF's other operating divisions, the Inorganics division's main customers include other chemical companies, and many of these are competitors of BASF.

The Inorganics division produces both commodities characterized by cyclical pricing, in which changes in the costs of raw materials have an almost immediate effect on the division's financial performance, and inorganic specialties, which are less sensitive to price fluctuations. The Inorganics division competes on the basis of strong customer relationships, comprehensive product service and price. In the market for specialty products, the division also competes based on its ability to offer innovative products, such as catalysts.

The Inorganics division sells its products primarily through BASF's own sales force. In January 2001, BASF centralized responsibility for the sale of electronic grade chemicals in the Inorganics division in order to provide these products to customers more efficiently.

The Inorganics division's main competitors include ATOFINA S.A. of France, Norsk Hydro of Norway and Gentek Inc. of the United States.

20

PETROCHEMICALS

OVERVIEW

The Petrochemicals division sells more than 200 different products and represents the first step in BASF's Verbund approach to integration for the company's petrochemical-based, high-value products. Approximately 50% of the division's products are earmarked for captive use within BASF. The remaining amount is sold to approximately 2,200 customers worldwide.

The principal raw materials used in this division are naphtha -- derived from refining crude oil -- and natural gas. The Petrochemicals division

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

purchases approximately 10% of its raw materials from other BASF operations, the majority of which is natural gas acquired from WINGAS GmbH. All other principal raw materials are bought from external sources. BASF does not rely on any dominant supplier for the raw materials of the Petrochemicals division.

The Petrochemicals division's principal products include the basic building blocks of petrochemicals, which are produced primarily in steam crackers. In a steam cracker, steam is used to crack naphtha mainly into ethylene and propylene. Other materials produced in this process include aromatics such as benzene, and C(4) cuts (a mixture of C(4) hydrocarbons) -- a source of butadiene, isobutene and n-butenes. BASF also produces acetylene -- a chemical based on natural gas and provides industrial gases for consumption at BASF's Verbund sites in Ludwigshafen, Germany, and Antwerp, Belgium.

The division's products, which are used internally in BASF's value-adding chains of production, include large amounts of ethylene, propylene, butadiene, benzene, acetylene, oxo alcohols, phthalic anhydride, ethylene oxide, ethylene glycols, propylene oxide, propylene glycol and industrial gases. This captive use within BASF provides steady demand that helps maintain good capacity utilization rates at the division's production plants.

In Europe, BASF operates steam crackers in Ludwigshafen, Germany, and Antwerp, Belgium. Although the steam crackers mainly supply products for captive use within the company, BASF maintains positions in the merchant markets for ethylene to ensure high capacity utilization. In mid-2001, BASF obtained approval from the European Union commission to acquire the SISAS Group's production activities in Feluy, Belgium. Through this acquisition, BASF strengthened its position in the European market for phthalic anhydride.

In North America, BASF and its partner TotalFinaElf S.A. have built a world-scale steam cracker at TotalFinaElf's refinery located in Port Arthur, Texas. The steam cracker started operations in the fourth quarter of 2001, and will supply olefins and aromatics to BASF's Verbund sites in Geismar, Louisiana, and Freeport, Texas. BASF is the majority partner, with a 60% ownership interest, and the site operator. The combined investment of BASF and TotalFinaElf amounts to approximately E1 billion, with BASF's share being E600 million. The steam cracker's annual production capacity is 920,000 metric tons of ethylene and 550,000 metric tons of propylene.

In Asia, a production plant for oxo C(4) alcohols came on stream in Kuantan, Malaysia, in April 2001.

Virtually all of the products in the Petrochemicals division are commodities; low production cost is therefore the key to the success of the division. Highly competitive cost positions are achieved through economies of scale, high capacity utilization and use of all products within Verbund sites. Many of the division's products constitute the first steps in BASF's integrated value-adding chains and are sold to other BASF operations at market prices. By buying these products from BASF's own Petrochemicals division, however, other BASF operations benefit from efficiencies in logistics and savings in energy, transportation, purchasing and infrastructure costs. This approach underpins BASF's ability to efficiently manufacture higher-value products throughout its operations.

The Petrochemicals division's sales to third parties were E2,079 million in 2001.

PRODUCTS

The following are the Petrochemicals division's main product lines:

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CRACKER PRODUCTS

BASF produces the entire range of cracker products from ethylene and propylene to benzene and C(4) cuts. Of these, propylene is the most important starting product for BASF's value-adding chains of production in petrochemicals. Benzene is used captively both in Ludwigshafen and Antwerp, while the residues from benzene extraction are sold as gasoline components. Butadiene is used captively to produce dispersions and ABS (acrylonitrile-butadiene-styrene) and is also sold in the merchant market. Isobutene (a C(4) hydrocarbon) serves as the starting material for the polyisobutene value-adding chain of gasoline additives as well as the basic building block in vitamin synthesis. In Europe, all n-butenes are used in the synthesis of plasticizers and detergent alcohols. Higher olefins are marketed to the adhesives industry.

INDUSTRIAL GASES

These products include industrial gases such as hydrogen, carbon monoxide and oxygen and are largely for captive use within BASF to manufacture higher-value chemicals.

ALKYLENE OXIDES AND GLYCOLS

Ethylene oxide derived from ethylene is used mainly to produce surfactants, ethanolamines, glycols and glycol ethers. BASF is one of Europe's largest producers of ethylene glycol, a product used in antifreeze in the automotive industry. BASF also supplies ethylene glycol to polyester manufacturers for the production of fibers, films and PET (polyethylene terephthalate) plastic bottles. Ethylene oxide and glycols form important links in BASF's ethylene value-adding chain, and in 2001 the company increased production capacity for these products. Propylene oxide is synthesized from propylene and serves as a base for a wide variety of products, including surfactants, hydraulic fluids, solvents and propylene glycol.

SOLVENTS

BASF offers a wide range of oxygenated, halogen-free solvents that are used to dissolve other chemicals and facilitate chemical reactions. BASF is the world's largest producer of oxo alcohols and is also a major producer of acetates, glycol ethers and glycol ether acetates, as well as the specialty solvents dimethylformamide (DMF), dimethylacetamide (DMAC) and cyclohexanone. BASF sells most of these products globally, primarily to the coatings, pharmaceuticals and cosmetics industries.

PLASTICIZERS AND PLASTICIZER RAW MATERIALS

BASF manufactures standard and specialty plasticizers, which are used in chemical processes to make rigid plastics flexible. BASF also sells the plasticizer precursor phthalic anhydride for use in dyestuffs and unsaturated polyester resins, and markets plasticizers based on higher alcohols.

22

Production capacities as of December 31, 2001 for the major products in the Petrochemicals division are as follows:

PRODUCT	ANNUAL PRODUCTION CAPACITY (METRIC TONS)	PRIMARY APPLICATIONS
-----	-----	-----

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Ethylene.....	2,260,000 (1)	- Plastics - Specialty chemicals - Solvents - Dispersions
Propylene.....	1,300,000 (2)	- Plastics - Plasticizers - Solvents - Specialty chemicals
Benzene.....	490,000 (3)	- Plastics
Oxo C(4) alcohols (calculated as butyraldehyde).....	1,070,000 (4)	- Plasticizers - Dispersions - Solvents
Phthalic anhydride.....	259,000 (5)	- Plasticizers - Resins - Dyestuffs
Higher oxo alcohols.....	170,000	- Plasticizers - Detergents (ethoxylates)
Acetylene.....	90,000	- Plastics - Vitamins - Pharmaceuticals
Ethylene oxide.....	1,065,000	- Nonionic surfactants - Ethylene glycols
Propylene oxide.....	124,000	- Nonionic surfactants - Propylene glycol
Ethylene glycols.....	750,000	- Antifreeze - Polyester
Propylene glycol.....	80,000	- Unsaturated polyesters, - Polyester
Glycol ethers.....	125,000	- Solvents, brake and hydro fluids

- (1) Includes the total production capacity of 920,000 metric tons conducted through a joint venture between BASF (60%) and TotalFinaElf S.A.
- (2) Includes the total production capacity of 550,000 metric tons conducted through a joint venture between BASF (60%) and TotalFinaElf S.A.
- (3) Includes the total production capacity of 110,000 metric tons conducted through a joint venture between BASF (60%) and TotalFinaElf S.A.
- (4) Includes the total production capacity of 250,000 metric tons conducted through a joint venture between BASF (60%) and PETRONAS.
- (5) Includes the total production capacity of 40,000 metric tons conducted through a joint venture between BASF (60%) and PETRONAS.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for 64% of the Petrochemicals division's sales to external customers; North America for 27%; South America for 1%; and the Asia, Pacific Area, Africa region for approximately 8%.

The Petrochemicals division sells products through BASF's own sales force as well as through wholesalers. Specialty chemical and other chemical companies are the primary external customers of this division, and some of the customers are also competitors of BASF. Approximately 50% of the division's sales are to other BASF divisions.

The Petrochemicals division produces commodities that are subject to strong cyclicity in pricing. Changes in the costs of raw materials have an almost immediate effect on the division's financial performance. Competition in the market is based on strong customer relationships, comprehensive product services and price.

BASF considers Shell Chemicals and BP Amoco plc of the United Kingdom; Eastman Chemicals Corp., Exxon Chemicals Company and The Dow Chemical Co. of the United States; DSM of the Netherlands; E.ON AG, DEA Mineralol AG, Celanese AG and the Degussa AG unit Oxeno of Germany to be the main competitors in its Petrochemicals division.

INTERMEDIATES

OVERVIEW

The Intermediates division manufactures approximately 550 products that are sold to around 3,000 customers worldwide. These customers typically purchase the division's chemical precursors to produce higher-value chemicals. Customers of the Intermediates division are largely active in the manufacture of surfactants, plastics, polyurethanes, textile fibers, resins, paints, colorants, pharmaceuticals and agricultural products.

The Intermediates division represents an important link in BASF's Verbund approach to integration because it purchases approximately 80% of its feedstock from other BASF operations, thus benefiting from efficiencies in logistics and savings in energy, transportation, purchasing and infrastructure costs. The division also consumes by-products of other BASF chemical operations, thus adding value to otherwise wasted product streams. The principal raw materials that the division uses are methanol, formaldehyde, acetylene, C(4) aldehyde, acrylonitrile, ammonia, ethylene oxide, ethylene, and chlorine.

Many of the Intermediates division's products are generally more resilient to economic cycles than the products in the Chemicals segment's other divisions, and many are the result of multi-step production processes within BASF before intermediates are sold to external customers. The division, however, also satisfies high demand within BASF for cost-efficient precursors for the production of agricultural products, pharmaceuticals, paint resins, plastics, adhesives, dyes, pigments and process chemicals for the textile, leather and paper industries. Internal transfers to other BASF operations, in particular of amines, account for approximately 25% of the division's total sales.

The keys to the Intermediates division's success are achieving technological and cost leadership, offering customized products and, increasingly, developing a global production presence. To increase its global presence, the Intermediates division intends to expand its operations outside of Europe, particularly in Asia with a major focus on the new Verbund sites in Kuantan, Malaysia, and Nanjing, China.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF is specifically aiming to build on its existing global leadership position in the production of diols and to expand its production of amines to capture an increased share of global markets. In

24

Kuantan, Malaysia, BASF manufactures butanediol through the joint venture BASF PETRONAS Chemicals. In mid-2001, BASF obtained approval from the European Union Commission to acquire the SISAS Group's production activities in Feluy, Belgium. Through the acquisition, BASF strengthened its position in the market for butanediol and its derivatives, and also added maleic anhydride to the division's portfolio. Maleic anhydride is used in the manufacture of unsaturated polyester resins.

The Intermediates division's sales to third parties were E1,738 million in 2001.

PRODUCTS

The Intermediates division has four major product areas:

AMINES

BASF is among the world's top three producers of amines, which are principally used to make detergents and cleaning products, process chemicals and agricultural products as well as pharmaceuticals. BASF offers approximately 140 different amines worldwide. Key products include aromatic amines, ethanolamines, ethyleneamines, alkylamines, alkylalkanolamines and specialty amines. Amines are sold globally, but Europe is BASF's primary market for these products.

BUTANEDIOL AND DERIVATIVES

BASF is the world's largest manufacturer of 1,4-butanediol, which is a chemical building block for products such as plastics and polyurethanes. Its derivatives are used to produce, for example, fibers and paints. Other key products include tetrahydrofuran, PolyTHF-Registered Trademark-, gamma-butyrolactone and N-methylpyrrolidone, which BASF produces and sells globally. With the acquisition of the SISAS Group's Feluy production site, this product area now also includes maleic anhydride.

CARBOXYLIC ACIDS AND POLYALCOHOLS

This product group comprises carboxylic acids such as formic acid, propionic acid and adipic acid, as well as polyalcohols, which include hexanediol and neopentylglycol. These chemicals can be used, for example, to manufacture preservatives for the feed and food industries, auxiliaries for textile and leather applications, as well as precursors for a wide range of coatings products. The Intermediates division sells these products globally. BASF is focusing capital expenditures on North America and Asia as part of the company's strategy to increase sales in these regions.

SPECIALTY INTERMEDIATES

BASF manufactures acid chloride derivatives, dialdehydes and imidazoles as well as various chemical specialties such as alcoholates, formamide, triphenylphosphine and several optically active intermediates. These chemicals are often used in the manufacture of paper, polymers, textiles and leather products and also for pharmaceuticals and agricultural products. Europe is BASF's primary market for these products, but BASF has targeted Asia as well as North America for future substantial growth.

25

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Production capacities as of December 31, 2001 for the major products in the Intermediates division are as follows:

PRODUCT -----	ANNUAL PRODUCTION CAPACITY (METRIC TONS) -----	PRIMARY APPLICATIONS -----
Alkylamines.....	190,000	- Agricultural products - Water treatment - Pharmaceuticals - Rubber chemicals
Ethanolamines/ alkylalkanolamines/ ethyleneamines.....	255,000	- Laundry and cleaning material - Water treatment - Agricultural products - Gas purification
Specialty amines.....	90,000	- Surfactants - Rubber industry applications - Agricultural products - Polyurethane and epoxies
Acid chloride derivatives.....	40,000	- Organic peroxides - Pharmaceuticals
Butanediol.....	470,000 (1)	- Plastics - Polyurethanes
Polytetrahydrofuran (PolyTHF-Registered Trademark-)....	124,000	- Fibers - Polyurethanes
Glyoxal-Registered Trademark- (40% solution).....	80,000	- Textile resins
1,6-Hexanediol.....	42,000	- Plastics - Coating resins
Formic acid/propionic acid.....	180,000/ 80,000	- Preservatives
Formamide.....	100,000	- Agricultural products
Maleic anhydride.....	135,000	- Unsaturated polyester resins

(1) Of which 25,000 metric tons is produced by Idemitsu BASF Co. Ltd. -- a 50-50 joint venture between Idemitsu Petrochemicals Co. Ltd. and BASF (capacity reflects total joint venture capacity).

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for approximately 52% of the Intermediates division's sales to external customers. North and South America together accounted for approximately 23% and the Asia, Pacific Area, Africa region for

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

approximately 25%. BASF sells this division's products through its own sales force as well as through distributors.

A significant majority of the Intermediates division's products are more resilient to economic cycles compared with the products in the Chemicals segment's other divisions. However, the Intermediates division also manufactures products that are commodities characterized by cyclical pricing. The trend toward commodity pricing is increasing.

26

The competitors of the Intermediates division range from major industry participants to smaller, specialized chemical companies. Besides product price, important factors for success include quality and a reliable supply of products along with customer service. BASF is among the top three producers worldwide in its four intermediates business sectors. In the amines market, BASF considers its main competitors to be Air Products Corp., The Dow Chemical Company and Huntsman Corporation. In BASF's butanediol and derivatives activities, the company's major competitors are International Specialty Products Inc., E.I. du Pont de Nemours and Company, Lyondell Chemical Company and Mitsubishi Chemicals Corporation. The main competitors in BASF's specialty intermediates business are Sydsvenska Kemi OY, BP Amoco plc and Celanese AG.

PLASTICS & FIBERS

SEGMENT OVERVIEW

BASF is one of the world's leading plastics and fiber products manufacturers and offers one of the industry's most comprehensive product ranges.

The following table sets forth the Plastics & Fibers segment's sales to third parties, percentage of total BASF sales, intersegmental transfers, income from operations and capital expenditures for the last three years:

		2001		2000 (1)		1999
(EUROS IN MILLIONS)						
Sales to third parties.....	E	8,185	E	11,030	E	
Percentage of total BASF sales.....		25%		31%		
Intersegmental transfers.....	E	406	E	510	E	
Income from operations.....	E	(2)	E	902	E	
Capital expenditures.....	E	891	E	633	E	

(1) The Plastics & Fibers segment's figures include BASF's polyolefins operations for the first nine months of 2000.

The principal customers of the Plastics & Fibers segment are active in a broad range of industries, including the construction, packaging, automotive, household appliance, electrical and electronics, consumer products, textile, and carpet as well as the sports and leisure industries.

The Plastics & Fibers segment benefits significantly from several levels of Verbund-generated cost savings. The segment buys a number of raw materials externally but does not rely on any dominant supplier.

Europe remains BASF's largest market for plastics. To ensure the ongoing

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

success of the Plastics & Fibers segment, BASF is currently positioning itself to better respond to customer needs by building production sites in key markets. BASF is also expanding existing production sites, application centers and sales offices in the segment's major markets

On July 1, 2001, the Plastics & Fibers segment's former Engineering Plastics and Fiber Products divisions were combined to form the new Performance Polymers division. Polyurethane intermediates -- primarily, aniline -- were transferred to the Polyurethanes division from the Intermediates division of the Chemicals segment. Prior year amounts have been restated to reflect these changes.

27

The divisions comprising the Plastics & Fibers segment and their principal products are:

STYRENICS:

MAJOR PRODUCTS

- PS, PS-I (polystyrene)
- ABS (acrylonitrile-butadiene-styrene copolymers)
- ASA (acrylonitrile-styrene-acrylate copolymers)
- SAN (styrene-acrylonitrile copolymers)
- MABS (methacrylate-acrylonitrile-butadiene-styrene copolymer)
- ABS/PA blend (acrylonitrile-butadiene-styrene copolymer and polyamide)
- S/PPE blend (impact modified styrene copolymer and polyamide)
- EPS (expandable polystyrene)
- XPS (extruded polystyrene)
- EPP (expandable polypropylene)
- MF (melamine resin foam)

PRIMARY APPLICATIONS

- Packaging and disposable products
- Household appliances
- Housings for consumer electronics
- Electrical and consumer electronics
- Household appliances
- Office equipment
- Automotive components
- Uncoated exterior automotive parts
- Sports equipment
- High-end electrical equipment
- Household and toiletry items
- Cosmetics packaging
- Office and household equipment
- Containers for hygiene and cosmetics
- Medical equipment housings
- Office equipment housings
- Exterior and interior automotive
- Garden equipment
- Children's toys
- Plumbing and sanitary applications
- Battery chargers
- Building insulation
- Packaging
- Building insulation
- Automotive components
- Packaging for fragile products
- Insulation pads
- Sports equipment
- Automotive components

- Soundproofing materials
- Fire protection materials
- Household and consumer appliances

28

PERFORMANCE POLYMERS:

MAJOR PRODUCTS

- PA (polyamide)

- PBT (polybutylene terephthalate)

- POM (polyoxymethylene)

- PES (polyethersulfone) and PSU (polysulfone)

- Fiber intermediate products (including caprolactam, polycaprolactam, adipic acid, adiponitrile and hexamethylenediamine)

- Carpet products

PRIMARY APPLICATIONS

- Automotive engine components
- Flame retardant plastics for elect
- Housings for electrical equipment
- Films for food packaging

- Electrical connectors
- Automotive components such as wind
- Housings for automotive transmissi

- Clips and fasteners
- Speaker grilles
- High-end children's toys
- Mechanical and precision engineeri

- Automobile oil circulation systems
- reflectors and housings
- Microwave dishes, infant formula b
- Medical equipment

- Carpeting
- Apparel
- Upholstery fabrics

- Commercial, residential and automo

POLYURETHANES:

MAJOR PRODUCTS

- Isocyanates

- Polyols

- Polyurethane systems

PRIMARY APPLICATIONS

- Furniture interiors
- Automotive seats and steering whe
- Carpet backings
- Shoe soles, athletic track surfac

- Rigid and flexible foams
- Cable sheathings, shoe soles

- Automotive seats
- Steering wheels, fenders, dashboa
- Polyurethane special elastomers
- Cable coverings
- Shock-absorbing plastics for auto
- equipment

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- Polyurethane special elastomers
- Shock absorbers and buffers in ve
- Components in sports equipment
- Flexible plastic cable coverings

29

SEGMENT STRATEGY

BASF's goal is to strengthen its position as one of the leading global competitors in the plastics and fibers industry -- a position which is based primarily on its styrenics, nylon and polyurethane value-adding chains of chemistry.

To achieve this goal, BASF is pursuing the following strategy in its Plastics & Fibers segment:

- **MARKETING AND SELLING PRODUCTS MORE EFFICIENTLY THAN COMPETITORS IN KEY REGIONAL MARKETS:** BASF believes that continuing to improve its marketing and sales activities in Europe, Asia and North America will contribute to the segment's overall performance and above all to the performance of the segment's commodities. To support this strategic goal, BASF has set up global sales teams, which are dedicated to specific industry branches.
- **INCREASING SALES OF SELECTED SPECIALTY PRODUCTS:** BASF aims to expand its position in the market for specialty products which have the potential to make a long-term contribution to the segment's profitability and which can be easily derived from the company's value-adding chains of chemistry.
- **BOOSTING THE EFFICIENCY OF THE COMPANY'S GLOBAL PRODUCTION ACTIVITIES:** BASF intends to shift production from older plants to more efficient world-scale plants, which rely on new technologies and offer substantial economies of scale. In Asia, the company is continuing to expand its production capacities and is building on its well-established base in the region.
- **BUILDING ON THE COMPANY'S STRENGTHS AS A GLOBAL MANUFACTURER OF PLASTICS:** As a manufacturer of plastics with major activities in Europe, North America and Asia, BASF aims to become a preferred supplier of global customers by providing on a regional basis consistently high quality products.
- **DEVELOPING FUTURE PRODUCTION CAPACITIES IN LINE WITH GROWTH IN GLOBAL DEMAND**
- **WORKING CLOSELY WITH CUSTOMERS IN DEVELOPING NEW PRODUCTS AND APPLICATIONS:** BASF sells its plastics and fiber products to customers, who in turn use these materials to make products which they sell to end consumers. Therefore, it is essential for BASF to work closely with its customers to develop the most suitable materials for the markets these customers aim to serve. Furthermore, manufacturers in various industries are increasingly relying on plastics and fiber products to replace conventional materials. Consequently, BASF aims to collaborate with these customers to develop the best materials for improving their manufacturing processes.
- **USING E-COMMERCE MORE EXTENSIVELY AS A DISTRIBUTION CHANNEL:** BASF expects that approximately E500 million in sales will be carried out through e-commerce in 2002, and believes this distribution channel will continue to make an increasing contribution to the segment's sales.

In 2001, the Plastics & Fibers segment spent approximately E146 million on

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

research and development activities. Research activities focus on improving existing manufacturing processes, developing cost-effective manufacturing alternatives, building partnerships and working together with customers to develop innovative applications and products.

30

The main capital expenditure projects of the Plastics & Fibers segment currently include:

LOCATION -----	PROJECT -----	PROJECTED ANNUAL CAPACITY AT COMPLETION OF PROJECT (METRIC TONS) -----	PROJECTED START-UP OF OPERAT -----
Caojing, China	MDI (diphenylmethane diisocyanate).....	160,000 (1)	2005
	TDI (toluene diisocyanate).....	130,000 (2)	2005
Geismar, Louisiana	TDI replacement.....	160,000	2002
Yeosu, Korea	TDI.....	140,000	2003
	MDI expansion.....	160,000	2004
Altamira, Mexico	Styrolux-Registered Trademark- (styrene- butadiene-styrene block copolymers).....	45,000	2003
Singapore	SM (styrene monomer).....	550,000 (3)	2002
	PO (propylene oxide).....	250,000 (3)	2002
Ludwigshafen, Germany	EB (ethyl benzene) replacement.....	600,000	2002
	SM (styrene monomer) replacement.....	550,000	2002
	Ultrason-Registered Trademark- (polyethersulfone and polysulfone).....	5,000	2002
Antwerp, Belgium	MDI expansion.....	320,000	2003
	Styrolux-Registered Trademark- (styrene- butadiene-styrene block copolymers).....	30,000	2002
Schwarzheide, Germany	Basotect-Registered Trademark- (melamine resin foam)....	2,000	2003
Tudela, Spain	Styrodur C-Registered Trademark- (extruded polystyrene)...	100,000 (4)	2002

(1) Conducted through a joint venture with SINOPEC and the Hua Yi Group of China as well as Huntsman-ICI Polyurethanes and Nippon Polyurethanes (capacity

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

reflects total joint venture capacity of which BASF has a 35% share).

- (2) Conducted through a joint venture with SINOPEC and the Hua Yi Group of China (capacity reflects total joint venture capacity of which BASF has a 70% share).
- (3) Conducted through a 50-50 joint venture with Shell Eastern Petroleum Pte. Ltd. (capacity reflects total joint venture capacity).
- (4) Measured in cubic meters.

STYRENICS

OVERVIEW

BASF is one of a small number of global producers of styrenics, supplying approximately 700 principal customers in all major geographic markets of the world.

The Styrenics division supplies customers with plastics to make thousands of products ranging from food containers and housings for consumer products to foamed boards for building insulation. Polystyrene, which can be used in both rigid and foamed applications, is an easy-to-process material and offers an excellent price-to-performance ratio compared with alternative materials,

31

giving it an advantage in the high-growth consumer packaging and consumer goods industries. BASF believes similar growth opportunities exist for the division's two major products used in building insulation -- Styropor-Registered Trademark- and Styrodur-Registered Trademark-. The division's styrene copolymers are especially well suited for high-performance applications, which call for materials that are stiff or durable against weathering.

The Styrenics division purchases approximately 30% of its raw materials from within BASF, benefiting significantly from the Verbund approach to integration. The division's principal raw materials are benzene, ethylene, butadiene rubber and acrylonitrile. BASF continues to fine-tune Verbund structures at its production sites and to carry out backward integration where appropriate.

BASF believes that achieving cost and technology leadership, as well as strengthening its global presence are crucial to ensuring the continued competitiveness of its styrenics products. Through acquisitions and capacity expansions, BASF produces polystyrene, expandable polystyrene products and styrene copolymers in all major markets.

Major projects over the last two years included:

- adding GPPS (general purpose polystyrene) capacity in Nanjing, China for BASF's joint venture, Yangzi-BASF Styrenics Company Ltd. (BASF participation: 60%);
- modernizing the ethyl benzene and styrene plants in Ludwigshafen, Germany, and Antwerp, Belgium;
- setting up a joint venture with Shell Eastern Petroleum Pte. Ltd. to bring a world-scale SMPO (styrene monomer/propylene oxide) plant in Singapore on stream in the second half of 2002;
- acquiring a majority share in the polystyrene activities of Pushpa Polymers Pvt Ltd. (PPPL) -- now BASF Styrenics Private Company Ltd. -- from the Chatterjee group in the fast-growing Indian market;

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- starting up a styrene copolymers plant in Altamira, Mexico; and
- starting up a new plant for Basotect-Registered Trademark- (melamine resin foam) in Schwarzheide, Germany.

As a result of these activities, BASF currently operates polystyrene plants in what it considers to be the world's most important markets. The division sells approximately 90% of its products to external customers.

In Asia and South America, which BASF views as long-term growth markets for the Styrenics division, the company aims to expand its market presence by improving the capacity of existing plants in the region. In Europe, the division is focusing on consolidating and upgrading the ethyl benzene and styrene operations and streamlining polystyrene production capacity at existing sites. In its styrene copolymers business, the division's restructuring efforts include improving production processes and workforce reductions. BASF intends to continue expanding its production capacities for specialties such as Styrolux-Registered Trademark- and Basotect in Europe. In North America, BASF is aiming to strengthen its position in the markets for polystyrene and styrene copolymers by concentrating its production activities, improving logistics and streamlining its workforce.

The Styrenics division's sales to third parties were E3,267 million in 2001.

32

PRODUCTS

The Styrenics division's key product lines include:

PS, PS-I (POLYSTYRENE)

BASF's polystyrene products range from rigid and transparent general-purpose plastics to high impact-resistant grades that customers shape using injection molding, extrusion and blow molding. Styrolux complements BASF's polystyrene product portfolio and combines toughness with transparency. BASF sells polystyrene globally and ships it to customers in granulate form.

Primary applications:

- Packaging and disposable products
- Household appliances
- Housings for consumer electronics

EPS (EXPANDABLE POLYSTYRENE)

BASF sells expandable polystyrene under the brand name Styropor. Styropor is a leading product in the building insulation market. Neopor-Registered Trademark-, a new product with superior insulation capabilities, has been introduced in the European market. BASF sells expandable polystyrene globally and ships it to customers in the form of beads. Insulation manufacturers transform the beads into foam boards for sale to wholesalers. Other customers transform the beads into shape-molded parts for packaging. Expandable polystyrene's advantages include heat insulation, high compressive strength, shock absorption, low weight and moisture resistance.

Primary applications:

- Building insulation

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- Packaging

ABS (ACRYLONITRILE-BUTADIENE-STYRENE COPOLYMERS)

Terluran-Registered Trademark- and Ronfalin-Registered Trademark- are trade names for BASF's top styrene copolymer plastic. It offers superior surface quality, colorfastness and luster.

Primary applications:

- Electrical and consumer electronics equipment
- Household appliances
- Office equipment
- Automotive components

ASA (ACRYLONITRILE-STYRENE-ACRYLATE COPOLYMERS)

Luran-Registered Trademark- S is the trade name for BASF's styrene copolymer plastic modified with rubber to make it durable against weathering, aging and chemicals.

Primary applications:

- Uncoated exterior automotive parts
- Sports equipment such as surfboards and boats

33

- High-end electrical equipment such as microwave ovens and coffeemakers

SAN (STYRENE-ACRYLONITRILE COPOLYMERS)

Luran is BASF's trade name for SAN plastic. It is transparent, chemical and dishwasher resistant and offers a high degree of stiffness and resistance to temperature change.

Primary applications:

- Household and toiletry items
- Cosmetics packaging
- Office and household equipment

MABS (METHACRYLATE-ACRYLONITRILE-BUTADIENE-STYRENE COPOLYMER)

Terlux-Registered Trademark- is the trade name for BASF's MABS plastic. It offers transparency, luster, toughness and resistance against chemicals.

Primary applications:

- Hygiene and cosmetic product containers
- Medical equipment housings
- Office equipment housings

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

ABS/PA BLEND (BLEND OF ACRYLONITRILE-BUTADIENE-STYRENE COPOLYMER AND POLYAMIDE)

Terblend-Registered Trademark- N is the trade name for BASF's blend of plastics that offers a very high degree of toughness, excellent processibility and luster.

Primary applications:

- Exterior and interior automotive parts (hubcaps, mirror housings, dashboard trim pillar covers)
- Garden equipment
- Children's toys

PS/PPE BLEND (BLEND OF IMPACT MODIFIED POLYSTYRENE AND POLYPHENYLENE ETHERS)

Luranyl is the trade name for BASF's blend of plastics that offers high heat resistance, high dimensional stability, hot water resistance and low moisture absorption.

Primary applications:

- Plumbing and sanitary applications
- Battery chargers

XPS (EXTRUDED POLYSTYRENE)

BASF sells extruded polystyrene under the brand name Styrodur. It is a green, extruded, rigid polystyrene foam that is made using environmentally friendly carbon dioxide as a blowing agent. Styrodur is a leading product in the building insulation market, where BASF sells it to wholesalers in the form of foam boards. Sales of the Styrodur product line, which offers heat insulation, low water absorption and compressive strength, are concentrated in Europe.

34

Primary application: Building insulation.

EPP (EXPANDABLE POLYPROPYLENE)

BASF sells expandable polypropylene, which is often used to make foam components, under the brand name Neopolen-Registered Trademark- P. BASF ships Neopolen to customers in the form of pre-expanded beads. Sales are concentrated in Europe and North and South America.

Primary applications:

- Automotive components
- Packaging for fragile products
- Insulation pads
- Sports equipment

MF (MELAMINE RESIN FOAM)

BASF sells melamine resin foam under the brand name Basotect. It is a flexible foam material that absorbs sound and offers high heat resistance and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

good flame retardant attributes. BASF ships Basotect to customers as foam boards or foam blocks. The product's primary markets are Europe, the United States and Japan.

Primary applications:

- Automotive components
- Soundproofing materials
- Fire protection materials
- Household and consumer applications

Production capacities as of December 31, 2001 for the major products in the Styrenics division are as follows:

PRODUCT -----	ANNUAL PRODUCTION CAPACITY (METRIC TONS) -----
Styrene and styrene-based polymers (styrene monomer, polystyrene, expandable polystyrene, copolymers).....	4,922,000 (1)
XPS (extruded polystyrene).....	1,150,000 (2)
EPP (expanded polypropylene).....	10,800
MF (melamine resin foam).....	150,000 (2)

(1) Capacity reflects total joint venture capacities. These include:

- 550,000 metric tons of styrene monomer through a joint venture between BASF (50%) and Shell Group;
- 120,000 metric tons of styrene monomer, 140,000 metric tons of polystyrene and 45,000 metric tons of expandable polystyrene through a joint venture between BASF (60%) and Yangzi Petrochemical Corporation; and
- 57,000 metric tons of expandable polystyrene through a joint venture between BASF (50%) and Alfa Group.

(2) Measured in cubic meters.

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for approximately 50% of the Styrenics division's sales; North America for approximately 23%; the Asia, Pacific Area, Africa region for approximately 21%; and South America for 6%.

The Styrenics division sells products primarily through its own regional sales force, supported by BASF technical and marketing experts. The Styrenics division is increasingly relying on e-commerce for distributing its products. Activities include BASF's Plastics Portal as well as the company's participation in Omnexus; an independent business-to-business online marketplace that focuses on delivering products and related services to plastics injection molders around the world.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The market for styrenics is global and characterized by narrowing margins, price competition and a push toward greater commodity-based pricing. Competition is predominantly based on price, followed by quality and, increasingly, on global delivery capabilities. The division's major customers require that top suppliers have a global presence and provide accompanying services, such as technical support. Demand for styrenics continues to rise due to overall economic growth in both industrial and emerging markets. In addressing these trends, BASF aims to become a leader in terms of cost and technology and is expanding its production and marketing presence to all major markets.

The principal global competitor of the Styrenics division is The Dow Chemical Company of the United States. The division also competes in North America with Nova Chemical Corporation of Canada and in Europe with ATOFINA of France and Enichem of Italy. In Asia, BASF competes with other regional competitors, such as Chi Mei of Taiwan.

PERFORMANCE POLYMERS

OVERVIEW

BASF is one of the world's leading producers of engineering plastics and manufactures nylon fibers and fiber intermediates. The Performance Polymers division's products are found in numerous items used in daily life: in high-performance engineering plastics for automotive or electrical applications, as well as in carpets and other textiles.

On July 1, 2001, the former Engineering Plastics and Fiber Products divisions were combined to form the new Performance Polymers division. Polyurethane intermediates -- primarily, aniline -- were transferred to the Polyurethanes division from the Intermediates division of the Chemicals segment. Prior year amounts have been restated to reflect these changes. BASF believes that through the Performance Polymers division it will be able to exploit the synergies of the company's nylon value-adding chain more effectively.

The Performance Polymers division's principal raw materials are cyclohexane, ammonia and propylene, which are purchased both from external suppliers and from within BASF. The division benefits significantly from BASF's Verbund approach to integration, purchasing approximately 65% of the raw materials for the division's engineering plastics products from other BASF operations.

Many of the Performance Polymers division's engineering plastics have chemical and physical properties that enable them to withstand high temperatures and to resist chemical exposure to corrosives and solvents. These properties make the products less susceptible to physical damage in a variety of high performance applications.

The division sells its engineering plastics to approximately 1,500 customers worldwide. The customer base consists largely of high-performance plastic molders and plastic component manufacturers in the automotive, consumer electronics, electrical equipment and packaging industries. These customers often rate product performance and customer support as important, but prices are becoming increasingly critical to customers in choosing a supplier.

To compete effectively in this market, the Performance Polymers division seeks to maintain and increase its preferred supplier status with global customers, many of whom demand collaboration in developing specific plastic applications. The division works with suppliers to automotive

manufacturers to develop specific applications for parts such as engine components, airbag housings and electronic connectors.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

To boost its competitiveness, the division is also replacing older plants with new, world-scale plants that provide significant economies of scale and is carrying out measures to contain costs. In Europe and North America, the division is continuing with a restructuring program to improve the division's long-term earnings potential. This includes consolidating its product portfolio by eliminating unprofitable product lines, entering into strategic alliances for its specialty products and streamlining its workforce in these regions. BASF is also expanding the division's activities in Asia, a region to which many customers have relocated operations, to support both regional consumption and exports.

The Performance Polymers division also produces two types of nylon -- nylon 6 and nylon 6,6 -- as well as their monomers caprolactam, adipic acid and hexamethylenediamine. The division sells its fiber and fiber intermediates products to approximately 500 customers worldwide. In North America, customers include commercial and residential carpet producers, and tier one automotive carpet suppliers. BASF has been experiencing overcapacity for its fiber products in North America and has been consolidating its production capacities in this region to improve capacity utilization rates and control costs.

The Performance Polymers division's sales to third parties were E2,241 million in 2001.

PRODUCTS

BASF's Performance Polymers division delivers its products to customers primarily as pellets and in liquid form, but also as nylon filaments.

The Performance Polymers division offers the following product lines:

ENGINEERING PLASTICS

PA (POLYAMIDE)

Ultramid-Registered Trademark- is the trade name for BASF's plastics based on nylon 6, nylon 6,6 and other copolymers manufactured by BASF. It offers toughness and strength as well as both heat and chemical resistance.

Primary applications:

- Automotive engine intake manifolds, pedals and engine covers
- Flame retardant plastics for electrical components such as switches and circuit breakers
- Housings for electrical equipment
- Films for food packaging

PBT (POLYBUTYLENE TEREPHTHALATE)

Ultradur-Registered Trademark- is the trade name for BASF's plastic based on PBT. It features high stiffness, strength, dimensional stability and heat and aging resistance.

Primary applications:

- Electrical connectors
- Automotive components such as windshield wiper arms

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- Housings for automotive transmissions

37

POM (POLYOXYMETHYLENE)

Ultraform-Registered Trademark- is the trade name for BASF's POM plastic. It offers high stiffness and strength, resilience and low wear.

Primary applications:

- Clips and fasteners
- Speaker grilles
- High-end children's toys
- Mechanical and precision engineering devices such as shafts and gears

PES (POLYETHER SULFONE) AND PSU (POLYSULFONE)

Ultrason-Registered Trademark- S and E are the trade names for BASF's PES and PSU plastics. They are distinguished primarily by their high resistance to heat and are used in high performance applications. These products can replace other plastics such as thermosets as well as metals and ceramics. The most important features of Ultrason are stiffness, and resistance to water and oily substances even at high temperatures. Other important features include electrical insulation properties and dimensional stability.

Primary applications:

- Automobile oil circulation systems, headlight reflectors and housings
- Microwave dishes, infant formula bottles
- Medical equipment

FIBER INTERMEDIATE PRODUCTS INCLUDING CAPROLACTAM, POLYCAPROLACTAM, ADIPIC ACID, ADIPONITRILE AND HEXAMETHYLENEDIAMINE

Caprolactam forms the basis for manufacturing polycaprolactam, the main precursor for nylon 6. BASF sells a variety of caprolactam products, including caprolactam in its pure form, nylon 6 for use in engineering plastics and Ultramid BS-Registered Trademark-, a nylon 6-based spinning polymer. Adipic acid, acrylonitrile and hexamethylenediamine form the basis for nylon 6,6. BASF sells a variety of nylon 6,6 products, including adipic acid and hexamethylenediamine in their pure forms, Ultramid A-Registered Trademark-, which is used for engineering plastics, and Ultramid AS-Registered Trademark-, a nylon 6,6-based spinning polymer. BASF sells most of these products globally.

Primary applications include precursors for fibers used in:

- Carpeting
- Apparel
- Upholstery fabrics

CARPET PRODUCTS

BASF is a leading supplier of nylon 6 BCF (bulk continuous filaments). BASF

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

supplies both pre-colored and natural nylon 6 BCF to the commercial and residential carpet markets, primarily in North America and Asia. In addition, major vehicle manufacturers in North America use BASF's solution-dyed nylon 6 yarns in automotive carpet applications. BASF's trade names for nylon fibers and yarns include Zeftron 2000-Registered Trademark- solution-dyed nylon and SAVANT-TM-, a new carpet fiber, which is resistant to stains and to the effects of ozone exposure, and which is targeted at the high-end commercial carpet segment. The division also promotes the 6ixAgain-Registered Trademark- carpet-recycling program in

38

the United States, which recycles carpets so that the nylon materials can be reused by BASF and resold to external customers.

Primary applications:

- Commercial carpets
- Residential carpets
- Automotive carpets

Production capacities as of December 31, 2001 for the major products in the Performance Polymers division are as follows:

PRODUCT -----	ANNUAL PRODUCTION CAPACITY (METRIC TONS) -----
Polyamide.....	620,000
PBT.....	80,000 (1)
POM.....	71,000
PES and PSU.....	3,000
Caprolactam.....	720,000
Adipic acid.....	270,000
Acrylonitrile.....	300,000
Nylon carpet fibers.....	120,000

(1) Conducted through a 50-50 joint venture with GE Plastics N.V. (capacity reflects total joint venture capacity).

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for 43% of the Performance Polymers division's sales; North America for 39%; the Asia, Pacific Area, Africa region for 17%; and South America for 1%.

The division's customers for engineering plastics, particularly in the automotive industry, are primarily global companies that demand uniform worldwide standards for products and services in all major markets. BASF sells engineering plastics products primarily through its own regional sales force supported by BASF's technical centers in Germany, the United States and Japan. These centers not only help customers develop applications, but also independently research new markets and applications in which plastics can replace more conventional materials such as metal or wood. In Asia the division is expanding its sales force to build on its solid position in the market.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The sales force responsible for the division's fiber products targets its efforts at the mills that produce nylon-containing carpets and textiles in Europe, Asia and the United States to create awareness and demand for the division's products. The markets for caprolactam and the other fiber intermediate products are characterized by cyclicalities, price competition and commodity pricing.

The Performance Polymers division is increasingly relying on e-commerce as a channel for distributing its products. Besides operating its own Plastics Portal, BASF also participates in Omnexus; an independent business-to-business online marketplace that focuses on delivering products and related services to plastics injection molders around the world.

Major global competitors in the engineering plastics market include Bayer and Celanese AG of Germany, DuPont and General Electric Company of the United States, DSM N.V. of the Netherlands and Rhodia S.A. of France. The nylon market is characterized by a small number of global producers, including E.I. du Pont de Nemours and Company, Honeywell Inc. and Solutia Inc. of the United States, Rhodia and DSM.

39

POLYURETHANES

OVERVIEW

BASF's Polyurethanes division is one of the world's three largest producers of polyurethanes, important specialty plastics used to produce a wide spectrum of rigid, flexible, foamed and compact components for consumer products.

A polyurethane is a polymer that is produced through the reaction of two liquid chemicals -- an isocyanate and a polymeric alcohol (a polyol). Polyurethane customers buy these liquid chemicals and combine them at their own manufacturing sites to produce polyurethane foams or parts. BASF offers over 3,500 customized polyurethane solutions. These products are often used to make a variety of automotive parts, including bumpers, steering wheels and instrument panels. BASF's polyurethanes can also be found in household goods, such as mattresses and upholstery, and in sports equipment, such as in-line skates and athletic shoes. The fashion industry is increasingly using BASF's polyurethanes, particularly to manufacture synthetic leathers.

The Polyurethanes division sells its products to customers in two principal ways:

- POLYURETHANE BASIC MATERIALS: The Polyurethanes division sells individual polyurethane basic materials (isocyanates and polyols) to customers. The customers then apply their own technology to formulate the liquid basic materials so that when combined they will react and solidify into a material with particular properties.
- POLYURETHANE SYSTEMS: A polyurethane system consists of pre-fabricated, ready-to-use formulations of isocyanates and polyols. The Polyurethanes division sells these specially formulated, tailor-made isocyanates and polyols to customers. When the customer combines them, these liquid chemicals react and solidify into a material that possesses the technical properties specified by the customer.

The Polyurethanes division also sells polyurethane special elastomers, which are specialized end products used mainly in the automotive and electrical industry.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The Polyurethanes division's principal raw materials are toluene, benzene and propylene. The division benefits significantly from BASF's Verbund approach to integration, purchasing approximately 80% of its precursors from other BASF operations. The Polyurethanes division sells the vast majority of its products to external customers.

BASF offers its polyurethane basic materials, systems and specialized end products to numerous customers that require a high degree of application technology. The Polyurethanes division sells its products to a variety of industries, some of which are highly concentrated, such as the automotive and electrical appliance industries, and others that are highly fragmented, such as the footwear and construction industries.

The Polyurethanes division's success can be traced to maintaining low costs, establishing a global presence for polyurethane basic materials and maintaining strong relationships with customers for polyurethane systems and special elastomers. To reduce basic material costs, the division is increasing capacity utilization rates at existing plants and shifting production from older, less efficient plants to new, world-scale plants that offer substantial economies of scale. In addition, the division benchmarks its production processes against those of its competitors.

To build on its strong relationships with customers, the Polyurethanes division is expanding its regional activities, focusing above all on the Asian market. For example, in Singapore BASF, along with its joint venture partner Shell Eastern Petroleum Pte Ltd., is building a world-scale plant which is scheduled to go on stream in the second half of 2002 with an annual production capacity of 250,000 metric tons of propylene oxide. And in Caojing, China, BASF plans to build an integrated

40

isocyanates manufacturing facility with Huntsman and local partners that is scheduled to come on stream in 2005.

