See following page

Securities registered or to be registered pursuant to Section 12(g) of the Act.

NONE

(Title of Class)

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

NONE

(Title of Class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report:

Ordinary Shares, no par value	1,379,021,949
(as of December 31, 2014)	

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or non-accelerated filer. See definition of accelerated filer and large accelerated filer in Rule 12b-2 of the Exchange Act (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards Other

as issued by the International Accounting Standards Board

If Other has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Deutsche Bank
Annual Report 2014 on Form 20-F

3

Deutsche Bank Aktiengesellschaft, which we also call Deutsche Bank AG, is a stock corporation organized under the laws of the Federal Republic of Germany. Unless otherwise specified or required by the context, in this document, references to we, us, our, the Group and Deutsche Bank Group are to Deutsche Bank Aktiengesellschaft and its consolidated subsidiaries.

Due to rounding, numbers presented throughout this document may not add up precisely to the totals we provide and percentages may not precisely reflect the absolute figures.

Our registered address is Taunusanlage 12, 60325 Frankfurt am Main, Germany, and our telephone number is +49-69-910-00.

Inclusion of Our Financial Report

We have included as an integral part of this Annual Report on Form 20-F our Financial Report 2014, to which we refer for the responses to certain items hereof. Certain portions of the Financial Report have been omitted, as indicated therein. The included Financial Report contains our consolidated financial statements, which we also incorporate by reference into this report, in response to Items 8.A and 18. Such consolidated financial statements differ from those contained in the Financial Report used for other purposes in that, for Notes 44 and 45 thereto, notes addressing non-U.S. requirements have been replaced with notes addressing U.S. requirements, and Note 46 thereto has been omitted. Such consolidated financial statements have been audited by KPMG AG Wirtschaftsprüfungsgesellschaft, as described in their Report of Independent Registered Public Accounting Firm included on page 455 of the Financial Report, which report is included only in the version of the Financial Report included in this Annual Report on Form 20-F.

Cautionary Statement Regarding Forward-Looking Statements

We make certain forward-looking statements in this document with respect to our financial condition and results of operations. In this document, forward-looking statements include, among others, statements relating to:

- the potential development and impact on us of economic and business conditions and the legal and regulatory environment to which we are subject;
- the implementation of our strategic initiatives and other responses there to;
- the development of aspects of our results of operations;
- our expectations of the impact of risks that affect our business, including the risks of losses on our trading processes and credit exposures; and
- other statements relating to our future business development and economic performance.

In addition, we may from time to time make forward-looking statements in our periodic reports to the United States Securities and Exchange Commission on Form 6-K, annual and interim reports, invitations to Annual General Meetings and other information sent to shareholders, offering circulars and prospectuses, press releases and other written materials. Our Management Board, Supervisory Board, officers and employees may also make oral forward-looking statements to third parties, including financial analysts.

Forward-looking statements are statements that are not historical facts, including statements about our beliefs and expectations. We use words such as believe, anticipate, expect, intend, seek, estimate, project, should, potential, reasonably possible, plan, aim and identify forward-looking statements.

By their very nature, forward-looking statements involve risks and uncertainties, both general and specific. We base these statements on our current plans, estimates, projections and expectations. You should therefore not place too much reliance on them. Our forward-looking statements speak only as of the date we make them, and we undertake no obligation to update any of them in light of new information or future events.

Table of Contents

Deutsche Bank
Annual Report 2014 on Form 20-F

4

We caution you that a number of important factors could cause our actual results to differ materially from those we describe in any forward-looking statement. These factors include, among others, the following:

the potential development and impact on us of economic and business conditions;
 other changes in general economic and business conditions;
 changes and volatility in currency exchange rates, interest rates and asset prices;
 changes in governmental policy and regulation, including measures taken in response to economic, business, political and social conditions;
 the potential development and impact on us of legal and regulatory proceedings to which we are or may become subject;
 changes in our competitive environment;
 the success of our acquisitions, divestitures, mergers and strategic alliances;
 our success in implementing our strategic initiatives and other responses to economic and business conditions and the legal and regulatory environment and realizing the benefits anticipated there from; and
 other factors, including those we refer to in Item 3: Key Information Risk Factors and elsewhere in this document and others to which we do not refer.

Use of Non-GAAP Financial Measures

This document and other documents we have published or may publish contain non-GAAP financial measures. Non-GAAP financial measures are measures of our historical or future performance, financial position or cash flows that contain adjustments which exclude or include amounts that are included or excluded, as the case may be, from the most directly comparable measure calculated and presented in accordance with IFRS in our financial statements. Examples of our non-GAAP financial measures, and the most directly comparable IFRS financial measures, are as follows:

Non-GAAP Financial Measure	Most Directly Comparable IFRS Financial Measure
IBIT attributable to Deutsche Bank shareholders,	Income (loss) before income taxes
IBIT attributable to Deutsche Bank shareholders (adjusted)	
Average active equity	Average shareholders' equity
Pre-tax return on average active equity	Pre-tax return on average shareholders' equity
Post-tax return on average active equity,	Post-tax return on average shareholders' equity
Post-tax return on average active equity (adjusted)	
Tangible book value	Total shareholders' equity (book value)
Net revenues (adjusted)	Net revenues
Adjusted cost base	Noninterest expenses
Cost/income ratio (adjusted)	Cost/income ratio

CRR/CRD 4 Solvency Measures

Our regulatory assets, exposures, risk-weighted assets, capital and ratios thereof are calculated for regulatory purposes as of December 31, 2014 and set forth throughout this document under the regulation on prudential requirements for credit institutions and investment firms (CRR) and the Capital Requirements Directive 4 (CRD 4) implementing Basel 3, which were published on June 27, 2013 and which apply on and after January 1, 2014. CRR/CRD 4 provides for transitional rules, under which capital instruments that are no longer eligible under the new rules are permitted to be phased-out as the new rules on regulatory adjustments are phased in, as well as regarding the risk weighting of certain categories of assets. Unless otherwise noted, our CRR/CRD 4 solvency measures as of December 31, 2014 set forth in this document reflect these transitional rules.

We also set forth in this document such CRR/CRD 4 measures on a fully loaded basis, reflecting full application of the rules without consideration of the transitional provisions under CRR/CRD 4. As the final implementation of CRR/CRD 4 may differ from our expectations, and our competitors assumptions and estimates regarding such implementation may vary, our fully loaded CRR/CRD 4 measures, which are non-GAAP financial measures, may not be comparable with similarly labeled measures used by our competitors.

Table of Contents

Deutsche Bank
Annual Report 2014 on Form 20-F

5

Because CRR/CRD 4 was not yet applicable prior to January 1, 2014, our regulatory assets, exposures, risk-weighted assets, capital and ratios thereof were calculated for regulatory purposes as of December 31, 2013 under the previously applicable the Basel 2.5 capital rules. We also set forth in several places such measures as of December 31, 2013 under a pro forma application of CRR/CRD 4, both on a transitional and a fully loaded basis. Because CRR/CRD 4 was not yet applicable as of such date, such measures are non-GAAP financial measures.

We believe that these fully loaded and pro forma CRR/CRD 4 calculations provide useful information to investors as they reflect our progress against the new regulatory capital standards and as many of our competitors have been describing CRR/CRD 4 calculations on a fully loaded basis.

Further Description and Reconciliation of Non-GAAP Financial Measures

For descriptions of these non-GAAP financial measures and the adjustments made to the most directly comparable financial measures under IFRS (or the CRR/CRD 4 rules, as applicable), please refer (i) for the CRR/CRD 4 regulatory capital, risk-weighted assets, capital ratios and leverage ratio, to Management Report: Risk Report: Regulatory Capital on pages 229 through 251 of the Financial Report and Management Report: Risk Report: Balance Sheet Management on pages 251 through 254 of the Financial Report, and (ii) for the other non-GAAP financial measures described above, to pages S-14 through S-18 of the Supplemental Financial Information, which are incorporated by reference herein.

When used with respect to future periods, our non-GAAP financial measures are also forward-looking statements. We cannot predict or quantify the levels of the most directly comparable financial measures under IFRS (or the CRR/CRD 4 rules) that would correspond to these non-GAAP financial measures for future periods. This is because neither the magnitude of such IFRS (or CRR/CRD 4) financial measures, nor the magnitude of the adjustments to be used to calculate the related non-GAAP financial measures from such IFRS (or CRR/CRD 4) financial measures, can be predicted. Such adjustments, if any, will relate to specific, currently unknown, events and in most cases can be positive or negative, so that it is not possible to predict whether, for a future period, the non-GAAP financial measure will be greater than or less than the related IFRS (or CRR/CRD 4) financial measure.

Selected Financial Data

We have derived the data we present in the tables below from our audited consolidated financial statements for the years presented. You should read all of the data in the tables below together with the consolidated financial statements and notes included in Item 18: Financial Statements and the information we provide in Item 5: Operating and Financial Review and Prospects. Except where we have indicated otherwise, we have prepared all of the consolidated financial information in this document in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and as endorsed by the European Union (EU). Our corporate division and segment data comes from our management reporting systems and is not in all cases prepared in accordance with IFRS. For a discussion of the major differences between our management reporting systems and our consolidated financial statements under IFRS, see Note 4 Business Segments and Related Information to the consolidated financial statements.

Dividends

The following table shows the dividend per share in euro and in U.S. dollars for the years ended December 31, 2014, 2013, 2012, 2011, and 2010. We declare our dividends at our Annual General Meeting following each year. Our dividends are based on the non-consolidated results of Deutsche Bank AG as prepared in accordance with German accounting principles. Because we declare our dividends in euro, the amount an investor actually receives in any other currency depends on the exchange rate between euro and that currency at the time the euros are converted into that currency.

Effective January 1, 2009, the German withholding tax applicable to dividends is 26.375 % (consisting of a 25 % withholding tax and an effective 1.375 % surcharge). For individual German tax residents, the withholding tax paid after January 1, 2009 represents for private dividends, generally, the full and final income tax applicable to the dividends. Dividend recipients who are tax residents of countries that have entered into a convention for avoiding double taxation may be eligible to receive a refund from the German tax authorities for a portion of the amount withheld and in addition may be entitled to receive a tax credit for the German withholding tax not refunded in accordance with their local tax law.

Annual Report 2014 on Form 20-F

Item 3: Key Information

9

U.S. residents will be entitled to receive a refund equal to 11.375 % of the dividends received after January 1, 2009. For U.S. federal income tax purposes, the dividends we pay are not eligible for the dividends received deduction generally allowed for dividends received by U.S. corporations from other U.S. corporations.

Dividends in the table below are presented before German withholding tax.

See Item 10: Additional Information – Taxation for more information on the tax treatment of our dividends.

	Dividends per share ¹	Dividends per share	Basic earnings per share	Payout ratio ^{2,3} Diluted earnings per share
2014 (proposed)	\$ 0.91	0.75	56 %	57 %
2013	\$ 1.03	0.75	117 %	121 %
2012	\$ 0.99	0.75	N/M	N/M

2010	\$ 1.00	0.75	24 %	26 %

N/M Not meaningful

¹ For your convenience, we present dividends in U.S. dollars for each year by translating the euro amounts at the period end rate for the last business day at each year end as described below under Exchange Rate and Currency Information .

² We define our payout ratio as the dividends we paid per share in respect of each year as a percentage of our basic and diluted earnings per share for that year.

³ The number of average basic and diluted shares outstanding has been adjusted in order to reflect the effect of the bonus element of the subscription rights issue in connection with the capital increases in June 2014 and October 2010.

Exchange Rate and Currency Information

Germany's currency is the euro. For your convenience, we have translated some amounts denominated in euro appearing in this document into U.S. dollars. Unless otherwise stated, we have made these translations at U.S.\$ 1.2141 per euro, the euro foreign exchange reference rate for U.S. dollars published by the European Central Bank (ECB) for December 31, 2014. ECB euro foreign exchange reference rates are based on a regular daily concertation procedure between central banks across Europe and worldwide, which normally takes place at 2.15 p.m. CET. You should not construe any translations as a representation that the amounts could have been exchanged at the rate used on December 31, 2014 or any other date.

The ECB euro foreign exchange reference rate for U.S. dollars for December 31, 2014 may differ from the actual rates we used in the preparation of the financial information in this document. Accordingly, U.S. dollar amounts appearing in this document may differ from the actual U.S. dollar amounts that we originally translated into euros in the preparation of our financial statements.

Fluctuations in the exchange rate between the euro and the U.S. dollar will affect the U.S. dollar equivalent of the euro price of our shares quoted on the German stock exchanges and, as a result, are likely to affect the market price of our shares on the New York Stock Exchange. These fluctuations will also affect the U.S. dollar value of cash dividends we may pay on our shares in euros. Past fluctuations in foreign exchange rates may not be predictive of future fluctuations.

Item 3: Key Information

11

Risk Factors

An investment in our securities involves a number of risks. You should carefully consider the following information about the risks we face, together with other information in this document, when you make investment decisions involving our securities. If one or more of these risks were to materialize, it could have a material adverse effect on our financial condition, results of operations, cash flows or prices of our securities.

Even as the U.S. economy has gradually improved, Europe continues to experience tepid economic growth, high levels of structural debt, persistent long-term unemployment and very low inflation. These persistently challenging market conditions have contributed to political uncertainty in many member countries of the eurozone and continue to negatively affect our results of operations and financial condition in some of our businesses, while a continuing low interest environment and competition in the financial services industry have compressed margins in many of our businesses. If these conditions persist or worsen, we could determine that we need to make changes to our business model.

Persistent doubt about the sustainability of the economic recovery in the eurozone continues to materially affect our businesses, particularly through its negative impact on client activity levels. The European Central Bank (generally referred to as the ECB) recently announced a new large-scale financial asset purchase program (commonly referred to as quantitative easing) in an attempt to counteract these conditions and in particular to lower the risk that the eurozone will enter a period of deflation, which, if left unabated, could exacerbate the already high structural debt and unemployment levels that have persisted and have contributed to political uncertainty in many member countries of the eurozone. By contrast, the U.S. Federal Reserve recently ceased its own quantitative easing program and has stated that it plans to begin raising its benchmark interest rate around the middle of 2015, as growth in the U.S. economy has trended upward. Many economists expect that the global and in particular the eurozone economy will to some extent become dependent on the U.S. to act as the main driver of global economic growth. This may especially be the case as Chinese economic growth continues to slow as a result of the cooling of the real estate market there. Any deceleration of economic growth in the U.S. could endanger the still tepid and fragile economic recovery in the eurozone and elsewhere. These macroeconomic uncertainties have been exacerbated by heightened geopolitical tensions, such as those in connection with Ukraine, Russia and the Middle East, which, should they intensify, would have the potential to further undermine confidence in the global economic recovery. In addition, sharp declines in oil and commodity prices in 2014 have led to further uncertainty concerning the resilience of the global economy. Although oil price declines have largely benefited industrialized economies, they have also caused further volatility in emerging markets, which have experienced a divergence between those countries that export energy and those that import it. This has, in many cases, increased the uncertainty with respect to the future levels of foreign investment inflows into such markets.

Against this background and these uncertainties, we have observed continued subdued client activity in a number of our businesses, with our credit flow businesses in our Corporate Banking & Securities (CB&S) division affected in particular, although we experienced somewhat improved activity levels in the second half of 2014. The simultaneous easing of monetary policy in the eurozone and the tightening of it in the United States may have disruptive effects on many of our businesses. Our credit flow businesses continue to be affected by the potential tightening of monetary policy in the United States, even as the ultra-low interest rate environment, especially in the eurozone, where it may be sustained, and geopolitical uncertainties have also put pressure on our margins in several traditional banking sectors. We may face further uncertainty if, as it currently appears, the net effect of monetary policies in the U.S. and the eurozone is to continue to weaken the euro against the U.S. dollar. We benefit from a stronger U.S. dollar as a significant portion of our revenues is generated in the United States while our results are reported in euro. A stronger U.S. dollar will, however, also increase the euro values of our U.S. dollar-denominated liabilities, including those incurred in respect of U.S. litigation and enforcement matters, and will also tend to significantly increase our risk weighted assets, including those in the NCOU, that are denominated in U.S. dollars. This can lead to material declines in our capital ratios. These challenges have been exacerbated as we continue to face headwinds from the continuing intensification of the

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

12

regulatory environment. A continued high level of litigation and enforcement matters has given rise to reputational challenges, has put further pressure on our profitability and returns, and has made our periodic results more volatile as we often have little control as to the period in which we will resolve active matters.

Like many in the investment banking industry, we continue to rely on our trading and markets businesses as a primary source of profit. However, these flow businesses, in particular our fixed income securities franchise, have continued to face an extremely challenging environment, especially in the first half of 2014, caused by cyclical uncertainty about the low interest rate environment, central bank intervention in markets and the gradual cessation thereof and overall sluggish economic growth. These negative effects have been exacerbated by the impacts on our profitability from continued de-risking and long-term structural trends driven by regulation and competition that have further compressed our margins in many of our businesses. Should a combination of these factors continue to lead to reduced margins and subdued activity levels in our trading and markets business over the longer term, this could reflect structural challenges that may lead us to consider changes to aspects of our business model.

If uncertainty about the macroeconomic environment persists or worsens, these trends may also be difficult for us to counter. More generally, if economic conditions in the eurozone remain at their current subdued levels, or worsen, or if economic growth stagnates elsewhere, our results of operations may be materially and adversely affected. Continued quantitative easing by the ECB in response to this may lead to a continuation of the current environment of low interest rates and margin compression, which may also already affect our business and financial position. By contrast, any decision by the U.S. Federal Reserve or by central banks more generally to tighten their monetary policy if economies continue to improve could have a material adverse effect on perceptions of liquidity in the financial system and on the global economy more generally, and may adversely affect our business and financial position. In particular, we may in the future be unable to offset the potential negative effects on our profitability of the current macroeconomic and market conditions through performance in our other businesses.

Regulatory and political actions by European governments in response to the European sovereign debt crisis may not be sufficient to prevent the crisis from spreading or to prevent departure of one or more member countries from the common currency. In particular, anti-austerity populism in Greece and other member countries of the eurozone could undermine confidence in the continued viability of those countries' participation in the euro. The default or departure from the euro of any one or more countries could have unpredictable political consequences as well as consequences for the financial system and the greater economy, potentially leading to declines in business levels, write-downs of assets and losses across our businesses. Our ability to protect ourselves against these risks is limited.

Although the severity of the European sovereign debt crisis appeared to have abated somewhat over the last several years, the emergence of significant anti-austerity sentiment in some member countries, especially in Greece, may contribute to renewed instability in the European sovereign debt markets and in the economy more generally. The austerity programs introduced by a number of countries across the eurozone in response to the sovereign debt crisis have dampened economic growth over recent years, while reform efforts have not yet been able to overcome the extremely difficult structural economic challenges that several eurozone countries continue to face. Against this background, the political leaders of Greece and other affected countries have limited flexibility to counteract these negative macroeconomic trends through fiscal policy, especially as Greece remains subject to the terms of its international debt restructuring. This negative macroeconomic outlook has the potential to cultivate the political support in Greece or other countries to attempt to renegotiate their debt restructurings or to exit from the eurozone. Any resulting political developments could quickly change the economic and financial situation throughout the eurozone, and could affect even the financially more stable countries in the eurozone, including Germany. Substantial doubt remains whether actions taken by European policymakers would be sufficient to contain such a crisis. In particular, the ECB's quantitative easing program may not improve economic conditions quickly enough or at all in Greece and other economically contracting or stagnant eurozone countries in order to build a political consensus to maintain the course in the eurozone. In

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

13

addition, the European Stability Mechanism, generally referred to as the ESM, the special purpose vehicle created by the European Union to combat the sovereign debt crisis, may prove to be ineffective or inadequate in a crisis situation. As economic weakness continues in the eurozone, questions about the long-term growth prospects of the eurozone countries could exacerbate their difficulties in refinancing their sovereign debt as it comes due, further increasing pressure on other eurozone governments.

Any political decision by Greece or other member countries to leave the eurozone could lead to tremendous pressure on other member countries to do so as well and could potentially lead to a significant deterioration of the sovereign debt market, especially if the exit did not result in the catastrophic effects on the exiting country that many have predicted. If one or more members of the eurozone defaults on their debt obligations or decides to leave the common currency, this would result in the reintroduction of one or more national currencies. Should a eurozone country conclude it must exit the common currency, the resulting need to reintroduce a national currency and restate existing contractual obligations could have unpredictable financial, legal, political and social consequences, leading not only to significant losses on sovereign debt but also on private debt in that country. Given the highly interconnected nature of the financial system within the eurozone, and the high levels of exposure we have to public and private counterparties around Europe, our ability to plan for such a contingency in a manner that would reduce our exposure to non-material levels is likely to be limited. If the overall economic climate deteriorates as a result of one or more departures from the eurozone, our businesses could be adversely affected, and, if overall business levels decline or we are forced to write down significant exposures among our various businesses, we could incur substantial losses.

We may be required to take impairments on our exposures to the sovereign debt of European or other countries as the European sovereign debt crisis continues. The credit default swaps into which we have entered to manage sovereign credit risk may not be available to offset these losses.

The effects of the continuing sovereign debt crisis have been especially evident in the financial sector, as a large portion of the sovereign debt of eurozone countries is held by European financial institutions, including us. As of December 31, 2014, we had a direct sovereign credit risk exposure of 4.6 billion to Italy, 688 million to Spain and 100 million to Greece. Despite the abatement of the crisis in recent years, it remains uncertain whether, in light of the current political environment, Greece or other eurozone sovereigns, such as Spain, Italy, Portugal and Cyprus, will be able to manage their debt levels in the future and whether Greece will attempt to renegotiate its past international debt restructuring. In the future, negotiations or exchanges similar to the Greek debt restructuring in 2012 could take place with respect to the sovereign debt of these or other affected countries. The outcome of any negotiations regarding changed terms (including reduced principal amounts or extended maturities) of sovereign debt may result in additional impairments of assets on our balance sheet. Any negotiations are highly likely to be subject to political and economic pressures that we cannot control, and we are unable to predict their effects on the financial markets, on the greater economy or on ourselves.

In addition, any restructuring of outstanding sovereign debt may result in potential losses for us and other market participants that are not covered by payouts on hedging instruments that we have entered into to protect against the risk of default. These instruments largely consist of credit default swaps, generally referred to as CDSs, pursuant to which one party agrees to make a payment to another party if a credit event (such as a default) occurs on the identified underlying debt obligation. A sovereign restructuring that avoids a credit event through voluntary write-downs of value may not trigger the provisions in CDSs we have entered into, meaning that our exposures in the event of a write-down could exceed the exposures we previously viewed as our net exposure after hedging. Additionally, even if the CDS provisions are triggered, the amounts ultimately paid under the CDSs may not correspond to the full amount of any loss we incur. We also face the risk that our hedging counterparties have not effectively hedged their own exposures and may be unable to provide the necessary liquidity if payments under the instruments they have written are triggered. This may result in systemic risk for the European banking sector as a whole and may negatively affect our business and financial position.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

14

We have a continuous demand for liquidity to fund our business activities. We may suffer during periods of market-wide or firm-specific liquidity constraints, and liquidity may not be available to us even if our underlying business remains strong.

We are exposed to liquidity risk, which is the risk arising from our potential inability to meet all payment obligations when they become due or only being able to meet them at excessive cost. Our liquidity may become impaired due to a reluctance of our counterparties or the market to finance our operations due to actual or perceived weaknesses in our businesses. Such impairments can also arise from circumstances unrelated to our businesses and outside our control, such as, but not limited to, disruptions in the financial markets. For example, we experienced, as a result of the European sovereign debt crisis in 2012, declines in the price of our shares and increases in the premium investors must pay when purchasing CDSs on our debt. In addition, negative developments concerning other financial institutions perceived to be comparable to us and negative views about the financial services industry in general have also affected us in recent years. These perceptions have affected the prices at which we have accessed the capital markets to obtain the necessary funding to support our business activities; should these perceptions worsen, our ability to obtain this financing on acceptable terms may be adversely affected. Among other things, an inability to refinance assets on our balance sheet or maintain appropriate levels of capital to protect against deteriorations in their value could force us to liquidate assets we hold at depressed prices or on unfavorable terms, and could also force us to curtail business, such as the extension of new credit. This could have an adverse effect on our business, financial condition and results of operations.

As a result of funding pressures arising from the European sovereign debt crisis and the global economic weakness more generally, there has been increased intervention by a number of central banks over the past several years, in particular by the ECB and the U.S. Federal Reserve. In September 2012, the ECB announced an unlimited sovereign bond buying program (referred to as the OMT Program) aimed at keeping the borrowing costs of affected eurozone countries low through the purchase of their debt instruments. In a court order dated January 14, 2014, the German Constitutional Court (Bundesverfassungsgericht) has sought guidance from the Court of Justice of the European Union as to whether the OMT Program is compatible with European law. Although a recent Advocate General Opinion stated that the program should be valid under European law, the Court of Justice of the European Union is not expected to issue a final decision until the summer of 2015. A decision finding that the OMT Program is incompatible with European law could adversely affect the ability of the ECB to invoke the OMT Program and negatively impact the stability of the eurozone. Over the course of 2014, the ECB cut its main refinancing rate to 0.05 %, made liquidity available to the banks via targeted longer-term refinancing operations and, towards the end of the year, launched a program to purchase covered bonds and asset-backed securities. In addition, the ECB has recently announced that it would implement a program commonly referred to as quantitative easing, which is designed to keep long-term interest rates low through substantial purchases of long-term financial assets from private institutions. The U.S. Federal Reserve has also expanded its provision of U.S. dollar liquidity to the ECB, which the ECB has then made available to European banks.

To the extent these incremental measures, most of which have resulted in the availability of additional liquidity to European financial institutions and the financial markets in the eurozone more generally, are curtailed or halted, this could adversely impact funding markets for all European financial institutions, including us. This could in turn lead to an increase in funding costs, or reduced funding supply, which could result in a reduction in business activity. In particular, any decision by the ECB to discontinue or reduce quantitative easing or by the U.S. Federal Reserve or central banks more generally to tighten their monetary policy will likely cause long-term interest rates to increase and accordingly impact the costs of our funding. In addition, negative perceptions concerning our business and prospects could develop as a result of large losses, changes of our credit ratings, a general decline in the level of business activity in the financial services sector, regulatory action, serious employee misconduct or illegal activity, as well as many other reasons outside our control and that we cannot foresee.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

15

Since the start of the global financial crisis and continuing through the European sovereign debt crisis, the major credit rating agencies have lowered our credit ratings or placed them on review or watch on multiple occasions. On July 29, 2014, Moody's announced it was downgrading our long-term debt and deposit ratings from A2 to A3. On March 26, 2014, Fitch Ratings affirmed our long-term issuer default rating of A+ but moved the respective rating outlook from stable to negative. On April 30, 2014, Standard & Poor's affirmed our long-term issuer default rating of A but moved the respective rating outlook from stable to negative, and on February 3, 2015, Standard & Poor's put our long-term ratings on CreditWatch with negative implication. Recent credit rating downgrades have not materially affected our borrowing costs. However, any future downgrade could materially affect our funding costs, although we are unable to predict whether this would be the case or the extent of any such effect. The effect would depend on a number of factors including whether a downgrade affects financial institutions across the industry or on a regional basis, or is intended to reflect circumstances specific to us; any actions our senior management may take in advance of or in response to the downgrade; the willingness of counterparties to continue to do business with us; any impact of other market events and the state of the macroeconomic environment more generally.

Additionally, under many of the contracts governing derivative instruments to which we are a party, a downgrade could require us to post additional collateral, lead to terminations of contracts with accompanying payment obligations for us or give counterparties additional remedies. We take these effects into account in our liquidity stress testing analysis, as further described in Management Report: Risk Report: Liquidity Risk: Stress Testing and Scenario Analysis on pages 217 through 218 of the Financial Report.

Regulatory reforms enacted and proposed in response to weaknesses in the financial sector, together with increased regulatory scrutiny more generally, have created significant uncertainty for us and may adversely affect our business and ability to execute our strategic plans.

In response to the global financial crisis and the European sovereign debt crisis, governments, regulatory authorities and others have made and continue to make proposals to reform the regulatory framework for the financial services industry to enhance its resilience against future crises. Legislation has already been enacted and regulations issued in response to many of these proposals. The regulatory framework for financial institutions is likely to undergo further significant change. This creates significant uncertainty for us and the financial industry in general. The wide range of new laws and regulations or current proposals includes, among other things, provisions for more stringent regulatory capital and liquidity standards, restrictions on compensation practices, restrictions on proprietary trading and other investment activities, special bank levies and financial transaction taxes, recovery and resolution powers to intervene in a crisis including bail-in of creditors, the creation of a single supervisor and a single resolution mechanism (SRM) within the eurozone, separation of certain businesses from deposit taking, stress testing and capital planning regimes, heightened reporting requirements, and reforms of derivatives, other financial instruments, investment products and market infrastructures. In addition, regulatory scrutiny under existing laws and regulations has become more intense. The specific effects of a number of new laws and regulations remain uncertain because the drafting and implementation of these laws and regulations are still on-going, and may include, for example, material revisions to our risk-weighted assets calculation, changes in our deductions from our regulatory capital and the imposition of additional capital charges to cover financial, market and operational risk. These requirements may be in addition to regulatory capital buffers that may also be increased or be in addition to those already imposed on us and could themselves materially increase our capital requirements.

Regulatory authorities have substantial discretion in how to regulate banks, and this discretion, and the means available to the regulators, have been steadily increasing during recent years. Regulation may be imposed on an ad hoc basis by governments and regulators in response to ongoing or future crises, and may especially affect financial institutions such as us that are deemed to be systemically important. For example, exceptional and temporary capital ratios, such as the one mandated by the European Council in October 2011, may be imposed very quickly.

Item 3: Key Information

16

The European Union is in the process of establishing a banking union consisting of Germany and members of the eurozone, plus any other EU member states that choose to join. Since November 4, 2014, the ECB has been our primary prudential supervisor, and there is uncertainty to what extent this will result in a change to our regulatory environment. In preparation for direct supervision, the ECB conducted a comprehensive assessment, consisting of an asset quality review and a stress test, the results of which it published on October 26, 2014. We successfully met all quantitative and qualitative requirements of the comprehensive assessment. However, potential costs for litigations were not part of the stress test. In the future, the ECB or other regulators may conduct more stringent stress tests, and failure to meet the respective new quantitative and qualitative requirements could have a material adverse effect on our business, financial condition and results of operations, including our ability to pay out dividends.

In addition, the regulators having jurisdiction over us, including the ECB and the German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin), have discretion to impose capital deductions on financial institutions for financial, market and operational risks that are not otherwise recognized in risk-weighted assets or other surcharges depending on the individual situation of the bank. On February 20, 2015, the ECB required us to maintain a Common Equity Tier 1 ratio of at least 10 % (on a phase-in basis). Furthermore, any prospective changes in accounting standards, such as those imposing stricter or more extensive requirements to carry assets at fair value, could also have uncertain impacts on our capital needs.

Regulatory and legislative changes require us to maintain increased capital and may significantly affect our business model and the competitive environment. Any perceptions in the market that we may be unable to meet our capital requirements with an adequate buffer, or that we should maintain capital in excess of the requirements, could intensify the effect of these factors on our business and results.

In December 2010, the Basel Committee on Banking Supervision published a set of comprehensive changes to the capital adequacy framework, known as Basel 3, which have been implemented into European Union law by a legislative package referred to as CRR/CRD 4. CRR/CRD 4 became effective on January 1, 2014, with some provisions being gradually phased in through 2019. CRR/CRD 4 contains, among other things, detailed rules on regulatory banking capital, increased capital requirements and the introduction of additional capital buffers (which will increase from year to year) as well as tightened liquidity standards and the introduction of a leverage ratio not based upon risk-weightings. We expect to be subject to additional capital buffers, including as a result of being designated a globally systemically important financial institution, or G-SIFI. In July 2013, U.S. federal bank regulators issued final rules implementing many elements of the Basel 3 framework in the United States.

We may not have sufficient capital to meet these increasing regulatory requirements. This could occur due to regulatory and other changes, such as the gradual phase out of our hybrid capital instruments as qualifying Additional Tier 1 (or AT1), or due to any substantial losses we may incur, which would reduce our retained earnings, a component of Common Equity Tier 1 capital, or due to a combination of these or other factors. One such factor might be a continued decline in the value of the euro as compared to other currencies, causing our risk-weighted assets denominated in these other countries to increase, as described above. In addition, although we executed two transactions to issue AT1 notes with a total eligible amount of 4.6 billion in 2014, we may be unable to replace our hybrid capital instruments as they are being gradually phased out. As a result, our future leverage ratio under CRR/CRD 4 may be substantially lower than the adjusted pro forma CRR/CRD 4 leverage ratio we have published. This ratio reflects, as of December 31, 2014, the 10.0 billion of hybrid capital securities that continued to qualify under the CRR/CRD 4 phase-in rules as of that date but that will be phased out of our regulatory capital.

If we are unable to build up capital buffers as required by CRR/CRD 4, we may become subject to restrictions on the pay-out of dividends, share buybacks and discretionary compensation payments. In addition, any requirement to increase capital ratios could lead us to adopt a strategy focusing on capital preservation and creation over revenue generation and profit growth, in particular involving the reduction in higher margin risk-weighted assets. If we are unable to increase our capital ratios to the regulatory minimum in such a case or by raising new capital through the capital markets, through the reduction of risk-

Item 3: Key Information

17

weighted assets or through other means, then we may be required to activate our group recovery plan. If these actions or other private or supervisory actions do not restore capital ratios to the levels required by CRR/CRD 4, and we are failing or likely to fail, competent authorities may apply resolution powers under the German Recovery and Resolution Act (Sanierungs- und Abwicklungsgesetz) and other laws. Resolution powers may include the power to require legal and operational changes to bank structures to ensure resolvability, to transfer to another legal entity shares, assets, rights or liabilities of a bank which is failing or likely to fail, to reduce, including to reduce to zero, the nominal amount of shares, or to cancel shares. Furthermore, the competent resolution authority may order the full or partial write-down of hybrid capital and debt instruments or their conversion into shares (commonly referred to as "bail-in"). The exercise of resolution powers could lead to a significant dilution of our shareholders or even the total loss of our shareholders' or creditors' investment.

In February 2014, the Federal Reserve Board adopted U.S. prudential reforms (the "FBO Rules") applicable to foreign banking organizations ("FBOs"). FBOs with U.S. \$ 50 billion or more in U.S. non-branch assets, such as us, will be required to establish or designate a separately capitalized top-tier U.S. intermediate holding company ("IHC") to hold substantially all of the FBO's ownership interests in U.S. subsidiaries by July 1, 2016. Beginning on that date, our IHC will be subject, on a consolidated basis, to the risk-based capital requirements under the U.S. Basel 3 capital framework, capital planning and stress testing requirements (on a phased-in basis), U.S. liquidity buffer requirements and other enhanced prudential standards comparable to those applicable to top-tier U.S. bank holding companies of a similar size. The Federal Reserve Board will have the authority to examine the IHC and any of its subsidiaries. U.S. leverage requirements applicable to the IHC will take effect beginning in January 2018. The Federal Reserve Board has also stated that it intends, through future rulemakings, to apply the Basel 3 liquidity coverage ratio and net stable funding ratio to the U.S. operations of some or all large foreign banking organizations. Our combined U.S. operations, including our New York branch, will also be subject to certain requirements related to liquidity and risk management.

Our existing U.S. bank holding company subsidiary, Deutsche Bank Trust Corporation, is subject to various U.S. prudential requirements and will become subject to others prior to our establishing the IHC. As of January 1, 2015, Deutsche Bank Trust Corporation is subject to risk-based and leverage capital requirements, liquidity requirements, and other enhanced prudential standards applicable to large U.S. bank holding companies. Deutsche Bank Trust Corporation also became subject to capital planning and stress testing requirements on June 30, 2014. Deutsche Bank Trust Corporation will remain subject to the capital planning and stress testing requirements and certain enhanced prudential standards until corresponding requirements applicable to the IHC become effective. On March 5, 2015, the Federal Reserve Board released the results of the 2015 supervisory stress tests. It found that, even in the severely adverse economic stress test scenario, Deutsche Bank Trust Corporation would maintain capital ratios well above the required minimum levels. On March 11, 2015, the Federal Reserve Board announced that it objected on qualitative grounds to the capital plan submitted by Deutsche Bank Trust Corporation as part of the 2015 Comprehensive Capital Analysis and Review (CCAR), citing numerous and significant deficiencies across Deutsche Bank Trust Corporation's risk-identification, measurement, and aggregation processes, approaches to loss and revenue projection, and internal controls. The capital plan did not include any planned dividends or share repurchases. Deutsche Bank Trust Corporation is committed to strengthening and enhancing its capital planning process.

On September 3, 2014, the Federal Reserve Board and other U.S. regulators approved a final rule implementing for certain U.S. banking holding companies and depository institutions both a full and a modified version of the quantitative liquidity coverage ratio ("LCR") requirement that is generally consistent with the Basel Committee's revised Basel 3 liquidity rules, but is more stringent in several respects.

Title I of the Dodd-Frank Act and the implementing regulations require each bank holding company with assets of U.S. \$ 50 billion or more, including Deutsche Bank AG, to prepare and submit annually a plan for the orderly resolution of subsidiaries and operations in the event of future material financial distress or failure (the "Title I US Resolution Plan"). For foreign-based covered companies such as Deutsche Bank AG, the Title I US Resolution Plan only relates to subsidiaries, branches, agencies and businesses that are domiciled in or conducted in whole or in material part in the United States. In addition to the Title I US Resolution Plan, in 2014,

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

18

Deutsche Bank Trust Company Americas, one of our insured depository institutions (IDIs) in the United States, was subject to the FDIC's final rule requiring IDIs with total assets of U.S. \$ 50 billion or more to submit periodically to the FDIC a plan for resolution in the event of failure under the Federal Deposit Insurance Act (the IDI Rule). We expanded our 2014 Title I US Resolution Plan to also be responsive to the IDI Rule requirements.

These requirements could require us to reduce assets held in the United States, inject capital into or otherwise change the structure of our U.S. operations. To the extent that we are required to reduce operations in the United States or deploy capital in the United States that could be deployed more profitably elsewhere, these requirements could have an adverse effect on our business, financial condition and results of operations.

Any increased capital or liquidity requirements, including those described above, could have adverse effects on our business, financial condition and results of operations, as well as on perceptions in the market of our stability, particularly if any such proposal becomes effective and results in our having to raise capital at a time when financial markets are distressed. If these regulatory requirements must be implemented more quickly than currently foreseen, we may decide that the quickest and most reliable path to compliance is to reduce the level of assets on our balance sheet, dispose of divisions or separate out certain activities or reduce or close down certain business lines. The effects on our capital raising efforts in such a case could be amplified due to the expectation that our competitors, at least those subject to the same or similar capital requirements, would likely also be required to raise capital at the same time. Moreover, some of our competitors, particularly those outside the European Union, may not face the same or similar regulations, which could put us at a competitive disadvantage.

In addition to these regulatory initiatives, market sentiment may encourage financial institutions such as us to maintain significantly more capital than regulatory-mandated minima, which could exacerbate the effects on us described above or, if we do not increase our capital to the encouraged levels, could lead to the perception in the market that we are undercapitalized relative to our peers generally.

The increasingly stringent regulatory environment to which we are subject, coupled with substantial outflows in connection with litigation and enforcement matters, may make it difficult for us to maintain our capital ratios at levels above those required by regulators or expected in the market.

Since 2008, governments, regulatory authorities and others have significantly tightened the prudential regulation of the financial services industry. These changes and the general lack of international regulatory coordination, including on implementation timetables, have created significant uncertainty for us, especially as regulatory authorities' discretion in how to regulate banks has also substantially increased in recent years. Even though we currently comply with minimum regulatory capital rules under CRR/CRD 4, regulators may conduct stress tests and impose unexpected enhancements on us that require us to hold capital in excess of the regulatory required minima. These may include, for example, material revisions to our risk-weighted assets calculation, changes in our deductions from our regulatory capital and the imposition of extra capital charges to cover financial and operational risk. These requirements may be in addition to regulatory capital buffers that may also be increased or be in addition to those already imposed on us, and could themselves materially increase our capital requirements.

In addition, the single resolution fund under the SRM is expected to have reached a target size of approximately 55 billion by January 1, 2024 (based upon 1 % of deposits covered under the European deposit guarantee schemes directive), of which approximately 15 billion is expected to be contributed by German banks. On this basis, we believe our contributions over the coming years to the single resolution fund might be substantial. We also expect that the changes to the European deposit guarantee schemes directive, which must be implemented into German law to become effective July 3, 2015, will require increased annual contributions by us to the German deposit protection guarantee scheme.

Moreover, we are required to hold and calculate capital separately for our operations in different jurisdictions. In the United States, the Federal Reserve Board has adopted rules that impose enhanced prudential standards

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

19

on our U.S. operations, ultimately leading to higher capital and funding requirements for our U.S. operations. It is unclear whether such increased U.S. capital and other requirements as well as similar developments in other jurisdictions could lead to a fragmentation of supervision of global banks that could adversely affect our reliance on regulatory waivers allowing us to meet capital adequacy requirements, large exposure limits and certain organizational requirements on a consolidated basis only rather than on both a consolidated and non-consolidated basis. Should we no longer be entitled to rely on these waivers, we would have to adapt and take the steps necessary in order to meet regulatory capital requirements and other requirements on a consolidated as well as a non-consolidated basis, which could result also in significantly higher costs and potential effects on our profitability and dividend paying ability.

Against this backdrop, our results of operation and financial condition have been negatively affected in recent quarters by a large number of claims, disputes, legal proceedings and government investigations. The extent of our financial exposure to these and other matters could continue to be material and could substantially exceed the level of provisions that we established for such litigation, regulatory and similar matters. In this environment, our compliance costs have also substantially increased.

As a result of the substantial uncertainties with respect to our calculation of our capital requirements and the potential outflows in respect of litigation and enforcement matters, we have found it necessary and may find it necessary or desirable to raise additional capital in the future to maintain our capital at levels required by our regulators or viewed by market participants as necessary for our businesses in comparison with our international peers.

Rules in the United States, recent legislation in Germany and proposals in the European Union regarding the prohibition of proprietary trading or its separation from the deposit-taking business may materially affect our business model.

On December 10, 2013, U.S. regulators released the final version of the rules implementing the Volcker Rule, as required by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the Dodd-Frank Act). The final rules prohibit U.S. insured depository institutions and companies affiliated with U.S. insured depository institutions (such as us) from engaging in short-term proprietary trading of certain securities, derivatives, commodity futures and options on these instruments, for their own account. The final rules also impose limits on investments in, and other relationships with, hedge funds, private equity funds and other private funds and limit the ability of banking entities and their affiliates to enter into certain transactions with such funds with which they or their affiliates have certain relationships. The Volcker Rule requires banking entities to establish comprehensive compliance programs designed to help ensure and monitor compliance with restrictions under the Volcker Rule. In December 2013, the Federal Reserve Board extended the end of the conformance period for the Volcker Rule generally until July 21, 2015. In December 2014, the Federal Reserve Board issued an order extending the Volcker Rule's general conformance period until July 21, 2016 for investments in and relationships with covered funds and certain foreign funds that were in place on or prior to December 31, 2013 (legacy covered funds), and stated its intention to grant a final one-year extension of the general conformance period, to July 21, 2017, for banking entities to conform ownership interests in and relationships with legacy covered funds. The extension of the conformance period does not apply to the Volcker Rule's prohibitions on proprietary trading or to any investments in and relationships with covered funds made or entered into after December 31, 2013. During the applicable conformance periods, we will continue our efforts to bring our activities and investments into compliance with the rule and to implement appropriate compliance programs.

In addition, the German Act on the Separation of Risks and Recovery and Resolution Planning for Credit Institutions and Banking Groups, referred to as the Separation Act, was promulgated in August 2013. The Separation Act regulates the activities of banks that take deposits or other repayable funds from the public and lend them for their own account (referred to as CRR Banks). CRR Banks are required to transfer certain activities deemed to be high risk to a financial trading institution, which may be established within the same banking group, if certain independence requirements are met. We are required to determine the scope of activities to be separated by July 1, 2015 in conjunction with the competent authority, and are required to implement separation by July 1, 2016. Such separ-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

20

ation may result in higher financing costs for the separated activities that could adversely affect our business, financial condition and results of operations. Moreover, there are still uncertainties as to which business operations would be required to be separated. The BaFin has been granted broad discretion in this respect.

On January 29, 2014, the European Commission published a draft Regulation on Structural Measures Improving the Resilience of EU Banks and Transparency of the Financial Sector, referred to as the Proposed Regulation, which, if enacted as proposed, would prohibit certain large banks from engaging in proprietary trading in financial instruments and commodities and investing in hedge funds or other entities that engage in proprietary trading, for the sole purpose of making a profit for its own account. The Proposed Regulation would also grant supervisors broad powers to require these banks to separate certain activities deemed to be high risk from other businesses, such as deposit-taking and lending. The Proposed Regulation is currently being discussed at the European level and might overrule certain requirements set out in the Separation Act at the national level.

The Volcker Rule, the Separation Act and the Proposed Regulation may have significant implications for the future structure and strategy of our Group, and may increase our Group's funding costs. This could adversely affect our business, financial condition and results of operations.

European and German legislation regarding the recovery and resolution of banks and investment firms as well as proposals published by the Financial Stability Board on Total Loss Absorbing Capacity may result in regulatory consequences that could, if resolution measures were imposed on us, significantly affect our business operations, lead to higher refinancing costs and lead to losses for our shareholders and creditors.

On January 1, 2015, the German Recovery and Resolution Act came into force and transposed the European directive establishing a framework for the recovery and resolution of credit institutions and investment firms (referred to as the Bank Recovery and Resolution Directive or BRRD) into German law. Under the Recovery and Resolution Act, the competent resolution authority may take a range of measures including the transfer of shares, assets or liabilities of a failing bank to another legal entity, the reduction, including to zero, of the nominal value of shares or the cancellation of shares outright, and may, in its exercise of the bail-in power, write down certain eligible unsecured liabilities, including to zero, or convert them into equity. In order to facilitate the authorities' bail-in powers, which became effective in Germany on January 1, 2015, banks are required to include conditions in their eligible liabilities issued outside the EU that recognize the regulatory powers to write down or convert debt. Furthermore, affected banks are required to meet at all times a robust minimum requirement for own funds and eligible liabilities (MREL) which will be set on a case-by-case basis by the competent resolution authority. In addition, on November 14, 2014, the Financial Stability Board (FSB) published a proposal that global systemically important banks (G-SIBs), such as us, should meet a new firm-specific requirement for Total Loss Absorbing Capacity (TLAC) alongside minimum regulatory capital requirements from January 1, 2019.

Moreover, resolution powers will be conferred on a Single European Resolution Board, which shall be fully operational on January 1, 2016.

The bail-in powers and the necessary contractual conditions could result in increased refinancing costs for us. Furthermore, in the event that we are unable to hold sufficient loss-absorbing capital, we could be required to restrict our business or take other measures to ensure our resolvability under the relevant regulations. These steps could adversely affect our business, financial condition and results of operations.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

21

Other regulatory reforms adopted or proposed in the wake of the financial crisis – for example, extensive new regulations governing our derivatives activities, bank levies or a possible financial transaction tax – may materially increase our operating costs and negatively impact our business model.

