**Item 8.01. Other Events.**

On March 14, 2008, a Proton launch vehicle carrying the SES Americom AMC-14 satellite experienced an anomaly which left the satellite in a lower orbit than planned. While further testing will be necessary, the satellite appears to be functional. Engineers from SES Americom and Lockheed Martin, the manufacturer of the satellite, are exploring options to potentially bring AMC-14 into its proper orbit. If those efforts are successful, station keeping fuel would be required to correct the orbit, so the service life of the satellite would be substantially reduced.

We intended to lease the entire capacity of the satellite from EchoStar Corporation in order to, among other things, increase the number of high definition channels we offer. Therefore, the launch anomaly will result in a delay in our roll out of some high definition channels, including some local network channels.