For polyurethane systems and special elastomers, strong relationships with leading industry customers are crucial because of the highly individualized nature of these products. To strengthen its relationships with customers, BASF has established a global network of system houses, which are production sites that work closely with customers to provide specially formulated products for individual needs. The Polyurethanes division currently has 24 system houses around the world in locations near customers. BASF recently acquired two new system houses in the United States and Turkey, and intends to establish or acquire more.

The Polyurethanes division's sales to third parties were E2,677 million in 2001.

PRODUCTS

The Polyurethanes division's product lines include:

POLYURETHANE BASIC MATERIALS

The Polyurethanes division sells basic materials globally to customers that make polyurethane plastics by reacting isocyanates with polyols.

ISOCYANATES

- MDI (DIPHENYLMETHANE DIISOCYANATE)

MDI is a versatile chemical that can be used to make flexible foams

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

as well as semi-rigid and rigid polyurethane plastics.

Primary applications:

- Furniture interiors
- Automotive parts such as seats and steering wheels
- Carpet backings
- Shoe soles
- TDI (TOLUENE DIISOCYANATE)

TDI is a chemical used primarily in the manufacture of flexible foams.

Primary applications:

- Foam cushions for furniture
- Automobile seats
- Athletic track surfaces

POLYOLS

- POLYETHER POLYOLS

Polyether polyols are combined with isocyanates to make virtually all polyurethane products, other than those made with polyester polyols.

Primary applications:

- Rigid foams
- Flexible foams

41

- POLYESTER POLYOLS

Polyester polyols are combined with isocyanates to make primarily semi-rigid polyurethane plastics.

Primary applications:

- Cable sheathing
- Shoe soles

POLYURETHANE SYSTEMS

BASF's worldwide polyurethane systems group offers tailor-made polyurethane products for a wide variety of applications. The systems are grouped according to the combination of their properties, for example, rigid, flexible or semi-rigid. BASF develops ready-to-use polyurethane systems for customers, fulfilling customers' specific engineering requirements at its system houses around the world. Automotive OEM (original equipment manufacturer) suppliers comprise a significant customer group for polyurethane systems. OEM suppliers make seats, steering wheels, fenders and dashboards using BASF's polyurethane systems.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

POLYURETHANE SPECIAL ELASTOMERS

BASF sells polyurethane special elastomers, consisting of TPU (thermoplastic polyurethane elastomers) and cellular elastomers, mainly in Europe, South America, North America and Japan. The automotive and electrical industries are the major customers for these products.

TPU

BASF sells TPU under the trade name Elastollan-Registered Trademark-. Elastollan is based on both polyether polyols and polyester polyols. It is supplied in granular form to customers who use it primarily to make flexible plastic cable coverings. Customers for these products are primarily in the automotive and cable and wire industries.

CELLULAR ELASTOMERS

The trade names for BASF's cellular elastomers, or shock-absorbing, rigid plastics, are Cellasto-Registered Trademark-, Elastocell-Registered Trademark- and Emdicell-Registered Trademark-. BASF is the world's largest producer of cellular elastomers and sells them, for example, as molded end-products for use as shock absorbers and buffers in the automotive industry and as components in sports equipment.

Production capacities as of December 31, 2001 for the major products in the Polyurethanes division are as follows:

PRODUCT	ANNUAL PRODUCTION CAPACITY (METRIC TONS)
MDI.....	560,000
TDI.....	190,000
Polyester polyols.....	112,000
TPU (thermoplastic polyurethane).....	45,000
Polyether polyols.....	515,000
Propylene oxide.....	250,000 (1)

(1) Conducted through a 50-50 joint venture with Shell Nederland Chemie B.V. (capacity reflects total joint venture capacity).

42

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for approximately 47% of the Polyurethanes division's sales; North America for approximately 32%; the Asia, Pacific Area, Africa region for approximately 18%; and South America for approximately 3%.

The Polyurethanes division markets its products on two different levels. First, the division sells its polyurethane basic materials globally as commodities. Second, the division sells its polyurethane systems and special elastomers globally as customized, ready-to-use products, which comprise more than half of the division's products based on volume.

Global demand for all polyurethane products is expected to continue growing

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

as the global economy continues to expand. The market for polyurethane basic materials is less cyclical than the market for most other standard plastics, primarily because polyurethane basic materials are relatively specialized and are produced pursuant to proprietary technologies that BASF possesses. Competition in the market for basic materials is based primarily on price, although product quality and technical application assistance are also important to customers.

The markets for polyurethane systems and special elastomers are even less cyclical than those for polyurethane basic materials. Competition in the market for polyurethane systems and special elastomers is based primarily on a supplier's ability to satisfy customers' technical application needs by providing tailor-made formulations of isocyanates and polyols and also on a supplier's ability to accommodate customers' just-in-time approach to manufacturing by delivering customized products quickly and at the appropriate time.

The main competitors of the Polyurethanes division are Bayer AG of Germany, The Dow Chemical Company, Huntsman-ICI and Lyondell Chemical Company of the United States and Shell Chemicals U.K. of the United Kingdom.

43

PERFORMANCE PRODUCTS

SEGMENT OVERVIEW

BASF is a leading global producer of performance chemicals, coatings and functional polymers through its Performance Products segment. Formerly known as the Colorants & Finishing Products segment, this segment produces a broad range of high-value chemicals that it sells to many global companies in the automotive, paper, packaging, textile, sanitary care, construction, coatings, printing and leather industries.

On July 1, 2001 the Colorants division and Specialty Chemicals division were merged to form the Performance Chemicals division. The polyvinylpyrrolidone (PVP) product line for technical applications was transferred to the Functional Polymers division from the Fine Chemicals segment. Prior year amounts have been restated to reflect these changes. The Functional Polymers division, formerly known as the Dispersions division, was renamed to reflect more accurately the division's portfolio of products, which includes not only dispersions.

The following table sets forth the segment's sales to third parties, percentage of total BASF sales, intersegmental transfers, income from operations and capital expenditures for the last three years:

		2001 -----		2000 -----
(EUROS IN MILLIONS)				
Sales to third parties.....	E	8,154	E	8,418
Percentage of total BASF sales.....		25%		23%
Intersegmental transfers.....	E	322	E	314
Income from operations.....	E	99	E	586
Capital expenditures.....	E	418	E	1,332

The segment's products often represent the final stages in many value-adding chains within BASF's Verbund approach to integration. This approach allows the Performance Products segment to purchase many of its raw materials from within

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF, thereby generating efficiencies in logistics and savings in energy, transportation, purchasing and infrastructure costs. BASF uses these efficiencies and savings to achieve cost leadership for many of the products in the segment.

The key elements of the segment's success are developing products and application technologies tailored to the specific requirements of customers and better meeting customer needs by establishing and expanding manufacturing plants and application development centers in regions where customers are active. BASF is also investing capital in highly efficient plants to reduce production costs. Close customer relationships are particularly important to the segment for the development of innovative customized products and application systems.

The divisions comprising the Performance Products segment and their principal products are:

PERFORMANCE CHEMICALS:

MAJOR PRODUCTS -----	PRIMARY APPLICATIONS -----
- Pigments and resins for coatings and plastics	- Automotive, decorative and wood applications
- Printing systems	- Printing inks and packaging media and packaging
- Isobutene derivatives such as polyisobutene	- Precursors and compounds as fuel additives
- Surfactants	- Products for detergent, textile and leather
44	
- Hydrocyanic acid derivatives such as chelating agents	- For pulp manufacturing, laundry detergents, chemicals
- Performance chemicals for textiles	- Entire textile production, ink-jet inks
- Leather dyes and chemicals	- Leather production and tanning auxiliaries, water repellents, dyes, auxiliaries as well as finishing

COATINGS:

MAJOR PRODUCTS -----	PRIMARY APPLICATIONS -----
- Automotive OEM (original equipment manufacturer) coatings	- Automotive coatings

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

-	Automotive refinish coatings	-	Automotive coatings
-	Industrial coatings	-	Commercial vehicles industrial building and wood finishes
-	Decorative paints in South America	-	Interior and exterior commercial building

FUNCTIONAL POLYMERS:

MAJOR PRODUCTS

PRIMARY APPLICATIONS

-	Acrylic monomers	-	Precursors for disp detergents, floccul
-	Polymers	-	Adhesives; paints a woven materials and construction indust
-	Paper chemicals	-	Paper-processing ch dispersions for pap
-	Superabsorbents	-	Absorbent materials care products

SEGMENT STRATEGY

The focus of the Performance Products segment is on developing integrated system solutions that provide customers with tailor-made products and application processes. BASF believes that through these efforts it can differentiate the segment's products and services from those of its competitors and foster close, lasting relationships with its customers.

Key strategies for the divisions in this segment are as follows:

- PERFORMANCE CHEMICALS

The Performance Chemicals division was formed in 2001 to more effectively market and sell BASF's high-value chemicals, which customers purchase mainly on the basis of product quality and performance. To compete successfully with low-cost industry leaders and new competitors from Asia and South America, the division undertook restructuring measures over the past four years to improve its costs structures. The division has expanded its production capacity for nonionic surfactants in North America and aims to further strengthen its position in this market through close

45

cooperation with key customers. The Performance Chemicals division is focusing its capital spending on continuing to improve cost structures by employing the most efficient technologies and processes available. In this division, BASF is intensifying its marketing activities in Asia and North America.

- COATINGS

In the past year, the Coatings division streamlined its product lines to eliminate less profitable products and improve its financial performance. The division focuses on four product lines -- automotive coatings, automotive

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

refinish coatings, industrial coatings and, for the South American market, decorative paints. BASF believes that the Coatings division can achieve and sustain a leading market position and attain high profitability in these product lines. The Coatings division is seeking to strengthen these activities through internal growth, joint ventures and acquisitions. The division aims to strengthen its position in Asia in particular.

- FUNCTIONAL POLYMERS

The Functional Polymers division aims to build on its position as a leading supplier of acrylic acid and its derivatives, to improve its cost and technology leadership, to expand its businesses in all regions and to grow profitably by introducing innovative products. To achieve these goals, the division is focusing its capital spending on building production plants close to customers to reduce transportation costs. Despite a current oversupply of acrylic monomers in Asia, demand in this region is expected to continue increasing. BASF currently plans to build new plants for acrylic acid and acrylic esters in Nanjing, China, which are expected to be in operation by 2005. In Europe and North America, a comprehensive restructuring program is under way to improve the division's cost competitiveness.

The main capital expenditure projects for the Performance Products segment currently include:

LOCATION -----	PROJECT -----	PROJECTED ANNUAL CAPACITY AT COMPLETION OF PROJECT (METRIC TONS) -----	PROJECTE START-UP OF PROJE -----
Hamina, Finland	Dispersions for paper coatings	140,000	2002
Geismar, Louisiana	A new nonionic surfactants plant	40,000	2002
Ludwigshafen, Germany	A new plant for methanesulfonic acid	10,000	2003

In 2001, capital expenditures for the Performance Products segment totaled E418 million. The segment also spent E197 million on research and development activities in 2001.

PERFORMANCE CHEMICALS

OVERVIEW

BASF is one of the world's largest manufacturers of high-value chemicals, which the company sells through its Performance Chemicals division to over 10,000 customers worldwide in a wide variety of industries including the detergent, printing, coating, leather, automotive, oil and textile industries.

BASF believes that its Verbund approach to integration gives the Performance Chemicals division an advantage over small and medium-sized companies that lack the cost advantages of integration. The Performance Chemicals division purchases approximately 45% of its raw materials from other BASF operations, generating efficiencies in logistics and savings in energy, transportation, purchasing and infrastructure costs. The division consumes a multitude of raw

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

materials and has no principal raw materials or dominant suppliers. The Performance Chemicals division sells nearly 90% of its products to external customers.

The Performance Chemicals division is made up of business units which are each responsible for marketing and selling the division's products to specific industries. BASF views the detergents industry as one of the division's most important markets. The company is one of the largest producers of nonionic surfactants. Surfactants enhance cleansing efficiency and are used for example in household detergents and dishwashing agents as well as in industrial and institutional cleaning applications. The production capacity for nonionic surfactants in North America was expanded in 2001, and BASF aims to continue building on its position by working closely with key customers of these products.

In the recent past, the division's products for the pigment, textile and leather industries had experienced continual pressure on prices, a drop in demand and worldwide overcapacity. Restructuring measures that were undertaken over the past four years have largely been completed. As a result, the division has improved its capacity utilization rates by narrowing its product line, by restructuring and consolidating production sites and by transferring production capacity from Europe to Asia, where the fastest-growing customer base is located. By merging the marketing and sales activities for pigments and resins in the Performance Chemicals division, BASF believes it will be able to serve the coatings industry more efficiently and strengthen its position in the market for these products.

The Performance Chemicals division is now intensifying its marketing activities in Asia as well as in North America, where it is focusing on the detergent, mineral oil and printing industries. The division is working closely with customers to develop high-value products and tailor-made solutions which help customers optimize their production processes and reduce their costs so that they can offer their respective customers more competitive solutions. Through these activities, the Performance Chemicals division aims to grow faster than the market.

The Performance Chemicals division's sales to third parties were E3,345 million in 2001.

PRODUCTS

The Performance Chemicals division sells its products globally. The major product groups of the Performance Chemicals division are:

PIGMENTS AND RESINS FOR COATINGS AND PLASTICS

The Performance Chemicals division offers organic and inorganic pigments, pigment preparations, non-textile dyes, process chemicals and resins. Resins are film-forming components used in UV (ultraviolet) curing coatings, urethane systems and melamine based coatings. Pigments are insoluble dry coloring materials for paints, plastics, inks and other special applications. BASF's pigments and resins are used primarily in automotive, decorative, industrial paint and wood applications, as well as in the plastics industry.

PRINTING SYSTEMS

The printing systems product group offers a complete range of commercial inks for different print technologies and plates for flexography and letterpress print processes. BASF offers printing inks for use in the printing industry, particularly in sheet-offset systems and web-offset systems, which are used to print newspapers and magazines, color advertising materials, books and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

brochures. BASF also sells printing inks for use in the packaging industry.

47

ISOBUTENE DERIVATIVE CHEMISTRY

Isobutene is the starting material for polyisobutene, the most important component for BASF's Keropur-Registered Trademark- and Puradd-Registered Trademark- brand fuel additives. Through its highly reactive polyisobutenes, BASF has established a new standard in the fuel and lubricant additives market. BASF is the only industry supplier with a product portfolio spanning low to ultra high molecular polyisobutenes, and is also one of the world's largest manufacturers of polyisobutene derivatives such as polyisobuteneamine, which is part of the isobutene value-adding chain.

SURFACTANTS

BASF produces a wide range of nonionic surfactants based on aliphatic alcohols, ethylene and propylene oxide. Such products are used in detergents and cleaners, textile and leather auxiliaries.

HYDROCYANIC ACID DERIVATIVE CHEMISTRY

BASF produces several chelating agents based on hydrocyanic acid which serve as process chemicals in various industries. Applications include pulp manufacturing, electroplating, laundry detergents, cleaners and photographic chemicals.

PERFORMANCE CHEMICALS FOR TEXTILES

BASF offers textile and dyeing auxiliaries, pigment preparations for textile printing as well as inks for ink-jet printing technology. BASF's product range covers a wide spectrum of textile applications.

LEATHER DYES AND CHEMICALS

BASF is one of the world's leading producers of leather chemicals and dyes, producing a full range of products for nearly all aspects of the leather production process.

Production capacities for the major products in the Performance Chemicals division as of December 31, 2001 were:

PRODUCT -----	ANNUAL PRODUCTION CAPACITY -----
Organic pigments.....	39,500 metric tons
HDI.....	10,000 metric tons
Printing inks.....	200,000 metric tons
Printing plates.....	1,000,000 square meters
Polyisobutene.....	75,000 metric tons
Nonionic surfactants.....	305,000 metric tons

MARKETS AND DISTRIBUTION

In 2001, Europe was the Performance Chemicals division's principal market, accounting for 58% of its sales. The Asia, Pacific Area, Africa region accounted for 18%; North America for 18%; and South America for 6%.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF's own regional sales network sells most of the Performance Chemicals division's products. Distributors sell the balance of products, primarily to smaller customers. In the Performance Chemicals division, BASF generally considers Ciba Specialty Chemicals Holding Inc. and Clariant International Ltd. of Switzerland, Shell Chemicals U.K. of the United Kingdom, DIC/Sun Group of Asia and Bayer AG of Germany to be its main competitors.

48

The Performance Chemicals division is organized into the following business units, which each market and sell the division's products to specific industries and have specific competitors:

COATINGS, PLASTICS AND SPECIALTIES

BASF considers itself to be among the industry leaders along with Ciba, Clariant and Bayer in supplying pigments, resins and additives to the coatings, plastics and specialties industries. BASF sells these products primarily in Europe from large production sites in Germany, but also supports its regional marketing activities through production sites in Brazil and China.

PRINTING INDUSTRY

The primary market for BASF's printing systems products is Europe, but Asian competitors dominate the global market.

AUTOMOTIVE AND OIL INDUSTRY

This business unit sells the division's fuel additives primarily under the brand names Puradd (in the United States) and Keropur, and mainly in North America and Europe.

DETERGENTS AND FORMULATORS

BASF, along with Sasol Chemical Industries Ltd., is a leading supplier of nonionic surfactants to the detergents industry. Other major suppliers include Shell International B.V. and Cognis Corp. In chelating agents, BASF is a worldwide leading supplier together with Akzo Nobel N.V. and The Dow Chemical Co.

TEXTILES

BASF is one of the world's top three producers of performance chemicals for textiles, along with Clariant and Ciba. BASF is concentrating its sales and marketing activities of these products on Asia and Europe.

LEATHER

In leather dyes and chemicals, BASF and Clariant are the world's leading producers, and compete against Bayer, TFL Ledertechnik GmbH & Co. KG of Germany; Stahl International B.V. of the Netherlands and a host of small regional producers. The most important markets for BASF's leather products are Asia, Europe and South America. BASF manufactures these products in 16 countries to best meet the needs of a highly fragmented market comprised primarily of small customers.

COATINGS

OVERVIEW

BASF is one of the world's leading producers of high-quality coating products, offering innovative and environmentally responsible products for the

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

automotive industry, including both finishes and refinishes, and for particular segments of the industrial coatings market. BASF also sells decorative paints in South America for interior and exterior use in residential and commercial buildings.

BASF's Coatings division provides customers with innovative high-solid, waterborne and powder coating systems that reduce or eliminate solvent emissions and are considered environmentally and economically efficient. BASF sees significant growth opportunities for a new powder-slurry coating system it jointly developed in partnership with DaimlerChrysler AG and Durr Systems GmbH of Germany.

49

The key to the Coatings division's success is maintaining preferred supplier status with major customers by working with them to develop system solutions, which are tailor-made products and services. These system solutions help the division differentiate its product offerings from those of its competitors and foster lasting relationships with customers. In developing these system solutions, the Coatings division also draws on advances stemming from BASF's research and development activities. Currently, the Coatings division is focusing its research activities on developing environmentally friendly coating technologies with high quality characteristics such as scratch resistance. Ultraviolet (UV) curing coatings represent a particularly promising technology.

Being able to deliver tailor-made products quickly is also important to the division's success. Customers that use automotive and industrial coatings require in particular quick delivery of coatings at specified times to accommodate their just-in-time approach to manufacturing. To satisfy these needs, BASF's Coatings division is locating its operations near its customers' production sites.

Over the next five years, the Coatings division plans to invest approximately E310 million on expanding and improving its production processes worldwide. In Europe, this will include increasing the production capacity of powder coatings in Verbania, Italy; Munster, Germany; and in Guadalajara, Spain. In Munster, Germany, the Coatings division intends to expand the production capacity of coatings resins, which are used in automotive OEM (original equipment manufacturer) coatings. In Guadalajara, Spain, BASF is planning to build production facilities to manufacture waterborne coatings to meet the rising demand among Spanish automotive manufacturers for these products.

The Coatings division is seeking to strengthen its position in particular in Asia. On October 1, 2000, BASF formed a 50-50 joint venture with Tokyo-based NOF Corporation. BASF NOF Coatings Co., Ltd. combines NOF's and BASF's entire coatings activities in Japan, which include automotive OEM, refinish as well as industrial coatings and covers manufacturing, sales and marketing as well as research and development activities. The joint venture plans to invest in new production facilities in Japan to manufacture automotive OEM and waterborne coatings for the automotive industry.

The Coatings division purchases approximately 15% of its raw materials from other BASF operations. The division's principal raw materials are pigments, solvents, resins and additives, and the division does not rely on a dominant supplier. The Coatings division sells all of its products to external customers.

The Coatings division's sales to third parties were E2,287 million in 2001.

PRODUCTS

The Coatings division's products are sold on a global basis, with the exception of decorative paints, which are only sold in South America. The

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

division has the following product lines:

AUTOMOTIVE OEM (ORIGINAL EQUIPMENT MANUFACTURER) COATINGS

BASF offers a complete line of automotive OEM coatings and extensive technical support to major vehicle manufacturers. BASF is a leading supplier for primer coats, fillers, top-coats and clearcoats. Most of the world's leading automobile manufacturers are long-standing customers of BASF.

AUTOMOTIVE REFINISH COATINGS

For the refinishing of automobiles and commercial vehicles, BASF offers topcoat and undercoat materials through coating systems under the well-known brand names Glasurit-Registered Trademark- and R-M-Registered Trademark-. Most of these systems, which are sold to paint distributors and automotive repair and body shops, increasingly use solvent-reducing waterborne coatings as well as high-solid systems.

50

INDUSTRIAL COATINGS

BASF offers environmentally efficient systems for coating industrial products. Application technologies include powder, liquid, e-coat and coil coatings that are used on household appliances, commercial vehicles, industrial buildings, radiators and automotive components. Wood finishes in the furniture industry represent another key use for BASF's industrial coatings. With the acquisition of Rohm and Haas' industrial coatings business, BASF is now the second largest coil coating producer by market share and volume sold in North America and worldwide.

DECORATIVE PAINTS

BASF is the leading distributor of decorative paints for interior and exterior use in the South American market. BASF's dispersion and building paints are marketed under the Suvinil-Registered Trademark- trademark and enjoy a high level of customer recognition.

Production capacities as of December 31, 2001 for the major products in the Coatings division are as follows:

PRODUCT	ANNUAL PRODUCTION CAPACITY
-----	-----
	(METRIC TONS)
Powder coatings.....	30,000
Waterborne coatings.....	40,000

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for 39% of the Coatings division's sales. North America accounted for 34% and South America for 19%, while the Asia, Pacific Area, Africa region accounted for 8% of the division's sales.

BASF sells products of the Coatings division to customers, particularly those in the automotive industry, primarily through its own sales force. Third-party distributors also sell products to the automotive refinish, industrial coatings and South American decorative paint businesses.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The Coatings division also relies on e-commerce as a distribution channel, in particular for its automotive refinish coatings. In North America, customers of BASF's automotive refinish technologies distributor chain can order products online at bodyshopmall.com, while for customers in Europe the division has established e-commerce portals to sell its Glasurit and R-M brands.

Although price is important to the division's customers, competition is also based on the ability of coatings suppliers to collaborate with customers and quickly deliver tailor-made products and applications, particularly to vehicle manufacturers using a just-in-time approach to manufacturing. BASF's Suvinil line of decorative paints competes in South America primarily on the basis of brand recognition, product quality and price.

BASF considers E.I. du Pont de Nemours and Company and PPG Industries, Inc. of the United States to be the primary global competitors of the Coatings division, and Nippon Paint Company Ltd. and Kansai Paint Company Ltd. of Japan to be the division's competitors in Asia.

FUNCTIONAL POLYMERS

OVERVIEW

BASF's Functional Polymers division, formerly known as the Dispersions division, is one of the largest producers of acrylic acid and its derivative products, which are mainly superabsorbents and dispersions. In a dispersion, also known as an emulsion, tiny globules of polymers are suspended in a liquid, usually water. After applying a dispersion to a solid surface, the liquid evaporates, leaving the globules to dry uniformly over the surface. Dispersions are used in a multitude of industries, including the manufacture of paper, decorative paints, adhesives, non-woven materials,

51

carpets, fibers and plastics. The Functional Polymers division also manufactures wet end chemicals for paper production. The most important customers of the Functional Polymers division are the paper, construction, adhesive, sanitary care and coatings industries.

The Functional Polymers division purchases approximately 70% of its raw materials from other BASF operations through the company's Verbund. Such raw materials include styrene, butadiene, oxo alcohols and above all propylene, which is used to produce acrylic acid. By purchasing the vast majority of its raw materials internally, the division benefits from BASF's economies of scale in purchasing and producing raw materials, from efficiencies in logistics and from savings in energy, transportation, purchasing and infrastructure costs. The division sells most of its products to external customers, but also sells approximately 10% of its products to other BASF operations.

BASF's goals for the Functional Polymers division are to strengthen the division's position as a leading acrylic acid manufacturer, expand the division's cost leadership and its business in all regions, and grow by introducing innovative products such as polyvinylamines -- a new class of paper chemicals.

In Europe and North America, a comprehensive restructuring program is under way to improve the division's cost competitiveness. The division is streamlining its workforce in Europe and shifting production from older plants to new, more efficient plants. The division is also relocating specific production capacities closer to customers in an effort to reduce transportation costs. In North America, the division is reducing its workforce and consolidating its production activities to control costs and increase capacity utilization rates of some plants.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The current oversupply of acrylic monomers in Asia is expected to be absorbed by increasing demand in this region. A new manufacturing complex for the production of acrylic acid and acrylic esters became fully operational in August 2000 in Kuantan, Malaysia, where it forms part of BASF's first Asian Verbund site. In China, a new plant for acrylic dispersions went on stream in Shanghai in 2001. BASF also plans to manufacture acrylic acid and acrylic esters at BASF's second Asian Verbund site in Nanjing by 2005. In South America, BASF started up a butyl acrylate plant in 2001 in Guaratingueta, Brazil, to supply this important regional market.

The Functional Polymers division is especially committed to further expanding its leading position as a manufacturer of superabsorbents. In 2000, BASF acquired the superabsorbents business of Chemdal International Corporation, an affiliate of AMCOL International Corporation with production sites in the United States and the United Kingdom, for \$657 million. Chemdal achieved sales of E238 million in 1999. The acquisition increased BASF's annual superabsorbents production capacity by more than 160,000 metric tons to about 300,000 metric tons. Through this acquisition, BASF has achieved a leading position worldwide in superabsorbents and increased the captive use of its acrylic acid. In Asia, a region which BASF considers to have the highest growth potential, the company started up a new plant for the production of superabsorbents in Rayong, Thailand.

The Functional Polymers division's sales to third parties were E2,522 million in 2001.

PRODUCTS

The Functional Polymers division sells its products globally. The division has the following four major product groups that are to a significant extent based on acrylic acid and its derivatives:

ACRYLIC MONOMERS

BASF is the world's largest producer of acrylic monomers, which are sold directly to customers in the form of acrylic acid, acrylic esters and special acrylics. Acrylic monomers are used as precursors to manufacture dispersions, superabsorbents, detergents, flocculants and fibers. Acrylic monomers are used as precursors to manufacture products in a wide range of industries.

52

POLYMERS

BASF's polymers products consist mainly of polymer dispersions for the manufacture of adhesives, paints and finishes as well as non-woven materials and chemicals for the construction industry. BASF's strengths lie particularly in its excellent UV curable hot melt technology for adhesive raw materials as well as in dispersions for paints and other coating materials.

PAPER CHEMICALS

BASF offers the paper industry a complete and integrated range of chemical products for all aspects of the paper production process, including the manufacture of untreated paper, paper finishing and wastewater treatment. The Functional Polymers division's product range of paper chemicals consists of paper-processing chemicals, paper dyes and dispersions for paper coating. In 2000, BASF introduced an innovative new class of process chemicals known as polyvinylamines. Polyvinylamines are process chemicals which improve the performance of paper production lines by removing undesirable materials and also increase the strength of paper and board grades. A commercial-scale production

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

plant for this class of products started operation in Ludwigshafen, Germany, in 2001.

SUPERABSORBENTS

BASF sells superabsorbents globally to the personal hygiene industry, which uses these products to manufacture diapers and other sanitary care products.

Production capacities as of December 31, 2001 for the major products of the Functional Polymers division are as follows:

PRODUCT	ANNUAL PRODUCTION CAPACITY
-----	-----
	(METRIC TONS)
Acrylic monomers(1).....	850,000
Superabsorbents.....	305,000

(1) Conducted through a joint venture between BASF (60%) and PETRONAS (40%) (capacity reflects total joint venture capacity).

MARKETS AND DISTRIBUTION

The primary market for the Functional Polymers division is Europe, which accounted for more than 47% of the division's sales in 2001. North America accounted for approximately 31%; the Asia, Pacific Area, Africa region for 17%; and South America for 5% of sales in 2001. The Functional Polymers division's strategic goal is to increase market share in growing markets, especially in North and South America and in Asia.

BASF sells the vast majority of the division's products primarily through its own regional sales network. Some smaller customers purchase products through distributors. Many of the division's products, particularly dispersions, contain up to 50% water. To minimize transportation costs, BASF manufactures these products at local plants and markets and sells them on a regional basis. Acrylic monomers, however, are distributed globally from production sites in Ludwigshafen, Germany; Antwerp, Belgium; Freeport, Texas; Kuantan, Malaysia; and Guaratingueta, Brazil.

The Functional Polymers division is increasing its e-commerce activities to distribute its products. The division began selling acrylic monomers through Elemica Holding Ltd., an independent business-to-business e-commerce company. The division's participation in WorldAccount, BASF's integrated global extranet platform, is targeted at its customers in the adhesive, construction and paper industries.

Acrylic monomers have commodity-like attributes and can be affected by cyclicity. Other products, particularly dispersions for adhesives, paints and non-wovens; superabsorbents; and paper process chemicals, are relatively resilient to economic cycles and compete primarily on the basis of product innovation and quality.

BASF's main competitor in acrylic monomers and polymers is Rohm and Haas Co. of the United States. The Dow Chemical Company and Hercules of the United States are BASF's main competitors in paper chemicals. In the superabsorbents business,

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF's main global competitors are Degussa AG of Germany and Nippon Shokubai Co., Ltd. of Japan.

AGRICULTURAL PRODUCTS & NUTRITION

SEGMENT OVERVIEW

BASF's Agricultural Products & Nutrition business segment is active in agricultural products and fine chemicals businesses that offer opportunities for high returns and are typically resilient to economic cycles. After receiving clearance from the Federal Trade Commission and the European Union Commission, BASF sold its pharmaceuticals business on March 2, 2001 to Abbott Laboratories Inc. of Abbott Park, Illinois. Pursuant to the requirements of U.S. GAAP, the pharmaceuticals activities are disclosed as discontinued operations as described in Item 18 under Note 3 to the Consolidated Financial Statements. Effective January 1, 2001, the generic pharmaceutical business with operations in Germany, France, Italy, the Netherlands, Switzerland and Spain was sold to Biochemie GmbH, a subsidiary of Novartis AG. For additional information on BASF's pharmaceuticals activities as discontinued operations, see also Notes 3 and 4 to the Consolidated Financial Statements in Item 18. The gain on disposition in 2001 is classified as extraordinary income in these financial statements. For further information see also Note 9 to the Consolidated Financial Statements in Item 18.

The Agricultural Products & Nutrition business segment conducts its activities through its Agricultural Products and Fine Chemicals divisions and until March 2, 2001 also conducted its activities through the Pharmaceuticals division. The Agricultural Products and Fine Chemicals divisions are treated as separate reportable operating segments, as was the Pharmaceuticals division in 2001.

The following table sets forth the sales to third parties, percentage of total BASF sales, intersegmental transfers, income from operations and capital expenditures for the last three years in each of the reportable operating segments of the Agricultural Products & Nutrition business segment:

54

		2001		2000		1999

(EUROS IN MILLIONS)						
AGRICULTURAL PRODUCTS						
Sales to third parties.....	E	3,478	E	2,428	E	1
Percentage of total BASF sales.....		11%		7%		
Intersegmental transfers.....	E	30	E	34	E	
Income from operations.....	E	18	E	(443)	E	
Capital expenditures.....	E	130	E	3,260	E	
FINE CHEMICALS						
Sales to third parties.....	E	1,984	E	1,739	E	1
Percentage of total BASF sales.....		6%		5%		
Intersegmental transfers.....	E	29	E	44	E	
Income from operations.....	E	(210)	E	(5)	E	
Capital expenditures.....	E	199	E	83	E	
PHARMACEUTICALS -- DISCONTINUED OPERATIONS						
Sales to third parties.....	E	364	E	2,526	E	2
Percentage of total BASF sales.....		1%		7%		
Intersegmental transfers.....	E	5	E	36	E	
Income from operations.....	E	30	E	243	E	

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Capital expenditures..... E 20 E 121 E

The Agricultural Products & Nutrition business segment sells its products primarily to customers in the farming, food processing, animal and human nutrition and personal care industries. The segment's products include agricultural products such as herbicides, fungicides and insecticides; and fine chemicals such as vitamins, carotenoids, pharmaceutical active ingredients; polymers for pharmaceuticals, cosmetics and human nutrition; aroma chemicals; UV (ultraviolet) filters; amino acids; feed enzymes; and organic acids.

The business segment contributes to BASF's Verbund approach to integration by purchasing a number of precursors from the company's chemical operations and using them to create higher value products. The Fine Chemicals division in particular benefits from efficiencies in logistics and savings in energy, transportation, purchasing and infrastructure costs derived from internally purchasing precursors used in manufacturing vitamins and other nutrition products.

The Agricultural Products division, based in Mount Olive, New Jersey, is a leading supplier and marketer of herbicides, fungicides and insecticides. On July 1, 2000, BASF acquired the agricultural products business of American Home Products Corp. (AHP) of Madison, New Jersey. The acquisition, the largest in BASF's history, nearly doubles the company's agricultural products business. BASF is also investing in the emerging field of plant biotechnology and founded a subsidiary for these activities called BASF Plant Science GmbH in 1998.

The Fine Chemicals division serves the animal and human nutrition, pharmaceutical, cosmetics and aroma chemicals industries, and in all of the division's main product groups BASF is one of the top three suppliers. In January, 2001, BASF strengthened its position as one of the world's leading manufacturers of vitamins by acquiring the water-soluble vitamins business of Takeda Chemical Industries Ltd. of Japan. As a result of this acquisition, BASF accounts for approximately 25% of the world's vitamins market.

The divisions comprising the Agricultural Products & Nutrition business segment and their principal products are:

AGRICULTURAL PRODUCTS:

MAJOR PRODUCTS -----	PRIMARY APPLICATIONS -----
- Herbicides	- Agrochemicals to control weeds
- Fungicides	- Agrochemicals to control fungi
- Insecticides	- Agrochemicals to control insects

FINE CHEMICALS:

MAJOR PRODUCTS -----	PRIMARY APPLICATIONS -----
- Vitamins	- Animal and human nutrition

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- Carotenoids	-	Animal and human nutrition
- Enzymes	-	Animal nutrition
- Amino acids	-	Animal nutrition
- Organic acids	-	Grain and compound feed pre
- Cosmetic ingredients	-	Personal care items such as sunscreen agents
- Polymers	-	Hair sprays, styling mousse conditioners for the cosmet dosage forms; filtration ai
- Aroma chemicals	-	Fragrance and flavor raw ma
- Pharmaceutical active ingredients	-	Pharmaceuticals

SEGMENT STRATEGY

While each of the divisions in the Agricultural Products & Nutrition business segment faces competition and sets goals particular to its industry, they share the following strategic objectives:

- maximizing returns from their existing product portfolios;
- ensuring a steady flow of innovative and safe products through focused research and development as well as an increased number of collaborative efforts and licensing agreements; and
- taking full advantage of common technology platforms.

Key strategies for the divisions in this segment are as follows:

- AGRICULTURAL PRODUCTS

The Agricultural Products division focuses on the research, development and marketing of innovative products to improve the yields and quality of agricultural crops. Through the acquisition of the crop protection business of AHP, BASF has gained a leading position in the significant agricultural markets of North and South America while strengthening its well-established position in Europe. With its expanded line of insecticides to add to the Agricultural Products division's line of herbicides and fungicides, the division offers a broad product portfolio for all major crops. Through the acquisition, the division expects to achieve annual cost savings of at least E250 million as of 2002. More than half of this amount was

56

achieved in 2001. With a research and development pipeline that consists of 14 projects--including current market introductions--as well as the CLEARFIELD-Registered Trademark- Production System, the division expects to expand its market share and grow faster than the global market for agricultural products.

- FINE CHEMICALS

The Fine Chemicals division aims to achieve leading positions in the markets it serves. The division is pursuing this strategy by exploiting economies of

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

scale, developing new production technologies that reduce costs, expanding its global presence and attaining preferred supplier status with customers.

BASF believes the segment's cost position to be good overall compared with its competitors. In the few areas where the division's production costs do not compare favorably with those of competitors, BASF is making process improvements in existing plants, transferring its production capacities from smaller facilities to world-scale plants and entering into production joint ventures to achieve economies of scale and reduce costs. In the vitamins business, BASF acquired the water-soluble vitamins business of Takeda Chemical Industries Ltd. of Japan to strengthen its position as one of the leading global vitamins producers.

AGRICULTURAL PRODUCTS

OVERVIEW

BASF's Agricultural Products division is a leading manufacturer and supplier of herbicides, fungicides and insecticides. The division's principal products are used mainly by farmers to improve crop yields and crop quality. Through the acquisition of the crop protection business of American Home Products Corp. (AHP) of Madison, New Jersey, on July 1, 2000, BASF has become one of the leaders in the agricultural products industry, almost doubling its agricultural business.

In 2001, BASF was able to:

- successfully integrate AHP's crop protection sales force into the Agricultural Products division's sales organization in time for the start of the 2001 season;
- work with its dealers to reduce their inventory levels;
- achieve cost savings of more than E125 million in 2001 -- the first year of business after combining the crop protection activities of AHP with BASF's Agricultural Products division -- and BASF expects to achieve annual cost savings of at least E250 million as of 2002 from this integration;
- consolidate the division's product portfolio;
- keep the division's research and development projects on budget and schedule;
- make progress in integrating the research and development organization and marketing activities of AHP's crop protection business into BASF's organization; and
- begin consolidating the new organization's production capacities.

PLANT BIOTECHNOLOGY

BASF is expanding its activities in the field of plant biotechnology in response to advances in the market for agricultural products in which agricultural chemicals, plant seed and biotechnology are becoming increasingly integrated. BASF's goal in the field of plant biotechnology is to offer crop plants with improved vitamin and nutritional content and cultivation properties.

As part of its expansion efforts, BASF established BASF AgGenetics LLC in July 2001. This new subsidiary will work closely with a number of established

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

U.S. breeding companies to enlarge the corn gene pool that is available to the company and to significantly enhance the development of new proprietary inbred lines in the United States.

PRODUCTS

F 500-Registered Trademark-, a major new fungicidal active ingredient of the strobilurin class of chemistry, is currently being introduced into the market, and the registration process for F 500 is underway in all major countries. Registrations have already been received in 2001 in Germany, the United Kingdom, Brazil and South Africa. The Environmental Protection Agency in the United States has granted F 500 "Reduced Risk Status," which means its registration application will be given preferential treatment. In September 2001, a new production facility for the active ingredient went on stream in Schwarzheide, Germany.

F 500 controls major plant pathogens from all classes of fungi, and is effective against a broad spectrum of diseases in many crops including cereals, grapes, vegetables and fruits. It is also highly effective, safe for crops and has a favorable toxicological and ecotoxicity profile. The division's Comet-Registered Trademark- and Opera-Registered Trademark- are the first in a series of new fungicides based on F 500, which BASF plans to introduce over the next few years. With its wide range of activity, F 500 is expected to become a universal fungicide and an excellent active ingredient for formulations for the effective management of fungal diseases.

The following table lists the Agricultural Products division's other major active ingredients and the products they are used in:

BRAND NAME -----	ACTIVE INGREDIENT -----	APPLICATIONS -----	PRIMARY -----
HERBICIDES			
Basagran-Registered Trademark-	Bentazon	- Legumes - Cereals - Potatoes - Rice - Soybeans - Turf - Corn - Flax	- - - - - - - -

	-	Sugar beets	-
	-	Bananas	-

59

In addition to herbicides, fungicides and insecticides, BASF's portfolio of agricultural products includes the CLEARFIELD-Registered Trademark- Production System, which combines herbicide-resistant seeds developed using enhanced plant breeding methods with custom-designed herbicide solutions. It has proved highly effective at controlling problematic weeds that often cannot be managed using other products. CLEARFIELD crops currently being marketed include corn, wheat, rice and canola, and because these varieties contain no introduced genetic material, they are non-GMO (genetically modified organisms).

SALES

The Agricultural Products division's sales to third parties were E3,478 million in 2001. The following table shows 2001 sales by product area:

PRODUCT AREAS	2001 SALES
	(EUROS IN MILLIONS)
Herbicides.....	1,809
Fungicides.....	848
Insecticides and other agrochemical products.....	821

RESEARCH AND DEVELOPMENT

BASF's research and development activities in Agricultural Products cover all three areas of crop protection: fungicides, herbicides and insecticides. As part of the company's measures to integrate AHP's crop protection activities, BASF is concentrating the division's research and development activities in Ludwigshafen and Limburgerhof, Germany, and at the Research Triangle Park (RTP) in Raleigh, North Carolina. The division will close its research and development facility in Princeton, New Jersey, in mid-2002. In addition to these research centers, BASF has a network of trial stations that are located in key markets around the world, which allow BASF to conduct research throughout the year and on crops that grow only in specific regions.

In 2001, research and development spending in the Agricultural Products division was approximately 9.9% of the division's sales to third parties. Including new market introductions, BASF's product pipeline has 14 projects,

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

which includes several new active ingredients. Together with its CLEARFIELD Production System, BASF anticipates a combined annual peak sales potential of about E2 billion from its current product pipeline. This makes the company's research and development pipeline one of the strongest in the industry.

PLANT BIOTECHNOLOGY

In addition to the research and development efforts discussed above, BASF in 1998 established two research joint ventures, Metanomics and SunGene, with partners from the scientific community. Metanomics, based in Berlin, Germany, is studying functional genomics -- the analysis of the function of individual genes in plants, which can lead to the discovery of the key genes needed to genetically modify crop plants. SunGene, based in Gatersleben, Germany, tests commercially attractive genes and develops new technologies for the efficient introduction of genes into plants. Together with the Swedish seed breeding company Svalof Weibull, BASF established BASF Plant Science GmbH, to strengthen its presence in the plant biotechnology field.

BASF has the goal of becoming a leading competitor in the plant biotechnology market and expanding its position as a major supplier to the agricultural industry. In March 2000, BASF announced that it would substantially step up its operations in plant biotechnology. Research funds will amount to more than E700 million over 10 years. BASF also intends to allocate additional funds for the acquisition of seed companies or participations therein.

60

BASF believes that biotechnology will be crucial to the crop protection industry in the 21st century. However, new crop varieties developed through biotechnology, particularly those with genetically modified traits such as herbicide resistance, have experienced significant criticism from the public in Western Europe. Fears about unknown health risks still dominate public perception in Europe, and producers of genetically modified crops are struggling to address these concerns.

BASF believes that in the long term, the benefits afforded by biotechnology will lead to more public acceptance of products using biotechnology. At present, BASF is focusing its biotechnology research efforts on the following areas:

- improved tolerance to cold and drought;
- higher content of plant constituents such as oil, proteins, carbohydrates; and
- improved yield of plant constituents such as vitamins and health-promoting fatty acids.

BASF cannot give assurances that any of its research and development projects will survive the development process and ultimately obtain the requisite regulatory approval or, if approved, will be commercially profitable. Competitors may also launch competing or improved products.

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for 36% of the Agricultural Products division's sales; North America for 36%; South America for 16%; and the Asia, Pacific Area, Africa region for 12%.

The Agricultural Products division markets its products globally with a strong presence in every region. BASF has plants for synthesizing active ingredients at BASF's Verbund site in Ludwigshafen and in Schwarzheide, Germany; Hannibal, Missouri; Beaumont, Texas; Tarragona, Spain; and at BASF's Brazilian

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

sites in Guaratingueta, Resende and Paulinia. Products for final sale are formulated in facilities that are usually located close to the market. The formulating of products is carried out either at BASF plants or together with partners.

The Agricultural Products division delivers high performance products and competes primarily on innovation, product quality and service. BASF directs marketing and sales efforts through multi-staged marketing channels, which include wholesalers and commercial distributors.

The global market for agricultural products is highly seasonal, since the main markets for these products are in the Northern Hemisphere. Sales tend to be higher in the first and second quarters of the year, when the growing season in North America and Europe is underway. Sales during the second half of the year, which are driven primarily by the main growing season in Latin America, are weaker.

Over the last 10 years, the agrochemical industry has been going through a process of consolidation. The main factors driving this trend include:

- the need to offer a comprehensive range of products and services to customers;
- the need to be present in all major markets;
- rising expenditures on research and development, due to increasingly comprehensive testing requirements to ensure that potential products comply with environmental, health and safety standards before being registered; and
- an increase in the complexity associated with manufacturing agricultural products.

As a result, the number of basic suppliers of crop protection products has decreased over the past ten years.

61

BASF has become one of the top players in the industry resulting from the acquisition of the crop protection business of AHP. Including the sales generated by the crop protection business of AHP for the entire year in 2000, BASF would have ranked number two in fungicides, number three in herbicides and number five in insecticides.

The market for chemical-based crop protection products decreased compared with 2000 due to:

- historically low commodity prices for all major crops, which affected farmers' revenues and the resources they had available to purchase agricultural products;
- European farmers' reluctance to invest in agricultural products due to BSE (bovine spongiform encephalopathy) and the outbreak of foot-and-mouth disease;
- bad weather both in Europe and the United States, which resulted in less acreage and reduced application time;
- inventory reduction programs pursued by distributors;
- reduced use of selective herbicides due to the increased use of genetically-modified, herbicide-resistant crops; and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- a weakened global economy, further impacted by the financial crisis in Latin America.

However, the market for agricultural products is forecast to grow in the medium to long term. The main driver is a growing world population and therefore a rising demand for food, which is also expected to result in new opportunities in the field of biotechnology.