On August 16, 2012, the EU Regulation on over-the-counter (OTC) derivatives, central counterparties and trade repositories, referred to as EMIR, entered into force. While a number of the compliance requirements introduced by EMIR already apply, the European Securities and Markets Authority is still in the process of finalizing some of the implementing rules mandated by EMIR. EMIR introduced a number of requirements, including clearing obligations for certain classes of OTC derivatives and various reporting and disclosure obligations. Although some of the particular effects brought about by EMIR are not yet fully foreseeable, many of its elements have led and may lead to changes which may negatively impact our profit margins, require us to adjust our business practices or increase our costs (including compliance costs). The Markets in Financial Instruments Directive (which comprises a regulation (MiFIR) and a directive (MiFID)), the substantive provisions of which will become applicable on January 3, 2017, introduces a trading obligation for those OTC derivatives which are subject to mandatory clearing and which are sufficiently standardized. We will also be impacted by the BCBS-IOSCO final minimum standards for margin requirements for non-centrally cleared derivatives, for which enabling legislation exists in the EU (EMIR) but where much of the impact depends on how these requirements are implemented in detailed rule-making.

In the United States, the Dodd-Frank Act has numerous provisions that may affect our operations. Pursuant to regulations implementing provisions of the Dodd-Frank Act, we and one of our subsidiaries registered as swap dealers with the U.S. Commodity Futures Trading Commission (CFTC) and became subject to their extensive oversight. Regulation of swap dealers by the CFTC imposes numerous corporate governance, business conduct, capital, margin, reporting, clearing, execution and other regulatory requirements on us. It also requires us to comply with certain U.S. rules in some circumstances with respect to transactions conducted outside of the United States or with non-U.S. persons. Although the coverage of EMIR and CFTC regulations implementing the Dodd-Frank Act is in many ways similar, certain swaps may be subject to both regulatory regimes to a significant extent. However, the CFTC 's guidance on cross-border swaps regulation may allow us to comply with some, but not all, U.S. regulatory requirements on a substituted basis by complying with EMIR and MiFID. The new requirements under the Dodd-Frank Act may adversely affect our derivatives business and make us less competitive, especially as compared to competitors not subject to such regulation. Additionally, under the Dodd-Frank Act, securities-based swaps would be subject to a standalone regulatory regime under the jurisdiction of the U.S. Securities and Exchange Commission (SEC). The SEC is in the early stages of finalizing rules for its security-based swap regime but it is expected to be parallel to, but not identical to, the CFTC 's regulation of swaps. This may impose further regulation of our derivatives business.

In addition, CRD 4 provides for executive compensation reforms including caps on bonuses that may be awarded to risk takers as defined in CRD 4. The compensation reforms of CRD 4 could put us at a disadvantage to our competitors in attracting and retaining talented employees, especially compared to those outside the European Union that are not subject to these caps.

Bank levies also have been introduced in some countries including Germany and the United Kingdom and other countries. We accrued 247 million for the German and U.K. bank levies in 2011, 213 million in 2012, 197 million in 2013 and 342 million in 2014, primarily recognized in Consolidation & Adjustments. We will also be required to contribute substantially to the single resolution fund under the SRM and the statutory deposit guarantee schemes under the revised Deposit Guarantee Schemes Directive. Generally, however, the total impact of these future levies cannot currently be quantified and they may have a material adverse effect on our business, financial condition and results of operations in future periods.

Separately, on January 22, 2013, the Council of the European Union adopted a decision authorizing eleven EU member states (Austria, Belgium, Estonia, France, Germany, Greece, Italy, Portugal, Slovakia, Slovenia and Spain) to proceed with the introduction of a financial transaction tax under the European Union 's enhanced

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

22

cooperation procedure. The European Commission on February 14, 2013 adopted a draft directive for the implementation of the financial transaction tax. While we expect further progress during 2015, the final scope, design and entry into force (although currently contemplated by January 1, 2016) of the financial transaction tax are still uncertain. Depending on the final details, the proposed financial transaction tax could have a materially negative effect on our profits and business. Different forms of national financial transaction taxes have already been implemented in a number of European jurisdictions, including France and Italy, and these taxes may result in compliance costs as well as market consequences which may affect our revenues.

Adverse market conditions, historically low prices, volatility and cautious investor sentiment have affected and may in the future materially and adversely affect our revenues and profits, particularly in our investment banking, brokerage and other commission- and fee-based businesses. As a result, we have in the past incurred and may in the future incur significant losses from our trading and investment activities.

As a global investment bank, we have significant exposure to the financial markets and are more at risk from adverse developments in the financial markets than are institutions engaged predominantly in traditional banking activities. Sustained market declines have in the past caused and can in the future cause our revenues to decline, and, if we are unable to reduce our expenses at the same pace, can cause our profitability to erode or cause us to show material losses. Volatility can also adversely affect us, by causing the value of financial assets we hold to decline or the expense of hedging our risks to rise. Reduced customer activity can also lead to lower revenues in our flow business.

Specifically, our investment banking revenues, in the form of financial advisory and underwriting fees, directly relate to the number and size of the transactions in which we participate and are susceptible to adverse effects from sustained market downturns. These fees and other income are generally linked to the value of the underlying transactions and therefore can decline with asset values. In addition, periods of market decline and uncertainty tend to dampen client appetite for market and credit risk, a critical driver of transaction volumes and investment banking revenues, especially transactions with higher margins. In the first half of 2014 and at other times in the past, decreased client appetite for risk has led to lower levels of activity and lower levels of profitability in our Corporate Banking & Securities Corporate Division. Our revenues and profitability could sustain material adverse effects from a significant reduction in the number or size of debt and equity offerings and merger and acquisition transactions.

Market downturns also have led and may in the future lead to declines in the volume of transactions that we execute for our clients and, therefore, to declines in our noninterest income. In addition, because the fees that we charge for managing our clients' portfolios are in many cases based on the value or performance of those portfolios, a market downturn that reduces the value of our clients' portfolios or increases the amount of withdrawals reduces the revenues we receive from our asset management and private banking businesses. Even in the absence of a market downturn, below-market or negative performance by our investment funds may result in increased withdrawals and reduced inflows, which would reduce the revenue we receive from our asset management business. While our clients would be responsible for losses we incur in taking positions for their accounts, we may be exposed to additional credit risk as a result of their need to cover the losses where we do not hold adequate collateral or cannot realize it. Our business may also suffer if our clients lose money and we lose the confidence of clients in our products and services.

In addition, the revenues and profits we derive from many of our trading and investment positions and our transactions in connection with them can be directly and negatively impacted by market prices, which have been volatile in recent years. In each of the product and business lines in which we enter into these trading and investment positions, part of our business entails making assessments about the financial markets and trends in them. When we own assets, market price declines can expose us to losses. Many of the more sophisticated transactions of our Corporate Banking & Securities Corporate Division and our Non-Core Operations Unit are designed to profit from price movements and differences among prices. If prices move in a way we have not anticipated, we may experience losses. Also, when markets are volatile, the assessments we have made may

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

23

prove to lead to lower revenues or profits, or may lead to losses, on the related transactions and positions. In addition, we commit capital and take market risk to facilitate certain capital markets transactions; doing so can result in losses as well as income volatility. Such losses may especially occur on assets we hold for which there are not very liquid markets initially. Assets that are not traded on stock exchanges or other public trading markets, such as derivatives contracts between banks, may have values that we calculate using models other than publicly-quoted prices. Monitoring the deterioration of prices of assets like these is difficult and could lead to losses we did not anticipate. We can also be adversely affected if general perceptions of risk cause uncertain investors to remain on the sidelines of the market, curtailing their activity and in turn reducing the levels of activity in those of our businesses dependent on transaction flow.

Since we published our Strategy 2015+ targets in 2012, macroeconomic and market conditions as well as the regulatory environment have been much more challenging than originally anticipated, and as a result, we have updated our aspirations to reflect these challenging conditions. If we are unable to implement our updated strategy successfully, we may be unable to achieve our financial objectives, or incur losses or low profitability or erosions of our capital base, and our share price may be materially and adversely affected.

In September 2012, we introduced Strategy 2015+, which has the aim of making Deutsche Bank a better balanced, leaner and more robust and stable organisation. We also announced several financial targets to highlight the financial objectives of Strategy 2015+. As challenges in the macroeconomic and market conditions and the regulatory environment were greater than expected in 2012, in May 2014, we updated our aspirations and strategy and announced a series of measures intended to build up our capital strength, enhance our competitiveness and invest in our client franchises. These measures included capital issuance to improve our capital base and to provide a buffer against future uncertainties. In this context we updated our financial aspirations. While we have recently announced a full strategic review, we remain focused on the execution of Strategy 2015+.

Our ability to meet our aspirations and implement our strategy is based on a number key assumptions, including the implementation of regulatory frameworks (e.g. CRD 4, EBA guidance) based on our understanding of current rules and their likely impact on us, global GDP growth stabilising to 2 to 4 % p.a., a stable interest rate environment before 2016 and central bank intervention receding in the U.S.

A number of internal and external factors could negatively impact or prevent the implementation of our strategic goals or the realization of their anticipated benefits. These include economic factors such the recurrence of extreme turbulence in the markets in which we are active, weakness in global, regional and national economic conditions, increased competition for business and political instability, especially in Europe. New regulatory requirements may lead to increases in our cost base or restrict our operations. Several regulatory authorities have or are looking to introduce initiatives for structural change. As these governmental initiatives are subject to ongoing discussions, we cannot at this stage quantify any future impact. We are also involved in numerous litigation, arbitration and regulatory proceedings and investigations in Germany and in a number of jurisdictions outside Germany, especially in the U.S. Such matters are subject to many uncertainties. While we have resolved a number of important legal matters and made progress on others, we expect the litigation environment to continue being challenging. If litigation and regulatory matters continue to occur at the same rate and magnitude as in recent years, we may not be able to achieve our Strategy 2015+ aspirations.

In particular, our progress towards an adjusted cost-income ratio of approximately 65 % has been impacted by projects and incremental increases in headcount needed to comply with additional regulatory requirements and by increased regulatory charges, such as bank levies, while market challenges, including those related to the low interest rate environment, have impacted our revenue growth. Although we will strive to meet the cost-income ratio target, we expect these headwinds to challenge the progress we made in 2015. Our progress towards an adjusted post-tax return on equity target of around 12 % may continue to be impacted by regulatory induced costs, additional bank levy charges, the on-going challenging market conditions and volatile effective tax rates. We plan to continue to work towards our target, but progress will be difficult in light of current head-

24

winds. With respect to CB&S, we expect to face significant headwinds to achieve our financial target of an adjusted post-tax return on average equity of 13 % to 15 %, in light of on-going risks and uncertainties in connection with global macroeconomic growth, potential changes to U.S. macroeconomic policy, regulatory expenditures and other developments, particularly relating to the single resolution fund and bank levies, effects of further balance sheet deleveraging, litigation and the costs of further platform enhancements. Our performance target in PBC also continues to face headwinds and may prove to be challenging in the current business environment. Our target is dependent on several factors, including realizing synergies from the Postbank integration. PBC also continues to be affected by on-going market conditions and uncertainties in the regulatory environment. With respect to GTB, we expect the highly competitive business environment to remain challenging and low interest rate levels to persist (having even turned negative in the second half of last year). We expect cost pressures to continue to pose a challenge for GTB. These include increasing regulatory requirements and charges relating to litigation and enforcement matters. While GTB continues to work towards its Strategy 2015+ aspiration, the targeted growth in income before income taxes may prove to be challenging in the current business environment.

If we fail to implement our strategic initiatives in whole or in part or should the initiatives that are implemented fail to produce the anticipated benefits, or should the costs we incur to implement our initiatives exceed the 4.0 billion we have anticipated, we may fail to achieve our financial objectives, or incur losses or low profitability or erosions of our capital base, and our share price may be materially and adversely affected.

We operate in a highly and increasingly regulated and litigious environment, potentially exposing us to liability and other costs, the amounts of which may be substantial and difficult to estimate, as well as to legal and regulatory sanctions and reputational harm.

The financial services industry is among the most highly regulated industries. Our operations throughout the world are regulated and supervised by the central banks and regulatory authorities in the jurisdictions in which we operate. In recent years, regulation and supervision in a number of areas has increased, and regulators, governmental bodies and others have sought to subject financial services providers to increasing oversight and scrutiny, which in turn has led to additional regulatory investigations or enforcement actions. This trend has accelerated markedly as a result of the global financial crisis and the European sovereign debt crisis. Over the last year, there has been a steep escalation in the severity of the terms which regulators and law enforcement authorities have required to settle legal and regulatory proceedings against financial institutions, with recent settlements including unprecedented monetary penalties as well as criminal sanctions. As a result, we may continue to be subject to increasing levels of liability and regulatory sanctions, and may be required to make greater expenditures and devote additional resources to addressing these liabilities and sanctions. Regulatory sanctions may include status changes to local licenses or orders to discontinue certain business practices.

We and our subsidiaries are involved in various litigation proceedings, including civil class action lawsuits, arbitration proceedings and other disputes with third parties, as well as regulatory proceedings and investigations by both civil and criminal authorities in jurisdictions around the world. We expect that we will continue to experience a high level of litigation, regulatory proceedings and investigations. Litigation and regulatory matters are subject to many uncertainties, and the outcome of individual matters is not predictable with assurance. We may settle litigation or regulatory proceedings prior to a final judgment or determination of liability. We may do so to avoid the cost, management efforts or negative business, regulatory or reputational consequences of continuing to contest liability, even when we believe we have valid defenses to liability. We may also do so when the potential consequences of failing to prevail would be disproportionate to the costs of settlement. Furthermore, we may, for similar reasons, reimburse counterparties for their losses even in situations where we do not believe that we are legally compelled to do so. The financial impact of legal risks might be considerable but may be hard or impossible to estimate and to quantify, so that amounts eventually paid may exceed the amount of provisions made for such risks.

Actions currently pending against us may not only result in judgments, settlements, fines or penalties, but may also cause substantial reputational harm to us. The risk of damage to our reputation arising from such proceed-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

25

ings is also hard or impossible to quantify. For example, we are unable to quantify the harm to our reputation that could arise from the investigation by the public prosecutor for the City of Munich of statements made by certain former and present management board members in connection with the litigation relating to the former Kirch Group.

In addition, the financial impact of legal risks arising out of matters similar to some of those we face have been very large for a number of participants in the financial services industry, with fines and settlement payments greatly exceeding what market participants may have expected and, as noted above, escalating steeply over the last year to unprecedented levels. The experience of others, including settlement terms, in similar cases is among the factors we take into consideration in determining the level of provisions we maintain in respect of these legal risks. Recent developments in cases involving other financial institutions have led to greater uncertainty as to the predictability of outcomes and could lead us to add to our provisions. Moreover, the costs of our investigations and defenses relating to these matters are themselves substantial. Further uncertainty may arise as a result of a lack of coordination among regulators from different jurisdictions, which may make it difficult for us to reach concurrent settlements with each regulator. Should we be subject to financial impacts arising out of litigation and regulatory matters to which we are subject in excess of those we have calculated in accordance with our expectations and the relevant accounting rules, our provisions in respect of such risks may prove to be materially insufficient to cover these impacts. This could have a material adverse effect on our results of operations, financial condition or reputation.

We are currently the subject of regulatory and criminal industry-wide investigations relating to interbank offered rates, as well as civil actions. Due to a number of uncertainties, including those related to the high profile of the matters and other banks' settlement negotiations, the eventual outcome of these matters is unpredictable, and may materially and adversely affect our results of operations, financial condition and reputation.

We have received subpoenas and requests for information from various regulatory and law enforcement agencies in Europe, North America and Asia/Pacific in connection with industry-wide investigations concerning the setting of London Interbank Offered Rate (LIBOR), Euro Interbank Offered Rate (EURIBOR), Tokyo Interbank Offered Rate (TIBOR) and other interbank offered rates. We are cooperating with these investigations.

The investigations underway have the potential to result in the imposition of significant financial penalties and other consequences for the Bank.

As previously reported, we reached a settlement with the European Commission on December 4, 2013 as part of a collective settlement to resolve the European Commission's investigations in relation to anticompetitive conduct in the trading of Euro interest rate derivatives and Yen interest rate derivatives. Under the terms of the settlement agreement, we agreed to pay \$725 million in total. We nonetheless remain exposed to civil litigation and further regulatory action relating to these benchmarks.

We have been informed by certain of the authorities investigating these matters that proceedings against us will be recommended with respect to some aspects of the matters under investigation, and we are engaged in discussions with those authorities about potential resolution of those investigations.

Regulators are also investigating numerous financial institutions in addition to us, and as details of these investigations and their findings have become public, the reported actions of some financial institutions have attracted substantial attention in the media and the markets, leading to further reputational risk for institutions like us that are currently subject to similar inquiries. In the period from mid-2012 to autumn 2014, five financial institutions entered into settlements with the U.K. Financial Conduct Authority (formerly the Financial Services Authority), U.S. Commodity Futures Trading Commission, U.S. Department of Justice (DOJ), and other regulators. While the terms of the various settlements differed, they all involved significant financial penalties and regulatory consequences. For example, three financial institutions' settlements included a Deferred Prosecution Agreement, pursuant to which the DOJ agreed to defer prosecution of criminal charges against the appli-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

26

cable entity provided that the financial institution satisfies the terms of the Deferred Prosecution Agreement. The terms of the other two financial institutions' settlements included Non-Prosecution Agreements, pursuant to which the DOJ agreed not to file criminal charges against the entities so long as certain conditions are met. In addition, affiliates of two of the financial institutions agreed to plead guilty to a crime in a United States court for related conduct.

In addition, a number of civil actions, including putative class actions, are pending in federal court in the United States District Court for the Southern District of New York and in other federal district courts against us and numerous other banks. All but two of these actions are filed on behalf of certain parties who allege that they held or transacted in U.S. dollar LIBOR-based derivatives or other financial instruments and sustained losses as a result of collusion or manipulation by the defendants regarding the setting of U.S. dollar LIBOR. These civil actions are still at a relatively early stage.

We cannot predict the effect on us of the interbank offered rates matters, which could include fines levied by government bodies, damages from private litigation for which we may be liable, legal and regulatory sanctions (including possible criminal sanctions) and other consequences.

This uncertainty is further exacerbated by several factors outside of our control, such as the high profile of these matters and the contours of other financial institutions' settlement negotiations. In addition, regulatory and law enforcement authorities may make assessments about the conduct of institutions in the industry as a whole, which may influence their actions with respect to us. Any fines, damages, legal or regulatory sanctions or other consequences may have a material adverse effect, beyond provisions taken, on our results of operations, financial condition or reputation.

A number of regulatory and law enforcement agencies globally are currently investigating us in connection with misconduct relating to manipulation of foreign exchange rates. The extent of our financial exposure to these matters could be material, and our reputation may suffer material harm as a result.

We have received requests for information from certain regulatory and law enforcement agencies globally who are investigating trading, and various other aspects, of the foreign exchange market. We are cooperating with these investigations. The investigations underway have the potential to result in the imposition of significant financial penalties and other consequences for us. Relatedly, we are conducting our own internal global review of foreign exchange trading and other aspects of our foreign exchange business. In connection with this review, we have taken, and will continue to take, disciplinary action with regards to individuals if merited. We have also been named as a defendant in three putative class actions—two involving non-U.S. plaintiffs and one involving U.S. plaintiffs—brought in the United States District Court for the Southern District of New York alleging antitrust claims relating to the alleged manipulation of foreign exchange rates. On January 28, 2015, the federal judge overseeing the class actions granted the motion to dismiss with prejudice in the two actions involving non-U.S. plaintiffs while denying the motion to dismiss in the action involving U.S. plaintiffs.

Many of these matters are still in their early stages and it is accordingly too early to estimate their outcome or any fines that may be levied by governmental bodies or damages that may be incurred from private litigation. A number of other financial institutions are also currently being investigated. Any settlements by these institutions may adversely affect the outcomes for other financial institutions, such as us, in similar actions, especially as large settlements may be used as the basis or template for other settlements. As a result, these matters may expose us to substantial monetary damages and defense costs in addition to criminal and civil penalties, and they could accordingly have a material adverse effect on our results of operations, financial condition or reputation.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

27

A number of regulatory authorities are currently investigating or seeking information from us in connection with transactions with Monte dei Paschi di Siena. The extent of our financial exposure to these matters could be material, and our reputation may be harmed.

In February 2013 Banca Monte Dei Paschi Di Siena, which we refer to as MPS, issued civil proceedings in Italy against us alleging that we assisted former MPS senior management in an accounting fraud on MPS, by undertaking repo transactions with MPS and Santorini, a wholly owned SPV of MPS, which helped MPS defer losses on a previous transaction undertaken with us. MPS claimed at least 500 million in damages. Subsequently, in July 2013, the Fondazione Monte Dei Paschi, MPS largest shareholder, also issued civil proceedings in Italy for damages based on substantially the same facts. In December 2013, we reached an agreement with MPS in relation to the transactions that resolves the civil proceedings by MPS. The civil proceedings by the Fondazione Monte Dei Paschi remain pending.

A criminal investigation was launched by the Siena Public Prosecutor into the transactions and certain unrelated transactions entered into by a number of other international banks with MPS. Such investigation was moved in September 2014 from Siena to the Milan Public Prosecutors as a result of a change in the alleged charges being investigated. No charges have yet been brought. Separately, we have also received requests for information from certain regulators relating to the original transactions, including with respect to our accounting for our MPS-related transactions and alleged failures by our management adequately to supervise the individuals involved in the matter. We are cooperating with these regulators. The extent of our financial exposure to these matters could be material, and our reputation may suffer material harm as a result of these matters.

Regulatory and law enforcement agencies in the United States are investigating whether our historical processing of certain U.S. dollar payment orders for parties from countries subject to U.S. embargo laws complied with U.S. federal and state laws. The eventual outcomes of these matters are unpredictable, and may materially and adversely affect our results of operations, financial condition and reputation.

We have received requests for information from certain regulatory and law enforcement agencies concerning our historical processing of U.S. dollar payment orders through U.S. financial institutions for parties from countries subject to U.S. embargo laws. These agencies are investigating whether such processing complied with U.S. federal and state laws. In 2006, we voluntarily decided that we would not engage in new U.S. dollar business with counterparties in Iran, Sudan, North Korea and Cuba and with certain Syrian banks, and to exit existing U.S. dollar business with such counterparties to the extent legally possible. In 2007, we decided that we will not engage in any new business, in any currency, with counterparties in Iran, Syria, Sudan and North Korea and to exit existing business, in any currency, with such counterparties to the extent legally possible; we also decided to limit our non-U.S. dollar business with counterparties in Cuba. We are providing information to and otherwise cooperating with the investigating agencies. A number of financial institutions have previously settled matters of this nature by, among other things, payment of significant monetary penalties, and numerous unconfirmed media reports suggest additional potential settlements involving other financial institutions. Although we have no reliable basis on which to compare the on-going investigations relating to us to any potential settlements involving other institutions, it is possible that any such settlements may influence regulatory agencies in their interactions with us. While it is too early to predict, the eventual outcomes of the investigations to which we are subject may materially and adversely affect our results of operations, financial condition and reputation.

We have been subject to contractual claims, litigation and governmental investigations in respect of our U.S. residential mortgage loan business that may materially and adversely affect our results of operations, financial condition or reputation.

From 2005 through 2008, as part of our U.S. residential mortgage loan business, we sold approximately U.S.\$ 84 billion of loans into private label securitizations and U.S.\$ 71 billion through whole loan sales. We have been, and in the future may be, presented with demands to repurchase loans from or to indemnify purchasers, investors or financial insurers with respect to losses allegedly caused by material breaches of representations and warranties. Our general practice is to process valid repurchase claims that are presented in compliance with contractual rights and applicable statutes of limitations. As of December 31, 2014, we have

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

28

approximately U.S.\$ 4.8 billion of mortgage repurchase demands outstanding and not subject to agreements to rescind (based on original principal balance of the loans). Against these outstanding demands, we have established provisions of U.S.\$ 813 million (669 million) as of December 31, 2014 (for part of which we are indemnified). As with provisions generally, however, it is possible that the provisions we have established may ultimately be insufficient, either with respect to particular claims or with respect to the full set of claims that have been or may be presented. There are other potential mortgage repurchase demands that we anticipate may be made, but we cannot reliably estimate their timing or amount. As of December 31, 2014, we have completed repurchases, obtained agreements to rescind or otherwise settled claims on loans with an original principal balance of approximately U.S.\$ 5.3 billion. In connection with those repurchases, agreements and settlements, we have obtained releases for potential claims on approximately U.S.\$ 72.9 billion of loans sold by us as described above.

From 2005 through 2008, we or our affiliates have also acted as an underwriter of approximately U.S.\$ 105 billion of U.S. residential mortgage-backed securities (referred to as RMBS) for third-party originators.

As is the case with a significant number of other participants in the mortgage securitizations market and as described in Note 29 Provisions to the consolidated financial statements, we have received subpoenas and requests for information from certain regulators and government entities concerning our RMBS businesses. We are cooperating fully in response to those subpoenas and requests for information. We have a number of pending lawsuits against us or our affiliates as issuer, underwriter and/or trustee of RMBS. Such pending RMBS litigations are in various stages up through discovery and we continue to defend these actions vigorously. Legal and regulatory proceedings are subject to many uncertainties, and the outcome of individual matters is not predictable with assurance.

Our non-traditional credit businesses materially add to our traditional banking credit risks.

As a bank and provider of financial services, we are exposed to the risk that third parties who owe us money, securities or other assets will not perform their obligations. Many of the businesses we engage in beyond the traditional banking businesses of deposit-taking and lending also expose us to credit risk.

In particular, much of the business we conduct through our Corporate Banking & Securities Corporate Division and our Non-Core Operations Unit entails credit transactions, frequently ancillary to other transactions. Nontraditional sources of credit risk can arise, for example, from holding securities of third parties; entering into swap or other derivative contracts under which counterparties have obligations to make payments to us; executing securities, futures, currency or commodity trades that fail to settle at the required time due to nondelivery by the counterparty or systems failure by clearing agents, exchanges, clearing houses or other financial intermediaries; and extending credit through other arrangements. Parties to these transactions, such as trading counterparties, may default on their obligations to us due to bankruptcy, political and economic events, lack of liquidity, operational failure or other reasons.

Many of our derivative transactions are individually negotiated and non-standardized, which can make exiting, transferring or settling the position difficult. Certain credit derivatives require that we deliver to the counterparty the underlying security, loan or other obligation in order to receive payment. In a number of cases, we do not hold, and may not be able to obtain, the underlying security, loan or other obligation. This could cause us to forfeit the payments otherwise due to us or result in settlement delays, which could damage our reputation and ability to transact future business, as well as impose increased costs on us. Recently enacted legislation in the European Union (EMIR) and the U.S. (the Dodd-Frank Act) has introduced requirements for the standardization, margining, central clearing and transaction reporting of certain over-the-counter derivatives. While such requirements are aimed at reducing the risk posed to counterparties and the financial system by such derivatives, they may reduce the volume and profitability of the transactions in which we engage, and compliance with such provisions may impose substantial costs on us.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

29

The exceptionally difficult market conditions experienced since the global financial crisis severely adversely affected certain areas in which we do business that entail nontraditional credit risks, including the leveraged finance and structured credit markets, and may do so in the future.

We have incurred losses, and may incur further losses, as a result of changes in the fair value of our financial instruments.

A substantial proportion of the assets and liabilities on our balance sheet comprise financial instruments that we carry at fair value, with changes in fair value recognized in the income statement. Fair value is defined as the price at which an asset or liability could be exchanged in an arms length transaction between knowledgeable, willing parties, other than in a forced or liquidation sale. If the value of an asset carried at fair value declines (or the value of a liability carried at fair value increases) a corresponding unfavorable change in fair value is recognized in the income statement. These changes have been and could in the future be significant. Additionally, in recent periods there has been a significant difference between fair value and book value for some assets.

Observable prices or inputs are not available for certain classes of financial instruments. Fair value is determined in these cases using valuation techniques we believe to be appropriate for the particular instrument. The application of valuation techniques to determine fair value involves estimation and management judgment, the extent of which will vary with the degree of complexity of the instrument and liquidity in the market. Management judgment is required in the selection and application of the appropriate parameters, assumptions and modeling techniques. If any of the assumptions change due to negative market conditions or for other reasons, subsequent valuations may result in significant changes in the fair values of our financial instruments, requiring us to record losses.

Our exposure and related changes in fair value are reported net of any fair value gains we may record in connection with hedging transactions related to the underlying assets. However, we may never realize these gains, and the fair value of the hedges may change in future periods for a number of reasons, including as a result of deterioration in the credit of our hedging counterparties. Such declines may be independent of the fair values of the underlying hedged assets or liabilities and may result in future losses.

Our risk management policies, procedures and methods leave us exposed to unidentified or unanticipated risks, which could lead to material losses.

We have devoted significant resources to developing our risk management policies, procedures and assessment methods and intend to continue to do so in the future. Nonetheless, the risk management techniques and strategies have not been and may in the future not be fully effective in mitigating our risk exposure in all economic market environments or against all types of risk, including risks that we fail to identify or anticipate. Some of our quantitative tools and metrics for managing risk are based upon our use of observed historical market behavior. We apply statistical and other tools to these observations to arrive at quantifications of our risk exposures. During the financial crisis, the financial markets experienced unprecedented levels of volatility (rapid changes in price direction) and the breakdown of historically observed correlations (the extent to which prices move in tandem) across asset classes, compounded by extremely limited liquidity. In this volatile market environment, our risk management tools and metrics failed to predict some of the losses we experienced, particularly in 2008, and may in the future fail to predict important risk exposures. In addition, our quantitative modeling does not take all risks into account and makes numerous assumptions regarding the overall environment, which may not be borne out by events. As a result, risk exposures have arisen and could continue to arise from factors we did not anticipate or correctly evaluate in our statistical models. This has limited and could continue to limit our ability to manage our risks especially in light of the European sovereign debt crisis, many of the outcomes of which are currently unforeseeable. Our losses thus have been and may continue to be significantly greater than the historical measures indicate.

In addition, our more qualitative approach to managing those risks not taken into account by our quantitative methods could also prove insufficient, exposing us to material unanticipated losses. Also, if existing or potential

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

30

customers or counterparties believe our risk management is inadequate, they could take their business elsewhere or seek to limit their transactions with us. This could harm our reputation as well as our revenues and profits. See Management Report: Risk Report beginning on page 56 of the Financial Report for a more detailed discussion of the policies, procedures and methods we use to identify, monitor and manage our risks.

Operational risks may disrupt our businesses.

We face operational risk arising from errors, inadvertent or intentional, made in the execution, confirmation or settlement of transactions or from transactions not being properly recorded, evaluated or accounted for. An example of this risk concerns our derivative contracts, which are not always confirmed with the counterparties on a timely basis. For so long as the transaction remains unconfirmed, we are subject to heightened credit and operational risk and in the event of a default may find it more difficult to enforce the contract. The European sovereign debt crisis and the global financial crisis, in which the risk of counterparty default increased, have increased the possibility that this operational risk materializes.

In addition, our businesses are highly dependent on our ability to process manually or through our systems a large number of transactions on a daily basis, across numerous and diverse markets in many currencies. Some of the transactions have become increasingly complex. Moreover, management relies heavily on its financial, accounting and other data processing systems that include manual processing components. If any of these processes or systems do not operate properly, or are disabled, or subject to intentional or inadvertent human error, we could suffer financial loss, a disruption of our businesses, liability to clients, regulatory intervention or reputational damage.

We are also dependent on our employees to conduct our business in accordance with applicable laws, regulations and generally accepted business standards. If our employees do not conduct our business in this manner, we may be exposed to material losses. Furthermore, if an employee's misconduct reflects fraudulent intent, we could also be exposed to reputational damage. We categorize these risks as conduct risk, which comprises inappropriate business practices, including selling products that are not suitable for a particular customer, fraud, unauthorized trading and failure to comply with applicable regulations, laws and internal policies.

We in particular face the risk of loss events due to the instability, malfunction or outage of our IT system and IT infrastructure. Such losses could materially affect our ability to perform business processes and may, for example, arise from the erroneous or delayed execution of processes as either a result of system outages or degraded services in systems and IT applications. A delay in processing a transaction, for example, could result in an operational loss if market conditions worsen during the period after the error. IT-related errors may also result in the mishandling of confidential information, damage to our computer systems, financial losses, additional costs for repairing systems, reputational damage, customer dissatisfaction or potential regulatory or litigation exposure.

Business continuity risk is the risk of incurring losses resulting from the interruption of normal business activities. We operate in many geographic locations and are frequently subject to the occurrence of events outside of our control. Despite the contingency plans we have in place, our ability to conduct business in any of these locations may be adversely impacted by a disruption to the infrastructure that supports our business, whether as a result of, for example, events that affect our third party vendors or the community or public infrastructure in which we operate. Any number of events could cause such a disruption including deliberate acts such as sabotage, terrorist activities, bomb threats, strikes, riots and assaults on the bank's staff; natural calamities such as hurricanes, snow storms, floods, disease pandemic and earthquakes; or other unforeseen incidents such as accidents, fires, explosions, utility outages and political unrest. Any such disruption could have a material adverse effect on our business and financial position.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

31

Our operational systems are subject to an increasing risk of cyber attacks and other internet crime, which could result in material losses of client or customer information, damage our reputation and lead to regulatory penalties and financial losses.

Among the operational risks we face is the risk of breaches of the security of our computer systems due to unauthorized access to networks or resources, the introduction of computer viruses or malware, or other forms of cyber attack or internet crime. Such breaches could threaten the confidentiality of our clients' data and the integrity of our systems. We devote significant resources toward the protection of our computer systems against such breaches. To address the evolving cyber threat risk, we are currently expending significant additional resources to modify and enhance our protective measures and to investigate and remediate any information security vulnerabilities. Nevertheless, a residual risk remains that such measures may not be effective against all threats. Given our global footprint and the volume of transactions we process, certain errors or actions may be repeated or compounded before they are discovered and rectified.

We and other financial institutions have experienced attacks on computer systems, including attacks aimed at obtaining unauthorized access to confidential company or customer information or damaging or interfering with company data, resources or business activities. The increasing frequency and sophistication of recent cyber-attacks has resulted in an elevated risk profile for many organizations around the world, and significant attention by our management has been paid to the overall level of preparedness against such attacks. Cyber security is growing in importance due to factors such as the continued and increasing reliance on our technology environment. Although we have to date not experienced any material loss of data from these attacks, it is possible, given the use of new technologies and increasing reliance on the Internet and the varying nature and evolving sophistication of such attacks, that we may not be able to effectively anticipate and prevent all such attacks. A successful attack could have a significant negative impact on us, including as a result of disclosure or misappropriation of client or proprietary information, damage to computer systems, financial losses, additional costs to us (such as for investigation and reestablishing services), reputational damage, customer dissatisfaction and potential regulatory or litigation exposure.

The size of our clearing operations exposes us to a heightened risk of material losses should these operations fail to function properly.

We have large clearing and settlement businesses and an increasingly complex and interconnected information technology (IT) landscape. These give rise to the risk that we, our customers or other third parties could lose substantial sums if our systems fail to operate properly for even short periods. This will be the case even where the reason for the interruption is external to us. In such a case, we might suffer harm to our reputation even if no material amounts of money are lost. This could cause customers to take their business elsewhere, which could materially harm our revenues and profits.

We may have difficulty in identifying and executing acquisitions, and both making acquisitions and avoiding them could materially harm our results of operations and our share price.

We consider business combinations from time to time. Even though we review the companies we plan to acquire, it is generally not feasible for these reviews to be complete in all respects. As a result, we may assume unanticipated liabilities, or an acquisition may not perform as well as expected. Were we to announce or complete a significant business combination transaction, our share price could decline significantly if investors viewed the transaction as too costly or unlikely to improve our competitive position. In addition, we might have difficulty integrating any entity with which we combine our operations. Failure to complete announced business combinations or failure to integrate acquired businesses successfully into ours could materially and adversely affect our profitability. It could also affect investors' perception of our business prospects and management, and thus cause our share price to fall. It could also lead to departures of key employees, or lead to increased costs and reduced profitability if we felt compelled to offer them financial incentives to remain.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 3: Key Information

32

The effects of the takeover of Deutsche Postbank AG may differ materially from our expectations.

Deutsche Postbank AG (together with its subsidiaries, Postbank) became a consolidated, majority-owned subsidiary of ours in December 2010 following a public takeover offer by us. In June 2012 Deutsche Postbank AG and a wholly-owned subsidiary of Deutsche Bank AG entered into a domination and profit and loss transfer agreement, which became incontestably valid in September 2012. As a result, we have general control over the management of Postbank. The effects of this acquisition on us may differ materially from our expectations. Our estimates of the synergies and other benefits that we expect to realize, and the costs that we might incur, as a result of this acquisition involve subjective assumptions and judgments that are subject to significant uncertainties. Moreover, Postbank's securities portfolio contains products that may also be subject to material further decreases in value.

Furthermore, unforeseen difficulties may emerge in connection with the integration of Postbank's business, including potential difficulties due to integration of IT systems and personnel, different internal standards and business procedures, the commitment of management resources in connection with the integration process and the potential loss of key personnel. The benefits, synergies, costs and timeframe of the integration could be adversely affected by any of these factors, as well as by a variety of factors that are partially or entirely beyond our and Postbank's control, such as negative market developments. Any failure to integrate Postbank's operations on a timely and efficient basis could have a material adverse effect on our net assets, financial condition and results of operations.

We may have difficulties selling non-core assets at favorable prices or at all and may experience material losses from these assets and other investments irrespective of market developments.

We may seek to sell certain non-core assets, including those of our Non-Core Operations Unit. Such sales may be made as part of our strategy to meet or exceed the new capital requirements by reducing risk-weighted assets and thereby improving our capital ratios. This strategy may prove difficult in the current market environment as many of our competitors are also seeking to dispose of assets to improve their capital ratios. We have already sold a substantial portion of our non-core assets, and our remaining non-core assets may be particularly difficult for us to sell as quickly as we have expected at prices we deem acceptable. Unfavorable business or market conditions may make it difficult for us to sell such assets at favorable prices, or may preclude such a sale altogether. If the measures announced in response to the European sovereign debt crisis prove inadequate to calm market concern or if the European debt crisis otherwise reignites, we may experience difficulty in obtaining funding in a manner permitting us to conduct our business without needing to dispose of significant volumes of assets.

In addition, we have made significant investments in individual companies and have other assets that are not part of our core business such as our stake in Maher Terminals. Losses and risks from those assets and at those companies may restrict our ability to sell our shareholdings and may reduce the value of our holdings considerably, potentially impacting our financial statements or earnings, even where general market conditions are favorable. Our larger, less liquid interests are particularly vulnerable given the size of these exposures. Any potential write-down for any such investment could further negatively affect our business.

Intense competition, in our home market of Germany as well as in international markets, could materially adversely impact our revenues and profitability.

Competition is intense in all of our primary business areas, in Germany as well as in international markets. If we are unable to respond to the competitive environment in these markets with attractive product and service offerings that are profitable for us, we may lose market share in important areas of our business or incur losses on some or all of our activities. In addition, downturns in the economies of these markets could add to the competitive pressure, through, for example, increased price pressure and lower business volumes for us.

Annual Report 2014 on Form 20-F

Item 3: Key Information

33

In recent years there has been substantial consolidation and convergence among financial services companies, culminating in unprecedented consolidations in the course of the global financial crisis. This trend has significantly increased the capital base and geographic reach of some of our competitors and has hastened the globalization of the securities and other financial services markets. As a result, we must compete with financial institutions that may be larger and better capitalized than we are and that may have a stronger position in local markets. Also, governmental action in response to the global financial crisis may place us at a competitive disadvantage.

Transactions with counterparties in countries designated by the U.S. State Department as state sponsors of terrorism or persons targeted by U.S. economic sanctions may lead potential customers and investors to avoid doing business with us or investing in our securities, harm our reputation or result in regulatory action which could materially and adversely affect our business.

We engage or have engaged in a limited amount of business with counterparties, including government-owned or -controlled counterparties, in certain countries or territories that are subject to comprehensive sanctions, including Iran and Cuba (referred to as Sanctioned Countries), or with persons targeted by U.S. economic sanctions (referred to as Sanctioned Persons). U.S. law generally prohibits U.S. persons or any other persons acting within U.S. jurisdiction from doing business with Sanctioned Countries or Sanctioned Persons. Thus, U.S. regulations may extend to activities in other geographic areas and by non-U.S. persons depending on the circumstances. Our U.S. subsidiaries, branch offices, and employees are and our non-U.S. subsidiaries, branch offices, and employees may become subject to those prohibitions and other regulations. We are a German bank and our activities with respect to Sanctioned Countries and Sanctioned Persons have been subject to policies and procedures designed to avoid the involvement of persons acting within U.S. jurisdiction in any managerial or operational role and to ensure compliance with United Nations, European Union and German embargoes; in reflection of legal developments in recent years, we further developed our policies and procedures with the aim of ensuring compliance with regulatory requirements extending to other geographic areas regardless of jurisdiction. However, should our policies prove to have been ineffective, we may be subject to regulatory action that could materially and adversely affect our business. By 2007, our Management Board decided that we will not engage in new business with counterparties in countries such as Iran, Syria, Sudan and North Korea and to exit existing business to the extent legally possible. It also decided to limit our business with counterparties in Cuba.

We had a representative office in Tehran, Iran, which we discontinued at December 31, 2007. Our remaining business with Iranian counterparties consists mostly of participations as lender and/or agent in a few large trade finance facilities arranged before 2007 to finance the export contracts of exporters in Europe and Asia. The lifetime of most of these facilities is ten years or more and we are legally obligated to fulfill our contractual obligations. We do not believe our business activities with Iranian counterparties are material to our overall business, with the outstanding loans to Iranian borrowers representing substantially less than 0.01 % of our total assets as of December 31, 2014 and the revenues from all such activities representing less than 0.01 % of our total revenues for the year ended December 31, 2014.

Annual Report 2014 on Form 20-F

Item 3: Key Information

34

In recent years, the United States has taken steps, including the passage of the Comprehensive Iran Sanctions, Accountability, and Divestment Act of 2010, the National Defense Authorization Act for Fiscal Year 2012, the Iran Threat Reduction and Syria Human Rights Act of 2012, the Iran Freedom and Counter-Proliferation Act of 2012, and a number of Executive Orders, to deter foreign companies from dealing with Iran by providing for possible sanctions against companies that provide services in support of certain Iranian activity in (among others) the financial, energy, shipping or military sectors or with certain Iranian counterparties, whether or not such dealings occur within U.S. jurisdiction. Among the targets of these indirect, or secondary, U.S. economic sanctions are foreign financial institutions that, among other things, facilitate significant transactions with, or provide significant financial services to a wide range of Iranian entities, persons, and financial institutions. We do not believe we have engaged in activities sanctionable under these statutes, but the U.S. authorities have considerable discretion in applying the statutes, and any imposition of sanctions against us could be material. It is also possible that direct and secondary sanctions imposed by the U.S. and other jurisdictions could be expanded in the future. Proposals for expanded sanctions are discussed on a continuous basis in Congress and elsewhere.

As required by Section 219 of the Iran Threat Reduction and Syria Human Rights Act of 2012 (Section 13(r) of the Securities Exchange Act of 1934, as amended) we have disclosed certain information regarding our activities or transactions with persons subject to U.S. sanctions against Iran and other persons subject to such provision. Such disclosure is set forth in the section of this document entitled Disclosures Under Iran Threat Reduction and Syria Human Rights Act of 2012, which follows Item 16H: Mine Safety Disclosure.

We are also engaged in a limited amount of business with counterparties domiciled in Cuba, which is not subject to any United Nations, European Union or German embargo. The business consists of a limited number of letters of credit and of structured export finance transactions, as well as claims resulting from letters of credit, and it represented substantially less than 0.01 % of our assets as of December 31, 2014. The transactions served to finance commercial products such as machinery and electrical equipment as well as medical products.

We are aware, through press reports and other means, of initiatives by governmental and nongovernmental entities in the United States and elsewhere to adopt laws, regulations or policies prohibiting transactions with or investment in, or requiring divestment from, entities doing business with Sanctioned Countries, particularly Iran. Such initiatives may result in our being unable to gain or retain entities subject to such prohibitions as customers or as investors in our securities. In addition, our reputation may suffer due to our association with such countries. Such a result could have significant adverse effects on our business or the price of our securities.

Item 4: Information on the Company

History and Development of the Company

The legal and commercial name of our company is Deutsche Bank Aktiengesellschaft. It is a stock corporation organized under the laws of Germany.

Deutsche Bank Aktiengesellschaft originated from the reunification of Norddeutsche Bank Aktiengesellschaft, Hamburg, Rheinisch-Westfälische Bank Aktiengesellschaft, Düsseldorf, and Süddeutsche Bank Aktiengesellschaft, Munich. Pursuant to the Law on the Regional Scope of Credit Institutions, these were disincorporated in 1952 from Deutsche Bank, which had been founded in 1870. The merger and the name were entered in the Commercial Register of the District Court Frankfurt am Main on May 2, 1957.

We are registered under registration number HRB 30 000. Our registered address is Taunusanlage 12, 60325 Frankfurt am Main, Germany, and our telephone number is +49-69-910-00. Our agent in the United States is: Peter Sturzinger, Deutsche Bank Americas, c/o Office of the Secretary, 60 Wall Street, Mail Stop NYC60-2525, New York, NY 10005.

For information on significant capital expenditures and divestitures, please see Management Report: Operating and Financial Review: Deutsche Bank Group: Significant Capital Expenditures and Divestitures on page 15 of the Financial Report.

Management Structure

Please see Management Report: Operating and Financial Review: Deutsche Bank Group: Management Structure on page 8 to 9 of the Financial Report.

Our Business Strategy

Management are currently undertaking a full strategic review of the Group. Deutsche Bank will continue to work towards the existing targets of Strategy 2015+ until revised strategic goals are fully embedded. We have presented our Business Strategy below based on existing targets and continued progress under Strategy 2015+.

We believe we made significant progress in 2014 towards a number of our strategic aspirations that we first articulated in 2012 and updated in 2014, most notably strengthening our capital. In 2014 we continued to focus on consolidating our unique global platform and home market position, further leveraging the integrated performance of our full-service banking model, building capital strength, achieving operational excellence and cost efficiency, and placing us at the forefront of cultural change in the banking industry. In 2014 we reinforced our commitment to the universal banking model, to our home market and to our global presence. Although challenges remain in several areas, we made further progress in 2014 in all five elements of our Strategy 2015+:

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

36

Clients. We continued to align our organization more closely to our clients in the reporting year. We added approximately 5,000 new corporate clients on the dedicated platform for Germany's medium-sized companies launched in 2013. In terms of new initiatives, a commitment was made in May 2014 to invest 200 million in the digital experience for retail clients with the aim of providing a seamless branch and online experience. Furthermore, the cross-divisional initiative between Corporate Banking & Securities (CB&S) and Global Transaction Banking (GTB) to better serve multinational corporations in the U.S. helped us obtain 66 new client mandates in 2014. Overall, we have realigned our client coverage, deepened cross-divisional engagement with key clients, and implemented new metrics to enhance the measurement of client satisfaction.

