FORM 51-102F3
Material Change Report

Item 1. Name and Address of Company

Entrée Gold Inc. (the Company)
Suite 1201, 1166 Alberni Street
Vancouver, BC V6E 3Z3

Item 2. Date of Material Change

September 28, 2005

Item 3. News Release

The News Release dated September 28, 2005 was disseminated via CCN Matthews, Canadian and U.S. Timely Disclosure.

Item 4. Summary of Material Change

The Company reported assays from its Copper Flats drill hole EDG0053 returned a mineralized intersection of 70 metres of 1.79% copper and 1.26 g/t gold for a copper equivalent grade of 2.61%. This intersection extended the mineralization north of the Entrée Ivanhoe Mines Ltd. (NYSE: IVN; TSX: IVN; Ivanhoe) property boundary to 625 metres along strike.

The Company also reported that hole OTD1218, collared on Ivanhoe's Oyu Tolgoi property approximately 220 metres south of Entrée's Copper Flats, has intersected strong copper and gold mineralization on Entrée's ground. The hole was drilled so as to cut the Hugo North extension at close to a right angle, midway between the high-grade intercepts in holes EGD006 and EGD016. OTD1218 returned a 114 metre interval averaging 4.33% copper and 2.64 g/t gold for a copper equivalent grade of 6.04%.

Item 5. Full Description of Material Change

For a full description of the material change, see Schedule A .

Item 6. Reliance on subsection 7.1(2) or (3) of National Instrument 51-102

Not Applicable.

Item 7. Omitted Information

Not Applicable.

Item 8. Executive Officer

The following Senior Officer of the Company is available to answer questions regarding this report:
Greg Crowe, President and CEO
604.687.4777

Item 9. Date of Report

Dated at Vancouver, BC, this 29th day of September, 2005.

SCHEDULE A

**DRILLING CONTINUES TO EXTEND HUGO NORTH ON
ENTRÉE S COPPER FLATS**

Vancouver, B.C., Wednesday September 28, 2005 Entrée Gold Inc. (TSX-V: ETG; AMEX: EGI Entrée or the Company) reports that drill hole EGD053 on the Copper Flats region of its Lookout Hill property has intersected high-grade copper and gold mineralization approximately 625 metres along-strike north of the joint Entrée Ivanhoe Mines Ltd. (NYSE: IVN; TSX: IVN; Ivanhoe) property boundary. The mineralization was encountered approximately 175 metres north of the most northerly previous intersection of the Hugo North deposit (EGD008).

Varying degrees of chalcopyrite and bornite mineralization were intersected in EGD053 between 1,312 and 1,496 metres down-hole. Lesser amounts of copper mineralization were intersected from 1,256 to 1,312 metres. A high-grade interval was intersected between 1,340 and 1,382 metres and yielded an average grade of 2.62% copper and 2.07 grams per tonne (g/t) gold, for a copper equivalent grade of 3.96% (see table, below). This interval occurred within a wider zone (1,326 – 1,396 metres) that averaged 1.79% copper and 1.26 g/t gold (copper equivalent grade of 2.61%). A lower mineralized intercept (1,418.3 – 1,496 metres) was encountered below a 22.3 metre dyke and yielded 77.7 metres of 0.96% copper and 0.30 g/t gold (copper equivalent grade of 1.15% copper).

The EGD053 mineralization commences at a vertical depth of approximately 1,200 metres and is interpreted to represent the upper portion of the extension of the Hugo North deposit. Elsewhere on Copper Flats, the deposit typically widens and becomes higher grade down-dip from the interpreted top of the system.

The mineralization intersected by hole EGD053 lies further to the west than had been anticipated, supporting previous indications that the Hugo North extension may be shifting back to the 010°N – 030°N orientation that it commonly has on Ivanhoe's Oyu Tolgoi property. A daughter hole (EGD053A) currently is in progress to target the deposit approximately 100 metres below the EGD053 intercept.

Greg Crowe, Entrée's President and CEO, commented: The intersection in hole EGD053 is very significant. As was previously reported, hole ETG020, designed to test the Hugo North mineralized system approximately 450 metres north of hole EGD008 (300 metres north of hole EGD053), was lost due to technical difficulties at a down-hole depth of 1,119 metres – approximately 200 metres above the targeted depth of mineralization. With the success of EGD053, we now have confirmation that Hugo North remains open to the north.