BASF considers the main competitors of the Agricultural Products division to be Syngenta AG of Switzerland (formed in 2000 through the merger of the agricultural products activities of Novartis AG and AstraZeneca plc); Bayer AG of Germany, Aventis Crop Science of Aventis S.A. of France (approval by the European Commission for the acquisition of Aventis Crop Science by Bayer is pending); as well as Monsanto Co., The Dow Chemical Company and E.I. du Pont de Nemours and Company of the United States.

GOVERNMENTAL REGULATION

In most countries, crop protection products (including genetically modified plants) must obtain government regulatory approval prior to marketing. The regulatory framework for crop protection and environmental health products is directed to ensure the protection of the consumer, the applicator and the environment. The strictest standards are applied in the United States, Japan and Western Europe. In the United States, the EPA (Environmental Protection Agency) has the responsibility for registration of all chemicals released into the environment, including herbicides, insecticides, fungicides and plant growth regulators irrespective of whether they are used for crop protection or for public health. Significant amounts of EPA resources are concentrated on the effects of crop protection products on the environment and on the safety of fish, wildlife and water resources. Plant-biotechnology-based crop protection products are also regulated by the USDA (U.S. Department of Agriculture) for environmental safety of the plant and by the FDA (U.S. Food and Drug Administration) to ensure the safety of food.

Since human exposure to a crop protection or environmental or public health product may occur from residues on food or from residential lawn use and/or indoor residential use, the safety assessment considers the human risk from all anticipated routes of exposure. Special sensitivities, food consumption and exposure patterns on infants and children are specifically considered. If the product is used on a food crop, a legal limit for residual chemical or a tolerance is established for the specific chemical. This limit is based on a strict health standard and the data provided by the manufacturer.

62

It generally takes five to seven years from discovery of a new active ingredient until the dossier is submitted to the appropriate regulatory agency for product approval. There are no statutory time frames in the United States for registration of new crop protection and environmental health products. The standard time frame for registration of an agricultural product, not regulated under "reduced risk" status, is typically 30 to 36 months. For an agricultural product in the "reduced risk" category, this time frame is shortened to an average of 24 months. Numerous initiatives on both the part of the EPA and crop protection manufacturers aiming to streamline the review process and reduce the review time for a new product have not been successful.

Genetically modified plants must undergo a regulatory assessment by the USDA for environmental safety including impact on native species and the impact of environmental release. The FDA considers the safety of the modified food and whether it is "substantially similar" to existing food products. Part of this review considers the possible introduction of new toxins or potential allergens

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

into the food. Foods that are not considered "substantially similar" must undergo a more detailed review and approval process by the FDA.

FINE CHEMICALS

OVERVIEW

BASF's Fine Chemicals division develops, manufactures and sells approximately 900 different high-value specialty products to approximately 8,000 customers.

BASF's Fine Chemicals division is a leading supplier of vitamins; carotenoids; pharmaceutical active ingredients; polymers for the pharmaceuticals, cosmetics and human nutrition industries; raw materials for aroma chemicals; UV (ultraviolet light) filters; amino acids; feed enzymes; and organic acids for the animal nutrition industry. For further information on antitrust matters involving BASF's vitamins business, see "Item 8. Financial Information -- Legal Proceedings."

The Fine Chemicals division benefits from BASF's Verbund approach to integration by purchasing approximately 35% of its raw materials from other BASF operations, ensuring economies of scale, efficient use of by-products, lower capital expenditures for capacity additions, lower transportation costs and reliable supplies. These cost savings and other advantages improve the ability of the Fine Chemicals division to compete in international markets, where competition for many of its products is based on price. Virtually all of the division's products are sold to external customers.

About 60% of the division's raw material purchases are bulk commodities from external and internal sources, such as nutrients for vitamin premixes; sugar and molasses for lysine and pseudoephedrine production; and urea and acetanhydride for purines. These supplies are readily available on the market. Among specialty inputs, no single product accounts for more than 4% of total external purchases.

Capital expenditures in the Fine Chemicals division from 1997 to 2001 included production plants and manufacturing equipment in Germany, Denmark and the United States, particularly in the carotenoid product area. The Fine Chemicals division's most significant capacity expansions during this period were for the production of carotenoids; vitamin E and its precursors; UV absorbers; and for aroma chemicals such as citral, geranonitrile and Lysmeral-Registered Trademark-. BASF acquired the worldwide business in lysine, a feed additive, of the South Korean Daesang Group, in May 1998. On January 4, 2001, BASF acquired the water-soluble vitamins business of Takeda Chemical Industries Ltd., Japan.

The key elements of the division's success are establishing a global sales presence by maintaining low costs and achieving preferred supplier status with major customers, as this status promotes lasting relationships and often generates higher sales volumes. BASF believes that its

63

Fine Chemicals division generally has a good cost position in comparison with its competitors. In the few areas where the division's production costs do not compare favorably with those of competitors, BASF is making process improvements in existing plants and transferring production capacities from smaller facilities to world-scale plants.

The Fine Chemicals division aims to expand its role as a contract manufacturer for the pharmaceutical industry. As more and more pharmaceutical companies concentrate on researching, developing and marketing new products, production of active ingredients is increasingly being contracted out to fine

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

chemical companies that both specialize in the synthesis of complex molecules and have suitable multipurpose plants that meet the pharmaceutical industry's standards. Over the next five years, BASF's goal is to become a leading contract manufacturer for this industry.

PRODUCTS

The following are the main product lines of the Fine Chemicals division:

VITAMINS

Based on sales, BASF is the second largest vitamins producer worldwide, and vitamins account for approximately one third of sales in the Fine Chemicals division. BASF produces six of the 13 naturally occurring vitamins. These include the water-soluble vitamins B(2) (riboflavin), Calpan (calcium d-pantothenate) and C, as well as the fat-soluble vitamins A, E and D(3). The Fine Chemicals division sells vitamins to the human and animal nutrition industries. BASF is currently pursuing an investment program in its vitamins business. In the first phase, BASF acquired the vitamins business of Takeda Chemical Industries Ltd., and now offers a complete range of fat-and water-soluble vitamins. The company estimates that as a result of the acquisition it has a 25% share of the world market for vitamins. In the second phase of the investment program, which is expected to be completed by 2006, BASF plans to invest approximately E600 million to build world-scale plants for vitamins E, B(2), C, Calpan and B(6). BASF expects to improve its market position by expanding its range of water-soluble vitamins, gaining greater access to the market for food industry applications, and strengthening its presence in Asia. BASF's vitamins sales are evenly divided among Europe, North America and Asia.

CAROTENOIDS

Carotenoids are nature-identical products that provide certain health benefits and are also used to color foods. This product line includes beta-carotene, cantaxanthine and astaxanthine for the food, feed and nutritional supplement industries for human and animal nutrition. More than half of BASF's carotenoid sales are in Europe.

PHARMACEUTICAL ACTIVE INGREDIENTS

The main products in this category are caffeine, pseudoephedrine, theophylline, ibuprofen and povidone iodine. Beverage manufacturers are the primary buyers of caffeine, while theophylline and pseudoephedrine are used to treat respiratory diseases. Ibuprofen is used in a variety of over-the-counter and prescription products to treat mild pain. All of BASF's production sites for these products have GMP (good manufacturing practice) certification, a quality standard granted by an independent agency and demanded by companies who market and sell these products. BASF sells these products worldwide, with the United States being the most important market, followed by Western Europe. BASF is the number one producer worldwide of all the products in this category.

64

POLYMERS

The Fine Chemicals division sells polymers for applications in the cosmetics, pharmaceuticals and food industries. In pharmaceuticals, polymers are used as binders, disintegrants, coatings and solvents for the manufacture of finished dosage forms. The cosmetics industry uses polymers in hair care products such as hairspray, styling mousses, gels and hair-conditioners. In the food industry, polymers are applied as filtration aids for beverages such as beer, wine and soft drinks. BASF sells polymers mainly in Europe.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

AMINO ACIDS

Amino acids are feed additives that serve as a complementary growth area within BASF's animal nutrition business. An important product is lysine, of which BASF is among the top three producers. The Fine Chemicals division produces lysine at BASF's site in Gunsan, Korea. BASF has a strong foothold in the Asian market for amino acids, with the region accounting for half of the sales for this product group.

ENZYMES

Enzymes, which are proteins that function as biochemical catalysts, are used for animal nutrition to improve feed absorption. BASF's enzyme product line includes Natuphos-Registered Trademark-, Natustarch-Registered Trademark-, and Natugrain-Registered Trademark-, which the Fine Chemicals division produces and markets pursuant to a cooperation agreement with DSM N.V. of the Netherlands. Most of BASF's enzyme sales are roughly divided between Europe and North America.

ORGANIC ACIDS

Organic acids are used as preservatives for grains and compound feeds. BASF offers a wide range of organic acid products that suppress the growth of molds and bacteria. BASF is the leading supplier of standard and tailor-made organic acids for the feed industry in Europe and Asia.

COSMETICS INGREDIENTS

Cosmetics ingredients are raw materials for many personal care products, including skin-care additives and sunscreen agents. BASF sells these products primarily in Europe. The Fine Chemicals division offers the full range of UVA and UVB absorbers, and in 2001 started up a new world-scale plant in Ludwigshafen to manufacture Uvinul MC 80 -- part of BASF's product range of UV absorbers.

AROMA CHEMICALS

Aroma chemicals are fragrance and flavor raw materials that are used as precursors for perfumes, food products, detergents and cosmetics. BASF sells these products primarily in Europe.

SALES

The Fine Chemicals division's sales to third parties were E1,984 million in 2001. The following table shows the Fine Chemicals division's sales for 2001 by customer industry:

CUSTOMER INDUSTRY -----	SALES ----- (EUROS IN MILLIONS)
Animal nutrition.....	840
Human nutrition.....	385
Pharmaceuticals.....	408
Personal care, cosmetics and aroma chemicals.....	351

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

RESEARCH AND DEVELOPMENT

The Fine Chemicals division's research and development activities focus on constantly improving BASF's cost position while generating a flow of new products. In 2001, the Fine Chemicals division spent approximately 4% of its consolidated sales on research and development activities, essentially unchanged from 2000.

Approximately 45% of the Fine Chemicals division's research and development expenses in 2001 were allocated to human nutrition and pharmaceuticals. Around 35% were spent on products for the animal nutrition industry. The remainder was earmarked for applications in cosmetics and aroma chemicals.

In the animal nutrition business, BASF is seeking to increase its market share by improving product quality and reducing production costs. BASF is also directing research efforts at extending the feed additives product range, for example, by adding new heat-stable enzymes to the Natuphos/Natustarch range of feed enzymes. These enzymes are designed to improve digestion in animals and reduce the phosphate content of excretions.

Biotechnological production processes are becoming increasingly important to the success of many fine chemical products because they reduce variable production costs and allow for continuous improvement in the bacteria strains and fermentation processes for vitamins and amino acids. BASF is currently working on optimizing the fermentation and production processes for the amino acid lysine. BASF has successfully replaced chemical synthesis with biotechnology-based processes to produce vitamin B(2) and precursors of vitamin C.

MARKETS AND DISTRIBUTION

In 2001, Europe accounted for 40% of the Fine Chemicals division's sales; North America for 30%, the Asia, Pacific Area, Africa region for 23%; and South America for 7%.

The main customers of the Fine Chemicals division are global participants in the animal nutrition, human nutrition, pharmaceuticals, personal care and aroma chemical industries. Many of the division's products are sold in relatively small volumes and are often tailor-made to meet customer specifications.

BASF sells the vast majority of its fine chemical products through its own sales force, which targets major global customers. Key account managers are assigned to these major customers on the basis of region and product group. Through its sales and marketing departments, BASF works closely with customers to develop specific applications and to collaborate on developing new products. BASF is also selling its fine chemical products through its global extranet platform, WorldAccount and is considering selling the division's products through Elemica Holding Ltd., an independent e-marketplace for the chemicals industry.

BASF's competitive position depends to a large extent on its ability to compete on both price and quality. This requires comprehensive cost leadership in production, marketing and sales.

BASF expects the trend toward globalization and consolidation to continue among customers of the Fine Chemicals division. Product differentiation is based on quality, price and value-added services. BASF believes that cost-effective production processes will be critical to ensure future success in this industry, as will preferred supplier status with important customers. The trend toward commoditization for certain fine chemicals, such as vitamins, is intensifying. BASF is exposed to competition from new market entrants, especially from China. Entrants from China, in particular, tend to be low cost producers that compete

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

on the basis of price, primarily in the European feed and food vitamins market. Competition from new entrants has affected other regional feed vitamins markets to a more limited degree.

66

BASF considers its main competitors in the animal nutrition area to be Roche Group of Switzerland, Archer Daniels Midland Co. of the United States, Novo Nordisk A/S of Denmark, Adisseo Group and Rhodia S.A. of France, Eisai Co. Ltd. of Japan and new entrants from China. In the human nutrition area, BASF's main competitors are Roche and Merck KGaA of Germany. In pharmaceutical active ingredients, BASF considers Albemarle Corporation, Mallinckrodt Inc., International Specialty Products Inc. and FMC Corporation of the United States to be its main competitors, as well as a number of Chinese and Indian suppliers. In cosmetics and aroma chemicals, Roche and Givaudan of Switzerland, International Specialty Products, Hercules Inc., Millennium Specialty Chemicals, IFF Inc., National Starch & Chemical Co. of the United States and Kurarai of Japan are BASF's main competitors.

GOVERNMENTAL REGULATION

BASF's various Fine Chemicals products are subject to regulation by government agencies throughout the world. The primary emphasis of these requirements is to assure the safety and effectiveness of BASF's products. Of particular importance in the United States is the Food and Drug Administration (FDA), which regulates many of BASF's Fine Chemicals products. The FDA oversees the marketing, manufacturing and labeling of cosmetics (e.g., sunscreen agents), pharmaceuticals (e.g., pharmaceutical active ingredients), foods (e.g., dietary supplements, including vitamins) and feeds (e.g., vitamins, carotenoids). The Federal Trade Commission regulates claims made in the advertising of dietary supplements. Animal health products are also regulated in the United States by the United States Department of Agriculture and the Environmental Protection Agency.

One of the major markets for BASF's fine chemicals is the European Union (E.U.). In the E.U., similar regulatory systems are established on the national level of different member states as well as on the pan-European government level. Positive lists and negative lists exist in Europe and they regulate the usage of various substances in order to ensure consumer safety. Before the substances are added to these lists, they are subject to a rigorous approval procedure. A product is approved in the E.U. only after its safety is assessed by a committee of independent academic scientists.

In countries other than the United States and those of the E.U. in which BASF conducts business, BASF is subject to regulatory and legislative climates that are similar to or sometimes even more restrictive than those described above. The regulatory environment in Japan, for example, can be more restrictive than that of the United States or the E.U.

OIL & GAS

SEGMENT OVERVIEW

BASF conducts the activities of its Oil & Gas segment through its subsidiary Wintershall AG, one of the leading oil and gas companies in Germany. Wintershall and its affiliated companies are active in two sectors:

- OIL AND NATURAL GAS EXPLORATION AND PRODUCTION

Wintershall participates in the search and production of oil and natural gas in 10 countries on four continents. BASF presently conducts its most important oil exploration and production operations in North Africa and the

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Middle East and in Germany, and its most significant gas exploration and production activities in Argentina, Germany and the North Sea. Wintershall's strategy is to increase its hydrocarbon production in the next 10 years by at least 50%. The company also aims to maintain a ratio of proved reserves to production at approximately

67

10 years. Wintershall markets approximately 75% of its crude oil production through its wholly owned subsidiary Wintershall Oil AG, of Zug, Switzerland.

- NATURAL GAS DISTRIBUTION AND TRADING

BASF conducts natural gas distribution and trading activities through two joint ventures -- WINGAS GmbH (WINGAS) and Wintershall Erdgas Handelshaus GmbH (WIEH) -- in partnership with OAO Gazprom (Gazprom) of Russia. WINGAS owns and operates a pipeline system in Germany that is approximately 1,900 kilometers in length for the distribution of natural gas. The company also owns and operates one underground natural gas storage site, which has a capacity of 157 billion cubic feet and is the largest in Western Europe. WIEH acts exclusively as a trading company, purchasing Russian natural gas and marketing it to WINGAS and Verbundnetz Gas AG (VNG), a transmission and distribution company in eastern Germany in which Wintershall has a 15.8% ownership interest. WIEH also markets Russian natural gas in Central Europe through its Swiss subsidiary Wintershall Erdgas Handelshaus AG (WIEE) of Zug, Switzerland.

Effective December 31, 1999, Wintershall exited the oil refining and marketing business by selling for cash to VEBA OEL AG, a subsidiary of E.ON AG, its Emsland refinery in Lingen, Germany, together with its 15% stake in Aral AG, a retail gasoline station network in Germany. (The segment's 1999 financial data include amounts from the oil refining and marketing business.) The businesses sold to VEBA OEL had 1999 sales of approximately E1,016 million. BASF believes its decision to divest its holdings in Aral and the Lingen refinery was a significant step in the restructuring of its portfolio by concentrating on its core activities in the Oil & Gas segment. The proceeds from the sale of BASF's stake in Aral are included in BASF's financial results for 1999. The proceeds from the sale of the refinery are included in the Oil & Gas segment's income from operations for 1999.

The Oil & Gas segment sells most of the natural gas it produces to third parties, however through WINGAS it also supplies BASF with natural gas consumed at BASF's Verbund site in Ludwigshafen, Germany and at other BASF companies. The Oil & Gas segment sells to third parties all of the oil it produces.

The following table sets forth the segment's sales to third parties, petroleum and natural gas taxes, intersegmental transfers, royalties, income from operations and capital expenditures:

	2001		2000		1999
	-----		-----		-----
	(EUROS IN MILLIONS)				
Sales to third parties, net of petroleum and natural gas					
taxes(1).....	4,516	E	3,957	E	3
Petroleum and natural gas taxes(1).....	268	E	259	E	1
Intersegmental transfers.....	413	E	320	E	
Sales incl. intersegmental transfers.....	E 4,929	E	E 4,277	E	3
Royalties.....	312	E	276	E	
Sales incl. intersegmental transfers, less royalties.....	E 4,617	E	E 4,001	E	3

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Income from operations.....	1,308	E	1,310	E
Capital expenditures.....	229	E	267	E

(1) Since 2000, natural gas taxes only

The Oil and Gas segment's sales to third parties, net of petroleum and natural gas taxes, accounted for 10.4% of BASF's total sales in 1999 and 11.0% of BASF's total sales in 2000. In 2001, the segment accounted for 13.9% of BASF's total sales.

68

SEGMENT STRATEGY

In its exploration and production business, the Oil & Gas segment is pursuing a growth strategy by increasing existing oil and gas production activities and by carrying out acquisitions. To this end, the segment aims to increase production of oil and gas by at least 50% over the next 10 years. To ensure the company's ongoing competitiveness, Wintershall plans to focus on the following core regions:

- Europe,
- North Africa,
- South America (Southern Cone) and
- Russia/Caspian Sea/Middle East.

Wintershall's goal is to maintain a ratio of proved reserves to production of approximately 10 years and a suitable balance of assets operated by Wintershall and by third parties. Wintershall's strategy for achieving these goals is:

- to increase oil and gas production in Germany and the North Sea through further exploration activities and field developments;
- to expand its activities in North Africa to offset the depletion of existing oil reserves and to expand its gas and condensate production;
- to increase production of gas from existing and new fields in Argentina in order to meet growing demand for natural gas in the Southern Cone region;
- to pursue exploration activities in new offshore concessions in Brazil with the goal of establishing new production activities in the region; and
- to expand oil and gas activities in Russia through strategic partnerships such as Wintershall's partnership with Gazprom.

In the natural gas marketing and distribution business, WINGAS currently is the fourth largest natural gas transmission and distribution company in Germany. Over the next few years, WINGAS aims to increase its current 10% share of the growing German gas market by expanding its transmission and distribution activities into new regions.

Ongoing liberalization of the European natural gas market requires natural gas distributors to give third parties access to their pipelines. This creates significant growth opportunities for WINGAS, since the company is eligible to transport natural gas through its competitors' extensive transmission networks.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

In Europe, WINGAS intends to expand its pipeline network, focusing on regions not yet covered by its network.

EXPLORATION AND PRODUCTION OF OIL AND NATURAL GAS

The exploration and production of oil and natural gas historically have been Wintershall's core businesses, with operations primarily in Germany, Libya, Argentina, Dubai and the Netherlands. In 2001, Wintershall acquired an exploration portfolio in Brazil.

BASF believes that Wintershall presently has finding and development costs that are below the industry average. Unlike global oil and gas exploration and production companies, Wintershall focuses its exploration and production activities on a select number of promising regions where a combination of local technical expertise, strategic alliances and, where possible, operating experience allow it to develop petroleum resources at below-average costs.

69

Wintershall is the operator of most of the significant exploration and production projects in which it has an interest. In projects where it is not the operator, Wintershall participates in operating decisions pursuant to agreements with operators.

The activities that the Oil & Gas segment presently conducts are as follows:

COUNTRY -----	ACTIVITIES -----	COUNTRY -----	ACTIVITIES -----
Argentina	Oil and gas exploration and production	Libya	Oil and gas exploration and production
Azerbaijan(1)	Oil exploration	the Netherlands	Gas exploration and production
Brazil(1)	Oil exploration	Qatar	Oil exploration
Dubai	Oil exploration and production	Romania	Gas exploration
Germany	Oil and gas exploration and production	Russia(2)	Oil exploration and production

(1) Non-consolidated activities

(2) At equity consolidated activities

RESERVES

The Oil & Gas segment's most significant oil reserves are in North Africa/Middle East and Germany, with the substantial majority of these reserves being located in Libya. The most significant natural gas reserves are in Argentina and Germany.

70

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The Oil & Gas segment's proved oil and gas reserves and proved developed oil and gas reserves in each of four geographic areas as of December 31, 2001, 2000 and 1999 were as follows:

	GERMANY	NORTH AFRICA AND MIDDLE EAST (1)	ARGENTINA	REST OF WORLD (1)	TOTAL	RES
	-----	-----	-----	-----	-----	-----
AT DECEMBER 31, 2001						
Oil (millions of barrels)						
Proved reserves.....	101	442	39	--	582	
Proved developed reserves.....	70	412	28	--	510	
Gas (billions of cubic feet)						
Proved reserves.....	500	172	1,225	134	2,031	
Proved developed reserves.....	500	171	612	57	1,340	
AT DECEMBER 31, 2000						
Oil (millions of barrels)						
Proved reserves.....	116	479	30	--	625	
Proved developed reserves.....	76	462	22	--	560	
Gas (billions of cubic feet)						
Proved reserves.....	509	228	920	89	1,746	
Proved developed reserves.....	503	228	519	54	1,304	
AT DECEMBER 31, 1999						
Oil (millions of barrels)						
Proved reserves.....	86	509	26	--	621	
Proved developed reserves.....	66	465	18	--	549	
Gas (billions of cubic feet)						
Proved reserves.....	432	247	788	119	1,586	
Proved developed reserves.....	301	--	476	73	850	

(1) Consolidated activities only

At 2001 levels of production, in terms of barrel of oil equivalents, proved oil reserves would last approximately 10 years. At 2001 levels of production, in terms of cubic feet equivalents, proved gas reserves would last approximately 11 years.

EXPLORATION AND PRODUCTION

The net quantities of oil and gas produced as well as the average sales price and production cost (lifting cost) per unit of oil and gas produced in each of the last three years were as follows:

	1999	2000	2001
	-----	-----	-----
OIL			
Net quantities produced (millions of barrels).....	55	56	
Average sales price less royalties (per barrel).....	E12.73	E23.76	E2

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Average production cost (lifting cost) (per barrel).....	E	2.84	E	3.60	E
GAS					
Net quantities produced (billions of cubic feet).....		135		145	
Average sales price less royalties (per thousand cubic feet).....	E	1.36	E	2.35	E
Average sales cost (lifting cost) (per thousand cubic feet).....	E	0.40	E	0.50	E

71

Wintershall's total gross and net productive wells, total gross and net developed acres and total gross and net developed and undeveloped acres (both leases and concessions) as of December 31, 2001, were as follows:

	GERMANY	NORTH AFRICA AND MIDDLE EAST (1)	ARGENTINA	REST OF WORLD (1)	TOTAL	R WO E
	-----	-----	-----	-----	-----	---
OIL						
Total gross productive wells.....	547.0	272.0	57.0	0.0	876.0	
Total net productive wells.....	252.4	63.0	18.0	0.0	333.4	
GAS						
Total gross productive wells.....	150.0	0.0	147.0	22.0	319.0	
Total net productive wells.....	63.4	0.0	35.0	7.2	105.6	
OIL AND GAS ACREAGES (THOUSAND OF ACRES)						
Total gross developed acres.....	163.9	93.8	256.2	12.8	526.7	
Total net developed acres.....	56.3	29.7	60.4	4.6	150.9	
Total gross undeveloped acres....	2,581.7	2,074.5	4,233.1	2,463.4	11,352.6	5
Total net undeveloped acres.....	1,215.6	788.0	1,322.8	1,091.8	4,418.1	2

(1) Consolidated activities only

Exploration activities are focused on Europe, the Southern Cone region of South America, North Africa/Middle East (mainly Libya) and the Caspian Sea. The Oil & Gas segment's exploration expenditures in 2001 were E112 million. Either directly or through its subsidiaries, Wintershall was involved in the drilling of 15 exploratory wells that were completed in 2001 compared with four exploratory wells completed in 2000. In 2001, seven of the exploratory wells completed were productive compared with none in 2000. As of December 31, 2001, Wintershall had begun drilling five additional exploratory wells. In Brazil, E67 million was spent on acquiring new concessions and E17 million on exploration activities. In Azerbaijan and Russia, E27 million was spent on exploration activities. These expenditures in Brazil and Azerbaijan are not included in the Consolidated Financial Statements of the BASF Group, whereas the expenditure in Russia is included on an equity basis. In Azerbaijan and Russia, Wintershall participated in three exploratory wells, which resulted in two discoveries. Drilling began on two additional exploratory wells at the end of 2001.

In 2001, approximately 70% of the Oil & Gas segment's oil reserves and production activities were in North Africa and the Middle East. The substantial

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

majority of these reserves and production activities were in Libya, where the segment operates several onshore oilfields and utilizes associated natural gas for local consumption. BASF does not believe the ILSA (Iran-Libya Sanctions) Extension Act adopted by the United States government will have a material adverse effect on BASF's financial condition or results of operations. Remaining oil production takes place primarily in the Mittelplate offshore oil field in the German North Sea as well as Dubai, Argentina and Russia.

With approximately 200 million barrels of proved initial reserves, the Mittelplate field is the largest known German oil reservoir. Wintershall and its partner, RWE-DEA, have been producing oil from an offshore production platform since 1987. As of 1998, the Mittelplate field has also been developed from an onshore site by extended-reach wells. In 2001, oil production increased to 11.3 million barrels of which 5.5 million barrels were produced through extended-reach wells. Each partner has a 50% interest in the project. Wintershall's share of Mittelplate oil production has been contracted to RWE-DEA and Elf Oil Germany, a unit of TotalFinaElf S.A., for refining.

72

More than 40% of Wintershall's natural gas is produced in Argentina. Wintershall acquired its Argentine gas operations through the September 1998 dissolution of the BASF joint venture Deminex. By acquiring Deminex's gas operations in Argentina, Wintershall added 746 billion cubic feet to its total natural gas reserves. Since 1998, Wintershall has further developed its gas reserves in Argentina and increased its market share in the Southern Cone region of South America. And in 2001, the company decided to develop the Carina and Aries gas fields off the coast of Tierra del Fuego. As a result of the economic development in Argentina at the end of 2001, the project schedule is under review. Wintershall also holds a 10% share in the "Cruz del Sur" gas pipeline project. The project is expected to be completed by the first half of 2002. With this pipeline, which runs from Punta Lara, Argentina, to Montevideo, Uruguay, Wintershall will be able to participate in the strategic development of new gas markets in Uruguay. Southern Brazil represents another growing gas market in which Wintershall may participate, and the pipeline may be extended to this region depending on market conditions.

The Oil & Gas segment has a 49.95% participation interest in and is the operator of the first natural gas offshore project on the German continental shelf, approximately 300 kilometers off the German North Sea coast. Production started in September 2000 with a gas plateau rate of 112 million cubic feet per day. The major partners in this project include BEB Erdgas und Erdol and RWE-DEA. N.V. Nederlandse Gasunie a Dutch natural gas distributor has contracted to purchase the natural gas produced from this field.

In spring 1999, BASF signed a German-Russian economic agreement with Gazprom that provides a framework for future project-specific agreements. The agreement also contemplates the joint participation of Wintershall and Gazprom in the exploration and production of oil and gas primarily in Russia. Wintershall and Gazprom are specifically planning to participate in the development of large gas/condensate fields in Western Siberia. Such developments will have to be the subject of future agreements. Gazprom and Wintershall are developing geotechnical concepts needed for the economic and technical development of these fields.

In Brazil, Wintershall established a significant exploration portfolio in 2001. In the third round of bidding with Agencia Nacional do Petroleo (ANP), Wintershall acquired and became the operator of three offshore concessions in water depths of up to 100 meters. In addition, Wintershall participated in two deepwater exploration concessions with Esso Exploracao Espirito Santo Ltda. and Shell Brasil Ltda.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

In general, oil and gas exploration and production activities require high levels of investment and entail particular economic risks and opportunities. These activities tend to be highly regulated, and companies engaging in these activities generally may face intervention by governments in matters such as:

- the award of exploration and production licenses;
- the imposition of specific drilling and other work obligations;
- environmental protection measures;
- control over the development and abandonment of fields and installations;
and
- restrictions on production.

Crude oil prices are subject to international supply and demand and other factors that are beyond an oil company's control. Political developments can affect world supply of and demand for oil, and therefore oil prices as well. Such factors can also affect the price of natural gas sold under long-term contracts because, under long-term contracts in Germany and in many other countries, natural gas pricing typically is tied to prices of refined products pursuant to a specified time lag.

73

Crude oil prices are generally set in U.S. dollars, while costs may be incurred in a variety of currencies. Fluctuations in exchange rates therefore can give rise to foreign exchange exposures.

As with most international oil and gas companies, substantial portions of the oil and gas reserves of Wintershall are located in countries outside the European Union and North America, some of which can be considered politically and economically less stable than European Union or North American countries. These reserves and the related operations may be subject to political risks, including:

- increases in taxes and royalties;
- the establishment of production and export limits;
- the renegotiation of contracts;
- the nationalization of assets;
- changes in local government regimes and policies, as well as changes in business customs and practices;
- payment delays;
- currency exchange restrictions; and
- losses and impairment of operations by actions of insurgent groups.

To date, none of these risks has significantly affected the Oil & Gas segment or had a material adverse effect on BASF's financial condition or results of operations.

Wherever possible, Wintershall arranges capital investment guarantees by the German government to protect its investments. Covered risks include political risks, such as the risk of war, revolution and expropriation. If any covered risk were to materialize, Wintershall would receive approximately E160 million.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

German government guarantees currently cover a total investment volume by Wintershall of approximately E447 million, including inventory of raw materials and supplies.

General uncertainties are inherent in estimating quantities of proved reserves and in projecting future rates of production and timing of development expenditures. The accuracy of any reserve estimate is a function of the quality of available data and engineering, and geological interpretation and judgment. Results of drilling, testing and production after the date of the estimate may require substantial upward or downward revisions. In addition, changes in oil and natural gas prices could have an effect on the economically recoverable reserves. Accordingly, reserve estimates could be materially different from the quantities of oil and natural gas that are ultimately recovered.

NATURAL GAS DISTRIBUTION AND TRADING

BASF conducts its natural gas distribution and trading activities pursuant to an extensive agreement with OOO Gazexport, a subsidiary of OAO Gazprom of Russia. To promote the joint marketing of mainly Russian, as well as British North Sea and German natural gas in Germany, Wintershall and Gazprom established two joint ventures:

- WINGAS GmbH (WINGAS) of Kassel, Germany, in which Wintershall has a 65% ownership interest; and
- Wintershall Erdgas Handelshaus GmbH (WIEH), of Berlin, Germany, in which Wintershall has a 50% ownership interest.

WINGAS owns and operates a large pipeline system in Germany for the distribution of natural gas and also owns and operates one underground natural gas storage site. WIEH acts exclusively

74

as a trading company, purchasing Russian natural gas and marketing it to WINGAS and other natural gas providers in Germany. WIEH also markets Russian natural gas in Central Europe through its wholly owned Swiss subsidiary, Wintershall Erdgas Handelshaus AG (WIEE), of Zug, Switzerland.

In the medium term, the natural gas distribution and trading business has generated stable margins and represents a source of noncyclical income for BASF. In addition, this business ensures a reliable and cost efficient source of natural gas for BASF's Verbund site in Ludwigshafen, Germany, and for other BASF companies.

In 2001, WINGAS concluded new supply contracts with municipalities in Germany and in the forward market and therefore was able to increase the sales volume from 387 billion cubic feet to 414 billion cubic feet despite relatively warm weather during the year. The sales volume of WINGAS, WIEH and WIEE totaled 730 billion cubic feet compared with 756 billion cubic feet for 2000. The BASF consolidated sales volume in 2001 was 461 billion cubic feet, representing a 1.5% decrease over the previous year's sales volume of 468 million cubic feet.

WINGAS

Since 1991, WINGAS has invested approximately E2.7 billion (of which Wintershall's share was E1.8 billion) in its natural gas distribution and trading activities in Germany. The high-pressure pipeline system currently spans approximately 1,900 kilometers (km). The pipeline system presently consists of four primary legs:

- MIDAL (MITTE-DEUTSCHLAND-ANBINDUNGS-LEITUNG), which is the longest

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

pipeline of the WINGAS network, extending over 702 km from the North Sea to southern Germany. To supply the metropolitan area of Hamburg, Germany, RHG (Rehden-Hamburg-Gasleitung) branches from MIDAL north of Bielefeld, Germany, forming a 132 km-long branch-pipe.

- STEGAL (SACHSEN-THURINGEN-ERDGAS-LEITUNG), which is a 344 km pipeline that comes from the east and meets MIDAL south of Kassel, Germany. STEGAL supplies eastern Germany with natural gas and connects the WINGAS pipeline system with Czech and Slovakian pipeline systems that transport Russian natural gas.
- WEDAL (WEST-DEUTSCHLAND-ANBINDUNGS-LEITUNG), which is a 319 km pipeline that establishes a direct connection between the WINGAS pipeline system and the British natural gas grid, ensuring a link to the Western European natural gas network. WEDAL runs between Aachen, Germany, and Bielefeld, Germany.
- JAGAL (JAMAL-GAS-ANBINDUNGS-LEITUNG), which is a 336 km pipeline completed in October 1999 that links the large YAMAL gas field in Russia to WINGAS's pipeline network system. JAGAL begins in Frankfurt/Oder, Germany, and links up with STEGAL just south of Leipzig, Germany.

In addition to its natural gas pipeline network, WINGAS also owns and operates a natural gas storage site in Rehden, Germany. It is the largest underground gas storage site in Western Europe, with a capacity of 157 billion cubic feet.

In 2001, WINGAS purchased 50% of the natural gas from WIEH, which in turn purchases all of its gas from Gazprom's subsidiary Gazexport. In 2001, WINGAS bought additional gas directly from Gazexport so that in total 261 billion cubic feet were purchased from these suppliers. WINGAS also bought 92 billion cubic feet from North Sea suppliers, including EdFT (Electricite de France Trading Ltd.) and Conoco.

The biggest customer for WINGAS's natural gas is BASF's own Verbund site in Ludwigshafen, Germany. In 2001, the site purchased approximately 87 billion cubic feet, or approximately 21% of

75

WINGAS's distribution volume. Approximately 19 billion cubic feet, or 5%, was sold to other BASF companies; 36% to transmission companies; 20% to regional distributors, municipalities and industrial companies; and 18% was sold in the forward market. Of the natural gas that WINGAS distributed in Germany in 2001, just over half (56%) was supplied through long-term natural gas supply agreements with more than 60 customers. Starting in 2004, WINGAS will also supply natural gas to BASF's Verbund site in Antwerp, Belgium.

WINGAS is currently the fourth largest natural gas transmission and distribution company in Germany, has a current market share of 10% and aims to increase its share of the growing German gas market. Capital expenditures in 2001 totaled E39 million, of which E38 million was used for additions to the existing infrastructure.

ENVIRONMENTAL MATTERS

BASF is subject to numerous national and local environmental laws and regulations throughout the world concerning its operations and products in countries in which it operates. These laws and regulations govern, among other things, the handling, manufacture, transport and disposal of materials and the discharge of pollutants into the environment, practices and procedures applicable to construction and operation of sites, and the restoration and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

preservation of natural resources.

BASF's operations are subject to increasingly stringent laws and government regulations related to environmental protection and remediation. In Germany alone, some 3,000 laws and regulations regarding environment, safety and health affect BASF's operations. In Germany, the primary environmental laws currently affecting BASF's operations are:

- the Chemicals Act (CHEMIKALIENGESETZ), which provides for the protection of humans and the environment from the harmful effects of dangerous chemical substances;
- the Federal Immission Control Act (BUNDES-IMMISSIONSSCHUTZGESETZ), which regulates emissions from a variety of sources;
- the Ordinance on Large Firing Installations (GROFEUERUNGSANLAGEN-VERORDNUNG), which establishes emissions limits for different types of plants for all major air pollutants, including sulfur dioxide, nitrogen oxides and dust;
- the Hazardous Incident Ordinance of the European Union (STORFALL-VERORDNUNG), which classifies the accident potential of installations and sets corresponding standards for safety management;
- the Closed Substance Cycle and Waste Management Act (KREISLAUFWIRTSCHAFTS-UND ABFALLGESETZ), which regulates waste management, focusing on waste avoidance and reuse of waste;
- the Federal Water Resources Act (WASSERHAUSHALTSGESETZ), which establishes principles for the responsible use of water resources, including the purification of wastewater;
- the Waste Water Charges Act (ABWASSERABGABENGESETZ), which establishes wastewater emissions based on the content of harmful substances and other parameters, such as nitrogen content and determines fees to be paid by companies according to the emissions of these harmful substances;
- the Act on Transportation of Dangerous Goods (GESETZ ZUR BEFORDERUNG GEFÄHRLICHER GÜTER), which sets standards for transportation safety and the avoidance of the release of dangerous substances due to accidents; and
- the Federal Mining Act (BUNDESBERGGESSETZ), which regulates the exploration and production of oil and gas.

76

Although BASF believes that its production sites and operations are currently in material compliance with all applicable laws and regulations, these laws and regulations have required and in the future could require BASF to take action to remediate the effects on the environment of the prior disposal or release of chemicals or petroleum substances or waste. Such laws and regulations have applied and in the future could apply to various sites, including BASF's chemical plants, oil fields, waste disposal sites, chemical warehouses and natural gas storage sites. In addition, such laws and regulations have required and in the future could require BASF to install additional controls for certain of its emission sources, undertake changes in its operations in future years and remediate soil or groundwater contamination at current and/or former sites and facilities.

BASF's operating costs for environmental protection totaled E765.3 million in 2001. These costs are recurring or one-time costs associated with sites or measures that are incurred in the avoidance, reduction or elimination of

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

deleterious effects on the environment. They include the costs of centralized disposal sites, such as wastewater treatment plants, as well as decentralized sites, such as residue incinerators. They also comprise different levies such as effluent levies, water levies, costs for disposal services by third parties, monitoring, analysis and surveillance carried out by mobile and stationary units as well as research and development costs for reducing the incidence of residues. BASF also spent approximately E175.8 million in 2001 on capital expenditures for pollution control devices and equipment.

BASF also incurs costs to remediate the impact of the current and prior disposal or release of chemicals or petroleum substances or waste, both at its own sites and at third-party sites to which BASF has sent waste for disposal. Worldwide, BASF had established provisions of E309 million for anticipated investigation and clean-up costs at such sites as of December 31, 2001, and E269 million as of December 31, 2000. In the United States, liability for remediation of contamination is imposed generally pursuant to the federal Comprehensive Environmental Response Compensation and Liability Act (Superfund) and analogous state laws. Although such U.S. laws generally allow the recovery of the total cost of cleanup from any single responsible party, cleanup costs typically are shared among several responsible parties at third-party sites where multiple parties sent waste to the site for disposal, and sometimes at owned or operated sites where a predecessor or other third-party disposed of waste on-site. BASF has been notified that it may be a potentially responsible party at such sites. The proceedings related to these sites are in various stages. The cleanup process has not been completed at most sites; the number, potential liability and financial viability of other parties are typically not fully resolved and the status of the insurance coverage for most of these proceedings is uncertain. Consequently, BASF cannot accurately determine the ultimate liability for investigation or cleanup costs at these sites. As events progress at each site for which BASF has been named a potentially responsible party or is otherwise involved in remediation of contamination, BASF accrues, as appropriate, a liability for site cleanup. Such liabilities include all costs that are probable and can be reasonably estimated. In establishing these liabilities, BASF considers its shipments of waste to a site and its percentage of total waste shipped to the site (in the case of third-party sites); the types of waste involved; the conclusions of any studies; the magnitude of any remedial actions which may be necessary; and the number and viability of other potentially responsible parties. Although the ultimate liability may differ from estimates, BASF routinely reviews the liabilities and revised estimates, as appropriate, based on the most current information available.

BASF has established and continues to establish provisions for environmental remediation liabilities where the amount of such liability can be reasonably estimated. The provisions made are considered to be in accordance with U.S. GAAP for known requirements. BASF adjusts accruals as new remediation commitments are made and as information becomes available which changes estimates previously made. For further information, see Note 24 to the Consolidated Financial Statements.

77

When required by national law, BASF establishes provisions for potential, but not confirmed, soil contamination at BASF sites around the world which are still in operation. In general -- unless otherwise required by national law -- investigations into potential contamination and subsequent cleanup are only required when a site is closed and the existing production facilities dismantled. BASF cannot at this time accurately determine the ultimate potential liability for investigation and cleanup at sites which are still in operation. Taking into account BASF's experience to date regarding environmental matters and facts currently known, BASF believes that capital expenditures and remedial actions necessary to comply with existing laws and conditions governing environmental protection will not have a material effect on BASF's consolidated

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

financial condition or results of operations.

In connection with the onshore and offshore oil and gas activities conducted by BASF's subsidiary, Wintershall, BASF is subject to an increasing number of national laws, regulations and directives governing the protection of the environment. In connection with the exploration, drilling, production, storage, transportation and distribution of oil and gas, these regulations may, among other things:

- require permits;
- restrict the types, quantities and concentration of substances that may be released into the environment;
- limit or prohibit such activities on land within environmentally protected areas; and
- impose criminal or civil liability for pollution of soil, water and air as a result of such activities.

Wintershall performs environmental impact studies where new oil and gas activities are planned and complies with environmental protection principles when onshore and offshore sites are abandoned. Environmental laws and regulations have an increasing impact on the oil and gas industries, and therefore on Wintershall. It is impossible to predict accurately the effect of future developments in such laws and regulations on Wintershall's future earnings and operations. Some risk of environmental costs and liabilities is inherent in Wintershall's oil and gas activities, as it is with other companies engaged in similar businesses. BASF can make no assurance that Wintershall will not incur material costs and liabilities relating to environmental matters.

In recent years the operations of all chemical companies have become subject to increasingly stringent legislation and regulations related to occupational safety and health, product registration and environmental protection. Such legislation and regulations are complex and constantly changing, and there can be no assurance that future changes in laws or regulations would not require BASF to install additional controls for certain of its emission sources, to undertake changes in its manufacturing processes or to investigate possible soil or groundwater contamination and remediate proven contamination at sites where such cleanup is not currently required.

SUPPLIES AND RAW MATERIALS

RAW MATERIALS PROCUREMENT

Through its Verbund strategy, BASF operates in an integrated manufacturing environment that processes basic raw materials to produce thousands of products for sale as finished goods at various points in these manufacturing processes. Large amounts of raw materials purchased by BASF are therefore used as feedstocks in these value-adding chains of production.

The major raw materials that feed BASF's Verbund production sites are hydrocarbon-based raw materials such as naphtha and LPG (liquefied petroleum gas). These materials are used as feedstocks for the steam crackers that are operated in Ludwigshafen, Germany; Antwerp, Belgium; and -- since the fourth quarter of 2001 -- in Port Arthur, Texas. Other important hydrocarbon-based

raw materials are natural gas, benzene and propylene. BASF primarily sources its natural gas from Russia by means of a long-term natural gas supply contract with Gazprom. This contract is conducted through BASF's joint venture, WINGAS. Other

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

important materials at BASF include cyclohexane, styrene, titanium dioxide and methanol.

BASF believes the company can purchase raw materials most efficiently through its network of global and regional procurement teams, which BASF refers to as its "Procurement Verbund." High-volume raw materials or those of strategic importance, such as raw materials used at the start of BASF's value-adding chains of chemistry, tend to be purchased by global procurement teams in order to leverage BASF's purchasing power and secure a stable supply of key raw materials. Regional procurement teams play an essential role in purchasing raw materials for the company's regional production sites.

BASF has a policy of maintaining, when possible, multiple sources of supply for materials and is not dependent on a limited number of suppliers for essential raw materials.

BASF has not experienced any difficulty in obtaining sufficient supplies of raw materials in recent years and believes it will be able to obtain them at competitive market prices in the future. BASF, however, cannot give any assurance that its ability to obtain sufficient raw materials at any time will not be adversely affected by unforeseen developments. In addition, the prices of raw materials may vary, perhaps significantly, from year to year.

TECHNICAL GOODS AND SERVICES PROCUREMENT

The technical goods and services that BASF purchases are related primarily to the company's manufacturing activities, which involve significant capital expenditures to design and build plants. These expenditures also cover the maintenance of sites and offices around the world.

BASF's global and regional procurement teams in its Procurement Verbund work with technicians and engineers to identify where and how technical goods and services can be procured most efficiently. To this end, the standardization of goods and services has a major role to play. Standardizing goods and services tends not only to be more cost effective, but reduces the expenses associated with servicing and maintenance. Furthermore, the company's procurement teams work closely with suppliers to support them in developing system solutions. In this way, the capital expenditures needed to develop such solutions can be allocated more effectively.