Competencies. Our strategy is founded on the strength of our businesses and we delivered a stronger and more balanced financial performance in 2014. Our income before income taxes rose to 3.1 billion (from 1.5 billion in 2013). For the first time ever, our four core business divisions CB&S, Private & Business Clients (PBC), GTB and Deutsche Asset & Wealth Management (Deutsche AWM) each delivered more than 1 billion in pre-tax profits. These results were achieved despite a challenging market in 2014, characterized by persistently low interest rates. As the operating environment is likely to remain demanding in 2015, we will continue to focus on sustaining profitability and strengthening shareholder returns in the future.

Capital. We further reinforced our capital and leverage ratios in the reporting year through an 8.5 billion capital increase in June and the raising of Additional Tier 1 capital of 4.7 billion, which saw strong investor demand. These actions enhanced the safety and stability of Deutsche Bank as well as the financial system as a whole. We comfortably passed the European Central Bank's Comprehensive Assessment that was undertaken in 2014 and comprised an Asset Quality Review and a Stress Test. The assessment reaffirmed that our capital base substantially exceeds regulatory requirements, even under severe market stress conditions, and underlined the quality of our asset base. Overall, our capital and leverage ratios have been strengthened significantly since the launch of Strategy 2015+. The CET1 ratio had improved to 9.7 % as of end of 2013, before reaching 11.7 % on a fully loaded basis (Capital Requirements Directive 4, CRD 4) at the end of 2014, well above our target of 10 %. At the same time, we significantly reduced our balance sheet exposure to deliver a 3.5 % leverage ratio at year-end 2014 (based on revised CRD 4 rules), achieving the Strategy 2015+ leverage ratio target. Going forward, as regulatory requirements on capital and leverage continue to become more stringent, we will need to be ready to respond to final rules and specifications.

Costs. We achieved the goals set for the Operational Excellence (OpEx) program in 2014. The OpEx program aims to increase quality and flexibility, reinforce controls and embed a culture of cost-efficiency in the bank. The program's objectives are to invest 4 billion and achieve annual cost savings of 4.5 billion by 2015. 1.3 billion cost savings were achieved in 2014. Overall, the program delivered cumulative savings of 3.3 billion by the end of 2014, which is ahead of the 2.9 billion target. We have saved money by becoming more efficient, buying smarter, putting the right people in the right places, upgrading technology and streamlining the businesses. Nevertheless, we continue to face cost challenges. The adjusted cost base increased slightly in 2014, driven largely by higher regulatory spending including both project driven and permanent costs. Furthermore, we made investments in business growth. At the same time, expenses for litigation and enforcement matters remained high. As a result, ongoing cost discipline will continue to be a key area of focus in the future.

Culture. We have developed and further embedded the cultural change program in 2014. We recognize the need for cultural change in the financial sector and are committed to implementing this change. Culture is a key component of the restoration of public trust in the banking industry and we are committed to a culture that aligns risks and rewards, attracts and develops talented individuals, fosters teamwork and partnership and is sensitive to the needs of the society in which we operate. We launched a broad cultural change program as part of Strategy 2015+. As part of that cultural change program, in 2014 we conducted 100 townhalls and about 4,700 workshops. The program touches several aspects of the way we do business every day as well as performance reviews and the compensation system.

Item 4: Information on the Company

37

To further strengthen our ability to execute our strategic and regulatory priorities, some individual responsibilities of the Management Board were changed in November 2014. A critical new mandate focused on strategy and transformation was established and the responsibility of Deutsche Bank's legal team was realigned.

Our achievements to date and the ongoing challenges we face form the backdrop for the next phase of our strategy development. We are conducting a rigorous internal and external strategic review. Despite the challenges of a difficult operating environment and increased regulation, our management team believes that we will emerge as one of a handful of strong global banks and are well-positioned to capture future opportunities.

Strategy in CB&S

CB&S continued dynamic optimisation of resources across the platform is aimed at enabling the business to maintain a market leading client franchise while delivering sustainable returns and a more efficient platform. In 2014, we continued to reduce leverage exposure, costs and headcount significantly increasing the efficiency of our platform. As part of the ongoing optimisation of our business model, in response to the changing market and regulatory environment, we continued to evaluate our business portfolio, adapting it to reflect current market opportunities and meet client needs. In that context, at the end of 2014, we announced the cessation of most trading in single name CDS.

In Markets, our diversified client-focused business model delivered solid revenue share momentum in 2014. We plan to continue to optimize our Fixed Income & Currencies (FIC) platform, address specific gaps in our U.S. business and realize opportunities within our market leading Credit Solutions business. We plan to continue to invest in our electronic trading capabilities to achieve further efficiencies, better serve our clients and adapt to changing market environment. In Equities, we remain committed to maximizing the income from our platform.

In Corporate Finance we were ranked number 5 globally in 2014 and achieved record market share with gains across most products and regions (based on Dealogic data). We continued to focus on increasing productivity through enhanced alignment of client coverage, more efficient allocation of our balance sheet and greater cooperation with GTB. We intend to continue to focus on deepening relationships with our most profitable clients and achieving sustainable returns from our lending portfolio. We aim to maintain our leading position in Europe, continue to increase our share in the U.S. and retain our strong Asian franchise (based on Dealogic data).

Strategy in PBC

PBC pursues a strategy of complementing home market leadership with a profitable presence in selected European countries as well as in Asia and efficiency benefits from a joint services and IT platform. In its home market Germany, PBC continued its market leadership among private banks in Germany (e.g., by number of clients) by concluding the integration of the new Private & Commercial Banking unit (PCB) and making significant progress in setting up a joint IT and banking services platform between PCB and Postbank. PBC's international franchise continued its growth path in the countries in which we operate and we continue to benefit from our stake in Hua Xia Bank in China. PBC significantly contributes to Deutsche Bank Group's funding base.

We aim at further strengthening our German home market leadership by leveraging the coverage and product strength of PCB as well as Postbank's consumer banking business while further extending our well-positioned advisory franchises in selected international markets. In addition to our plans to increase focus on commercial banking, we intend to serve our customers best by investing in selected digital offerings to expand our multi-channel offering. This digitization program is being rolled out in all our businesses. Additionally, we are strengthening our consumer banking business by positioning Postbank as a personal and digital financial services provider. With Magellan, we are consolidating and advancing our joint services and IT platform for PBC, offering services to both the advisory and the consumer banking business. We believe that this platform with integrated services, innovative tools and an end-to-end process model could improve PBC's efficiency while at the same time supporting our ambition to become a leading private and commercial bank in the digital world.

Item 4: Information on the Company

38

Strategy in GTB

As a key building block of our Commercial/International Banking proposition, GTB serves corporate and institutional clients globally with best-in-class solutions around deposit taking, domestic and cross-border payments, trade finance, supply chain finance and securities services (i.e. trust, agency, depository, custody and related services). GTB is organized along its two main business areas, Trade Finance and Cash Management Corporates (TF/CMC) and Institutional Cash and Securities Services (ICSS).

Throughout 2014, overall business conditions for GTB continued to remain challenging. A relatively slow economic recovery particularly in Europe, low or even negative interest rate environment, and ongoing margin pressure all acted as headwinds to the business. However, despite these challenges, GTB delivered a solid performance based on increasing business volumes, distinct propositions in SEPA, T2S and client centric solutions across a variety of industry segments including Fintech. We have further demonstrated the resilience of our strategy even in the face of a difficult external environment.

GTB remains committed to staying on course and executing on its strategic priorities: strengthening relationships with existing clients; acquiring new target clients especially in Asia; further building our capabilities to serve mid-cap clients in Germany; continuing our investments in our platforms and operational excellence; optimizing our business portfolio while maintaining strict cost, risk and capital discipline. Moreover, GTB intends to keep driving cultural change as a top priority, with a particular focus on intensifying the collaboration with Deutsche Bank's other core divisions, to support the Bank's integrated, client-centric approach.

The ongoing efforts of the division have led to Deutsche Bank receiving external recognition from some of the industry's most respected bodies. The awards GTB received in 2014 include (but are not limited to) Leading US dollar and euro provider for Financial Institutions in Western Europe, Central & Eastern Europe, North America and Latin America and Best Transaction Services House in Western Europe by Euromoney, Best overall Cash Management in Asia/Pacific by Asiamoney, as well as Global Corporate Trust Services Provider of the Year by Infrastructure Investor Awards.

Strategy in Deutsche AWM

Deutsche AWM serves individual, institutional and intermediary clients worldwide with a full range of active, passive and alternative investments across all major asset classes, as well as investment solutions, wealth management advisory and private banking services.

In 2014, we continued the focused execution of our strategic programme to integrate, transform and grow the business. We delivered initial implementations of both the Aladdin technology solution for our Asset Management investment platform and the Avaloq solution for our Wealth Management client service operations. We actively managed our business portfolio, divesting approximately 21 billion worth of assets under management in non-core and sub-scale business areas, while optimising others and expanding both outsourcing and near-shoring efforts. In parallel, we made significant investments in both client service and product innovation. Through targeted hires, we increased our private banker and wealth advisory teams to serve ultra-high-net-worth (UHNW) clients worldwide, and added key experienced hires to our institutional and retail coverage teams in our Global Client Group. Additionally, we enhanced our product offering across innovative and high-growth sectors, including expanding our CROCI, physical replication ETF and alternative fund offerings.

As a result, clients entrusted us with over 40 billion net new assets, which, together with constructive financial markets performance, enabled Deutsche AWM to surpass in 2014 1 trillion in assets under management.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Looking ahead, Deutsche AWM intends to grow by leveraging the combined capabilities of our integrated franchise. In Wealth Management, we expect to further expand our footprint serving UHNW clients, enabling growth in wallet share and greater access for key clients to transactions and offerings across Deutsche Bank, in collaboration with CB&S. In Asset Management, we intend to continue building on strength in our domestic market Germany, while gaining share globally across institutional and retail asset management by launching differentiated new investment products while remaining committed to our open architecture platform, delivering

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

39

strong investment performance and serving clients through an integrated coverage model. We believe our close connectivity with PBC and GTB enables us to provide retail and institutional clients seamless access to solutions. Finally, across the franchise, we expect focused execution of ongoing transformation projects will further improve efficiency and increase operating margins.

Strategy in the NCOU

The NCOU was established in 2012 as our fifth corporate division and consists of two major businesses: Wholesale Assets and Operating Assets. Wholesale Assets mainly includes credit correlation trading positions, securitization assets, exposures to monoline insurers, assets reclassified under IAS 39, the Special Commodities Group and assets and liabilities from PBC including Postbank. Operating Assets contains separate operating entities from the former Corporate Investments division (all of which have been transferred into NCOU), CB&S, and Deutsche AWM. The NCOU further contains several legal contingent risks transferred from Deutsche Bank's core business divisions.

Our strategy and mandate continue to focus on the accelerated de-risking of the portfolio and are aligned with the Bank's overall strategic objectives. The aim is to free up capital, reduce balance sheet size as measured under CRD 4 and protect shareholder value by reducing risks from the above mentioned assets, liabilities and business activities.

Our Corporate Divisions

Please see Management Report: Operating and Financial Review: Deutsche Bank Group: Corporate Divisions beginning on page 9 of the Financial Report.

The Competitive Environment**Competitor Landscape**

The global recovery remains fragmented as growth rates across countries remain divergent. The ECB recently announced it will begin a quantitative easing program in the eurozone as the area continues to battle weak economic growth and political uncertainty resulting from the current crisis in Ukraine. The U.S. and UK are experiencing greater growth driving increased expectations of monetary tightening in 2015, albeit with potential for delays as inflationary pressure recedes resulting from a significant decline in oil prices in the fourth quarter of 2014. China's tightening of policy to help fight fears of an economic bubble and drive a more sustainable level of growth through transitioning to a consumption-led model is helping to avoid a hard landing. Japan continues its unprecedented monetary policy easing (Abenomics) in an attempt to rid itself of years of suppressed growth. Furthermore the banking sector continues to face headwinds globally from the ongoing intense regulatory environment and legal and reputational issues that continue to put pressure on returns and profitability.

Following the significant strengthening of capital ratios across the industry in 2013 and 2014 via capital raising, restructuring and retrenchment from capital intensive businesses, the focus has been concentrated on resolving legal matters, responding to the continued regulatory requirements (notably the CRD 4 leverage ratio requirements) and operational efficiency improvements. Banks are affected by the ultra-low interest rate and volatility environment that is suppressing client activity and applying pressure to profitability and returns.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Deutsche Bank's core competitors include other universal banks, commercial banks, savings banks, public sector banks, brokers and dealers, investment banking firms, asset management firms, private banks, investment advisors, payments services providers, and insurance companies. We compete with some of our competitors globally and with some others on a regional, product, or niche basis. We compete on the basis of a

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

40

number of factors, including the quality of client relationships, transaction execution, our products and services, innovation, reputation and price.

There is an emerging group of potential future competitors in the form of start-ups and some technology firms that are showing increasing interest in banking services. The recent interest of technology companies and start-ups in some banking services (e.g., payments) has the potential to alter the competitive landscape and significant investment is ongoing across the banking industry to react and ensure it keeps pace with technological advances and customer demand.

In our home market, Germany, the retail banking market remains fragmented and our competitive environment is influenced by the three pillar system of private banks, public banks and cooperative banks. Competitive intensity has increased in recent years following some consolidation activity, particularly among public regional commercial banks (Landesbanken) and private banks.

Regulatory Reform

In the past year, key areas of the post-financial crisis G20 regulatory agenda strengthening international standards to create financially resilient institutions and ensuring resolvability of all banks have been finalized or become clearer.

Prudential standards including core Basel 3 capital, liquidity and leverage requirements have been implemented or further defined. In the EU, this has come via the Capital Requirements Regulation and the Capital Requirements Directive (CRR/CRD 4) that took effect on January 1, 2014. In the U.S., the Basel 3 framework took effect on January 1, 2015 for certain aspects of our U.S. operations and will be applicable to all of our U.S. operations (excluding Deutsche Bank AG New York Branch) starting on July 1, 2016.

Importantly, in 2014 we also became subject to a new prudential supervisory regime in Europe. On November 4, 2014, as part of the Single Supervisory Mechanism (SSM), the European Central Bank (ECB) took over our prudential supervision. In preparation for its takeover, the ECB conducted a comprehensive assessment, consisting of an asset quality review and stress tests, of us and other EU banks. We successfully met all the requirements of the comprehensive assessment. The advent of the ECB as competent authority for prudential regulation across all large EU banks should enhance consistency of standards and transparency around supervisory approach in future.

Other key post-crisis reforms, while agreed in primary legislation, are still in the early stages of their phase-in or implementation process, particularly where regulators have yet to develop detailed rules or determine their cross-border application. The impact of these laws on specific institutions cannot yet be fully known. Examples of these kinds of regulations include:

Legislation for OTC derivatives clearing, reporting and margin has been agreed in the EU and U.S. and some requirements already apply. While trade reporting has begun, phase-in of mandatory EU clearing obligations is not expected to begin before the second half of 2015 and relief from transaction-level requirements for swaps between non-U.S. swap dealers and non-U.S. persons has been extended until September 30, 2015. There are ongoing efforts to ensure cross-border recognition of CCPs, and while equivalence decisions have been made by the EU for some jurisdictions, the cross-border agreement between the U.S. and the EU has not yet materialized. The start and phase-in of margin requirements on non-cleared derivatives is currently expected to take place from end 2015 to end 2019. We can expect the cost of trading OTC derivatives across the market to increase as a result as well as a rise in demand for high quality collateral.

Updated EU rules for market structure, pre- and post-trade transparency for fixed income, currency and commodities transactions, investor protection, market abuse and sanctions through the Markets in Financial Instruments Directive (MiFID 2) and Regulation (MiFIR) and the Market Abuse Directive (MAD 2) and Regulation (MAR). MiFID 2/MiFIR will also introduce a trading obligation for those OTC derivatives which are subject to mandatory clearing and which are sufficiently standardized. Most requirements intro-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

41

duced by MiFID 2/MiFIR and MAD 2/MAR will be applicable to us starting on January 3, 2017 or July 3, 2016, respectively. Several implementing rules are still to be finalized by the European Securities and Markets Authority (ESMA). Depending on the detailed rules being developed, the updated MiFID 2/MiFIR could have a substantial impact on the way we trade with clients, transparency requirements, a willingness to deploy risk capital, and the way we distribute products.

Structural reforms requiring either separation of certain business activities or the creation of subsidiaries on a geographic basis. The German Act on the Separation of Risks and Recovery and Resolution Planning for Credit Institutions and Banking Groups requires us to separate proprietary trading and certain other activities from deposit-taking by July 1, 2016. Also, Federal Reserve Board final rules on enhanced prudential standards for the U.S. operations of foreign banking organizations require us to establish or designate a U.S. intermediate holding company by July 1, 2016 and transfer the ownership interests of substantially all of our U.S. subsidiaries to this U.S. intermediate holding company. We submitted our plan for the implementation of the Federal Reserve Board's final rules on enhanced prudential standards by December 31, 2014, as required by the rule. Implementation plans for both structural changes mentioned above are subject to regulatory approval. We will also be impacted by Section 619 of the U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act referred to as the Volcker Rule which must be implemented by July 2015, subject to certain exceptions.

Recovery and resolution the major jurisdictions where we have significant group operations have largely implemented the Financial Stability Board (FSB) Key Attributes for Effective Resolution Regimes, in particular the EU Bank Recovery and Resolution Directive (BRRD), which was implemented in Germany on January 1, 2015. The BRRD includes powers of the resolution authority to require legal and operational changes to bank structures to ensure resolvability, to transfer to another legal entity shares, assets, rights or liabilities of a bank which is failing or likely to fail, to reduce, including to reduce to zero, the nominal amount of shares, and to cancel shares. Furthermore, it may order the full or partial write-down of hybrid capital and debt instruments or their conversion into shares (commonly referred to as bail-in). In addition, in July 2014, the European Union published a regulation establishing a single European Resolution Mechanism (SRM) and a single European resolution fund for banks supervised by the ECB. However, making resolution effective requires home and host authorities to cooperate cross-border to recognize or support resolution, on which the FSB has pointed to a lack of progress.

In addition, several regulatory proposals are not yet agreed which, depending on the outcome in the final rules, may have a material impact on our activities, balance sheet and profitability:

Provisions of the Basel 3 framework that have yet to be implemented and the ongoing review and revision of other aspects of the Basel 3 framework, particularly with respect to calibration of the leverage ratio, liquidity coverage ratio and net stable funding ratio as well as the implementation of additional value adjustments, but also concerning capitalization for exposures to central counterparties and reviews of risk-weighted assets (including possible changes to address the variability in banks' regulatory capital ratios and introduction of a floor on the IRB approaches). Notably the fundamental review of the trading book, expected to be finalized in 2015, may have a significant impact on us. Other potential capital reforms include interest rate risk in the banking book and changes to the large exposure requirements and the securitization framework.

FSB proposals for Total Loss-Absorbing Capacity (TLAC) for global systemically important banks may have an impact on our funding costs and profile, depending on the final standards and how they are implemented in national law, particularly how they would affect the BRRD minimum requirement for own funds and eligible liabilities (MREL).

Further structural changes, either as a result of the Single Resolution Board applying BRRD powers under the SRM to ensure resolvability or as a result of the proposed EU regulation on structural measures improving the resilience of EU credit institutions. This would prohibit proprietary trading and require banks with trading assets above a certain threshold to separate market making activities, derivatives and securitization from deposit taking.

Additional direct costs as a result of financial sector specific tax and levies, for example the EU enhanced cooperation financial transaction tax, which is still under negotiation, and contributions to the Single Reso-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

42

lution Fund, which starts from January 1, 2016, subject to participating EU member state ratification. Legislation to increase contributions to statutory deposit guarantee schemes is also being implemented in the EU.

Additional regulation of specific financial market activities, such as money market funds, benchmarks and indices, and securities financing transactions. Possible future proposals on capital markets, including investment funds, financial market infrastructures, and other shadow banking proposals may also impact us.

Measures to further integrate the European single market for banking, including updating rules on anti-money laundering, data protection, payments and bank accounts, and retail distribution of products.

Climate change, environmental and social issues

Many governments, corporations and investors are increasing their focus on climate change, environmental and social issues by enacting legislation, changing business models, setting business operational policies and changing investment decision making. This activity has been accelerating in the lead up to the Paris climate summit in December 2015. Respected authorities continue to estimate that the total impact of these actions is insufficient to reduce the risks of climate change, increasing the risks to society and the economy from more frequent and stronger extreme weather events.

The number and strength of government, corporate and investor actions may therefore increase over time as climate change has a greater impact on society. This affects the financial services industry, in particular in connection to increasing demand for financing of projects that contribute to or mitigate climate change, as well as other environmental and societal impacts. Projects and products that contribute to climate change or have other negative environmental or social impacts, as well as their financing and other services for these projects, are being reviewed more critically by investors, customers, environmental authorities, non-governmental organizations and others. At Deutsche Bank such review is conducted based on the Environmental and Social Reputational Risk Framework. Where our own assessment of these issues so indicates, we may abstain from participating in such projects.

By contrast, projects and products that aim to mitigate climate change or other environmental pressures are increasingly seeking financing and other financial services; these offer growth opportunities for many of our businesses. Our research indicates that companies incorporating the best environmental, social and governance practices are able to raise capital at a lower cost and may be able to achieve superior risk-adjusted returns. Moreover, we note that investors, customers and others increasingly take the overall approach of companies to climate change, including the direct and indirect carbon emissions of their operations, into consideration in their decisions, even where such emissions are minimal.

We have undertaken a number of measures to reduce our carbon emissions over time, such as a comprehensive renovation of our world headquarters in Germany, to bring the energy efficiency of these buildings to the highest possible level for similar office towers. Combined with other measures, we have significantly reduced our emissions. These efforts are recognized with the highest rankings in many industry assessments. There is increasing attention by investors, some regulators and non-governmental organizations to fossil fuel asset risks from stronger, future climate change policies. As well, sustainability rating companies and some investors are asking financial institutions to measure and manage the emissions associated with our financial activities. We are working with other banks to develop relevant methodologies.

Regulation and Supervision

Overview

Our operations throughout the world are regulated and supervised by the relevant authorities in each of the jurisdictions where we conduct business. Such regulation relates to licensing, capital adequacy, liquidity, risk concentration, conduct of business as well as organizational and reporting requirements. It affects the type and scope of the business we conduct in a country and how we structure specific operations. In reaction

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

43

to the crisis in the financial markets, the regulatory environment has undergone and is still undergoing significant changes.

In December 2010, the Basel Committee on Banking Supervision proposed revised capital adequacy and liquidity standards that were significantly more stringent than the then-existing requirements. The set of comprehensive changes to the capital adequacy framework published by the Basel Committee, known as Basel 3, was implemented into European Union law by a legislative package referred to as CRR/CRD 4. The CRR/CRD 4 legislative package includes a European Union regulation (which is referred to as the Capital Requirements Regulation or CRR) which is directly enforceable as law in every member state of the European Union, and a European Union directive (which is referred to as the Capital Requirements Directive or CRD 4), which has been implemented into national (in our case German) law. CRR/CRD 4 contains, among other things, detailed rules on regulatory banking capital, increased capital requirements and the introduction of additional capital buffers, tightened liquidity standards and a non-risk based leverage ratio. Most of the new rules came into effect on January 1, 2014, with capital requirements and buffers increasing from year to year.

In June 2014, the European Union published a directive establishing a framework for the recovery and resolution of credit institutions and investment firms (which is referred to as the Bank Recovery and Resolution Directive or BRRD), which was implemented into German law and is applicable to us since January 1, 2015. Under the new resolution framework, broad resolution powers with respect to banks have been granted to the Federal Agency for Financial Market Stabilization (Bundesanstalt für Finanzmarktstabilisierung), including the power to reduce, including to zero, the nominal value of shares, or to cancel shares outright. Furthermore, the Federal Agency for Financial Market Stabilization may, in its exercise of the bail-in power, write down certain eligible unsecured liabilities, including to zero, or convert them into equity.

In addition, the German Act on the Separation of Risks and Recovery and Resolution Planning for Credit Institutions and Banking Groups (the Separation Act) prohibits deposit-taking banks and their affiliates from engaging in certain activities unless these activities are transferred to a separate legal entity. These activities include proprietary trading that does not constitute a service for others, high-frequency trading (with the exception of market-making activities), and credit or guarantee transactions with hedge funds and comparable enterprises. Banks concerned, such as us, have until July 1, 2016 to transfer the relevant business activities. Also starting on July 1, 2016, the German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) may prohibit, on a case-by-case basis, deposit-taking banks and their affiliates from engaging in market-making and other activities that are comparable to the activities prohibited by law if such activities could put the solvency of the deposit-taking bank or any of its affiliates at risk.

Finally, as discussed below under Regulation and Supervision in the United States, in July 2013 U.S. federal bank regulators issued final rules implementing many elements of the Basel 3 framework and other U.S. capital reforms.

Further changes continue to be under consideration in the jurisdictions in which we operate. While the extent and nature of these changes cannot be predicted now, they may include a further increase in regulatory oversight and enhanced prudential standards relating to capital, liquidity, employee compensation, limitations on activities and other aspects of our operations that may have a material effect on the businesses and the services and products that we will be able to offer.

The following sections present a description of the supervision of our business by the authorities in Germany, our home market, in the contracting states to the European Economic Area, and in the U.S., which we view as the most significant for us. Beyond these regions, local country regulations generally have limited impact on our operations that are unconnected with these countries.

Item 4: Information on the Company

44

Regulation and Supervision in Germany Basic Principles

We are authorized to conduct banking business and to provide financial services as set forth in the German Banking Act (Kreditwesengesetz) and the CRR. We are subject to comprehensive regulation and supervision by the European Central Bank (ECB), the BaFin and the Deutsche Bundesbank (Bundesbank), the German central bank.

Since November 4, 2014, we are directly supervised by the ECB, which is the primary supervisor of significant credit institutions and their banking affiliates domiciled in the eurozone as well as those domiciled in other member states of the European Union that decide to participate in the Single Supervisory Mechanism (which is referred to as SSM) in the future. The SSM was introduced in 2013 and is considered to be the first step towards a European Banking Union. The ECB is responsible for issuing new licenses to credit institutions and for assessing significant ownership changes in credit institutions where such changes must be notified, in each case regardless of whether an institution is significant or not. With respect to us and other significant credit institutions, the ECB is the primary supervisor and is responsible for most tasks of prudential supervision, such as those regarding compliance with regulatory requirements set forth in CRR/CRD 4 concerning own funds, large exposure limits, leverage, liquidity, securitizations, governance and risk management requirements. The ECB carries out its supervisory functions through a Joint Supervisory Team established for the Group. The team is led by the ECB and comprises staff from the ECB and national supervisory authorities, including the BaFin and the Bundesbank.

The BaFin continues to be our supervisor for regulatory matters with respect to which we are not supervised by the ECB. These include the rules on business conduct in the securities markets and the regulation of anti-money laundering, terrorist financing and payment services, as well as certain special areas of bank regulation, such as those related to the issuance of covered bonds (Pfandbriefe) and the supervision of German home loan banks (Bausparkassen). Generally, the BaFin also continues to supervise us with respect to those requirements under the German Banking Act that are not based upon European law, although the scope of such supervision with respect to regulatory requirements in addition to those that must be implemented under European law is not entirely clear. The Bundesbank supports the BaFin and the ECB and closely cooperates with them. The cooperation includes the ongoing review and evaluation of reports submitted by us and of our audit reports as well as assessments of the adequacy of our capital base and risk management systems. The ECB, the BaFin and the Bundesbank receive comprehensive information from us in order to monitor our compliance with applicable legal requirements and to obtain information on our financial condition. Generally, supervision by the ECB (together with the BaFin and the Bundesbank) applies on an unconsolidated basis (company only) and on a consolidated basis (the company and the entities consolidated with it for German regulatory purposes). Banks forming part of a consolidated group may waive the application of capital adequacy requirements, large exposure limits and certain organizational requirements on an unconsolidated basis if certain conditions are met. Deutsche Bank AG meets these conditions and has waived application of these rules since January 1, 2007.

The ECB and the BaFin have extensive supervisory and investigatory powers, including the ability to issue requests for information, to conduct regulatory investigations and on-site inspections, and to impose monetary and other sanctions.

We are in compliance with the German and European laws that are applicable to our business in all material respects.

The German Banking Act and the CRR

The German Banking Act and the CRR contain the principal rules for German banks, including the requirements for a banking license, and regulate the business activities of German banks. In particular, the German Banking Act requires that an enterprise that engages in one or more of the activities defined in the German Banking Act as banking business or financial services in Germany must be licensed as a credit institution (Kreditinstitut) or financial services institution (Finanzdienstleistungsinstitut), as the case may be. Deutsche Bank AG is licensed as a credit institution.

Annual Report 2014 on Form 20-F

Item 4: Information on the Company

45

Significant parts of the regulatory framework for banks in the European Union are governed by the CRR. The CRR primarily sets forth the requirements applicable to us relating to regulatory capital, risk-based capital adequacy, monitoring and control of large exposures, consolidated supervision and liquidity. Additional regulatory and implementing technical standards are also applicable to us, and are developed by the European Banking Authority (EBA) and adopted by the European Commission. Certain other requirements applicable to us including those with respect to additional capital and organizational requirements, are set forth in the German Banking Act and other German laws.

The German Securities Trading Act

Under the German Securities Trading Act (Wertpapierhandelsgesetz), the BaFin regulates and supervises securities trading in Germany. The German Securities Trading Act contains, among other things, disclosure and transparency rules for issuers of securities that are listed on a German exchange and prohibits insider trading with respect to certain listed securities. The German Securities Trading Act also contains rules of conduct. These rules of conduct apply to all businesses that provide securities services. Securities services include, in particular, the purchase and sale of securities or derivatives for others and the intermediation of transactions in securities or derivatives and certain types of investment advice. The BaFin has broad powers to investigate businesses providing securities services to monitor their compliance with the rules of conduct and the reporting requirements. In addition, the German Securities Trading Act requires an independent auditor to perform an annual audit of the securities services provider s compliance with its obligations under the German Securities Trading Act.

The European Union has completed several legislative proposals which result in further regulation of securities trading and the trading in derivatives in particular. Notably, the European Union adopted the European Regulation on OTC Derivatives, Central Counterparties and Trade Repositories (EMIR), which became effective on August 16, 2012. EMIR introduced requirements for standardized over-the-counter derivatives to be centrally cleared and derivative transactions to be notified to trade repositories. EMIR also includes additional capital and margin requirements for non-cleared trades. While a number of the compliance requirements introduced by EMIR have come into effect, the European Supervisory Authorities (mainly the European Securities and Markets Authority) are still in the process of finalizing certain implementing rules mandated by EMIR. Further legislative measures such as the Markets in Financial Instruments Directive (MiFID 2) and Regulation (MiFIR) and the Market Abuse Directive (MAD 2) and Regulation (MAR) provide for, among other things, greater regulation and oversight by covering additional markets and instruments, extension of pre- and post-trade transparency rules from equities to all financial instruments, stricter market abuse rules, greater restrictions on operating trading platforms, and greater sanctioning powers. MiFID 2/MiFIR will also introduce a trading obligation for those OTC derivatives which are subject to mandatory clearing and which are sufficiently standardized, and new investor protection rules which will significantly impact the way we distribute products. Most of the requirements introduced by MiFID 2/MiFIR and MAD 2/MAR will be applicable to us starting on January 3, 2017 or July 3, 2016, respectively. In addition, the European Securities and Markets Authority (ESMA) has yet to finalize several related implementing regulations.

Capital Adequacy Requirements

Since January 1, 2014, the capital adequacy requirements for banks are primarily set forth in the CRR. The CRR requires German banks to maintain an adequate level of regulatory capital in relation to their risk positions. Risk positions (commonly referred to as risk-weighted assets) include credit risks, market risks and operational risks (including, among other things, risks related to certain external factors, as well as to technical errors and errors of employees). The most important type of capital for compliance with the capital requirements under the CRR (see below) is Common Equity Tier 1 capital. Common Equity Tier 1 capital primarily consists of share capital, retained earnings and other reserves, subject to certain regulatory adjustments. Another component of capital is Additional Tier 1 capital. Generally, all instruments recognized as Additional Tier 1 capital must be written down, or converted into Common Equity Tier 1 capital when the Common Equity Tier 1 capital ratio of the financial institution falls below a minimum of 5.125 %, although regulators may require an earlier conversion, for example for stress-testing purposes. Common Equity Tier 1 capital and Additional Tier 1 capital together constitute Tier 1 capital. Tier 1 capital requirements are aimed at ensuring the ability to

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

46

absorb losses on a going concern basis. The other type of capital is Tier 2 capital which generally consists of long-term subordinated debt instruments and must be able to absorb losses on a gone concern basis. Tier 1 capital and Tier 2 capital together constitute own funds. Pursuant to the CRR, hybrid capital instruments that qualified as Tier 1 or Tier 2 capital under Basel 2.5 cease to qualify as such and will be gradually phased out through the end of 2021. Tier 3 capital is no longer recognized as own funds under the CRR. In addition, the CRR tightened the regime for certain deductions from capital.

Under the CRR, banks are required to maintain a minimum ratio of Tier 1 capital to risk-weighted assets of 6 % and a minimum ratio of Common Equity Tier 1 capital to risk-weighted assets of 4.5 %. The minimum total capital ratio of own funds to risk-weighted assets is 8 %.

The German Banking Act, as amended by the CRR/CRD 4 legislative package, also requires banks to build up a mandatory capital conservation buffer (Common Equity Tier 1 capital amounting to 2.5 % of risk-weighted assets), and authorizes the BaFin to require banks to build up an additional counter-cyclical buffer (Common Equity Tier 1 capital of generally up to another 2.5 % of risk-weighted assets) during periods of high credit growth. In addition, the BaFin may require banks to build up a systemic risk buffer (Common Equity Tier 1 capital of between 1 % and 3 % of risk-weighted assets for all exposures and in exceptional cases up to 5 % for domestic and third-country exposures) to prevent and mitigate long term non-cyclical systemic or macro-prudential risks not otherwise covered by CRR/CRD 4. Global systemically important banks (such as us) will be subject to an additional capital buffer of between 1 % and 3.5 % of risk-weighted assets which will be determined for the banks concerned based on a scoring system measuring their systemic importance. The systemic risk buffer and buffers for systemically important banks will generally not be cumulative; only the higher of these two buffers will apply. If a bank fails to build up the required capital buffers, it will be subject to restrictions on the pay-out of dividends, share buybacks and discretionary compensation payments. The ECB may require us to maintain higher capital buffers than those required by the BaFin.

The Basel 3 framework also proposes a non-risk based leverage ratio as a complement to the risk-based capital requirements. While the CRR does not require banks immediately to comply with a specific leverage ratio, banks are required to report and publish their leverage ratios for a future assessment and calibration of the leverage ratio. According to a delegated act adopted by the European Commission on October 10, 2014, the way we calculate our exposure measure for the leverage ratio under a revised CRR/CRD 4 framework changes significantly. It is expected that banks will be required to fully comply with the leverage ratio starting in 2018.

Under certain circumstances, the ECB may impose capital requirements on individual banks which are more stringent than statutory requirements. On February 20, 2015, the ECB required us to maintain a Common Equity Tier 1 ratio of at least 10 % (on a phase-in basis). Also, more generally, to prevent shortfalls in the capitalization of German banks, the German legislature enacted a statute allowing stabilization measures in the period through December 2015 that can be imposed on banks without approval of their shareholders. For details of Deutsche Bank's regulatory capital, see Management Report: Risk Report: Regulatory Capital: Capital Adequacy on pages 229 through 230 of our Financial Report.

Limitations on Large Exposures

The CRR also contains the primary restrictions on large exposures, which limit a bank's concentration of credit risks. The German Banking Act and the Large Exposure Regulation (Großkredit- und Millionenkreditverordnung) continue to supplement the CRR. For example, the Large Exposure Regulation continues to include exemptions (in addition to those contained in the CRR) from the applicability of limits to large exposures. Under the CRR, our exposure to a customer (and any customers affiliated with it) is deemed to be a large exposure when the value of such exposure is equal to or exceeds 10 % of our eligible regulatory capital. All exposures to a single customer (and customers affiliated with it) are aggregated for these purposes. In general, no large exposure may exceed 25 % of our eligible regulatory capital. Eligible regulatory capital for this purpose means the sum of Tier 1 capital and Tier 2 capital which may not exceed one third of Tier 1 capital. During a transitional period, eligible regulatory capital may include Tier 2 capital up to 75 % of Tier 1 capital during 2015.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

47

and 50 % during 2016. If the customer is a credit institution or investment firm, the exposure is limited to the higher of 25 % of our eligible regulatory capital or 150 million. Competent authorities may set a lower limit than 150 million. On April 15, 2014, the Basel Committee published a proposal that would restrict a bank's exposures to a single counterparty to 25 % of its Tier 1 capital (instead of 25 % of the sum of its Tier 1 and Tier 2 capital) and further limit exposures between banks designated as global systemically important banks such as us, to 15 % of Tier 1 capital. The proposal, if implemented, would be applicable starting on January 1, 2019.

Under certain conditions, the limits to large exposures may be exceeded by the exposures on the bank's trading book. In this case, the bank must meet an additional own funds requirement.

Consolidated Regulation and Supervision

The provisions of the German Banking Act and the CRR on consolidated supervision require that each group of institutions (Institutsgruppe) taken as a whole complies with the requirements on capital adequacy and the limitations on large exposures described above. The relevant provisions for consolidation are, to a large extent, set forth in the CRR. A group of institutions generally consists of a parent entity, also referred to as a superordinate undertaking, and the subsidiaries of the superordinate undertaking which are consolidated in the group under the CRR (i.e., banks in which the superordinate bank holds more than 50 % of the voting rights). The ECB is responsible for our supervision on a consolidated basis.

Financial groups which offer services and products in various financial sectors (banking and securities business, insurance and reinsurance business) are subject to supplementary supervision as a financial conglomerate (Finanzkonglomerat) once certain thresholds have been exceeded. Supervision of financial conglomerates comprises requirements regarding own funds, risk concentration, risk management, transactions within the conglomerate and organizational matters. We are a financial conglomerate and therefore are required to report capital adequacy requirements and risk concentrations also on a conglomerate level. In addition, we are required to report significant conglomerate internal transactions as well as significant risk concentrations. Our supervision at the conglomerate level is coordinated by the ECB.

Liquidity Requirements

The CRR introduced a new liquidity coverage requirement intended to ensure that banks have an adequate stock of unencumbered high quality liquid assets (HQLA) that can be easily and quickly converted into cash to meet their liquidity needs for a 30 calendar day liquidity stress scenario. The required liquidity coverage ratio is calculated as the ratio of a bank's liquidity buffer to its net liquidity outflows. Also, banks must regularly report the composition of the liquid assets in their liquidity buffer to their competent authorities. The liquidity coverage requirement will gradually be phased in through January 1, 2018, beginning with a minimum required level of liquidity of 60 % in 2015, which will subsequently be increased to 70 % in 2016, 80 % in 2017 and 100 % in 2018. Details on the liquidity coverage requirement have been set forth by the European Commission in implementing legislation, which will come into force on October 1, 2015. The ECB will be granted the authority to supervise our compliance with the liquidity coverage requirement under the CRR.

In addition, Basel 3 contains a proposal to introduce a net stable funding ratio (NSFR) to reduce medium- to long-term funding risks by requiring banks to fund their activities with sufficiently stable sources of funding. The CRR contains interim reporting requirements on stable funding but does not include substantive provisions relating to the NSFR. On October 31, 2014, the Basel Committee on Banking Supervision published a revised proposal for the NSFR pursuant to which the NSFR is defined as the amount of available stable funding relative to the amount of required stable funding. The NSFR is expected to become a minimum standard for banks by January 1, 2018. Since the proposal has not yet been implemented into binding European law, the European Commission needs to decide by December 31, 2016 whether and how to introduce the NSFR into European law.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

48

National liquidity requirements under the German Banking Act and the German Liquidity Regulation (Liquiditätsverordnung) will continue to be applicable to us until the full introduction of the liquidity coverage requirement at the European level on January 1, 2018. The German Banking Act generally requires banks and certain financial services institutions to invest their funds so as to maintain adequate liquidity at all times. The Liquidity Regulation provides for minimum liquidity requirements based upon a comparison of the remaining terms of certain assets and liabilities. It requires maintenance of a ratio (Liquiditätskennzahl or liquidity ratio) of liquid assets to liquidity reductions expected during the month following the date on which the ratio is determined of at least one. The Liquidity Regulation also allows banks and financial services institutions subject to it to use their own methodology and procedures to measure and manage liquidity risk if the BaFin has approved such methodology and procedures. The liquidity ratio (and estimated liquidity ratios for the next eleven months) must be reported to the ECB, the BaFin and the Bundesbank on a monthly basis. Generally, the liquidity requirements do not apply on a consolidated basis.

The ECB and the BaFin may impose on individual banks liquidity requirements which are more stringent than the general statutory requirements if such bank's continuous liquidity would otherwise not be ensured.

Financial Statements and Audits

As required by the German Commercial Code (Handelsgesetzbuch), we prepare our non-consolidated financial statements in accordance with German GAAP. Our consolidated financial statements are prepared in accordance with International Financial Reporting Standards, and our compliance with capital adequacy requirements and large exposure limits is determined solely based upon such consolidated financial statements.

Under German law, we are required to be audited annually by a certified public accountant (Wirtschaftsprüfer). The accountant is appointed at the shareholders' meeting. However, the supervisory board mandates the accountant and supervises the audit. The BaFin must be informed of and may reject the accountant's appointment. The German Banking Act requires that a bank's auditor inform the BaFin of any facts that come to the accountant's attention which would lead it to refuse to certify or to limit its certification of the bank's annual financial statements or which would adversely affect the bank's financial position. The auditor is also required to notify the BaFin in the event of a material breach by management of the articles of association or of any other applicable law. The auditor is required to prepare a detailed and comprehensive annual audit report (Prüfungsbericht) for submission to the bank's supervisory board, the BaFin and the Bundesbank. The BaFin and the Bundesbank share their information with the ECB.

Investigative and Enforcement Powers**Investigations and Official Audits**

The ECB and the BaFin may conduct audits of banks on a random basis, as well as for cause. In particular, the ECB may audit our compliance with requirements with respect to which it supervises us, such as those set forth in CRR/CRD 4. The BaFin may decide to audit our compliance with requirements with respect to which the BaFin supervises us, such as those relating to business conduct in the securities markets and the regulation of anti-money laundering, terrorist financing and payment services, as well as certain special areas of bank regulation, such as those related to the issuance of covered bonds (Pfandbriefe) and the supervision of German home loan banks (Bausparkassen).

The ECB as well as the BaFin may require a bank to furnish information and documents in order to ensure that the bank is complying with applicable bank supervisory laws. The ECB or the BaFin may conduct investigations without having to state a reason therefor. Such investigations may also take place at a foreign entity that is part of a bank's group for regulatory purposes. Investigations of foreign entities are limited to the extent that the law of the jurisdiction where the entity is located restricts such investigations.

The ECB and the BaFin may attend meetings of a bank's supervisory board and shareholders meetings. They also have the authority to require that such meetings be convened.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

49

Supervisory and Enforcement Powers

The ECB has a wide range of enforcement powers in the event it discovers any irregularities concerning requirements with respect to which it supervises us. It may, for example,

- impose additional own funds or liquidity requirements in excess of statutory requirements;
- restrict or limit a bank's business;
- require the cessation of activities to reduce risk;
- require a bank to use net profits to strengthen its own funds;
- restrict or prohibit distributions to shareholders and holders of Additional Tier 1 instruments;
- remove the members of the bank's management or supervisory board members from office; or
- prohibit them from exercising their current managerial capacities.

To the extent necessary to carry out the tasks granted to it, the ECB may also require national supervisory authorities to make use of their powers under national law. If these measures are inadequate, the ECB may revoke the bank's license. Furthermore, the ECB has the power to impose severe administrative penalties in case of breaches of directly applicable EU laws, such as the CRR, or of applicable ECB regulations and decisions. Penalties imposed by the ECB may amount to up to twice the amount of profits gained or losses avoided because of the violation, or up to 10 % of the total annual turnover of the relevant entity in the preceding business year. In addition, where necessary to carry out the tasks granted to it, the ECB may also require that the BaFin initiate proceedings to ensure that appropriate penalties are imposed on the affected bank.

The BaFin also retains a wide range of enforcement powers. As discussed above, it may take action if instructed by the ECB in connection with supervisory tasks granted to the ECB. With respect to supervisory tasks not granted to the ECB, the BaFin may still take, as in the past, action upon its own initiative. In particular, if a bank is in danger of defaulting on its obligations to creditors, the BaFin may take emergency measures to avert default. These emergency measures may include:

- issuing instructions relating to the management of the bank;
- prohibiting the acceptance of deposits and the extension of credit;
- prohibiting or restricting the bank's managers from carrying on their functions;
- prohibiting payments and disposals of assets;
- closing the bank's customer services; and
- prohibiting the bank from accepting any payments other than payments of debts owed to the bank.

The BaFin may also impose administrative pecuniary penalties under the German Banking Act and other German laws. Penalties under the German Banking Act may amount to generally up to 5 million. If the economic benefit derived from the offense is higher, the BaFin may impose penalties of up to 10 % of the net turnover of the preceding business year or double the amount of the economic benefit derived from the violation.

Finally, violations of the German Banking Act may result in criminal penalties.

Recovery and Resolution Planning, Restructuring Powers

The BRRD, which was published by the European Union in June 2014, was implemented in Germany through the German Recovery and Resolution Act (Sanierungs- und Abwicklungsgesetz), which has been applicable to us since January 1, 2015. The German Recovery and Resolution Act requires us to prepare recovery and resolution plans, and grants broad resolution powers to the Federal Agency for Financial Market Stabilization as resolution authority. In particular, the Federal Agency for Financial Market Stabilization may require legal and

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

operational changes to bank structures to ensure resolvability or may take a range of other measures including the transfer of shares, assets or liabilities of a failing bank to another legal entity, the reduction, including to zero, of the nominal value of shares or the cancellation of shares outright. Furthermore, the Federal Agency for Financial Market Stabilization may, in its exercise of the bail-in power, write down certain eligible unsecured liabilities, including to zero, or convert them into equity. To prevent banks from structuring their liabilities in a way that impedes the effectiveness of the bail-in or other resolution tools, the German Recovery

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

50

and Resolution Act requires banks to meet strict minimum requirements for own funds and eligible liabilities (MREL) which will be determined on a case-by-case basis by the competent resolution authorities.