Edgar Filing: ENTREE GOLD INC - Form 6-K

In addition to hole EGD053A, Ivanhoe is now drilling holes EGD082 and EGD081, collared, respectively, approximately 150 metres and 750 metres north of holes EGD053/053A. Ongoing, systematic testing will be required to document and fully understand the apparent change in trend of the system, as well as variations in thicknesses and grade along strike and down dip.

Other Ivanhoe/Entrée Project Drilling

Separately, hole OTD1218, collared on Ivanhoe's Oyu Tolgoi property approximately 220 metres south of Entrée's Copper Flats, has intersected strong copper and gold mineralization between 1,182 and 1,342 metres. The hole was drilled in a northwestward direction onto Entrée's ground, so as to cut the Hugo North extension at close to a right angle, midway between the high-grade intercepts in holes EGD006 and EGD016.

OTD1218 returned a 114 metre interval averaging 4.33% copper and 2.64 g/t gold for a copper equivalent grade of 6.04% (see table, below), immediately overlain by a 46 metre interval averaging 1.34% copper and 0.16 g/t gold (copper equivalent grade of 1.45%). Several individual, 2 metre-wide samples within this mineralized zone yielded values in excess of 9% copper and 5 g/t gold. Hole OTD1218 confirms the presence and continuity of very high-grade copper and gold mineralization in the vicinity of previously-reported holes EGD006/6A and EGD016.

A second hole, OTD1219, has been collared due north of OTD1218, approximately 40 metres south of the Entrée-Ivanhoe boundary and is being drilled parallel to OTD1218. The hole is targeting the Hugo North extension midway between holes EGD016 and EGD008.

Summary of Significant Assays Include:

Independent Exploration Update

Entrée continues its independent exploration of its 100% owned **Lookout Hill** property. Two drill rigs are currently testing geophysical, geochemical and geological targets at Zones I/II and at Bayan Ovoo. A third rig is about to commence testing deeper, induced polarization geophysical targets at Zones I/II.

Separately, geophysical and geochemical surveys are now completed on the Company's **Ulziit Uul** property, located approximately 120 kilometres north of Lookout Hill. Drilling of selected targets is expected to commence within the coming weeks.

QUALITY ASSURANCE AND CONTROL

Robert Cann, P.Geo., Entrée's Vice-President, Exploration and a qualified person as defined by National Instrument 43-101, is responsible for the preparation of technical information in the Company's news releases. SGS Mongolia LLC prepares the split core at the project site and assays all samples at its facility in Ulaanbaatar, Mongolia. Ivanhoe's QA/QC program is monitored by independent consultant Dr. Barry Smee, P.Geo., and managed on site by Dale Sketchley, M.Sc., P.Geo. Prepared standards and blanks are inserted at the sample preparation lab at the project site to monitor the quality control of the assay data.

ABOUT ENTRÉE GOLD INC.

Entrée Gold Inc. (www.entreegold.com) is a junior mineral exploration company focused on gold and copper prospects. The Company is a large landholder in Mongolia's south Gobi Desert, near the Chinese border. Entrée maintains 100% interest in the 179,590 hectare Lookout Hill (Shivee Tolgoi) property which completely surrounds Ivanhoe's 8,500 hectare, Turquoise Hill (Oyu Tolgoi) holdings.

Under an Earn-In Agreement announced in October 2004, Ivanhoe has the right to earn an interest in approximately 22% (40,000 hectares) of Entrée's Lookout Hill property. By the terms of the agreement, Ivanhoe must spend a minimum of US \$20 million in order to earn any interest in the mineral rights to the project property and may acquire up to a 70% interest in mineralization above a depth of 560 metres and an 80% interest in mineralization below a depth of 560 metres by spending US\$35 million. Thereafter, Entrée has the right to require Ivanhoe to fund its share of subsequent joint venture costs through to production, to be recovered from production cash flow.

Recent equity investments from Ivanhoe and Rio Tinto plc (NYSE: RTP; LSE: RIO.L - Rio Tinto), have increased the Company's operating cash to approximately CDN\$26 million and allowed it to expand its budgets for its independent exploration of its Lookout Hill and Ulziit Uul projects. The current program at Lookout Hill has been increased from US\$3 million to an estimated US\$5.1 million; while the program budget at Ulziit Uul has been increased from US\$0.9 million to an estimated US\$1.9 million.

Entrée is a Tier 1 listed company that trades on the TSX Venture Exchange under the symbol **ETG** and on the AMEX under the symbol **EGI**.