E-COMMERCE

BASF is actively pursuing the opportunities offered by e-commerce to increase the efficiency of its procurement processes. For example, increasingly in the chemicals industry, buyers and sellers are connecting their respective enterprise resource planning (ERP) systems through online marketplaces. In 2001, BASF's ERP was linked to Elemica Holding Ltd., a neutral electronic marketplace for the purchase and sale of basic, intermediate, specialty and fine chemicals.

Electronic marketplaces are also playing a strategic role in BASF's technical goods and services procurement. For example, BASF is a founding partner in cc-chemplorer, a marketplace for maintenance, repair and operations-related products and services for the chemical industry. BASF believes that its involvement in such e-commerce activities is making a positive contribution to the speed and quality of its procurement activities.

ORGANIZATIONAL STRUCTURE

BASF Aktiengesellschaft is the ultimate parent company of the BASF Group. The Group operates in five separate business segments which encompass BASF's 12

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

operating divisions. The business segments are reportable segments except for business segment Agricultural Products & Nutrition, which is treated as two reportable segments, the disclosing separately the Agricultural Products and Fine Chemicals divisions. The divested Pharmaceuticals division was formerly included as a third reportable segment in the business segment formerly known as Health & Nutrition.

In 2001, BASF established 48 business units organized along industry lines. These business units are responsible for production, marketing and sales activities, 38 of which have a regional focus.

In addition, to its operating divisions and business units, BASF has three corporate divisions which support the Board of Executive Directors in directing the company's activities, and eight competence centers which oversee strategic activities and set global standards. The corporate divisions are Legal, Taxes & Insurance; Planning & Controlling and Finance. The competence centers are Logistics & Information Services; Human Resources; Environment, Safety & Energy; Purchasing; Corporate Engineering; Chemicals Research & Engineering; Specialty Chemicals Research and Polymer Research.

SIGNIFICANT SUBSIDIARIES

The following table sets forth significant subsidiaries owned, directly or indirectly, by BASF Aktiengesellschaft:

NAME OF COMPANY -----	PERCENTAGE OWNED (%) -----
BASF Corporation, Mount Olive, New Jersey.....	100
BASF Antwerpen N.V., Antwerp, Belgium.....	100
Wintershall AG, Kassel, Germany.....	100
BASF Coatings AG, Munster-Hiltrup, Germany.....	100
Elastogran GmbH, Lemforde, Germany.....	100
BASF Schwarzheide GmbH, Schwarzheide, Germany.....	100
BASF Espanola S.A., Tarragona, Spain.....	100
BASF S.A., Sao Bernardo do Campo, Brazil.....	100

DESCRIPTION OF PROPERTY

BASF owns and operates numerous production and manufacturing sites throughout the world. The principal offices of BASF Aktiengesellschaft are located in Ludwigshafen, Germany. In addition, BASF operates regional headquarters, sales offices, distribution centers and research and development facilities worldwide.

At the heart of BASF's integration strategy are its Verbund production sites. The following is a description of these sites including the number of production plants:

LOCATION -----	PRODUCTION	
	ACREAGE -----	PLANTS -----
Ludwigshafen, Germany.....	1,760	245
Antwerp, Belgium.....	1,470	58

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Geismar, Louisiana.....	2,290	10
Freeport, Texas.....	510	20

80

Additional Verbund sites are currently under construction in Kuantan, Malaysia, with the joint venture partner PETRONAS and in Nanjing, China, with the joint venture partner SINOPEC.

See "Item 4. Information on the Company -- Environmental Matters" for information on environmental issues related to BASF's properties. Additional information regarding BASF's property, plant and equipment is contained in Note 14 to the Consolidated Financial Statements included in Item 18.

For information on BASF's oil and natural gas exploration and production activities, see "Item 4. Information on the Company -- Oil & Gas" and "Supplementary information concerning oil and gas producing activities (unaudited)" in Item 18.

The following is a list of BASF's significant production sites, all of which BASF owns, except as indicated below:

ITEM 5. OPERATING AND FINANCIAL REVIEW AND PROSPECTS

OVERVIEW

BASF is a transnational chemical company that aims to increase and sustain its corporate value through growth and innovation. The company's product range includes high-performance products, including chemicals, plastics, coatings systems, dispersions, agricultural products, fine chemicals as well as crude oil and natural gas.

BASF is comprised of the parent company, BASF Aktiengesellschaft of Ludwigshafen, Germany, and 153 consolidated subsidiaries. The company has customers in more than 170 countries and operates production sites in 39 countries.

BASF conducts its worldwide operations through 12 operating divisions, which have been aggregated into five business segments based on the nature of the products and production processes, type of customers, channels of distribution and nature of the regulatory environment. The business segments are reportable segments, with the exception of Agricultural Products & Nutrition, which is treated as two reportable segments, Agricultural Products and Fine Chemicals, respectively. The divested Pharmaceuticals division was formerly included as a third reportable segment in the business segment Health & Nutrition.

The reportable operating segments are:

- Chemicals
- Plastics & Fibers
- Performance Products
- Agricultural Products
- Fine Chemicals
- Pharmaceuticals (discontinued operations)
- Oil & Gas

After receiving clearance from the Federal Trade Commission and the European Union Commission, BASF sold its pharmaceuticals business on March 2, 2001 to Abbott Laboratories Inc. of Abbott Park, Illinois. Pursuant to the requirements of U.S. GAAP, pharmaceuticals activities are disclosed as discontinued operations as described in Item 18 under Note 3 to the Consolidated Financial Statements. For additional information on BASF's pharmaceuticals activities as

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

discontinued operations, see also Notes 4 and 5 to the Consolidated Financial Statements in Item 18.

CHEMICALS

In the Chemicals segment, profitability is to a large extent determined by the margins between prices for raw materials, particularly steam cracker feedstocks, and prices for end-products, which are set on the world commodity markets, as well as by the cost of production, which is influenced by the level of capacity utilization.

Because cost efficiency and a global presence are critical to the profitability of this segment, BASF's capital expenditures are focused on constantly improving processes and achieving technological and cost leadership as well as expanding the worldwide presence of its chemicals business. BASF has achieved industry leadership in many sectors of the chemical industry, operating world-scale plants with modern technology that incorporate BASF's Verbund approach to integration. This enhances the benefits achieved through economies of scale. The Verbund is based

85

on the creation of company-wide value-adding chains, beginning with a favorable cost position for the most basic starting materials and capitalizing on this cost advantage as basic materials are processed to form more complex compounds. High captive use ensures high capacity utilization rates of production plants, making the Chemicals segment less dependent on fluctuations in external demand. This also means that new capacities being brought on stream by BASF have a less disruptive effect on the market. The Verbund approach gives BASF cost leadership with respect to many products. BASF is currently expanding its existing Verbund sites and building new ones in emerging markets.

The Chemicals segment sells approximately 35% of its products, mostly from the Petrochemicals and the Inorganics divisions, to other segments. The transfer prices for these sales are based on market prices, but offer the internal buyer advantages through savings in logistics, including transportation and purchasing, and in energy and infrastructure costs. Many of the raw materials that this segment consumes are produced within BASF. For raw materials that are not produced by BASF or where BASF's demand exceeds its own production, BASF takes advantage of its size through centralized purchasing of raw materials around the world for many of its operating divisions, both on the basis of long-term contracts and in spot markets. In addition, BASF is taking advantage of the opportunities offered by e-commerce to increase its purchasing efficiencies for the Chemicals segment.

Raw materials account for a significant proportion of the cost in the Chemicals segment. Therefore, the Chemicals segment is sensitive to cycles in the prices of raw materials such as oil and gas. In addition, many of the segment's products are used as starting materials for end-products in cyclical industries that are affected by economic cycles such as the automotive, chemicals and construction industries.

PLASTICS & FIBERS

The Plastics & Fibers segment produces both commodities and specialty products. The profitability of commodity products is determined by the spread between the prices of monomer raw materials, particularly products manufactured in steam crackers, such as ethylene and propylene, and the prices of the polymer end-products.

Due to increasing price competition, low production costs and high sales volume are critical to achieving profitability. The strategy of the segment

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

focuses on achieving economies of scale through world-scale production and using advanced technologies and backward integration within the Verbund. In addition, BASF intends to stabilize earnings in this segment by developing innovative applications, entering new markets and tailoring future capacity expansions to the growth of specific markets.

The Plastics & Fibers segment's specialty products are relatively resilient to economic cycles. A key success factor in the markets for these products is the ability to maintain long-term relationships with customers. To strengthen these relationships, BASF offers customized products and systems to meet the specific needs of its customers. In addition, BASF is expanding its global presence as key customers also globalize. To this end, BASF will continue to develop its worldwide network of application centers to work closely with customers to provide specially formulated products.

PERFORMANCE PRODUCTS

The profitability of commodity and commodity-like products in this segment is determined mainly by the segment's production technology and costs. Production in world-scale plants in close proximity to regional markets and the use of leading production technologies allows BASF to maintain its status as a low-cost, global producer.

86

The segment also produces a number of high-value chemicals that often represent the final stages of BASF's value-adding chains. The critical success factors for these products are product innovation, application technology and strong customer relationships. To these ends, the development of new products is strongly focused on customer needs.

AGRICULTURAL PRODUCTS & NUTRITION

The Agricultural Products & Nutrition business segment is comprised of Agricultural Products and Fine Chemicals, both of which are generally non-cyclical businesses. It has devoted substantial resources to acquisitions as well as to research and development to become a market leader. BASF is investing in new state-of-the-art plants, both on its own and in partnerships, to ensure economies of scale are achieved.

OIL & GAS

In the Oil & Gas segment, crude oil prices are subject to international supply and demand and other factors that are beyond BASF's control. Such factors can also affect the price of natural gas because in many countries, including Germany, natural gas prices are tied to the prices of refined products.

In BASF's activities relating to the exploration and production of oil and natural gas, profitability is dependent on BASF's expertise to explore for new hydrocarbon resources and to efficiently develop and produce oil and gas deposits in its core regions.

Key factors affecting the profitability of the natural gas distribution and trading business are BASF's access to large gas reserves, the liberalization of the natural gas industry in Germany, the adequacy of its natural gas storage site and its ability to procure long-term contracts covering an increasing volume of natural gas.

BASIS OF PRESENTATION

The Consolidated Financial Statements of BASF included in Item 18 of this report have been prepared based on BASF's accounting and valuation principles in

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

accordance with German GAAP as required by the German Commercial Code (HANDELSGESETZBUCH), the standards of the German Accounting Standards Committee (GASC) and the German Stock Corporation Act (AKTIENGESETZ).

There are certain differences relating to accounting and valuation methods that are required under U.S. GAAP but are not allowed under German GAAP. The effects of BASF's reconciliation of the remaining differences between German GAAP and U.S. GAAP for the years ended December 31, 2001 and 2000 are described in Note 4 to the Consolidated Financial Statements included in Item 18.

In June 2001, the Financial Accounting Standards Board (or "FASB") issued Statement of Financial Accounting Standards (or "SFAS") No. 141, "Business Combinations." SFAS 141 requires the purchase method of accounting for business combinations initiated after June 30, 2001 and eliminates the pooling-of-interests method. BASF believes that the adoption of SFAS 141 will have no impact on the reconciliation of net income and stockholders' equity.

In June 2001, the FASB issued SFAS No. 142, "Goodwill and other Intangible Assets." SFAS No. 142 specifies that intangible assets with an unlimited useful life and goodwill will no longer be amortized but will be periodically tested for impairment and written down to fair value if considered impaired. BASF is currently reviewing these statements to determine this impact on the amounts disclosed in the reconciliation of net income and stockholders' equity to U.S. GAAP in the Notes to the Consolidated Financial Statements.

87

Also, in June 2001, the FASB issued SFAS 143, "Accounting for Asset Retirement Obligations." SFAS 143 addresses financial accounting and reporting for obligations and costs associated with the retirement of tangible long-lived assets. In August 2001, the FASB issued SFAS 144, "Accounting for the Impairment or Disposal of Long-Lived Assets," which provides a single accounting model for long-lived assets to be disposed of by sale. BASF is currently reviewing these statements to determine this impact on the amounts disclosed in the reconciliation of net income and stockholders' equity to U.S. GAAP in the Notes to the Consolidated Financial Statements.

RESULTS OF OPERATIONS

GROUP

This Management's Discussion and Analysis of Financial Condition and Results of Operations should be read in conjunction with the Consolidated Financial Statements and the Notes to the Consolidated Financial Statements included in Item 18 of this Annual Report.

After a positive start in the first quarter, the business climate worsened steadily as the year progressed. This affected all regions to a varying extent. BASF therefore embarked on a comprehensive restructuring program to improve its competitive position. This program includes the closure of sites and production plants that no longer fit BASF's strategic and business objectives. Special charges relating to the reorganization of BASF's marketing and sales structures were incurred, which had a significant negative effect on earnings.

88

The following table sets forth sales and income for BASF. Sales are net of petroleum and natural gas taxes.

SALES AND EARNINGS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

		2001	% CHANGE FROM PREVIOUS YEAR		2000	% CHANGE FROM PREVIOUS YEAR

In 2001, income from operations included E1,076 million in special charges, primarily for restructuring and streamlining measures taken in production, marketing and sales. Compared with the previous year's special charges of E330 million, this represents an increase in special charges of E746 million.

In conjunction with the restructuring program, charges incurred for severance payments, losses on disposal and nonscheduled write-downs on plants to be closed, as well as the costs of restructuring plant operations, totaled E747 million. Special charges were also incurred as a result of higher-than-expected fines imposed by the E.U. Commission for antitrust violations in BASF's vitamins business. The provision established for this penalty had to be increased by approximately E200 million. Additional charges of E20 million were incurred for further contributions to the federal foundation "Remembrance, Responsibility and the Future" to compensate those who suffered injustice as forced laborers under the National Socialist regime.

Of the total special charges included in income from operations, Europe accounted for E609 million; North America (NAFTA) for E431 million; South America for E14 million and the Asia, Pacific Area, Africa region for E22 million.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Special charges of E73 million affected the financial result. These special charges resulted from restructuring measures taken in companies that are accounted for under the equity method in the Consolidated Financial Statements, such as the joint venture Basell N.V.

In 2000, special items recorded in other operating expenses and other operating income included E590 million in special charges and E260 million in special income. Included in special charges are costs of E344 million related to the integration of the crop protection business of American Home Products Corp. A further E100 million related to charges from restructuring activities in the Pharmaceuticals segment, which included closing the research and development site in Nottingham, United Kingdom, and workforce reductions. Other special charges relate to the higher settlement costs for litigation brought by indirect purchasers of vitamins in the United States. Various divestitures led to special income of E205 million and included the sale of the Novolen-Registered Trademark- polypropylene technology of Targor GmbH to an international consortium, the sale of the Kraton-Registered Trademark- polymers business to Kraton Polymers GmbH, a subsidiary of the Deutsche Shell GmbH, the sale of the urology business in the Pharmaceuticals segment to Abbott GmbH and the conclusion of business relating to the sale in 1999 of the refinery business in the Oil & Gas segment.

In 1999, special items recorded in other operating expenses and in other operating income had a negative effect on income from operations of E941 million. Of this amount, E815 million related to provisions for litigations, settlements and related matters for vitamins in the Fine Chemicals segment and for the thyroid medication Synthroid-Registered Trademark- in the Pharmaceuticals segment. A further E310 million related to asset impairments, primarily in the Fine Chemicals, Colorants & Finishing Products and Chemicals segments, and to charges for restructuring in the Pharmaceuticals segment and in the Colorants & Finishing Products and Plastics & Fibers segments. In addition, an expense of E51 million was recorded for BASF's participation in the initiative, "Remembrance, Responsibility and the Future," to provide compensation to those who suffered injustice as forced laborers under the National Socialist regime. Special income of E235 million was generated by the disposal of fixed assets due to the divestiture of the oil marketing and refinery business in the Oil & Gas segment and of the Compo-Registered Trademark- specialty fertilizer business.

2001 COMPARED WITH 2000

SALES

In 2001, sales decreased E3,446 million, or 9.6%, to E32,500 million. In terms of ongoing business, i.e., excluding pharmaceuticals, polyolefins and textile dyes, sales were E31,990 million, or 3.2% higher than in the previous year. Major contributors to this result were the Oil & Gas and Agricultural Products & Nutrition business segments.

The following table sets forth the various factors affecting the change in sales:

	2001	
	IN MILLIONS	AS % OF SALES
Volume.....	E (110)	(0.3)
Prices.....	(492)	(1.4)
Currency exchange.....	(195)	(0.5)

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Acquisitions and additions to scope of consolidation....	1,810	5.0
Divestitures and deconsolidations.....	(4,459)	(12.4)
	-----	-----
	E (3,446)	(9.6)

Continued weakness in the global economy had an increasingly depressive effect on the sales volumes of our products. The majority of our operating divisions were affected. Despite this general

90

trend, the Inorganics division increased its sales, and crude oil and natural gas production levels were also higher than in the previous year.

For the most part, prices for our products declined in the face of falling demand. Price levels improved in the Inorganics and Intermediates divisions, and, to a lesser extent, in some product lines of the Coatings division.

Portfolio changes led to a decline in sales of E2,966 million, or 8.3%. These changes involve in particular:

- the divestiture of the pharmaceuticals and generics business, and
- the impact on sales due to the transfer of the polyolefins and the textile dye businesses to the Basell N.V. and DyStar Group joint ventures at the end of the third quarter of 2000.

Sales were positively influenced by the following:

- the acquisition of the vitamins business from Takeda Chemical Industries Ltd. at the beginning of 2001,
- the purchase of American Home Products Corp.'s crop protection business in mid-2000, and
- the acquisition of the superabsorbents business of Chemdal International Corporation in June 2000.

Additions to the scope of consolidation contributed E317 million to sales, or 0.9%. Our subsidiary in Turkey, in which all previous operations had been combined, is included in these numbers, as are companies in Japan, China, India, Hungary, Poland and Russia.

GROSS PROFIT

Gross profit declined in 2001 by E2,379 million or 18.7% to E10,312 million. As a percentage of sales, gross profit fell from 35.3% to 31.7%. The decrease reflects the continued pressure on selling prices as well as raw material costs that did not decline until the second half of the year.

INCOME FROM OPERATIONS

Due to weak demand and high special charges, income from operations fell sharply by E1,853 million, or 60.4% to E1,217 million. Without considering the effect of special items, income from operations decreased E1,107 million, or 32.6%, to E2,293 million, and represented 7.1% of sales, compared with 9.5% in the previous year.

INCOME FROM ORDINARY OPERATIONS/INCOME BEFORE TAXES

In 2001, income from ordinary operations decreased E2,218 million, or 78.5%,

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

to E609 million. This decline was primarily due to special items. Excluding the effect of special items, income from ordinary operations was E1,758 million. This represents a decline of E1,266 million, or 42%, compared with the previous year, and is a reflection of weak economic conditions. The effect of this decline on income from operations and on the financial result was E1,107 million and E159 million, respectively.

EXTRAORDINARY INCOME

The sale of our pharmaceuticals business to Abbott Laboratories Inc., Abbott Park, Illinois, resulted in extraordinary income of E6,121 million. Taxes charged on this income were E145 million. A large part of the gains realized relate to the sale of participations which we were able to dispose of as tax-exempt divestitures.

91

Extraordinary income consists of:

	(EUROS IN MILLIONS)

Extraordinary gains.....	8,794
Extraordinary expenses.....	2,673

	6,121

The extraordinary gains include proceeds from the sale of the pharmaceuticals business and additional compensation for the net liquidity and net assets transferred.

The expense items include the book values of the pharmaceuticals business, as well as provisions for warranties assumed and risks retained from the pharmaceuticals business.

As a result of the high extraordinary income, our income before taxes and minority interests was E6,730 million. This was E3,903 million, or 138%, more than in the previous year.

NET INCOME/EARNINGS PER SHARE

BASF achieved net income of E5,858 million. This amount consists of extraordinary income of E5,976 million net of the related taxes and a loss of E118 million in income from current operations.

The effective tax rate on income from ordinary operations was 125%, compared with 55% in the previous year. The high level of taxes is due to non-deductible foreign taxes on oil producing operations and for fines imposed by the E.U. Commission related to the violation of antitrust laws in the vitamins business, which were assumed to be non-deductible. The effective tax rate was reduced by a charge in accounting principles for deferred tax assets. Based upon the draft Standard No. 10 from the German Accounting Standards Committee (GASC) on accounting for deferred taxes, we also recorded deferred tax assets for tax loss carryforwards, to the extent realization of this potential for tax reduction through future earnings is foreseeable. These adjustments resulted in a reduction in tax expense of E220 million.

The capitalization of deferred tax assets for tax loss carryforwards from previous years resulted in income of E51 million, which is shown separately in

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

the consolidated statement of income.

Earnings per share were E9.72 in 2001, compared with E2.02 in 2000. Of this, E9.92 related to extraordinary income.

Under U.S. GAAP, the gain on the disposal of the pharmaceuticals business as well as the results of operations of the pharmaceuticals business of the first two months of 2001 would be reported as discontinued operations and not as extraordinary income. Also, the effect of adopting SFAS 133, "Accounting for Derivatives," would have been shown as the cumulative effect of a change in accounting principle. Under U.S. GAAP, our net income was E5,692 million, or E(238) million excluding extraordinary income. Per share, this is E9.45, or a loss of E0.39 after excluding extraordinary income (see Note 4 in the Notes to the Consolidated Financial Statements).

2000 COMPARED WITH 1999

SALES

Sales (net of petroleum and natural gas taxes) rose 22% in 2000 to E35,946 million from E29,473 million in 1999.

92

The following table sets forth the various factors affecting the change in sales:

	2000	
	IN MILLIONS	AS % OF SALES
Volume.....	E 1,902	6.5
Prices.....	3,326	11.3
Currency exchange.....	1,947	6.6
Acquisitions and additions to scope of consolidation.....	1,231	4.2
Divestitures and deconsolidations.....	(1,933)	(6.6)
	E 6,473	22.0

Sales volumes rose 6.5% in 2000, with the Plastics & Fibers and the Chemicals segments posting the greatest increases. High demand, additional production capacities and increased market shares contributed to this increase.

Rising prices accounted for an 11.3% increase in sales in 2000. Prices rose most sharply in the Oil & Gas segment and the Plastic & Fibers segment as well as in the Petrochemicals division of the Chemicals segment to compensate for higher raw material costs.

Positive currency effects, above all from the strength of the U.S. dollar and an appreciation in the Japanese yen, the Brazilian real and the Korean won, added E1,947 million to sales.

The combined effect of acquisitions, divestitures and changes in the scope of consolidation reduced sales by E702 million or 2.4%. Acquisitions contributed E1,056 million to sales in 2000. Major acquisitions included:

- the crop protection business of American Home Products Corp. (AHP);

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- the superabsorbents business of Chemdal International Corporation; and
- the industrial coatings business of Rohm and Haas Co.

Divestitures reduced sales by E1,919 million in 2000. Divestitures included:

- the sale of the marketing and refinery business in the Oil & Gas segment at the end of 1999;
- the sale of the Compo-Registered Trademark- specialty fertilizer business at the end of 1999;
- the transfer of BASF's polyolefins activities conducted through the companies Targor and Elenac to the joint venture Basell N.V. at the end of the third quarter; sales for the first nine months of 2000 from Targor and from BASF's participation in Elenac are included in the sales figures of the Plastics & Fibers segment; BASF's participation in Basell N.V. is accounted for under the equity method; and
- the transfer of the textile dye business to DyStar at the beginning of the fourth quarter; the first nine months of global sales in 2000 for this business were still included in the sales of the Colorants & Finishing Products segment; BASF's participation in DyStar is accounted for under the equity method.

Additions to the scope of consolidation and deconsolidations contributed a net E161 million to sales. See Note 1 to the Consolidated Financial Statements for further information on the companies that were consolidated for the first time in 2000 and the effects thereof on the Consolidated Financial Statements.

93

GROSS PROFIT

Gross profit rose 14.5% in 2000 to E12,691 million from E11,081 million in 1999. Gross profit as a percentage of sales fell in 2000 to 35.3% from 37.6% for the previous year, primarily due to a substantial increase in raw material costs, which could only be passed on in part in higher prices for BASF's products and only after a period of delay.

INCOME FROM OPERATIONS

Income from operations increased 52.8% in 2000 to E3,070 million from E2,009 million in 1999 due to higher sales. Other operating expenses net of other operating income fell 13.8% in 2000 to E1,537 million from E1,783 million in 1999 due to lower special charges in 2000. Total special items resulted in charges of E330 million in 2000 compared with charges of E941 million in 1999. Excluding the effect of special items, income from operations increased 15.3%.

INCOME BEFORE TAXES

In 2000, income before taxes increased 8.5% to E2,827 million from E2,606 million in 1999. The increase in income from operations was partly offset by a decline in the financial result. The financial result in 2000 amounted to E(243) million, E840 million lower than in 1999. In 2000, special income from securities and the sale of participating interests totaled E133 million. This represents a drop in special income of E619 million compared with 1999, when BASF sold its participation in Aral AG. The interest result in 2000 declined due to higher interest expenses from the higher financial indebtedness needed to finance acquisitions.

NET INCOME/EARNINGS PER SHARE

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The effective tax rate for 2000 stood at 54.6%. The rise in crude oil prices triggered an increase in non-deductible income taxes levied on BASF's exploration activities in North Africa and the Middle East. An additional factor was a reduction in deferred tax assets resulting from the decrease in effective tax rates as part of a package of tax reforms in Germany, from 52% to 38%. BASF's proposed special dividend payment will result in a tax credit, as this payment is subject to a tax rate of 30% instead of the 45% rate previously levied on retained earnings.

In 2000, net income increased 0.2% to E1,240 million from E1,237 million in 1999. Basic earnings per share in 2000 were E2.02 compared with E2.00 in 1999. See Note 4 to the Consolidated Financial Statements for a summary of the principal adjustments that would be required if U.S. GAAP rather than German GAAP had been fully applied. Net income under U.S. GAAP in 2000 was E1,454 million, or E2.37 per share.

94

The Chemicals segment is comprised of the Inorganics, Petrochemicals and Intermediates divisions. On July 1, 2001, the former Specialty Chemicals division was dissolved, and its glycols and alkylene oxides (for example, ethylene oxide and propylene oxide) product lines were transferred to the Petrochemicals division. All other Specialty Chemicals operations were transferred to the Performance Chemicals division. Polyurethane intermediates -- mainly aniline -- were transferred from the Intermediates division to the Polyurethanes division of the Plastics & Fibers segment. In 2000, the former Petrochemicals & Inorganics and Industrial Chemicals divisions were reorganized into the Inorganics and Petrochemicals divisions. As part of this reorganization, technical nitrogen products were transferred from Other (the former Fertilizers division) to the Inorganics division. Data for the Chemicals segment from 1999 and 2000 have been restated to reflect these reorganizations.

2001 COMPARED WITH 2000

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

SEGMENT OVERVIEW

In the Chemicals segment, sales to third parties decreased in 2001 to E4,494 million from E4,504 million in 2000. Growth in sales volumes in inorganic specialties and price increases in the Intermediates and Inorganics divisions were insufficient to offset completely a decline in sales in the Petrochemicals division. The oxo alcohols/plasticizers complex at the new BASF Verbund site in Kuantan, Malaysia, also contributed to sales, as did new plants and capacity expansion programs, such as trimethylolpropane in Ludwigshafen, Germany; hexanediol in Freeport, Texas; and ethylene oxide in Geismar, Louisiana.

Intersegmental transfers increased 1.8% in 2001 to E2,452 million from E2,408 million in 2000.

In 2001, income from operations decreased 43.4% to E362 million from E640 million in 2000. Both high raw material costs in the first half of 2001, most notably for naphtha, and the drop in the economy in the second half of the year -- which led to reduced demand in almost all customer segments -- had a major impact on income from operations. The Petrochemicals division came under particularly strong price and margin pressure, especially for products with excess capacity, such as plasticizers and solvents. Startup costs for new plants in Port Arthur, Texas; Geismar, Louisiana; and in Kuantan, Malaysia, created additional burdens on earnings.

95

Special items related primarily to the closure of a plant in the Petrochemicals division at the site in Tarragona, Spain; restructuring of an acetylene plant in Geismar, Louisiana; and integration into the Intermediates and Petrochemicals divisions of the site acquired in Feluy, Belgium.

Through its capital expenditures, BASF strives for a globally balanced position. To this end, BASF is strengthening BASF's operations in Europe, optimizing its Verbund structures in North America and establishing new Verbund sites in Asia. In 2001, BASF strengthened the Chemicals segment's core product groups -- butanediol and its derivatives, and phthalic anhydride -- by acquiring the SISAS Group's chemical site in Feluy, Belgium. Through capital expenditures and acquisitions, the Chemicals segment's assets increased 14.5% in 2001 to E4,847 million from E4,232 million in 2000.

Assuming the global economy begins to recover in 2002, BASF expects sales and earnings in the Chemicals segment to improve.

INORGANICS

In the Inorganics division, sales to third parties in 2001 increased 8.1% to E677 million, from E626 million in 2000. This sales growth was due primarily to higher prices but also volumes increased slightly. We increased sales and volumes over the previous year, above all in profitable inorganic specialties and electronic grade chemicals.

In 2001, income from operations improved, although economic conditions in important customer segments gradually deteriorated during the second half of the year. By year end, the recession in the semiconductor industry had led to a severe decline in demand for electronic grade chemicals. In the construction and woodworking industries, economic weakness intensified competition in the glues and impregnating resins product lines.

In 2001, BASF achieved high capacity utilization rates in its plants for large-volume inorganic products, which BASF produces primarily for captive use within the BASF Group (e.g., sulfuric acid, nitric acid, and the electrolysis

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

products chlorine and sodium hydroxide). Through economies of scale, we can supply the Verbund cost-effectively. Products from the Inorganics division form an important foundation for most of BASF's value-adding chains.

In addition to large-volume inorganic products, BASF's product range includes innovative specialties such as heterogeneous catalysts, electronic grade chemicals and powder injection molding technology. BASF is continuing to expand these profitable areas of our business. Last year BASF increased capacity for hydroxylamine free base -- a substance that is indispensable in the production of microchips -- from 4,000 metric tons per year to 7,000 metric tons per year. BASF also intensified its research efforts in the field of catalysts with the goal of securing or achieving technology and performance leadership. Here, BASF is focusing on catalysts with high growth rates.

In 2002, BASF expects income from operations to be lower as a result of continuing economic weakness in glues and impregnating resins as well as increasingly lower market prices for basic inorganic chemicals.

PETROCHEMICALS

In the Petrochemicals division, sales to third parties in 2001 were E2,079 million, a decrease of 3.7% from 2000. In 2000, strong volume demand and the rising price of naphtha led to significant price increases for cracker products and, as a result, to a steady increase in sales. However, in the course of 2001, this trend began to reverse as the economy began to slow down and raw material prices declined. First-time contributions to sales came from new plants that commenced operations

96

in 2001: the oxo alcohols/plasticizers complex in Kuantan, Malaysia, and the steam cracker in Port Arthur, Texas. Also during 2001, unprofitable plants in Tarragona, Spain were closed.

Income from operations in 2001 failed to meet expectations. After a strong start in the first quarter, cracker margins fell sharply in the second quarter. In addition, earnings were burdened by startup costs for the new plant in Kuantan, Malaysia, as well as by startup costs for the steam cracker in Port Arthur, Texas, which increased as the year progressed. The plasticizers and solvents product lines continued to suffer from excess capacity and, as a result, from strong price and margin pressures. In alkylene oxides and glycols, exceptionally high gas prices at the beginning of 2001 had an adverse effect on earnings in the United States. In Europe, BASF benefited from a high utilization rate and expanded its ethylene oxide plant in Antwerp, Belgium during the fourth quarter, making it the largest and most efficient in Europe.

In 2001, capital expenditures were lower than in the previous year. In the first quarter of 2002, construction is scheduled to be completed on a propylene plant that BASF is building with its partner SONATRACH in Tarragona, Spain. Another major project is the construction of a steam cracker at the Verbund site in Nanjing, China, where construction began in September 2001.

With BASF's new plants in Kuantan, Malaysia, and Port Arthur, Texas, BASF has laid the foundation for higher sales and earnings in the years to come. However, this expectation is based on the assumption that the global business and economic climate will improve in the course of 2002, allowing BASF to operate its world-scale plants most efficiently and to achieve optimal capacity utilization rates.

INTERMEDIATES

In the Intermediates division, sales to third parties in 2001 increased 1.0%

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

to E1,738 million from E1,720 million in 2000. BASF achieved this growth through higher sales prices for its products and the startup of new production capacities. Deteriorating economic conditions reduced sales volumes -- especially in the second half of the year -- and low utilization rates resulted in higher unit costs.

Income from operations was lower in 2001 than in 2000, as raw material costs remained high, especially in the first half of the year. Earnings were also burdened by the integration of the site in Feluy, Belgium, acquired at mid-year, and startup costs for new plants (trimethylolpropane and dimethylhexanediol in Ludwigshafen, Germany; 1,6-hexanediol in Freeport, Texas; optically active amines in Geismar, Louisiana).

Not accounting for the acquisition in Feluy, Belgium, BASF's capital expenditures were at the same level as last year. In 2001, BASF also focused on expanding its production plants in Ludwigshafen, Germany; Geismar, Louisiana; and Ulsan, Korea.

For 2002, BASF expects lower average raw material costs and substantially lower special charges. BASF therefore anticipates earnings to be higher than in 2001, despite only a moderate increase in sales.

2000 COMPARED WITH 1999

SEGMENT OVERVIEW

In the Chemicals segment, sales to third parties rose 36.9% in 2000 to E4,504 million from E3,289 million in 1999. All operating divisions, and above all the Petrochemicals division, contributed to this increase in sales. Sales volumes in 2000 increased, especially during the first half of 2000 due to high demand for the segment's products and new production capacities. BASF was able to increase prices for major products. The Petrochemicals division posted the sharpest

97

rise in prices due to an increase in prices for the basic cracker products ethylene, propylene and benzene, which was fueled by a rise in the price of naphtha, the division's most important raw material.

Intersegmental sales increased 12.6% in 2000 to E2,408 million from E2,139 million in 1999, reflecting higher transfer prices for cracker products from the Petrochemicals division.

Income from operations increased 1.7% in 2000 to E640 million from E629 million in 1999. Due to market conditions, especially for products such as plasticizers, solvents and butanediol, BASF was unable to pass on sharply increased raw material prices in full to customers. The Petrochemicals division significantly increased its income from operations, primarily due to higher margins for cracker products. However, this improvement was nearly offset by a decline in income from operations in the segment's other divisions. As a result of the higher cost of raw materials, income from operations as a percentage of sales to third parties declined in 2000 to 14.2% from 19.1% in 1999.

In 2000, the Chemicals segment's assets increased by 25.0% to E4,232 million from E3,386 million in 1999, which reflects significant investments made by BASF with the goal of expanding this segment's business.

INORGANICS

In the Inorganics division, sales to third parties in 2000 rose 15.3% to E626 million from E543 million in 1999. During the course of the year, BASF

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

increased prices for its products in this division in order to pass on the higher cost of natural gas.

Despite an increase in sales, income from operations in 2000 was lower than in 1999, as the Inorganics division could not increase prices for its products to the same extent to which the cost of raw materials increased.

At the end of 2000, BASF started up the world's largest formaldehyde plant in Ludwigshafen, Germany, with a production capacity of 180,000 metric tons per year.

PETROCHEMICALS

In the Petrochemicals division, sales to third parties in 2000 increased 69.4% to E2,158 million from E1,274 million in 1999. The increase in sales was due above all to substantially higher prices for cracker products and higher sales volumes. As in 1999, the plasticizers and solvents product lines suffered from sharp margin pressure as a result of excess manufacturing capacity industry-wide and continued price competition. The alkylene oxides and glycols business was influenced by high raw material costs, but sales volumes increased and higher prices could be passed on to customers to a limited extent and after a period of delay.

Due to favorable demand, higher raw material costs -- for example, for naphtha -- could be passed along to a large extent in the prices for cracker products. However, during the second half of the year, cracker margins did come under pressure. The Petrochemicals division was again a major contributor to the Chemical segment's income from operations.

Capital expenditures on fixed assets increased in 2000. Major projects included the construction of a steam cracker with BASF's partner TotalFinaElf S.A., in Port Arthur, Texas, the construction of a propane dehydrogenation plant with partner SONATRACH in Tarragona, Spain, and the construction of an oxo C(4) alcohol complex in Kuantan, Malaysia.

98

INTERMEDIATES

In the Intermediates division, sales to third parties in 2000 increased 16.8% to E1,720 million from E1,472 million in 1999. This increase was due to higher sales volumes in the division's major product areas. The effect of falling prices on sales was more than offset by positive currency effects of approximately 9%.

Income from operations in the Intermediates division declined in 2000 due to sharp increases in raw material costs. The division could not fully pass these higher costs on to customers through higher prices for its products, partly because existing sales contracts had not yet expired.

Capital expenditures rose in 2000, primarily due to the expansion of existing plants in Ludwigshafen, Germany; Geismar, Louisiana; and Ulsan, Korea.

The Plastics & Fibers segment comprises the Styrenics, Performance Polymers and Polyurethanes divisions. On July 1, 2001 the former operating divisions Engineering Plastics and Fiber Products were combined into the division Performance Polymers. Polyurethane intermediates -- mainly aniline -- were transferred to the Polyurethanes division from the Intermediates division of the Chemicals segment. Prior year amounts have been restated to reflect these changes. The polyolefins business is also included in the segment data through the end of September 2000, but is now a part of the joint venture Basell N.V., which is not consolidated in the Group's financial statements. The ammonium sulfate business, which -- as part of the Fertilizers business -- was formerly included in Other, was transferred on June 1, 2000 to the Fiber Products division. The segment reporting for 2000 and 1999 reflects this reorganization.

2001 COMPARED WITH 2000

SEGMENT OVERVIEW

Sales to third parties in 2001 dropped 25.8% to E8,185 million from E11,030 million in 2000.

99

On the basis of ongoing business, i.e., excluding polyolefins, sales decreased 8.6% from E8,951 million in 2000 to E8,182 million in 2001. Sales declined in all three of the segment's divisions, but to the greatest extent in the Performance Polymers division. Weakening demand and the resulting decline in sales volumes resulted in a 2.5% decrease in sales. Declining prices contributed to a 5.2% decrease in sales, while changes in exchange rates contributed to a 0.4% decline in sales.

The Polyurethanes division made the greatest positive contribution to the segment's income from operations, which decreased by E904 million, resulting in a loss of E2 million. This decrease in earnings was primarily due to reduced demand, strong margin pressures and new plant startups, in particular in North America.

Special charges totaling E182 million also contributed to the decline in earnings. These charges related primarily to the planned closure of plants in the Styrenics and Performance Polymers divisions in North America (NAFTA) and Europe; a write-down of a styrenics plant; and the planned closure of an

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

obsolete toluene diisocyanate (TDI) plant in the Polyurethanes division in Geismar, Louisiana, which will be replaced by a new plant.

In 2001, the Plastic & Fibers segment's assets increased by 4.2% to E6,344 million in 2001 from E6,086 million in 2000. Capital expenditures, including the acquisition of a styrene plant in Korea, were in excess of depreciation charges by E212 million. Further additions resulted from changes in the scope of consolidation.

For 2002, BASF expects sales and earnings to increase if the global economy improves in the second half of the year. BASF expects the restructuring of production in the NAFTA region to begin contributing to this development. Overall, positive effects from the global restructuring of BASF's production are expected to be reflected in earnings from 2003 onward.

STYRENICS

In the Styrenics division, sales to third parties in 2001 declined 7.1% to E3,267 million from E3,517 million in 2000. Despite a difficult economic environment, sales volumes increased 5%, but selling prices and therefore margins were under downward pressure. Thus, price effects contributed 12% to the decline in sales.

Income from operations did not develop satisfactorily in 2001. Business operations in the NAFTA region did not meet BASF's expectations. Special restructuring measures in the NAFTA region and in Europe burdened income from operations. The Styrenics division's specialty products, however, proved to be cyclically resilient.

In mid-2001, the division acquired a styrene plant in Korea. In addition, we invested in an EPS plant in Brazil and in a production plant for specialized foams in Italy. Expansion of production capacity for ethyl benzene in Antwerp, Belgium, was completed at the end of 2001.

In 2002, BASF's new ethyl benzene and styrene plant in Ludwigshafen, Germany, is expected to start operations and improve the efficiency of the value-adding chain.

BASF expects that the division's sales and earnings will improve significantly in 2002 only if there is a broad-based upturn in the economy in 2002.

PERFORMANCE POLYMERS

In the Performance Polymers division, sales to third parties in 2001 fell 15.4% to E2,241 million from E2,648 million in 2000. Weak demand in Asia affected fiber intermediates in particular. Engineering plastics products, on the other hand, performed well in a difficult market environment.

100

The decline in sales was due to an 11% reduction in sales volumes. In addition, downward pressure on product prices increased steadily, while raw material costs could not be reduced to the same extent. Approximately, price effects accounted for a 5% decline in sales.

Income from operations fell sharply, partially due to low capacity utilization rates. In 2001, the division was also burdened by special items related to various restructuring measures.

As of the beginning of 2002, there are no indications that the earnings situation in the Performance Polymers division will improve in the short term.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

POLYURETHANES

In 2001, sales to third parties in the Polyurethanes division decreased 4.3% to E2,677 million from E2,798 million in 2000.

Sales volumes declined 3% resulting from the difficult economic environment in 2001. Price effects accounted for 1% of the decline in sales. The first full year of operation for the MDI II plant (diphenylmethane diisocyanate) in Geismar, Louisiana, and the development of additional distribution channels through the purchase of system houses in the United States and Turkey contributed to a stabilization in sales.

Despite a decline compared with 2000, income from operations before special items in the Polyurethanes division was once again satisfactory. Higher raw material costs, especially for benzene, toluene and propylene, could only be passed on to customers in higher prices for BASF's products to a limited extent. The easing in raw material costs that started in the second half of the year was partially offset by price reductions demanded by the market.

The largest capital expenditures in the Polyurethanes division were for a new TDI (toluene diisocyanate) plant in Geismar, Louisiana, and for the construction of an SM/PO (styrene monomer/ propylene oxide) plant in Singapore as part of BASF's Ellba Eastern Private Ltd. joint venture with Shell. Both plants are scheduled to go on stream in 2002.

For 2002, BASF expects the Polyurethanes division's sales and earnings in 2002 to be comparable with 2001 levels.

2000 COMPARED WITH 1999

SEGMENT OVERVIEW

In the Plastics & Fibers segment, sales to third parties in 2000 rose 27.8% to E11,030 million from E8,628 million in 1999. Results for BASF's polyolefins operations are included only for the first nine months of the Plastics & Fibers segment's results for 2000. On September 30, 2000, BASF's polyolefins business, which BASF conducted through the companies Targor and Elenac, was combined with the polyolefins business of Shell in the joint venture Basell N.V. BASF's share in this joint venture is accounted for under the equity method. Excluding the polyolefins business, the Plastics & Fibers segment's sales to third parties increased by 36.9% in 2000.

In the Plastics & Fibers segment, sales increased in all divisions and above all in the Styrenics division. Price increases, which were needed to compensate for the rising cost of raw materials, accounted for a 17% increase in sales. At the same time, due to a positive business climate in global markets, BASF was able to increase this segment's sales volumes. Higher sales volumes contributed to a 9% rise in sales, while positive currency effects, in particular from the strength of the U.S. dollar, contributed 7% to the increase in sales.

Income from operations in 2000 in the Plastics & Fibers segment rose 37.5% to E902 million from E656 million in 1999, with the Styrenics division making the greatest contribution. The increase

101

was due to stronger sales and savings from cost-cutting measures. The higher prices passed on to customers in 2000 only partially compensated for increases in raw material costs. The segment's income from operations in 2000 includes E124 million in special income from the sale of Targor's Novolen-Registered Trademark- polypropylene technology and the sale of Elenac's

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Kraton-Registered Trademark- polymers business.

In 2000, assets of the Plastics & Fibers segment declined 12.3% to E6,086 million from E6,937 million in 1999 due to the deconsolidation of BASF's polyolefins business. Additions, however, were made to tangible fixed assets, primarily in the Polyurethanes and the Styrenics divisions.

STYRENICS

In the Styrenics division, sales to third parties in 2000 rose 51.7% to E3,517 million from E2,319 million in 1999. This increase was driven primarily by higher prices of 34% and a 7% improvement in sales volumes. Demand for polystyrene, styrene copolymers and EPS (expandable polystyrene) was high due to favorable market conditions for these products. Sales rose in all regions, with the greatest increases posted in Asia and South America due to the division's expansion strategy in these regions. Positive currency effects also contributed to an increase in sales.

The Styrenics division made a substantial contribution to the increase in income from operations of the Plastic & Fibers segment in 2000, primarily due to higher sales volumes, improved margins and the effects of cost-cutting measures.

Major capital expenditures on fixed assets in the Styrenics division were capacity expansions for ethyl benzene in Antwerp, Belgium, the construction of new plants for the manufacture of ethyl benzene and styrene in Ludwigshafen, Germany, and the expansion of a HIPS (high impact polystyrene) plant in Sao Jose dos Campos, Brazil. Furthermore a new plant for styrene copolymers began operations in the second half of 2000 in Altamira, Mexico.

PERFORMANCE POLYMERS

The Performance Polymers division includes the former Fibers division and the following products of the Engineering Plastics division: nylon 6 and 6,6 based engineering plastics, as well as polybutylene terephthalate, polyoxymethylene, polyether sulfone and polysulfone (Ultradur-Registered Trademark-, Ultraform-Registered Trademark- and Ultrason-Registered Trademark-). In the Performance Polymers division, sales to third parties in 2000 rose 27.8% to E2,648 million, from E2,072 million in 1999.

Sales increased in all regions, with the strongest showing in Europe and North America. Sales also increased across all product lines, with exceptional improvements in sales of nylon 6 intermediates.

Due to higher sales, the Performance Polymers division increased its income from operations significantly and therefore made a greater contribution to income from operations of the Plastics & Fibers segment.