In addition, on November 14, 2014, the Financial Stability Board (FSB) released a proposal that would require global systemically important banks (G-SIBs), such as us, to meet a new requirement for a Total Loss Absorbing Capacity (TLAC) starting on January 1, 2019. The FSB has proposed a predetermined pillar 1 minimum TLAC requirement that is set within the range of 16 % - 20 % of risk-weighted assets, and at a minimum twice the Basel 3 leverage ratio requirement. Moreover, the FSB has proposed an additional pillar 2 TLAC requirement which may be determined by the competent authorities for individual firms and apply over and above the pillar 1 TLAC minimum. The FSB intends to revise its proposal on TLAC based on a public consultation and findings from a quantitative impact study and market survey, and submit a final version to the G-20 by the G-20 summit in 2015. The ultimate impact on us will depend on how the proposals are implemented in national law.

In July 2014, the European Union published a regulation establishing a single European Resolution Mechanism (SRM) and a single European resolution fund for banks supervised by the ECB. The SRM regulation grants resolution powers to the European resolution authority, the Single Resolution Board . The Single Resolution Board will prepare resolution plans and will carry out the resolution of banks, whenever one of them fails or is likely to fail. It is intended to work in close cooperation with national resolution authorities. The bail-in and resolution powers of the Single Resolution Board will become effective as of January 1, 2016. Furthermore, the Single Resolution Board is charged with administering the single resolution fund. The single resolution fund is financed by bank levies raised at national level to a target level of 1 % of insured deposits of all banks in participating member states of the European Union after a build-up of eight years.

In addition, under the German Credit Institution Reorganization Act (Gesetz zur Reorganisation von Kreditinstituten), a bank may submit a stabilization plan to the BaFin if, based upon the circumstances, it is likely that the bank will not be able to continuously fulfill the applicable statutory capital or liquidity requirements. A stabilization plan may in particular provide for the taking up of new loans or other financing that will have priority over the claims of existing creditors if insolvency proceedings are opened within three years following the commencement of the stabilization proceedings. The aggregate amount of such loans may not exceed 10 % of the bank's own funds. If the BaFin (which would consult with the ECB) considers the stabilization plan to be sustainable, it applies to the court for the opening of a stabilization proceeding. If the statutory requirements are met, the court appoints a stabilization advisor who oversees the implementation of the stabilization plan and has the authority to issue orders to the management of the bank.

Also under the German Credit Institution Reorganization Act, if a bank considers a stabilization proceeding to be futile, it may initiate reorganization proceedings, provided that the requirements for resolution under the German Recovery and Resolution Act are met. The bank must then submit a reorganization plan to the BaFin. This reorganization plan may in particular provide for debt-to-equity swaps, contributions in kind, capital increases and reductions, an exclusion of subscription rights and the spin-off of parts of the bank. Upon application by the BaFin, the court must order the opening of reorganization proceedings if the statutory requirements are met. If reorganization proceedings are opened, each class of creditors and the shareholders resolve independently on the adoption of the reorganization plan. Under certain conditions, the reorganization plan may also be implemented without the approval of a class of creditors or the shareholders (i.e., it can be forced upon dissenting creditors or shareholders).

The BaFin may file an application for the initiation of insolvency proceedings against a bank.

Separation of Proprietary Trading Activities by Universal Banks

The German Separation Act provides that deposit-taking banks and their affiliates are prohibited from engaging in proprietary trading that does not constitute a service for others, high-frequency trading (with the exception of market-making activities), and credit or guarantee transactions with hedge funds and comparable enterprises, unless such activities are transferred to a separate legal entity. The separation requirement applies if certain

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

51

thresholds are exceeded, which we exceed. In addition, the German Separation Act authorizes the BaFin to prohibit the deposit-taking bank and its affiliates, on a case-by-case basis, from engaging in market-making and other activities that are comparable to the activities prohibited by law, if these activities may put the solvency of the deposit-taking bank or any of its affiliates at risk. In the event that the BaFin orders such a prohibition, the respective activities must be discontinued or transferred to a separate legal entity. The separate legal entity may be established in the form of an investment firm or a bank and may be part of the same group as the deposit-taking bank. However, it must be economically and organizationally independent from the deposit-taking bank and its (other) affiliates, and it has to comply with enhanced risk management requirements. The prohibition for deposit-taking banks and their affiliates to conduct activities associated with increased risks will become effective starting July 1, 2015, with a further transitional period of twelve months to accomplish the separation requirement. Thus, we have until July 2016 to transfer those activities specified in the German Separation Act to a separate legal entity. Starting on July 1, 2016, the BaFin will also have the power to prohibit certain market-making and other activities on a case-by-case basis.

On January 29, 2014, the European Commission published a proposal for a regulation on structural measures improving the resilience of EU credit institutions (referred to as Proposed Regulation), which if enacted, will impose measures similar to the Separation Act. The Proposed Regulation would apply to large banks which are either identified as global systemically important institutions (such as us), or whose total assets and trading activities exceed certain thresholds (which we exceed). If the Proposed Regulation were enacted as drafted, it would ban proprietary trading in financial instruments and commodities. For this purpose, proprietary trading is defined as (subject to certain exemptions) trading on own account for the sole purpose of making profit for the bank through dedicated trading structures. Furthermore, the Proposed Regulation would grant supervisors the power, and, in certain instances, impose on them an obligation, to require the transfer of certain trading and other activities (such as market making, derivatives and securitization operations) to separate legal trading entities within the group. In this case, the group would be required to be structured in a manner that results in the creation of two distinct sub-groups. Only one such subgroup would be permitted to conduct the business of taking insured deposits (referred to as a Core Bank). Both sub-groups would be required to comply separately with the own funds and capital requirements, the large exposure limits and certain other obligations set forth in CRR/CRD 4. Moreover, the Core Bank sub-group would not be permitted to hold any capital instruments or voting rights in the other sub-group. According to the Proposed Regulation, the prohibition on proprietary trading would become effective 18 months after the publication of the final regulation. The provisions on separation of trading activities from Core Banks would become effective 36 months after such publication. The Proposed Regulation is currently being discussed at the European level and might overrule certain requirements set out in the Separation Act at the national level. On December 22, 2014, the Economic and Monetary Affairs Committee (ECON) of the European Parliament published significant changes to the Proposed Regulation.

Remuneration Rules

Under the German Banking Act and the German Credit Institution Remuneration Regulation (Institutsvergütungsverordnung), we are subject to certain restrictions on the remuneration we pay statutorily designated risk takers and other affected employees. The remuneration rules have been revised on the basis of the CRR/CRD 4 framework, and since January 1, 2014, they impose a cap on bonuses. Pursuant to this cap, the variable remuneration for risk takers and other affected employees generally must not exceed that employee's fixed remuneration. The variable remuneration may be increased to twice the risk taker's and other affected employee's compensation if expressly approved by the shareholders meeting with the required majority. In addition, between 40 % and 60 % of the variable remuneration must be deferred. The deferral period must be at least three to five years. Also, depending on the responsibilities, activities and position of an employee, at least 50 % of the variable remuneration must be paid in the form of shares or instruments linked to shares. Finally, we are required to comply with certain disclosure requirements relating to the remuneration we pay to, and our remuneration principles in respect of, our risk takers and other affected employees.

Deposit Protection in Germany

The Deposit Protection Act

Until July 2, 2015, the Law on Deposit Protection and Investor Compensation (Einlagensicherungs- und Anlegerentschädigungsgesetz, Deposit Protection and Investor Compensation Act) provides for a mandatory deposit protection and investor compensation system in Germany. It requires that each German bank participate in one of the licensed government-controlled deposit protection and investor compensation schemes (Entschädigungseinrichtungen). Entschädigungseinrichtung deutscher Banken GmbH acts as the deposit and investor protection scheme for private sector banks such as us, collects and administers the contributions of the member banks, and settles any compensation claims of depositors and investors in accordance with the German Deposit Protection and Investor Compensation Act.

Under the German Deposit Protection and Investor Compensation Act, the deposit protection and investor compensation schemes are liable for obligations resulting from deposits or securities transactions, as the case may be, that are denominated in euro or the currency of any EU member state. They are not liable for obligations represented by instruments in bearer form or negotiable by endorsement. Claims of certain entities, such as banks, financial institutions (Finanzinstitute), insurance companies, investment funds, the Federal Republic of Germany, the German federal states, municipalities and medium-sized and large corporations, are not protected. The maximum liability of a deposit protection and investor compensation scheme to any one creditor is limited to an amount of 100,000 of the deposits, and to 90 % of any one creditor's aggregate claims arising from securities transactions up to an amount of 20,000, as the case may be.

The deposit protection and investor compensation schemes are financed by annual contributions of their participating banks. They may also levy special contributions if required to settle compensation claims. There is no absolute limit on such special contributions.

In June 2014, the European Union published a recast of the directive on deposit guarantee schemes (Recast Deposit Guarantee Schemes Directive). In January 2015, the German Government published a draft bill to implement the Recast Deposit Guarantee Directive. If the draft bill is enacted as proposed, statutory deposit protection and investor compensation schemes will, starting on July 3, 2015, be governed by the new German Deposit Protection Act (Einlagensicherungsgesetz) and the amended former German Deposit Protection and Investor Compensation Act, now called Investor Compensation Act (Anlegerentschädigungsgesetz).

According to the draft bill, statutory deposit protection will be expanded to also cover deposits of large corporations and deposits denominated in currencies of non-EU member states. In addition, deposits made in connection with particular life events (such as the sale of private residential properties, marriage or severance payments) will be protected up to an amount 500,000 for a period of six months after the amount has been deposited or become transferable. Furthermore, the period within which the protection scheme must make the compensation payment will be reduced from twenty days to seven days starting on June 1, 2016.

Under the proposed new German Deposit Protection Act, deposit protection schemes must have available financial means proportionate to their potential liabilities and reach a target level of such means of 0.8 % of the total covered deposits of their participating banks by July 3, 2024. The financial means must be contributed by the banks participating in the deposit protection scheme. The amount of contributions of each bank will be based upon the amount of its covered deposits and the degree of risk the bank is exposed to. The implementation of the Recast Deposit Guarantee Schemes Directive will substantially increase the costs for deposit protection schemes. Accordingly, we expect that our contributions to these schemes will also increase.

Statutory deposit protection schemes will be required to contribute to bank resolution costs where resolution tools are used. The contribution made by the deposit protection scheme is limited to the compensation it would have to pay if the affected bank had become subject to insolvency proceedings. Furthermore, statutory deposit protection schemes under certain circumstances may provide funding to its participating banks to avoid their failure.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

53

The implementation of the Recast Deposit Guarantee Schemes Directive will not affect the rules on investor compensation schemes as currently contained in the German Deposit Protection and Investor Compensation Act.

Voluntary Deposit Protection System

Liabilities to creditors that are not covered under the German Deposit Protection and Investor Compensation Act may be covered by one of the various protection funds set up by the banking industry on a voluntary basis. We take part in the Deposit Protection Fund of the Association of German Banks (Einlagensicherungsfonds des Bundesverbandes deutscher Banken e. V.). The Deposit Protection Fund covers liabilities to customers up to an amount equal to 20 % of the bank's own funds (Eigenmittel) as further specified in the Deposit Protection Fund's by-laws. This limit will be reduced to 15 % from January 1, 2020 onwards and to 8.75 % from January 1, 2025 onwards. Liabilities to other banks and other specified institutions, obligations of banks represented by instruments in bearer form and covered bonds in registered form (Namenspfandbriefe) are not covered. To the extent the Deposit Protection Fund makes payments to customers of a bank, it will be subrogated to their claims against the bank.

Banks that participate in the Deposit Protection Fund make annual contributions to the fund based on their liabilities to customers, and may be required to make special contributions up to an amount of 50 % of their annual contributions to the extent requested by the Deposit Protection Fund to enable it to fulfill its purpose. If one or more German banks are in financial difficulties, we may therefore participate in their restructuring even where we have no business relationship or strategic interest, in order to avoid making special contributions to the Deposit Protection Fund in case of an insolvency of such bank or banks, or we may be required to make such special contributions.

Further Regulation and Supervision in the European Economic Area

Since 1989 the European Union has enacted a number of regulations and directives to create a single European Union-wide market with almost no internal barriers on banking and financial services. The Agreement on the European Economic Area extends this single market to Iceland, Liechtenstein and Norway. Within this market our branches generally operate under the so-called "European Passport". Under the European Passport, our branches are subject to regulation and supervision primarily by the ECB and the BaFin. The authorities of the host country are responsible for the regulation and supervision of the liquidity requirements and the financial markets of the host country. They also retain responsibility with regard to the provision of securities services within the territory of the host country.

On November 24, 2010, the European Union enacted regulations to further integrate the existing national supervisory authorities into a European System of Financial Supervision. A European Systemic Risk Board (ESRB) was established and the independent advisory committees to the European Commission for banks, insurance companies and securities markets which had existed since 2004 were transformed into new European authorities: the EBA, the European Insurance and Occupational Pensions Authority (EIOPA) and the ESMA.

The ESRB is responsible for the macro-prudential oversight of the financial system within the EU. It will in particular collect and analyze all relevant information, identify systemic risks and issue warnings and recommendations for remedial action as appropriate. The secretariat of the ESRB is provided by the European Central Bank. The tasks of EBA and the other new authorities are to further integrate and harmonize the work of the relevant national supervisory authorities and to ensure a consistent application of EU law. To that effect they shall in particular develop technical standards for supervision, and help develop regulatory standards, which will become effective if the European Commission endorses them. They shall also issue guidelines and recommendations for supervisory practices and coordinate the work of competent supervisory authorities in emergency situations where the orderly functioning or integrity of the financial markets or the stability of the financial system in the EU is jeopardized. In such case, the EBA and the other new authorities may give instructions to competent supervisory authorities and, in certain circumstances, directly to banks and other financial institutions, to take remedial measures.

Item 4: Information on the Company

54

Regulation and Supervision in the United States

Our operations are subject to extensive federal and state banking, securities and derivatives regulation and supervision in the United States. We engage in U.S. banking activities directly through our New York branch. We also control U.S. banking subsidiaries, including Deutsche Bank Trust Company Americas (DBTCA), and U.S. broker-dealers, such as Deutsche Bank Securities Inc., U.S. nondeposit trust companies and nonbanking subsidiaries.

On July 21, 2010, the United States enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act), which provides a broad framework for significant regulatory changes that extend to almost every area of U.S. financial regulation. While rulemaking in respect of many of the provisions of the Dodd-Frank Act has already taken place, implementation of the Dodd-Frank Act will require further detailed rulemaking over several years by different U.S. regulators, including the Department of the Treasury, the Federal Reserve Board, the Securities and Exchange Commission (SEC), the Federal Deposit Insurance Corporation (FDIC), the Commodity Futures Trading Commission (CFTC) and the Financial Stability Oversight Council (Council), and uncertainty remains about the final details, timing and impact of many of the rules.

The Dodd-Frank Act provisions known as the Volcker Rule limit the ability of banking entities and their affiliates to engage as principal in certain types of proprietary trading unrelated to serving clients and to sponsor or invest in private equity or hedge funds or similar funds (covered funds), subject to certain exclusions and exemptions. In the case of non-U.S. banking entities such as Deutsche Bank AG, these exemptions include certain activity conducted outside the U.S. and meeting certain criteria. The Volcker Rule also limits the ability of banking entities and their affiliates to enter into certain transactions with covered funds with which they or their affiliates have certain relationships. On December 10, 2013, U.S. regulators released the final version of the regulations implementing the statute. Also on that date, the Federal Reserve Board extended the end of the conformance period for the Volcker Rule until July 21, 2015 (with the possibility of two one-year extensions under certain circumstances), by which time financial institutions subject to the rule, such as us, must bring their activities and investments into compliance and implement a specific compliance program. In December 2014, the Federal Reserve Board issued an order extending the Volcker Rule's general conformance period until July 21, 2016 for investments in and relationships with covered funds and certain foreign funds that were in place on or prior to December 31, 2013 (legacy covered funds), and stated its intention to grant a final one-year extension of the general conformance period, to July 21, 2017, for banking entities to conform ownership interests in and relationships with legacy covered funds. The extension of the conformance period does not apply to the Volcker Rule's prohibitions on proprietary trading or to any investments in and relationships with covered funds made or entered into after December 31, 2013. During the applicable conformance periods, we will continue our efforts to bring our activities and investments into compliance with the rule and to implement appropriate compliance programs.

The Dodd-Frank Act also provides regulators with tools to provide greater capital, leverage and liquidity requirements and other prudential standards, particularly for financial institutions that pose significant systemic risk. U.S. regulators will also be able to restrict the size and growth of systemically significant non-bank financial companies and large interconnected bank holding companies and will be required to impose bright-line debt-to-equity ratio limits on financial companies that the Council determines pose a grave threat to financial stability if the Council determines that the imposition of the limit is necessary to minimize the risk.

With respect to prudential standards, on February 18, 2014, the Federal Reserve Board adopted rules (the FBO Rules) that set forth how the U.S. operations of foreign banking organizations (FBOs), such as Deutsche Bank, will be required to be structured in the U.S., as well as the enhanced prudential standards that will apply to our U.S. operations.

Under the FBO Rules, a large FBO with U.S.\$ 50 billion or more in U.S. non-branch assets, such as us, will be required to establish or designate a separately capitalized top-tier U.S. intermediate holding company (IHC) that would hold substantially all of the FBO's ownership interests in U.S. subsidiaries by July 1, 2016. Beginning on that date, our IHC will be subject, on a consolidated basis, to the risk-based capital requirements under

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

55

the U.S. Basel 3 capital framework, capital planning and stress testing requirements (on a phased-in basis), U.S. liquidity buffer requirements and other enhanced prudential standards comparable to those applicable to top-tier U.S. bank holding companies of a similar size. The Federal Reserve Board will have the authority to examine the IHC and any of its subsidiaries. U.S. leverage requirements applicable to the IHC will take effect beginning in January 2018. An FBO's U.S. branches and agencies will not be held beneath an IHC; however, the U.S. branches and agencies of the FBO (and in certain cases, the entire U.S. operations of the FBO) will be subject to certain liquidity requirements, as well as other specific enhanced prudential standards, such as risk management and asset maintenance requirements under certain circumstances. Additionally, the FBO Rules will place requirements on the FBO itself related to the adequacy and reporting of the FBO's home country capital and stress testing regime. The Federal Reserve Board did not finalize (but continues to consider) requirements relating to single counterparty credit limits and an early remediation framework under which the Federal Reserve Board would implement prescribed restrictions and penalties against the FBO and its U.S. operations and certain of its officers and directors, if the FBO and/or its U.S. operations do not meet certain requirements, and would authorize the termination of U.S. operations under certain circumstances.

Title I of the Dodd-Frank Act and the implementing regulations issued by the Federal Reserve Board and the FDIC require each bank holding company with assets of U.S.\$ 50 billion or more, including Deutsche Bank AG, to prepare and submit annually a plan for the orderly resolution of subsidiaries and operations in the event of future material financial distress or failure (the Title I US Resolution Plan). For foreign-based covered companies such as Deutsche Bank AG, the Title I US Resolution Plan only relates to subsidiaries, branches, agencies and businesses that are domiciled in or conducted in whole or in material part in the United States. In addition to the Title I US Resolution Plan, in 2014, DBTCA, one of our insured depository institutions (IDIs) in the United States, was subject for the first time to the FDIC's final rule requiring IDIs with total assets of U.S.\$ 50 billion or more to submit periodically to the FDIC a plan for resolution in the event of failure (the IDI Plan) under the Federal Deposit Insurance Act (the IDI Rule). DBTCA exceeded the IDI Rule's threshold of U.S.\$ 50 billion in average total consolidated assets during 2013 and Deutsche Bank AG expanded its 2014 Title I US Resolution Plan to also be responsive to the IDI Rule requirements (the Title I US Resolution Plan together with the IDI Plan, the US Resolution Plan).

The core elements of the US Resolution Plan are Material Entities (MEs), Core Business Lines (CBLs) Critical Operations (COs) and, for purposes of the IDI Plan, Critical Services. The US Resolution Plan lays out the resolution strategy for each ME, defined as those entities significant to the activities of a CO or CBL and demonstrates how each ME, CBL and CO, as applicable, can be resolved in a rapid and orderly manner and without systemic impact on U.S. financial stability. The US Resolution Plan also discusses the strategy for continuing Critical Services in resolution. Key factors addressed in the US Resolution Plan include how to ensure:

- Continued access to services from other U.S. and non-U.S. legal entities as well as from third parties such as payment servicers, exchanges and key vendors;
- Availability of funding from both external and internal sources;
- Retention of key employees during resolution; and
- Efficient and coordinated close-out of cross-border contracts.

The US Resolution Plan is drafted in coordination with the U.S. businesses and infrastructure groups so that it accurately reflects the business, critical infrastructure and key interconnections.

Our existing U.S. bank holding company subsidiary, Deutsche Bank Trust Corporation, is subject to various U.S. prudential requirements and will become subject to others prior to our establishing the IHC. As of January 1, 2015, Deutsche Bank Trust Corporation is subject to risk-based and leverage capital requirements, liquidity requirements, and other enhanced prudential standards applicable to large U.S. bank holding companies. Deutsche Bank Trust Corporation also became subject to capital planning and stress testing requirements on June 30, 2014. Deutsche Bank Trust Corporation will remain subject to the capital planning and stress-testing

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

56

requirements and certain enhanced prudential standards until corresponding requirements applicable to the IHC become effective.

On September 3, 2014, the Federal Reserve Board and other U.S. regulators approved a final rule implementing both a full and modified quantitative liquidity coverage ratio (LCR) requirement for certain U.S. banking holding companies and depository institutions that is generally consistent with the Basel Committee's revised Basel 3 liquidity rules, but is more stringent in several respects. A banking organization's full LCR is the ratio of its high quality liquid assets divided by its total net cash outflows over the next 30 days under stressed conditions, including a maturity mismatch add-on for timing differences between cash inflows and outflows. Deutsche Bank Trust Corporation will be subject to the modified LCR, under which its total net cash outflows exclude the maturity mismatch add-on and are multiplied by a factor of 70%. Under the implementation schedule for the modified LCR, Deutsche Bank Trust Corporation will be required maintain as of each month end a modified LCR of 90% beginning in January 2016 and 100% beginning in January 2017. Currently, the LCR requirement does not apply to foreign banking organizations or their to-be-formed IHCs. However, the Federal Reserve Board has reaffirmed its plans to issue an additional rulemaking to apply an LCR requirement to the U.S. operations of some or all foreign banking organizations with \$50 billion or more in combined U.S. assets, such as us.

Furthermore, the Dodd-Frank Act provides for an extensive framework for the regulation of over-the-counter (OTC) derivatives, including mandatory clearing, exchange trading and transaction reporting of certain OTC derivatives, as well as rules regarding the registration of, and capital, margin and business conduct standards for, swap dealers and major swap participants. In November 2013, also pursuant to the Dodd-Frank Act, the CFTC re-proposed regulations to impose position limits on certain commodities and economically equivalent swaps, futures and options.

The Dodd-Frank Act also requires broader regulation of hedge funds and private equity funds, as well as credit rating agencies, and imposes new requirements with respect to securitization activities. In October 2014, federal regulatory agencies issued final rules to implement the credit risk retention requirements of Section 941 of the Dodd-Frank Act, which generally require securitizers of different types of asset-backed securitizations, including transactions backed by residential mortgages, commercial mortgages, and commercial, credit card and auto loans, to retain at least five percent of the credit risk of the assets being securitized, with an exemption for securitizations that are wholly composed of qualified residential mortgages. The regulations took effect on February 23, 2015. Compliance is required with respect to new securitization transactions backed by residential mortgages beginning December 24, 2015 and with respect to new securitization transactions backed by other types of assets beginning December 24, 2016. We continue to evaluate the final rules and assess their impact on our securitization activities.

The Dodd-Frank Act also establishes a new regulatory framework and enhanced regulation for several other areas, including but not limited to the following. Under the Dodd-Frank Act and implementing regulations, a new regime for the orderly liquidation of systemically significant financial companies is established, which authorizes assessments on financial institutions that have U.S.\$ 50 billion or more in consolidated assets to repay outstanding debts owed to the Treasury in connection with a liquidation of a systemically significant financial company under the new insolvency regime. In addition, the Dodd-Frank Act requires U.S. regulatory agencies to prescribe regulations with respect to incentive-based compensation at financial institutions in order to prevent inappropriate behavior that could lead to a material financial loss. Other provisions require issuers with securities listed on U.S. stock exchanges, which may include foreign private issuers such as us, to establish a clawback policy to recoup previously awarded executive compensation in the event of an accounting restatement. The Dodd-Frank Act also grants the SEC discretionary rule-making authority to impose a new fiduciary standard on brokers, dealers and investment advisers, and expands the extraterritorial jurisdiction of U.S. courts over actions brought by the SEC or the United States with respect to violations of the antifraud provisions of the Securities Act of 1933, the Securities Exchange Act of 1934 and the Investment Advisers Act of 1940.

Annual Report 2014 on Form 20-F

Item 4: Information on the Company

57

Implementation of the Dodd-Frank Act and related final regulations will result in additional costs and could limit or restrict the way we conduct our business. Although uncertainty remains about many of the details, impact and timing of these reforms, we expect that there will be significant costs and may be significant limitations on our businesses resulting from these regulatory initiatives, including the regulations to implement the Volcker Rule limitations and compliance requirements.

Regulatory Authorities

We and Deutsche Bank Trust Corporation, our wholly owned subsidiary, are bank holding companies under the U.S. Bank Holding Company Act of 1956, as amended (the Bank Holding Company Act), by virtue of, among other things, our ownership of DBTCA. As bank holding companies, we and Deutsche Bank Trust Corporation have elected to become financial holding companies. As a result, we and our U.S. operations are subject to regulation, supervision and examination by the Federal Reserve Board as our U.S. umbrella supervisor.

DBTCA is a New York state-chartered bank whose deposits are insured by the FDIC to the extent permitted by law. DBTCA is subject to regulation, supervision and examination by the Federal Reserve Board and the New York State Department of Financial Services and to relevant FDIC regulation. In addition, DBTCA is also subject to regulation by the Consumer Financial Protection Bureau in relation to its retail products and services offered to its customers. Deutsche Bank Trust Company Delaware is a Delaware state-chartered bank which is subject to regulation, supervision and examination by the FDIC and the Office of the State Bank Commissioner of Delaware. Deutsche Bank's New York branch is supervised by the Federal Reserve Board and the New York State Department of Financial Services. Deutsche Bank's federally chartered nondeposit trust companies are subject to regulation, supervision and examination by the Office of the Comptroller of the Currency. Certain of Deutsche Bank's subsidiaries are also subject to regulation, supervision and examination by state banking regulators of certain states in which they conduct banking operations.

Restrictions on Activities

As described below, federal and state banking laws and regulations restrict our ability to engage, directly or indirectly through subsidiaries, in activities in the United States. We are required to obtain the prior approval of the Federal Reserve Board before directly or indirectly acquiring the ownership or control of more than 5 % of any class of voting shares of U.S. banks, certain other depository institutions, and bank or depository institution holding companies. Under applicable U.S. federal banking law, our U.S. banking operations are also restricted from engaging in certain tying arrangements involving products and services.

Our two U.S. FDIC-insured bank subsidiaries, as well as our New York branch, are subject to requirements and restrictions under federal and state law, including requirements to maintain reserves against deposits, restrictions on the types and amounts of loans that may be made and the interest that may be charged thereon, and limitations on the types of investments that may be made and the types of services that may be offered.

In addition to the business of banking, and managing or controlling banks, so long as we are a financial holding company under U.S. law, we may also engage in nonbanking activities in the United States that are financial in nature, or incidental or complementary to such financial activity, including securities, merchant banking, insurance and other financial activities, subject to certain limitations on the conduct of such activities and to prior regulatory approval in some cases. As a non-U.S. bank, we are generally authorized under U.S. law and regulations to acquire a non-U.S. company engaged in nonfinancial activities as long as the company's U.S. operations do not exceed certain thresholds and certain other conditions are met. On January 14, 2014, the Federal Reserve Board sought comment on the appropriateness of further restrictions on the physical commodity and merchant banking activities conducted by financial holding companies under several provisions of the Bank Holding Company Act in order to address various prudential considerations, including the potential risks of such activities to the safety and soundness of financial holding companies and financial stability more broadly.

Our status as a financial holding company, and our resulting ability to engage in a broader range of nonbanking activities are dependent on Deutsche Bank AG, Deutsche Bank Trust Corporation and our two insured U.S. depository institutions being well capitalized and well managed (as defined by U.S. federal banking regula-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

58

tions) and upon our insured U.S. depository institutions meeting certain requirements under the Community Reinvestment Act. The Federal Reserve Board's and other U.S. regulators' well-capitalized standards are generally based on specified quantitative thresholds set at levels above the minimum requirements to be considered adequately capitalized. For our two insured depository institution subsidiaries, Deutsche Bank Trust Company Americas and Deutsche Bank Trust Company Delaware, the well-capitalized thresholds under the U.S. Basel 3 framework are a Common Equity Tier 1 capital ratio of 6.5 %, a Tier 1 capital ratio of 8 %, a Total capital ratio of 10 %, and a U.S. leverage ratio of 5 %. For bank holding companies, including Deutsche Bank AG and Deutsche Bank Trust Corporation, the well-capitalized thresholds are a Tier 1 capital ratio of 6 % and a Total capital ratio of 10 %, both of which are calculated for Deutsche Bank AG under its home country standards.

State-chartered banks (such as DBTCA) and state-licensed branches and agencies of foreign banks (such as our New York branch) may not, with certain exceptions that require prior regulatory approval, engage as a principal in any type of activity not permissible for their federally chartered or licensed counterparts. In addition, DBTCA and Deutsche Bank Trust Company Delaware are subject to their respective state banking laws pertaining to legal lending limits and permissible investments and activities. Likewise, the United States federal banking laws also subject state branches and agencies to the same single-borrower lending limits that apply to federal branches or agencies, which are substantially similar to the lending limits applicable to national banks. These single-borrower lending limits are based on the worldwide capital of the entire foreign bank (i.e., Deutsche Bank AG in the case of the New York branch).

The Federal Reserve Board may terminate the activities of any U.S. office of a foreign bank if it determines that the foreign bank is not subject to comprehensive supervision on a consolidated basis in its home country or that there is reasonable cause to believe that such foreign bank or its affiliate has violated the law or engaged in an unsafe or unsound banking practice in the United States or, for a foreign bank that presents a risk to the stability of the United States financial system, the home country of the foreign bank has not adopted, or made demonstrable progress toward adopting, an appropriate system of financial regulation to mitigate such risk.

The Dodd-Frank Act removed a longstanding prohibition on the payment of interest on demand deposits by our FDIC-insured bank subsidiaries and our New York branch. In addition, the lending limits applicable to our FDIC-insured state-chartered bank subsidiaries take into account credit exposures arising from derivative transactions, and the lending limits applicable to our New York branch take into account both credit exposures arising from derivative transactions as well as securities borrowing and lending transactions and repurchase and reverse repurchase agreements with counterparties.

Also, under the so-called swap "push-out" provisions of the Dodd-Frank Act, certain structured finance derivatives activities of FDIC-insured banks and U.S. branch offices of foreign banks (including our New York branch) are restricted, which may necessitate a restructuring of how we conduct certain of our derivatives activities. We and other U.S. banking organizations and FBOs must comply with the "push-out" provisions by July 2015, unless an extension period is granted.

In addition, the regulations which the Council, or the Consumer Financial Protection Bureau established under the Dodd-Frank Act, may adopt could affect the nature of the consumer activities which a bank (including our FDIC-insured bank subsidiaries and our New York branch) may conduct, and may impose restrictions and limitations on the conduct of such activities.

There are various qualitative and quantitative restrictions on the extent to which we and our nonbank subsidiaries can borrow or otherwise obtain credit from our U.S. banking subsidiaries or engage in certain other transactions involving those subsidiaries. In general, these transactions must be on terms that would ordinarily be offered to unaffiliated entities, must be secured by designated amounts of specified collateral and are subject to volume limitations. These restrictions also apply to certain transactions of our New York branch with our U.S. broker-dealers and certain of our other affiliates. Credit exposure arising from derivative transactions, securities

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

59

borrowing and lending transactions, and repurchase/reverse repurchase agreements is subject to these collateral and volume limitations.

A major focus of U.S. governmental policy relating to financial institutions is aimed at preventing money laundering and terrorist financing and compliance with economic sanctions in respect of designated countries or activities. Failure of an institution to have policies and procedures and controls in place to prevent, detect and report money laundering and terrorist financing could in some cases have serious legal, financial and reputational consequences for the institution.

New York Branch

Our New York branch is licensed by the New York Superintendent of Financial Services to conduct a commercial banking business and is required to maintain eligible high-quality assets with banks in the State of New York (up to a maximum of U.S.\$ 100 million of assets pledged so long as the New York branch remains well-rated by the New York State Superintendent of Financial Services). Should our New York branch cease to be well-rated, we may need to maintain substantial additional amounts of eligible assets. The Superintendent of Financial Services may also establish asset maintenance requirements for branches of foreign banks. In addition, the Federal Reserve Board is authorized to establish asset maintenance requirements for our New York branch under certain conditions, pursuant to the FBO Rules. Currently, no such requirements have been imposed upon our New York branch.

The New York State Banking Law authorizes the Superintendent of Financial Services to take possession of the business and property of a New York branch of a foreign bank under certain circumstances, generally involving violation of law, conduct of business in an unsafe manner, impairment of capital, suspension of payment of obligations, or initiation of liquidation proceedings against the foreign bank at its domicile or elsewhere. In liquidating or dealing with a branch's business after taking possession of a branch, only the claims of depositors and other creditors which arose out of transactions with a branch are to be accepted by the Superintendent of Financial Services for payment out of the business and property of the foreign bank in the State of New York, without prejudice to the rights of the holders of such claims to be satisfied out of other assets of the foreign bank. After such claims are paid, the Superintendent of Financial Services will turn over the remaining assets, if any, to the foreign bank or its duly appointed liquidator or receiver.

Deutsche Bank Trust Company Americas

The Federal Deposit Insurance Corporation Improvement Act of 1991 (referred to as FDICIA) provides for extensive regulation of depository institutions (such as DBTCA and its direct and indirect parent companies), including requiring federal banking regulators to take prompt corrective action with respect to FDIC-insured banks that do not meet minimum capital requirements. As an insured bank's capital level declines and the bank falls into lower categories (or if it is placed in a lower category by the discretionary action of its supervisor), greater limits are placed on its activities and federal banking regulators are authorized (and, in many cases, required) to take increasingly more stringent supervisory actions, which could ultimately include the appointment of a conservator or receiver for the bank (even if it is solvent). In addition, FDICIA generally prohibits an FDIC-insured bank from making any capital distribution (including payment of a dividend) or payment of a management fee to its holding company if the bank would thereafter be undercapitalized. If an insured bank becomes undercapitalized, it is required to submit to federal regulators a capital restoration plan guaranteed by the bank's holding company. Since the enactment of FDICIA, both of our U.S. insured banks have been categorized as well capitalized, the highest capital category under applicable regulations.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

60

DBTCA, like other FDIC-insured banks, is required to pay assessments to the FDIC for deposit insurance under the FDIC's Deposit Insurance Fund (calculated using the FDIC's risk-based assessment system). The Dodd-Frank Act changed the FDIC deposit insurance assessment framework (the amounts paid by FDIC-insured institutions into the deposit insurance fund of the FDIC), primarily by basing assessments on an FDIC-insured institution's total assets less tangible equity rather than U.S. domestic deposits, which is expected to shift a greater portion of the aggregate assessments to large FDIC-insured institutions. Additionally, in January 2015, the FDIC published guidance on brokered deposits. This guidance may result in DBTCA having to classify more of its deposits as brokered deposits, which could result in a higher assessment charge for DBTCA.

The FDIC's basic amount of deposit insurance is U.S.\$ 250,000.

Other

In the United States, our U.S.-registered broker-dealers are regulated by the SEC. Broker-dealers are subject to regulations that cover all aspects of the securities business, including sales methods, trade practices among broker-dealers, use and safekeeping of customers' funds and securities, capital structure, recordkeeping, the financing of customers' purchases and the conduct of directors, officers and employees.

Our principal U.S. SEC-registered broker-dealer subsidiary, Deutsche Bank Securities Inc., is a member of the New York Stock Exchange and is regulated by the Financial Industry Regulatory Authority (FINRA) and the individual state securities authorities in the states in which it operates. The U.S. government agencies and self-regulatory organizations, as well as state securities authorities in the United States having jurisdiction over our U.S. broker-dealer affiliates, are empowered to conduct administrative proceedings that can result in censure, fine, the issuance of cease-and-desist orders or the suspension or expulsion of a broker-dealer or its directors, officers or employees. Deutsche Bank Securities Inc. is also registered with and regulated by the SEC as an investment adviser, and by the CFTC and the National Futures Association as a futures commission merchant and commodity pool operator.

Under the Dodd-Frank Act, with certain exceptions, our entities that are swap dealers, security-based swap dealers, major swap participants or major security-based swap participants will be required to register with the SEC or CFTC, or both. We were required to provisionally register, subject to certain restrictions, at least one subsidiary as a swap dealer and provisionally registered Deutsche Bank AG and DB Energy Trading LLC effective on December 31, 2012. At a future date, we will be required to register one or more subsidiaries as security-based swap dealers with the SEC and may be required to register additional subsidiaries as swap dealers with the CFTC and certain subsidiaries as CFTC-regulated major swap participants and/or SEC-regulated major security-based swap participants. Registration, including provisional registration, as swap dealers, security-based swap dealers, major swap participants or major security-based swap participants subjects us to requirements as to capital, margin, business conduct, and recordkeeping, among other requirements.

Organizational Structure

We operate our business along the structure of our five corporate divisions. Deutsche Bank AG is the direct or indirect holding company for our subsidiaries. The following table sets forth the significant subsidiaries we own, directly or indirectly, as of December 31, 2014. We used the three-part test set out in Section 1-02 (w) of Regulation S-X under the U.S. Securities Exchange Act of 1934 to determine significance. We do not have any other subsidiaries we believe are material based on other, less quantifiable, factors.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 4: Information on the Company

61

We own 100 % of the equity and voting interests in these subsidiaries, except for Deutsche Postbank AG, of which we own shares representing approximately 94.1 % of the equity and voting rights. Further detail is included in Note 3 Acquisitions and Dispositions to the consolidated financial statements. These subsidiaries prepare financial statements as of December 31, 2014 and are included in our consolidated financial statements. Their principal countries of operation are the same as their countries of incorporation.

Subsidiary	Place of Incorporation
DB USA Corporation ¹	Delaware, United States
Deutsche Bank Americas Holding Corporation ²	Delaware, United States
German American Capital Corporation ³	Delaware, United States
DB U.S. Financial Markets Holding Corporation ⁴	Delaware, United States
Deutsche Bank Securities Inc. ⁵	Delaware, United States
DB Structured Products, Inc. ⁶	Delaware, United States
Deutsche Bank Trust Corporation ⁷	New York, United States
Deutsche Bank Trust Company Americas ⁸	New York, United States
Deutsche Bank Luxembourg S.A. ⁹	Luxembourg
Deutsche Bank Privat- und Geschäftskunden Aktiengesellschaft ¹⁰	Frankfurt am Main, Germany
DB Finanz-Holding GmbH ¹¹	Frankfurt am Main, Germany
Deutsche Postbank AG ¹²	Bonn, Germany
DWS Holding & Service GmbH ¹³	Frankfurt am Main, Germany

¹ DB USA Corporation is one of two top-level holding companies for our subsidiaries in the United States.

² Deutsche Bank Americas Holding Corporation is a second tier holding company for subsidiaries in the United States.

³ German American Capital Corporation is engaged in purchasing and holding loans from financial institutions, trading and securitization of mortgage whole loans and mortgage securities, and providing collateralized financing to counterparties.

⁴ DB U.S. Financial Markets Holding Corporation is a second tier holding company for subsidiaries in the United States.

⁵ Deutsche Bank Securities Inc. is a U.S. company registered as a broker dealer and investment advisor with the Securities and Exchange Commission and as a futures commission merchant with the Commodities Futures Trading Commission.

⁶ DB Structured Products, Inc. is a U.S. subsidiary that has ceased engaging in new business and has surrendered the licenses it holds in respect of mortgage-related activities.

⁷ Deutsche Bank Trust Corporation is a bank holding company under Federal Reserve Board regulations.

⁸ Deutsche Bank Trust Company Americas is a New York State-chartered bank and member of the Federal Reserve System. It originates loans and other forms of credit, accepts deposits, arranges financings and provides numerous other commercial banking and financial services.

⁹ The primary business of this company comprises Treasury and Markets activities, especially as a major supplier of Euro liquidity for Deutsche Bank Group. Further business activities are the international loan business, where the bank acts as lending office for continental Europe and as risk hub for the Credit Portfolio Strategies Group, and private banking. The company serves private individuals, affluent clients and small business clients with banking products.

¹⁰ The company serves private individuals, affluent clients as well as small and medium sized corporate clients with banking products.

¹¹ The company holds the majority stake in Deutsche Postbank AG.

¹² The business activities of this company comprise retail banking, business with corporate customers, money and capital markets activities as well as home savings loans.

¹³ The business activities of this company comprise acquisition, management, coordination and sale of investments in especially investment companies both nationally and internationally for its own account as well as rendering services for general and administrative functions for the investments and other comparable companies.

Property and Equipment

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

As of December 31, 2014, we operated in 71 countries out of 2,814 branches around the world, of which 66 % were in Germany. We lease a majority of our offices and branches under long-term agreements.

We continue to review our property requirements worldwide taking into account cost containment measures as well as growth initiatives in selected businesses. Please see Note 23 Property and Equipment to the consolidated financial statements for further information.

Information Required by Industry Guide 3

Please see pages S-1 through S-14 of the Supplemental Financial Information, which pages are incorporated by reference herein, for information required by SEC Industry Guide 3.

Item 4A: Unresolved Staff Comments

We have not received written comments from the Securities and Exchange Commission regarding our periodic reports under the Exchange Act, as of any day 180 days or more before the end of the fiscal year to which this annual report relates, which remain unresolved.

Item 5: Operating and Financial Review and Prospects

Overview

The following discussion and analysis should be read in conjunction with the consolidated financial statements and the related notes to them included in Item 18: Financial Statements of this document, on which we have based this discussion and analysis.

We have prepared our consolidated financial statements in accordance with IFRS as issued by the International Accounting Standards Board (IASB) and as endorsed by the European Union (EU).

Significant Accounting Policies and Critical Accounting Estimates

Our significant accounting policies are essential to understanding our reported results of operations and financial condition. Certain of these accounting policies require critical accounting estimates that involve complex and subjective judgments and the use of assumptions, some of which may be for matters that are inherently uncertain and susceptible to change. Such critical accounting estimates could change from period to period and have a material impact on our financial condition, changes in financial condition or results of operations. Critical accounting estimates could also involve estimates where management could have reasonably used another estimate in the current accounting period. Actual results may differ from these estimates if conditions or underlying circumstances were to change. See Note 1 Significant Accounting Policies and Critical Accounting Estimates to the consolidated financial statements for a discussion on our significant accounting policies and critical accounting estimates.

We have identified the following significant accounting policies that involve critical accounting estimates:

- the impairment of associates
- the impairment of financial assets available for sale
- the determination of fair value
- the recognition of trade date profit
- the impairment of loans and provisions for off-balance sheet positions
- the impairment of goodwill and other intangibles
- the recognition and measurement of deferred tax assets
- the accounting for legal and regulatory contingencies and uncertain tax positions

Recently Adopted Accounting Pronouncements and New Accounting Pronouncements

See Note 2 Recently Adopted and New Accounting Pronouncements to the consolidated financial statements for a discussion on our recently adopted and new accounting pronouncements.

Operating Results

You should read the following discussion and analysis in conjunction with our consolidated financial statements.

Executive Summary

Please see Management Report: Operating and Financial Review: Executive Summary on pages 4 through 7 of the Financial Report.

Trends and Uncertainties

For insight into the trends impacting our performance please see the Management Report: Operating and Financial Review section of the Financial Report. Key risks and uncertainties for the Bank are discussed in Item 3: Key Information Risk Factors .

The Bank's future performance and the implementation of our strategic goals could be influenced by a number of uncertainties. Challenges may arise from sustained market volatility, increasing competitive pressures, weakness of global, regional and national economic conditions and political instability in key markets.

In addition, regulatory requirements and supervisory changes continue to evolve. Regulatory changes have and may continue to increase our costs, restrict our operations, or require structural change, which could put pressure on our capital position. In addition, we are involved in litigation, arbitration and regulatory proceedings and investigations in Germany and in a number of jurisdictions outside Germany, especially in the U.S. Such matters are subject to many uncertainties.

While we seek to achieve efficiencies in our operations, the results of our OpEx Program and the realization of planned savings are dependent on the successful and timely execution of the measures we have identified. There are risks that OpEx benefits may not be fully realized or that they may impact our competitive position.

More specifically for CB&S, operations may continue to be challenged by factors including exposure of global macroeconomic growth to event risks, the potential impact of changes in US and European monetary policy, ongoing regulatory developments and the effects of further balance sheet de-leveraging, litigation charges and expenditures required to comply with regulation.

PBC may continue to face uncertainties in its operating environment. As a result of the ongoing expansionary monetary policy in the eurozone, we do not expect to experience any relief from the low interest rate environment in the near term. Additional revisions in regulatory requirements may further affect overall revenue generation capacity.

For GTB, uncertainties arise from highly competitive markets and the continued low interest rate environment. Additionally GTB's performance in future periods may also continue to be impacted by increasing cost related to more expansive and rigorous regulatory requirements.

Macroeconomic developments, such as further European sovereign debt issues, emerging market volatility and the changing regulatory environment could negatively impact the future performance of Deutsche AWM.

For NCOU, changes in the economic environment and market conditions could create uncertainty in the timeline for our de-risking strategy. A slowing in the de-risking strategy can create a heightened sensitivity to volatility in risk weighted asset calculations thereby impacting overall capital delivery in the near term. Further to the uncertainty which arises from the NCOU de-risking strategy, we expect the litigation environment to continue to be challenging.

Deutsche Bank
Annual Report 2014 on Form 20-F

Item 5: Operating and Financial Review and Prospects

64

Performance in Consolidation & Adjustments is primarily impacted by timing differences from different accounting methods used for management reporting and IFRS, plus one-off unallocated items. We still expect volatility from these items in our future results. In 2015, the Group will change its methodology to allocate to the divisions average active equity and certain revenue and cost items currently reported under Consolidation & Adjustments. This will result in the divisions attracting higher average active equity allocation compared to the prior approach and also additional charges, including bank levies, previously recorded in Consolidation & Adjustments.

Our effective tax rate was mainly impacted by non-tax deductible litigation charges and income taxes of prior periods which were partially offset by changes in the recognition and measurement of deferred taxes. The effective tax rate in future periods could continue to be influenced by the potential occurrence of specific factors.

Research and Development, Patents and Licenses

Not applicable.

Item 6: Directors, Senior Management and Employees**Directors and Senior Management**

In accordance with the German Stock Corporation Act (Aktiengesetz), we have a Management Board (Vorstand) and a Supervisory Board (Aufsichtsrat). The Stock Corporation Act prohibits simultaneous membership on both the Management Board and the Supervisory Board. The members of the Management Board are the executive officers of our company. The Management Board is responsible for managing our company and representing us in dealings with third parties. The Supervisory Board oversees the Management Board, appoints and removes its members and determines their salaries and other compensation components, including pension benefits. According to German law, our Supervisory Board represents us in dealings with members of the Management Board. Therefore, no members of the Management Board may enter into any agreement with us without the prior consent of our Supervisory Board.

German law does not require the members of the Management Board to own any of our shares to be qualified. Minimum shareholding policies, however, have been implemented in 2013/2014. In addition, German law has no requirement that members of the Management Board retire under an age limit. However, age limits for members of the Management Board are defined contractually and exist for the members of the Supervisory Board according to the Terms of Reference for our Supervisory Board.

The Supervisory Board may not make management decisions. However, German law and our Articles of Association (Satzung) require the Management Board to obtain the consent of the Supervisory Board for certain actions. The most important of these actions are:

granting general powers of attorney (Generalvollmachten). A general power of attorney authorizes its holder to represent the company in substantially all legal matters without limitation to the affairs of a specific office;

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 6: Directors, Senior Management and Employees

66

acquisitions and disposals (including transactions carried out by a subsidiary) of real estate when the value of the object exceeds 1 % of our regulatory banking capital (haftendes Eigenkapital);
 granting loans and acquiring participations if the German Banking Act requires approval by the Supervisory Board. In particular, the German Banking Act requires the approval of the Supervisory Board if we grant a loan (to the extent legally permissible) to a member of the Management Board or the Supervisory Board or one of our employees who holds a procuracy (Prokura) or general power of attorney; and
 acquisitions and disposals (including transactions carried out by a subsidiary) of other participations, insofar as the object involves more than 2 % of our regulatory banking capital. The Supervisory Board must be informed without delay of any acquisition or disposal of such participations involving more than 1 % of our regulatory banking capital.

The Management Board must submit regular reports to the Supervisory Board on our current operations and future business planning. The Supervisory Board may also request special reports from the Management Board at any time.

With respect to voting powers, a member of the Supervisory Board or the Management Board may not vote on resolutions open to a vote at a board meeting if the proposed resolution concerns:

- a legal transaction between us and the member; or
- commencement, settlement or completion of legal proceedings between us and the member.

A member of the Supervisory Board or the Management Board may not directly or indirectly exercise voting rights on resolutions open to a vote at a shareholders' meeting (Hauptversammlung, which we refer to as the General Meeting) if the proposed resolution concerns:

- ratification of the member's acts;
- a discharge of liability of the member; or
- enforcement of a claim against the member by us.

Supervisory Board and Management Board

In carrying out their duties, members of both the Management Board and Supervisory Board must exercise the standard of care of a prudent and diligent business person, and they are liable to us for damages if they fail to do so. Both boards are required to take into account a broad range of considerations in their decisions, including our interests and those of our shareholders, employees and creditors.

The liability of the members of the Management Board or the Supervisory Board under the German Stock Corporation Act for breach of their fiduciary duties is to the company rather than individual shareholders. However, also individual shareholders that hold at least 1 % or 100,000 of the subscribed capital and are granted standing by the court may invoke such liability to the company. The underlying concept is that all shareholders should benefit equally from amounts received under this liability by adding such amounts to the company's assets rather than disbursing them to plaintiff shareholders. We may waive the right to claim damages or settle these claims if at least three years have passed since the alleged breach and if the shareholders approve the waiver or settlement at the General Meeting with a simple majority of the votes cast, and provided that opposing shareholders do not hold, in the aggregate, one tenth or more of our share capital and do not have their opposition formally noted in the minutes maintained by a German notary.

Supervisory Board

Our Articles of Association require our Supervisory Board to have twenty members. In the event that the number of members on our Supervisory Board falls below twenty, the Supervisory Board maintains its authority to pass resolutions so long as at least ten members participate in the passing of a resolution, either in person or by submitting their votes in writing. If the number of members remains below twenty for more than three months or falls below ten, upon application to a competent court, the court must appoint replacement members to

serve on the board until official appointments are made.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 6: Directors, Senior Management and Employees

67

The German Co-Determination Act of 1976 (Mitbestimmungsgesetz) requires that the shareholders elect half of the members of the supervisory board of large German companies, such as Deutsche Bank, and that employees in Germany elect the other half. None of the current members of either of our boards were selected pursuant to any arrangement or understandings with major shareholders, customers or others.

Each member of the Supervisory Board generally serves for a fixed term of approximately five years. For the election of shareholder representatives, the General Meeting may establish that the terms of office of up to five members may begin or end on differing dates. Pursuant to German law, the term expires at the latest at the end of the Annual General Meeting that approves and ratifies such member's actions in the fourth fiscal year after the year in which the Supervisory Board member was elected. Supervisory Board members may also be re-elected. The shareholders may, by a majority of the votes cast in a General Meeting, remove any member of the Supervisory Board they have elected in a General Meeting. The employees may remove any member they have elected by a vote of three-quarters of the employee votes cast.

The members of the Supervisory Board elect the chairperson and the deputy chairperson of the Supervisory Board. Traditionally, the chairperson is a representative of the shareholders, and the deputy chairperson is a representative of the employees. At least half of the members of the Supervisory Board must be present at a meeting or must have submitted their vote in writing to constitute a quorum. In general, approval by a simple majority of the members of the Supervisory Board present and voting is required to pass a resolution. In the case of a deadlock, the resolution is put to a second vote. In the case of a second deadlock, the chairperson has the deciding vote.

For additional information on our Supervisory Board, including a table providing the names of and biographical information for the current members, see Corporate Governance Statement/Corporate Governance Report: Management Board and Supervisory Board: Supervisory Board on pages 496 to 500 of the Financial Report.

Standing Committees

For information on the standing committees of our Supervisory Board, please see Corporate Governance Statement/Corporate Governance Report: Management Board and Supervisory Board: Standing Committees on pages 500 to 503 of the Financial Report.

The business address of the members of the Supervisory Board is the same as our business address, Taunusanlage 12, 60325 Frankfurt am Main, Germany.

Management Board

Our Articles of Association require the Management Board to have at least three members. Our Management Board currently has eight members. The Supervisory Board has also appointed two Co-Chairmen of the Management Board.

The Supervisory Board appoints the members of the Management Board for a maximum term of five years and oversees them. They may be re-appointed or have their term extended for one or more terms of up to a maximum of five years each. The Supervisory Board may remove a member of the Management Board prior to the expiration of his or her term for good cause.

Pursuant to our Articles of Association, two members of the Management Board, or one member of the Management Board together with a holder of procuracy, may represent us for legal purposes. A holder of procuracy is an attorney-in-fact who holds a legally defined power under German law, which cannot be restricted with respect to third parties. However, pursuant to German law, the Management Board itself must resolve on certain matters as a body. In particular, it may not delegate strategic planning, coordinating or controlling responsibilities to individual members of the Management Board. The Management Board is required to ensure that shareholders are treated on an equal basis and receive equal information. The Management Board is also required to ensure appropriate risk management within our operations and to establish an internal monitoring system.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 6: Directors, Senior Management and Employees

68

Other responsibilities of the Management Board are:

- appointing key personnel;
- making decisions regarding significant credit exposures or other risks which have not been delegated to individual risk management units in accordance with the terms of reference (Geschäftsordnung) for the Management Board and terms of reference for our Risk Executive Committee;
- calling shareholders' meetings;
- filing petitions to set aside shareholders' resolutions;
- preparing and executing shareholders' resolutions; and
- reporting to the Supervisory Board.

For additional information on our Management Board, including the names of and biographical information for the current members, see

Corporate Governance Statement/Corporate Governance Report: Management Board and Supervisory Board: Management Board on pages 492 to 495 of the Financial Report.

Board Practices of the Management Board

The terms of reference for the Management Board are in accordance with the Supervisory Board resolution of October 29, 2014. These terms of reference provide that in addition to the joint overall responsibility of the Management Board as a group, the individual responsibilities of the members of the Management Board are determined by the business allocation plan for the Management Board. The terms of reference stipulate that, notwithstanding the Management Board's joint management and joint responsibility, and the functional responsibilities of the operating committees of our corporate divisions and of the functional committees, the members of the Management Board each have a primary responsibility for the divisions or functions to which they are assigned, as well as for those committees of which they are members.

In addition to managing our company, some of the members of our Management Board also supervise and advise our affiliated companies. As permitted by German law, some of the members also serve as members of the supervisory boards of other companies. Also, to assist us in avoiding conflicts of interest, the members of our Management Board have generally undertaken not to assume chairmanships of supervisory boards of companies outside our consolidated group.

Section 161 of the Stock Corporation Act requires that the management board and supervisory board of any German exchange-listed company declare annually that the recommendations of the German Corporate Governance Code have been adopted by the company or which recommendations have not been so adopted. These recommendations go beyond the requirements of the Stock Corporation Act. The Management Board and Supervisory Board issued a new Declaration of Conformity in accordance with § 161 German Stock Corporation Act (AktG) on October 29, 2014, which is available on our Internet website at www.deutsche-bank.com/corporate-governance under the heading "Declarations of Conformity".

For information on the Management Board's terms of office, please see Corporate Governance Statement/Corporate Governance Report: Management Board and Supervisory Board: Management Board on pages 492 to 495 of the Financial Report. For details of the Management Board's service contracts providing benefits upon termination, please see Compensation Report: Pension and Transitional Benefits and Compensation Report: Other Benefits upon Premature Termination on pages 289 to 290 of the Management Report.

For a description of our employee share programs, please see Note 35 Employee Benefits to the consolidated financial statements.

Item 7: Major Shareholders and Related Party Transactions

Major Shareholders

On December 31, 2014, our issued share capital amounted to 3,530,939,215 divided into 1,379,273,131 no par value ordinary registered shares.

On December 31, 2014, we had 599,320 registered shareholders. The majority of our shareholders are retail investors in Germany. On that date, 176,629,640 of our shares were registered in the names of 806 shareholders resident in the United States, representing 12.81 % of our share capital.

The German Securities Trading Act (Wertpapierhandelsgesetz) requires investors in publicly-traded corporations whose investments reach certain thresholds to notify both the corporation and the BaFin of such change within four trading days. The minimum disclosure threshold is 3 % of the corporation's issued voting share capital.

Table of Contents

Deutsche Bank
Annual Report 2014 on Form 20-F

Item 7: Major Shareholders and Related Party Transactions

70

Paramount Services Holdings Ltd., British Virgin Islands, an investment vehicle ultimately beneficially owned and controlled by His Excellency Sheikh Hamad Bin Jassim Bin Jabor Al-Thani, has notified us that as of June 25, 2014 it held 5.83 % of our shares. We have received no further notification by Paramount Services Holdings Ltd., British Virgin Islands, since that date.

BlackRock, Inc., New York, has notified us that as of September 25, 2014 it held 6.62 % of our shares. We have received no further notification by BlackRock, Inc., New York, since that date.

We are neither directly nor indirectly owned nor controlled by any other corporation, by any government or by any other natural or legal person severally or jointly.

Pursuant to German law and our Articles of Association, to the extent that we may have major shareholders at any time, we may not give them different voting rights from any of our other shareholders.

We are aware of no arrangements which may at a subsequent date result in a change in control of our company.

Related Party Transactions

We have business relationships with a number of the companies in which we own significant equity interests. We also have business relationships with a number of companies where members of our Management Board also hold positions on boards of directors. Our business relationships with these companies cover many of the financial services we provide to our clients generally. For more detailed information, refer to Note 38 Related Party Transactions to the consolidated financial statements.

We conduct our business with these companies on terms equivalent to those that would prevail if we did not have equity holdings in them or management members in common, and we have conducted business with these companies on that basis in 2014 and prior years. None of these transactions is or was material to us.

Among our business with related party companies in 2014, there have been and currently are loans, guarantees and commitments, which totaled 806 million (including loans amounting to 318 million) as of December 31, 2014, compared to 825 million as of December 31, 2013.

All these credit exposures

were made in the ordinary course of business,
were made on substantially the same terms, including interest rates and collateral, as those prevailing at the time for comparable transactions with other persons, and
did not involve more than the normal risk of collectability or presented other unfavorable features compared to loans to nonrelated parties at their initiation.

We have not conducted material business with parties that fall outside of the definition of related parties, but with whom we or our related parties have a relationship that enables the parties to negotiate terms of material transactions that may not be available from other, more clearly independent, parties on an arm's-length basis.

Related Party Impaired Loans

In addition to our other shareholdings, we hold acquired equity interests in some of our clients arising from our efforts to protect our then-outstanding lending exposures to them.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 7: Major Shareholders and Related Party Transactions

71

Impaired loans to related parties which may exhibit more than normal risk of collectability or present other unfavorable features compared to performing loans to related parties decreased by 16 million to 19 million, from December 31, 2013, principally driven by a large loan that was impaired as of December 31, 2013 ceasing to be impaired. The following table presents an overview of the impaired loans we hold of some of our related parties as of December 31, 2014.

in m.	Amount outstanding as of December 31, 2014	Largest amount outstanding January 1, to December 31, 2014	Provision for loan losses in 2014 ¹	Allowance for loan losses as of December 31, 2014 ¹	Nature of the loan and transaction in which incurred
Customer A	1	1	0	1	Uncollateralized shareholder loan bearing interest at 7.55 % per annum. The loan is held at contractual terms but interest is accreted at the effective interest rate applied to the carrying amount.
Customer B	2	2	0	1	Consisting of a claim from a collateralized real estate leasing finance unpaid at maturity, bearing interest at 6.62 % per annum. The exposure is past due and payable, interest is accreted at the effective interest rate applied to the carrying amount.
Customer C	4	4	0	2	Consisting of a claim from a collateralized real estate leasing finance unpaid at maturity, bearing interest at 4.73 % per annum. The exposure is past due and payable, interest is accreted at the effective interest rate applied to the carrying amount.
Customer D	0	1	0	0	Consisting of a claim from a collateralized real estate leasing finance unpaid at maturity, bearing interest at 5.28 % per annum. The exposure is past due and payable, interest is accreted at the effective interest rate applied to the carrying amount.
Customer E	11	11	(5)	6	Consisting of a real estate finance loan and guarantees which were honored after the company filed for liquidation. The exposure is past due and payable. Insolvency proceedings opened and still ongoing, closure of proceedings not foreseeable yet. Liquidation of assets and guarantee management largely finalized.
Total	19	n/a²	(5)	10	

¹ The allowance for loan losses is calculated by subtracting the net present value of future expected cash flows from the current outstanding. The year-end balance of the loan loss allowance is in most cases lower than the amount of provision for credit losses required for the recognition due to unwinding effects based upon passage of time which are recognized in interest income.

² Simply adding the largest amounts outstanding of the individual borrowers during the reporting period to arrive at an aggregate outstanding is not applicable as it would imply the assumption that the largest outstandings for all borrowers occurred simultaneously.

In the above table, customer A is an unconsolidated subsidiary of ours, customers B, C and D are investments held at equity and customer E is a shareholding in which we hold a participation of 10 % or more of the voting rights. Impaired loans to all related party customers have been

carried forward from the previous year end.

We have not disclosed the names of the related party customers described above because we have concluded that such disclosure would violate applicable privacy laws, such as customer confidentiality and data protection laws, and those customers have not waived application of these privacy laws. A legal opinion regarding the applicable privacy laws is filed as Exhibit 14.1 hereto.

Item 8: Financial Information**Consolidated Statements and Other Financial Information****Consolidated Financial Statements**

The Financial Statements of this Annual Report on Form 20-F consist of the Consolidated Financial Statements including Notes 1 to 45 thereto, which are set forth as Part 2 of the Financial Report, and, as described in Note 1 Significant Accounting Policies and Critical Accounting Estimates thereto in the third paragraph under Basis of Accounting, certain parts of the Management Report set forth as Part 1 of the Financial Report. Such Consolidated Financial Statements have been audited by KPMG AG Wirtschaftsprüfungsgesellschaft, as described in their Report of Independent Registered Public Accounting Firm included on page 455 of the Financial Report.

Legal Proceedings

General. We and our subsidiaries operate in a legal and regulatory environment that exposes us to significant litigation risks. As a result, we are involved in litigation, arbitration and regulatory proceedings and investigations in Germany and in a number of jurisdictions outside Germany, including the United States, arising in the ordinary course of our businesses. Please refer to Note 29 Provisions to the consolidated financial statements for descriptions of certain significant legal proceedings. Additional legal proceedings that may have, or have had in the recent past, significant effects on our financial position or profitability are described below.

Charter/BMY Matter. On December 8, 2014, the United States Department of Justice (DOJ) filed a civil complaint against, among others, Deutsche Bank, alleging that the bank owes more than \$190 million in taxes, penalties, and interest relating to two transactions that occurred between March and May 2000. The DOJ s complaint arises out of Deutsche Bank s March 2000 acquisition of Charter Corp. (Charter) and its subsequent sale in May 2000 of Charter to an unrelated entity, BMY Statutory Trust (the Trust). Charter s primary asset, both at the time of purchase by Deutsche Bank and sale to the Trust, was appreciated Bristol-Myers Squibb Company (BMY) stock. When the BMY stock was sold by the Trust, the Trust offset its gain with a loss from an unrelated transaction. The Internal Revenue Service subsequently disallowed the loss on audit exposing the BMY gain to taxation. The IRS assessed additional tax, penalties and interest against the Trust, which have not been paid. Relying on certain theories, including fraudulent conveyance, the DOJ is now seeking to recoup from Deutsche Bank the taxes, plus penalties and interest, owed by the Trust. The matter is in the early stages.

City of Milan Matters. In January 2009, the City of Milan (the City) issued civil proceedings in the District Court of Milan against Deutsche Bank and three other banks (together the Banks) in relation to a 2005 bond issue by the City (the Bond) and a related swap transaction which was subsequently restructured several times between 2005 and 2007 (the Swap) (the Bond and Swap together, the Transaction). The City sought damages and/or other remedies on the grounds of alleged fraudulent and deceitful acts and alleged breach of advisory obligations. During March 2012, the City and the Banks agreed to discharge all existing civil claims between them in respect of the Transaction, with no admission of liability by the Banks. While some aspects of the Swap remain in place between Deutsche Bank and the City, others were terminated as part of the civil settlement. As a further condition of the civil settlement, the sums seized from the Banks by the Milan Prosecutor (in the case of Deutsche Bank, 25 million) were returned by the Prosecutor to the Banks, despite this seizure having been part of the trial described below. Deutsche Bank also received a small interest payment in respect of the seized sum.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 8: Financial Information

73

In March 2010, at the Milan Prosecutor's request, the Milan judge of the preliminary hearing approved the indictment of each of the Banks and certain of their employees (including two current employees of Deutsche Bank). The indictments of the employees were for alleged criminal offences relating to the Swap and subsequent restructuring, in particular fraud against a public authority. The Banks were charged with an administrative (non-criminal) offence of having systems and controls that did not prevent the employees' alleged crimes. A first instance verdict was handed down on December 19, 2012. This verdict found all the Banks and certain employees, including the two Deutsche Bank employees, guilty of the charges against them. A reasoned judgment was handed down on February 3, 2013. Deutsche Bank and its employees filed appeals of this judgment in May 2013, and the appeals commenced on January 30, 2014. On March 7, 2014, the Milan Court of Appeal upheld all the grounds of appeal and quashed both the criminal convictions of the employees and the administrative liability of the Banks. In its reasoned judgment published on June 3, 2014, the appeal court held that the facts pleaded before the court did not occur and that the Bank's compliance model was adequate and effective. The prosecutor did not file an appeal to this judgment by the deadline of July 21, 2014. Deutsche Bank received a stamped final copy of the judgment on September 26, 2014 and has been advised that the matter is now concluded.

Corporate Securities Matters. Deutsche Bank and Deutsche Bank Securities Inc. (DBSI) regularly act in the capacity of underwriter and sales agent for debt and equity securities of corporate issuers and are from time to time named as defendants in litigation commenced by investors relating to those securities.

Deutsche Bank and DBSI, along with numerous other financial institutions, have been sued in the United States District Court for the Southern District of New York in various actions in their capacity as underwriters and sales agents for debt and equity securities issued by American International Group, Inc. (AIG) between 2006 and 2008. The complaint alleges, among other things, that the offering documents failed to reveal that AIG had substantial exposure to losses due to credit default swaps, that AIG's real estate assets were overvalued, and that AIG's financial statements did not conform to GAAP. Fact discovery is complete. On October 7, 2014, the court granted preliminary approval to a proposed settlement of the action in which AIG is providing consideration for the settlement. Approval of the settlement will result in Deutsche Bank and DBSI being released of all claims. The hearing on the fairness of the settlement has been scheduled for March 2015.

DBSI, along with numerous other financial institutions, was named as a defendant in a putative class action lawsuit pending in the United States District Court for the Southern District of New York relating to alleged misstatements and omissions in the registration statement of General Motors Company (GM) in connection with GM's November 18, 2010 initial public offering (IPO). DBSI acted as an underwriter for the offering. On September 4, 2014, the court dismissed all of the plaintiffs' claims with prejudice. The court also denied plaintiffs' request for leave to further amend the complaint. The plaintiffs have filed an appeal. The underwriters, including DBSI, received a customary agreement to indemnify from GM as issuer in connection with the offering, upon which they have notified GM that they are seeking indemnity.

CO2 Emission Rights. The Frankfurt am Main Office of Public Prosecution (the OPP) is investigating alleged value-added tax (VAT) fraud in connection with the trading of CO2 emission rights by certain trading firms, some of which also engaged in trading activity with Deutsche Bank. The OPP alleges that certain employees of Deutsche Bank knew that their counterparties were part of a fraudulent scheme to avoid VAT on transactions in CO2 emission rights, and it searched Deutsche Bank's head office and London branch in April 2010 and issued various requests for documents. In December 2012, the OPP widened the scope of its investigation and again searched Deutsche Bank's head office. It alleges that certain employees deleted e-mails of suspects shortly before the 2010 search and failed to issue a suspicious activity report under the Anti-Money Laundering Act which, according to the OPP, was required. It also alleges that Deutsche Bank filed an incorrect VAT return for 2009, which was signed by two members of the Management Board, and incorrect monthly returns for September 2009 to February 2010. Deutsche Bank is cooperating with the OPP.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 8: Financial Information

74

Dole Food Company. DBSI and Deutsche Bank AG, New York Branch (DBNY) have been named as co-defendants in a class action pending in Delaware Court of Chancery that was brought by former shareholders of Dole Food Company, Inc. (Dole). Plaintiffs allege that defendant David H. Murdock and certain members of Dole's board and management (who are also named as defendants) breached their fiduciary duties, and that DBSI and DBNY aided and abetted in those breaches, in connection with Mr. Murdock's privatization of Dole, which closed on November 1, 2013 (the Transaction). Plaintiffs claim approximately U.S. \$250 million in damages. On February 5, 2015, the Delaware Court of Chancery denied the motion for summary judgment of DBSI and DBNY. Trial in this matter commenced on February 23, 2015. DBSI and DBNY are parties to customary indemnity agreements from Dole (and certain of its affiliates) in connection with the Transaction, and DBSI and DBNY have notified Dole (and its relevant affiliates) that they are seeking indemnity.

ISDAFIX. Deutsche Bank has received requests for information from certain regulatory authorities concerning the setting of ISDAFIX benchmarks, which provide average mid-market rates for fixed interest rate swaps. The Bank is cooperating with these requests. In addition, the Bank has been named as a defendant in five putative class actions that were consolidated in the United States District Court for the Southern District of New York asserting antitrust, fraud, breach of contract and unjust enrichment claims relating to a purported conspiracy to manipulate the U.S. dollar ISDAFIX benchmark. Plaintiffs filed an amended complaint on February 12, 2015. Defendants intend to move to dismiss the amended complaint.

Kaupthing CLN Claims. In June 2012, Kaupthing hf, an Icelandic stock corporation, (acting through its Winding-up Committee) issued Icelandic law clawback claims for approximately \$509 million (plus interest) against Deutsche Bank in both Iceland and England. The claims relate to leveraged credit linked notes, referencing Kaupthing, issued by Deutsche Bank to two British Virgin Island special purpose vehicles (SPVs) in 2008. The SPVs were ultimately owned by high net worth individuals. Kaupthing claims to have funded the SPVs and alleges that Deutsche Bank was or should have been aware that Kaupthing itself was economically exposed in the transactions. It is claimed that the transactions are voidable by Kaupthing on a number of alternative grounds, including the ground that the transactions were improper because one of the alleged purposes of the transactions was to allow Kaupthing to influence the market in its own CDS (credit default swap) spreads and thereby its listed bonds. Additionally, in November 2012, an English law claim (with allegations similar to those featured in the Icelandic law claims) was commenced by Kaupthing against Deutsche Bank in London. Deutsche Bank filed its defense in the Icelandic proceedings in late February 2013 and continues to defend the claims. In February 2014, both proceedings in England were stayed pending final determination of the Icelandic proceedings. Additionally, in December 2014, the SPVs and their Joint Liquidators served Deutsche Bank with substantively similar claims arising out of the CLN transactions against Deutsche Bank and other defendants in England. The SPVs' claims are not expected to increase Deutsche Bank's overall potential liability in respect of the CLN transactions beyond the amount already claimed by Kaupthing.

Monte Dei Paschi. In February 2013 Banca Monte Dei Paschi Di Siena (MPS) issued civil proceedings in Italy against Deutsche Bank AG alleging that Deutsche Bank assisted former MPS senior management in an accounting fraud on MPS, by undertaking repo transactions with MPS and Santorini , a wholly owned SPV of MPS, which helped MPS defer losses on a previous transaction undertaken with Deutsche Bank. MPS claimed at least \$500 million in damages. Subsequently, in July 2013, the Fondazione Monte Dei Paschi, MPS' largest shareholder, also issued civil proceedings in Italy for damages based on substantially the same facts. In December 2013, Deutsche Bank reached an agreement with MPS in relation to the transactions that resolves the civil proceedings by MPS. The civil proceedings by the Fondazione Monte Dei Paschi remain pending.

A criminal investigation was launched by the Siena Public Prosecutor into the transactions and certain unrelated transactions entered into by a number of other international banks with MPS. Such investigation was moved in September 2014 from Siena to the Milan Public Prosecutors as a result of a change in the alleged charges being investigated. No charges have yet been brought. Separately, Deutsche Bank has also received requests for information from certain regulators relating to the original transactions, including with respect to Deutsche Bank's accounting for its MPS-related transactions and alleged failures by Deutsche Bank's man-

75

agement adequately to supervise the individuals involved in the matter. Deutsche Bank is cooperating with these regulators.

Ocala Litigation. Deutsche Bank is a secured creditor of Ocala Funding LLC (Ocala), a commercial paper vehicle sponsored by Taylor Bean & Whitaker Mortgage Corp. (Taylor Bean), which ceased mortgage lending operations and filed for bankruptcy protection in August 2009. Bank of America is the trustee, collateral agent, custodian and depository agent for Ocala. Deutsche Bank commenced a civil litigation in the United States District Court for the Southern District of New York against Bank of America resulting from Bank of America's failure to secure and safeguard cash and mortgage loans that secured Deutsche Bank's commercial paper investment. This litigation is in discovery.

Parmalat Litigation. Following the bankruptcy of the Italian company Parmalat, prosecutors in Parma conducted a criminal investigation against various bank employees, including employees of Deutsche Bank, and brought charges of fraudulent bankruptcy against a number of Deutsche Bank employees and others. The trial commenced in September 2009 and is ongoing.

Certain retail bondholders and shareholders have alleged civil liability against Deutsche Bank in connection with the above-mentioned criminal proceedings. Deutsche Bank has made a formal settlement offer to those retail investors who have asserted claims against Deutsche Bank. This offer has been accepted by some of the retail investors. The outstanding claims will be heard during the criminal trial process.

In January 2011, a group of institutional investors (bondholders and shareholders) commenced a civil claim for damages, in an aggregate amount of approximately 130 million plus interest and costs, in the Milan courts against various international and Italian banks, including Deutsche Bank and Deutsche Bank S.p.A., on allegations of cooperation with Parmalat in the fraudulent placement of securities and of deepening the insolvency of Parmalat. On January 26, 2015, the court in Milan dismissed the claim on the merits and awarded costs to the banks. The claimants now have a period of time in which to decide whether to appeal.

Pas-de-Calais Habitat. On May 31, 2012, Pas-de-Calais Habitat (PDCH), a public housing office, initiated proceedings before the Paris Commercial Court (the Court) against Deutsche Bank in relation to four swap contracts entered into in 2006, restructured on March 19, 2007 and January 18, 2008 and subsequently restructured in 2009 and on June 15, 2010. PDCH asks the Court to declare the March 19, 2007 and January 18, 2008 swap contracts (the Swap Contracts) null and void, or terminated, or to grant damages to PDCH in an amount of approximately 170 million on the grounds, inter alia, that Deutsche Bank committed fraudulent and deceitful acts, manipulated the Libor and Euribor rates which are used as a basis for calculating the sums due by PDCH under the Swap Contracts and has breached its obligations to warn, advise and inform PDCH. A hearing date is set in March 2015 for the filing of PDCH's submissions in reply. The earliest date for a hearing on the merits would be in the third quarter of 2015.

Postbank Voluntary Public Takeover Offer. On September 12, 2010, Deutsche Bank announced the decision to make a takeover offer for the acquisition of all shares in Deutsche Postbank AG. On October 7, 2010, the Bank published the official offer document. In its takeover offer, Deutsche Bank offered to Postbank shareholders a consideration of 25 for each Postbank share.

In November 2010, a former shareholder of Postbank, Effecten-Spiegel AG, which had accepted the takeover offer, brought a claim against Deutsche Bank alleging that the offer price was too low and was not determined in accordance with the applicable law of the Federal Republic of Germany. The plaintiff alleges that Deutsche Bank had been obliged to make a mandatory takeover offer for all shares in Deutsche Postbank AG in 2009 already. The plaintiff avers that, in 2009, the voting rights of Deutsche Post AG in Deutsche Postbank AG had to be attributed to Deutsche Bank AG pursuant to Section 30 of the German Takeover Act.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 8: Financial Information

76

The Cologne regional court dismissed the claim in 2011 and the Cologne appellate court dismissed the appeal in 2012. The Federal Court set aside the Cologne appellate court's judgment and referred the case back to the appellate court. In its judgment, the Federal Court stated that the appellate court had not sufficiently considered the plaintiff's allegation of an acting in concert between Deutsche Bank AG and Deutsche Post AG in 2009. The Cologne appellate court has scheduled an oral hearing for April 29, 2015 and has indicated that the chairman of Deutsche Post's management board may be heard as a witness. A formal resolution to take evidence has, however, not yet been made by the appellate court.

In 2014, some further former shareholders of Deutsche Postbank AG, who accepted the 2010 tender offer, brought similar claims as Effecten-Spiegel AG against Deutsche Bank. The Bank is of the opinion that all these actions, including the action by Effecten-Spiegel AG, are without merit and is defending itself against the claims.

Sebastian Holdings Litigation. Deutsche Bank is in litigation in the United Kingdom and the United States with Sebastian Holdings Inc., a Turks and Caicos company (SHI). The dispute arose in October 2008 when SHI accumulated trading losses and subsequently failed to meet margin calls issued by Deutsche Bank.

The U.K. litigation was commenced by Deutsche Bank to recover approximately U.S. \$ 246 million owed by SHI after the termination of two sets of master trading agreements with SHI. As a counterclaim, SHI duplicated aspects of its claim in the U.S. litigation (described below). The pleaded counterclaim, although not fully specified and containing elements which may have been duplicative, was for at least NOK 8.28 billion (around 955 million or U.S. \$ 1.08 billion at recent exchange rates, which do not necessarily equate to the rates applicable to the claim), plus substantial consequential loss claims based primarily on the lost profits SHI claimed it would have made on the moneys allegedly lost.

Judgment in the English Commercial Court was handed down in November 2013. SHI was found liable to Deutsche Bank for approximately U.S. \$ 236 million, plus interest. Deutsche Bank was awarded 85 % of costs, including an interim costs award of GBP 34 million. SHI's counterclaim was denied in full. SHI applied for permission to appeal elements of this decision but in July 2014 the Court of Appeal ordered that as a condition of SHI continuing to prosecute its appeal it must pay into court the judgment debt, plus interest and costs, by August 27, 2014. SHI failed to comply with the Court of Appeal's order and applied to the Supreme Court for permission to appeal such order, but on February 16, 2015 the Supreme Court refused SHI permission. The appeal has now been struck out.

In June 2014, Deutsche Bank won an action in the English Commercial Court against Mr. Alexander Vik (SHI's sole shareholder and director) personally who was held liable to Deutsche Bank in respect of the GBP 34 million interim costs award, plus a further GBP 2 million in interest accrued since November 2013 and Deutsche Bank's costs. Such sums were paid by Mr. Vik who has since obtained permission to appeal this decision in the Court of Appeal, but no appeal date has yet been set.

The U.S. litigation relates to a damages claim brought by SHI against Deutsche Bank in New York State court, arising out of the same circumstances as Deutsche Bank's suit against SHI in the U.K. and seeking damages of at least U.S. \$ 2.5 billion in an amended complaint filed January 10, 2011. The New York State Court has granted Deutsche Bank's motion to dismiss SHI's tort claims, certain of its contract and quasi-contract claims, and its claims for punitive damages, which ruling has been affirmed by the Appellate Division. SHI has filed a motion for leave to file an amended complaint, and Deutsche Bank has filed a motion for summary judgment dismissing the action. The Court heard argument on the two motions on January 7, 2015 and reserved decision. No trial date has been set.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 8: Financial Information

77

In November and December 2013, Deutsche Bank commenced actions in Connecticut and New York seeking to enforce the English judgment against SHI and Mr. Vik. SHI's and Mr. Vik's jurisdictional motions to dismiss the Connecticut action were withdrawn, and their motions to strike the complaint for failure to state a claim were denied by the Court on January 6, 2015. Discovery is now beginning. The Connecticut court has scheduled the case for trial commencing November 10, 2015. The English judgment against SHI has been recognized in Connecticut, and, on July 18, 2014, a New York judge granted Deutsche Bank summary judgment in its claim to recognize the English judgment against SHI in New York. In addition, Deutsche Bank has brought claims in New York against SHI, Mr. Vik, and other defendants, including Mr. Vik's wife and a family trust, in respect of fraudulent transfers that stripped SHI of assets in October 2008. The action also seeks to enforce the English judgment against Mr. Vik.

Trust Preferred Securities Litigation. Deutsche Bank and certain of its affiliates and officers were the subject of a consolidated putative class action, filed in the United States District Court for the Southern District of New York, asserting claims under the federal securities laws on behalf of persons who purchased certain trust preferred securities issued by Deutsche Bank and its affiliates between October 2006 and May 2008. The court dismissed the plaintiffs' second amended complaint with prejudice, which was affirmed by the United States Court of Appeals for the Second Circuit. On July 30, 2014, the plaintiffs filed a petition for rehearing and rehearing en banc with the Second Circuit. On October 16, 2014, the Second Circuit denied the petition. In February 2015, the plaintiffs filed a petition for a writ of certiorari seeking review by the United States Supreme Court.

ZAO FC Eurokommerz. On December 17, 2013, the liquidator of ZAO FC Eurokommerz commenced proceedings in the Arbitrazh Court of the City of Moscow against Deutsche Bank. The claim amounts to approximately 210 million and relates to the repayment of a RUB 6.25 billion bridge loan facility extended to ZAO FC Eurokommerz on August 21, 2007. The bridge loan was repaid in full on December 21, 2007. LLC Trade House, a creditor of ZAO FC Eurokommerz, filed for bankruptcy on July 31, 2009. The liquidator alleges, among other things, (i) that Deutsche Bank must have known that ZAO FC Eurokommerz was in financial difficulties at the time of repayment and (ii) that the bridge loan was repaid from the proceeds of a securitization transaction which was found to be invalid and consequently the proceeds should not have been available to repay the bridge loan. The first instance hearing on the merits of the claim took place on December 23, 2014. The judge found in favor of Deutsche Bank on the basis of the statute of limitations and the absence of evidence to prove that ZAO FC Eurokommerz was in financial difficulties at the time the loan was repaid and that an abuse of rights was committed by Deutsche Bank when accepting the contested repayment. The liquidator may appeal the decision. We have received no indication that any notice of appeal was received by the court prior to the applicable deadline.

Dividend Policy

We generally pay dividends each year. However, we may not pay dividends in the future at rates we have paid them in previous years. The dividend proposed for 2014 is 0.75, compared to dividends paid of 0.75 for 2013 and 0.75 for 2012. If we are not profitable, we may not pay dividends at all. If we fail to meet the capital adequacy requirements or the liquidity requirements under the Banking Act, the BaFin or the European Central Bank may suspend or limit the payment of dividends. See Item 4: Information on the Company Regulation and Supervision Regulation and Supervision in Germany .

Table of Contents

Deutsche Bank
Annual Report 2014 on Form 20-F

Item 8: Financial Information

78

Under German law, our dividends are based on the unconsolidated results of Deutsche Bank AG as prepared in accordance with German accounting rules. Our Management Board, which prepares the annual financial statements of Deutsche Bank AG on an unconsolidated basis, and our Supervisory Board, which reviews them, first allocate part of Deutsche Bank's annual surplus (if any) to our statutory reserves and to any losses carried forward, as it is legally required to do. They then allocate the remainder between other revenue reserves (or retained earnings) and balance sheet profit. They may allocate up to one-half of this remainder to other revenue reserves, and must allocate at least one-half to balance sheet profit. A profit distribution from balance sheet profit is only permitted to the extent that the balance sheet profit plus distributable earnings exceeds potential dividend blocking items, which consist of deferred tax assets, self-developed software and unrealized gains on plan assets, all net of respective deferred tax liabilities.

We then distribute the full amount of the balance sheet profit not subject to dividend blocking of Deutsche Bank AG if the Annual General Meeting so resolves. The Annual General Meeting may resolve a non-cash distribution instead of, or in addition to, a cash dividend. However, we are not legally required to distribute our balance sheet profit to our shareholders to the extent that we have issued participatory rights (Genussrechte) or granted a silent participation (stille Gesellschaft) that accord their holders the right to a portion of our distributable profit.

We declare dividends by resolution of the Annual General Meeting and pay them once a year. Dividends approved at a General Meeting are payable on the first stock exchange trading day after that meeting, unless otherwise decided at that meeting. In accordance with the German Stock Corporation Act, the record date for determining which holders of our ordinary shares are entitled to the payment of dividends, if any, or other distributions whether cash, stock or property, is the date of the General Meeting at which such dividends or other distributions are declared. If we issue a new class of shares, our Articles of Association permit us to declare a different dividend entitlement for the new class of shares.

Significant Changes

Except as otherwise stated in this document, there have been no significant changes subsequent to December 31, 2014.

Item 9: The Offer and Listing

79

Item 9: The Offer and Listing**Offer and Listing Details and Markets**

Our share capital consists of ordinary shares issued in registered form without par value. Under German law, shares without par value are deemed to have a nominal value equal to the total amount of share capital divided by the number of shares. Our shares have a nominal value of 2.56 per share.

The principal trading market for our shares is the Frankfurt Stock Exchange. Our shares are also traded on the six other German stock exchanges (Berlin, Duesseldorf, Hamburg, Hanover, Munich and Stuttgart), on the Eurex and the New York Stock Exchange.

We maintain a share register in Frankfurt am Main and, for the purposes of trading our shares on the New York Stock Exchange, a share register in New York.

All shares on German stock exchanges trade in euros, and all shares on the New York Stock Exchange trade in U.S. dollars. The following table sets forth, for the calendar periods indicated, high, low and period-end prices for our shares as reported by the Frankfurt Stock Exchange and the New York Stock Exchange.

	Price per share (Xetra) ¹			Price per share (NYSE) ²		
	High (in €)	Low (in €)	Period-end (in €)	High (in U.S.\$)	Low (in U.S.\$)	Period-end (in U.S.\$)

Memorandum and Articles of Association

The following is a summary of certain information relating to certain provisions of our Articles of Association, our share capital and German law. This summary is not complete and is qualified by reference to our Articles of Association and German law in effect at the date of this filing. Copies of our Articles of Association are publicly available at the Commercial Register in Frankfurt am Main, and an English translation is filed as Exhibit 1.1 to this Annual Report.

Our Business Objectives

Section 2 of our Articles of Association sets out the objectives of our business:

- to transact all aspects of banking business;
- to provide financial and other services; and
- to promote international economic relations.

Our Articles of Association permit us to pursue these objectives directly or through subsidiaries and affiliated companies.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

81

Our Articles of Association also provide that, to the extent permitted by law, we may transact all business and take all steps that appear likely to promote our business objectives. In particular, we may:

- acquire and dispose of real estate;
- establish branches in Germany and abroad;
- acquire, administer and dispose of participations in other enterprises; and
- conclude intercompany agreements (Unternehmensverträge).

Supervisory Board and Management Board

For more information on our Supervisory Board and Management Board, see Item 6: Directors, Senior Management and Employees.

Voting Rights and Shareholders Meetings

Each of our shares entitles its registered holder to one vote at our General Meeting. Our Annual General Meeting takes place within the first eight months of our fiscal year. Pursuant to our Articles of Association, we may hold the meeting in Frankfurt am Main, Düsseldorf or any other German city with over 500,000 inhabitants. Unless a shorter period is permitted by law, we must give the notice convening the General Meeting at least 30 days before the last day on which shareholders can register their attendance of the General Meeting (which is the fifth day immediately preceding that General Meeting). We are required to include details regarding the shareholder attendance registration process and the issuance of admission cards in our invitation to the General Meeting.

The Management Board or the Supervisory Board may also call an extraordinary General Meeting. Shareholders holding in the aggregate at least 5 % of the nominal value of our share capital may also request that such a meeting be called.

According to our Articles of Association our shares are issued in the form of registered shares. For purposes of registration in the share register, all shareholders are required to notify us of the number of shares they hold and, in the case of natural persons, of their name, address and date of birth and, in the case of legal persons, of their registered name, business address and registered domicile. Both being registered in our share register and the timely registration for attendance of the General Meeting constitute prerequisite conditions for any shareholder's attendance and exercise of voting rights at the General Meeting. Shareholders may register their attendance of a General Meeting with the Management Board (or as otherwise designated in the invitation) by written notice or electronically, no later than the fifth day immediately preceding the date of that General Meeting. Any shareholders who have failed to comply with certain notification requirements summarized under Notification Requirements below are precluded from exercising any rights attached to their shares, including voting rights.

Under German law, upon our request a registered shareholder must inform us whether that shareholder owns the shares registered in its name or whether that shareholder holds the shares for any other person as a nominee shareholder. Both the nominee shareholder and the person for whom the shares are held have an obligation to provide the same personal data as required for registration in the share register with respect to the person for whom the shares are held. For so long as a registered shareholder does not provide the requested information as to its holding of the shares or, in the case of nominee shareholding, the required information about the person for whom the shares are held has not been provided, the shares held by the registered shareholder carry no voting rights.

Shareholders may appoint proxies to represent them at General Meetings. As a matter of German law, a proxy relating to voting rights granted by shares may be revoked at any time.

As a foreign private issuer, we are not required to file a proxy statement under U.S. securities law. The proxy voting process for our shareholders in the United States is substantially similar to the process for publicly held companies incorporated in the United States.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

82

The Annual General Meeting normally adopts resolutions on the following matters:

- appropriation of distributable balance sheet profits (Bilanzgewinn) from the preceding fiscal year;
- formal ratification of the acts (Entlastung) of the members of the Management Board and the members of the Supervisory Board in the preceding fiscal year; and
- appointment of independent auditors for the current fiscal year.

A simple majority of votes cast is generally sufficient to approve a measure, except in cases where a greater majority is otherwise required by our Articles of Association or by law. Under the Stock Corporation Act and the German Transformation Act (Umwandlungsgesetz), certain resolutions of fundamental importance require a majority of at least 75 % of the share capital represented at the General Meeting adopting the resolution, in addition to a majority of the votes cast. Such resolutions include the following matters, among others:

- amendments to our Articles of Association changing our business objectives;
- capital increases that exclude subscription rights;
- capital reductions;
- creation of authorized or conditional capital;
- our dissolution;
- transformations under the German Transformation Act (Umwandlungsgesetz) such as mergers, spin-offs and changes in our legal form;
- transfer of all our assets;
- integration of another company; and
- intercompany agreements (in particular, domination and profit-transfer agreements).

Under certain circumstances, such as when a resolution violates our Articles of Association or the Stock Corporation Act, shareholders may file a shareholder action with the appropriate Regional Court (Landgericht) in Germany to set aside resolutions adopted at the General Meeting.

Under German law, the rights of shareholders as a group can be changed by amendment of the company's articles of association. Any amendment of our Articles of Association requires a resolution of the General Meeting. The authority to amend our Articles of Association, insofar as such amendments merely relate to the wording, such as changes of the share capital as a result of the issuance of shares from authorized capital, has been assigned to our Supervisory Board by our Articles of Association. Pursuant to our Articles of Association, the resolutions of the General Meeting are taken by a simple majority of votes and, insofar as a majority of capital stock is required, by a simple majority of capital stock, except where law or our Articles of Association determine otherwise. The rights of individual shareholders can only be changed with their consent. Amendments to the Articles of Association become effective upon their registration in the Commercial Register.

Share Register

We maintain a share register with Registrar Services GmbH and our New York transfer agent, pursuant to an agency agreement between us and Registrar Services GmbH and a sub-agency agreement between Registrar Services GmbH and the New York transfer agent.

Our share register will be open for inspection by shareholders during normal business hours at our offices at Taunusanlage 12, 60325 Frankfurt am Main, Germany. The share register generally contains each shareholder's surname, first name, date of birth, address and the number or the quantity of our shares held. Shareholders may prevent their personal information from appearing in the share register by holding their securities through a bank or custodian. Although the shareholder would remain the beneficial owner of the securities, only the bank's or custodian's name would appear in the share register.

Item 10: Additional Information

83

Dividend Rights

For a summary of our dividend policy and legal basis for dividends under German law, see [Item 8: Financial Information](#) [Dividend Policy](#).

Increases in Share Capital

German law and our Articles of Association permit us to increase our share capital in any of three ways:

Resolution by our General Meeting authorizing the issuance of new shares.

Resolution by our General Meeting authorizing the Management Board, subject to the approval of the Supervisory Board, to issue new shares up to a specified amount (no more than 50 % of existing share capital) within a specified period, which may not exceed five years. This is referred to as authorized capital (*genehmigtes Kapital*).

Resolution by our General Meeting authorizing the issuance of new shares up to a specified amount (no more than 50 % of existing share capital) for specific purposes, such as for employee stock options, for use as consideration in a merger or to issue to holders of convertible bonds or other convertible securities. This is referred to as conditional capital (*bedingtes Kapital*).

The issuance of new ordinary shares by resolution of the General Meeting requires the simple majority of the votes cast and of the share capital represented at the General Meeting. Resolutions of the General Meeting concerning the creation of authorized or conditional capital require the simple majority of the votes cast and a majority of at least 75 % of the share capital represented at the General Meeting.