POLYURETHANES

In 2000, sales to third parties in the Polyurethanes division rose 29.7% to E2,798 million, from E2,157 million in 1999. Improved sales volumes in all regions -- above all for polyurethane raw materials -- accounted for an approximately 16% increase in the division's sales. Positive currency effects, in particular from the strength of the U.S. dollar, contributed approximately 8% to the increase in sales. Also contributing to the increase in sales was the acquisition of IPI International Inc. of Elkton, Maryland, in February 2000 and of Hess Polyurethanes Inc. of Atlanta, Georgia, in July 2000 as well as the establishment of ELLBA C.V., a Dutch-based joint venture with

Shell for the production of propylene oxide and styrene monomer. In the last

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

quarter of 1999, ELLBA began operations and was consolidated on a pro rata basis. Excluding the effects of these structural changes, sales in the Polyurethanes division increased approximately 24% in 2000.

Income from operations in the Polyurethanes division remained at the level of 1999. Higher raw material costs, in particular for benzene, toluene and propylene, could not be fully passed on to customers through higher prices. As a result, the increase in sales did not lead to a corresponding increase in income.

The largest capital expenditures in the Polyurethanes division were for two additional plants in Geismar, Louisiana -- one for the production of MDI (diphenylmethane diisocyanate), which began operations in the second half of 2000, and another for the production of TDI (toluene diisocyanate), which is currently under construction.

The former Colorants & Finishing Products segment was renamed the Performance Products segment, and consists of the Performance Chemicals, Coatings and Functional Polymers divisions. Functional Polymers is the new name for the former Dispersions division. On July 1, 2001 the Colorants division and Specialty Chemicals division were merged to form the Performance Chemicals division. The polyvinylpyrrolidone (PVP) product line for technical applications was transferred to the Functional Polymers division from the Fine Chemicals segment. Prior year amounts have been restated to reflect these changes. The textile dye business, which was transferred to the joint venture DyStar GmbH & Co. KG, is included in the BASF's results for 2000 through the end of the third quarter of 2000.

2001 COMPARED WITH 2000

SEGMENT OVERVIEW

In terms of ongoing business, i.e., excluding the textile dye business, sales to third parties in the Performance Products segment increased 0.3% in 2001 to E8,126 million, from E8,105 million in 2000. The increase in sales from

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

ongoing business was due to additions to the scope of consolidation. Sales volumes and prices declined slightly. In the Coatings division, sales to third parties increased by 4.0% compared with 2000, to E2,287 million. Sales from ongoing business in

103

the Performance Chemicals division were E3,317 million compared with E3,395 million in 2000. In the Functional Polymers division, sales were E2,522 million, remaining at approximately the previous year's level.

Income from operations fell 83.1% to E99 million in 2001 from E586 million in 2000. The continued weak economic situation in North America and Europe and the resulting decline in demand had a negative impact on earnings in all of the segment's divisions in 2001. In many divisions, reduced demand led to increased price and margin pressures, which intensified during the first half of the year due to very high raw material costs. Special items of E298 million reduced earnings, above all in the Functional Polymers and Performance Chemicals divisions. These relate primarily to planned site closures in Birkenhead, United Kingdom, and Arnhem, the Netherlands, as well as to the closure of production plants in North America and Italy.

Assets in the segment declined slightly in 2001 to E6,048 million from E6,266 million in 2000.

For 2002, BASF expects an improvement in income from operations in the Performance Products segment as a result of the structural and cost reduction measures it has introduced, but only if there is growth in demand. The segment is positioned efficiently thanks to its new organization and increased industry focus, achieved by grouping activities along regional and global product lines.

PERFORMANCE CHEMICALS

In terms of ongoing business, i.e., excluding the textile dye business, sales to third parties in the Performance Chemicals division declined 2.3% in 2001 to E3,317 million from E3,395 million in 2000.

Despite this decline, sales of products for the printing and for the mineral oil industries increased. This was offset, however, by a weaker economy, which also affected the other businesses in the Performance Chemicals division. The 9.8% decline in sales is primarily due to structural changes, in particular relating to the transfer of the textile dye business, which reduced sales by 7%. Price and currency effects each reduced sales by 1% each.

Due to weak demand and ongoing intense competition in North America and Europe, income from operations was below last year's good level. Earnings in 2001 were also burdened by special items.

For 2002, BASF expects only moderate sales growth in the Performance Chemicals division in a still weak economic environment. By focusing on the division's most important customer industries and streamlining its product range, BASF has laid important groundwork that will enable it to be more competitive in this challenging environment.

COATINGS

In the Coatings division, sales to third parties in 2001 rose 4.0%, to E2,287 million from E2,198 million in 2000. Europe and Asia in particular contributed to this increase. Sales volumes remained at last year's level, as declines in automotive coatings were offset by increases in industrial coatings and decorative paints. Unfavorable currency effects were responsible for a sales decline of 3%, with the devaluation of the Brazilian real in particular

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

affecting sales. Selling prices rose slightly overall, but price concessions for industrial coatings were necessary in some cases. BASF is currently developing this business into the Coatings division's third key product line, next to automotive OEM and automotive refinish coatings. The joint venture with NOF Corp. in Japan, entered into in October 2000 and consolidated in 2001, also contributed to the growth in sales.

104

Income from operations was below last year's high level, due in particular to a slowdown in the automotive industry in the NAFTA region. Despite intensive marketing efforts, earnings in industrial coatings fell short of expectations.

In 2002, BASF expects an increase in sales in the Coatings division, and is building on innovative technologies and strengthening its systems supplier business to achieve this. BASF believes that it can increase the division's income from operations since it expects to continue improving on its cost structures and take full advantage of the remaining potential synergies from acquisitions.

FUNCTIONAL POLYMERS

In the Functional Polymers division, sales to third parties in 2001 rose 0.4% to E2,522 million from the previous year's level of E2,512 million. Due to the slowdown in the global economy, which began in the second quarter, the strong volume growth sought was not achieved.

Prices declined slightly due to lower raw material costs -- which had to be passed on to customers -- and to increasing pressure from competitors.

The division was able to expand its sales volumes in Asia, but lost sizable volumes in the NAFTA region. The global trend in sales volumes for paper chemicals and superabsorbents was favorable.

Income from operations was well below the level in 2000, in particular due to higher special charges. These charges related primarily to the destruction in an explosion of the division's superabsorbents plant in Birkenhead, United Kingdom, and to provisions for the planned closure of the division's site in Arnhem, the Netherlands, and of an acrylic acid plant and the polymin plant in Freeport, Texas.

In Asia, a plant for the manufacture of dispersions went into operation in Shanghai, China. In South America, the division took a first step toward supplying this important market with local production from a butyl acrylate plant in Guaratingueta, Brazil. In Ludwigshafen, Germany, a production plant for the innovative paper chemical polyvinylamine started operations. In Antwerp, Belgium, the division completed a world-scale plant for the manufacture of superabsorbents.

Business in the Performance Polymers division will remain challenging in the months ahead. Recovery in the division's customer industries and improved results are not expected until the second half of 2002. BASF therefore expects sales in the Functional Polymers division to remain at last year's level and earnings to improve.

2000 COMPARED WITH 1999

SEGMENT OVERVIEW

In the Performance Products segment, sales to third parties in 2000 rose 11.5% to E8,418 million from E7,553 million in 1999. Sales increased in all regions and for all divisions, but above all for the Functional Polymers and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Coatings divisions. Sales benefited from the superabsorbents business of Chemdal International Corporation, a subsidiary of AMCOL International Corp., acquired on June 1, 2000, as well as from the coil coatings business of Rohm and Haas Co., acquired in March 2000.

On October 1, 2000, BASF transferred the Performance Chemicals division's textile dye operations to the DyStar Group, a joint venture between BASF, Bayer and Hoechst. This joint venture is accounted for under the equity method, and as of October 1, 2000 sales and earnings from this business are not included in the segment's results. On a comparable basis, sales in 2000 in the Performance Products segment increased approximately 13.4%.

105

Income from operations fell 17.2% to E586 million in 2000 from E708 million in 1999. A drastic increase in the cost of raw materials in particular in the Functional Polymers division, could not be fully passed on to customers through higher prices for the segment's products. Income from operations improved in both the Performance Chemicals and Coatings divisions.

In 2000, assets in the Performance Products segment increased by 25.9% to E6,266 million from E4,975 million in 1999. This increase was mainly due to the acquisition of the superabsorbents business of Chemdal International Corporation in the Functional Polymers division and from the acquisition of Rohm and Haas' coil coatings business in the Coatings division.

The intended sale of the masterbatch business was not realized. Despite intensive talks and negotiations with a number of potential buyers, BASF was not convinced by any of the concepts outlined or offers made. BASF has therefore decided to continue to operate the masterbatch business itself. The closure of the sites in Ellesmere Port, United Kingdom, and Medellin, Columbia, which was announced in 1999, was completed in 2000.

PERFORMANCE CHEMICALS

The segment reporting for 2000 and 1999 reflects the 2001 reorganization of the former Colorants and Specialty Chemicals divisions into the Performance Chemicals division. As part of this reorganization, alkylene oxides and glycols were transferred to the Petrochemicals division and the coatings raw materials product line was transferred from the Functional Polymers division to Performance Chemicals division.

In the Performance Chemicals division, sales to third parties in 2000 rose 5.6% to E3,708 million from E3,510 million in 1999, primarily due to higher sales volumes and to positive currency effects. The increase in sales was partly offset by the textile dye business, which was transferred to DyStar, a joint venture between Bayer AG and Hoechst AG of Germany, and was only included for the first three quarters of the division's 2000 sales figures.

In 2000, the Performance Chemicals division increased income from operations. The positive effect of the substantial improvement in the division's cost structure as a result of restructuring measures carried out in previous years was partly offset by increases in raw material costs. This increase could only be passed on in higher prices to customers to a limited extent.

COATINGS

In the Coatings division, sales to third parties in 2000 rose 17.2%, to E2,198 million from E1,876 million in 1999, with all regions contributing to this increase. Sales volumes rose approximately 1%, with the greatest increase in the automotive coatings business. Positive currency effects contributed 8% to the increase in sales. On average, prices for the segment remained unchanged;

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

however, price concessions were necessary in the industrial coatings business. Currently, the division's priority is to expand this business into one of the division's key global activities.

Sales in the Coatings division benefited from the acquisition of the Rohm and Haas Co. coil coatings business at the beginning of March 2000. On a comparable basis, sales in the Coatings division increased approximately 8.7% in 2000 compared with 1999.

Income from operations in the Coatings division in 2000 improved due to higher sales and to cost savings from restructuring measures that were carried out in previous years. In addition, negative currency effects were lower in 2000 than in 1999, when a devaluation of the Brazilian real negatively impacted income.

106

FUNCTIONAL POLYMERS

In the Functional Polymers division, sales to third parties in 2000 rose 15.9% to E2,512 million from E2,167 million in 1999. Sales increased across the board for all products and in all regions. Sales volumes for dispersions used in the paper industry and for polymer dispersions used in adhesives and paints grew worldwide. This growth was fueled by increasing demand, with the strongest growth in Asia. Positive currency effects contributed approximately 7% to the division's increase in sales, with price increases accounting for approximately 3%.

The acquisition on June 1, 2000 of the superabsorbents business of Chemdal International Corporation strengthened BASF's position in this business, contributing approximately E135 million to the Functional Polymers division's sales.

Income from operations for the Functional Polymers division was lower in 2000 than in 1999 due to substantial increases in raw material costs that could be passed on to customers through higher prices for products only to a limited extent. Income from operations was further burdened by additional depreciation of fixed assets as well as amortization of goodwill from the Chemdal acquisition.

In 2000, assets in the Functional Polymers division increased primarily due to the Chemdal acquisition. In 2000, BASF started up its acrylic acid and acrylates plant at the company's Verbund site in Kuantan, Malaysia, as well as new plants for the manufacture of polymer dispersions in Ludwigshafen, Germany. Further additions to assets related to production plants that are currently under construction for the manufacture of polyvinylamines in Ludwigshafen, Germany, and for the manufacture of superabsorbents in Antwerp, Belgium.

2001 COMPARED WITH 2000

Sales in the Agricultural Products segment in 2001 were E3,478 million, compared with E2,428 million in 2000. This increase of E1,050 million, or 43.2%, was due primarily to the acquisition of the

107

crop protection business of American Home Products Corp. (AHP). A decline in prices reduced sales by 6%.

Sales increased in all regions. The segment expanded its market position in particular in North America and Europe, where sales were up 64.1% and 43.4%, respectively. Due to the uncertain economic situation in South America, BASF took a cautious approach in the market to reduce credit risk which resulted in an increase in sales of only 6.1% to E543 million.

In 2001, income from operations in the Agricultural Products segment was E18 million, compared with a loss of E443 million in 2000. This represented an improvement of E461 million over the previous year.

Special items reduced earnings by E182 million. Special charges related to the use of inventory stepped-up to higher market values in connection with the AHP acquisition, as well as to the closure of a research site in North America (NAFTA) and additional restructuring.

The segment's assets declined in 2001 to a total of E6,377 million from E6,607 million in 2000. Additions to tangible assets came from continuing small optimization measures, from investments in the F 500-Registered Trademark-production plant in Schwarzheide, Germany, from commencing the construction of a new research building in Limburgerhof, Germany, and from the modernization of a production plant in Brazil.

Due to the integration of AHP's crop protection business, expenses for research and development rose 25.5% to E345 million, which represented 10% of sales. Research and development activities are concentrated in Ludwigshafen and Limburgerhof, Germany, and at the Research Triangle Park in Raleigh, North Carolina. The Princeton research center in New Jersey will cease activities in mid-2002.

Following the integration of AHP's crop protection business, BASF expects cost savings totaling at least E250 million annually, beginning in 2002. More than half of this amount was already realized in 2001. Assuming the successful market launch of new products and full utilization of potential synergies, BASF expects a further increase in sales and earnings in the Agricultural Products

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

segment in 2002.

2000 COMPARED WITH 1999

When not accounting for AHP's crop protection business, sales volumes in the Agricultural Products segment (formerly the Crop Protection segment) were flat. Prices achieved the previous year's levels when accounting for positive currency effects. Due to the acquisition, sales rose in all regions, with total sales increasing 39.1% in 2000 to E2,428 million from E1,745 million in 1999.

In 2000, the Agricultural Products segment incurred a loss of E443 million compared with a positive income from operations in 1999 of E195 million. The Agricultural Products business is highly seasonal, with sales and income from operations generally higher in the first half of the calendar year. Therefore, the integration of AHP's crop protection business was carried out in the second half of the year to avoid burdening our activities in key European and North American markets. As expected, the Agricultural Products segment did not perform well in South America because the integration of AHP's business was carried out in the middle of the region's growing season. Additional fixed costs as well as the amortization of goodwill and other intangible assets from the acquisition also had a negative impact on income from operations. Furthermore, for some major crops, prices of agricultural products came under substantial pressure in the face of fierce competition. The segment's loss was due primarily to special charges of E341 million. These special charges related primarily to severance payments resulting from workforce reductions, additional charges from the use of the inventory stepped-up to higher market values as well as the write-down of research in process.

108

The segment's assets increased significantly in 2000 primarily due to the acquisition. Total assets increased to E6,607 million in 2000 from E1,949 million in 1999 due to additions to tangible fixed assets of E807 million, to intangible fixed assets, including goodwill, of E2,453 million and due to an increase in current assets. Through the acquisition, BASF obtained major production sites in the United States, France and Brazil, as well as research and development centers in the United States, United Kingdom, Brazil and Japan.

The segment's research and development costs increased 44.7% to E275 million due to the integration of the research and development activities acquired from AHP. These activities include a research and development center in Princeton, New Jersey as well as research facilities in the United Kingdom, Brazil and Japan. Due to the acquisition, the number of the segment's research and development projects increased significantly.

As part of the reorganization of the BASF group, the polyvinylpyrrolidone (PVP) product line for technical applications was transferred from the Fine Chemicals segment to the Functional Polymers division of the Performance Chemicals segment. Prior year amounts were restated to reflect this transfer.

2001 COMPARED WITH 2000

In the Fine Chemicals segment, sales to third parties in 2001 increased 14.1%, to E1,984 million from E1,739 million in 2000. The segment increased sales volumes by 5%. Structural changes, in particular the purchase of the vitamins business of Takeda Chemical Industries Ltd., contributed 11% to the increase in sales. Excluding the effects of these structural changes, sales in the Fine Chemicals segment were 4.8% above the previous year's level due to an increase in sales volumes. However, the increase in sales was partially offset by negative currency effects of 1% and by a 1% decline in prices. Some vitamins are still under price pressure, but lysine prices have improved. Pharmaceutical active ingredients, cosmetic raw materials, carotenoids, and enzymes for animal nutrition all experienced particularly strong sales growth.

109

In 2001, BASF recorded a loss of E210 million in income from operations in the Fine Chemicals segment compared with a loss of E5 million in 2000. The loss is due to a high level of special charges; excluding these charges, earnings would have increased compared with the previous year. Special items of E(283) million related in particular to provisions for unexpectedly high fines imposed by the E.U. Commission for antitrust violations in the vitamins business. BASF has appealed against the level of these fines. Additional charges in the Fine Chemicals segment related to the planned closure of unprofitable plants in North America.

In the Fine Chemicals segment, assets increased in 2001 by 8.8% to E1,488 million from E1,368 million in 2000. Besides the purchase of Takeda's vitamins business, additions to fixed assets related primarily to the expansion of plants for vitamin E, carotenoids, Lysmeral-Registered Trademark- and other flavors and fragrances, as well as to the construction of a new plant for the manufacture of UV absorbers.

For 2002, BASF expects the division to maintain the overall positive trend with regard to sales and earnings.

2000 COMPARED WITH 1999

In the Fine Chemicals segment, sales to third parties in 2000 rose by 6.3% to 1,739 million from 1,636 million in 1999. Sales volumes rose 6%, while positive currency effects -- primarily from the strength of the U.S. dollar -- contributed 9% to the increase in sales. Falling sales prices, above all for

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

vitamins E, A and B(2) lowered sales by 10%. With respect to individual product lines, sales increased, in particular for feed additives, products for human nutrition and cosmetic raw materials. Sales in the pharmaceutical active ingredients business were also higher in 2000 than in 1999. Sales also increased in 2000 compared with 1999 due to changes in the scope of consolidation and due to acquisitions such as the feed premix business of Japan's Takeda Kagaku Shiryo in the third quarter of 1999. On a comparable basis, sales in the Fine Chemicals segment increased 3.8%.

In 2000, the Fine Chemicals segment increased income from operations, posting a loss of E5 million compared with a loss of E774 in 1999. Improving sales volumes, favorable exchange rates and an increase in the still relatively low price of lysine were not sufficient to offset a decline in prices for vitamins. Income from operations in 1999 was significantly affected by substantial special charges for fines and provisions for damage claims related to violations of antitrust laws in the vitamins business in the United States and other countries. In 2000, there were additional charges of E47 million, primarily due to the settlement with indirect purchasers of vitamins in the United States.

In the Fine Chemicals segment, assets increased in 2000 by 2.2% to E1,368 million from E1,338 million in 1999. Additions to fixed assets included plant expansions for carotenoids, several aroma chemicals and UV absorbers as well as improvements in manufacturing processes for the production of vitamin C in Grenaa, Denmark, and lysine in Gunsan, Korea.

In both 2000 and 1999, the research and development expenses for the Fine Chemicals segment were approximately 4.5% of sales. To strengthen its position as a leading vitamins manufacturer, BASF acquired the water-soluble vitamins business of Takeda Chemical Industries Ltd. of Japan in January 2001.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

2001 COMPARED WITH 2000

After receiving authorization from the Federal Trade Commission and the European Union Commission, BASF sold its pharmaceuticals business on March 2, 2001 to Abbott Laboratories Inc. of Abbott Park, Illinois. Pursuant to the requirements of U.S. GAAP, the pharmaceuticals activities are disclosed as discontinued operations as described in Item 18 under Note 3 to the Consolidated Financial Statements. Effective January 1, 2001, the generic pharmaceuticals business with operations in Germany, France, Italy, the Netherlands, Switzerland and Spain was sold to Biochemie GmbH, a subsidiary of Novartis. For additional information on BASF's pharmaceuticals activities as discontinued operations, see also Notes 3 and 4 to the Consolidated Financial Statements in Item 18. The gain on disposition in 2001 is classified as extraordinary income in these financial statements. For further information see also Note 9 to the Consolidated Financial Statements in Item 18.

The segment data for 2001 reflect only two months of operations as compared with 12 months of operations for 2000.

2000 COMPARED WITH 1999

On July 1, 2000 the pharmaceutical active ingredients business was transferred from the Pharmaceuticals segment to the Fine Chemicals segment. The segment data for 2000 and 1999 were restated to reflect this transfer.

In the Pharmaceuticals segment, sales to third parties in 2000 rose 15.0% to E2,526 million from E2,197 million in 1999. Sales volumes rose approximately 4%. Positive currency effects of approximately 9%, mainly due to the strength of the U.S. dollar and an appreciation in the Japanese yen, also contributed to the increase in sales.

Income from operations in the Pharmaceuticals segment increased to E243 million in 2000 from a loss of E13 million in 1999. Improved sales of Synthroid-Registered Trademark-, Rytmonorm-Registered Trademark-/Rythmol-Registered Trademark- and Meridia-Registered Trademark-/Reductil-Registered Trademark-/Raductil-Registered Trademark- and tight cost management of research and development, production, marketing and sales activities made a significant contribution to the rise in income from operations. A net amount of E62 million was charged to income from operations. Expenses were related to

111

restructuring charges (mainly in Germany and the United Kingdom), to workforce reductions, the write-down of real estate belonging to Hokuriku Seiyaku Co. of Japan and the settlement of class-action lawsuits in the United States involving the medication Synthroid-Registered Trademark-. Special income included proceeds from the divestiture of the segment's urology business in Germany and a settlement payment in a patent dispute.

Assets of the Pharmaceuticals segment increased in 2000 by 18.1% to E2,228 million from E1,887 million in 1999.

2001 COMPARED WITH 2000

In the Oil & Gas segment, sales to third parties in 2001 rose 14.1% to E4,516 million from E3,957 million in 2000. This increase was due to positive price and currency effects contributing 8.3% and 1.3%, respectively, as well as increased sales volumes, which contributed 4.5%. Significant contributions to sales were made by the natural gas trading operations of BASF's subsidiary WINGAS, which increased its sales to third parties by 30.5% to E2,251 million in 2001 from E1,725 million in 2000. Higher natural gas prices were a major factor contributing to this increase. Developments in crude oil prices are reflected in sales only after a period of delay. Therefore, sales in the first half of 2001 were still positively affected by the high crude oil prices that prevailed in the second half of 2000. Due to lower demand, natural gas sales volumes totaled 214 billion kilowatt-hours, or 3% below the previous year's level.

In its exploration and production activities, the Oil & Gas segment increased sales in 2001 by 1.5% to E2,254 million from E2,221 million in 2000, even though the average price for U.K. Brent quality crude oil was \$24 per barrel in 2001, or \$4 per barrel lower than in 2000. The resulting negative impact from this price decrease was more than offset by a 13% increase in crude oil and natural gas production to 93 million barrels of oil equivalent.

Intersegmental transfers rose in 2001 to E413 million from E320 million in 2000, mainly due to higher gas prices.

112

At E1,308 million, income from operations in the Oil & Gas segment was comparable in 2001 and 2000. Income from operations is before income taxes on oil-producing operations in North Africa and the Middle East, which are recorded as income tax expenses. For further information, see Note 10 to the Consolidated Financial Statements.

Assets in the Oil & Gas segment decreased 11% in 2001 to E3,149 million from E3,540 million in 2000. Capital expenditures in tangible assets related primarily to development projects for exploration and production activities in Germany, North Africa and Argentina. Compared with the previous year, exploration expenditures more than doubled, reaching E156 million in 2001. By using the latest technologies and focusing on particularly promising regions,

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF achieves a competitive position with regard to finding costs.

There are no visible signs of near-term improvement in the weak economic environment for the Oil & Gas segment. BASF expects average crude oil prices to decline further in 2002 compared with 2001. However, BASF believes that any negative effects on sales and earnings will be offset to some extent by an expansion in business activities.

2000 COMPARED WITH 1999

In the Oil & Gas segment, sales to third parties in 2000 rose 29.7% to E3,957 million from E3,051 million in 1999. This increase was achieved despite the fact that in December 1999, BASF exited the oil marketing and refinery business, which in 1999 contributed E1,020 million to BASF's sales. The year's strong improvement in sales, above all in the segment's oil and natural gas exploration and production activities, which increased by 112.7% to E2,221 million from E1,044 million in 1999, more than compensated for the discontinuation of the marketing and refinery business. The 58.1% increase in average crude oil prices in 2000 compared to 1999 and the continued strength of the U.S. dollar were the primary causes for this increase in sales. In 2000, the average price for U.K. Brent quality crude oil was \$28.45 per barrel compared with \$17.99 in 1999. BASF was able to increase production by 3.2% to 80.0 million barrels of oil equivalent. The sales volume for natural gas trading increased by 9.4% to 221.5 billion kilowatt hours, and this, along with higher gas prices, resulted in an increase in sales of 113.5% in 2000 to E1,725 million compared with E808 million in 1999.

Intersegmental transfers rose in 2000 to E320 million from E177 million in 1999, mainly due to higher gas prices.

Income from operations in the Oil & Gas segment increased by 76.8% in 2000 to E1,310 million from E741 million in 1999 due to significantly higher sales in both businesses. Special income related to completed activities from the sale of the Oil & Gas segment's refinery business in 1999. Income from operations is before income taxes on oil-producing operations in North Africa and the Middle East. These taxes are recorded as income tax expenses. For additional information, see Note 8 to the Consolidated Financial Statements in Item 18.

Assets in the Oil & Gas segment increased 17.9% in 2000 to E3,540 million from E3,003 million in 1999. This rise was related primarily to an increase in receivables as a result of higher oil and gas prices. Additions related to fixed assets were primarily associated with development projects for exploration and production activities in Germany, the Netherlands, North Africa and Argentina.

113

LIQUIDITY AND CAPITAL RESOURCES

* EXCLUDING EXTRAORDINARY INCOME

2001 COMPARED WITH 2000

CASH FROM OPERATING ACTIVITIES

Cash provided by operating activities totaled E2,319 million, which was 22% less than in 2000. This decline was due primarily to a sharp drop in net income -- excluding extraordinary income, which is included in cash provided by investing activities. In 2001, fewer additional funds were required to finance current assets than in the previous year. This improved cash flow by E372 million.

INVESTING ACTIVITIES

Proceeds from the sale of the pharmaceuticals business far exceeded capital expenditures for investments and acquisitions, and resulted in positive cash flow from investing activities of E4,120 million.

Proceeds from divestitures totaled E7,503 million. These related to the sale of the pharmaceuticals and generics businesses.

Cash used for acquisitions amounted to E461 million. Major acquisitions included:

- the vitamins business of Takeda Chemical Industries Ltd., Japan;
- the SISAS activities at the site in Feluy, Belgium; and
- the acquisition of a styrene plant in Korea.

114

Capital expenditures on tangible and intangible fixed assets totaled E2,811 million in 2001, or E95 million less than in 2000. On a regional basis, capital expenditures and acquisitions were as follows:

- 47% in Europe (39% in 2000);
- 23% in North America (NAFTA) (47% in 2000);

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- 4% in South America (6% in 2000); and
- 26% in Asia, Pacific Area, Africa (8% in 2000).

In the CHEMICALS segment, capital expenditures and acquisitions in 2001 increased 20% to E929 million in 2001 from E774 million in 2000. Major projects included:

EUROPE

- a plant for the production of propylene (propane dehydrogenation) in Tarragona, Spain;
- the expansion of production capacities for PolyTHF-Registered Trademark- in Ludwigshafen, Germany;
- a plant for optically active amines in Ludwigshafen, Germany;
- a capacity expansion for glyoxal in Ludwigshafen, Germany;
- optimization of production of ethylene oxide and glycol in Antwerp, Belgium;

NORTH AND SOUTH AMERICA

- the completion of a steam cracker in a joint venture with TotalFinaElf S.A. in Port Arthur, Texas;
- plants for hexanediol/caprolactone in Freeport, Texas;
- a capacity expansion for ethylene oxide and glycols in Geismar, Louisiana;
- a plant for S-methoxyisopropylamine in Geismar, Louisiana;
- a plant for neopentylglycol in Freeport, Texas;

ASIA

- the expansion of the new Verbund site in Kuantan, Malaysia, which includes:
 - plants for oxo C(4) alcohols, phthalic anhydride and plasticizers;
 - a syngas plant; and
 - a plant for the manufacture of butanediol.

In the PLASTICS & FIBERS segment, capital expenditures and acquisitions in 2001 increased 41% to E891 million from E633 million in 2000. The largest projects were:

EUROPE

- the expansion of production for ethyl benzene in Antwerp, Belgium;
- the replacement of plants for the manufacture of ethyl benzene/styrene in Ludwigshafen, Germany;
- the expansion and construction of a new plant for Styrolux-Registered Trademark- in Antwerp, Belgium;

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- a capacity expansion for MDI (diphenylmethane diisocyanate) production in Antwerp, Belgium;
- the continued modernization of the production and compounding plants for nylon 6 in Ludwigshafen, Germany;
- the construction of Styrodur-Registered Trademark- C plants in Bibbiano, Italy, and Tudela, Spain;
- the expansion of Ultrason-Registered Trademark- production in Ludwigshafen, Germany;

NORTH AND SOUTH AMERICA

- the replacement of a plant for the production of TDI (toluene diisocyanate) in Geismar, Louisiana;
- the expansion of EPS (expandable polystyrene) production in Guaratingueta, Brazil;

ASIA

- the construction of a new plant for propylene oxide and styrene in Singapore in the Ellba Eastern Private Ltd. joint venture with Shell; and
- the construction of a new plant for TDI (toluene diisocyanate) in Yeosu, Korea.

In the PERFORMANCE PRODUCTS segment, capital expenditures and acquisitions declined 69% in 2001 to E418 million from E1,332 million in 2000. Major investment projects concluded or initiated were:

EUROPE

- the construction of a new plant for the manufacture of superabsorbents in Antwerp, Belgium;
- the completion of the production plant for the manufacture of vinyl formamide and polyvinylamine in Ludwigshafen, Germany; and
- the construction of a new plant for dispersions in Hamina, Finland.

In the AGRICULTURAL PRODUCTS & NUTRITION business segment, BASF spent E349 million on capital expenditures and acquisitions in 2001. This was E3,115 million less than in 2000, the year in which the crop protection business of American Home Products Corp. (AHP) was acquired.

In the Agricultural Products reporting segment, capital expenditures totaled E130 million in 2001. In addition to the completion of a new plant for the fungicide active ingredient F 500-Registered Trademark- in Schwarzheide, Germany, and the modernization of a production plant for the production of crop protection active ingredients in Guaratingueta, Brazil, several replacement and optimization projects were undertaken at various sites.

In the Fine Chemicals reporting segment, BASF spent E199 million on capital expenditures and acquisitions in 2001 compared with E83 million in 2000. The most important investment projects included expansions of plants for vitamin E, carotenoids, Lysmeral-Registered Trademark- and other flavors and fragrances, as well as the construction of a new plant for the manufacture of UV absorbers.

In the OIL & GAS SEGMENT, BASF invested E229 million in 2001 compared with

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

E267 million in 2000. The majority of these investments were for exploration and production activities.

116

Capital expenditures on FINANCIAL ASSETS AND SECURITIES amounted to E741 million, which was E99 million less than in 2000. These expenditures included in particular:

- capital expenditures totaling E200 million for BASF Future Business GmbH and BASF Venture Capital GmbH, as well as
- additions to other participations, securities and loans.

Expenditures for additions to financial assets and securities were offset by a cash inflow of E629 million for proceeds from the sale of financial assets, proceeds from the disposal of fixed assets as well as the repayment of loans and financial receivables. This resulted in a net cash outflow of E112 million.

FINANCING ACTIVITIES

BASF used most of the cash provided by the sale of the pharmaceuticals business to reduce financial indebtedness. As of December 31, 2001, financial indebtedness totaled E2,835 million, and was denominated in the following currencies:

- U.S. dollars: 28.3% (2000: 62.2%);
- euros: 48.9% (2000: 25.4%);
- renmimbi: 5.5% (2000: 2.8%); and
- other currencies: 17.3% (2000: 9.6%).

In 2001, dividend payments to the shareholders of BASF Aktiengesellschaft for fiscal year 2000 totaled E1,214 million (2000: E695 million), or E1.30 per qualifying share (2000: E1.13) plus a special dividend of E0.70 to repay stockholders' equity charged with 45% corporation tax.

In 2001, BASF spent E1.3 billion to buy back 30.8 million ordinary shares, or 5% of its share capital, at an average price of E42.22 per share.

LIQUID FUNDS

Cash and cash equivalents decreased by E146 million. Marketable securities increased E19 million to E383 million. Total liquid funds decreased to E743 million in 2001 from E870 million in 2000. Their share of total assets was 2.0% in 2001 compared with 2.3% in 2000.

CHANGE IN ASSETS

Total assets declined in 2001 by E1,682 million to E36,875 million due to the sale of the pharmaceuticals business. BASF's equity ratio increased to 47.5% from 37.1% at the end of 2000 as a result of the gain from the sale of its pharmaceuticals business. Long-term liabilities as a share of stockholders' equity and liabilities was 27.0% compared with 23.5% in 2000. Short-term liabilities accounted for 25.5% of stockholders' equity and liabilities compared with 39.4% in 2000. Financial indebtedness was reduced by E5,057 million to E2,835 million, in particular using income from the sale of Pharmaceuticals.

COMMITMENTS FOR INVESTMENTS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

In 2002, BASF is planning capital expenditures of E2.2 billion. Major projects by segment include:

CHEMICALS

- the construction of a C(4) complex in connection with the new steam cracker in Port Arthur, Texas;
- the construction of a steam cracker at the planned Verbund site in Nanjing, China;

117

- a capacity expansion for ethylene oxide in Ludwigshafen, Germany;
- the modernization of a chloralkali electrolysis plant in Ludwigshafen, Germany by conversion to a membrane process;

PLASTICS & FIBERS

- a plant for Styrolux in Altamira, Mexico;
- a plant for Basotect-Registered Trademark- in Schwarzheide, Germany;
- the reconstruction and expansion of a nylon 6 production plant in Ludwigshafen, Germany;
- the expansion of a Cellasto-Registered Trademark- production plant in Lemforde, Germany;

PERFORMANCE PRODUCTS

- plants for acrylic acid and acrylates at the planned Verbund site in Nanjing, China;
- a plant for methanesulfonic acid in Ludwigshafen, Germany;
- a plant for nonionic surfactants in Geismar, Louisiana;

AGRICULTURAL PRODUCTS & NUTRITION

- a capacity expansion for vitamin E and precursors in Ludwigshafen, Germany;
- the construction of a new plant for the production of vitamin B(2) in Gunsan, Korea;
- the construction of a new crop protection research facility in Limburgerhof, Germany;

OIL & GAS

- optimizing and expanding hydrocarbon production in North Africa;
- increasing crude oil production in the northern German Mittelplate field;
- developing the Carina and Aries natural gas fields off the coast of Argentina; and
- developing new natural gas reserves in the Dutch North Sea.

2000 COMPARED WITH 1999

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CASH FROM OPERATING ACTIVITIES

Investments and acquisitions reached a record level at BASF in 2000. These capital expenditures could not be financed entirely by cash from operating activities, but instead required additions to financial indebtedness. Cash provided by net income, together with depreciation of fixed assets, increased on the previous year's figure by 6.2% to E4,169 million. Fund commitments for inventories and receivables rose due to an increase in raw material costs, which were passed along to varying degrees through higher prices for our products. These higher fund commitments could not be compensated for by an increase in accounts payable and miscellaneous short-term obligations and led to a cash outflow of E1,147 million. As a result, cash from operations in 2000 decreased 8.1% to E2,992 million from E3,255 million in 1999.

INVESTING ACTIVITIES

Total cash used for investments and acquisitions in 2000 amounted to E8,830 million compared with E2,099 million in 1999. After deducting proceeds from divestitures total cash used for acquisitions amounted to E5,812 million.

Capital expenditures for acquisitions totaled E6,117 million. Major acquisitions included:

- the crop protection business of American Home Products Corp.;

118

- the superabsorbents business of Chemdal International Corporation;
- the industrial coatings business of Rohm and Haas Co.; and
- an equalization payment to Shell as part of BASF's contribution to the polyolefins joint venture Basell N.V.

Proceeds from divestitures totaled E305 million. These included:

- the sale of the Novolen-Registered Trademark- polypropylene technology and the Kraton-Registered Trademark- polymers business in the Plastics & Fibers segment; and
- the sale of various businesses in the Pharmaceuticals segment and the Oil & Gas segment.

Capital expenditures on tangible and intangible fixed assets decreased in 2000 to E2,906 million from E2,939 million in 1999.

On a regional basis, capital expenditures were as follows:

- 49% in Europe (60% in 1999);
- 33% in North America (NAFTA) (34% in 1999);
- 4% in South America (2% in 1999); and
- 14% in Asia, Pacific Area, Africa (4% in 1999).

In the Chemicals segment, capital expenditures rose 15.0% to E880 million in 2000 from E765 million in 1999. Major projects included:

EUROPE

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- the expansion of production capacities for butanediol in Ludwigshafen, Germany;
- the construction of a trimethylolpropane MP plant in Ludwigshafen, Germany;
- the expansion of a plant in Ludwigshafen, Germany, for the manufacture of optically-active amines;
- the construction of a new plant in Ludwigshafen, Germany, for the manufacture of dimethylhexanediol;
- the start-up of a new formaldehyde plant in Ludwigshafen, Germany;
- the expansion of a plant for the production of dinitrotoluene (a toluene diisocyanate precursor) in Schwarzheide, Germany;
- a capacity expansion for ethylene oxide in Antwerp, Belgium;
- a capacity expansion for complexing agents in Ludwigshafen, Germany;

NORTH AND SOUTH AMERICA

- the construction of a steam cracker through a joint venture with TotalFinaElf S.A., in Port Arthur, Texas;
- the construction of new plants for hexanediol/caprolactone in Freeport, Texas;
- capacity expansions for ethylene oxide and glycols in Geismar, Louisiana;
- the construction of a new plant for nonionic surfactants in Geismar, Louisiana; and

ASIA

- the construction of new plants for oxo C(4) alcohols, phthalic anhydride and plasticizers in Kuantan, Malaysia.

119

In the Plastics & Fibers segment, capital expenditures decreased 40% to E599 million in 2000 compared with E998 million in 1999. The largest projects were:

EUROPE

- the modernization of nylon 6 production and packaging plants in Ludwigshafen, Germany;
- a capacity expansion for ethyl benzene in Antwerp, Belgium;
- the replacement of the ethyl benzene and styrene plants in Ludwigshafen, Germany;
- the restructuring of polystyrene production in Ludwigshafen, Germany and Antwerp, Belgium;

NORTH AND SOUTH AMERICA

- the construction of a new plant to manufacture MDI (diphenylmethane diisocyanate) in Geismar, Louisiana;

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

- the construction of a new plant for the manufacture of ABS (acrylonitrile-butadiene-styrene) in Altamira, Mexico; and
- the expansion of a polystyrene plant in Sao Jose dos Campos, Brazil.

In the Colorants & Finishing Products segment, capital expenditures including acquisitions rose 289% in 2000 to E1260 million from E324 million in 1999. This increase was due to the completion of acquisitions. Major investment projects concluded or initiated were:

EUROPE

- the expansion of the imine plant for the manufacture of vinyl formamide and polyvinylamine in Ludwigshafen, Germany;
- the construction of a plant for the manufacture of superabsorbents in Antwerp, Belgium;

NORTH AND SOUTH AMERICA

- the expansion of the production capacity of acrylate and styrene/butadiene dispersions in Monaca, Pennsylvania;
- the expansion of production capacities for paper dyes in Altamira, Mexico;

ASIA

- the construction of an acrylic acid complex in Kuantan, Malaysia; and
- the expansion of the dispersions plant in Shanghai, China.

In the Agricultural Products segment, capital expenditures increased to E3,260 million in 2000 from E93 million in 1999. Major capital expenditures were related to the acquisition of the crop protection business of American Home Products. Additional capital expenditures included the construction of production capacities for the manufacture of the new F 500-Registered Trademark-fungicide from the strobilurine class of active ingredients in Schwarzheide, Germany.

In the Fine Chemicals segment, BASF invested E83 million in 2000 compared with E87 million in 1999 on capital expenditures. The most important investment projects included the expansion of production capacities for the manufacture of Uvinul-Registered Trademark- MC 80, plant expansions for carotenoids and aroma chemicals in Ludwigshafen, Germany, as well as improvements in manufacturing processes for the production of vitamin C in Grenaa, Denmark, and lysine in Gunsan, Korea.

In the Pharmaceuticals segment, capital expenditures increased to E121 million from E101 million in 1999.

120

In the Oil & Gas segment, BASF invested E267 million compared with E524 million in 1999. Development of the A6/B4 field in the German North Sea accounted for a large share of these investments.

Capital expenditures on financial assets and securities amounted to E840 million, which was E38 million less than in 1999. These expenditures included in particular:

- capital expenditures for the construction of a propylene plant in

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Tarragona, Spain, which is being built by BASF SONATRACH Propanchem S.A.
-- a joint venture company with the Algerian oil and gas company
SONATRACH, in which BASF has a 51% stake;

- capital expenditures for the construction of a styrene monomer and propylene oxide plant, which is being built by Ellba Eastern Private Ltd.
-- a joint venture company with Shell in Singapore in which BASF has a 50% stake; and
- capital expenditures for the new joint venture company with NOF Corporation of Tokyo, Japan.

A cash outflow of E840 million for additions to financial assets and securities compared with a cash inflow of E728 million for proceeds from the disposal of fixed assets and securities as well as the repayment of loans resulted in a net cash outflow of E112 million.

FINANCING ACTIVITIES

BASF assumed additional financial indebtedness of E6,660 million to finance acquisitions and investments. This included the issue of a E1,250 million, 5.75% Euro Bond of BASF Aktiengesellschaft 2000/2005 as well as the issue of E4,075 million through several commercial paper facilities denominated in euros and U.S. dollars as well as commercial paper facilities denominated in British pounds and Swiss francs associated with the euro swap.

At year-end, financial indebtedness totaled E7,892 million and was denominated in the following currencies:

- U.S. dollars: 62.2% (1999: 55.4%),
- euros: 25.4% (1999: 9.3%), and
- renminbi: 2.8% (1999: 14.2%).

In 2000, dividend payments to shareholders for the fiscal year 1999 totaled E695 million (1999: E693 million) or E1.13 per share (1999: E1.12). BASF spent E700 million on the buy-back of its shares. The exercise of warrants led to a cash inflow of E36 million, while a cash inflow of E59 million related to payments by PETRONAS, BASF's partner in the joint venture company BASF PETRONAS Chemicals Sdn. Bhd.

CASH AND CASH EQUIVALENTS

Cash and cash equivalents decreased by E484 million.

Marketable securities were reduced by E153 million to E364 million. Total liquid funds decreased to E870 million in 2000 from E1,508 million in 1999. Their share of total assets was 2.3% in 2000, compared with 5.0% in 1999.

CHANGE IN ASSETS

Total assets increased in 2000 by E8,548 million to E38,557 million primarily as a result of acquisitions. An increase in raw material costs and higher prices for BASF's products led to a rise in current assets. Currency translation effects from the rise in the U.S. dollar also led to an increase on the balance sheet. The equity ratio declined from 47.1% to 37.1%. Long-term liabilities as a

share of stockholders' equity and liabilities was 23.5% compared with 25.1% in

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

1999. Short-term liabilities accounted for 39.4% of stockholders' equity and liabilities compared with 27.8% in 1999.

EXCHANGE RATE EXPOSURE AND RISK MANAGEMENT

BASF transacts its business in many currencies other than the euro. About 55% of BASF's 2001 sales, about 56% of BASF's 2000 sales and about 58% of 1999 sales were to customers in Europe, about 45% of 2001 sales, about 44% of 2000 sales and about 42% of 1999 sales were to customers outside Europe. Moreover, about 40% of BASF's 2001 sales, about 38% of BASF's 2000 sales and about 35% of 1999 sales were attributable to BASF operations conducted outside Europe.

As a result of BASF's foreign currency exposure, exchange rate fluctuations have a significant impact in the form of both translation risk and transaction risk on BASF's Consolidated Financial Statements. Translation risk is the risk that BASF's Consolidated Financial Statements expressed in euros for a particular period or as of a certain date may be affected by changes in the prevailing rates of the various currencies of the reporting subsidiaries against the euro. Transaction risk arises when the currency structure of BASF's costs and liabilities deviates to some extent from the currency structure of BASF's sales proceeds and assets.

The effect of exchange rate fluctuations on BASF's income from operations for 2001, 2000 and 1999 is shown in BASF's Consolidated Financial Statements under the line items "Other operating income" and "Other operating expense." See Notes 6 and 7 to the Consolidated Financial Statements for further information. The net effect of exchange rate fluctuations on BASF's income from operations amounted to a net loss of E62.6 million in 2001, a net loss of E150.7 million in 2000 and a net gain of E36.7 million in 1999. The difference between 2001 and 2000 was primarily due to the strengthening of the U.S. dollar and the weakening of the Japanese yen. The difference between 2000 and 1999 was primarily due to the higher U.S. dollar in comparison with the euro.

Foreign currency translation adjustments had a negative effect of E129.5 million on stockholders' equity in 2001 primarily due to the devaluation of the Argentine peso and the deconsolidation of the pharmaceuticals business. In 2000, foreign currency translation adjustments had a positive effect of E112.5 million on stockholders' equity primarily due to the strengthening of the U.S. dollar. In 1999, the positive effect of E509.8 million on stockholders' equity was primarily due to the strengthening of the U.S. dollar and the Japanese yen in 1999 compared to 1998.

Exchange rate risk management is centralized at BASF Aktiengesellschaft. BASF bases its foreign exchange risk management generally on exposures derived from receivables and payables on the balance sheet. Planned sales revenues or expenses are only considered if such data is based on fixed contracts. Receivables and payables in a particular currency are netted. Normally at BASF, receivables exceed payables resulting in substantial net exposures in U.S. dollars and relatively small exposures in the British pound and the Japanese yen.