Liquidation Rights

The Stock Corporation Act requires that if we are liquidated, any liquidation proceeds remaining after the payment of all our liabilities will be distributed to our shareholders in proportion to their shareholdings.

Preemptive Rights

In principle, holders of our shares have preemptive rights allowing them to subscribe any shares, bonds convertible into, or attached warrants to subscribe for, our shares or participatory certificates we issue. Such preemptive rights exist in proportion to the number of shares currently held by the shareholder. Preemptive rights of shareholders may be excluded with respect to any capital increase, however, as part of the resolution by the General Meeting on such capital increase. Such a resolution by the General Meeting on a capital increase that excludes the shareholders preemptive rights with respect thereto requires both a majority of the votes cast and a majority of at least 75 % of the share capital represented at the General Meeting. A resolution to exclude preemptive rights requires that the proposed exclusion is expressly disclosed in the agenda to the General Meeting and that the Management Board presents the reasons for the exclusion to the shareholders in a written report. Under the Stock Corporation Act, preemptive rights may in particular be excluded with respect to capital increases not exceeding 10 % of the existing share capital with an issue price payable in cash not significantly below the stock exchange price at the time of issuance. In addition, shareholders may, in a resolution by the General Meeting on authorized capital, authorize the Management Board to exclude the preemptive rights with respect to newly issued shares from authorized capital in specific circumstances set forth in the resolution.

Shareholders are generally permitted to transfer their preemptive rights. Preemptive rights may be traded on one or more German stock exchanges for a limited number of days prior to the final day the preemptive rights can be exercised.

84

Notices and Reports

We publish notices pertaining to our shares and the General Meeting in the electronic German Federal Gazette (Bundesanzeiger) and, when so required, in at least one national newspaper designated for exchange notices.

We send our New York transfer agent, through publication or otherwise, a copy of each of our notices pertaining to any General Meeting, any adjourned General Meeting or our actions with respect to any cash or other distributions or the offering of any rights. We provide such notices in the form given or to be given to our shareholders. Our New York transfer agent is requested to arrange for the mailing of such notices to all shareholders registered in the New York registry.

We will make all notices we send to shareholders available at our principal office for inspection by shareholders. Registrar Services GmbH and our New York transfer agent will send copies of all notices pertaining to General Meetings to all registered shareholders. Registrar Services GmbH and our New York transfer agent will send copies of other notices or information material, such as quarterly reports or shareholder letters, to those registered shareholders who have requested to receive such notices or information material.

Charges of Transfer Agents

We pay Registrar Services GmbH and our New York transfer agent customary fees for their services as transfer agents and registrars. Our shareholders will not be required to pay Registrar Services GmbH or our New York transfer agent any fees or charges in connection with their transfers of shares in the share register. Our shareholders will also not be required to pay any fees in connection with the conversion of dividends from euros to U.S. dollars.

Liability of Transfer Agents

Neither Registrar Services GmbH nor our New York transfer agent will be liable to shareholders if prevented or delayed by law, or any circumstances beyond their control, from performing their obligations as transfer agents and registrars.

Notification Requirements

Disclosure of Interests in a Listed Stock Corporation

Disclosure Obligations under the German Securities Trading Act

Pursuant to the German Securities Trading Act (Wertpapierhandelsgesetz), any shareholder whose voting interest in a listed company like Deutsche Bank AG, through acquisition, sale or by other means, reaches, exceeds or falls below a 3 %, 5 %, 10 %, 15 %, 20 %, 25 %, 30 %, 50 % or 75 % threshold must notify us and the BaFin of its current aggregate voting interest in writing and without undue delay, but at the latest within four trading days. In connection with this requirement, the German Securities Trading Act contains various provisions regarding the attribution of voting rights to the person who actually controls the voting rights attached to the shares.

Furthermore, the voting rights attached to a third party's shares are attributed to a shareholder if the shareholder coordinates its conduct concerning the listed company with the third party (so-called "acting in concert") either through an agreement or other means. Acting in concert is deemed to exist if the parties coordinate their voting at the listed company's general meeting or, outside the general meeting, coordinate their actions with the goal of significantly and permanently modifying the listed company's corporate strategy. Each party's voting rights are attributed to each of the other parties acting in concert.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Shareholders failing to comply with their notification obligations are prevented from exercising any rights attached to their shares (including voting rights and the right to receive dividends) until they have complied with the notification requirements. In the event of a willful or grossly negligent breach of the notification obligations, shareholders are prevented from exercising their voting rights for a six-month period commencing upon the

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

85

delayed submission of the notification, unless the shareholder submitted an incorrect notification deviating no more than 10 % from the actual percentage of voting rights and the shareholder notified the listed company that his or her holdings reached, exceeded or fell below the notification thresholds described above. Non-compliance with the disclosure requirement may also result in a fine.

Except for the 3 % threshold, similar notification obligations exist for reaching, exceeding or falling below the thresholds described above when a person holds other financial instruments that entitle their holder to unilaterally acquire existing shares of the listed company carrying voting rights pursuant to a binding legal agreement. Holdings in the relevant financial instruments are to be aggregated with the voting rights attached to shares for purposes of determining whether any of the relevant notification thresholds have been triggered. According to the German Act on Strengthening Investor Protection and Improving the Functionality of the Capital Market (Gesetz zur Stärkung des Anlegerschutzes und Verbesserung der Funktionsfähigkeit des Kapitalmarktes), this obligation has been extended to other instruments which may not qualify as financial instruments within the meaning of the German Securities Trading Act that grant the holder the right to acquire unilaterally, based on a legally binding agreement, existing shares of Deutsche Bank carrying voting rights.

Deutsche Bank must publish the foregoing notifications without undue delay, but no later than within three trading days after their receipt, and report the publication to the BaFin.

Shareholders whose voting rights reach or exceed thresholds of 10 % of the voting rights in a listed company, or higher thresholds, are obliged to inform the company within 20 trading days of the purpose of their investment and the origin of the funds used for such investment, unless the articles of association of the listed company provide otherwise. Our Articles of Association do not contain such a provision.

Disclosure Obligations under the German Securities Acquisition and Takeover Act

Pursuant to the German Securities Acquisition and Takeover Act, any person whose voting interest reaches or exceeds 30 % of the voting shares of a listed stock corporation must, within seven calendar days, publish this fact (including the percentage of its voting rights) on the Internet and by means of an electronically operated financial information dissemination system. In addition, the person must subsequently make a mandatory public tender offer within four weeks to all shareholders of the listed company unless an exemption has been granted. The German Securities Acquisition and Takeover Act contains a number of provisions intended to ensure that shareholdings are attributed to those persons who actually control the voting rights attached to the shares. The provisions regarding coordinated conduct as part of the German Securities Acquisition and Takeover Act (so-called acting in concert) and the rules on the attribution of voting rights attached to shares of third parties are the same as the statutory securities trading provisions described above under Disclosure Obligations under the German Securities Trading Act except with respect to voting rights of shares underlying financial instruments whose holders are vested with the right, pursuant to a legally binding agreement, to unilaterally acquire existing voting shares of the listed company and voting rights which may be acquired on the basis of financial and other instruments enabling the acquisition of voting shares. If a shareholder fails to provide notice on reaching or exceeding the 30 % threshold, or fails to make a public tender offer, the shareholder will be precluded from exercising any rights associated with its shares (including voting and dividend rights) until it has complied with the requirements under the German Securities Acquisition and Takeover Act. In addition, non-compliance with the disclosure requirement may result in a fine.

Disclosure of Participations in a Credit Institution

The German Banking Act (Kreditwesengesetz) requires any person intending to acquire, alone or acting in concert with another person, a qualifying holding (bedeutende Beteiligung) in a credit or financial services institution to notify the BaFin and the Bundesbank without undue delay and in writing of the intended acquisition. A qualifying holding is a direct or indirect holding in an undertaking which represents 10 % or more of the capital or voting rights or which makes it possible to exercise a significant influence over the management of such undertaking. The required notice must contain information demonstrating, among other things, the reliability of the person or, in the case of a corporation or other legal entity, the reliability of its directors and officers.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

86

A person holding a qualifying holding shall also notify the BaFin and the Bundesbank without undue delay and in writing if he intends to increase the amount of the qualifying holding up to or beyond the thresholds of 20 %, 30 % or 50 % of the voting rights or capital or in such way that the institution comes under such person's control or if such person intends to reduce the participation below 10 % or below one of the other thresholds described above.

If the qualifying holding notified relates to an interest in a credit institution under the Capital Requirements Regulation (CRR), such as Deutsche Bank AG, the BaFin is not competent to ultimately decide on the acquisition but is required, at least 15 working days prior to expiry of the applicable assessment period, to forward its draft decision to the European Central Bank which ultimately, in accordance with applicable law, is competent to decide upon whether or not to permit the acquisition of the qualifying holding notified.

The competent authority may, within the applicable assessment period of 60 business days, prohibit the intended acquisition if there appears to be reason to assume that the acquirer or its directors and officers are not reliable or financially sound, that the participation would impair the effective supervision of the relevant banking institution, that the prospective managing director (Geschäftsleiter) is not reliable or not qualified, that money laundering or financing of terrorism has occurred or been attempted in connection with the intended acquisition, or that there would be an increased risk of such illegal acts as a result of the intended acquisition. During the applicable assessment period the competent authority may request further information necessary for the assessment. Generally, such a request delays the expiration of the assessment period by up to 20 business days.

If a person acquires a qualifying holding despite such prohibition or without making the required notification, the competent authority may prohibit the person from exercising the voting rights attached to the shares. In addition, non-compliance with the disclosure requirement may result in the imposition of a fine in accordance with statutory provisions. Moreover, the competent authority may order that any disposition of the shares requires its approval and may ultimately appoint a trustee to exercise the voting rights attached to the shares or to sell the shares to the extent they constitute a qualifying holding.

Review of Acquisition of 25 % or more by the German Federal Ministry of Economics and Technology

Pursuant to the German Foreign Trade Act (Außenwirtschaftsgesetz) and the Foreign Trade Regulation (Außenwirtschaftsverordnung), the direct or indirect acquisition of 25 % or more of the voting rights in a German company by investors from outside the European Union and the European Free Trade Association (Iceland, Liechtenstein, Norway and Switzerland) or by entities which are owned by 25 % or more by investors from outside the aforementioned region may be reviewed by the German Federal Ministry of Economics and Technology. If the Ministry determines that the acquisition poses a threat to the public policy or public security of Germany, it may impose conditions on or suspend the acquisition or require that it is unwound. The decision to review an acquisition must be made within three months following the conclusion of the contract or publication of the decision to launch a take-over bid or publication of the acquisition of control. The review must be completed within two months following receipt of the complete acquisition documents. No notification of the acquisition is required but the acquirer may seek pre-clearance of a proposed acquisition from the Federal Ministry of Economics and Technology.

EU Short Selling Regulation (ban on naked short selling)

Regulation (EU) No 236/2012 of the European Parliament and of the Council of March 14, 2012 on short selling and certain aspects of credit default swaps (the EU Short Selling Regulation) came into force on November 1, 2012. The EU Short Selling Regulation, the regulations adopted by the EU Commission implementing it, and the German act implementing the EU Short Selling Regulation replace the previously applicable German federal provisions governing the ban on naked short selling of shares and certain debt securities. (Short sales are sales of securities that the seller does not own, with the intention of buying back an identical security at a later point in time in order to be able to deliver the security. A short sale is naked when the seller has not borrowed the securities at the time of the short sale, or ensured they can be borrowed.) Under the EU Short

Table of Contents

Deutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

87

Selling Regulation, short sales of shares are permitted only under certain conditions. Significant net short positions in shares must be reported to the BaFin and, if a certain threshold is exceeded, they must also be publicly disclosed. Net short positions are calculated by netting the long and short positions held by a natural or legal person in the issued capital of the company concerned. The details are set forth in the EU Short Selling Regulation and the regulations adopted by the EU Commission implementing it. In certain situations described in greater detail in the EU Short Selling Regulation, the BaFin is permitted to limit short selling and comparable transactions.

Material Contracts

In the usual course of our business, we enter into numerous contracts with various other entities. We have not, however, entered into any material contracts outside the ordinary course of our business within the past two years.

Exchange Controls

As in other member states of the European Union, regulations issued by the competent European Union authorities to comply with United Nations resolutions have caused freeze orders on assets of certain legal and natural persons designated in such regulations. In addition, Regulation (EU) No. 961/2010 of October 25, 2010 on restrictive measures against Iran requires that transfers of funds from or to Iranian persons, entities or bodies that exceed 10,000 (or the equivalent in a foreign currency) shall be notified in advance in writing to the Bundesbank. If the amount to be transferred exceeds 40,000 (or the equivalent in a foreign currency), a prior authorization of the Bundesbank is required.

With some exceptions, corporations or individuals residing in Germany are required to report to the Bundesbank any payment received from, or made to or for the account of, a nonresident corporation or individual that exceeds 12,500 (or the equivalent in a foreign currency). This reporting requirement is for statistical purposes.

Subject to the above-mentioned exceptions, there are currently no German laws, decrees or regulations that would prevent the transfer of capital or remittance of dividends or other payments to our shareholders who are not residents or citizens of Germany.

There are also no restrictions under German law or our Articles of Association concerning the right of nonresident or foreign shareholders to hold our shares or to exercise any applicable voting rights. Where the investment reaches or exceeds certain thresholds, however, certain reporting obligations apply and the investment may become subject to review by the BaFin, the European Central Bank and other competent authorities. For more information see Item 10: Additional Information Notification Requirements .

Taxation

The following is a summary of material German and United States federal income tax consequences of the ownership and disposition of shares for a resident of the United States for purposes of the income tax convention between the United States and Germany (the Treaty) who is fully eligible for benefits under the Treaty. A U.S. resident will generally be entitled to Treaty benefits if it is:

the beneficial owner of shares (and of the dividends paid with respect to the shares);
an individual resident of the United States, a U.S. corporation, or a partnership, estate or trust to the extent its income is subject to taxation in the United States in its hands or in the hands of its partners or beneficiaries;

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

88

not also a resident of Germany for German tax purposes; and
not subject to anti-treaty shopping articles under German domestic law or the Treaty that apply in limited circumstances.
The Treaty benefits discussed below generally are not available to shareholders who hold shares in connection with the conduct of business through a permanent establishment in Germany. The summary does not discuss the treatment of those shareholders.

The summary does not purport to be a comprehensive description of all of the tax considerations that may be relevant to any particular shareholder, including tax considerations that arise from rules of general application or that are generally assumed to be known by shareholders. In particular, the summary deals only with shareholders that will hold shares as capital assets and does not address the tax treatment of shareholders that are subject to special rules, such as fiduciaries of pension, profit-sharing or other employee benefit plans, banks, insurance companies, dealers in securities or currencies, persons that hold shares as a position in a straddle, conversion transaction, synthetic security or other integrated financial transaction, persons that elect mark-to-market treatment, persons that own, directly or indirectly, 10 % or more of our voting stock, persons that hold shares through a partnership or hybrid entity and persons whose functional currency is not the U.S. dollar. The summary is based on German and U.S. laws, treaties and regulatory interpretations, including in the United States current and proposed U.S. Treasury regulations as of the date hereof, all of which are subject to change (possibly with retroactive effect).

Shareholders should consult their own advisors regarding the tax consequences of the ownership and disposition of shares in light of their particular circumstances, including the effect of any state, local or other national laws.

Taxation of Dividends

Dividends that we pay are subject to German withholding tax at an aggregate rate of 26.375 % (consisting of a 25 % withholding tax and a 1.375 % surcharge). Under the Treaty, a U.S. resident will be entitled to receive a refund from the German tax authorities of 11.375 in respect of a declared dividend of 100. For example, for a declared dividend of 100, a U.S. resident initially will receive 73.625 and may claim a refund from the German tax authorities of 11.375 and, therefore, receive a total cash payment of 85 (i.e., 85 % of the declared dividend). For U.S. tax purposes, a U.S. resident will be deemed to have received total dividends of 100. The gross amount of dividends that a U.S. resident receives (which includes amounts withheld in respect of German withholding tax) generally will be subject to U.S. federal income taxation as foreign source dividend income, and will not be eligible for the dividends received deduction generally allowed to U.S. corporations. German withholding tax at the 15 % rate provided under the Treaty will be treated as a foreign income tax that, subject to generally applicable limitations under U.S. tax law, is eligible for credit against a U.S. resident's U.S. federal income tax liability or, at its election, may be deducted in computing taxable income. Thus, for a declared dividend of 100, a U.S. resident will be deemed to have paid German taxes of 15. A U.S. resident cannot claim credits for German taxes that would have been refunded to it if it had filed a claim for refund. Foreign tax credits will not be allowed for withholding taxes imposed in respect of certain short-term or hedged positions. The creditability of foreign withholding taxes may be limited in certain situations, including where the burden of foreign taxes is separated inappropriately from the related foreign income.

Subject to certain exceptions for short-term and hedged positions, qualified dividends received by certain non-corporate U.S. shareholders will generally be subject to taxation in the United States at a lower rate than other ordinary income. Dividends received will be qualified dividends if we (i) are eligible for the benefits of a comprehensive income tax treaty with the United States that the U.S. Internal Revenue Service (IRS) has approved for purposes of the qualified dividend rules and (ii) were not, in the year prior to the year in which the dividend was paid, and are not, in the year in which the dividend is paid, a passive foreign investment company (PFIC). The Treaty has been approved for purposes of the qualified dividend rules, and we believe we qualify for benefits under the Treaty. The determination of whether we are a PFIC must be made annually and is dependent on the particular facts and circumstances at the time. It requires an analysis of our income and valua-

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

89

tion of our assets, including goodwill and other intangible assets. Based on our audited financial statements and relevant market and shareholder data, we believe that we were not a PFIC for U.S. federal income tax purposes with respect to our taxable years ended December 31, 2013 or December 31, 2014. In addition, based on our current expectations regarding the value and nature of our assets, the sources and nature of our income, and relevant market and shareholder data, we do not currently anticipate becoming a PFIC for our taxable year ending December 31, 2015, or for the foreseeable future. However, the PFIC rules are complex and their application to financial services companies is unclear. Each U.S. shareholder should consult its own tax advisor regarding the potential applicability of the PFIC regime to us and its implications for their particular circumstances.

If a U.S. resident receives a dividend paid in euros, it will recognize income in a U.S. dollar amount calculated by reference to the exchange rate in effect on the date of receipt, regardless of whether the payment is in fact converted into U.S. dollars. If dividends are converted into U.S. dollars on the date of receipt, a U.S. resident generally should not be required to recognize foreign currency gain or loss in respect of the dividend income but may be required to recognize foreign currency gain or loss on the receipt of a refund in respect of German withholding tax to the extent the U.S. dollar value of the refund differs from the U.S. dollar equivalent of that amount on the date of receipt of the underlying dividend.

Refund Procedures

To claim a refund, a U.S. resident must submit, within four years from the end of the calendar year in which the dividend is received, a claim for refund to the German tax authorities together with the original bank voucher (or certified copy thereof) issued by the paying entity documenting the tax withheld. For dividends received after 2011, the claim for refund must be accompanied by a withholding tax certificate (Kapitalertragsteuerbescheinigung) on an officially prescribed form and issued by the institution that withheld the tax.

Claims for refunds are made on a special German claim for refund form (Form E-USA), which must be filed with the German tax authorities: Bundeszentralamt für Steuern, An der Kuppe 1, D-53225 Bonn, Germany. The German claim for refund forms may be obtained inter alia from the German tax authorities at the same address where the applications are filed or can be downloaded from the homepage of the Bundeszentralamt für Steuern (www.bzst.bund.de). A U.S. resident must also submit to the German tax authorities a certification (on IRS Form 6166) with respect to its last filed U.S. federal income tax return. Requests for IRS Form 6166 are made on IRS Form 8802, which requires payment of a user fee. IRS Form 8802 and its instructions can be obtained from the IRS website at www.irs.gov. Instead of the individual refund procedure described above, a U.S. resident may use an IT-supported quick-refund procedure (Datenträgerverfahren DTV / Data Medium Procedure DMP). If the U.S. resident's bank or broker elects to participate in the DMP, it will perform administrative functions necessary to claim the Treaty refund for the beneficiaries. The refund beneficiaries must provide specified information to the DMP participant and confirm to the DMP participant that they meet the conditions of the Treaty provisions and that they authorize the DMP participant to file applications and receive notices and payments on their behalf.

The refund beneficiaries also must provide a certification of filing a tax return on IRS Form 6166 with the DMP participant. In addition, if the individual refund procedure requires a withholding tax certificate (see above), such certificate is generally also necessary under the DMP.

The German tax authorities reserve the right to audit the entitlement to tax refunds for several years following their payment pursuant to the Treaty in individual cases. The DMP participant must assist with the audit by providing the necessary details or by forwarding the queries to the respective refund beneficiaries/shareholders.

The German tax authorities will issue refunds denominated in euros. In the case of shares held through banks or brokers participating in the Depository Trust Company, the refunds will be issued to the Depository Trust Company, which will convert the refunds to U.S. dollars. The resulting amounts will be paid to banks or brokers for the account of holders.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 10: Additional Information

90

If a U.S. resident holds its shares through a bank or broker who elects to participate in the DMP, it could take at least three weeks for it to receive a refund after a combined claim for refund has been filed with the German tax authorities. If a U.S. resident files a claim for refund directly with the German tax authorities, it could take at least eight months for it to receive a refund. The length of time between filing a claim for refund and receipt of that refund is uncertain and we can give no assurances as to when any refund will be received.

Taxation of Capital Gains

Under the Treaty, a U.S. resident will not be subject to German capital gains tax in respect of a sale or other disposition of shares. For U.S. federal income tax purposes, a U.S. holder will recognize capital gain or loss on the sale or other disposition of shares in an amount equal to the difference between such holder's tax basis in the shares and the U.S. dollar value of the amount realized from their sale or other disposition. Such gain or loss will be capital gain or loss and will be long-term capital gain or loss if the shares were held for more than one year. The net amount of long-term capital gain realized by an individual generally is subject to taxation at a lower rate than ordinary income. Any such gain generally would be treated as income arising from sources within the United States; any such loss would generally be allocated against U.S. source income. The ability to offset capital losses against ordinary income is subject to limitations.

Shareholders whose shares are held in an account with a German bank or financial services institution (including a German branch of a non-German bank or financial services institution) are urged to consult their own advisors. This summary does not discuss their particular tax situation.

United States Information Reporting and Backup Withholding

Dividends and payments of the proceeds on a sale of shares, paid within the United States or through certain U.S.-related financial intermediaries are subject to information reporting and may be subject to backup withholding unless the U.S. resident (i) is a corporation or other exempt recipient or (ii) provides a taxpayer identification number and certifies (on IRS Form W-9) that no loss of exemption from backup withholding has occurred. Shareholders that are not U.S. persons generally are not subject to information reporting or backup withholding.

However, a non-U.S. person may be required to provide a certification (generally on IRS Form W-8BEN or W-8BEN-E) of its non-U.S. status in connection with payments received in the United States or through a U.S.-related financial intermediary.

Backup withholding tax is not an additional tax, and any amounts withheld under the backup withholding rules will be allowed as a refund or a credit against a holder's U.S. federal income tax liability, provided the required information is furnished to the IRS.

Shareholders may be subject to other U.S. information reporting requirements. Shareholders should consult their own advisors regarding the application of U.S. information reporting rules in light of their particular circumstances.

German Gift and Inheritance Taxes

Under the current estate, inheritance and gift tax treaty between the United States and Germany (the Estate Tax Treaty), a transfer of shares generally will not be subject to German gift or inheritance tax so long as the donor or decedent, and the heir, donee or other beneficiary, were not domiciled in Germany for purposes of the Estate Tax Treaty at the time the gift was made, or at the time of the decedent's death, and the shares were not held in connection with a permanent establishment or fixed base in Germany.

The Estate Tax Treaty provides a credit against U.S. federal estate and gift tax liability for the amount of inheritance and gift tax paid in Germany, subject to certain limitations, where shares are subject to German inheritance or gift tax and United States federal estate or gift tax.

Not applicable.

Item 14: Material Modifications to the Rights of Security Holders and Use of Proceeds

Not applicable.

Item 15: Controls and Procedures**Disclosure Controls and Procedures**

An evaluation was carried out under the supervision and with the participation of our management, including our Co-Chief Executive Officers and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934) as of December 31, 2014. There are, as described below, inherent limitations to the effectiveness of any control system, including disclosure controls and procedures. Accordingly, even effective disclosure controls and procedures can provide only reasonable assurance of achieving their control objectives. Based upon such evaluation, our Co-Chief Executive Officers and Chief Financial Officer concluded that the design and operation of our disclosure controls and procedures were effective as of December 31, 2014.

Management's Annual Report on Internal Control over Financial Reporting

Management of Deutsche Bank Aktiengesellschaft, together with its consolidated subsidiaries, is responsible for establishing and maintaining adequate internal control over financial reporting. Our internal control over financial reporting is a process designed under the supervision of our co-principal executive officers and our principal financial officer to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the firm's financial statements for external reporting purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board and as endorsed by the European Union. As of December 31, 2014, management conducted an assessment of the effectiveness of our internal control over financial reporting based on the framework established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on the assessment performed, management has determined that our internal control over financial reporting as of December 31, 2014 was effective based on the COSO framework (2013).

KPMG AG Wirtschaftsprüfungsgesellschaft, the registered public accounting firm that audited the financial statements included in this document, has issued an attestation report on our internal control over financial reporting, which attestation report is set forth below.

Item 15: Controls and Procedures

93

Report of Independent Registered Public Accounting Firm

To the Supervisory Board of

Deutsche Bank Aktiengesellschaft:

We have audited Deutsche Bank Aktiengesellschaft and subsidiaries (the Company or Deutsche Bank) internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting . Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Deutsche Bank maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Item 15: Controls and Procedures

94

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Deutsche Bank Aktiengesellschaft and subsidiaries on pages 312 to 455 of the Financial Report as of December 31, 2014 and 2013, and the related consolidated statements of income, comprehensive income, changes in equity, and cash flows for each of the years in the three-year period ended December 31, 2014, including the disclosures described in Note 1 to the Consolidated Financial Statements as being part of the financial statements and our report dated March 6, 2015 expressed an unqualified opinion on those consolidated financial statements.

Frankfurt am Main, Germany

Wirtschaftsprüfungsgesellschaft

Change in Internal Control over Financial Reporting

There was no change in our internal control over financial reporting identified in connection with the evaluation referred to above that occurred during the year ended December 31, 2014 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

For 2013 and prior years, management's assessment of the effectiveness of internal control over financial reporting was conducted based on the framework established in Internal Control – Integrated Framework (1992) issued by COSO in 1992. In 2013, COSO issued a revised version of its framework. For the year ended December 31, 2014, our management conducted its assessment based on the COSO framework (2013). In 2013 and 2014, we revised certain elements of our approach to internal control over financial reporting to support the transition to the COSO framework (2013). Because of the evolutionary nature of the revisions, we have determined that they did not constitute a change in internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. As such, disclosure controls and procedures or systems for internal control over financial reporting may not prevent all error and all fraud. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and any design may not succeed in achieving its stated goals under all potential future conditions; over time, control may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

Item 16C: Principal Accountant Fees and Services

Please see Management Report: Corporate Governance Statement/Corporate Governance Report: Auditing and Controlling: Principal Accountant Fees and Services on pages 505 and 506 of the Financial Report.

Item 16D: Exemptions from the Listing Standards for Audit Committees

Our common shares are listed on the New York Stock Exchange, the corporate governance rules of which require a foreign private issuer such as us to have an audit committee that satisfies the requirements of Rule 10A-3 under the U.S. Securities Exchange Act of 1934. These requirements include a requirement that the audit committee be composed of members that are independent of the issuer, as defined in the Rule, subject to certain exemptions, including an exemption for employees who are not executive officers of the issuer if the employees are elected or named to the board of directors or audit committee pursuant to the issuer's governing law or documents, an employee collective bargaining or similar agreement or other home country legal or listing requirements. The German Co-Determination Act of 1976 (Mitbestimmungsgesetz) requires that the shareholders elect half of the members of the supervisory board of large German companies, such as us, and that employees in Germany elect the other half. Employee-elected members are typically themselves employees or representatives of labor unions representing employees. Pursuant to law and practice, committees of the Supervisory Board are typically composed of both shareholder- and employee-elected members. Of the current members of our Audit Committee, three Henriette Mark, Gabriele Platscher and Bernd Rose are current employees of Deutsche Bank who have been elected as Supervisory Board members by the employees. None of them is an executive officer. Accordingly, their service on the Audit Committee is permissible pursuant to the exemption from the independence requirements provided for by paragraph (b)(1)(iv)(C) of the Rule. We do not believe the reliance on such exemption would materially adversely affect the ability of the Audit Committee to act independently and to satisfy the other requirements of the Rule.

Item 16E: Purchases of Equity Securities by the Issuer and Affiliated Purchasers

96

Item 16E: Purchases of Equity Securities by the Issuer and Affiliated Purchasers

In 2014, we repurchased a total of 28,615,000 shares, of which 4 million via derivatives, for group purposes pursuant to share buybacks authorized by the General Meeting. During the period from January 1, 2014 until the 2014 Annual General Meeting on May 22, 2014, we repurchased 11,367,000, of which 4 million via derivatives, of our ordinary shares pursuant to the authorization granted by the Annual General Meeting on May 23, 2013, at an average price of 33.65 and for a total consideration of 382 million. This authorization was replaced by a new authorization to buy back shares approved by the Annual General Meeting on May 22, 2014. Under the new authorization, up to 101,949,964 shares may be repurchased through April 30, 2019. Of these, 50,974,982 shares may be purchased by using derivatives. During the period from the 2014 Annual General Meeting until December 31, 2014, we repurchased 17,248,000 shares at an average price of 25.84 and for a total consideration of 446 million (excluding option premium). At December 31, 2014, the number of shares held in Treasury from buybacks totaled 101,034 shares. This figure stems from nine shares at the beginning of the year, plus 28.6 million shares from buybacks in 2014, less 28.5 million shares which were used to fulfill delivery obligations in the course of share-based compensation of employees. We did not cancel any shares in 2014.

In addition to these share buybacks for group purposes, pursuant to a shareholder authorization approved at our 2014 Annual General Meeting, we are authorized to buy and sell, for the purpose of securities trading, our ordinary shares through April 30, 2019, provided that the net number of shares held for this purpose at the close of any trading day may not exceed 5 % of our share capital on that day. The gross volume of these securities trading transactions is often large, and even the net amount of such repurchases or sales may, in a given month, be large, though over longer periods of time such transactions tend to offset and are in any event constrained by the 5 % of share capital limit. These securities trading transactions consist predominantly of transactions on major non-U.S. securities exchanges. We also enter into derivative contracts with respect to our shares.

The following table sets forth, for each month in 2014 and for the year as a whole, the total gross number of our shares repurchased by us and our affiliated purchasers (pursuant to both activities described above), the total gross number of shares sold, the net number of shares purchased or sold, the average price paid per share (based on the gross shares repurchased), the number of shares that were purchased for group purposes mentioned above and the maximum number of shares that at that date remained eligible for purchase under such programs.

November	15,603,656	16,212,273	(608,617)	24.95	0	84,701,964
December	15,298,235	15,439,598	(141,363)	25.20	0	84,701,964
Total 2014	310,846,161	310,757,883	88,278	29.55	28,615,000	84,701,964

At December 31, 2014, our issued share capital consisted of 1,379,273,131 ordinary shares, of which 1,379,012,949 were outstanding and 260,182 were held by us in treasury.

On June 5, 2014, Deutsche Bank AG issued 59.9 million new common shares at 29.20 per share, resulting in total proceeds of 1.7 billion. The shares were issued with full dividend rights for the year 2014 from authorized capital and without pre-emptive rights. The shares were placed with Paramount Services Holdings Ltd., an investment vehicle ultimately beneficially owned and controlled by His Excellency Sheikh Hamad bin Jassim Bin Jabor al Thani.

On June 25, 2014, Deutsche Bank AG completed a capital increase from authorized capital against cash contributions through a public offering with subscription rights. In total, 299.8 million new common shares were issued, resulting in total proceeds of 6.8 billion. The shares were issued with full dividend rights for the year 2014. 99.1 % of the subscription rights were exercised and thus 297.1 million new shares were

issued at the subscription price of 22.50 per share. The remaining 2.8 million new shares were sold in the market at an average price of 26.58 per share.

Item 16F: Change in Registrant's Certifying Accountant

Not applicable.

Item 16G: Corporate Governance

Our common shares are listed on the New York Stock Exchange, as well as on all seven German stock exchanges. Set forth below is a description of the significant ways in which our corporate governance practices differ from those applicable to U.S. domestic companies under the New York Stock Exchange's listing standards as set forth in its Listed Company Manual (the "NYSE Manual").

The Legal Framework. Corporate governance principles for German stock corporations (Aktiengesellschaften) are set forth in the German Stock Corporation Act (Aktiengesetz), the German Co-Determination Act of 1976 (Mitbestimmungsgesetz) and the German Corporate Governance Code (Deutscher Corporate Governance Kodex, referred to as the Code).

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Item 16G: Corporate Governance

98

The Two-Tier Board System of a German Stock Corporation. The Stock Corporation Act provides for a clear separation of management and oversight functions. It therefore requires German stock corporations to have both a Supervisory Board (Aufsichtsrat) and a Management Board (Vorstand). These boards are separate; no individual may be a member of both. Both the members of the Management Board and the members of the Supervisory Board must exercise the standard of care of a diligent business person to the company. In complying with this standard of care they are required to take into account a broad range of considerations, including the interests of the company and those of its shareholders, employees and creditors.

The Management Board is responsible for managing the company and representing the company in its dealings with third parties. The Management Board is also required to ensure appropriate risk management within the corporation and to establish an internal monitoring system. The members of the Management Board, including its chairperson or speaker, are regarded as peers and share a collective responsibility for all management decisions.

The Supervisory Board appoints and removes the members of the Management Board. It also may appoint a chairperson of the Management Board. Although it is not permitted to make management decisions, the Supervisory Board has comprehensive monitoring functions, including advising the company on a regular basis and participating in decisions of fundamental importance to the company. To ensure that these monitoring functions are carried out properly, the Management Board must, among other things, regularly report to the Supervisory Board with regard to current business operations and business planning, including any deviation of actual developments from concrete and material targets previously presented to the Supervisory Board. The Supervisory Board may also request special reports from the Management Board at any time. Transactions of fundamental importance to the company, such as major strategic decisions or other actions that may have a fundamental impact on the company's assets and liabilities, financial condition or results of operations, may be subject to the consent of the Supervisory Board. Pursuant to our Articles of Association (Satzung), such transactions include the granting of powers of attorney without limitation to the affairs of a specific office, major acquisitions or disposals of real estate or participations in companies and granting of loans and acquiring participations if the Banking Act (Kreditwesengesetz) requires approval by the Supervisory Board.

Pursuant to the Co-Determination Act, our Supervisory Board consists of representatives elected by the shareholders and representatives elected by the employees in Germany. Based on the total number of Deutsche Bank employees in Germany these employees have the right to elect one-half of the total of twenty Supervisory Board members. The chairperson of the Supervisory Board of Deutsche Bank is a shareholder representative who has the deciding vote in the event of a tie.

This two-tier board system contrasts with the unitary board of directors envisaged by the relevant laws of all U.S. states and the New York Stock Exchange listing standards for U.S. companies.

The Group Executive Committee of Deutsche Bank is a body that is not specified by the Stock Corporation Act. It has been created by the Management Board under its terms of reference and serves as a tool to coordinate the corporate divisions and regional management with the Management Board. It comprises the members of the Management Board and senior representatives from regions, corporate divisions and certain infrastructure and control functions appointed by the Management Board. The Co-Chairmen of the Management Board, Messrs. Fitschen and Jain, are also the Co-Chairmen of the Group Executive Committee. It reviews the development of the businesses, discusses matters of group strategy and prepares recommendations for decision by the Management Board. Functional committees assist the Management Board in executing cross-divisional strategic management, resource allocation, control and risk management.

German companies which have their shares listed on a stock exchange must report each year on the company's corporate governance in their annual report to shareholders.

Item 16G: Corporate Governance

99

The Recommendations of the Code. The Code was issued in 2002 by a commission composed of German corporate governance experts appointed by the German Federal Ministry of Justice in 2001. The Code was last amended in June 2014 and, as a general rule, will be reviewed annually and amended if necessary to reflect international corporate governance developments. The Code describes and summarizes the basic mandatory statutory corporate governance principles found in the provisions of German law. In addition, it contains supplemental recommendations and suggestions for standards on responsible corporate governance intended to reflect generally accepted best practice.

The Code addresses six core areas of corporate governance. These are (1) shareholders and shareholders' meetings, (2) the cooperation between the Management Board and the Supervisory Board, (3) the Management Board, (4) the Supervisory Board, (5) transparency and (6) financial reporting and audits.

The Code contains three types of provisions. First, the Code describes and summarizes the existing statutory, i.e., legally binding, corporate governance framework set forth in the Stock Corporation Act and in other German laws. Those laws and not the incomplete and abbreviated summaries of them reflected in the Code must be complied with. The second type of provisions is recommendations. While these are not legally binding, Section 161 of the Stock Corporation Act requires that any German exchange-listed company declare annually that the recommendations of the Code have been adopted by it or which recommendations have not been adopted. The third type of Code provisions comprises suggestions which companies may choose not to adopt without disclosure. The Code contains a significant number of such suggestions, covering almost all of the core areas of corporate governance it addresses.

In their last Declaration of Conformity of October 29, 2014, the Management Board and the Supervisory Board of Deutsche Bank stated that they will act in conformity with the recommendations of the Code. The Declaration of Conformity is available on Deutsche Bank's internet website at www.deutsche-bank.com/corporate-governance.

Supervisory Board Committees. The Supervisory Board may form committees. The Co-Determination Act requires that the Supervisory Board form a mediation committee to propose candidates for the Management Board in the event that the two-thirds majority of the members of the Supervisory Board needed to appoint members of the Management Board is not met.

The Stock Corporation Act specifically mentions the possibility to establish an audit committee to handle issues of accounting and risk management, compliance, auditor independence, the engagement and compensation of outside auditors appointed by the shareholders' meeting and the determination of auditing focal points. The Code recommends establishing such an audit committee. Since 2007 the Code also recommends establishing a nomination committee comprised only of shareholder elected Supervisory Board members to prepare the Supervisory Board's proposals for the election or appointment of new shareholder representatives to the Supervisory Board. The Code also includes suggestions on the subjects that may be handled by Supervisory Board committees, including corporate strategy, compensation of the members of the Management Board, investments and financing. Under the Stock Corporation Act, any Supervisory Board committee must regularly report to the Supervisory Board. Sections 25d (7) to (12) of the German Banking Act require, depending on size and complexity of the respective credit institution, the establishment of Supervisory Board committees with specific tasks to be performed as follows: Risk Committee (Section 25d (8)), Audit Committee (Section 25d (9)), Nomination Committee (with different tasks and composition requirements than under the Code) (Section 25d (11)) and Compensation Control Committee (Section 25d (12)).

Annual Report 2014 on Form 20-F

Item 16G: Corporate Governance

100

The Supervisory Board of Deutsche Bank has established a Chairman's Committee (Präsidentenausschuss) which is responsible for conclusion, amendment and termination of employment and pension contracts in consideration of the plenary Supervisory Board's sole authority to decide on the remuneration of the members of the Management Board, a Nomination Committee (Nominierungsausschuss), an Audit Committee (Prüfungsausschuss), a Risk Committee (Risikoausschuss), an Integrity Committee (Integritätsausschuss), a Compensation Control Committee (Vergütungskontrollausschuss) and the required Mediation Committee (Vermittlungsausschuss). The functions of a nominating/corporate governance committee and of a compensation committee required by the NYSE Manual for U.S. companies listed on the NYSE are therefore performed by the Supervisory Board or one of its committees, in particular the Chairman's Committee, the Compensation Control Committee and the Mediation Committee.

Independent Board Members. The NYSE Manual requires that a majority of the members of the board of directors of a NYSE listed U.S. company and each member of its nominating/corporate governance, compensation and audit committees be independent according to strict criteria and that the board of directors determines that such member has no material direct or indirect relationship with the company.

As a foreign private issuer, Deutsche Bank is not subject to these requirements. However, its audit committee must meet the more lenient independence requirement of Rule 10A-3 under the Securities Exchange Act of 1934. German corporate law does not require an affirmative independence determination, meaning that the Supervisory Board need not make affirmative findings that audit committee members are independent. However, the Stock Corporation Act requires that at least one member of the supervisory board or, if an audit committee is established, such audit committee, must be independent and have expertise in accounting and audit matters, unless all members have been appointed before May 29, 2009. Moreover, both the Stock Corporation Act and the Code contain several rules, recommendations and suggestions to ensure the Supervisory Board's independent advice to, and supervision of, the Management Board. As noted above, no member of the Management Board may serve on the Supervisory Board (and vice versa). Supervisory Board members will not be bound by directions or instructions from third parties. Any advisory, service or similar contract between a member of the Supervisory Board and the company is subject to the Supervisory Board's approval. A similar requirement applies to loans granted by the company to a Supervisory Board member or other persons, such as certain members of a Supervisory Board member's family. In addition, the Stock Corporation Act prohibits a person who within the last two years was a member of the management board from becoming a member of the supervisory board of the same company unless he or she is elected upon the proposal of shareholders holding more than 25 % of the voting rights of the company.

The Code also recommends that each member of the Supervisory Board inform the Supervisory Board of any conflicts of interest which may result from a consulting or directorship function with clients, suppliers, lenders or other business partners of the stock corporation. In the case of material conflicts of interest or ongoing conflicts, the Code recommends that the mandate of the Supervisory Board member be removed by the shareholders' meeting. The Code further recommends that any conflicts of interest that have occurred be reported by the Supervisory Board at the Annual General Meeting, together with the action taken, and that potential conflicts of interest also be taken into account in the nomination process for the election of Supervisory Board members.

Audit Committee Procedures. Pursuant to the NYSE Manual the audit committee of a U.S. company listed on the NYSE must have a written charter addressing its purpose, an annual performance evaluation, and the review of an auditor's report describing internal quality control issues and procedures and all relationships between the auditor and the company. The Audit Committee of Deutsche Bank operates under written terms of reference and reviews the efficiency of its activities regularly.

Disclosure of Corporate Governance Guidelines. Deutsche Bank discloses its Articles of Association, the Terms of Reference of its Management Board, its Supervisory Board, the Chairman's Committee, the Audit Committee, the Risk Committee, the Integrity Committee, the Compensation Control Committee and the Nomination Committee, its Declaration of Conformity under the Code and other documents pertaining to its corporate governance on its internet website at www.deutsche-bank.com/corporate-governance.

Disclosures Under Iran Threat Reduction and Syria Human Rights Act of 2012

101

Item 16H: Mine Safety Disclosure

Not applicable.

Disclosures Under Iran Threat Reduction and Syria Human Rights Act of 2012

Under Section 219 of the Iran Threat Reduction and Syria Human Rights Act of 2012, which added Section 13(r) of the U.S. Securities Exchange Act of 1934, as amended, an issuer of securities registered under the Securities Exchange Act of 1934 is required to disclose in its periodic reports filed under the Securities Exchange Act of 1934 certain of its activities and those of its affiliates relating to Iran and to other persons sanctioned by the U.S. under programs relating to terrorism and proliferation of weapons of mass destruction that occurred during the period covered by the report. We describe below a number of potentially disclosable activities of Deutsche Bank AG and its affiliates. Disclosure is generally required regardless of whether the activities, transactions or dealings were conducted in compliance with applicable law.

Legacy Financing Arrangements. Despite having ceased entering into new business in or with Iran in 2007, we continue to be engaged as lender, sponsoring bank and/or facility agent or arranger in several long-term financing agreements relating to the construction or acquisition of plant or equipment for the petroleum and petrochemical industries, under which Iranian entities were the direct or indirect borrowers. Before 2007, as part of banking consortia, we entered into a number of financing arrangements, three of which remained outstanding as of December 31, 2014, with the National Petrochemical Company (NPC) and its group entities as borrowers. The latest final maturity under these loan facilities is in 2019. These loan facilities were guaranteed by national export credit agencies representing two European governments. In principle, the obligations of the borrowers under these loan facilities are secured by assignments of receivables from oil and oil products exported by NPC and/or its trading subsidiaries to buyers, mostly in Asia. These delivery obligations, however, were waived for the period covered by this report, because of the current sanctions environment. For some of these arrangements, we act as escrow agent, holding escrow accounts for the Iranian borrowers mentioned above, into which receivables are, in principle, paid by the buyers of the oil and oil products. During the period covered by this report, no such receivables were paid to the said escrow accounts. Such accounts are pledged in favor of the relevant banking consortium. We have no involvement in the contractual arrangements related to, or in the physical settlement of, the oil and oil product exports mentioned above. Iranian entities in whose names the escrow accounts are held are not permitted to draw on such accounts, either because they are sanctioned parties or, where this is not the case, because of our business decision to not allow access to such accounts in light of the overall sanctions environment.

During 2014, approximately 1.0 million was paid into the escrow account. We, in our role as agent, distributed to the participants in the banking consortia 45 million including portions attributable to us totaling 5.9 million.

We received approximately 2.6 million of repayments in principal and approximately 4,000 interest in 2014 with respect to transactions in which we were a lender but not an agent or arranger.

Table of ContentsDeutsche Bank
Annual Report 2014 on Form 20-F

Disclosures Under Iran Threat Reduction and Syria Human Rights Act of 2012

102

In one financing arrangement, we are not ourselves a lender but act rather as agent for a lender, a state-owned development bank. In this capacity, we received fees from the Iranian borrower of approximately 2,000 and passed them on to the lender.

We generated revenues in 2014 of approximately 2.2 million in respect of these financing arrangements, of which approximately 1.9 million consisted of escrow account revenues, 0.2 million consisted of loan interest revenues and 34,000 consisted of fee revenues. The net profits were less than these amounts. This amount includes the revenues from BHF-BANK's business related to Iran attributable to the time it still was our subsidiary. BHF-BANK was acquired as part of the acquisition of the Sal. Oppenheim Group in March 2010 and was sold by us effective March 26, 2014.

As of December 31, 2014, we have an undrawn commitment of approximately 1.3 million under one of the financing agreements referred to above. Due to the export credit agency coverage, this remainder cannot be cancelled without German government approval, for which we have applied but which we have not yet received. We do not intend to make further disbursements upon this undrawn commitment.

Our portion of the outstanding principal amount of the remaining loan facilities amounted to approximately 25 million as of December 31, 2014. We intend to continue pursuing repayment and fulfilling our administrative role under these agreements, but we do not intend to engage in any new extensions of credit to these or other Iranian entities.

Legacy Contractual Obligations Related to Guarantees and Letters of Credit. Prior to 2007, we provided guarantees to a number of Iranian entities. In almost all of these cases, we issued counter-indemnities in support of guarantees issued by Iranian banks because the Iranian beneficiaries of the guarantees required that they be backed directly by Iranian banks. In 2007, we made a decision to discontinue issuing new guarantees to Iranian or Iran-related beneficiaries. Although the pre-existing guarantees stipulate that they must be either extended or honored if we receive such a demand and we are legally not able to terminate these guarantees, we decided in 2011 to reject any extend or pay demands under such guarantees. Even though we exited, where possible, many of these guarantees, guarantees with an aggregate face amount of approximately 7.6 million are still outstanding as of year-end 2014. The gross revenues from this business in 2014 were approximately 76,000 and the net profit we derived from these activities was less than this amount. This amount includes revenues of BHF-BANK, which was sold in March 2014.

We also have outstanding legacy guarantees in relation to a Syrian bank sanctioned by the U.S. under its non-proliferation program. The aggregate face amount of these legacy guarantees was approximately 11.1 million as of December 31, 2014, the gross revenues received from non-Syrian parties for these guarantees were approximately 110,000 in 2014 and the net profit we derived from these activities was less than this amount. This amount includes revenues of BHF-BANK, which was sold in March 2014. In one case we paid cancellation fees of less than 400 to the frozen account of the Syrian bank. The amount of legacy guarantees related to this Syrian bank is higher than the amount reported for 2013 (which was 9.0 million) because an analysis initiated in 2014 identified additional legacy guarantees, dating from or before 2007, with regard to this Syrian bank booked in one of the Bank's (non-German) European locations.

We intend to exit these guarantee arrangements as soon as possible.

Annual Report 2014 on Form 20-F

Disclosures Under Iran Threat Reduction and Syria Human Rights Act of 2012

103

Payments Received. In 2014, we received less than 80 payments adding up to approximately 19 million in favor of non-Iranian clients in Germany, the Netherlands and Belgium, which payments stemmed ultimately from relevant Iranian entities. Revenues for these incoming payments were less than 20,000. These figures include relevant payments in favor of clients of our subsidiary Postbank. We expect that we will also have to execute such transactions in the future.

On behalf of one of our clients in Poland we transferred to an account of the Iranian embassy in Poland, held by another bank, one payment of approximately 100. We do not intend to make such payments in the future.

Operations of Iranian Bank Branches and Subsidiaries in Germany and/or France. Several Iranian banks, including Bank Melli Iran, Bank Saderat, Bank Tejarat and Europäisch-Iranische Handelsbank, have branches or offices in Germany and/or France, even though their funds and other economic resources are frozen under European law. As part of the payment clearing system in Germany and other European countries, when these branches or offices need to make payments in Germany or Europe to cover their day-to-day operations such as rent, taxes, insurance premia and salaries for their remaining staff, or for any other kind of banking-related operations necessary to wind down their legacy trade business, the German Bundesbank and French banks accept fund transfers from these Iranian banks and disburse them to the applicable (mainly German) payees, some of whom hold accounts with us. In 2014, we received approximately 14.1 million in such disbursements in approximately 1,000 transactions via the German Bundesbank and French banks in respect of payments from the above-mentioned Iranian banks, and the gross revenues derived from these payments were less than 5,000. Relevant transactions of our subsidiary Postbank are included in these figures. We expect that we will also have to execute such transactions in the future.

Based on discussions initiated by the German Bundesbank, in 2014 BHF-BANK continued to maintain accounts for Bank Sepah's branch in Frankfurt, Germany. These accounts were frozen under European sanctions law. Until BHF-BANK was sold in March 2014 the total volume of outgoing payments from these accounts was approximately 0.5 million, which payments were made with the involvement of the competent authorities in Germany under applicable law. The gross revenues from this activity attributable to this time were approximately 3,500 and the net profits were less than this amount.

Maintaining of Accounts for Iranian Consulates and Embassies. In 2014, Iranian embassies and consulates in Germany and the Netherlands were holding accounts with us as well as with Postbank. This includes the provision by a subsidiary of Postbank to the Iranian consulate of girocard (debitcard/ATM)-terminals as well as the processing of transactions of cardholders using the terminals; the terminals are used to facilitate the payment of fees for the issuance of visas and other administrative measures by the consulate. The additional purpose of these accounts was the funding of day-to-day operational costs of the embassies and consulates, such as salaries, rent, and electricity. One of the account relationships was between Deutsche Bank Netherlands N.V. and the Agent Bureau of the Embassy of the Islamic Republic of Iran in The Hague (which is responsible for all Iran-U.S. Claims Tribunal activities). The total volume of outgoing payments from these accounts was approximately 32.5 million in 2014, which payments were made with the involvement of the competent authorities in the relevant European countries under applicable law. We derived gross revenues of approximately 51,000 and net profits which were less than this amount from these activities. The relevant European governments have requested that we continue to provide these services in the future to enable the Government of Iran to conduct its diplomatic relations.

Item 18: Financial Statements

104

Relationships with Corporate Clients. We maintain a business relationship with one corporate client registered in Germany who was sanctioned by the United States in the first quarter of 2014 pursuant to Executive Order 13382. We did not terminate this relationship but imposed several restrictive measures to mitigate the relevant risks. On October 16, 2014, the client's name was removed from the U.S. Office of Foreign Asset Control's Specially Designated Nationals List. Until that day the generated revenues derived from this relationship were less than 7,000 and the net profits were less than this amount.

Activities of Entities in Which We Have Interests. Section 13(r) requires us to provide the specified disclosure with respect to ourselves and our affiliates, as defined in Exchange Act Rule 12b-2. Although we have minority equity interests in certain entities that could arguably result in these entities being deemed affiliates, we do not have the authority or the legal ability to acquire in every instance the information from these entities that would be necessary to determine whether they are engaged in any disclosable activities under Section 13(r). In some cases, legally independent entities are not permitted to disclose the details of their activities to us because of German privacy and data protection laws or the applicable banking laws and regulations. In such cases, voluntary disclosure of such details could violate such legal and/or regulatory requirements and subject the relevant entities to criminal prosecution or regulatory investigations.

PART III

Item 17: Financial Statements

Not applicable.

Item 18: Financial Statements

The Financial Statements of this Annual Report on Form 20-F consist of the Consolidated Financial Statements including Notes 1 to 45 thereto, which are set forth as Part 2 of the Financial Report, and, as described in Note 1 Significant Accounting Policies and Critical Accounting Estimates thereto in the third paragraph under Basis of Accounting, certain parts of the Management Report set forth as Part 1 of the Financial Report. Such Consolidated Financial Statements have been audited by KPMG AG Wirtschaftsprüfungsgesellschaft, as described in their Report of Independent Registered Public Accounting Firm included on page 455 of the Financial Report.

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	4
	Executive Summary	

Management Report**Operating and Financial Review**

The following discussion and analysis should be read in conjunction with the consolidated financial statements and the related notes to them. Our Operating and Financial Review includes qualitative and quantitative disclosures on Segmental Results of Operations and Entity Wide disclosures on Net Revenue Components as required by International Financial Reporting Standard (IFRS) 8, Operating Segments. This information, which forms part of and is incorporated by reference into the financial statements of this report, is marked by a bracket in the margins throughout this Operating and Financial Review. For additional Business Segment disclosure under IFRS 8 please refer to Note 4 Business Segments and Related Information of the Consolidated Financial Statements.

Executive Summary**The Global Economy**

We estimate that growth of the global economy remained relatively weak at 3.4 % on an annual average in 2014, which was unchanged compared to the year before. After reaching its peak on the previous year at 3.6 % in the first quarter of 2014, growth declined to 3.3 % over the remainder of the year.

On an annual average, growth in industrialized countries accelerated in 2014, while growth in emerging market countries slowed. The economic output growth of industrialized countries is estimated to have increased from 1.2 % in 2013 to 1.7 % in 2014. The reduction in household debt continued to curb growth, especially in the eurozone. The major central banks maintained their extremely expansionary monetary policies, which supported the global economy. Key interest rates remained at historically low levels in 2014, and extensive quantitative easing provided additional stimulus.

In 2014, the eurozone continued its moderate recovery, which had begun mid-2013. After falling by 0.4 % in 2013, GDP rose by 0.9 % on an annual average in 2014, driven primarily by consumer spending. German economic growth accelerated from 0.1 % in 2013 to 1.6 % in 2014. After stagnation over the summer, growth accelerated markedly in the fourth quarter. The German economy is supported by the solid trend in consumer spending, driven by record employment levels and sound real income growth. In response to concerns about a negative feedback loop resulting from weak inflation, a de-anchoring of inflation expectations and a weak banking system that was restricting the credit supply, the European Central Bank (ECB) decided to adopt an even more expansionary policy in 2014. Over the course of the year, the ECB cut its key interest rates to 0.05 %, made liquidity available to the banks via targeted longer-term refinancing operations (TLTROs) and, towards the end of the year, launched a program to purchase covered bonds and asset-backed securities.

Despite the weather-related decline in GDP in the first quarter of 2014, U.S. economic growth accelerated slightly from 2.2 % in 2013 to 2.4 % in 2014. This was thanks to the continuous improvement in employment figures, the fracking boom as well as positive wealth effects from the ongoing recovery of the real estate market and the sharp rise in prices on the stock markets. Growth was also stimulated by the Federal Reserve's expansionary monetary policy. In light of the sound economic trend, the Fed scaled back its asset purchases during 2014 before terminating the program entirely in October.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	5
	Executive Summary	

In Japan, growth declined from 1.6 % in 2013 to stagnation in 2014. This was largely due to the increase in sales tax from 5 % to 8 % in April 2014. The Japanese economy continued to receive support from the country’s extremely expansionary fiscal and monetary policies, the first two pillars of Abenomics. However, the comprehensive structural reforms that constitute the third pillar of Abenomics have, for the most part, still not been implemented.

Economic activity in the emerging market countries slowed from 5.0 % in 2013 to an estimated 4.6 % in 2014. This was partly due to the relatively weak external demand, but also to restrictions on the supply side, for example, slower growth in labor supply and the capital stock. Growth was weaker in all regions, with the sharpest decline in Latin America.

We estimate that economic growth in Asia (excluding Japan) has slightly weakened from 6.6 % in 2013 to 6.5 % in 2014. After growth of 7.7 % in 2013, China’s economy expanded by just 7.4 % in 2014, largely as a result of the downturn on the real estate market. Thanks to investor-friendly reforms in India by the new government under Prime Minister Modi, the Indian economy grew at an estimated 7.2 %, which was stronger than in 2013 with 6.9 %.

In the emerging market economies of Eastern Europe, the Middle East and Africa, growth slowed from 2.6 % in 2013 to an estimated 2.2 % in 2014. Growth in Russia declined from 1.3 % in 2013 to 0.6 % in 2014 as a result of the weak trend in commodity prices and sanctions in response to the Ukraine crisis.

We estimate that economic activity in Latin America grew by just 0.8 % in 2014, down from 2.5 % in 2013. In Brazil, political uncertainty surrounding the presidential elections, an interventionist economic policy, high inflation and weak commodity prices had a dampening effect. As a result, we estimate that the Brazilian economy merely stagnated in 2014, following growth of 2.5 % in 2013.

The Banking Industry

On balance, 2014 was characterized by moderate progress for the banking industry. At the same time, the sharp contrast between Europe and the U.S. continued.

In Europe, lending to households edged up again over the course of the year, while the decline in the volume of lending to firms gradually slowed. Overall, however, there was a moderate decline in private sector lending. On the deposit side, business was remarkably stable given the increasingly serious repercussions of the low interest-rate environment and further cuts in key interest rates. There was consistently strong growth in corporate deposits as well as solid growth in retail deposits. In Germany, both corporate and household lending volumes increased slightly over the course of the year, once again outperforming the eurozone as a whole. In 2014, banks in Europe were far more active in debt funding markets than in the extremely weak preceding years, even though the volume remained below the average over the past decade. At the same time, demand for the ECB’s targeted longer term refinancing operations (TLTROs) was limited. Total assets of eurozone banks saw a moderate increase for the first time since 2011, rising about 2.5 % in the year.

In the U.S., the contrast between corporate and retail lending was even more pronounced in 2014, with a double-digit expansion in the volume of loans to firms compared with sluggish growth in retail loans. There was, however, a solid increase in consumer loans, while mortgages declined slightly. The issuance of mortgage-backed securities also fell substantially on the previous year, highlighting the fact that, for the most part, the recent rises in real estate prices in the U.S. were not credit-driven. Banks’ deposit volumes again increased sharply in 2014, although the pace of growth slowed suddenly at the end of the year.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	6
	Executive Summary	

Global investment banking delivered a relatively solid performance in 2014, resulting largely from a significant increase in equity origination and a slight increase in bond origination. M&A activity surged. Consequently, both equity underwriting and M&A volumes recorded their highest level since the boom year 2007. Fixed-income trading contracted in 2014. By contrast, equity trading picked up. Revenues in corporate finance increased across the board with the exception of the syndicated loan business, which saw a slight decline. From a regional perspective, revenues in Asia and Europe rose particularly sharply in 2014, albeit from a relatively weak starting point.

Global asset management continued to benefit from growing wealth of high net-worth clients in all key regions. This was largely due to strong stock and bond market gains. The yield on ten-year German government bonds plummeted over the course of the year from just below 2 % to 0.5 %, marking several all-time lows. By contrast, important share indices in North America and Europe reached record highs. Increased market volatility particularly in the second half of the year, with considerable fluctuation in commodity prices (notably the decline in oil prices) and exchange rates, is likely to have had a positive effect on the business.

With regard to changes in banking regulation and financial supervision, in 2014 the focus in Europe was on preparations for the Banking Union, which was launched at the end of the year with the start of the single supervisory mechanism led by the ECB. Prior to the launch, Europe's largest banks underwent a comprehensive balance-sheet assessment and stress test, which enhanced the transparency and cross-border comparability of bank data. In addition, the EU adopted new rules governing the recovery and resolution of failed banks, in which the principle of creditor bail-in plays a key role. In the U.S., a potential increase in capital requirements was again on the agenda, which fuelled a global debate on total loss-absorbing capacity (TLAC). Banks on both sides of the Atlantic continued to be plagued by numerous litigation and enforcement issues, with settlements sometimes involving considerable financial burdens.

Overall, U.S. banks were once again very profitable with net profits matching historical peak levels thanks to a stable trend in the operating business and another slight decline in loan loss provisions. By contrast, the profitability of European banks remained unsatisfactory in light of stagnating revenue levels and increasing expenditures, a decline in the cost of risk notwithstanding.

Deutsche Bank Performance

In 2014 we continued to invest in the bank's future growth and in further strengthening our capital base. Revenues remained stable despite challenging markets. While we made progress on OpEx savings, costs were negatively affected by required regulatory spending. We expect 2015 to be a year of further challenges and disciplined implementation; however, we will continue to work diligently towards our 2015 targets and to our strategic vision for Deutsche Bank.

The financial highlights for the Group in the period and key performance indicators can be summarized as follows:

- Group net revenues of 31.9 billion in 2014, up 34 million versus 2013;
- Income before income taxes of 3.1 billion, up 1.7 billion versus 2013;
- Net income increased to 1.7 billion in 2014; up 1.0 billion versus 2013;
- Cost/income ratio (reported) was 86.7 %, down from 89.0 % in 2013. Cost/income ratio (adjusted) was 74.4 %, up from 72.5 % in 2013;
- CRR/CRD 4 fully loaded Common Equity Tier 1 ratio was 11.7 % at the end of 2014;
- Post-tax return on average active equity (reported) was 2.7 %, up from 1.2 % in 2013. Post-tax return on average active equity (adjusted) was 7.1 %, down from 7.7 % in 2013;
- CRR/CRD 4 fully loaded leverage ratio was 3.5 % at year-end 2014;
- CRR/CRD 4 fully loaded risk-weighted assets of 394 billion as of December 31, 2014.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	7
	Executive Summary	

Our Group Key Performance Indicators are as follows:

Group Key Performance Indicators	Status end of 2014	Status end of 2013
Post-tax return on average active equity (reported) ¹	2.7%	1.2%
Post-tax return on average active equity (adjusted) ²	7.1%	7.7%
Cost/income ratio (reported) ³	86.7%	89.0%
Cost/income ratio (adjusted) ⁴	74.4%	72.5%
Cost savings ⁵	3.3 bn	2.1 bn
Costs to achieve savings ⁶	2.9 bn	1.8 bn
CRR/CRD 4 fully loaded Common Equity Tier 1 ratio ⁷	11.7%	9.7%
Fully loaded CRR/CRD 4 leverage ratio ⁸	3.5%	2.4% ⁹

¹ Based on Net Income attributable to Deutsche Bank shareholders.

² Based on Net Income attributable to Deutsche Bank shareholders, adjusted for litigation, CtA, impairment of goodwill and intangible assets, other severances and CRR/CRD 4 Credit Valuation Adjustment (CVA)/Debt Valuation Adjustment (DVA)/Funding Valuation Adjustment (FVA). Calculation is based on an adjusted tax rate of 34 % for year ended December 31, 2014 and 36 % for year ended December 31, 2013.

³ Total noninterest expenses as a percentage of total net interest income before provision for credit losses plus noninterest income.

⁴ Based on noninterest expenses, adjusted for litigation, CtA, impairment of goodwill and intangible assets, policyholder benefits and claims, other severances and other divisional specific cost one-offs; divided by reported revenues.

⁵ Cost savings resulting from the implementation of the OpEx program.

⁶ Costs-to-achieve (CtA) savings are costs which are directly required for the realisation of savings in the OpEx program.

⁷ The CRR/CRD 4 fully loaded Common Equity Tier 1 ratio represents our calculation of our Common Equity Tier 1 ratio without taking into account the transitional provisions of CRR/CRD 4. Further detail on the calculation of this ratio is provided in the Risk Report.

⁸ Further detail on the calculation of this ratio is provided in the Risk Report.

⁹ Does not take into account recent revisions to the leverage exposure calculation under CRR/CRD 4.

Income before income taxes grew significantly year on year to 3.1 billion driven by solid performances in the Core businesses, plus lower provision for credit losses and reduced litigation costs compared to 2013 as the resolution of some matters was pushed beyond 2014.

Net revenues in 2014 were 31.9 billion, up 34 million from 2013. Despite market challenges, CB&S, GTB and PBC reported increased net revenues in 2014, while Deutsche AWM reported a slight revenue decrease following mark-to-market movements on policyholder positions in Abbey Life. NCOU revenues were down year on year, primarily impacted by a decreasing portfolio following de-risking activities.

Noninterest expenses in 2014 were 27.7 billion, down 2 % from 2013, benefitting primarily from lower litigation costs. In addition policyholder benefits & claims fell, savings were realized from the OpEx program, and restructuring activity costs decreased. However, compensation and benefits were higher compared to 2013, mainly driven by costs to comply with regulatory compensation requirements.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

OpEx program annual cost savings of 3.3 billion were achieved in 2014, above the 2.9 billion target for 2014. Cumulative costs to achieve were 2.9 billion (thereof 1.2 billion spent in 2014, 1.3 billion spent in 2013 and 0.5 billion spent in 2012). However, the prevailing business environment and additional regulatory cost challenges had an adverse impact on our adjusted cost-income ratio and adjusted post-tax return on average active equity.

Our capital position strengthened with a fully loaded Common Equity Tier 1 ratio of 11.7 %, in excess of our strategy 2015+ target. Additionally the fully loaded CRR/CRD 4 leverage ratio was 3.5 % at the end of 2014 based on a CRR/CRD 4 leverage exposure of 1,445 billion as of December 31, 2014.

Deutsche Bank met the requirements of the Comprehensive Assessment conducted by the European Central Bank (ECB) in 2014. The assessment comprised an Asset Quality Review (AQR) and a Stress Test which modeled the capital adequacy of the Bank under different stress scenarios. The assessment reaffirmed that our capital base exceeds regulatory requirements, even under severe market stress conditions, and underlined the quality of our asset base. The AQR adjustments identified were not material in nature and did not result in changes to the reported results or ratios.

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	8
	Deutsche Bank Group	

Deutsche Bank Group

Deutsche Bank: Our Organization

Headquartered in Frankfurt am Main, Germany, we are the largest bank in Germany and one of the largest financial institutions in Europe and the world, as measured by total assets of 1,709 billion as of December 31, 2014. As of that date, we employed 98,138 people on a full-time equivalent basis and operated in 71 countries out of 2,814 branches worldwide, of which 66 % were in Germany. We offer a wide variety of investment, financial and related products and services to private individuals, corporate entities and institutional clients around the world.

Following a comprehensive strategic review, we realigned our organizational structure in the fourth quarter 2012. We reaffirmed our commitment to the universal banking model and to our four existing corporate divisions. We strengthened this emphasis with an integrated Deutsche Asset & Wealth Management Corporate Division that includes former Corporate Banking & Securities businesses such as exchange-traded funds (ETFs). Furthermore, we created a Non-Core Operations Unit. This unit includes the former Group Division Corporate Investments (CI) as well as non-core operations which were re-assigned from other corporate divisions.

As of December 31, 2014 we were organized into the following five corporate divisions:

- Corporate Banking & Securities (CB&S)
- Private & Business Clients (PBC)
- Global Transaction Banking (GTB)
- Deutsche Asset & Wealth Management (Deutsche AWM)
- Non-Core Operations Unit (NCOU)

The five corporate divisions are supported by infrastructure functions. In addition, we have a regional management function that covers regional responsibilities worldwide.

We have operations or dealings with existing or potential customers in most countries in the world. These operations and dealings include:

- subsidiaries and branches in many countries;
- representative offices in many other countries; and
- one or more representatives assigned to serve customers in a large number of additional countries.

Management Structure

We operate the five corporate divisions and the infrastructure functions under the umbrella of a virtual holding company. We use this term to mean that, while we subject the corporate divisions to the overall supervision of our Management Board, which is supported by infrastructure functions, we do not have a separate legal entity holding these five corporate divisions but we nevertheless allocate substantial managerial autonomy to them. To support this structure, key governance bodies function as follows:

The Management Board has the overall responsibility for the management of Deutsche Bank, as provided by the German Stock Corporation Act. Its members are appointed and removed by the Supervisory Board, which is a separate corporate body. Our Management Board focuses on strategic management, corporate governance, resource allocation, risk management and control, assisted by functional committees.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The Group Executive Committee was established in 2002. It comprises the members of the Management Board and senior representatives from our regions, corporate divisions and certain infrastructure functions appointed by the Management Board. The Group Executive Committee is a body that is not required by the

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	9
	Deutsche Bank Group	

Stock Corporation Act. It serves as a tool to coordinate our businesses and regions, discusses Group strategy and prepares recommendations for Management Board decisions. It has no decision making authority.

Within each corporate division and region, coordination and management functions are handled by operating committees and executive committees, which helps ensure that the implementation of the strategy of individual businesses and the plans for the development of infrastructure areas are integrated with global business objectives.

Corporate Divisions

Corporate Banking & Securities Corporate Division

Corporate Division Overview

CB&S is made up of the business divisions Corporate Finance and Markets. These businesses offer financial products worldwide including the underwriting of stocks and bonds, trading services for investors and the tailoring of solutions for companies' financial requirements.

The CB&S businesses are supported by the Credit Portfolio Strategies Group (CPSG), which has responsibility for a range of loan portfolios and, from 2013, centralized the hedging of certain uncollateralized counterparty derivative exposures, actively managing the risk of these through the implementation of a structured hedging regime.

As part of the ongoing optimization of our business model, in response to the changing market and regulatory environment, we continued to evaluate our business portfolio, adapting it to reflect current market opportunities and meet client needs. In that context, at the end of 2014, we announced the cessation of most trading in single name credit default swaps (CDS) and physical precious metals.

During the fourth quarter of 2013, the decision was taken to scale down and discontinue elements of the commodities business. The portfolios containing discontinued activities were aggregated under the Special Commodities Group (SCG), which was subsequently transferred from CB&S to NCOU in the first quarter of 2014. SCG contains assets, liabilities and contingent risks related to Energy, Agriculture, Base Metals and Dry Bulk exposures. The continued commodities business remains in CB&S.

Effective in November 2012, following a comprehensive strategic review of the Group's organizational structure, CB&S was realigned as part of the Group's new banking model. This realignment covered three main aspects: the transfer of non-core assets (namely correlation and capital intensive securitization positions, monoline positions, and IAS 39 reclassified assets) to the NCOU; the transfer of passive and third-party alternatives businesses, such as ETFs, into the newly integrated Deutsche AWM Corporate Division; and a refinement of coverage costs between CB&S and GTB.

We have made the following significant capital expenditures or divestitures since January 1, 2012:

In December 2014, we completed the sale of 75 % of a U.S.\$ 2.5 billion portfolio of U.S. special situation commercial real estate loans to a fund managed by the Texas Pacific Group. Deutsche Bank retains a 25 % stake in the portfolio and continues to originate and acquire new loans in the U.S. special situations commercial real estate market.

In June 2014, Markit Ltd., a provider of financial data and trade processing services, initiated its listing on NASDAQ Stock Market via a sale of shares from existing shareholders. As part of this listing, we sold 5.8 million of the 11.6 million shares (5.7 %) we held in Markit.

In June 2012, we completed the sale of DB Export Leasing GmbH to Interoute Communications Limited.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	10
	Deutsche Bank Group	

In March 2012, we completed the sale of our U.S. multi-family financing business (Deutsche Bank Berkshire Mortgage) to a group led by Lewis Ranieri and Wilbur L. Ross, in line with our desire to focus on our core business strengths in the U.S.

Products and Services

Within our Corporate Finance Business Division, our clients are offered mergers and acquisitions, equity and debt financing and general corporate finance advice. In addition, we provide a variety of financial services to the public sector.

The Markets Business Division is responsible for the sales, trading and structuring of a wide range of fixed income, equity, equity-linked, foreign exchange and commodities products. The division aims to deliver solutions for the investing, hedging and other needs of customers. As part of increasing the efficiency of the business, our Rates, Flow Credit and FX businesses now operate as an integrated business with a single management team. The Structured Finance business encompasses non-flow financing and structured risk for clients across all industries and asset classes.

All our trading activities are covered by our risk management procedures and controls which are described in detail in the Risk Report.

Distribution Channels and Marketing

In CB&S, the focus of our corporate and institutional coverage bankers and sales teams is on our client relationships. We have restructured our client coverage model so as to provide varying levels of standardized or dedicated services to our customers depending on their needs and level of complexity.

Private & Business Clients Corporate Division

Corporate Division Overview

PBC operates under a single retail banking business model across Europe and selected Asian markets. PBC serves retail and affluent clients as well as small and medium sized business customers.

The PBC Corporate Division comprises three business units under one strategic steering, supported by a joint services and IT platform:

- Private & Commercial Banking, which comprises all of PBC's activities in Germany under the Deutsche Bank brand;
- Advisory Banking International, which covers PBC's activities in Europe (outside Germany) and Asia including our stake in and partnership with Hua Xia Bank; and
- Postbank, which comprises, among other businesses, Postbank, norisbank and BHW.

PBC continued to focus on realizing potential from the Private & Commercial Banking business unit by leveraging the integrated commercial banking coverage model for small and medium sized corporate clients. This enables us to capture new opportunities from small and medium sized business clients by improving PBC's client proximity and cross-divisional collaboration leveraging the expertise of Deutsche Bank Group.

In Continental Europe we operate our Advisory Banking International business unit in five major banking markets: Italy, Spain, Poland, Belgium and Portugal. In Asia, India and China are our core markets. In India, PBC operates a branch network of seventeen branches supported by a mobile sales force. In China, we hold a 19.99 % stake in the Hua Xia Bank, with which we have a strategic partnership and cooperation

agreement.

Postbank continues to operate in the market with its own brand. We continued our integration of Postbank into PBC and we seek to significantly strengthen our joint business model and to generate revenue and cost synergies.

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	11
	Deutsche Bank Group	

We have made the following significant capital expenditures or divestitures since January 1, 2012:

In October 2014, we contributed ownership of the real estate of 90 retail banking branches in Italy to a closed-end institutional real estate fund, Italian Banking Fund (IBF) managed by Hines Italy SGR. The contributed real estate had a total value of 134 million and will mostly be leased back for a period of at least 12 years.

In May 2014, we completed the sale of a 20.2 % stake in Deutsche Herold AG to Zürich Beteiligungs AG, a subsidiary of Zurich Insurance Group AG. Deutsche Bank acquired the 20.2 % stake from a third party immediately ahead of selling it to Zurich. 15.2 % of the disposal to Zurich was based on a share purchase agreement that was entered into by DB and Zurich in 2001. The remaining 5.0 % stake was sold due to Zurich exercising a call option.

In March 2012, Postbank and our wholly owned subsidiary DB Finanz-Holding GmbH (DB Finanz-Holding) agreed to enter into a domination and profit and loss transfer agreement according to Section 291 of the German Stock Corporation Act, with DB Finanz-Holding as controlling company and Postbank as dependent. The agreement became effective in June 2012 and reached final legal validity on September 11, 2012. The share in Postbank held at the end of 2014 is 94.1 %.

In February 2012, we exchanged a mandatorily-exchangeable bond issued by Deutsche Post in February 2009 into 60 million Postbank shares (and cash) and one day later Deutsche Post exercised its option to sell to us an additional 12.1 % of the share capital in Postbank. Together with shares held at this point in time, our ownership in Postbank increased to 93.7 %.

Products and Services

PBC offers a similar range of banking products and services throughout Europe and Asia, with some variations among countries that are driven by local market, regulatory and customer requirements.

We offer Investment and Insurance, Mortgages, Business Products, Consumer Finance, Payments, Cards & Accounts, Deposits and mid-cap related products provided by other divisions as part of our mid-cap joint venture, as well as postal services and non-bank products in Postbank.

Our investment products cover the full range of brokerage products (equities, bonds), mutual/closed-end funds (single- and multi-assets), structured products as well as discretionary portfolio management and securities custody services. In addition we provide life- and non-life insurance products as well as corporate pension schemes to our clients.

We offer standard to complex mortgage solutions and our mortgage product portfolio is complemented by publicly subsidized mortgages, mortgage brokerage and mortgage-related insurance. Our business products focus on managing transactions, risk and liquidity for our clients. In commercial banking and international services we optimize cash flow and market volatility for our clients and support their business expansions. In addition our loan product offering consists of personal installment loans, credit lines and overdrafts as well as point of sale (POS) business.

Our payments, cards and account products provide domestic, international and SEPA payments, debit, credit and prepaid cards as well as current accounts for private clients and business clients. Our deposits portfolio consists of sight deposits, term deposits and savings.

Our lending businesses are subject to our credit risk management processes. Please see the Monitoring Credit Risk and Main Credit Exposure Categories sections in the Risk Report.

	Deutsche Bank Group	

Distribution Channels and Marketing

In following a client-centric banking approach, we seek to optimize the interaction with our customers as well as the accessibility and availability of our services. PBC uses a broad multi-channel approach to serve its customers and distribute financial solutions depending on local strategic positioning and business model.

Branches: Within our branches, we generally offer the entire range of products and advice.

Financial Agents: In most countries, we additionally market our retail banking products and services through self-employed financial agents.

Customer Contact Centers: Our Customer Contact Centers provide clients with remote services (i.e., account information, securities brokerage) supported by automated systems.

Online and Mobile Banking: On our websites, we offer clients a broad variety of relevant product information and services including interactive tools, tutorials and rich media content. We provide a high performing transaction-platform for banking, brokerage and self-services, combined with a highly frequented multi-mobile offering for smartphones and tablets. Moreover, we further invest in improvements of selected digital capabilities. This digitization program is being rolled out in all our businesses.

Self-service Terminals: These terminals support our branch network and allow clients to withdraw and transfer funds, receive custody account statements and make appointments with our financial advisors.

Moreover, we enter into country-specific distribution and cooperation arrangements. In Germany, we maintain cooperation partnerships with companies such as DP DHL (Postbank cooperation) and Deutsche Vermögensberatung AG (DVAG). With DVAG, we distribute our mutual funds and other banking products through DVAG's independent distribution network. In order to complement our product range, we have signed distribution agreements, in which PBC distributes the products of product suppliers. These include an agreement with Zurich Financial Services for insurance products, and product partnerships with thirteen fund companies for the distribution of their investment products.

To achieve a strong brand position internationally, we market our services consistently throughout the European and Asian countries we consider to be part of our strategic focus.

Global Transaction Banking Corporate Division

Corporate Division Overview

GTB delivers commercial banking products and services to corporate clients and financial institutions, including domestic and cross-border payments, financing for international trade, lending, as well as the provision of trust, agency, depository, custody and related services. Our business divisions consist of:

Trade Finance and Cash Management Corporates

Institutional Cash and Securities Services

We have made the following significant capital expenditures or divestitures since January 1, 2012:

On February 28, 2014, registrar services GmbH was sold to Link Market Services.

On June 1, 2013, the sale of Deutsche Card Services to EVO Payments International was completed.

Products and Services

Trade Finance offers local expertise, a range of international trade products and services (including financing), custom-made solutions for structured trade and the latest technology across our international network so that our clients can better manage the risks and other issues associated with their cross-border and domestic trades.

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	13
	Deutsche Bank Group	

Cash Management caters to the needs of a diverse client base of corporates and financial institutions. With the provision of a comprehensive range of innovative and robust solutions, we handle the complexities of global and regional treasury functions including customer access, payment and collection services, liquidity management, information and account services and electronic bill presentation and payment solutions.

Securities Services provides a range of trust, payment, administration and related services for selected securities and financial transactions, as well as domestic securities custody in more than 30 markets.

Distribution Channels and Marketing

GTB develops and markets its own products and services in Europe, the Middle East, Asia and the Americas. The marketing is carried out in conjunction with the coverage functions in this division, in CB&S and in PBC. Leveraging the integrated commercial banking coverage model for small and medium sized corporate clients enables us to capture new opportunities from this client group.

Customers can be differentiated into two main groups: (i) financial institutions, such as banks, mutual funds and retirement funds, broker-dealers, fund managers and insurance companies, and (ii) multinational corporations, large local corporates and medium-sized companies, predominantly in Germany and the Netherlands.

Deutsche Asset & Wealth Management Corporate Division (Deutsche AWM)**Corporate Division Overview**

With 1.0 trillion of invested assets as of December 31, 2014, Deutsche AWM is one of the world's leading investment organizations. Deutsche AWM helps individuals and institutions worldwide to protect and grow their wealth, offering traditional active, passive and alternative investments across all major asset classes. Deutsche AWM also provides customized wealth management solutions and private banking services to high-net-worth and ultra-high-net-worth (UHNW) individuals and family offices.

Products and Services

Deutsche AWM's investment capabilities span both active and passive strategies and a diverse array of asset classes including equities, fixed income, real estate, infrastructure, private equity and hedge funds. The division also offers customized wealth management solutions and private banking services, including lending and discretionary portfolio management.

In 2014, Deutsche AWM enhanced its product offering across innovative and high-growth sectors, including expanding products based on the Cash Return on Capital Invested (CROCI) approach, alternative fund offerings and physical replication exchange-traded funds (ETFs), for which it is Europe's second largest provider (source: Deutsche Bank, Bloomberg Finance LP, Reuters). Additionally, through targeted hires, Deutsche AWM increased its private banking and wealth advisory teams to serve UHNW clients worldwide, and added to institutional and retail coverage teams in the Global Client Group.

Distribution Channels and Marketing

Global Coverage/Advisory teams manage client relationships, provide advice and assist clients to access Deutsche AWM's products and services. Deutsche AWM also markets and distributes its offering through other business divisions of Deutsche Bank Group, notably PBC for retail customers and CB&S for selected institutional and corporate clients, as well as through third-party distributors. To ensure holistic service and advice, all clients have a single point of access to Deutsche AWM, with dedicated teams serving specific client groups.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Deutsche AWM created its Key Client Partners (KCP) advisory centers in 2013, to deliver its cross divisional investment banking, corporate banking and asset management capabilities. The global centres give professional investors access to cross-asset class and cross-border investment opportunities and financing solutions in tandem with CB&S.

	Deutsche Bank Group	

Non-Core Operations Unit Corporate Division

In the fourth quarter 2012, we established the NCOU to operate as a separate division alongside Deutsche Bank’s core businesses. As set out in Strategy 2015+, our objectives in setting up the NCOU are to improve external transparency of our non-core positions; to increase management focus on the core operating businesses by separating the non-core activities; and to facilitate targeted accelerated de-risking.

The NCOU manages assets with a value of approximately 39 billion and fully loaded RWA equivalent of 59 billion, as of December 31, 2014.

In addition to managing our global principal investments and holding certain other non-core assets to maturity, targeted de-risking activities within the NCOU are intended to help us reduce risks that are not related to our planned future strategy, thereby reducing both balance sheet and the associated capital demand. In carrying out these targeted de-risking activities, the NCOU will prioritize for exit those positions with less favorable capital and leverage profiles, which is aligned with the Bank’s overall strategic objectives.

The NCOU’s portfolio includes activities that are non-core to the Bank’s strategy going forward; assets materially affected by business, environment, legal or regulatory changes; assets earmarked for de-risking; assets suitable for separation; assets with significant capital absorption but low returns; and assets exposed to legal risks. In addition, certain liabilities were also assigned to the NCOU following similar criteria to those used for asset selection, e.g. liabilities of businesses in run-off or for sale, legacy bond issuance formats and various other short-dated liabilities, linked to assigned assets.

In RWA terms the majority of NCOU’s assets now relate to legacy CB&S assets, and includes credit correlation trading positions, securitization assets, exposures to monoline insurers and assets reclassified under IAS 39. NCOU’s portfolio also includes legacy PBC assets such as selected foreign residential mortgages and consumer assets as well as other financial investments no longer deemed strategic for Postbank. The assets previously managed in the former Group Division Corporate Investments relate to the Bank’s global principal investment activities which now primarily consist of our stake in the port operator Maher Terminals.

During 2014, the NCOU continued to reduce risks and achieved a 39 % reduction in total assets. Significant disposals were executed from across portfolios, notably the completion of the sales of BHF-BANK and The Cosmopolitan of Las Vegas.

We have made the following significant divestitures since January 1, 2012:

On December 19, 2014, we closed the sale of Nevada Property 1 LLC, the owner of The Cosmopolitan of Las Vegas, to Blackstone Real Estate Partners VII for U.S.\$ 1.73 billion, subject to closing purchase price adjustments.

In March 2014, we completed the sale of BHF-BANK to Kleinwort Benson Group and RHJ International for a total consideration of 347 million primarily in cash (316 million) and the remainder in the form of new shares in RHJ International issued at par value. These shares have also subsequently been sold.

In December 2013, our subsidiary Deutsche Postbank AG completed the sale of an approximately £ 1.4 billion UK commercial real estate loan portfolio to GE Capital Real Estate.

In June 2013, our subsidiary PB Capital Corporation, completed the sale of an approximately U.S.\$ 3.7 billion commercial real estate loan portfolio to San Francisco based Union Bank, N.A., an indirect subsidiary of Mitsubishi UFJ Financial Group, Inc.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	15
	Deutsche Bank Group	

In May 2013, Sicherungseinrichtungsgesellschaft deutscher Banken mbH (SdB) fully repaid the remaining exposure (of which 0.8 billion was allocated to the former Corporate Investments, now part of the NCOU) of ECB-eligible notes guaranteed by the SOFFin (Sonderfonds Finanzmarktstabilisierung, established in October 2008 by the German government in the context of the financial crisis).

In January 2013, we completed the sale of our 15 % participation in Dedalus GmbH & Co. KGaA, through which we indirectly held approximately 1.1 % of the shares in EADS N.V., for a consideration of approximately 250 million.

In October 2012, we exited our exposure to Actavis, the generic pharmaceuticals company, upon completion of Watson Pharmaceuticals acquisition of the company.

Infrastructure and Regional Management

The infrastructure group consists of our centralized business support areas. These areas principally comprise control and service functions supporting our five corporate divisions.

This infrastructure group is organized to reflect the areas of responsibility of those Management Board members that are not in charge of a specific business line. The infrastructure group is organized into COO functions (i.e., Global Technology Operations, Corporate Services and COO Group Function), CFO functions (i.e., Finance, Tax, Insurance and Treasury), CRO functions (i.e., Credit Risk Management and Market Risk Management), CEO functions (i.e., Communications & Corporate Social Responsibility, Deutsche Bank Research, Group Audit), HR, Special Groups & Works Council, Legal & Audit, Compliance, AML & GRAD (Compliance, Anti-Money Laundering, Government & Regulatory Affairs) and Strategy, Organisation & Transformation (VKO).

The Regional Management function covers regional responsibilities worldwide. It focuses on governance, franchise development and performance development. Regional and country heads and management committees are established in the regions to enhance client-focused product coordination across businesses and to ensure compliance with regulatory and control requirements, both from a local and Group perspective. In addition, the Regional Management function represents regional interests at the Group level and enhances cross-regional coordination.

All expenses and revenues incurred within the Infrastructure and Regional Management areas are fully allocated to our five corporate divisions.

Significant Capital Expenditures and Divestitures

Information on each Corporate Division's significant capital expenditures and divestitures from the last three financial years has been included in the above descriptions of the Corporate Divisions.

Since January 1, 2014, there have been no public takeover offers by third parties with respect to our shares and we have not made any public takeover offers in respect of any other company's shares.

¹ Average balances for each year are calculated in general based upon month-end balances.

² Gross interest yield is the average interest rate earned on our average interest-earning assets.

³ Gross interest rate paid is the average interest rate paid on our average interest-bearing liabilities.

⁴ Net interest spread is the difference between the average interest rate earned on average interest-earning assets and the average interest rate paid on average interest-bearing liabilities.

⁵ Net interest margin is net interest income expressed as a percentage of average interest-earning assets.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	17
	Results of Operations	

2014

The decrease in net interest income in 2014 of 562 million, or 4 %, to 14.3 billion compared to 14.8 billion in 2013, was primarily driven by lower interest income in NCOU due to asset reductions as a result of our continued de-risking. Overall, the net interest spread decreased by 1 basis point as a result of slightly lower increase of gross interest yield as compared to gross interest rate paid. The net interest margin improved by 6 basis points, mainly due to effects resulting from the aforementioned asset reductions.

2013

The decrease in net interest income in 2013 of 1.1 billion, or 7 %, to 14.8 billion compared to 16.0 billion in 2012, was primarily driven by lower interest income on trading assets in CB&S, due to lower client activity reflecting lower liquidity and ongoing market uncertainty. Another main driver of the decline in net interest income was the accelerated de-risking strategy in NCOU. In PBC, slightly reduced margins and a strategic deposit volume reduction in Postbank also impacted net interest income in 2013. Overall, the net interest spread increased by 2 basis points, following an almost parallel decline in gross interest yield and gross interest rate paid. The net interest margin improved by 3 basis points, mainly due to margin improvements in Germany.

Net Gains (Losses) on Financial Assets/Liabilities at Fair Value through Profit or Loss

in m. (unless stated otherwise)	2014	2013	2012	2014 increase (decrease) from 2013		2013 increase (decrease) from 2012	
				in m.	in %	in m.	in %
CB&S Sales & Trading (equity)	1,066	1,125	991	(58)	(5)	133	13
CB&S Sales & Trading (debt and other products)	2,487	2,544	4,508	(57)	(2)	(1,964)	(44)
Non-Core Operations Unit	(663)	(374)	(846)	(289)	77	472	(56)
Other	1,408	523	955	886	170	(433)	(45)
Total net gains (losses) on financial assets/ liabilities at fair value through profit or loss	4,299	3,817	5,608	481	13	(1,791)	(32)

2014

Net gains on financial assets/liabilities at fair value through profit or loss increased by 481 million to 4.3 billion for the full year 2014. The main driver for this was an increase of 886 million in Other, mainly reflecting mark to market gains from interest rate movements in CB&S which was partly offset by an increase in net losses on financial assets/liabilities at fair value through profit or loss of 289 million in NCOU, which included a loss related to the Special Commodities Group from our exposure to traded products in the U.S. power sector in 2014.

2013

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Net gains on financial assets/liabilities at fair value through profit or loss decreased by 1.8 billion to 3.8 billion for the full year 2013. The main driver for this development was a decrease of 2.0 billion in Sales & Trading (debt and other products), which was primarily driven by lower client activity coupled with a challenging trading environment and market uncertainty impacting Rates and Commodities, as well as by lower revenues in Foreign Exchange due to lower volatility and margin compression. In addition, the decrease was significantly driven by a fall of 433 million in Other, mainly reflecting the non-recurrence of a prior year refinement in the calculation methodology of the Debt Valuation Adjustment (DVA) on certain derivative liabilities in CB&S, and the deconsolidation of funds in Deutsche AWM, offset by increases in other revenues categories and C&A. The increase of 472 million in NCOU was due to a decrease in net losses on financial assets/liabilities at fair value through profit or loss, mainly driven by a smaller asset base as a result of an accelerated de-risking strategy and fair value movements on some of our non-core assets. The increase of 133 million in net gains on financial assets/liabilities at fair value through profit or loss in Sales & Trading (equity) was due to increased client activity and an improved market environment resulting in higher revenues from equity trading.

	Results of Operations	

Net Interest Income and Net Gains (Losses) on Financial Assets/Liabilities at Fair Value through Profit or Loss

Our trading and risk management businesses include significant activities in interest rate instruments and related derivatives. Under IFRS, interest and similar income earned from trading instruments and financial instruments designated at fair value through profit or loss (i.e., coupon and dividend income) and the costs of funding net trading positions are part of net interest income. Our trading activities can periodically shift income between net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss depending on a variety of factors, including risk management strategies.

In order to provide a more business-focused discussion, the following table presents net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss by corporate division and by product within CB&S.

in m. (unless stated otherwise)	2014	2013	2012	2014 increase (decrease) from 2013		2013 increase (decrease) from 2012

N/M Not meaningful

¹ This breakdown reflects net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss only. For a discussion of the corporate divisions' total revenues by product please refer to Note 4 Business Segments and Related Information.

² Includes the net interest spread on loans as well as the fair value changes of credit default swaps and loans designated at fair value through profit or loss.

³ Includes net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss of origination, advisory and other products.

Corporate Banking & Securities (CB&S)

2014

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 9.6 billion in 2014, an increase of 764 million, or 9 %, compared to 2013. In Sales & Trading (debt and other products), the main drivers for the increase were higher revenues in RMBS after having been impacted by de-risking activity and challenging market conditions in 2013, mark-to-market gains in relation to RWA mitigation efforts arising on CVA compared to a loss in 2013, and higher revenues in Credit Solutions due to increased financing. The increase in Sales & Trading (equity) in 2014 was primarily driven by client financing balances in Prime Finance and favorable trading conditions in Equity Derivatives. Revenue from Loan products also increased in the year reflecting investment in the Commercial Real Estate business. These revenue increases were partly offset by a decrease in Remaining products, mainly due to a Debt Valuation Adjustment (DVA) loss of 126 million (full year 2013: a loss of 21 million).

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	19
	Results of Operations	

2013

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 9.0 billion in 2013, a decrease of 1.5 billion, or 14 %, compared to 2012. This decrease was partly driven by products outside of Sales & Trading. For Remaining products, the decrease was mainly related to the non-recurrence of a refinement in the calculation methodology of the DVA on certain derivative liabilities in 2012. In Sales & Trading (debt and other products), the main drivers for the decrease were lower revenues in RMBS due to de-risking activity undertaken this year, weaker liquidity and market uncertainty, lower revenues in Foreign Exchange due to lower volatility and margin compression and weaker trading revenues in Commodities and Rates. Partly offsetting these were an increase in Loan products due to favourable movements in credit spreads, a lower proportion of lending activity measured at fair value and lower overall hedge costs. The increase in Sales & Trading (equity) in 2013 was primarily driven by non-recurrence of higher dividend payout in 2012 in Equity Derivatives, increased client activity and an improved market environment in Equity Trading business.