To mitigate the impact of currency exchange rate fluctuations, the exposure to currency risk is assessed on a daily basis. BASF applies a selective hedging strategy in that a varying portion of the exposure in each currency is hedged based on forecasts of the exchange rate development versus the euro. In this respect, forward exchange contracts with a term of several weeks to six months or currency options with a term of usually one month are concluded to match the term of the hedging instruments with the term of the underlying positions.

In 2001, BASF's hedging transactions have been aimed primarily at minimizing exchange rate risks against the U.S. dollar, the British pound, the Japanese yen, the Singapore dollar and the Mexican peso. See "Item 11. Quantitative and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Qualitative Disclosure About Market Risk" and Note 28 to the Consolidated Financial Statements for further information.

122

RESEARCH AND DEVELOPMENT

BASF's research and development activities are aimed at developing new and improved products, finding new applications for existing products and developing cost-efficient and environmentally responsible manufacturing processes.

BASF spent E1.17 billion on research and development activities in 2001 compared with E1.06 billion in 2000 and E0.94 billion in 1999, excluding the effects of the pharmaceuticals business for each year. The company spends approximately 38% of its research budget on developing new products, and another 21% on improving existing products. Developing new and improved processes accounts for about 31% of spending, while 11% is spent on discovering new research methods and technologies. BASF spends 82% of its annual research budget in Germany, 13% in North America, 3% in other European countries and 2% in South America and Asia.

BASF employs about 8,200 people worldwide in various research and development activities. About 6,000 employees are involved in research and development work in Ludwigshafen, making the facility one of the world's largest research centers in the chemical industry.

The center in Ludwigshafen and a number of decentralized research sites worldwide form an efficient network that makes an important contribution to BASF's Verbund approach to integration. As a consequence of the portfolio changes BASF has reorganized its core technology platforms and reduced their number from four to three. These three technology platforms are located in Ludwigshafen and support the company's global activities. BASF carries out product and market-related development worldwide in close cooperation with customers and joint-venture partners.

The biggest share of BASF's research spending is devoted to the area of agriculture and nutrition, where BASF is expanding its activities. The Limburgerhof Agricultural Center in Germany and the research center in Research Triangle Park (RTP) in Raleigh, North Carolina, develop agricultural products, using our network of trial stations around the world. BASF conducts its own biotechnology research and is also involved in various biotechnology research joint ventures. BASF plans to spend more than E700 million over 10 years on research and development activities in plant biotechnology. The activities are concentrated in BASF Plant Science GmbH, which currently employs about 350 people worldwide.

BASF additionally conducts research activities through more than 800 cooperative agreements with universities, research institutes and industrial partners in many countries worldwide and through various research joint ventures.

PATENTS

BASF puts great emphasis on obtaining patents, trademarks, copyrights and designs to protect its investment in research and development. The company seeks the optimum protection for significant product and process developments. BASF's patents are registered in 14 countries on average that are most relevant to the product or process involved. This protection is crucial in the chemical industry because profit margins often depend on implementing state-of-the-art technology protected by patents. BASF vigorously enforces its patents and trademarks.

A number of major products and manufacturing processes no longer have patent

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

protection. BASF believes that the expiration of patent protection for these established products and processes generally has not had a significant adverse impact on the company.

123

(This page has been left blank intentionally.)

ITEM 6. DIRECTORS, SENIOR MANAGEMENT AND EMPLOYEES

In accordance with the German Stock Corporation Act (AKTIENGESETZ), BASF Aktiengesellschaft has a Board of Executive Directors (VORSTAND) and a Supervisory Board (AUFSICHTSRAT). The two Boards are separate, and no individual may simultaneously be a member of both Boards.

The Board of Executive Directors is responsible for managing the business of BASF Aktiengesellschaft in accordance with the German Stock Corporation Act and BASF Aktiengesellschaft's Articles of Association. It also represents the company in its dealings with third parties and in court.

The principal function of the Supervisory Board is to appoint and supervise the Board of Executive Directors. The Supervisory Board may not make management decisions, but BASF's Articles of Association or the Supervisory Board itself may require the prior consent of the Supervisory Board for certain types of transactions. The Supervisory Board assumes the function of an audit committee in its role as supervisor of the Board of Executive Directors.

Members of both the Board of Executive Directors and the Supervisory Board owe a duty of loyalty and care to BASF Aktiengesellschaft. In exercising these duties, the applicable standard of care is that of a diligent and prudent businessperson. Members of both Boards must take into account a broad range of considerations when making decisions, foremost the interests of BASF Aktiengesellschaft, its shareholders, employees and creditors and, to a certain extent, the interests of society. The members of the Board of Executive Directors and the Supervisory Board are personally liable to BASF Aktiengesellschaft for breaches of their duties of loyalty and care.

BOARD OF EXECUTIVE DIRECTORS

The number of members of the Board of Executive Directors is determined by the Supervisory Board, subject to a minimum number of two members. As of December 31, 2001, BASF Aktiengesellschaft's Board of Executive Directors had eight members. On December 14, 2001, the Supervisory Board appointed Klaus Peter Lobbe as an additional member of the Board of Executive Directors effective January 1, 2002.

Pursuant to the Memorandum and Articles of Association of BASF Aktiengesellschaft, any two members of the Board of Executive Directors or one member and the holder of a special power of attorney (PROKURA) may bind the company.

The Board of Executive Directors must report regularly to the Supervisory Board on the current business of BASF Aktiengesellschaft, on the company's business policies and other fundamental matters regarding the future conduct of the company's business, on the company's profitability, particularly on its return on equity, as well as on any exceptional matters that may arise from time to time. The Supervisory Board is also entitled to request special reports at any time.

The Supervisory Board appoints members to the Board of Executive Directors for a maximum term of five years. Members of the Board of Executive Directors may be re-appointed or have their terms extended for one or more terms of no

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

more than five years.

Under certain circumstances, such as a serious breach of duty or a bona fide vote of no confidence by a majority of votes at a shareholders' meeting, a member of the Board of Executive Directors may be removed by the Supervisory Board prior to the expiration of his or her term. A member of the Board of Executive Directors may not deal with or vote on matters relating to proposals, arrangements or contracts between that member and the company.

The Articles of Association of BASF Aktiengesellschaft require decisions of the Board of Executive Directors to be made by a simple majority unless the law requires a larger majority. In case of a tie, the vote of the chairman of the Board is decisive.

125

The following table lists the current members of the Board of Executive Directors, their ages as of December 31, 2001, and the years in which they were first appointed to the Board:

DR. JURGEN F. STRUBE

Age: 62..... First year appointed: 1985

Year term expires: 20

PROFESSIONAL CAREER

1969	Joined Finance department of BASF Aktiengesellschaft
1970	Worked at BASF Antwerpen, Belgium, and in BASF Aktiengesellschaft's Logistics division
1974	Assigned to BASF Brasileira S.A., Sao Paulo, Brazil, responsible for the company's logistics and administrative activities, and later on also for the company's chemicals and plastics
1980	Head of Glasurit do Brasil Ltda.
1982	President of the Brazil regional division
1985	Appointed to the Board of Executive Directors
1990	Appointed Chairman of the Board of Executive Directors

POSITION & MAIN AREAS OF RESPONSIBILITY

Chairman of the Board of Executive Directors -- Legal, Taxes & Insurance, Planning & Controlling, Executive Management and Development, Corporate Communication

MEMBERSHIPS ON SUPERVISORY BOARDS

Since 1990	Allianz Lebensversicherungs-AG, Stuttgart, Germany
Since 1996	Hochtief AG, Essen, Germany
Since 1998	Commerzbank AG, Frankfurt, Germany
Since 1998	Hapag-Lloyd AG, Hamburg, Germany
Since 2000	Linde AG, Wiesbaden, Germany
Since 2000	Bertelsmann AG, Gutersloh, Germany
Since May 2001	Bayerische Motorenwerke Aktiengesellschaft, Munich, Germany

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

MAX DIETRICH KLEY

Age: 61..... First year appointed: 1990

Year term expires: 20

PROFESSIONAL CAREER

1969	Joined the Legal department of BASF Aktiengesellschaft
1977	Head of the Tax department
1982	Chief Executive Officer of Gewerkschaft Auguste Victoria, Marl, Germany
1987	President of the Energy and Coal division
1990	Appointed to the Board of Executive Directors
1999	Appointed Deputy Chairman of the Board of Executive Directors

POSITION & MAIN AREAS OF RESPONSIBILITY

Deputy Chairman and Chief Financial Officer -- Finance, Oil & Gas, Coatings, Raw Materials Purchasing, Eastern Europe, West Asia, Africa regional division, Investor Relations, Corporate Audit

126

MEMBERSHIPS ON SUPERVISORY BOARDS

Since 1990	Bayerische Hypo-und Vereinsbank AG, Munich, Germany
Since 1992	Gerling-Konzern Speziale Kreditversicherungs-Aktiengesellschaft, Cologne, Germany
Since 1993	Landesbank Rheinland-Pfalz, Mainz, Germany
Since 1995	Lausitzer Braunkohle AG, Senftenberg, Germany
Since 1995	Mannesmann Demag Krauss Maffei AG, Munich, Germany
Since 2000	Basell N.V., Hoofddorp, the Netherlands
Since 2000	RWE Plus AG, Essen, Germany
Since 2001	Siberian-Urals Petrochemical and Gas company (SIBUR), Moscow, Russia

HELMUT BECKS

Age: 57..... First year appointed: 1996

Year term expires: 20

PROFESSIONAL CAREER

1971	Joined BASF in October 1971 and initially worked in instrumentation in the Works Engineering division
1988	Head of the Electrical Engineering department
1991	President of BASF AG Site Engineering
1994	President of the BASF Group's South East Asia/Australia

MEMBERSHIPS ON SUPERVISORY BOARDS

Since 1999	Dresdner Bank Lateinamerika AG, Hamburg, Germany
Since 2000	Haftpflichtverband der Deutschen Industrie V.a.G., Hanover, Germany (German Industry Liability Association)

SUPERVISORY BOARD

The Supervisory Board consists of 20 members, 10 of whom are elected by shareholders at BASF Aktiengesellschaft's Annual Meeting and 10 of whom are elected by employees as required by the German Codetermination Act (MITBESTIMMUNGSGESETZ). Any Supervisory Board member elected by the shareholders at BASF Aktiengesellschaft's Annual Meeting may be removed by a majority of the votes cast at a subsequent meeting of shareholders. Any Board member elected by the employees may be removed by three-quarters of the votes cast by the class of employees that the member represents.

Aside from Mr. Arthur L. Kelly, all current shareholder representatives on the Supervisory Board were elected in 1998. Mr. Kelly was appointed by the district court of Ludwigshafen on December 7, 2000, as a replacement for Dr. Marcus Bierich, who died on November 25, 2000.

The Supervisory Board appoints a chairman and a deputy chairman from among its members. The chairman of the Supervisory Board must be elected by a majority of two-thirds of the Board members. If a majority is not reached in the first vote, the members of the Supervisory Board, who were elected by the shareholders, elect the chairman.

At least half of the total required number of members of the Supervisory Board must be present or participate in decision-making to constitute a quorum. Unless otherwise provided for by law or BASF Aktiengesellschaft's Articles of Association, resolutions are passed by a simple majority of the votes cast. In the event of a tie, a second vote is held, and the chairman may cast a deciding vote.

Supervisory Board members are elected to terms of approximately five years. The terms expire at the end of the Annual Meeting after the fourth fiscal year following the year in which the

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

130

members were elected. The current terms of all Supervisory Board members expire at the end of the Annual Meeting in 2003. Compensation for Board members is determined by BASF Aktiengesellschaft's Articles of Association.

The following table lists the current members of BASF Aktiengesellschaft's Supervisory Board, their respective ages as of December 31, 2001, their principal occupation and the year in which they were first elected or appointed to the Supervisory Board:

NAME -----	AGE -----	PRINCIPAL OCCUPATION -----	YEAR FIRST ELECTE -----
DR. BERTHOLD LEIBINGER Chairman	71	Managing Director of TRUMPF GmbH + Co KG	1998
VOLKER OBENAUER(1) Deputy Chairman	59	Chairman of the works council of BASF Group	1993
WOLFGANG DANIEL(1)	44	Deputy Chairman of the works council of the Ludwigshafen site of BASF Aktiengesellschaft	1996
ETIENNE GRAF DAVIGNON	69	President of Societe Generale de Belgique	1993
DR. FRANCOIS DIEDERICH	49	Professor at Zurich Technical University	1998
DR. TESSEN VON HEYDEBRECK	56	Member of the Board of Executive Directors of Deutsche Bank AG	1998
DR. WOLFGANG JENTZSCH	69	Retired member of the Board of Executive Directors of BASF Aktiengesellschaft	1995
ARTHUR L. KELLY	64	Chief Executive Officer of KEL Enterprises L.P., Chicago, Illinois	2000
ROLF KLEFFMANN(1)	52	Chairman of the works council of Wintershall AG's Barnstorf oil plant	1998
ULRICH KUPPERS(1)	46	Manager of the Ludwigshafen branch of the Mining, Chemical and Energy Industries Union (INDUSTRIEGEWERKSCHAFT BERGBAU, CHEMIE, ENERGIE)	1994
KONRAD MANTEUFFEL(1)	49	Member of the works council of the Ludwigshafen site of BASF Aktiengesellschaft	1999
DR. KARLHEINZ MESSMER(1)	57	Plant Manager at the Ludwigshafen site of BASF Aktiengesellschaft	1993
ROBERT OSWALD(1)	46	Chairman of the works council of the Ludwigshafen site of BASF Aktiengesellschaft	2000
ELLEN SCHNEIDER(1)	51	Chairwoman of the joint works council of Elastogran GmbH	1993
DR. HERMANN SCHOLL	66	Managing Director of Robert Bosch GmbH	1998

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

DR. HENNING SCHULTE-NOELLE	59	Chairman of the Board of Executive Directors of Allianz AG	1992
ROBERT STUDER	63	Retired Chairman of Union Bank of Switzerland	1993
JURGEN WALTER(1)	56	Member of the Central Board of Executive Directors of the Mining, Chemical and Energy Industries Union (INDUSTRIEGEWERKSCHAFT BERGBAU, CHEMIE, ENERGIE)	1998

131

NAME	AGE	PRINCIPAL OCCUPATION	YEAR FIRST ELECTED
----	-----	-----	-----
HELMUT WERNER	65	Retired Chairman of the Board of Executive Directors of Mercedes-Benz AG	1993

(1) Employee representative.

COMPENSATION OF DIRECTORS AND OFFICERS

The aggregate amount of compensation BASF Aktiengesellschaft and its subsidiaries paid during the year ended December 31, 2001, to all members of the Board of Executive Directors and the Supervisory Board, as a group, was E11.3 million. Of this amount, members of the Board of Executive Directors received E9.3 million and members of the Supervisory Board received E2.0 million. These sums include accrued performance-related bonuses for 2001. Additionally, the pro rata value of stock options granted to the members of the Board of Executive Directors in 2001 amounts to E4.2 million.

The total compensation BASF Aktiengesellschaft and its subsidiaries paid during the year ended December 31, 2001, to former members of the Board of Executive Directors and their beneficiaries was E4.8 million. In 2001, E2.1 million was set aside for the provision of pensions and similar benefits to the Board of Executive Directors, and as of December 31, pension provisions totaled E57.3 million. No commitments were assumed in favor of the members of the Supervisory Board or the Board of Executive Directors.

Pursuant to its Articles of Association, BASF Aktiengesellschaft reimburses each Supervisory Board member for out-of-pocket expenses. BASF Aktiengesellschaft also grants each Supervisory Board member a fixed annual payment of E5,000 and additional compensation based on dividends paid to BASF Aktiengesellschaft shareholders. This latter amount is E1,750 for each percentage point that aggregate dividends in a given year exceed 4% of BASF Aktiengesellschaft's subscribed capital. The chairman of the Supervisory Board receives a payment of twice and the deputy chairman receives a payment of 1.5

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

times this amount. For the year ended December 31, 2001, approximately 47% of the total compensation paid to members of the Supervisory Board consisted of dividend-based compensation.

Pursuant to BASF's stock option program, each member of the Board of Executive Directors is entitled to receive options on BASF Shares corresponding to 10 to 30% of the Board member's individual performance-related bonus. See "Item 6. Directors, Senior Management and Employees -- BASF Stock Option Program (BOP)" for further details on the number of options granted and on the terms and conditions of the options' rights.

BOARD PRACTICES

The Supervisory Board has established a special committee known in Germany as the "PERSONALAUSSCHUSS." The members of this committee are Dr. Berthold Leibinger, Dr. Henning Schulte-Noelle, Volker Obenauer and Jurgen Walter. This committee is responsible for reviewing and approving the terms and conditions of contracts between BASF Aktiengesellschaft and members of the Board of Executive Directors.

Directors' service contracts with BASF or with any of its subsidiaries do not include benefits which are provided upon termination of employment.

132

SHARE OWNERSHIP BY MEMBERS OF THE BOARD OF EXECUTIVE DIRECTORS AND THE SUPERVISORY BOARD

No member of the Board of Executive Directors or the Supervisory Board beneficially owns 1% or more of the outstanding BASF Shares.

EMPLOYEES

As of December 31, 2001, BASF employed a workforce of 92,545 people worldwide, which represented a decline of approximately 10.4% from the end of 2000 largely related to the pharmaceutical divestiture. About 55.0% of the workforce is based in Germany. Expenditures for salaries and wages totaled E4,858 million in 2001, down from E5,307 million in 2000. For further information, see Note 12 to the Consolidated Financial Statements included in Item 18.

The following table details BASF's workforce on a regional basis as of December 31, 2001, 2000 and 1999.

	2001	2000	1999
	-----	-----	-----
Europe.....	63,339	68,861	73,789
thereof Germany.....	50,939	54,356	58,158
North America.....	14,531	17,331	15,685
South America.....	5,749	6,913	6,688
Asia, Pacific Area, Africa.....	8,926	10,168	8,466
Total.....	92,545	103,273	104,628

As of December 31, 2001, BASF Aktiengesellschaft employed 39,354 people at its headquarters in Ludwigshafen, Germany, compared with 41,117 people as of December 31, 2000.

Many of BASF's employees who are not considered management in Germany are

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

members of labor unions. Almost all of these union members belong to the Mining, Chemical and Energy Industries Union (INDUSTRIEGEWERKSCHAFT BERGBAU, CHEMIE, ENERGIE). None of BASF's sites in Germany is operated on a "closed shop" basis, meaning that employees are not required to join a union. In Germany, collective bargaining agreements for employees below management level are generally negotiated between the regional association of employers within a particular industry and the respective unions.

In addition, under German law, employees elect a works council (BETRIEBSRAT) that participates in determining company policy, especially with regard to certain voluntary compensation matters and benefits.

The most recent collective bargaining agreement for employees in Germany represented by labor unions, which covers most of BASF's employees in Germany, was signed in March 2000 and expires February 28, 2002.

BASF considers its labor relations to be positive and anticipates reaching future agreements with its labor unions on terms satisfactory to all parties. There can be no assurances, however, that new agreements will be reached without a work stoppage or strike or on terms satisfactory to BASF. A prolonged work stoppage or strike at any of BASF's major manufacturing sites could have a material adverse effect on the company's results of operations. BASF has not experienced any material strikes during the last 10 years.

133

AGREEMENT 2003

In the "Agreement 2003" signed in April 2000, BASF management and employee representatives of BASF's Ludwigshafen site reached an agreement. The agreement calls for continued workforce reductions by the end of 2003 that will be achieved through socially responsible measures. A similar agreement was in form from 1997 through 2000. Incentives for voluntary retirement, such as part-time contracts for those approaching retirement (6,085 contract signed as of December 31, 2001) and increased internal job market flexibility will all help reduce the workforce without forced layoffs, and yet simultaneously permit the hiring of new younger employees. For the period between 2001 and the end of 2003, BASF expects an annual workforce reduction of approximately 1,300 positions.

BASF STOCK OPTION PROGRAM (BOP)

The BASF Stock Option Program (BOP) is offered to the Board of Executive Directors and approximately 1,200 of BASF's senior executives. Approximately 75% of the eligible senior executives opted to participate in the program. The program became effective on April 30, 1999, after BASF's shareholders approved a conditional capital increase for the program at the Annual Meeting on April 29, 1999. At the Annual Meeting on April 26, 2001 the shareholders approved a new conditional capital increase to incorporate certain changes to the BOP effective as of 2001.

An executive participating in the BOP receives four option rights for each BASF Share held by such executive for the purpose of taking part in the BOP (the "BOP Shares"). The number of BOP Shares eligible for the BOP is determined by an amount representing 10 to 30% of the executive's annual variable compensation and by the relevant "market price" of BASF Shares, which is the volume weighted average of the prices quoted in the Xetra-Registered Trademark- electronic trading system of Deutsche Borse AG on the day after the Annual Meeting (the "BOP Share Price"). In 2001, the BOP Share Price was E47.87 and in the years 2000 and 1999 it was E47.80 and E41.60, respectively. Annual variable compensation for a member of the Board of Executive Directors is determined by the Supervisory Board pursuant to the terms of the executive director's

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

employment agreement with BASF. Annual variable compensation for any other senior executive is determined by such senior executive's superiors pursuant to rules established by the Board of Executive Directors, and is based on BASF's performance and individual target agreement.

Option rights granted in 1999 and 2000 may not be exercised prior to three years after the grant date. They expire 15 days after the sixth Annual Meeting of BASF Aktiengesellschaft following the grant date. Option rights granted in 2001 may not be exercised prior to July 1, 2003. They expire 15 days after the eighth Annual Meeting of BASF Aktiengesellschaft following the grant date.

Each option right entitles the holder to two subscription rights. The first subscription right permits participants to purchase one BASF Share at the BOP Share Price provided that the market price of BASF Shares on the exercise date is more than 30% higher than the BOP Share Price. The second subscription right permits participants to purchase one BASF Share at a discount, provided that the performance of BASF Shares exceeds the performance of a benchmark index. For options granted in 1999 and 2000 the benchmark index is the DOW JONES EURO STOXX(SM) Total Return Index ("the EURO STOXX") and for options granted in 2001 the benchmark index is the Dow Jones Global Chemicals Total Return Index (the "DJ Chemicals"). The discount is equal to twice the percentage by which BASF Shares have outperformed the benchmark index since the date of issue of the relevant right.

An option right may be exercised if the exercise criteria for one or both of the underlying subscription rights have been satisfied. If an option right is exercised based on the exercisability of only one subscription right, then the other unexercisable subscription right terminates. The

134

monetary benefit resulting from the exercise of option rights being granted for one BOP Share may not exceed 10 times the BOP Share Price.

For details about the number of stock options granted see the table below:

	2001 -----	2000 -----	1999 -----
Stock options outstanding as of January 1.....	2,057,003	1,172,728	
Stock options granted.....	1,133,204	917,016	1,178,440
-thereof to members of the Board of Executive Directors...	137,060	126,228	166,616
Option rights lapsed(1).....	97,475	32,741	5,712
Stock options outstanding as of December 31.....	3,092,732	2,057,003	1,172,728

(1) Option rights lapse if the option holders no longer work for BASF or have sold part of their BOP Shares.

EMPLOYEE STOCK PURCHASE PROGRAM

In 1999, BASF Aktiengesellschaft and several other German subsidiaries of BASF launched a stock purchase program for their employees. At present, various European and Mexican subsidiaries participate in the program. The program allows an employee to purchase BASF Shares at market prices by using all or part of the annual variable salary that the employee receives from the employing company. For every block of 10 BASF Shares so purchased, the employee will be granted one additional BASF Share after one, three, five, seven and 10 years without further

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

payment, provided that the BASF Shares purchased under the program are still held by the employee.

	2001	2000	1999
Number of BASF Shares held under the program as of January 1.....	745,840	220,840	
Number of BASF Shares purchased under the program.....	434,800	544,730	223,980
Maximum amount of free shares granted.....	217,400	272,365	111,990
Shares expired.....	49,960	19,730	3,140
Number of BASF Shares held under the program as of December 31.....	1,130,680	745,840	220,840

ITEM 7. MAJOR SHAREHOLDERS AND RELATED PARTY TRANSACTIONS

MAJOR SHAREHOLDERS

The capital stock of BASF Aktiengesellschaft consists of ordinary shares with no par value (STUCKAKTIEN) that are issued only in bearer form ("BASF Shares"). As of December 31, 2001, BASF Aktiengesellschaft had an aggregate of 583,401,370 BASF Shares outstanding. Because the holders of BASF Shares are not registered with BASF Aktiengesellschaft or any other organization, BASF Aktiengesellschaft generally cannot determine who its shareholders are or how many shares a particular shareholder owns. Notwithstanding the foregoing, based on its most recent survey, BASF Aktiengesellschaft believes that, as of January 10, 2001, approximately 9.4% of the BASF Shares were held by shareholders in the United States.

The German Securities Trading Act (WERTPAPIERHANDELSGESETZ) requires any investor who holds voting securities of a German corporation listed on a stock exchange within the European Union or European Economic Area to promptly notify the corporation and the German Federal Supervisory Authority for Securities Trading (BUNDESAUFSICHTSAMT FUR DEN WERTPAPIERHANDEL) whenever its holdings reach, exceed or fall below 5%, 10%, 25%, 50% or 75% of the corporation's outstanding voting rights. In addition, any investor holding 5% or more of the voting rights of a listed German corporation was required to provide the corporation with an initial notification of the level of its holdings prior to the first Annual Meeting of the corporation held after April 1, 1995. If an investor fails to provide the notices described above, the investor will forfeit any rights that are attached to its securities during the period of such failure. The German Securities Trading Act contains various rules designed to ensure the attribution of shares to the person who has effective control over the shares.

Allianz Aktiengesellschaft has notified BASF that it directly or indirectly holds more than 10% of the BASF Shares. Information available as of December 31, 2001 indicated that Allianz Aktiengesellschaft and its subsidiaries held an aggregate of 10.21% of the BASF Shares.

To its knowledge, BASF Aktiengesellschaft is not owned or controlled directly or indirectly by any corporation, foreign government or any person, jointly or severally.

RELATED PARTY TRANSACTIONS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The existing loans between BASF and affiliated and associated companies and participating interests as of December 31, 2001 are shown in Note 15 to the Consolidated Financial Statements included in Item 18. There are no loans outstanding to members of the Supervisory Board and the Executive Board.

Allianz Aktiengesellschaft, through certain of its subsidiaries, currently provides insurance services to BASF in a number of different areas. BASF Aktiengesellschaft believes that these services are provided on an arm's length basis.

Certain members of the Supervisory Board and the Board of Executive Directors are members of supervisory or executive boards of financial institutions with which BASF engages in certain transactions in the ordinary course of business and at terms at the time prevailing in the market for comparable transactions with other persons.

137

(This page has been left blank intentionally.)

ITEM 8. FINANCIAL INFORMATION

CONSOLIDATED FINANCIAL STATEMENTS

See "Item 18. Financial Statements."

EXPORT SALES

BASF manufactures products mainly in Europe (primarily Germany) and North America and to an increasing extent in Asia. BASF's products are then sold in markets worldwide. Therefore, a large share of BASF's products are manufactured in Germany and exported for sale in Asia and to a lesser extent in South America. The following table sets forth BASF's primary exports:

REGION	REGIONAL SALES	PRODUCED IN REGION	REGIONAL IM
-----	-----	-----	-----
	(EUROS IN MILLIONS)	(EUROS IN MILLIONS)	(EUROS I
Europe.....	17,984	19,399	
- Thereof Germany.....	7,212	13,417	
North America.....	7,654	7,772	
South America.....	2,188	1,842	
Asia, Pacific Area, Africa.....	4,674	3,487	
Total.....	32,500	32,500	

LEGAL PROCEEDINGS

In addition to the legal proceedings and claims described below, BASF is involved in a number of legal proceedings and claims incidental to the normal conduct of its businesses, relating to such matters as product liability, patent infringement, licensing, tax assessments, competition, past waste disposal practices and release of chemicals into the environment. Although the outcome of these proceedings and claims cannot be predicted with certainty, BASF Aktiengesellschaft believes that, except for liabilities resulting from the antitrust claims relating to vitamins, any resulting liabilities, net of amounts recoverable from insurance or otherwise, will not, in the aggregate, have a material adverse effect on BASF's consolidated results of operations, financial

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

condition and cash flows.

ANTITRUST CLAIMS RELATING TO VITAMINS

In 1999 and in 2000, BASF Aktiengesellschaft as well as BASF Australia Ltd. entered into agreements with the United States Department of Justice, the Canadian Competition Bureau and the Australian Department of Justice by which BASF Aktiengesellschaft and BASF Australia Ltd. agreed to plead guilty to certain violations of antitrust laws relating to the sale of vitamin products in respective countries. The relevant courts accepted the guilty pleas and the recommended fines of \$225 million, C\$19 million and A\$7.5 million. On November 21, 2001, the European Commission imposed a fine of E296.2 million against BASF Aktiengesellschaft. BASF has appealed against this decision.

Proceedings are still running in Mexico, Brazil and Australia (relating only to vitamin C).

BASF has agreed to settle the class action lawsuits with plaintiffs that purchased products directly from vitamins manufacturers. Terms of the settlement agreement call for seven vitamins manufacturers to contribute \$1.17 billion. The Company's share of this settlement is \$287 million. The United States district court for the District of Columbia granted final approval of the proposed settlement on March 28, 2000. Because numerous large customers have elected to opt out of the proposed settlement, BASF Aktiengesellschaft's share has been reduced to \$90 million including fees of plaintiffs attorneys. Individual settlements with a series of such customers have been concluded. The payments for these settlements are within the range indicated above.

139

State court actions on behalf of indirect purchasers are proceeding separately in approximately 28 states. BASF has agreed to settle state class action law suits in 24 states. Terms of the settlement agreements call for six vitamin manufacturers to contribute up to \$396 million, subject to approval of the settlements in various state courts. If the settlements are finally approved, BASF Aktiengesellschaft will be obligated to pay up to \$97 million of the total amount. All settlements have been granted preliminary approval. Further claims for damages have been filed in Canada, New Zealand and in Australia.

The company has established provisions for the costs that they can currently anticipate in excess of the amounts agreed upon and paid. BASF does not believe, that the additional charges relating to unsettled vitamin antitrust proceedings will have a substantial impact on the profitability of the company.

SYNTHROID-REGISTERED TRADEMARK--RELATED CLAIMS

This proceeding concerned class action lawsuits against Knoll Pharmaceutical Company (KPC) of BASF's Pharmaceutical business, which was discontinued in 2001. The lawsuits challenged Knoll's delaying publication of a study comparing Synthroid-Registered Trademark- to certain branded and generic products.

Final approval of a proposed 1997 settlement was not granted. Knoll subsequently negotiated a new proposed settlement with consumers, and third-party payors providing for a payment of \$25.5 million in addition to the \$98 million paid into escrow in late 1997 (plus the accrued interest thereon). The United States District Court of Chicago granted final approval of the new proposed settlement on August 4, 2000. A number of appeals have been filed. On August 31, 2001, the United States Court of Appeals granted final confirmation of the settlement. However, the district court needs to determine attorneys' fees and costs, before the payment is made.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

ADDITIONAL PROCEEDINGS

In 2001, class action lawsuits against BASF Aktiengesellschaft and some of its affiliates were filed at United States courts. It was alleged that sales of automotive refinish coatings had violated antitrust laws. BASF considers these allegations to be unfounded and will consequently file for dismissal of the lawsuits.

OTHER PROCEEDINGS

In 2001, BASF Aktiengesellschaft and certain of its subsidiaries have been named defendants in numerous class action law suits alleging violations of the Sherman Act and state statutes in connection with the sale of automotive refinish coatings. Based on BASF's internal investigation these law suits are without any merits, and BASF will, therefore, file motions to dismiss.

DIVIDEND POLICY

The Board of Executive Directors and the Supervisory Board of BASF Aktiengesellschaft propose dividends based on BASF Aktiengesellschaft's year-end unconsolidated financial statements. The proposal is then voted on at BASF's Annual Meeting. The Annual Meeting is usually convened during the second quarter of each year.

Since all BASF Shares are in bearer form, dividends are either remitted to the custodian bank on behalf of the stockholder, generally within two days following the Annual Meeting, or, in the case of stockholders personally possessing certificates, available immediately following the Annual Meeting upon submission of the dividend coupon therefor at the offices of BASF Aktiengesellschaft in Ludwigshafen, Germany, or the offices of BASF Aktiengesellschaft's appointed paying agents.

140

See "Item 10. Additional Information" for further information. Record holders of BASF's American Depositary Receipts (ADRs) on the dividend record date will be entitled to receive payment in full of the declared dividend in respect of the year for which it is declared. Cash dividends payable to ADR holders will be paid to The Bank of New York, as depository, in euros and, subject to certain exceptions, will be converted by the depository into U.S. dollars. The amount of dividends received by holders of ADRs may be affected by fluctuations in exchange rates. See "Item 3 -- Exchange Rate Information" for further information.

BASF Aktiengesellschaft expects to continue to pay dividends, although there can be no assurance as to the particular amounts that would be paid from year to year. The payment of future dividends will depend on BASF's financial condition. See "Item 5. Operating and Financial Review and Prospects."

SIGNIFICANT CHANGES

Except as otherwise disclosed in this Annual Report, there has been no material change in the financial position of BASF Aktiengesellschaft since December 31, 2001.

ITEM 9. THE OFFER AND LISTING

LISTING DETAILS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

PRINCIPAL MARKET FOR BASF SHARES

The principal trading market for BASF Shares is the Frankfurt Stock Exchange. BASF Shares are also traded on the other German stock exchanges, namely Berlin, Bremen, Dusseldorf, Hamburg, Hanover, Munich and Stuttgart. In addition, BASF Shares are traded on the London, Paris and Swiss stock exchanges.

Since June 7, 2000, American Depositary Receipts (ADRs), each representing one BASF Share, have been traded on the New York Stock Exchange (NYSE) under the trade symbol "BF."

Options on BASF Shares are traded on Eurex, the German-Swiss derivatives market jointly owned and operated by Deutsche Borse AG and the Swiss Stock Exchange.

TRADING ON THE FRANKFURT STOCK EXCHANGE

The Frankfurt Stock Exchange, which is operated by Deutsche Borse AG, is the largest of the eight German stock exchanges. The aggregate annual turnover of the Frankfurt Stock Exchange in 2001 amounted to E3.81 billion (based on the exchange's practice of separately recording the sale and purchase components involved in any trade) for both equity and debt instruments. The Frankfurt Stock Exchange is, in terms of turnover in 2001, the third largest stock exchange in the world, after the New York Stock Exchange (NYSE) and the Nasdaq National Market.

In 2001, trading on the Frankfurt Stock Exchange accounted for approximately 86% of the turnover in exchange-traded securities in Germany. As of December 31, 2001, the equity securities of 5,777 companies, of which 4,865 were non-German, were traded on the Frankfurt Stock Exchange.

Trading on the floor of the Frankfurt Stock Exchange starts each business day at 9:00 a.m. and continues until 8:00 p.m., Central European Time. Markets in listed securities are generally of the auction type, but listed securities also change hands in interbank dealer markets off the Frankfurt Stock Exchange. Price formation is by open outcry, as determined by state-appointed specialists (AMTLICHE KURSMAKLER), who are themselves exchange members but are not permitted to deal with the public. Prices for active stocks are quoted continuously during stock exchange hours.

BASF Shares are also traded on Xetra-Registered Trademark- (Exchange Electronic Trading), an integrated computerized trading system operated by the Frankfurt Stock Exchange. Xetra is available during the operating hours of the Frankfurt Stock Exchange to brokers and banks that are members of a German stock exchange. Xetra is integrated into the Frankfurt Stock Exchange and is subject to its rules and regulations.

Transactions on the Frankfurt Stock Exchange (including transactions within the Xetra system) settle on the second business day following trading. Transactions on the Frankfurt Stock Exchange, which may occur when one of the parties to the transaction is foreign, are generally settled on the second business day following trading. The parties, however, may agree upon a different settlement period. German banks' standard terms and conditions for securities transactions require that all customer orders to buy or sell listed securities be executed on a stock exchange unless a customer gives specific instructions to the contrary.

The Hessian Exchange Supervisory Authority and the Trading Monitors of the Frankfurt Stock Exchange both monitor trading on the Frankfurt Stock Exchange. The exchange may suspend a quotation if orderly stock exchange trading is temporarily endangered or if a suspension is

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

143

necessary to protect the public interest. Trading activities are also monitored by the German Federal Supervisory Authority for Securities Trading (BUNDESAUFSICHTSAMT FUR DEN WERTPAPIERHANDEL).

BASF Shares are included in the DEUTSCHE AKTIENINDEX (DAX), the leading index of trading on the Frankfurt Stock Exchange. The DAX is a continuously updated, capital-weighted performance index of 30 highly capitalized German companies. The shares included in the DAX are selected on the basis of share turnover and market capitalization.

As of September 20, 1999, BASF Shares are also included in the Dow Jones EURO STOXX(SM) 50 Index comprised of the 50 companies with the highest market capitalization in countries participating in the European Monetary Union (EMU).

BASF Shares are also included in the Dow Jones STOXX600 Index comprised of some 600 companies located in Europe. BASF Shares are also included in the Dow Jones EURO STOXX Index comprised of some 313 companies in 11 of the 12 countries that are members of the EMU. This index is a component of the 16-country Dow Jones STOXX 600 Index. STOXX Ltd. is the operating company of the Dow Jones STOXX Indexes. BASF Shares are also part of the S&P Global 100 Index, which is comprised of 100 large companies with global businesses from around the world. The S&P Global 100 Index is sponsored by Standard & Poor's and the New York Stock Exchange.

According to statistics provided by the Frankfurt Stock Exchange, the average daily volume of BASF Shares traded on the exchange in 2001 was 6,980,228 shares.

SHARE PRICE HISTORY

The table below shows for the periods indicated the high and low official daily quotation for BASF Shares on the Frankfurt Stock Exchange as reported by Deutsche Borse AG and also the high and low of the DAX. See "Item 3. Key Information" for information on exchange rates between the U.S. dollar and the euro during the periods in this table.

ITEM 10. ADDITIONAL INFORMATION

ARTICLES OF ASSOCIATION

BASF incorporates herein all information regarding its Articles of Association by reference to its Registration Statement on Form 20-F (File No. 1-15909), as filed with the Securities and Exchange Commission on May 25, 2000.

ACQUISITION OF BASF SHARES BY BASF AKTIENGESELLSCHAFT

Under the German Stock Corporation Act, a stock corporation may acquire its own shares in a limited number of exceptional cases, including if so authorized by a shareholder resolution adopted at a General Shareholders' Meeting. At the Annual Meetings of BASF Aktiengesellschaft held on April 27, 2000 and April 26, 2001, the shareholders authorized the Board of Executive Directors to buy back BASF Shares representing up to 10% of BASF Aktiengesellschaft's outstanding share capital. The Board of Executive Directors may either cancel the shares re-bought, reducing the company's outstanding share capital, re-sell the shares subject to a further resolution adopted at an Annual Meeting, or use the shares to service option rights granted to participants of the BASF Stock Option Program. In 2001, BASF Aktiengesellschaft had bought 30,775,000 BASF Shares, or approximately 5.0% of the then outstanding BASF Shares. The Board of Executive Directors has cancelled 25,975,000 of these re-bought BASF Shares, reducing the company's outstanding share capital. On December 18, 2001, the Board of Executive Directors also decided to cancel the remaining 4,800,000 re-bought BASF Shares.

MATERIAL CONTRACTS

On March 20, 2000, BASF acquired from American Home Products Corp. of Madison, New Jersey, the entire crop protection business conducted by American Cyanamid Company, a subsidiary of the seller. The transaction closed on July 1, 2000, after anti-trust clearance had been received from the Federal Trade Commission and the European Union Commission. It was consummated through asset and share transactions in more than 65 jurisdictions worldwide, including the United States. BASF acquired all inventories, manufacturing facilities, customer relations, research and development activities, know-how, intellectual property rights, product registrations, accounts receivable and all other tangible and intangible assets. BASF also assumed contractual rights and obligations, provided the assets and contracts were primarily related to the seller's crop protection business. All employees working primarily for the acquired business were offered employment by BASF. The acquisition contract provides for representations and warranties, including indemnity provisions, as is customary in this kind of transaction. Major claims triggering the seller's responsibility to indemnify BASF have not emerged as of the date of this Annual Report. The total consideration to be paid by BASF under the acquisition contract consisted of a cash payment of \$3.8 billion and the assumption of \$94 million of debt. The cash payment was adjusted as of the closing date pursuant to the terms of the acquisition agreement and all amounts due have been paid in full.

On December 14, 2000, BASF and Abbott Laboratories Inc. of Abbott Park, Illinois, entered into an agreement for the sale of BASF's worldwide non-generic

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

pharmaceuticals business to Abbott Laboratories. Under the agreement, BASF transferred the shares in its subsidiaries conducting its worldwide non-generic pharmaceuticals business, excluding the production of certain pharmaceutical active ingredients, to Abbott Laboratories. The purchase price was \$6.9 billion on a cash and debt-free basis, to be adjusted by the balance of cash and debt at closing. The agreement provides for customary representations and indemnities capped at 25% of the purchase price. The transaction closed on March 2, 2001, after anti-trust clearance had been received from the Federal Trade Commission and the European Union Commission.

147

EXCHANGE CONTROLS AND OTHER LIMITATIONS AFFECTING SECURITY HOLDERS

There are, except in limited embargo circumstances pursuant to resolutions adopted by the United Nations or the European Union, no legal restrictions in Germany on international capital movements and foreign exchange transactions.

For statistical purposes only, every individual or corporation residing in Germany (a "Resident") must report to the German Central Bank (DEUTSCHE BUNDESBANK), subject only to certain immaterial exceptions, any payment received from or made to or on account of an individual or corporation residing outside Germany (a "Nonresident") if such payment exceeds E12,500 or the equivalent in a foreign currency. In addition, Residents must report any claims against or any liabilities payable to Nonresidents if such claims or liabilities in the aggregate exceed E1,500,000 or the equivalent in a foreign currency during any one month.

Neither German Law nor the Articles of Association (SATZUNG) of BASF Aktiengesellschaft impose any limitations on the rights of Nonresident or foreign owners to hold or vote BASF Shares, including those represented by American Depositary Receipts (ADRs).

TAXATION

The following is a summary of material U.S. federal income and German tax considerations relating to the ownership of American Depositary Shares (ADSs) or BASF Shares by an Eligible U.S. Holder (as defined below).

The discussion is based on tax laws of the United States and Germany as in effect on the date of this Annual Report, including the Convention between the United States of America and the Federal Republic of Germany for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with respect to Taxes on Income and Capital and to Certain Other Taxes (the "Income Tax Treaty"), and the Convention Between the United States of America and the Federal Republic of Germany for the Avoidance of Double Taxation with respect to Taxes on Estates, Inheritances, and Gifts (the "Estate Tax Treaty"). All such laws are subject to change, possibly with retroactive effect, and to different interpretations. The discussion also is based in part upon the representations of the Depositary and the assumption that each obligation in the Deposit Agreement and any related agreement will be performed in accordance with its terms.

The discussion does not purport to be a comprehensive description of all the tax considerations that may be relevant to the ownership of ADSs or BASF Shares. In particular, it does not address any aspect of U.S. federal tax law other than income taxation, or any aspect of German tax law other than income, gift, inheritance and wealth taxation, and it does not cover the tax laws of any state or municipality, or any jurisdiction outside the United States and Germany. Moreover, the discussion does not consider any specific facts or circumstances that may apply to a particular Eligible U.S. Holder, and does not take into account any special tax rules to which certain holders (including, without limitation, tax-exempt organizations, persons subject to the alternative minimum

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

tax, securities broker-dealers, financial institutions, persons holding ADSs or BASF Shares in a hedging transaction or as part of a straddle or conversion transaction, persons having a functional currency other than the U.S. dollar, persons that own, or that are treated as owning, 10% or more of the voting power of our stock and persons that received ADSs or BASF Shares pursuant to the exercise of employee stock options or otherwise as compensation) may be subject.

Owners of ADSs or BASF Shares are urged to consult their tax advisers regarding the U.S. federal, state, local, German and other tax consequences of owning and disposing of ADSs or BASF Shares. In particular, owners of ADSs or BASF Shares are urged to consult their tax advisers to confirm their status as Eligible U.S. Holders and the consequence to them if they do not so qualify.

148

For purposes of the discussion that follows, an "Eligible U.S. Holder" is any beneficial owner of ADSs or BASF Shares who or which (i) is a resident of the United States for the purposes of the Income Tax Treaty, such as a U.S. citizen or U.S. corporation, (ii) is not also a resident of the Federal Republic of Germany for the purposes of the Income Tax Treaty, (iii) owns the ADSs or BASF Shares as capital assets, (iv) does not hold ADSs or BASF Shares as part of the business property of a permanent establishment located in Germany or as part of a fixed base of an individual located in Germany and used for the performance of independent personal services, (v) is entitled to benefits under the Income Tax Treaty with respect to income and gain derived in connection with the ADSs or BASF Shares, and (vi) if not an individual, is not subject to the limitation on benefits restrictions in the Income Tax Treaty.

In general, for U.S. federal income tax purposes, holders of ADRs (as defined below) evidencing ADSs will be treated as the owners of the BASF Shares represented by those ADSs.

TAXATION OF DIVIDENDS

Under U.S. federal income tax law, Eligible U.S. Holders are generally required to include in their gross income, as ordinary dividend income, the gross amount of any distribution paid from the current or accumulated earnings and profits of BASF (as determined under U.S. federal income tax principles). The amount of dividend income for U.S. federal income tax purposes is not reduced by German taxes withheld from a dividend distribution in respect of the ADSs or BASF Shares. Eligible U.S. Holders that are corporations will not be entitled to the dividends-received deduction with respect to such distributions.

As a German corporation, BASF is required to withhold taxes on dividends paid to German resident and nonresident stockholders. Beginning with dividends paid in 2002, the required withholding rate applicable to BASF dividends is 20% plus a solidarity surcharge of 5.5% thereon, equal to 1.1% of the gross dividend (i.e., 5.5% of the 20% tax). Accordingly, a total German withholding tax of 21.1% of the gross dividend is required. These withholding tax rates reflect changes made in the German tax law that are effective with respect to BASF dividends paid in 2002 and thereafter. BASF dividends paid in prior years were subject to 25% withholding tax plus the 5.5% solidarity surcharge for a total of 26.375% withholding tax.

An Eligible U.S. Holder is entitled to a refund of a portion of the withholding tax, reducing the net German tax rate to that permitted under the Income Tax Treaty, i.e., 15% of the gross dividend. Dividends paid by BASF in prior years were subject to the German imputation system then in effect. Under that system, German resident individuals received a tax credit based on qualifying dividends received from German corporations and U.S. residents received a related Treaty benefit reducing the German tax on such dividends to 10%. With repeal of the imputation credit for dividends paid in 2002, the

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

special 10% Treaty rate no longer applies.

The portion of the German income tax withheld that cannot be refunded under the Income Tax Treaty may be claimed either as a foreign tax credit against the U.S. federal income tax liability of an Eligible U.S. Holder or as a deduction in computing taxable income. For U.S. foreign tax credit purposes, dividends received in respect of the ADSs or BASF Shares generally will be treated as passive income (or, in some circumstances, financial services income) derived from sources outside the United States. The rules and limitations relating to foreign tax credits are complex, and Eligible U.S. holders should consult their own tax advisors regarding the availability of foreign tax credits and the application of the foreign tax credit limitations to their particular situations.

To illustrate the foregoing, for each \$100 gross amount of dividend paid by BASF in 2002 to an Eligible U.S. Holder, \$21.10 of German tax would be withheld, of which \$6.10 would be refundable. For U.S. federal income tax purposes, the U.S. Holder would report dividend income of \$100 (to the

149

extent paid out of current and accumulated earnings and profits) and foreign taxes paid of \$15, for purposes of calculating the Foreign Tax Credit or the deduction for taxes paid.

For U.S. federal income tax purposes, dividends paid by BASF in euros are included in the gross income of an Eligible U.S. Holder in a U.S. dollar amount calculated by reference to the exchange rate in effect on the date the dividends (including the deemed refund of German corporate tax) are received by such Eligible U.S. Holder or, in the case of ADSs, by the Depositary. If a dividend paid in euros is converted into U.S. dollars on the date received, Eligible U.S. Holders generally should not be required to recognize foreign currency gain or loss in respect of the dividend.

GENERAL REFUND PROCEDURES REGARDING GERMAN WITHHOLDING TAX

Pursuant to administrative procedures, claims for refunds under the Income Tax Treaty generally must be submitted to the German Federal Tax Authority (BUNDESAMT FÜR FINANZEN) either individually by an Eligible U.S. Holder, or collectively (introduced on a trial basis) by the Depositary (or a custodian as its designated agent) on behalf of all Eligible U.S. Holders owning ADSs. Claims must be filed within four years of the end of the calendar year in which the dividend was received.

The collective refund procedure may not be available for eligible U.S. Holders entitled to refunds in excess of €150 for the calendar year. In such event, those holders must file separate claims or may qualify for the simplified refund procedure described below. Details of the collective refund procedure will be available from the Depositary.

Individual claims for refund have to be made on a special German claim form that must be filed with the German Federal Tax Authority at Bundesamt für Finanzen, Friedhofstrasse 1, 53221 Bonn, Germany. The German claim-for-refund form may be obtained from the German Federal Tax Authority at the same address where applications are filed, or from the Embassy of the Federal Republic of Germany at 4645 Reservoir Road, N.W., Washington, D.C. 20007-1998. Forms can also be obtained from the Office of the Assistant Commissioner (International), Internal Revenue Service, 950 L'Enfant Plaza South, SW, Washington, DC 20024, Attention: Taxpayer Service Division.

As part of the individual refund claim, an Eligible U.S. Holder must submit to the German Federal Tax Authority the original bank voucher (or certified copy

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

thereof) issued by the paying entity documenting the tax withheld, and an official certification on IRS Form 6166 of such Eligible U.S. Holder's last filed U.S. federal income tax return. IRS Form 6166 may be obtained by sending a request to the Internal Revenue Service Center, Foreign Certification Request, P.O. Box 16347, Philadelphia, PA 19114-0447. Requests for certification are to be made in writing and must include the Eligible U.S. Holder's name, mailing address and social security or employer identification number, the form number for the relevant U.S. federal income tax return and the tax period for which the certification is requested.

The Internal Revenue Service will send the certification directly to the German Federal Tax Authority if requested by the Eligible U.S. Holder. If no such request is made, the Internal Revenue Service will send a certificate on IRS Form 6166 to the Eligible U.S. Holder, which then must submit the certification with its claim for refund. The Internal Revenue Service certification is valid for three years and need only be resubmitted in a fourth year in the event of a subsequent application for refund.

SIMPLIFIED REFUND PROCEDURE REGARDING GERMAN WITHHOLDING TAX IN RESPECT OF ADSS OR BASF SHARES DEPOSITED WITH THE DEPOSITORY TRUST COMPANY IN NEW YORK

As of May 7, 1999, Eligible U.S. Holders may make applications for refunds payable under the Income Tax Treaty by using a simplified refund procedure instead of the general refund procedures

150

described above. Eligible U.S. Holders may use the simplified refund procedure only with respect to taxes withheld on dividends in respect of ADSs or BASF Shares deposited with The Depository Trust Company in New York. Under the simplified refund procedure, refund applications will be filed in a special (simplified) collective procedure with the aid of the "Elective Dividend Service" (the "EDS") installed at The Depository Trust Company.

In the EDS system, the participants maintaining accounts at The Depository Trust Company report the positions held by them at the relevant cutoff date that qualify for share dividends subject to withholding tax at the appropriate rates under the Income Tax Treaty. The reports of the individual participants will be compiled by The Depository Trust Company into a collective application and submitted to the German Federal Tax Authority for conditional refund. After initially checking only arithmetical correctness, the German Federal Tax Authority will make a refund as required to The Depository Trust Company. The refund will be made at the earliest on the due date of the withholding tax pursuant to German tax law.

The Depository Trust Company will distribute the refund amounts in accordance with EDS data to the participants to be passed on to the beneficial owners.

TAXATION OF CAPITAL GAINS

Upon a sale or other taxable disposition of ADSs or BASF Shares, an Eligible U.S. Holder will recognize a gain or loss for U.S. federal income tax purposes in an amount equal to the difference between the amount realized from the sale or other disposition, and the Eligible U.S. Holder's tax basis in the ADSs or BASF Shares. Such gain or loss generally will be treated as a capital gain or loss derived from U.S. sources, and will be a long-term capital gain or loss if the Eligible U.S. Holder's holding period for the ADSs or BASF Shares exceeds one year. In the case of certain Eligible U.S. Holders (including individuals), long-term capital gains are taxable at preferential U.S. federal income tax rates. The deduction of capital losses is subject to certain limitations under U.S. federal income tax law.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Deposits and withdrawals of BASF Shares in exchange for ADSs generally will not be considered a taxable event for U.S. federal income tax purposes.

Under the Income Tax Treaty, an Eligible U.S. Holder will not be liable for German tax on capital gains realized or accrued on the sale or other disposition of ADSs or BASF Shares.

GIFT AND INHERITANCE TAXES-GERMAN TAXATION

An Eligible U.S. Holder who is an individual and whose domicile is determined to be in the United States for purposes of the Estate Tax Treaty will not be subject to German inheritance and gift tax (the equivalent of the U.S. federal estate and gift tax) upon the individual's death or upon the making of a gift unless the ADSs or BASF Shares (i) are part of the business property of a permanent establishment located in Germany or (ii) are part of the assets of a fixed base of an individual located in Germany and used for the performance of independent personal services. An individual's domicile in the United States, however, does not prevent imposition of German inheritance and gift tax with respect to an heir, donee, or other beneficiary who is domiciled in Germany at the time the individual died or the gift was made.

The Estate Tax Treaty also provides a credit against U.S. federal estate and gift tax liability for the amount of inheritance and gift tax paid to Germany, subject to certain limitations, in a case where the ADSs or BASF Shares are subject to German inheritance or gift tax and U.S. federal estate or gift tax.

151

OTHER GERMAN TAXES

There are no German transfer, stamp or other similar taxes that would apply to Eligible U.S. Holders that purchase or sell ADSs or BASF Shares. The wealth tax is no longer levied in respect of any taxation periods that start on or after January 1, 1997. For collection periods from 1998 on, the trade capital tax has been abrogated.

INFORMATION REPORTING AND BACKUP WITHHOLDING

Dividends on ADSs or BASF Shares, and payments of the proceeds of a sale of ADSs or BASF Shares, paid within the United States or through certain U.S.-related intermediaries are subject to Internal Revenue Service information reporting, and may be subject to backup withholding at a 31% rate unless the holder (i) is a corporation or other exempt recipient or (ii) provides a correct taxpayer identification number, certifies that no loss of exemption from backup withholding has occurred and otherwise complies with the backup withholding requirements.

DOCUMENTS ON DISPLAY

BASF is subject to the informational requirements of the Securities Exchange Act of 1934, as amended. In accordance with these requirements, BASF files reports and other information with the Securities and Exchange Commission. These materials, including this Annual Report and the exhibits thereto, may be inspected and copied at the Commission's Public Reference Room at 450 Fifth Street, N.W., Washington, D.C. 20549 and at the Commission's regional offices at 500 West Madison Street, Suite 1400, Chicago, Illinois 60661, and 233 Broad Street, New York, New York 10279. Copies of the materials may be obtained from the Public Reference Room of the Commission at 450 Fifth Street, N.W., Washington, D.C. 20549 at prescribed rates. The public may obtain information on the operation of the Commission's Public Reference Room by calling the Commission in the United States at 1-800-SEC-0330. The Commission also maintains

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

a web site at www.sec.gov that contains reports, proxy statements and other information regarding registrants that file electronically with the Commission. BASF's Annual Report and some of the other information submitted by BASF to the Commission may be accessed through this web site. In addition, material filed by BASF can be inspected at the offices of the New York Stock Exchange at 20 Broad Street, New York, New York 10005.

152

ITEM 11. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

BASF is exposed to foreign currency and interest rate risks in the normal course of business. In cases where BASF intends to hedge against these risks, financial derivatives are used, including forward exchange contracts, currency options, interest rate/currency swaps or combined instruments. In addition, derivative instruments are used to replace transactions in original financial instruments, such as shares or fixed-income securities.

Exclusive use is made of commonly used instruments with sufficient market liquidity. Derivative financial instruments are only used if they have corresponding underlying positions arising from the operating business, cash investments and financing. The leverage effect that can be achieved with derivatives is deliberately not used. The derivative instruments held by BASF are solely held for purposes other than trading.

Where financial derivatives have a positive market value, BASF is exposed to credit risks in the event of non-performance by their counterparties. The credit risk is minimized by exclusively trading contracts with major creditworthy financial institutions.

To ensure efficient risk management, market risks are centralized at BASF Aktiengesellschaft and BASF Group companies designated for this purpose. BASF has developed and implemented internal guidelines based on the principles of separation of the placement function from the settlement function for derivative instruments.

The risks arising from changes in exchange rates and interest rates as a result of the underlying transactions and the derivative transactions concluded to hedge them are monitored constantly. For this purpose, market quotations or computer or mathematical models are used to determine the current market values not only of the underlying transactions but also of the derivative transactions and these are compared with each other. Where derivative instruments were entered into as replacement for original financial instruments, market trends are also monitored constantly.

INTEREST RATE RISK MANAGEMENT

BASF employs interest rate sensitive financial instruments to manage the liquidity and cash needs of its operations. Financial liabilities consist of bank loans (44% of financial liabilities), which BASF group companies worldwide took from numerous local banks in their various home currencies. Additionally, a fixed rate euro bond is outstanding (44% of financial liabilities) as well as a number of variable and fixed-rate U.S. dollar-bonds denominated infrastructure and environmental bonds with a preferred tax status in the United States (11% of financial liabilities). The remaining debt consists of a number of other bonds or commercial paper (1% of financial liabilities).

In addition to the interest rate risk exposure resulting from financial liabilities described above, BASF entered into a number of interest derivatives, combined interest/currency derivatives or combined interest/equity derivatives with banks. In most cases BASF is obliged to pay a fixed rate in a foreign currency and receives a variable rate in euros. Such swaps were concluded to

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

optimize the internal financing of group companies worldwide and to offer the internal parties the desired credit terms and cash flows. BASF also entered into a swap contract for which BASF pays a quarterly variable rate and receives a positive equity index performance. That instrument is described in greater detail under "Other Derivatives" and "Marketable Securities" below.

(1) Amounts stated under USD/DEM-fixed/fixed in the column "Thereafter" represent two swaps with predefined cashflows. Respective interest rates have not been agreed upon by the parties.

(2) Total Amount of USD/DEM-fixed/variable includes a swap of \$78.3 million with a stepped interest rate beginning at 9.5% and ending at 19.5% p.a.

The total volume of interest rate and cross currency swaps increased from E2,977 million to E3,081 million as of December 31, 2001 due to new intercompany loans requiring hedges of the intendant foreign exchange risk. The total fair value of the swaps changed from E(366) million in 2000 to E(591) million as of December 31, 2001 mainly due to the rise in the exchange rate of the U.S. dollar versus the euro and the decrease in U.S. fixed interest rates.

FOREIGN EXCHANGE RISK MANAGEMENT

The principal derivative financial instruments used by BASF to hedge foreign currency exposures resulting from trade receivables, trade payables and commercial paper denominated in foreign currency are forward foreign exchange contracts and currency options. In 2001, transactions in these hedging instruments were primarily aimed at hedging the exchange rate risk arising from the U.S. dollar, the Canadian dollar, the Australian dollar, the British pound, the Mexican peso, the Swiss franc, the Japanese yen and the Singapore dollar.

As of December 31, 2000, the company had entered into foreign exchange forward contracts and currency options related to the foreign exchange exposure arising from the sale of BASF's pharmaceutical business in U.S. dollars with a

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

nominal volume of \$4.0 billion. For additional information on the sale of the pharmaceuticals business, see Note 3 to the Consolidated Financial Statements in Item 18.

Intercompany loans within the BASF Group must frequently be denominated in a currency which is foreign to the intercompany borrower or the intercompany lender or both. The foreign currency risks inherent in such loans are hedged by forward foreign exchange contracts or foreign currency borrowings from third parties in such cases where the loan has a short term or a variable maturity. Longer term intercompany loans with fixed maturity schedules are hedged primarily with cross currency swaps.

The tables below provide information about significant derivative financial instruments which are sensitive to changes in foreign currency exchange rates.

 (1) All maturing in 2002 except of E615.7 million in 2003-2005 and E110.2 million after 2005.

(2) The Fair Value of this contract is less than E0.01 million.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The total volume of forward currency contracts decreased from E10,630 million in 2000 to E5,052 million as of December 31, 2001 due to the expiry of contracts entered into to hedge the foreign exchange risk inherent firstly in the denomination of the sale price for BASF's pharmaceutical business in U.S. dollars and secondly in U.S. dollar denominated commercial paper, which was repaid during 2001. The total fair value of the outstanding forward contracts worsened from E(18) million at December 31, 2000 to E(126) million as of December 31, 2001 mainly due to the rise of the U.S. dollar versus the euro and the decline of the U.S. dollar versus the Brazilian real.

163

put.....	38	0.91	0

(1) The fair value of this contract is less than E0.1 million.

The total volume of foreign currency options decreased from E4,221 million at December 31, 2000 to 153 million at December 31, 2001 due the expiry of foreign currency options entered into to hedge the foreign exchange exposure arising from the sale of BASF's pharmaceutical business in U.S. dollars. The total fair value of foreign currency options changed from E66 million to only E2 million due to the decline in the volume of outstanding options.

The total volume of cross currency swaps increased from E2,977 million to E3,081 million as of December 31, 2001 due to new intercompany loans requiring hedges of the intendant foreign exchange risk. The total fair value of the swaps changed from E(366) million in 2000 to E(591) million as of December 31, 2001 mainly due to the rise in the exchange rate of the U.S. dollar versus the euro and the decrease in U.S. fixed interest rates.

MARKETABLE SECURITIES

As of December 31, 2001, BASF owned debt and equity securities which are exposed to price changes. These financial instruments are used as profitable investments of BASF's cash surplus and are not held for trading purposes. All securities are quoted on stock exchanges, and the funds have readily determinable market prices. The securities are reflected in the U.S. GAAP reconciliation at their fair value of E629.2 million, which includes unrealized gains of E246.3 million. See Note 18 to the Consolidated Financial Statements in Item 18 for further information. BASF carefully monitors developments in the

financial markets.

In addition, BASF entered into a swap contract for which BASF pays a quarterly variable rate and receives a positive equity index performance (for details see the "Other Derivatives" table above in "Interest Rate Risk Management"). Such a swap was concluded to synthetically create an

166

equity investment using the variable interest payments from liquid funds. While BASF is obliged to pay on a quarterly basis a variable interest rate, the payments of the counterparties are dependent on the DAX-Index development during the stipulated term. However, a special provision insures that negative DAX-Index performance is not required to be reimbursed. Therefore the maximum equity exposure is a zero payment from the counterparties. The fair value of the DAX-Libor-Swap was E5.0 million as of December 31, 2001.

A 10% change in overall equity prices would not materially impact BASF's operations, financial position or cash flows.

COMMODITY PRICE RISKS

Certain BASF divisions are exposed to fluctuations in prices for raw materials and commodities. BASF operates in markets where the prices of raw materials and products are commonly affected by cyclical movements of the economy.

In order to secure the supply of raw materials, BASF has signed long-term supply contracts and is buying additional quantities on spot markets. Some of the most important raw materials involved are:

- Naphtha
- Propylene
- Benzene
- Titanium dioxide
- Cyclohexene
- Methanol
- Alpha olefins

The following measures are taken to avoid and manage risks in the purchase of raw materials:

- BASF avoids supply problems by entering into long-term contracts with at least two suppliers for each significant raw material. The quantities contracted are divided by the suppliers based on their ability to ensure supply security. BASF enters into long-term contracts only after a strict evaluation of the supplier's financial condition and technical capabilities as well as its environmental safety record, so that supply problems and quality problems are reduced to a minimum.
- Price risks are managed through several measures. Purchasing raw materials through long-term contracts and on spot markets allows BASF to obtain favorable prices for a portion of its raw materials, if for example excess quantities on the spot markets lead to a short-term price reduction. In long-term contracts, price conditions are based on published raw material price quotations and lead to the permanent adjustment of prices (price

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

gliding clauses) or are adjusted at least on a quarterly basis.

REPORT OF INDEPENDENT ACCOUNTANTS

We have audited the accompanying consolidated balance sheets of BASF Aktiengesellschaft and subsidiaries as of December 31, 2001 and 2000, and the related consolidated statements of income, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2001. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in Germany and in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such Consolidated Financial Statements present fairly, in all material respects, the financial position of BASF Aktiengesellschaft and its subsidiaries as of December 31, 2001 and 2000, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2001 in conformity with accounting principles generally accepted in Germany.

As discussed in Note 2 to the Consolidated Financial Statements, the Company changed its method of accounting for tax loss carryforwards in 2001.

Application of accounting principles generally accepted in the United States of America would have affected stockholders' equity as of December 31, 2001 and 2000 and net income for each of the three years in the period ended December 31, 2001 to the extent summarized in Note 4 to the Consolidated Financial Statements.

F-5

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF ACCOUNTING POLICIES

(A) BASIS OF PRESENTATION

The Consolidated Financial Statements of BASF Aktiengesellschaft ("BASF" or "BASF Aktiengesellschaft") are based on the accounting and valuation principles of the German Commercial Code (HANDELSGESETZBUCH) and the German Stock Corporation Act (AKTIENGESETZ). The accounting principles conform to generally accepted accounting principles in the United States (U.S. GAAP) to the extent permissible under the German Commercial Code based on the accounting standards issued by the German Accounting Standard Committee (GASC). The reconciliation of remaining significant deviations to U.S. GAAP is described in Note 4 to these Consolidated Financial Statements.

The translation of euros into U.S. dollars (\$) has been made solely for the convenience of the reader at the noon buying rate of the Federal Reserve Bank of New York on December 31, 2001, which was \$0.8901 = E1.00. No representation is made that such euro amounts could have been or could be converted into dollars at that or any other exchange rate on such date or any other dates.

(B) SCOPE OF CONSOLIDATION

The Consolidated Financial Statements include BASF Aktiengesellschaft, the parent company, and all material subsidiaries in which BASF Aktiengesellschaft directly or indirectly exercises a majority of the voting rights or which are otherwise controlled by BASF Aktiengesellschaft (collectively, the "Company"). Furthermore, material 50% joint ventures are included on a proportional consolidation basis, with the exception of the joint venture Basell N.V. of BASF and Shell, which is accounted for using the equity-method. Basell N.V. largely operates independently and is not included in the planning and approval processes of BASF. Subsidiaries and joint ventures whose impact on the net worth, financial position and results of the Company is individually and in the aggregate immaterial, are excluded from the scope of consolidation.

Consolidated companies and changes to the scope of consolidation:

	2001	2000	1999
Consolidated companies as of beginning of year.....	170	150	132
- Thereof proportional consolidation.....	6	16	17
First-time consolidations.....	27	41	26
- Thereof proportional consolidation.....	5	--	2
Deconsolidations.....	43	21	8
- Thereof proportional consolidation.....	--	10	3
Consolidated as of December 31.....	154	170	150

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

	---	---	---
- Thereof proportional consolidation.....	11	6	16

Generally, affiliated companies not consolidated due to immateriality, non-proportionally consolidated joint ventures and associated companies are accounted for using the equity method.

F-6

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

Associated companies represent those entities where the Company has a participation of at least 20% and exercises a significant influence over the operating and financial policies.

	2001	2000	1999
Affiliated companies.....	24	22	25
Joint ventures.....	1	3	7
Other associated companies.....	3	3	3
	--	--	--
	28	28	35

Major changes to the scope of consolidation, other than those relating to corporate structure, relate to the following:

2001:

First-time consolidations comprise:

- BASF SONATRACH Propanchem S.A., Tarragona, Spain, (BASF's share: 51%, SONATRACH: 49%), which constructs plants for propylene production.
- Ellba Eastern Private Ltd., Singapore, our joint venture with Shell to produce styrene and propylene oxide.
- BASF-YPC Company Ltd., Nanjing, China, our joint venture with SINOPEC to setup a petrochemical Verbund site in Nanjing, China.
- BASF NOF Coatings Company Ltd., Tokyo, Japan, our joint venture with NOF, Tokyo, Japan, for the production and marketing of coatings, especially for the Japanese market.
- BASF Styrenics Private Ltd., Mumbai, India, a producer of polystyrene, which was acquired at the end of 2000.
- Another 22 subsidiaries, previously not consolidated, located in Turkey, Japan, China, Russia, Poland, Norway, Finland and other countries.

Deconsolidations comprise:

- 32 companies in the course of the sale of the pharmaceuticals and generics business;
- 11 companies due to merger with other affiliates, liquidation or declining

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

significance.

2000:

First-time consolidations comprise:

- BASF Coatings Ltd., Deeside, United Kingdom, a coil coatings manufacturer, acquired from Norsk Hydro in 1999.
- BASF PETRONAS Chemicals Sdn. Bhd. (BASF's share: 60%, PETRONAS' share: 40%) and BASF Services (Malaysia) Sdn. Bhd., Petaling Jaya, Malaysia, which operate the Verbund site in Kuantan, Malaysia.

F-7

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

- 22 subsidiaries from the crop protection business of American Home Products Corp. acquired in the middle of 2000; the major part of this business was directly acquired through asset purchases by consolidated subsidiaries of BASF.
- Another 16 subsidiaries previously not consolidated.

Deconsolidations comprise primarily:

- The divestiture of Wintershall (U.K.) Limited and Wintershall Exploration (U.K.) Limited, London, United Kingdom.
- 14 companies of the Targor Group and the Elenac Group, due to the contribution of the polyolefins business to the joint venture Basell N.V.

1999:

First-time consolidations comprise:

- ELLBA C.V. (formerly Basell C.V.) of Rotterdam, the Netherlands, a joint venture with Shell that has been consolidated since the start-up of the styrene monomer and propylene oxide plant.
- Salchi Spa of Italy, an industrial coatings manufacturer acquired in 1998 and now known as BASF Coatings Spa of Burago Molgora, Milan, Italy.
- Wintershall Energia S.A. of Buenos Aires, Argentina. The operation was taken over in 1998 when Deminex was split between the partners.
- Another 23 subsidiaries previously not consolidated, mainly in the Pharmaceuticals segment and Polyurethanes division.

Deconsolidations comprise:

- The divestiture of BASF Horticulture et Jardin S.A. of Levallois, France.
- The divestiture of Wintershall Canada Ltd. of Calgary, Alberta, Canada.
- The divestiture of the former joint venture Ultrasorb Chemikalien GmbH of Ludwigshafen, Germany.

SIGNIFICANT ACQUISITION

On July 1, 2000, the Company acquired the worldwide crop protection business of American Home Products Corp. (AHP). This business manufactures a wide range of herbicides, insecticides, fungicides and biotechnology products for the professional and industrial markets around the world. It operates 14 production facilities for active ingredients and formulations worldwide.

For accounting purposes, the acquisition has been treated as a purchase, and, accordingly, the results of operations of the acquired business are included in the accompanying financial statements beginning July 1, 2000. The Company has integrated this business into its Agricultural Products segment. Goodwill after allocation of the purchase price to identifiable assets and liabilities is amortized over 20 years on a straight-line basis.

The following unaudited pro forma data summarize the results of operations for the years 2000 and 1999, as if the above acquisition had been completed as of the beginning of these periods. The pro forma data give effect to actual operating results prior to the acquisition, adjusted to include the pro forma effect of interest expense, amortization of intangibles and income taxes. The 2000 pro forma data include a one-time cost of E344 million related to the integration of the business. The pro forma results do not include any anticipated cost savings from the combination of the crop protection businesses

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

of AHP and BASF. These pro forma amounts do not purport to be

F-9

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

indicative of the results that would have actually been obtained if the acquisition occurred as of the beginning of the periods presented or that may be obtained in the future.

		2000		1999
		-----		-----
Net sales.....	E	37,130.7	E	31,038.7
Income from operations.....		3,381.7		2,062.7
Net income.....		1,351.8		1,118.8
Earnings per share (German GAAP).....		2.20		1.81

The effects on a pro forma basis of 2001 and 1999 acquisitions on net sales, net income and basic and diluted earnings per share were not material.

PROPORTIONAL CONSOLIDATION

The Company accounts for its investments in 11 joint ventures (2000: 6, 1999: 16) using the proportional consolidation method, as permitted under German GAAP. Under U.S. GAAP, all investments in joint ventures must be accounted for using the equity method. The differences in accounting treatment between proportional consolidation and the equity method of accounting have no impact on reported stockholders' equity or net income. Rather, they relate solely to matters of classification and display. The United States Securities and Exchange Commission (SEC) permits the omission of such differences in classification and display in the reconciliation to U.S. GAAP appearing in Note 4.

Condensed financial information relating to the Company's pro rata interest in joint ventures accounted for using the proportional consolidation method is as follows:

LIST OF SHAREHOLDINGS: A list of companies included in the Consolidated Financial Statements as well as a list of all companies in which BASF has a participation, has been deposited in the Commercial Register HRB 3000 in Ludwigshafen, Germany, as required by the German Commercial Code, Section 313(2). The list of shareholdings can be obtained as a separate report from BASF Aktiengesellschaft.

F-11

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

(C) SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

BALANCE SHEET DATE: The Consolidated Financial Statements are generally prepared using the individual financial statements of the companies forming part of the group (hereinafter referred to as "consolidated companies"). Such financial statements are generally prepared as of the balance sheet date of the Consolidated Financial Statements. In certain cases, interim financial statements or adjusted statements as of the balance sheet date of the Consolidated Financial Statements are prepared and used.

UNIFORM VALUATION: Assets and liabilities of consolidated companies are accounted for and valued uniformly in accordance with the principles described herein. Where the accounting and valuation methods applied in the financial statements of the consolidated companies differ from these principles, appropriate adjustments are made to the relevant items. For companies accounted for under the equity method, significant deviations in the valuation methods are adjusted.

ELIMINATIONS: Transactions between consolidated companies are eliminated in full and those for joint ventures, on a pro rata basis. Inter-company profits resulting from sales between consolidated companies are eliminated unless they originate from the construction of plants under customary market conditions and are of minor importance. With regard to the companies accounted for under the equity method, inter-company profits resulting from sales on customary market conditions are not eliminated because the amounts are insignificant or because determining them would involve a disproportionate amount of effort.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CAPITAL CONSOLIDATION: Capital consolidation is based on a method equivalent to the purchase method required under U.S. GAAP. At the time of acquisition, the acquisition cost of participations is offset against the proportionate share of equity acquired. Differences arising are allocated to the assets or liabilities of the acquired company up to their fair values or capitalized as intangible fixed assets. Differences not allocated to individual assets are capitalized as goodwill and amortized within the expected useful life, within a period of five to 20 years.

REVENUE RECOGNITION: Revenues from product sales and the performance of services are recognized upon shipment to customers or performance of services. Provisions for discounts, sales returns, rebates to customers, estimated future warranty obligations and other claims are provided for in the same period the related sales are recorded. Revenues on long-term natural gas contracts are recognized when the gas is delivered. The terms of such contracts do not fix price.

INTANGIBLE ASSETS: Intangible assets are valued at acquisition cost less scheduled straight-line amortization. The weighted average amortization period for the intangible assets is 11 years for 2001 and eight years for 2000 based on the following expected useful lives:

	ESTIMATED LIVES (YEARS)	
	2001	2000
Goodwill.....	5 - 20	5 - 20
Product rights and licenses.....	3 - 10	3 - 15
Marketing, supply and similar rights.....	4 - 20	4 - 20
Know-how and patents.....	5 - 15	5 - 15
Concessions, explorations rights and similar rights.....	3 - 25	3 - 25
Software.....	2 - 5	2 - 5
Other rights and values.....	5 - 25	5 - 25

F-12

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

The Company evaluates goodwill and other intangible assets whenever significant events or changes in circumstances occur which might impair recovery of recorded asset costs.

PROPERTY, PLANT AND EQUIPMENT: Property, plant and equipment are stated at acquisition or production cost less scheduled depreciation over their estimated useful lives. Low-value assets are fully depreciated in the year of acquisition and are shown as retirements. Movable depreciable fixed assets that are functionally integrated are treated as a single asset item. The cost of self-constructed plants includes direct costs and an appropriate proportion of the production overhead, but excludes financing costs for the period of construction. Fixed assets, including natural gas pipelines, are depreciated using the straight-line method. Movable fixed assets put into operation before 2001 are mostly depreciated by the declining balance method, with a change to straight-line depreciation if this results in higher depreciation rates (see Note 2).

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The weighted average periods of depreciation are as follows for 2001 and 2000:

	ESTIMATED LIVES	
	2001	2000
	(YEARS)	
Building and structural installations.....	23	22
Industrial plant and machinery.....	10	9
Long-distance natural gas pipelines.....	25	25
Working and office equipment and other facilities.....	10	8

Property, plant and equipment are reviewed for impairment whenever events or changes in circumstances indicate that the carrying value of an asset may not be recoverable. Measurement of an impairment loss for long-lived assets that the Company expects to hold and use is based on the fair value of the asset, which is usually based on the expected future discounted cash flows from the use of the asset and its eventual disposition.

The Company follows the successful efforts method of accounting for its oil and gas operations. Under this method, costs of successful and uncompleted oil and gas drilling operations are capitalized as tangible assets. Successful drillings are depreciated under the unit-of-production method. Successful drillings of German operations that began production prior to 2001 are depreciated under the declining balance method over the estimated useful lives of eight years (for drilling in old fields) and 15 years. Geophysical expenditures, including exploratory and dry-hole costs, are charged against income.

FINANCIAL ASSETS: Shares in more significant non-consolidated affiliated or associated companies are accounted for by the equity method. Other shares, participations and securities held as fixed assets are shown at acquisition cost or, where an other-than-temporary impairment of value occurs, at the appropriate lower values. Investments in affiliated and associated companies accounted for using the equity method are carried at cost of acquisition, plus the Company's equity in undistributed earnings. Goodwill associated with such investments is amortized over a period of between five and 10 years.

Loans are stated at cost or, in the case of non-interest-bearing loans or loans at below market interest rates, at their present value. Loans are considered impaired when, based on current information and events, it is probable that the Company will be unable to collect all amounts due. In such circumstances, the Company recognizes an impairment loss based on the estimated fair value of the loan.

F-13

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

INVENTORIES: Inventories are carried at the lower of acquisition or production costs or market values, as appropriate. These lower values are the replacement costs of raw materials and factory supplies and merchandise and, in the case of work in process and finished products, the expected sales proceeds less costs to be incurred prior to sale. Production costs include, in addition

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

to direct costs, an appropriate allocation of production overhead using normal utilization rates of the production plants. Financing costs are not included.

Construction-in-progress relates mainly to plants under construction for third parties. Expected profits are not recognized until the final or partial billing of a project; expected losses are recognized by write-downs to the lower attributable values.

RECEIVABLES AND OTHER ASSETS: Receivables are generally carried at their nominal value; notes receivable and loans generating no or a low-interest income are discounted to their present values. Risks of collectibility and transferability are covered by appropriate valuation allowances.

SECURITIES: Securities held as fixed assets, as well as marketable securities, are valued individually at cost or at lower quoted or market values.

DEFERRED TAX ASSETS: Deferred tax assets are recorded for taxable temporary differences between the valuation of assets and liabilities in the financial statements of the consolidated companies and the carrying amounts for tax purposes. Beginning in the year 2001, deferred taxes have been recorded for tax loss carryforwards (see Note 2). For companies located in Germany a 38% tax rate is applied, for other companies the tax rates applicable in the individual countries are used. If expected future earnings of a company make it seem more likely than not that the tax benefits will not be realized, appropriate valuation allowances are made.

PROVISIONS: Provisions for pensions are based on actuarial computations predominantly according to the projected unit credit method. Similar obligations, especially those arising from promises made by North American Group companies to pay the healthcare costs and life insurance premiums of retired staff and their dependents, are included in pension provisions.

Tax provisions are recognized for income taxes and other taxes in the amount necessary to meet the expected payment obligations, less any prepayments that have been made. Provisions for deferred taxes are recognized for a net liability from taxable temporary differences between the valuation of assets and liabilities in the financial statements of the consolidated companies and the carrying amounts for tax purposes, using the tax rates applicable in the individual countries.

Other provisions are recorded for the expected amounts of liabilities and probable losses from pending transactions. Maintenance provisions are established to cover omitted maintenance procedures as of the end of the year, expected to be incurred within the first three months of the following year. The amount provided is based on reasonable commercial judgement.

Environmental expenditures that relate to an existing condition caused by past operations and prescribed by current legal requirements that do not have future economic benefit are expensed. Liabilities for these expenditures are recorded on an undiscounted basis when environmental assessments or clean-ups are probable, the costs can be reasonably estimated and no future economic benefit is expected.

Provisions for required recultivation associated with oil and gas operations, especially the filling of wells and clearance of oilfields, or the operation of landfill sites are built up in installments over their expected service lives. In addition, provisions are accrued in installments for regular

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

shutdowns within prescribed intervals of certain large-scale plants as required by technical surveillance authorities.

Provisions for restructuring measures are recorded when a commitment from management exists and a detailed plan has been established. Such provisions include severance payments and other personnel-related costs, as well as specific site restructuring costs such as the costs for demolition and closure.

Provisions for long-service and anniversary bonuses are actuarially calculated using an interest rate predominantly of 5.5%. For short-time working programs for those employees nearing retirement, the present value of promised top-up payments are set aside in full and the wage and salary payments due during the passive phase of agreements are accrued through installments, discounted at an interest rate of 5.5%.

Provisions are recorded for the expected costs of short-time working contracts that are anticipated to be contracted during the term of the collective bargaining agreements, taking into consideration the ceilings provided in the collective agreements.

CONVERSION OF FOREIGN CURRENCY ITEMS: The cost of assets acquired in foreign currencies and revenues from sales in foreign currencies are recorded at current rates on transaction dates. Short-term foreign currency receivables and liabilities are valued at the rate on the balance sheet date. Long-term foreign currency receivables are recorded at the rate prevailing on the acquisition date or at the lower rate on the balance sheet date. Long-term foreign currency liabilities are recorded at the rate prevailing on the acquisition date or at the higher rate on the balance sheet date. Foreign-currency receivables or liabilities that are hedged are carried at hedge rates.

DERIVATIVE FINANCIAL INSTRUMENTS: Derivative financial instruments are treated as pending transactions and are not recorded as assets or liabilities. When applicable, underlying transactions and hedging measures are combined and valued accordingly. Profits from hedging transactions which cannot be allocated to a particular underlying transaction are recorded in income upon maturity. Unrealized losses from hedging transaction, which cannot be allocated to a particular underlying transaction are recognized currently in earnings and included in provisions.

TRANSLATION OF FOREIGN CURRENCY FINANCIAL STATEMENTS: The translation of foreign currency financial statements conforms with Statement of Financial Accounting Standard (SFAS) No. 52, "Foreign Currency Translation." The local currency is the functional currency of BASF subsidiaries and joint ventures in North America, Japan, Korea, China, Brazil, Singapore, and for oil and gas operations in Argentina. Balance sheet items are translated to euros at year-end rates except equity accounts at historical rates. Expenses and income are translated at quarterly average rates and accumulated for the year. The effects of rate changes are shown as "currency translation adjustment" and reported as a separate component of equity.

Where the euro is the functional currency, non-monetary assets and liabilities carried at historical values are translated using historical rates. Monetary assets and liabilities (and any non-monetary assets and liabilities carried at fair value) are translated using the year end rates, and expenses and income are converted at quarterly average rates cumulated to year-end figures, except for those items derived from balance sheet items converted at historical rates, which are also translated at historical rates. Foreign exchange gains or losses resulting from the remeasurement process are included in other operating expenses or income.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

F-15

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

EARNINGS PER SHARE: The calculation of earnings per share under German GAAP is based on the average number of common shares outstanding during the applicable period and the net income of the period.

USE OF ESTIMATES IN FINANCIAL STATEMENT PREPARATION: The preparation of financial statements in conformity with GAAP requires the use of estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. In the preparation of these Consolidated Financial Statements, estimates and assumptions have been made by management concerning the selection of useful lives of property, plant and equipment and intangible assets, the measurement of provisions, the carrying value of investments, and other similar evaluations of assets and obligations. Actual results could differ from these estimates.

2. CHANGE IN ACCOUNTING PRINCIPLES

Additions of movable assets to property, plant and equipment since January 1, 2001 are depreciated using the straight-line method, which is considered to better reflect the development of values of the Company's plants. Movable assets of property, plant and equipment already in use before the end of 2000 continue to be depreciated by the declining balance method. Successful drillings in the oil and gas operations added in 2001 are depreciated under the unit-of-production method. Successful drillings of German operations that began production prior to 2001 continue to be depreciated under the declining balance method.

The effect of the change in depreciation methods was to reduce depreciation expense by E171.9 million and to increase net income by E110.2 million, or E0.18 per share.

Beginning in 2001, deferred tax assets for tax loss carryforwards are recorded if the expected future earnings of a company make it seem more likely than not that the tax benefit will be realized. This accounting treatment, mandatory under U.S. GAAP, is allowed in Germany based on the recently issued Standard No. 10 of the German Accounting Standards Board.

Deferred tax assets for tax loss carryforwards arising in 2001 reduced income tax expenses and correspondingly increased net income by E219.7 million, or E0.37 per share.

Deferred tax assets recorded retroactively for tax loss carryforwards prior to 2001 resulted in an increase in net income of E50.6 million, or E0.08 per share, which is disclosed separately in the Consolidated Statements of Income as "Effect of the change in accounting principles for deferred taxes."

The changes in accounting principles increased earnings per share by E0.63.

3. DISCONTINUED OPERATIONS

On March 2, 2001, BASF's pharmaceuticals business was sold on the basis of an agreement dated December 14, 2000 to Abbott Laboratories Inc., Abbott Park, Illinois. Net sales and income of the pharmaceuticals business are included in the financial statements of the BASF Group as well as in the data of the former business segment Health & Nutrition (now called: Agricultural Products &

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Nutrition) for 1999, 2000 and for the period ended March 1, 2001.

F-16

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

The pharmaceuticals business is considered a discontinued operation under U.S. GAAP and would therefore not be included in the results from continuing operations for the years 1999 through 2001. The effect on the Consolidated Financial Statements would be as follows:

INCOME STATEMENT:

	2001	2000	1999
Sales.....	E364	E2,526	E2,197
Income from operations.....	30	243	(13)
Income before taxes.....	31	260	3
Net income/income from discontinued operations.....	19	156	2

The effect on net income from discontinued operations has been determined using a 40% income tax rate.

The gain on the disposal of the pharmaceuticals business is separately disclosed as extraordinary income (Note 9). According to U.S. GAAP, this gain would be adjusted for U.S. GAAP valuation differences and reported as part of income from discontinued operations.

4. RECONCILIATION TO U.S. GAAP

The Consolidated Financial Statements comply with U.S. GAAP as far as permissible under German GAAP. The remaining differences between German and U.S. GAAP relate to valuation methods that are required under U.S. GAAP but which are not permissible under German GAAP.

The following is a summary of the significant adjustments to net income and stockholders' equity that would be required if U.S. GAAP had been fully applied rather than German GAAP.

EARNINGS PER SHARE

The calculation of earnings per common share is based on the weighted-average number of common shares outstanding during the applicable period. The calculation of diluted earnings per common share reflects the effect of all dilutive potential common shares that were outstanding during the respective period. For computing diluted earnings per share, interest expense on convertible bonds, net of taxes, has been added to net income.

F-18

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

Options related to the BASF stock option program (BOP) for senior management (see Note 27) for which the exercise hurdles were met have not been included in the computation of diluted earnings per share because they would have had an anti-dilutive effect.

The determination of shares outstanding is as follows:

STOCKHOLDERS' EQUITY IN ACCORDANCE WITH U.S. GAAP...		\$16,500.9	E18,538.2
		-----	-----

(A) CAPITALIZATION OF INTEREST

For U.S. GAAP purposes, the Company capitalizes interest on borrowings during the active construction period of major capital projects. Capitalized interest is added to the cost of the underlying assets and is amortized over the useful lives of the asset. The capitalization of interest relating to capital projects is not permissible under German GAAP.

In calculating capitalized interest, the Company has made assumptions with respect to the capitalization rate and the average amount of accumulated expenditures. The Company's

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

subsidiaries generally use the entity specific weighted average borrowing rate as the capitalization rate.

(B) CAPITALIZATION OF SOFTWARE DEVELOPED FOR INTERNAL USE

Certain costs incurred for computer software developed or obtained for the Company's internal use are to be capitalized beginning in 1999 (Statement of Position (SOP) 98-1, "Accounting for the Costs of Computer Software Developed or Obtained for Internal Use") and amortized over the expected useful life of the software. Such costs have been expensed in these financial statements because the capitalization of self-developed intangible assets is not permissible under German GAAP.

(C) VALUATION OF PENSION FUNDS

Pension benefits under Company pension schemes are partly funded in a legally independent fund "BASF Pensionskasse VVaG" ("BASF Pensionskasse"). The companies' contribution to the BASF Pensionskasse is included in expenses for pensions and assistance.

BASF guarantees the commitments of the BASF Pensionskasse. For U.S. GAAP purposes, BASF Pensionskasse would be classified as a defined benefit plan and therefore included in the calculation of net periodic pension cost as well as the projected benefit obligation and plan assets. The valuation of the pension obligations under the projected unit credit method and of the fund assets of BASF Pensionskasse at market values would result in a prepaid pension asset according to U.S. GAAP that is not recorded in the Consolidated Financial Statements under German GAAP.

Net periodic pension cost according to U.S. GAAP would be lower than showing the Company's contribution to the BASF Pensionskasse as expense.

Information about the funded status of the BASF Pensionskasse is provided in the following table:

	2001	2000
	-----	-----
	(EUROS IN MILLIONS)	
Plan assets as of December 31,.....	E3,886.4	E4,137.3
Projected benefit obligation as of December 31,.....	3,294.3	3,213.4
	-----	-----
Funded status.....	592.1	923.9
Unrecognized actuarial losses (gains).....	59.8	(327.2)
	-----	-----
Prepaid pension asset.....	E 651.9	E 596.7
	-----	-----

The valuation of certain pension plans of foreign subsidiaries, according to SFAS No. 87 also resulted in prepaid pension assets (Note 23), included in the reconciliation to U.S. GAAP. After consideration of unrecognized actuarial gains and losses, E209.0 million in 2001 and E198.4 million in 2000 were included in the reconciliation to U.S. GAAP.

(D) ACCOUNTING FOR DERIVATIVES AT FAIR VALUE AND VALUATION OF LONG-TERM FOREIGN

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CURRENCY ITEMS

Beginning in 2001, derivative contracts are to be accounted for at fair values as required by SFAS Nos. 133 and 138. Where hedge accounting is not applicable, changes in the fair values of derivative contracts are to be included in net income, together with foreign exchange gains and losses of the underlying transactions.

F-20

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

At the beginning of 2001, the implementation of SFAS No. 133 increased income before taxes by E66.8 million consisting of E(127.2) million negative fair values of derivative contracts and E194.0 million foreign exchange gains on the underlying transactions. The cumulative effect on net income was E38.0 million.

Under German GAAP, long-term receivables and liabilities denominated in a foreign currency are converted into euros at the exchange rates of the date when the transactions took place or the lower exchange rates at the end of the year for receivables and the higher exchange rates for liabilities. U.S. GAAP requires conversion at the exchange rate at the end of the year. Furthermore, hedge accounting is applied in these financial statements to a larger extent than allowed by SFAS No. 133. Positive fair values of derivative contracts for which hedge accounting is not applicable are deferred until settlement or termination of the derivative contract.

An exchange loss of E48.6 million for the overvaluation of the Brazilian real would have been charged to 1999 net income under U.S. GAAP.

Under German GAAP, unrealized gains on swap and other forward contracts are deferred until settlement or termination while unrealized losses are recognized as of each period end. Under U.S. GAAP, these contracts are marked to market. The amounts included in the reconciliation of net income were E44.6 million in 2000 and E12.4 million in 1999, and in the reconciliation of shareholders' equity E50.0 million in 2000.

(E) VALUATION OF SECURITIES

Under U.S. GAAP, available-for-sale securities are recorded at market values on the balance sheet date. The effect of the change in valuation is immediately recognized in a separate component of stockholders' equity. Realized profits and losses are credited or charged to income, as are other than temporary impairments of value. The major part of securities and other investments are considered to be available-for-sale. Under German GAAP, such securities and other investments are valued at the lower of acquisition cost or market value at the balance sheet date.

(F) U.S. GAAP ADJUSTMENTS RELATING TO COMPANIES ACCOUNTED FOR UNDER THE EQUITY METHOD

For purposes of the reconciliation to U.S. GAAP, the earnings of companies accounted for using the equity method have been determined using valuation principles prescribed by U.S. GAAP.

(G) OTHER ADJUSTMENTS

This caption includes the reversal of maintenance provisions, the reclassification of the provision for stock compensation, and other items.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

German GAAP requires companies to accrue as of the end of the year for the expected costs of omitted maintenance procedures expected to take place within the first three months of the following year. Such costs would be expensed as incurred under U.S. GAAP. The amounts included in the reconciliation of net income related to the maintenance provision were E(5.6) million in 2001, E(1.4) million in 2000 and E2.8 million in 1999, and in the reconciliation of stockholders' equity were E27.3 million in 2001 and E32.9 million in 2000. For purposes of reconciliation to U.S. GAAP, the recording of stock compensation expense results in a credit to stockholders' equity rather than a balance sheet provision.

F-21

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

(H) DEFERRED TAXES

The adjustments required to conform with U.S. GAAP would result in taxable temporary differences between the valuation of assets and liabilities in the Consolidated Financial Statements and the carrying amount for tax purposes. Resulting adjustments for deferred taxes primarily relate to the aforementioned U.S. GAAP reconciling items.

Additionally, this amount also includes deferred tax liabilities related to the currency translation adjustment and, until December 31, 2000, deferred tax assets for tax loss carryforwards of E75.6 million. Beginning in 2001, deferred tax assets for tax loss carryforwards are recorded in the financial statements (see Note 2).

In accordance with German GAAP, the tax credit related to the distribution of retained earnings previously taxed at higher rates is accounted for as a reduction of income tax expense in the financial year for which the distribution has been recommended.

The revised corporation tax system in Germany recognizes such credits as a reduction of income taxes payable in the year the dividend is paid. According to U.S. GAAP, such tax credits are to be recognized as a reduction of income tax expenses in the period in which the tax credits will be recognized for tax purposes. This leads to a deferral of the recognition of the reduction of taxes related to the dividend payment in 2002.

(I) MINORITY INTERESTS

The share of minority shareholders in the aforementioned reconciliation items to U.S. GAAP of net income and stockholders' equity are reported separately.

CONSOLIDATION OF MAJORITY-OWNED SUBSIDIARIES

U.S. GAAP requires the consolidation of all controlled subsidiaries. Under German GAAP, the Company does not consolidate certain subsidiaries because their combined effect on financial position, results of operations and cash flows is not material. The effect of non-consolidated subsidiaries for 2001, 2000 and 1999, on total assets, total liabilities, stockholders' equity, net sales and net income was less than 3%.

Additionally, under German GAAP, the Company accounts on a prospective basis for previous unconsolidated subsidiaries that are added to the scope of consolidation. U.S. GAAP requires consolidation for all periods that a subsidiary is controlled. Had the previously unconsolidated companies that were

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

newly consolidated in 2001 or 2000 been consolidated in 2000 or 1999, the effect on the 2000 and 1999 net sales, net income, assets and liabilities would have been immaterial.

NEW U.S. GAAP ACCOUNTING STANDARDS NOT YET ADOPTED

In June 2001, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 141, "Business Combinations." SFAS No. 141 requires the purchase method of accounting for business combinations initiated after June 30, 2001 and eliminates the pooling-of-interests method. BASF does not believe that the adoption of SFAS No. 141 will have a significant impact on the reconciliation of net income and stockholders' equity.

In June 2001, the FASB issued SFAS No. 142, "Goodwill and other Intangible Assets." SFAS No. 142 specifies that intangible assets with an unlimited useful life and goodwill will no longer be

F-22

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

amortized but will be periodically tested for impairment and written down to fair value if considered impaired. BASF is currently reviewing these statements to determine this impact on the amounts disclosed in the reconciliation of net income and stockholders' equity to U.S. GAAP in the Notes to the Consolidated Financial Statements.

In June 2001, the FASB issued SFAS No. 143, "Accounting for Asset Retirement Obligations." SFAS No. 143 addresses financial accounting and reporting for obligations and costs associated with the retirement of tangible long-lived assets. In August 2001, the FASB issued SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets," which provides a single accounting model for long-lived assets to be disposed of by sale. BASF is currently reviewing these statements to determine this impact on the amounts disclosed in the reconciliation of net income and stockholders' equity to U.S. GAAP in the Notes to the Consolidated Financial Statements.

REPORTING OF COMPREHENSIVE INCOME

Comprehensive income in accordance with SFAS No. 130, "Reporting Comprehensive Income," includes the impact of revenues, gains, expenses and losses, that are not included in net income under U.S. GAAP.

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

5. SEGMENT REPORTING

The Company is a worldwide manufacturer and supplier of more than 8,000 products. The Company offers a wide range of products, including chemicals, plastics, coatings systems, dispersions, agricultural products, fine chemicals, crude oil and natural gas.

The Company conducts its worldwide operations through 12 operating divisions, which have been aggregated into five business segments based on the nature of the products and production processes, the type of customers, the channels of distribution and the nature of the regulatory environment. The business segments are reportable segments except for the business segment Agricultural Products & Nutrition, which is treated as two reportable segments, disclosing separately Agricultural Products and Fine Chemicals. The divested Pharmaceuticals division was formerly included as a third reportable segment in the business segment Health & Nutrition.

The business segment Chemicals contains the operating divisions Inorganics, Petrochemicals and Intermediates. The former operating division of Specialty Chemicals was dissolved as of July 1, 2001 and the strategic business units of glykols, alkylene oxides as well as ethylene and propylene oxides have been transferred to the Petrochemicals operating division. The other activities of the Specialty Chemicals operating division have been allocated to the operating division of Performance Products.

The business segment Plastics & Fibers includes the operating divisions

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Styrenics, Performance Polymers and Polyurethanes. The former operating divisions of Engineering Plastics and Fiber Products were merged as of July 1, 2001 to create the Performance Polymers operating division. Up to September 2000, the polyolefins business was included in the business segment's figures. This business was transferred to the associated company Basell N.V., which is not consolidated.

The business segment Colorants & Finishing Products has been renamed Performance Products. It consists of the operating divisions Performance Chemicals, Coatings and Functional Polymers. The former operating divisions Dispersions, Colorants as well as some parts of Specialty Chemicals have been combined to form the operating division Performance Chemicals. Up to September 2000, the figures of the operating division include the textile dye business of the former Colorants operating division. This business has been transferred to the non-consolidated associated company DyStar.

The business segment Health & Nutrition was renamed Agricultural Products & Nutrition. Figures for the divested pharmaceuticals business are included in the segment's figures through February 2001.

Besides these changes, certain strategic business units have been reassigned to other operating divisions in order to better reflect the Company's value-adding-chains.

Segment reporting data for prior years have been restated to reflect these organizational changes.

The Oil & Gas segment consists of the operating division Oil and Gas, which conducts oil and gas exploration and trades in natural gas.

Business activities not allocated to any operating division are shown as "Other" and comprise the sale of feedstock, remaining Fertilizers activities, engineering and other services as well as rental income.

F-24

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

The income from operations recorded as "Other" includes mainly costs of exploratory research of E202 million in 2001 (2000: E168 million; 1999: E124 million).

Transfers between the reportable segments are generally valued at market-based prices and the revenues generated by these transfers are shown in the table below as "Intersegmental transfers."

RELEASE AND ADJUSTMENTS OF PROVISIONS relate principally to environmental protection and remediation provisions, sales and purchase provisions, shutdown and restructuring provisions, litigation and claims provisions, maintenance provision, provisions for risks from tax audit and various other items in the normal course of business.

Provision releases and adjustments arise because present circumstances indicate that they are no longer probable and estimable or that the probable amount has been reduced.

INCOME FROM MISCELLANEOUS REVENUE-GENERATING ACTIVITIES primarily represents revenues from energy sales, sales of raw materials and income from rentals.

GAINS FROM THE DISPOSAL OF ASSETS in 2001 were especially related to the sale of the generics business of the Pharmaceuticals operating division to Novartis.

Gains in 2000 arose primarily from the sale of the Novolen-Registered Trademark- polypropylene technology of Targor GmbH and the Kraton-Registered Trademark- polymer business of Elenac GmbH.

Gains in 1999 related primarily to the sale of the Company's COMPO-Registered Trademark- business in specialty fertilizers and the marketing and sales of the Company's agricultural fertilizers operations; the sale of the Company's oil refining business, including a refinery in Lingen, Germany, and the divestiture of the Canadian oil and gas production activities of the Oil & Gas segment.

OTHER includes income from management and marketing services, miscellaneous sales and various other sundry items.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

INTEGRATION MEASURES, REORGANIZATION AND SHUTDOWNS arose primarily for the planned shutdown of sites and plants that do not fit with our strategic and economic requirements in 2001. Sites in North America (NAFTA), South America, the United Kingdom, the Netherlands, Germany, Australia and other countries will be shut down. Additionally 1,000 European employees will be made redundant as a consequence of the reorganization of the marketing structures. The related costs total E747.4 million.

In 2000, charges of E344.2 million related in particular to the integration of the crop protection business of AHP, which was acquired in 2000. They comprise severance payments resulting from workforce reductions, the write-off of research in process included in goodwill, and, additional charges resulting from the sale of inventory whose base had been stepped-up as part of the purchase price allocation. Further expenses were related to the restructuring of the Pharmaceuticals segment.

In 1999, charges included current expenses of E123.1 million for temporarily unutilized production plants. Additional charges related to the permanent shutdown of the following sites: the Company's multi-division site in Medellin, Colombia; the Colorants division's site in Ellesmere Port, United Kingdom; the pharmaceutical production site in Beeston, United Kingdom; and the fertilizer production site in Ostend, Belgium.

COSTS FROM MISCELLANEOUS REVENUE-GENERATING ACTIVITIES represents costs related to other miscellaneous revenue-generating activities as shown in Note 6.

OTHER include additional provisions of E200 million for the fine imposed by the E.U. Commission related to the antitrust procedure against several vitamins producers in 2001. Further charges relate to provisions for expected losses on accounts receivable in Argentina, waiving the peg of the Argentine peso to the U.S. dollar, as well as scrapping of inventories and other various items.

In 2000 and 1999, expenses for litigations and claims relate primarily to sanctions and compensation payments associated with the vitamins antitrust proceedings in the United States and various other countries along with payments resulting from lawsuits involving the drug Synthroid-Registered Trademark-.

Amortization of goodwill of companies accounted for under the equity method totaling E54.6 million in 2001 (2000: E24.5 million, 1999: E21.0 million) as well as income from the release of negative goodwill of E2.0 million in 2001 (2000: E2.0 million, 1999: E2.0 million) are included in (losses)/income from companies accounted for under the equity method.

The (losses)/income from companies accounted for under the equity method includes in 2001 charges at Basell N.V. for closures of its sites in Wilton, United Kingdom and Tarragona, Spain, as well as restructuring charges for sites in the United States.

In 1999, income from participating interests and similar income included a gain from the sale of BASF's interests in the IVAX Corporation and Aral AG, which was sold to VEBA OEL AG. The divestiture of the holdings in Aral AG together with the disposal of the refinery business shown in income from operations increased net income by E373 million.

In 2000, other interest, income from the sale of marketable securities and similar income includes gains from the sale of securities and swaps of E129 million (1999: E20 million).

9. EXTRAORDINARY INCOME

	2001	
	(EUROS IN MILLIONS)	
Extraordinary revenues.....	E	8,793.9
Extraordinary expenses.....		2,673.1
Extraordinary income.....	E	6,120.8

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Extraordinary revenues were generated from the sale of the pharmaceuticals business including compensation for the surrendered liquid funds net of assumed financial debt as well as the payment for excess net assets compared to reference net assets at the date of the contract.

Extraordinary expenses include the book values of the pharmaceuticals business and the liquid funds. Further included are provisions for warranties or risks retained in connection with the sale of the pharmaceuticals business.

The extraordinary income is charged with E145.0 million income taxes.

10. INCOME TAXES

	2001		2000		
	(EUROS IN MILLIONS)				
German corporation tax.....	E	449.1	E	477.0	E
German trade income tax.....		104.9		143.8	
Foreign income tax.....		242.7		467.2	
Income taxes on oil-producing operations non-compensable with German corporation tax.....		487.1		462.2	
Refunds/loss carry back.....		(32.7)		(77.5)	
Current taxes.....		1,251.1		1,472.7	
Deferred taxes.....		(296.6)		72.3

Other taxes.....		174.6		168.8	
Total taxation.....	E	1,129.1	E	1,713.8	E

Other taxes includes real estate taxes and other comparable taxes; they are shown under the appropriate expense items of the statement of income.

The regional breakdown of income before taxes was as follows:

	2001		2000		1999	
	(EUROS IN MILLIONS)					
Germany.....	E	970.1	E	1,736.4	E	1,211.5
Foreign.....		(361.4)		1,091.0		1,394.0
	E	608.7	E	2,827.4	E	2,605.5

In 2001, a federal German corporation tax of 25% plus a 5.5% solidarity surcharge will be levied on corporate income. This tax charge is final because the imputation system has been terminated. In 2000 and 1999, retained corporate income in Germany was subject to a federal

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

F-33

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

corporation income tax of 40%. Additionally, a solidarity surcharge of 5.5% was levied on the federal German corporation tax. Upon distribution of a dividend, the federal German corporation tax rate was reduced to 30%.

German trade income tax, which varies depending on the municipality where the industrial activities take place, is levied at a weighted average rate of 16.2%. This tax is deductible for federal corporation tax purposes.

Income of foreign sources is taxed at the income tax rates applicable in the respective countries of domicile.

For German companies, deferred taxes are calculated using a tax rate of 38% (1999: 52%). For foreign companies, deferred taxes are calculated using the tax rates applicable in the individual foreign countries. Such rates averaged 34% in 2001, 28% in 2000 and 36% in 1999. The reduction of German corporation tax resulted in an E132 million charge in 2000 and an E45 million charge in 1999 shown below in "Other."

Income from foreign sources which is distributed in the form of a dividend to the parent company is generally exempt from additional German corporation taxes through double taxation treaties. Income taxes on oil-producing operations in certain regions, which can amount to up to 85%, may be compensated up to an equivalent level with German corporation tax. The non-compensable amount is shown separately in the reconciliation from the statutory tax rate in Germany to the effective tax rate.

Deferred taxes are recorded in conformity with U.S. GAAP. Beginning in 2001, deferred tax assets on tax loss carryforwards are recorded. Deferred tax assets have also been recorded for tax loss carryforwards arising prior to 2001. If expected future earnings of a company make it more likely than not that the future tax benefits will not be realized, adequate valuation allowances are established.

	-----	-----
- Thereof short-term.....	31.0	105.7
	-----	-----

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

Deferred tax liabilities are included in "provisions for taxes" in the Consolidated Balance Sheets.

German tax losses may generally be carried forward indefinitely.

Foreign loss carryforwards have varying expiration periods through 2021 and are subject to limitations with regard to offsetting against future taxable income. Deferred tax liabilities have not been provided for withholding taxes or additional corporate income taxes due in Germany in the absence of double taxation treaties for unremitted earnings of foreign subsidiaries or affiliated companies or investments accounted for under the equity method.

In 2001, deferred tax assets include E422.6 million (net of a valuation allowance of E76.3 million) due to the following tax loss carryforwards. In 2000, E75.6 million (net of a valuation allowance of E16.3) were included in the U.S. GAAP reconciliation.

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

RECONCILIATION OF DEFERRED TAX ASSETS/LIABILITIES TO U.S. GAAP

Under U.S. GAAP, deferred tax liabilities would increase, or deferred tax assets decrease by E841.3 million in 2001 (2000: E633.1 million) due to adjustment of the following balance sheet items as shown in the reconciliation to U.S. GAAP:

	2001	2000
(EUROS IN MILLIONS)		
Property, plant and equipment.....	E 209.3	E 192.8
Financial assets and marketable securities.....	179.7	141.6
Prepaid pension expense.....	316.4	292.2
Tax credit related to the distribution of retained earnings previously taxed at higher rate and others.....	135.9	6.5
TOTAL.....	E 841.3	E 633.1

11. MINORITY INTERESTS

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

	2001	2000	1999
	(EUROS IN MILLIONS)		
Minority interests in profits.....	E 91.7	E 76.3	E 43
Minority interests in losses.....	124.3	33.7	35
	E (32.6)	E 42.6	E 7

Minority interests in profits relate to the Group companies engaged in trading of natural gas. Minority interests in losses relate mainly to BASF PETRONAS Chemicals Sdn. Bhd., Malaysia, as well as the operator of the steam cracker at Port Arthur, Texas, and Yangzi-BASF Styrenics Company Ltd., China.

In 2000, minority interests in profits related furthermore to Knoll Pharmaceuticals Ltd., India, and Yangzi-BASF Styrenics Company Ltd., China.

See Note 22 for a detailed analysis of consolidated subsidiaries with minority shareholdings.

12. OTHER INFORMATION

PERSONNEL COSTS

	2001	2000	
	(EUROS IN MILLIONS)		
Wages and salaries.....	E 4,857.8	E 5,306.8	E

Under the BASF stock option program, the members of the Board of Executive Directors were granted 137,060 option rights in 2001, 126,228 in 2000 and 166,616 in 1999. These options rights entitle such directors to purchase, if the exercise hurdles are met, a maximum of 274,120 shares from the option rights of 2001. The members of the Board of Executive Directors, including retired members, hold in total 429,904 option rights entitling them to buy up to 859,808 BASF Shares. Additional personnel costs related to the issuance of these options totaled E4.2 million in 2001, thereof E1.6 million for option rights issued in 2001 and E2.6 million for option rights issued in 1999 and 2000. See Note 27 for further information.

The members of the Board of Executive Directors and the Supervisory Board as well as their membership on other supervisory boards are shown in "Item 6. -- Directors, Senior Management and Employees."

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

ADDITIONAL INFORMATION ON STATEMENTS OF CASH FLOWS

Cash generated from operating activities was derived after interest payments of E428.9 million in 2001, E472.2 million in 2000 and E237.5 million in 1999. Income taxes paid totaled E528.2 million in 2001, E839.0 million in 2000 and E592.7 million in 1999.

Cash generated from operating activities was increased from the sale of accounts receivable by E192.7 million in 2001, E779.5 million in 2000 and E298.3 million in 1999.

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

Additions in 2001 include the purchase of the vitamins business of Takeda Chemical Industries Ltd., Japan.

Disposals and transfers in 2001 are mainly due to the sale of the pharmaceuticals business.

Write-downs in 2001 were made for expected long-term value impairments of E86.3 million of production technology and supply rights related to a superabsorbents plant in Birkenhead, United Kingdom. This plant was heavily damaged in an explosion and a replacement plant built at the Antwerp site will be based on a different technology.

Additions in 2000 primarily include the acquisition of the crop protection business of American Home Products Corp., thereof goodwill of E1,929.4 million and product rights of E498.5 million, as well as goodwill and supply rights of the superabsorbents business Chemdal acquired from Amcol International Corp. and the goodwill from the oil coatings business acquired from Rohm and Haas.

Disposals and transfers in 2000 result primarily from the deconsolidation of the companies of the Targor Group and the Elenac Group due to their inclusion in the joint venture Basell N.V.

Write-downs in 2000 include the portion of goodwill from the acquisition of AHP's crop protection business related to research in progress (E87.5 million).

Impairment losses in 2001 of E179.3 million relate to a superabsorbents plant in Birkenhead, United Kingdom, which was heavily damaged in an explosion as well as to a site in Arnhem, the Netherlands, and various sites in North America whose closure has been decided as a consequence of their unsatisfactory earnings potentials.

Impairment losses of E27.1 million were recorded in 2000 in particular by Hokuriku Seiyaku Ltd., Japan, for non-operating land and building due to a major decrease of market values.

		-----		-----

"Work-in-process" and "Finished goods and merchandise" are combined into one item due to the production conditions in the chemical industry.

The acquisition or production cost of raw materials, work in process, finished goods and merchandise is mainly determined by the last-in-first-out (LIFO) method. Factory supplies are carried predominantly at average cost. Inventories of E3,130.2 million or 63% of total inventories in 2001 and E3,225.9 million or 62% of total inventories in 2000 are valued according to the LIFO method. The difference between the carrying value determined according to the LIFO method and higher average cost is E72.0 million in 2001 and E255.0 million in 2000.

A total of 30,775,000 shares were acquired in 2001, of which 25,975,000 shares were cancelled in 2001. The Board of Executive Directors decided in 2001 to cancel the remaining 4,800,000 shares, which was not formally completed as of December 31, 2001. The subscribed capital is shown net of these shares.

SHARE REPURCHASE

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The Board of Executive Directors received approval at the Annual Meeting on April 26, 2001, to repurchase BASF's Shares to a maximum amount of 10% of subscribed capital until October 1, 2002. The shares shall be purchased on the stock exchange or through a public purchase offer addressed to all shareholders. If BASF Shares are purchased on a stock exchange, the price paid for the shares may not be higher than the highest market price on the buying day and it may not be lower than 25% of that market price. In the case of a public purchase offer, the price offered by BASF may be a maximum of 25% higher than the highest market price on the third trading day prior to the publishing of the public purchase offer.

This authorization supersedes the validity of the prior authorizations to repurchase BASF Shares. The Board of Executive Directors is authorized to cancel repurchased shares without further shareholder approval.

A sale of repurchased BASF Shares requires the respective authorization through the Annual Meeting unless the shares are utilized to serve warrants from the BASF Stock Option Program BOP 1999/2000 and BOP 2001/2005. Furthermore, repurchased shares may be sold to participants in the Stock Option Program 2001/2005, to fulfill the participants' investment requirements in BASF Shares according to the clauses of the Stock Option Program in order to meet conditions for the granting of options.

Based on the respective authorizations, a total of 30,775,000 shares, or 5% of the issued shares have been acquired in 2001. The average purchase price was E42.22 per share. Of these shares a total of 25,975,000 shares were cancelled by December 31, 2001. The remaining 4,800,000 own shares of BASF Aktiengesellschaft were acquired for the purpose of cancellation. Therefore, the subscribed capital is shown net of these own shares at December 31, 2001. During

F-48

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

2000, BASF purchased and cancelled a total of 15,856,500 shares, or 2.6% of issued shares, at an average price of E44.13 per share.

CONDITIONAL CAPITAL

The Annual Meeting on April 26, 2001, authorized the Board of Executive Directors to make an additional conditional increase in the subscribed capital of up to E384.0 million to fulfill the exercising of warrants related to option bonds which may be issued until April 1, 2006.

Conditional capital of up to E38.4 million is reserved to fulfill stock options granted under the BASF Stock Option Program BOP 2001/2005 to the members of the Board of Executive Directors and other senior executives of BASF and its subsidiaries; up to E10.0 million conditional capital is reserved to fulfill stock options from the Stock Option Program 1999/2000. An amount of less than E0.1 million is reserved to meet compensation claims of former shareholders of Wintershall.

AUTHORIZED CAPITAL

At the Annual Meeting of April 29, 1999, shareholders authorized the Board of Executive Directors, with the approval of the Supervisory Board, to increase subscribed capital by issuing new shares in an amount of up to E500.0 million against cash or contribution in kind through May 1, 2004. The Board of Executive Directors is empowered to decide on the exclusion of shareholders' subscription rights for these new shares.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

CAPITAL SURPLUS

Capital surplus includes premiums from the issuance of shares, the fair value of warrants attached to option bonds and negative goodwill from the capital consolidation resulting from acquisitions of subsidiaries against issue of BASF Shares at par value.

21. RETAINED EARNINGS

		2001		2000

23. PROVISIONS FOR PENSIONS AND SIMILAR OBLIGATIONS

In addition to governmental pension schemes, most employees are entitled to Company pension benefits resulting from defined contribution and defined benefit plans. Benefits generally depend on years of service, contribution or compensation and consider the legal, fiscal and economic conditions of the countries where companies are located.

The pension plans for BASF Aktiengesellschaft and other German subsidiaries include a funded plan, BASF Pensionskasse, which is financed by equal contributions of employees and the Company and the returns on its assets.

For German Group subsidiaries, additional Company pension commitments are financed primarily by pension provisions. In the case of non-German subsidiaries, pension entitlements are covered in some cases by pension provisions, but mainly by external insurance companies or pension funds.

The valuation according to the "projected unit credit method" as defined by SFAS No. 87 is based on the following average rates:

	2001	2000
	----	-----
Interest rate.....	6.5%	6.4%
Projected increase of wages and salaries.....	3.3	3.5
Projected pension increase.....	1.1	1.4

OIL AND GAS PRODUCTION: Accrued costs for filling of wells and the removal of production equipment after the end of production are accumulated by installments during the expected production period.

ENVIRONMENTAL PROTECTION AND REMEDIATION COSTS: Expected costs for rehabilitating contaminated sites, water protection, recultivating landfills, removal of environmental pollution at existing production or warehouse equipment and other measures.

PERSONNEL COSTS: The personnel cost provision includes obligations to grant long-time service bonuses and anniversary payments, vacation pay, variable

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

compensation including related social security contributions and other accruals as well as provisions for early retirement and short-working programs for employees nearing retirement. Most German BASF companies have various

F-52

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

programs that entitle employees who are at least 55 years old to reduce their working hours to 50% for up to six years. Under such arrangements, employees generally work full time during the first half of the transition period and leave the Company at the start of the second period. Employees receive a minimum 85% of their net salary throughout the transition period.

SALES AND PURCHASE RISKS: The sales and purchase risks provision includes warranties, product liability, customer rebates, payment discounts and other price reductions, sales commissions and provisions for expected losses on committed purchases or similar obligations.

INTEGRATION, SHUTDOWN AND RESTRUCTURING COSTS: Such provisions include severance payments to employees as well as specific site shutdown or restructuring costs, including the costs for demolition and similar measures.

The movement in shutdown and restructuring provisions is as follows:

		AMOUNT ACCRUED AS OF JANUARY 1, 2001		AMOUNT PAID IN 2001		OTHER CHANGES 2001		AMOUNT ACCRUED AS OF DECEMBER 31, 2001

In 2001, provisions for severance payments had to be set up for the planned shutdown of numerous plants and production sites located predominantly in North America (NAFTA), South

F-53

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

America, the United Kingdom, the Netherlands and Italy. Further charges arose from the restructuring of the Company's sales and marketing organization.

In 2000, provisions for severance costs for employees resulted from the integration of the crop protection business acquired from American Home Products Corp. (AHP) and from the workforce reduction in the Pharmaceuticals segment. Provisions of E403.7 million were accrued for these measures, thereof E243 million for severance cost of employees of the acquired crop protection business of AHP without a charge to profits.

In 1999, BASF approved plans to close the multi-division site in Medellin, Colombia, the Performance Products site in Ellesmere Port, United Kingdom, the Pharmaceuticals production site in Beeston, United Kingdom, and the Fertilizers site in Ostend, Belgium. These plans represent primarily severance costs for employees associated with these sites as well as demolition costs and the cost of fulfilling contractual obligations after the sites were closed. Pretax charges of E123.9 million were recorded for these measures, which were expected to be substantially completed in the year 2000.

LEGAL, DAMAGE CLAIMS, GUARANTEES AND RELATED COMMITMENTS: Provisions are recorded for the expected cost of outstanding litigation and claims of third parties, including regulatory authorities, other guarantees and warranties for trust proceedings. The significant proceedings are described in Note 26.

Additions in 2001 relate to guarantees granted and risks retained in connection with the sale of the pharmaceuticals business. An additional E200 million resulted from the fine imposed by the E.U. Commission for violations of anti-trust laws relating to the sale of vitamin products. The provisions set up hitherto were insufficient due to the unexpectedly high fine.

MAINTENANCE AND REPAIR COSTS: Provision for maintenance and repair costs covers omitted maintenance procedures as of the end of the year that are expected to be incurred within the first three months of the following year and

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

certain provisions for the overhauling of large-scale plants within prescribed intervals.

The 5.75% Euro Bond 2000/2005 of BASF Aktiengesellschaft was issued in July 2000 in the amount of E1,250 million. The Bond is listed on the Frankfurt Stock Exchange and the Stuttgart Stock Exchange.

The 3% U.S. Dollar Option Bond 1986/2001 of BASF Finance Europe N.V. was repaid on April 9, 2001.

LIABILITIES TO CREDIT INSTITUTIONS

Liabilities to credit institutions relate to a large number of different credit institutions in various countries. Liabilities to credit institutions denominated in Chinese renminbi result from the local financing of Chinese joint ventures.

At the end of 2001, the Company had committed and unused credit lines of E2,800 million with variable interest rates. In addition, the Company had E410 million uncommitted credit lines free of charges.

Liabilities to companies in which participations are held include liabilities to joint ventures accounted for using the proportional consolidation method of E254.4 million as of December 31, 2001 and of E143.4 million as of

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

December 31, 2000, and liabilities relating to associated companies accounted for under the equity or costs method of E42.9 million as of December 31, 2001 and E186.8 million as of December 31, 2000.

Generally, non-trade liabilities to companies in which participations are held bear interest at market rates plus a mark-up of less than 1%.

Non-trade liabilities to joint venture partners are related to the financing of fixed assets projects. In 2001, liabilities of E450.3 million carry interest at rates of between 6.30% to 6.98%. E362.8 million of them mature after more than five years.

26. LITIGATION AND CLAIMS

In the context of its ordinary business operations, BASF is a defendant in class action lawsuits brought before United States courts and individual actions before labor courts and civil courts or comparable institutions in Germany and abroad. Significant proceedings are discussed below.

ANTITRUST CLAIMS RELATING TO VITAMINS

In 1999 and in 2000, BASF Aktiengesellschaft as well as BASF Australia Ltd. entered into agreements with the United States Department of Justice and the Canadian Competition Bureau and the Australian Department of Justice by which BASF Aktiengesellschaft and BASF Australia Ltd. agreed to plead guilty to certain violations of antitrust laws relating to the sale of vitamin products in the respective countries. The relevant courts accepted the guilty pleas and the recommended fines of \$225 million, C\$19 million and A\$7.5 million. On November 21, 2001, the European Commission imposed a fine of E296.2 million against BASF Aktiengesellschaft. BASF has appealed against this decision.

Proceedings are still running in Mexico, Brazil and Australia (relating only to vitamin C).

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF has agreed to settle the class action lawsuits with plaintiffs that purchased products directly from vitamin manufacturers. Terms of the settlement agreement call for seven vitamin manufacturers to contribute \$1.17 billion. The Company's share of this settlement is \$287 million. The United States district court for the District of Columbia granted final approval of the proposed settlement on March 28, 2000. Because numerous large customers have elected to opt out of the proposed settlement, BASF Aktiengesellschaft's share has been reduced to \$90 million including fees of the plaintiffs' attorneys. Individual settlements with a series of such customers have been concluded. The payments for these settlements are within the range indicated above.

State court actions on behalf of indirect purchasers are proceeding separately in approximately 28 states. BASF has agreed to settle state class action lawsuits in 24 states. Terms of the settlement agreements call for six vitamin manufacturers to contribute up to \$396 million, subject to approval of the settlements in various state courts. If the settlements are finally approved, BASF Aktiengesellschaft will be obligated to pay up to \$97 million of the total amount. All settlements have been granted preliminary approval. Further claims for damages have been filed in Canada, New Zealand and in Australia.

The Company has established provisions for the costs that it can currently anticipate in excess of the amounts agreed upon and paid. BASF does not believe that the additional charges relating to unsettled vitamin antitrust proceedings will have a substantial impact on the profitability of the Company.

SYNTHROID-REGISTERED TRADEMARK- RELATED CLAIMS

This proceeding concerned class action lawsuits against Knoll Pharmaceutical Company (KPC) of BASF's Pharmaceutical business, discontinued in 2001. The lawsuits challenged Knoll's delaying the publication of a study comparing Synthroid-Registered Trademark- to certain branded and generic products.

Final approval of a proposed settlement of 1997 was not granted. Knoll subsequently negotiated a new proposed settlement with consumers and third-party payors providing for a payment of \$25.5 million in addition to the \$98 million paid into escrow in late 1997 (plus the accrued interest thereon). The United States District Court of Chicago granted final approval of the new proposed settlement on August 4, 2000. A number of appeals have been filed. On August 31, 2001, the United States Court of Appeals granted final confirmation of the settlement. However, the district court needs to determine attorneys' fees and costs before the payment is made.

ADDITIONAL PROCEEDINGS

In 2001, class action lawsuits against BASF Aktiengesellschaft and some of its affiliates were filed at United States Courts. It was alleged that sales of automotive refinish coatings had violated antitrust laws. BASF considers these allegations to be unfounded and will consequently file for dismissal of the lawsuits.

27. STOCK-BASED COMPENSATION

BASF STOCK OPTION PROGRAM (BOP): The Annual Meeting of April 26, 2001, approved the modified BASF stock option program for senior executives of the Company worldwide. For information on the increase of conditional capital, see Note 20. Approximately 1,200 senior executives, including the Board of Executive Directors, are authorized to participate in this program.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

To participate in the stock option program, each participant must make an individual investment in BASF Shares in the amount of 10% to 30% of his or her individual variable compensation. The number of shares to be applied for through the BOP program is determined by the defined amount of the variable compensation and the weighted average market price quotation for BASF Shares, which was E47.87 on April 27, 2001. The options of the Stock Option Program 2001 can be exercised between July 1, 2003 and the 15th day after the Annual Meeting in 2009.

For each BASF Share of the individual investment, a participant receives four options, each of which entitles a holder to purchase a maximum of two BASF Shares (Share A and Share B) at a price lower than the market price if, on the exercise date of the option, the exercise hurdles described below have been exceeded.

Options to purchase Share A may be exercised if the market price of BASF Shares exceeds 30% of the market price at the grant date of the options. The exercise price of Share A will be the market price at the exercise date less the share price increase since granting the option (this reduction is limited to 100% of the grant price). Options to purchase Share B may be exercised if the cumulative percentage performance of BASF Shares exceeds the percentage performance of the Dow Jones Global Chemicals Total Return Index (DJ Chemicals). The exercise price of Share B will be the market price at the exercise date of the option minus twice the percentage outperformance of BASF Shares compared to the DJ Chemicals index.

Each option right may only be exercised if the performance targets are achieved and may only be exercised once, meaning that if only one performance target is met and that option is exercised, the other option right expires. The option can be exercised within one month after the target is met. The maximum gain for a participant from the BOP program is limited to 10 times the original individual investment.

The BOP 1999 and BOP 2000 stock option programs were structured in a similar way to the BOP 2001 program. The options granted may be exercised between the day after the Annual Meetings in 2002 and 2003 and the 15th day after the Annual Meetings in 2005 and 2006, respectively. The benchmark index to determine the value of the option on Share B is the Dow Jones EURO STOXX(SM) Total Return Index (EURO STOXX(SM)). To participate in the BOP program, each participant must make an individual investment in BASF Shares in the amount of 10% to 30% of his or her individual variable compensation. The invested amount is used to purchase BASF Shares at the market price of the first business day after the Annual Meeting, which was E47.80 on April 28, 2000 for the BOP 2000 stock option program and E41.60 on April 30, 1999 for the BOP 1999 stock option program.

Details on the fair value and the number of options issued are described below. The fair value of BOP 2001 is calculated based on the full-term structure of interest rates given by deposit and

F-60

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

swap rates, as quoted April 27, 2001. For BOP 2000 and BOP 1999, a risk-free interest rate of 5.39% and 3.59% is used, respectively.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

* Option rights lapse if the option holders no longer work for BASF or have sold part of their BOP shares

Total compensation cost for the stock option programs is determined by valuing the number of outstanding options with the fair value of the options at the grant date. This total compensation cost will be recognized by a charge to income over the period in which the related employees' services are rendered (2001: two years, 2000 and 1999: three years). Compensation cost of E30.2 million was recorded in 2001, E15.9 million in 2000 and E6.5 million in 1999.

BASF "PLUS" INCENTIVE SHARE PROGRAM: In 1999, BASF started an incentive share program called "plus" for all eligible employees except the senior executives entitled to participate in the BOP. Currently, employees of German and of various European and Mexican subsidiaries are entitled to participate in the program.

Each participant must make an individual investment in BASF Shares from his or her variable compensation. For each 10 BASF Shares purchased in the program, a participant receives one BASF Share at no cost after one, three, five, seven and 10 years of holding the BASF Shares. The right to receive free BASF Shares expires if a participant sells the individual investment in BASF Shares, if the participant stops working for the Company or one year after retirement.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

The Company provides for the value of the free shares over the period until the shares are to be issued based on the year-end price of BASF Shares. Compensation cost of E4.4 million was recorded in 2001, E2.7 million in 2000 and E1.1 million in 1999.

28. FINANCIAL INSTRUMENTS AND DERIVATIVE INSTRUMENTS

DERIVATIVE INSTRUMENTS: The Company is exposed to foreign currency, interest rate and commodity risks during the normal course of business. In cases where the Company intends to hedge against these risks, derivatives are used, including forward exchange contracts, currency options, interest rate/currency swaps or combined instruments or commodity derivatives. In addition, derivative instruments are used to replace transactions in original financial instruments, such as shares or fixed-interest securities. Derivative instruments are only used if they have a corresponding underlying position or planned transaction arising from the operating business, cash investments and financing. The leverage effect that can be achieved with derivatives is deliberately not used. The derivative instruments held by the Company are not held for the purpose of speculation.

Where derivatives have a positive market value, the Company is exposed to credit risks in the event of non-performance of their counterparts. The credit risk is minimized by exclusively trading contracts with major creditworthy financial institutions.

To ensure efficient risk management, market risks are centralized at BASF Aktiengesellschaft, except when certain subsidiaries have been authorized to close derivative contracts under the principles mentioned above. The Company has developed and implemented internal guidelines based on the principles of separation of functions for completion and execution of derivative instruments.

The risks arising from changes in exchange rates and interest rates as a result of the underlying transactions and the derivative transactions concluded to secure them are monitored constantly. The same is effective for the derivative instruments, which are used to replace transactions in original financial instruments. For this purpose, market quotations or computer or mathematical models are used to determine the current market values not only of the underlying transactions but also of the derivative transactions and these are compared with each other.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

FOREIGN EXCHANGE AND INTEREST RATE RISK MANAGEMENT: Foreign currency derivatives are primarily aimed at hedging the exchange rate risk against the U.S. dollar, the Canadian dollar, the Australian dollar, the British pound, the Swiss franc, the Japanese yen and the Singapore dollar.

F-62

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

Interest derivatives or combined interest/currency derivatives were concluded to hedge loans granted to group companies. In the case of interest swaps or combined instruments, the difference between interest paid and interest received is deferred and is reflected in the interest result. As far as other derivatives are concerned, index swaps were used to create synthetic share investments with a guarantee of the capital invested.

FAIR VALUE OF FINANCIAL INSTRUMENTS: The fair value of a financial instrument is the price at which the instrument could be exchanged between willing parties. Fair value amounts are estimated by the Company management based on available market information and appropriate valuation techniques. These estimates do not necessarily reflect the amount that could be realized or would be paid in the current market.

Book and estimated fair values of financial instruments, for which it is practicable to estimate the fair value, were as follows:

	DECEMBER 31, 2001		DECEMBER 31, 2000	
	BOOK VALUES	FAIR VALUES	BOOK VALUES	FAIR VALUES
	(EUROS IN MILLIONS)			
ASSETS				
Financial assets (details, see Note 15).....	E 3,360.7	E 3,477.7	E 3,589.7	E 3,589.7
Accounts receivable, trade and other assets...	8,039.1	8,057.7	9,126.7	9,126.7

LIABILITIES				
Financial liabilities.....	E 2,835.0	E 2,876.7	E 7,891.9	E 7,891.9
Accounts payable, trade and other liabilities.....	6,025.8	6,038.9	6,430.0	6,430.0

ACCOUNTS RECEIVABLE AND OTHER ASSETS, ACCOUNTS PAYABLE AND OTHER LIABILITIES: For trade accounts receivable, liquid funds and other assets, trade accounts payable and other liabilities, the book value approximates the fair value. For non-current amounts, the difference between book value and fair value represents primarily unrecognized gains from foreign currency balances.

The fair value of financial assets and marketable securities represents market values from securities exchanges at the balance sheet date. The market value of financial liabilities represents a valuation of bonds at inter-bank rates.

BREAKDOWN OF DERIVATIVE INSTRUMENTS:

	NOMINAL AMOUNTS		FAIR VALUE DECEMBER 31
	DECEMBER 31		
	2001	2000	2001
(EUROS IN MILLIONS)			
Forward exchange contracts.....	E 5,051.6	E 10,630.0	E (125.0)
Currency options.....	153.4	4,220.9	1.0
FOREIGN CURRENCY DERIVATIVES.....	5,205.0	14,850.9	(124.0)
Interest rate swaps.....	15.1	36.0	(0.0)
Interest rate/cross currency swaps.....	3,081.1	2,977.2	(590.0)
INTEREST RATE DERIVATIVES.....	3,096.2	3,013.2	(591.0)
Commodity derivatives and other derivatives.....	33.4	25.6	4.0

The nominal values are the totals of the purchases and sales of the particular derivatives on a gross basis. The fair market values correspond to the difference between the cost and resale value, which is determined from market quotations or by the use of option pricing models or, in the case of unlisted contracts, the termination amount in the event of premature cancellation. Offsetting changes in the valuation of the underlying transactions are not taken into account.

Provisions for probable losses from fluctuations of foreign exchange rates, interest rates or prices amounted to E11.1 million in 2001 and E47.4 million for 2000. All changes of the fair value of financial instruments and derivative contracts had been recognized as required by U.S. GAAP and the impact on net income and stockholders' equity in accordance to U.S. GAAP is disclosed in Note 4.

Interest rate and cross currency swaps are related to internal financing of Group companies worldwide. Commodity derivatives are used to hedge raw material prices, e.g., for naphtha.

SUPPLEMENTARY INFORMATION CONCERNING OIL AND GAS PRODUCING ACTIVITIES
(UNAUDITED)

OIL AND GAS PRODUCING ACTIVITIES

"Additional Petroleum Data" disclosures are presented in accordance with the provisions of SFAS No. 69, "Disclosure of Oil and Gas Producing Activities." Accordingly, volumes of reserves and production exclude royalty interests of third parties, and royalty payments are shown as reductions in revenues.

In 2001, Wintershall began accounting for an investment in Russia in accordance with the equity method. The respective results of operations, costs incurred, capitalized costs, reserves and discounted future net cash flows are disclosed proportionally to Wintershall's participation.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

RESULTS OF OPERATIONS FROM OIL AND GAS PRODUCING ACTIVITIES

Results of operations from oil and gas producing activities represent only those revenues and expenses directly associated with Wintershall's oil and gas production. These amounts do not include any allocation of interest expenses or corporate overheads and are therefore not necessarily indicative of contributions to consolidated net earnings of the Company. Estimated income taxes

F-64

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

were computed by applying the statutory income tax rates to the pretax income from producing activities.

OIL AND NATURAL GAS RESERVES

Proved oil and gas reserves are the estimated volumes of crude oil, natural gas and natural gas liquids that are shown by geological and engineering data with reasonable certainty to be recoverable in future years from known reserves under existing economic and operating conditions, i.e., prices and costs as of the date the estimates are made. Prices only reflect changes in existing prices resulting from contractual arrangements, not escalation based on future conditions. Proved reserves exclude royalties and interests of third parties.

Proved developed reserves are reserves that can be expected to be recovered through existing wells with existing equipment and operating methods. Additional oil and gas expected to be obtained through the application of fluid injection or other improved recovery techniques for supplementing natural forces and mechanisms of primary recovery are included as proved developed reserves only after testing in the form of a pilot project or after the operation of an installed program has confirmed through production response that increased recovery will be achieved.

F-68

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

Numerous uncertainties are inherent in estimating quantities of proved reserves and in projecting future rates of production and timing development expenditures. The accuracy of any reserve estimate is a function of the quality of available data and engineering and geological interpretation and judgement. Results of drilling, testing and production after the date of the estimate may necessitate substantial upward or downward revisions. In addition, changes in oil and natural gas prices could have an effect on the quantities of proved reserves because the estimates of reserves are based on prices and costs at the date when such estimates are made.

Edgar Filing: BASF AKTIENGESELLSCHAFT - Form 20-F

The tables below show the estimated net quantities, calculated in compliance with Regulation S-X, Rule 4-10(a), as of December 31, 1999, 2000 and 2001 of the Company's proved oil and gas reserves and proved developed oil and gas reserves, as well as changes in estimated proved reserves as a result of production and other factors. The Company's reserves for 1999, 2000 and 2001 include reserves owned directly by the Company and its consolidated subsidiaries.

STANDARDIZED MEASURE OF DISCOUNTED FUTURE NET CASH FLOWS RELATING TO PROVED OIL AND GAS RESERVES

The information presented below has been prepared in accordance with SFAS No. 69, which requires the standardized measure of discounted future net cash flows to be based on year-end sales prices, costs and statutory income tax rates and a 10% annual discount rate. Because prices used in the calculation are as of December, the standardized measure could vary significantly from year to year depending on market conditions at that specific date.

The projection should not be viewed as realistic estimates of future cash flows nor should the "standardized measure" be interpreted as representing current value to the company. Material revisions of estimates of proved reserves may occur in the future, development and production of the reserves may not occur in the period assumed, actual prices realized are expected to vary significantly from those used and actual costs may also vary. The company's investment and operating decisions are not based on the information presented below, but on a wide range of reserves, and on different price and cost assumptions from those reflected in this information.

F-71

BASF GROUP

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS -- (CONTINUED)

Beyond the above considerations, the "standardized measure" is also not directly comparable with asset balances appearing elsewhere in the Consolidated Financial Statements because any such comparison would require a reconciling adjustment.