Private & Business Clients (PBC)**2014**

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 6.0 billion in 2014, a decrease of 4 million, compared to 2013, primarily reflecting a continued challenging interest rate environment in Europe. This was partly offset by the positive impact of a subsequent gain related to a business sale closed in a prior period.

2013

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 6.0 billion in 2013, a decrease of 254 million, or 4 %, compared to 2012. This decrease was primarily due to the ongoing low interest rate environment affecting revenues on deposits and a higher negative impact from purchase price allocation on Postbank.

Global Transaction Banking (GTB)**2014**

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 2.2 billion in 2014, an increase of 248 million, or 12 %, compared to 2013. The increase was primarily driven by a change of our hedging instruments to manage the interest rate risk which increases our revenues at fair value through profit or loss but is offset in other revenues. Overall, net interest income remained under pressure due to the low interest rate environment.

2013

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 2.0 billion in 2013, a decrease of 32 million, or 2 %, compared to 2012. Net interest income declined compared to the prior year driven by low interest rate in core markets, and competitive pressure on margins. Furthermore, foreign exchange-movements compared to 2012 adversely impacted the income reported in Euro.

Deutsche Asset & Wealth Management (Deutsche AWM)

2014

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 1.5 billion in 2014, a decrease of 63 million, or 4 %, compared to 2013. Higher net interest revenues in lending, deposits and alternatives were more than offset by an unfavorable change in the fair value of guarantees and negative effects from mark-to-market movements on policyholder positions in Abbey Life.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review Results of Operations	20
--	--	----

2013

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 1.6 billion in 2013, a decrease of 406 million, or 21 %, compared to 2012. The decrease in net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss was mainly attributable to the deconsolidation of funds in 2013 and was offset by increases in other revenues categories.

Non-Core Operations Unit (NCOU)**2014**

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were a loss of 573 million in 2014, a decrease of 818 million, compared to 2013. The main driver of the decrease was lower net interest revenues due to asset reductions in NCOU as a result of our de-risking strategy. A one-time loss related to the Special Commodities Group from our exposure to traded products in the U.S. power sector during the first quarter 2014 also contributed to the fair value losses.

2013

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were 245 million in 2013, a decrease of 405 million, or 62 %, compared to 2012. The main driver of the decrease was lower portfolio revenues due to asset reductions across all products in the NCOU. This was a result of an accelerated de-risking strategy, leading overall to a reduction in fair value losses.

Consolidation & Adjustments (C&A)**2014**

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss were a negative 187 million in 2014, compared with a gain of 19 million in 2013. This decrease was largely driven by negative effects from timing differences from different accounting methods used for management reporting and IFRS. This was partially offset by higher income from our capital account, largely resulting from the capital increase.

2013

Combined net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss was a gain of 19 million in 2013, compared with 369 million in 2012. This decrease primarily reflected lower positive effects resulting from timing differences from different accounting methods used for management reporting and IFRS. The remaining decline was mainly due to net interest income which was not allocated to the business segments and items outside the management responsibility of the business segments, for example funding expenses on non-divisionalized assets/liabilities.

Provision for Credit Losses**2014**

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Provision for credit losses in 2014 was 1.1 billion, down by 931 million, or 45 % versus 2013 reflecting material reductions in all businesses. Reduction in NCOU was driven by decreased provision for credit losses in IAS 39 reclassified and commercial real estate assets. Our Core bank benefited from increased releases and a non-recurrence of large single name bookings.

2013

Provision for credit losses recorded in 2013 increased by 344 million to 2.1 billion. In NCOU, provision for credit losses increased reflecting a number of single client items, including an item related to the European Commercial Real Estate sector. Provision for credit losses also increased in GTB, related to a single client credit event, and in CB&S, from higher charges relating to shipping companies. These increases were partly offset by lower provisions in PBC reflecting the improved credit environment in Germany.

Commissions and fee income

2014

Total Commissions and fee income increased from 12.3 billion in 2013 by 101 million to 12.4 billion in 2014. Advisory revenues were higher than in the prior year reflecting a higher fee pool and market share gains. Fees for assets under management increased due to a favorable development in European & U.S. exchange traded funds. This was offset by a decrease in Fees for other customer services, mainly triggered by changes in regulatory requirements with regard to payment and card fees as well as lower revenues from Postal Services. Additionally a change in the reporting classification of certain product-related expenses resulted in a further decline.

2013

Total Commissions and fee income increased from 11.8 billion in 2012 by 500 million to 12.3 billion in 2013. Commissions for assets under management increased from a favorable development in the leveraged debt markets globally, which benefited from low interest rates. Underwriting and advisory fees as well as brokerage fees and fees for other customer services improved, driven by higher client activity levels and improved market conditions for global equity trading.

Net gains (losses) on financial assets available for sale

2014

Net gains on financial assets available for sale were 242 million in 2014 compared to 394 million in 2013. The decline in 2014 mainly resulted from de-risking activities related to the NCOU.

2013

Net gains on financial assets available for sale were 394 million in 2013 compared to 301 million in 2012. The net gain in 2013 mainly resulted from the de-risking activities related to the NCOU portfolio.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	22
	Results of Operations	

Net income (loss) from equity method investments

2014

Net gains from equity investments increased from 369 million in 2013 to 619 million in 2014. The drivers for this positive effect were prior year impairments in NCOU and an increased equity pick up related to the investment in Hua Xia Bank.

2013

Net gains from equity investments increased from 163 million in 2012 to 369 million in 2013. The result in 2013 included 374 million from an equity pick up related to the investment in Hua Xia Bank.

Other income (loss)

2014

Other income declined from 193 million in 2013 to 108 million in 2014. The decline in 2014 was primarily related to the restructuring of the debt financing of Maher Terminals, which resulted in a reclassification of the cumulative mark-to-market loss from other comprehensive income to other income in NCOU.

2013

Other income improved from negative 120 million in 2012 to positive 193 million in 2013. The improvement in 2013 is predominantly due to NCOU de-risking of portfolios. An impairment related to the expected sale of BHF-BANK was partly offset by continuing positive development of operating profits in Maher Terminals. Losses recorded from derivatives qualifying for hedge accounting were significantly lower than in the prior year.

² In 2014, prior period comparatives have been restated in order to reflect changes in the Group's cost reporting.

³ Includes litigation related expenses of 1.6 billion in 2014, 3.0 billion in 2013 and of 2.6 billion in 2012.

Compensation and benefits

2014

Compensation and benefits increased by 183 million, or 1 %, to 12.5 billion in 2014 compared to 12.3 billion in 2013. This primarily reflects higher fixed compensation costs to comply with regulatory requirements, driven significantly by CB&S, as well as strategic hires in our business and control functions. This increase was partly offset by positive effects from the ongoing implementation of OpEx across our Core businesses.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	23
--	---	----

Results of Operations

2013

Compensation and benefits decreased by 1.2 billion, or 9 %, to 12.3 billion in 2013 compared to 13.5 billion in 2012. The reduction reflected a reduced deferred award amortization due to lower deferred grants awarded and positive effects from the ongoing implementation of OpEx.

General and administrative expenses

2014

General and administrative expenses decreased by 472 million, or 3 %, to 14.7 billion in 2014 compared to 15.1 billion in 2013. The decrease was primarily driven by lower litigation costs of 1.6 billion compared to 3.0 billion in 2013 as well as savings from the OpEx program. The decrease was partly offset by higher expenses from regulatory requirements, investments in our Core businesses and charges in relation to loan processing fees in PBC.

2013

General and administrative expenses increased by 110 million, or 1 %, from 15.0 billion in 2012 to 15.1 billion in 2013. The increase was primarily driven by higher litigation expenses as well as higher IT costs resulting from cost-to-achieve and project ramp-up costs in 2013. Partly offsetting was the non-recurrence of turnaround measures taken in the Netherlands in 2012. In addition, professional service fees, communication, travel and representation expenses as well as marketing expenses decreased.

Policyholder benefits and claims

2014

Policyholder benefits and claims decreased by 172 million from 460 million in 2013 to 289 million in 2014 and were solely driven by insurance-related charges regarding the Abbey Life business. These charges are offset by net gains on financial assets/liabilities at fair value through profit or loss on policyholder benefits and claims.

2013

Policyholder benefits and claims increased by 46 million from 414 million in 2012 to 460 million in 2013 and were solely driven by insurance-related charges regarding the Abbey Life business. These charges are offset by net gains on financial assets/liabilities at fair value through profit or loss on policyholder benefits and claims.

Impairment of intangible assets

2014

In 2014, the impairment charges on goodwill and intangibles of 111 million were mainly attributable to a 194 million impairment to our Maher Terminal investment, with a partial offset from a write-up on Scudder of 84 million.

2013

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

In 2013 the impairment charges on goodwill and intangibles of 79 million were mainly attributable to the commercial banking activities in the Netherlands. As in 2012, these charges were incurred in respect of the further execution of the turn-around measures as part of the Strategy 2015+.

Restructuring

2014

Restructuring expenses from our OpEx program decreased by 267 million, or 67 %, to 133 million in 2014 compared to 399 million in 2013.

2013

In 2013, restructuring expenses of 399 million resulted from our OpEx program and were virtually unchanged to the prior year.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review Results of Operations	24
--	--	----

Income Tax Expense

2014

In 2014, income tax expense was 1.4 billion versus 775 million in the comparative period. The effective tax rate of 46 % was mainly impacted by non-tax deductible litigation charges and income taxes of prior periods which were partially offset by changes in the recognition and measurement of deferred taxes.

2013

In 2013, income tax expense was 775 million, which led to an effective tax rate of 53 % compared to an income tax expense of 498 million and an effective tax rate of 61 % in 2012. The effective tax rate in each of 2013 and 2012 was impacted by expenses that were not deductible for tax purposes, which for 2012 included impairments of goodwill.

Segment Results of Operations

The following is a discussion of the results of our business segments. See Note 4 Business Segments and Related Information to the consolidated financial statements for information regarding:

changes in the format of our segment disclosure;

the framework of our management reporting systems and

definitions of non-GAAP financial measures that are used with respect to each segment.

The criterion for segmentation into divisions is our organizational structure as it existed at December 31, 2014. Segment results were prepared in accordance with our management reporting systems.

1 Segment assets represent consolidated view, i.e., the amounts do not include intersegment balances.

2 Risk weighted assets and capital ratios are based upon Basel 2.5 rules through December 31, 2013 and upon CRR/CRD 4 fully-loaded since January 1, 2014.

3 See Note 4 Business Segments and Related Information to the consolidated financial statements for a description of how average active equity is allocated to the divisions.

2014

CB&S reported solid revenues in full year 2014 despite a challenging market environment with low market volatility and client activity in the first half of the year. In the second half of 2014 volatility increased and CB&S saw stronger revenue momentum across the franchise.

Full year 2014 net revenues were 13.7 billion, an increase of 217 million, or 2 % from 13.5 billion in 2013. Net revenues included valuation adjustments relating to Credit Valuation Adjustment (CVA) arising on RWA mitigation efforts, Debt Valuation Adjustment (DVA), Funding Valuation Adjustment (FVA) and refinements in the calculation of IFRS CVA and FVA, totalling a loss of 299 million (full year 2013: a loss of 201 million).

Sales & Trading (debt and other products) net revenues were 6.8 billion, in line with the prior year. Revenues in RMBS were significantly higher, reflecting de-risking activity and a challenging market environment in 2013. Revenues in Distressed Products were higher than the prior year driven by strong performance in Europe. Revenues in Flow Credit were significantly lower than the prior year driven by weaker performance in North America. Core Rates revenues were lower than the prior year driven by FVA losses due to market movements and a calculation refinement, coupled with weaker performance in APAC and Europe. Revenues in Foreign Exchange were lower than the prior year due to lower volatility and reduced client activity notably in the first six months of 2014. Global Liquidity Management, Credit Solutions and Emerging Markets revenues were in line with the prior year. Sales & Trading (debt and other products) net revenues included three valuation adjustment items totalling a loss of 173 million. First, a mark-to-market gain of 7 million (full year 2013: a loss of 240 million) relating to RWA mitigation efforts arising on CVA. Second, a loss of 58 million (full year 2013: nil) relating to a refinement in the calculation of IFRS CVA. Third, a FVA loss of 122 million (full year 2013: a gain of 67 million) including a negative impact of 51 million due to a calculation refinement.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	28
	Results of Operations	

Sales & Trading (equity) net revenues were 2.9 billion, an increase of 191 million, or 7 %, compared to the prior year. Prime Finance revenues were higher than the prior year driven by increased client balances. Equity Trading revenues and Equity Derivatives revenues were both in line with the prior year.

Origination and Advisory net revenues were 2.9 billion for the full year 2014, an increase of 99 million, or 4 %, compared to the prior year. Revenues in Advisory were higher than the prior year driven by increased fee pool and market share. Revenues in Equity Origination and Debt Origination were both in line with the prior year.

Loan products net revenues were 1.2 billion for the full year 2014, in line with the prior year.

Net revenues from Other products were negative 90 million, compared to negative 21 million in the prior year. Net revenues from Other products included a DVA loss of 126 million (full year 2013: a loss of 21 million), including a gain of 37 million related to a refinement in the calculation of IFRS CVA.

In provision for credit losses, CB&S recorded a net charge of 103 million for the full year 2014, a decrease of 87 million, or 46 % compared to the prior year, driven by decreased provisions in the Shipping portfolio and a net release of provisions in our Leveraged Finance Portfolio.

Noninterest expenses increased by 186 million or 2 % compared to full year 2013. The increase was due to regulatory required expenditures, platform enhancements and adverse foreign exchange movements. These more than offset the progress on OpEx cost reduction initiatives and lower litigation costs.

Income before income taxes was 3.3 billion, compared to 3.2 billion in the prior year, driven by solid revenue performance and lower litigation costs partly offset by higher regulatory costs and cost-to-achieve (CtA) spend.

2013

Full year 2013 performance was significantly impacted by continued market uncertainty, in particular regarding the U.S. Federal Reserve's decision on tapering its quantitative easing program, coupled with a reduction in liquidity and slowdown in client activity.

Full year 2013 net revenues were 13.5 billion, a decline of 1.5 billion, or 10 %, from 15.1 billion in 2012. Net revenues were impacted by three valuation adjustment items. First, a mark-to-market loss of 265 million related to Credit Valuation Adjustment (CVA) RWA mitigation efforts. Second, a loss of 21 million related to the impact of a Debt Valuation Adjustment (DVA). Partly offsetting these was a gain of 85 million related to a Funding Valuation Adjustment (FVA). Excluding these items in both 2013 and 2012, net revenues decreased by 1.0 billion, or 7 %, compared to the full year 2012.

Sales & Trading (debt and other products) net revenues were 6.8 billion, a decrease of 2.0 billion, or 23 % compared to the prior year. Revenues in Rates were significantly lower than the prior year, due to lower client activity reflecting weaker liquidity and ongoing market uncertainty. RMBS was impacted by de-risking activity undertaken this year, exacerbated by weaker liquidity and continued market uncertainty, resulting in significantly lower revenues compared to the prior year. Despite increased volumes, revenues in Foreign Exchange were lower than the prior year due to lower volatility and margin compression. Revenues in Flow Credit were lower than the prior year due to weak performance in the Europe region. Revenues in Emerging Market and Distressed Products were in line with the prior year.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	29
	Results of Operations	

Sales & Trading (equity) net revenues were 2.7 billion, an increase of 449 million, or 20 % compared to the prior year. Equity Trading revenues increased and Equity Derivatives revenues increased significantly from prior year driven by higher client activity and an improved market environment. Prime Finance revenues were in line with the prior year.

Origination and Advisory net revenues were 2.8 billion for the full year 2013, an increase of 244 million, or 10 %, compared to the prior year. Debt Origination revenues were higher, and Equity Origination revenues were significantly higher than the prior year reflecting strong global market debt and equity issuance activity. Revenues in Advisory were down from the prior year, due to reduced fee pool and deal volumes.

Loan products net revenues were 1.2 billion for the full year 2013, an increase of 336 million, or 37 %, compared to 2012, due to lower overall hedge costs, a lower proportion of lending activity measured at fair value, favourable movements in credit spreads and continued strengthening in our commercial real estate franchise.

For the full year 2013, net revenues from Other products were negative 21 million, compared to positive 547 million in 2012. The decrease was mainly driven by non-recurrence of prior-year positive impact of a refinement in the calculation methodology of a Debt Valuation Adjustment (DVA) implemented in 2012 on certain derivative liabilities.

In provision for credit losses, CB&S recorded a net charge of 189 million for the full year 2013, an increase of 108 million, or 133 % compared to the prior year, driven by increased provisions taken in the Shipping portfolio.

Noninterest expenses decreased by 1.9 billion or 16 % compared to full year 2012, which included an impairment of intangible assets. Excluding these charges, the decrease was driven by lower compensation and non-compensation expenses reflecting the continued implementation of OpEx measures, coupled with favourable foreign exchange rate movements, partially offset by increased litigation costs.

Income before income taxes was 3.2 billion, compared to 2.9 billion in the prior year, driven by non-recurrence of the impairment on intangible assets, lower compensation and non-compensation expenses, partly offset by lower revenues and higher litigation provisions.

	Results of Operations	

2014

PBC's business environment remained challenging during 2014 with headwinds including further declines in interest rates, tighter regulation and significant non-recurring charges regarding loan processing fees triggered by two rulings in May and October 2014 of the German Federal Court of Justice (Bundesgerichtshof). Despite the challenging environment, PBC's revenues grew on a year-on-year basis reflecting an upturn in client activity in respect of Investment & Insurance Products and growth in certain Credit products, primarily in Germany. Provision for credit losses also improved in the period reflecting the quality of the loan portfolio.

PBC's reported full year result declined compared with 2013 due to the above-mentioned impact of 400 million for the reimbursement of loan processing fees. Appropriate provisions for loan processing fees were booked in 2014 and on this basis we expect no further impact in 2015 and beyond.

Net revenues in PBC increased by 89 million, or 1 %, compared to 2013. Growth in revenues from Investment & Insurance products of 88 million, or 7 %, reflected net asset inflows and higher transaction levels, mainly in securities. Net revenues from Credit products increased by 55 million, or 2 %, primarily driven by increased loan volumes, especially in German Mortgages. Net revenues from Other products increased by 33 million, or 7 %, mainly reflecting the impacts of a subsequent gain in Private & Commercial Banking related to a business sale closed in a prior period, gains from securities sales in DB Bauspar, as well as growth in the performance of the Hua Xia Bank equity investment. This was partly offset by decreased revenues related to Postbank nonoperating activities. Additionally, 2013 was positively impacted by a partial release of loan loss allowances in Postbank, which were reported in Other product revenues as the allowances were recognized prior to consolidation. Net revenues from Payments, Cards & Accounts decreased by 36 million, or 3 %, mainly triggered by changes in regulatory requirements with regard to payment and card fees. Net revenues from Deposits decreased by 34 million, or 1 %, due to the continued challenging interest rate environment in Europe as well as a result of de-leveraging mainly in Postbank. Net revenues from Postal and supplementary Postbank Services declined by 17 million, or 4 %, due to a change in the reporting classification of certain product-related expenses previously reported in other revenues.

Provision for credit losses decreased by 97 million, or 13 %, versus prior year period, benefiting from a favorable environment in Germany. In the prior year, an additional credit of 86 million was recorded in other interest income, representing a partial release of loan loss allowances in Postbank as well as improved credit quality of Postbank loans recorded at fair value on initial consolidation by the Group.

Noninterest expenses increased by 406 million, or 6 %, compared to 2013. 2014 was significantly impacted by 400 million of charges relating to loan processing fees following the above-mentioned changes triggered by recent German legal decisions. Additionally, higher infrastructure expenses, mainly caused by regulatory requirements, resulted in cost increases. Offsetting these expense increases in 2014 was the gain from the disposition of real estate in Europe. Noninterest expenses in 2013 also included an item of comparable size which was related to a release of a provision in respect of the Hua Xia Bank credit card cooperation. Expenditures for our OpEx and Postbank integration programs decreased by 42 million, or 8 %, in line with the progress of these programs. Additionally, PBC continued to realize incremental savings from efficiency measures implemented under the OpEx program.

Income before income taxes decreased by 220 million, or 14 %, compared to 2013, mainly driven by charges for loan processing fees as mentioned above.

Invested assets increased by 9 billion versus December 31, 2013, due to 6 billion in net inflows, mainly in securities, and additional market appreciation.

32

2013

PBC delivered a stable operating performance, in an environment of low interest rates and the muted client investment activity in Germany. The lending environment in 2013 was benign, with provision for credit losses below the prior years. The European markets in which we operate besides Germany were marked by a reduced credit activity that was compensated with increased business in Investment Products. The turmoil in the Chinese and Indian financial markets, observed in the last months of 2013, did not materially impact our operations in these countries.

Net revenues increased slightly by 10 million as compared to 2012. Higher revenues from credit products, investment & insurance products and other products were compensated by lower revenues from deposits, related to the ongoing low interest rate environment and higher negative impact from purchase price allocation on Postbank. Revenues from credit products increased by 76 million, or 2 %, mainly reflecting mortgage volume growth in Private & Commercial Banking and higher consumer finance margins in Advisory Banking International. Revenues from investment & insurance products increased by 74 million, or 6 %, driven by higher transaction volumes in Advisory Banking International and higher revenues from discretionary portfolio management in Private & Commercial Banking. Revenues from other products increased by 51 million, or 12 %, benefitting from the performance of Hua Xia Bank, partly offset by several, mainly Postbank related, one-off items. Net revenues from Postal and supplementary Postbank Services declined by 20 million, or 4 %, reflecting usual revenue fluctuations. Net revenues from payments, cards and accounts remained stable.

Provision for credit losses was 719 million, down 8 % from 781 million for 2012, driven by Private & Commercial Banking and Postbank, reflecting an improved portfolio quality and credit environment in Germany. Additionally, a credit of 86 million (2012: 94 million) was recorded in other interest income representing increases in the credit quality of Postbank loans recorded at fair value on initial consolidation by the Group. Advisory Banking International had an increase in provisions for credit losses, mainly caused by a difficult credit environment in Italy.

Noninterest expenses increased by 52 million, or 1 %, compared to 2012 due to higher costs-to-achieve of 112 million, related to Postbank integration and to OpEx, as well as higher cost allocations from infrastructure functions, which were mostly counterbalanced by savings, mainly driven by realization of synergies from Postbank.

Income before income taxes increased by 35 million, or 2 %, versus 2012, despite higher costs-to-achieve of 112 million.

Invested assets were down by 11 billion mainly driven by 15 billion net outflows, mostly in deposits, partly offset by 4 billion market appreciation.

2014

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

In 2014, net revenues and income before income taxes in GTB developed solidly, despite a persistently challenging market environment, as reflected by further cuts to already low interest rates, heightened geopolitical risks and a highly competitive business environment. Noninterest expenses in 2014 and 2013 were impacted by specific items. 2014 contained a litigation-related charge, whereas the performance in 2013 included higher expenses for the turn-around of our commercial banking activities in the Netherlands as part of the Strategy 2015+ as well as an impairment of an intangible asset.

Net revenues increased by 76 million, or 2 %, compared to 2013 including a gain on the sale of registrar services GmbH in 2014 and the sale of Deutsche Card Services in 2013. In Trade Finance, revenues increased due to strong volumes and stabilizing margins especially in Asia and Europe. Securities Services benefited from increasing volumes. Revenues in Cash Management remained under pressure in the ongoing low interest rate environment.

Provision for credit losses decreased by 159 million, or 50 %, compared to 2013. The decrease primarily related to the non-recurrence of a single client credit event in Trade Finance recorded in 2013.

Noninterest expenses increased by 144 million, or 5 %, compared to 2013. As mentioned above, 2014 included a litigation-related charge, while the prior year was impacted by higher expenses related to the Strategy 2015+. This contained higher cost-to-achieve related to the OpEx program for the turn-around in the Netherlands and an impairment of an intangible asset. Excluding those items, noninterest expenses increased due to higher revenue-related expenses as well as increased costs to comply with regulatory requirements. Furthermore, investments to enable business growth contributed to the cost increase.

Income before income taxes increased by 92 million, or 8 %, compared to 2013 due to lower provision for credit losses following the single client credit event in 2013 as well as higher revenues. This was partly offset by an increased cost base.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review Results of Operations	34
--	--	----

2013

Despite the challenging market conditions in 2013, GTB's profitability increased compared to 2012. Both periods included specific items related to the execution of the Strategy 2015+. 2013 was impacted by the specific items mentioned above, and the results in 2012 included a litigation-related charge, the settlement of the credit protection received from the seller as part of the turn-around measures of the commercial banking activities in the Netherlands as well as an impairment of an intangible asset.

Net revenues decreased by 130 million, or 3 %, compared to 2012, which included the aforementioned settlement payment related to the turn-around measures in the Netherlands. 2013 contained a gain from the sale of Deutsche Card Services. Throughout 2013, the macroeconomic environment proved to be challenging with persistent low interest rates in core markets, and competitive pressures on margins. Furthermore, foreign exchange movements compared to 2012 adversely impacted GTB's result reported in Euro. Excluding the above headwinds and specific items, revenues increased versus 2012 with growth materializing in Asia-Pacific (APAC) and the Americas. Net revenues in Trade Finance were stable benefiting from strong volumes which offset the impact from the competitive margin environment. Securities Services showed a robust performance in this market environment based on higher volumes. Revenues in Cash Management benefited from strong transaction volumes and client balances.

Provision for credit losses increased by 107 million, or 52 %, versus 2012. The increase was primarily driven by a single client credit event in Trade Finance, partly offset by lower provisions in the commercial banking activities in the Netherlands.

Noninterest expenses decreased by 680 million, or 20 %, compared to 2012, mainly driven by the non-recurrence of the aforementioned litigation-related charge as well as lower turn-around charges in the Netherlands. Cost-to-achieve related to the OpEx program of 109 million increased by 68 million versus 2012. Excluding these charges, noninterest expenses were lower than in 2012 due to the continued focus on cost management. This was partly offset by an increase in expenses related to higher business activity and the execution of the Strategy 2015+.

Income before income taxes increased by 442 million, or 67 %, compared to 2012 due to specific items incurred in 2012 such as litigation and turn-around measures of the commercial banking activities in the Netherlands.

¹ We define invested assets as (a) assets we hold on behalf of customers for investment purposes and/or (b) client assets that are managed by us. We manage invested assets on a discretionary or advisory basis, or these assets are deposited with us.

2014

In 2014, Deutsche AWM continued to benefit from higher assets under management following elevated market levels, increased net new money, and the positive foreign exchange impact from the strengthening of the U.S. dollar, which have positively increased recurring revenue streams. Performance continues to be impacted by increased regulatory costs and an ongoing low interest rate environment, which challenges deposit revenue margins. Overall net revenues have decreased following lower mark-to-market movements on policyholder positions in Abbey Life, which have been offset by lower Policyholder benefits and claims within noninterest expenses.

In Deutsche AWM, net revenues for full year 2014 were 4.7 billion, a decrease of 27 million, or 1 %, compared to 2013.

Management Fees and other recurring revenues increased by 161 million, or 7 %, due to an increase of average assets under management driven by positive net new money from clients, favorable foreign exchange development and market appreciation. Performance and transaction fees and other non-recurring revenues were down 97 million, or 11 %, driven by lower performance fees in asset management, and lower transactional revenues from fixed income and foreign exchange products for private clients. Net interest revenues increased by 45 million, or 8 %, due to increased lending volumes, recovery of prior period interest, and improved lending margins. Other product revenues increased compared to 2013 by 68 million, or 23 %,

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	36
	Results of Operations	

partly due to higher revenues from alternatives partially offset by unfavorable change in fair value of guarantees, which have been impacted by the fall in long-term interest rates. Mark-to-market movements on policyholder positions in Abbey Life decreased by 202 million, or 41 % versus 2013, largely offset in noninterest expenses.

Provision for credit losses decreased by 30 million mainly resulting from lower specific client-related lending provisions and the recovery of prior charges in 2014.

Noninterest expenses were down 245 million, or 6 %, compared to 2013, mainly driven by lower policyholder benefits, reversal of intangible write-downs for Scudder, lower costs-to-achieve related to OpEx and the positive impact of ongoing OpEx program measures and lower litigation costs. This was partially offset by strategic hiring and one-time effects in compensation to comply with regulatory requirements and pension changes.

Income before income taxes was 1.0 billion in 2014, an increase of 245 million compared to 2013. Slightly lower revenue performance was more than offset by decreased provision for credit losses and noninterest expenses.

Invested assets in Deutsche AWM were 1.0 trillion as of December 31, 2014, an increase of 116 billion, or 13 %, versus December 31, 2013, mainly driven by foreign currency movements of 50 billion, market appreciation of 43 billion and inflows of 40 billion.

2013

In 2013, Deutsche AWM benefited from the increase in equity and bond markets. In addition, Deutsche AWMs initiative to improve its operating platform delivered cost efficiencies.

In Deutsche AWM net revenues for full year 2013 were 4.7 billion, an increase of 263 million, or 6 %, compared to 2012.

Management Fees and other recurring revenues increased by 158 million, or 7 %, due to an increase of the average assets under management for the year following positive market conditions as well as margin improvements arising from a favorable shift in product mix from growth in Alternatives and private clients. Mark-to-market movements on policyholder positions in Abbey Life increased by 74 million, or 18 % versus 2012, largely offset in noninterest expenses. Net interest revenues increased by 83 million, or 17 %, due to strong growth in lending revenues for securitized loans and commercial mortgages. Performance and transaction fees and other non recurring revenues were up 19 million, or 2 %, driven by higher performance fees across Alternatives and actively managed funds. Other product revenues decreased compared to 2012 by 70 million, or 19 % mainly due to a gain on the sale of the Value Retail business in the prior year.

Provision for credit losses increased by 5 million compared to 2012 mainly resulting from a specific client lending provision in Switzerland.

Noninterest expenses were down 370 million, or 9 %, compared to 2012 mainly due to headcount reductions related to OpEx in 2013 as well as Scudder and IT related impairments in 2012, partly offset by the aforementioned effect related to Abbey Life.

Income before income taxes was 782 million in 2013, an increase of 628 million compared to 2012. This reflects a solid revenue performance, impairments taken in 2012 as well as our progress made on OpEx in 2013.

Invested assets in Deutsche AWM were 923 billion as of December 31, 2013, an increase of 3 billion versus December 31, 2012, mainly driven by market appreciation of 40 billion, partly offset by foreign currency effects, outflows and other movements. Net outflows were primarily driven by low-margin institutional clients partially offset by 11 billion inflows from private clients.

2014

During 2014, NCOU continued to execute its de-risking strategy with specific focus on the disposal of operating assets previously held in the former Corporate Investments division. Sales completed in 2014 included BHF-BANK and The Cosmopolitan of Las Vegas. These were supplemented by the further winding down of legacy banking assets, such as the early termination of some of the credit derivative protection currently in the monoline portfolio together with the sale of underlying bonds as well as a significant reduction in CRD IV exposure from the credit correlation portfolio. Asset de-risking in 2014 has delivered net gains of 181 million.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Net revenues for the NCOU in the reporting period decreased by 753 million, or 78 % to 211 million. This reflects a lower level of portfolio revenues in line with the asset reductions achieved and lower de-risking gains partially offset by lower valuation adjustments in the period. In 2014 specific items included 314 million of accumulated mark-to-market loss on a swap transaction relating to the restructuring of the debt financing of Maher Terminals which resulted in a reclassification of the cumulative mark-to-market loss from other comprehensive income to other income and a 151 million loss related to the Special Commodities Group from our exposure to traded products in the U.S. power sector. Net revenues in 2013 included a 183 million loss related to the sale of BHF-BANK, 171 million negative effect from the first-time application of Funding Valuation Adjustment (FVA) and mortgage repurchase costs of 122 million.

Provisions for credit losses decreased by 559 million, or 68 %, in comparison to 2013, driven by a decrease in provisions for credit losses in IAS 39 reclassified and commercial real estate assets.

Noninterest expenses decreased by 746 million, or 21 % in comparison to 2013, predominately due to lower litigation-related expenses. Direct costs have also decreased by 327 million, or 21 % driven by the sale of BHF-BANK in the year as well as other de-risking measures. This was offset by a specific impairment charge of 194 million taken against our investment in Maher Terminals in the current period.

The loss before income taxes was 2.9 billion, a decrease of 551 million compared to the prior year. Lower revenues and lower credit losses reflect the progress of de-risking, while noninterest expenses were lower but continued to be impacted by the timing and nature of specific items.

38

Results of Operations

2013

Net revenues decreased by 463 million, or 32 %, compared to 2012 driven by the reduction in portfolio revenues which have fallen in line with asset levels. In 2013 specific items included 183 million loss related to the expected sale of BHF-BANK, 171 million negative effect from the first-time application of Funding Valuation Adjustment (FVA), mortgage repurchase costs of 122 million and the impact from various impairments which were partially offset by an increase in net de-risking gains generated in the period. Net revenues in 2012 included negative effects related to an impairment of 257 million to our previously held exposure in Actavis Group, refinements of the CVA methodology of 203 million and mortgage repurchase costs of 233 million.

Provision for credit losses increased by 185 million, or 29 % in comparison to 2012, mainly due to specific credit events seen across portfolios including in exposures to European Commercial Real Estate.

Noninterest expenses decreased by 147 million compared to 2012. The movement includes higher litigation related costs offset by the non-recurrence of the impairment of intangible assets of 421 million reported in the prior year.

The loss before income taxes was 3.4 billion, an increase of 467 million compared to the prior year. Lower net revenues were the main driver, but each period was impacted by the timing and nature of specific items.

N/M Not meaningful

¹ Net interest income and noninterest income.

² Assets in C&A reflect corporate assets, such as deferred tax assets or central clearing accounts, outside the management responsibility of the business segments.

³ Risk weighted assets are based upon Basel 2.5 rules through December 31, 2013 and upon CRR/CRD 4 fully-loaded since January 1, 2014. Risk-weighted assets in C&A reflect corporate assets outside the management responsibility of the business segments, primarily those corporate assets related to the Group's pension schemes. The decrease of risk-weighted assets in 2013 was primarily driven by the de-risking initiatives in our pension assets.

⁴ Average active equity assigned to C&A reflects the residual amount of equity that is not allocated to the segments as described in Note 4 Business Segments and Related Information .

2014

In 2014, C&A net revenues of negative 497 million included negative 336 million related to spreads for capital instruments and a 66 million loss from a FVA on internal uncollateralized derivatives between Treasury and CB&S; the aforementioned items amounted in 2013 negative 330 million in spreads for capital instruments and negative 276 million from FVA due to its first time inclusion in that year. Revenues in 2014 also reflected negative 172 million in valuation and timing differences compared to negative 249 million in 2013 as volatility in USD/EUR cross-currency basis spreads was down and effect from own credit spread decreased.

Noninterest expenses of 389 million declined by 53 % compared to prior year mainly due to a 528 million non-recurring major litigation charge in 2013. Noninterest expenses also included 342 million in charges related to bank levies compared to 197 million in 2013.

Noncontrolling interests were 28 million in 2014, mainly due to a Structured Finance transaction compared to 15 million in 2013 primarily due to Postbank; these noncontrolling interests are deducted from income before income taxes of the divisions and reversed in C&A.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	39
	Results of Operations	

Loss before income taxes at 859 million compared to a loss of 1.7 billion in 2013. The result was primarily driven by the non-recurrence of major litigation items partly offset by higher bank levies.

2013

In 2013, C&A net revenues of negative 929 million included negative 330 million related to spreads for capital instruments and a 276 million loss due to the first time inclusion of a FVA on internal uncollateralized derivatives between Treasury and CB&S. Also included were timing differences of negative 249 million related to positions which were measured at fair value for management reporting purposes and measured at amortized cost under IFRS. These effects will reverse over the life time of the positions. Compared to 2012, these effects were significantly less negative primarily reflecting decreased EUR/USD basis risk movements and amortization back through P&L of prior years losses.

Noninterest expenses of 830 million were up 42 % compared to prior year mainly due to litigation related charges, including 528 million related to settlement with Kirch Group. Partly offsetting was a correction of historical internal cost allocation in 2013. Noninterest expenses in 2013 also included bank levy-related charges of 197 million.

The decrease in noncontrolling interests, which are deducted from income before income taxes of the divisions and reversed in C&A, was mainly due to Postbank.

Loss before income taxes was 1.7 billion in 2013, compared to 1.5 billion in 2012. The increase was primarily driven by the settlement with Kirch Group and the aforementioned loss due to the first time inclusion of a FVA. Partly offsetting were lower negative effects from valuation and timing differences and lower noninterest expenses.

Movements in Assets

The overall increase of 97 billion (or 6 %) as of December 31, 2014, compared to December 31, 2013 was primarily driven by a 125 billion increase in positive market values from derivative financial instruments during the period, primarily related to interest rate and foreign exchange products in the fourth quarter, despite significant activity in trade restructuring and novation to reduce exposure.

The overall balance sheet movements include an increase of 91 billion due to foreign exchange rate movements, in particular related to the significant strengthening of the US dollar versus the euro, which accounted for 79 billion of the increase, primarily during the second half of the year.

Brokerage and securities related receivables contributed 32 billion to the overall growth, mainly resulting from higher collateral requirements corresponding to the increase in negative market values from derivative financial instruments.

Loans increased by 29 billion, with exposure increases in CB&S, Deutsche AWM and GTB partly being offset by managed reductions in our NCOU.

Financial assets available for sale (reported as part of remaining assets) increased by 16 billion driven mainly by a 12 billion increase in highly liquid securities held in the Group's Strategic Liquidity reserve. These increases are the result of the ongoing optimization of our liquidity reserves.

These increases were partially offset by a 73 billion decrease in central bank funds sold, securities purchased under resale agreements and securities borrowed, under both accrual and fair value accounting, mainly driven by reductions in our secured financing provided to clients, a decrease in securities borrowing for

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review Financial Position	41
--	---	----

shorts coverage corresponding to the reduction of short positions as well as a result of the adoption of IAS 32 R in 2014, allowing for the offsetting of financial assets and financial liabilities for bilateral reverse repos and repos under certain conditions.

Trading assets decreased by 14 billion, primarily driven by debt securities, slightly being offset by an increase in equity securities.

Interest-earning deposits with banks decreased in the same period by 14 billion, partially being offset by an increase of 3 billion in cash and due from banks, primarily as a consequence of managed reductions in wholesale deposits.

Movements in Liabilities

As of December 31, 2014, total liabilities increased by 79 billion (or 5 %) compared to year-end 2013.

Negative market values from derivative financial instruments increased by 127 billion and brokerage and securities related payables were up by 24 billion compared to December 31, 2013, primarily due to the same reasons that drove the movements in positive market values from derivative financial instruments and brokerage and securities related receivables outlined above.

Long-term debt increased by 12 billion, primarily from higher funding activities which exceeded the amount of debt that matured during the year.

Deposits were up by 5 billion, with increases in our funding through transaction banking and retail partly being offset by lower volumes from unsecured wholesale funding.

Central bank funds purchased, securities sold under repurchase agreements and securities loaned, under both accrual and fair value accounting, have decreased by 55 billion in total, mainly driven by reductions in our secured financing provided to clients and as a result of the adoption of IAS 32 R in 2014, allowing for the offsetting of financial assets and financial liabilities for bilateral reverse repos and repos under certain conditions.

Other short-term borrowings were down by 17 billion, primarily due to lower issuances in CB&S and, to a lesser extent, in GTB.

Trading liabilities decreased by 14 billion, primarily driven by debt securities, slightly offset by an increase in equity securities.

Similar to total assets, the overall increase in liabilities also reflects the impact of foreign exchange rate movements during the year.

Liquidity

Liquidity reserves amounted to 184 billion as of December 31, 2014 (compared to 196 billion as of December 31, 2013). We maintained a positive liquidity stress result as of December 31, 2014 (under the combined scenario).

Equity

Total equity as of December 31, 2014 increased by 18.3 billion compared to December 31, 2013. The main factors contributing to this development were a capital increase of 8.5 billion from the issuance of 359,8 million new common shares in June 2014 and the issuance of new additional equity components (Additional Tier 1 securities, treated as equity according to IFRS) of 4.7 billion on May 20 and on November 19, 2014. Further contributing to the increase were net income attributable to Deutsche Bank shareholders of 1.7 billion, positive effects from

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

exchange rate changes of 2.9 billion (especially in the U.S. dollar), unrealized net gains on financial assets available for sale of 1.4 billion, which mainly resulted from improved market

	Financial Position	

prices of debt securities from European issuers. Partly offsetting were cash dividends paid to Deutsche Bank shareholders of 765 million.

Regulatory Capital

The calculations of the regulatory capital numbers and ratios presented in this report include year-end profits after the deduction of a dividend payment of 0.75 per share proposed by the Management Board to the Supervisory Board and the Annual General Meeting. For further details we refer to our paragraph Treatment of year-end profits for the solvency report in the section Risk Report Regulatory Capital .

The calculation of our regulatory capital as of December 31, 2013 is based on the Basel 2.5 framework. Starting January 1, 2014, the calculation of our regulatory capital, risk-weighted assets and capital ratios incorporates the capital requirements following the Capital Requirements Regulation (CRR) and Capital Requirements Directive 4 (CRD 4), published on June 27, 2013 including certain transitional rules. Therefore when referring to the results according to the transitional rules that are currently applicable to us, we use the term CRR/CRD 4 . When referring to the results according to the full application of the final framework we use the term fully loaded CRR/CRD 4 .

Our Tier 1 capital according to CRR/CRD 4 as of December 31, 2014 was 63.9 billion resulting in a CRR/CRD 4 Tier 1 capital ratio of 16.1 %. As of December 31, 2013, our Tier 1 capital according to Basel 2.5 was 50.7 billion, resulting in a Basel 2.5 Tier 1 capital ratio of 16.9 %. Our Common Equity Tier 1 (CET 1, referred to as Core Tier 1 under Basel 2.5) capital according to CRR/CRD 4 was 60.1 billion, resulting in a CRR/CRD 4 CET 1 capital ratio of 15.2 % as of December 31, 2014. At the end of 2013 our CET 1 capital was 38.5 billion according to Basel 2.5, resulting in a Basel 2.5 CET 1 capital ratio of 12.8 %.

The implementation of the new capital requirements under CRR/CRD 4 has led to a negative first-day application effect of 1.5 billion in our Tier 1 capital. The decrease was driven by the derecognition of our legacy Hybrid Tier 1 capital instruments that will no longer qualify as Tier 1 capital under the full application of CRR/CRD 4 and that exceeded the maximum recognizable amount (cap) of AT1 instruments subject to phase-out arrangements by 2.2 billion. The decline in our Tier 1 capital also resulted from deductions of 1.5 billion that were phased in with 20 % in 2014, mainly relating to deductions of deferred tax assets and defined benefit pension assets. The decrease was partially offset by positive first-day application effects from securitization positions of 0.9 billion where we have opted for a risk weight of 1,250 % instead of deduction treatment. A further positive effect resulted from significant investments in financial and insurance entities of 1.2 billion which benefited from the deduction exemption for amounts below 15 % of the relevant CET 1 capital and were instead risk-weighted at 250 %.

We further had an increase in our Tier 1 capital resulting mainly from a capital increase from authorized capital against cash contributions with gross proceeds of 8.5 billion and the issuance of CRR/CRD 4 compliant Additional Tier 1 Notes (the AT1 Notes), executed in two transactions, with an eligible amount of 4.6 billion. Our net income attributable to Deutsche Bank shareholders of 1.7 billion, after deduction of our accrual for dividend and AT1 coupons of 1.2 billion, also contributed to the increase. We further saw positive impacts from foreign exchange movements on our Tier 1 capital of 1.5 billion.

Our fully loaded CRR/CRD 4 Tier 1 capital as of December 31, 2014 was 50.7 billion resulting in a fully loaded CRR/CRD 4 Tier 1 capital ratio of 12.9 %. Our fully loaded CRR/CRD 4 Common Equity Tier 1 capital was 46.1 billion, resulting in a fully loaded CRR/CRD 4 Common Equity Tier 1 capital ratio of 11.7 % as of December 31, 2014.

As of December 31, 2014 our fully loaded CRR/CRD 4 Tier 1 capital was 13.2 billion lower compared to our CRR/CRD 4 Tier 1 capital due to the derecognition of our legacy Hybrid Tier 1 capital instruments of 10.0 billion as well as the full consideration of certain CET 1 deductions of in total 3.6 billion, mainly relating to deferred tax assets and defined benefit pension fund assets, that were deducted from AT1 capital according to the transitional rules.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Operating and Financial Review	43
	Financial Position	

Risk-weighted assets (RWA) according to CRR/CRD 4 were 397 billion as of December 31, 2014, compared with 300 billion at the end of 2013 according to Basel 2.5 rules. RWA for credit risk increased by 42 billion largely reflecting the impact from the CRR/CRD 4 framework, the impact from foreign exchange movements mainly during the second half of the year as well as from model updates. This was partly offset by further de-risking efforts and asset sales. The new calculation of RWA for the CVA according to the CRR/CRD 4 framework contributed 21 billion to the overall increase. The RWA increase of 17 billion for market risk was primarily driven by the inclusion of former capital deduction items for higher risk securitization positions into the RWA calculation according to the CRR/CRD 4 framework, partly offset by movement in risk levels. Operational Risk RWA were 16 billion higher mainly caused by our early recognition of enhancements to our Advanced Measurement Approach (AMA) model in the second quarter of 2014 as well as by effects from the model change related to reasonably possible litigation losses.

Risk-weighted assets according to CRR/CRD 4 fully-loaded were 394 billion as of December 31, 2014. In addition to the above mentioned movements we had a RWA decrease of 3 billion mainly driven by pension fund relief.

Amendments to IAS 39 and IFRS 7, Reclassification of Financial Assets

As of December 31, 2014 and December 31, 2013 the carrying value of reclassified assets was 7.4 billion and 8.6 billion, respectively, compared with a fair value of 7.4 billion and 8.2 billion as of December 31, 2014 and December 31, 2013, respectively. These assets are held in the NCOU.

Please refer to Note 13 Amendments to IAS 39 and IFRS 7, Reclassification of Financial Assets for additional information on these assets and on the impact of their reclassification.

Exposure to Monoline Insurers

The deterioration of the U.S. subprime mortgage and related markets has generated large exposures to financial guarantors, such as monoline insurers, that have insured or guaranteed the value of pools of collateral referenced by CDOs and other market-traded securities. Actual claims against monoline insurers will only become due if actual defaults occur in the underlying assets (or collateral). There is ongoing uncertainty as to whether some monoline insurers will be able to meet all their liabilities to banks and other buyers of protection. Under certain conditions (i.e., liquidation) we can accelerate claims regardless of actual losses on the underlying assets.

The following tables summarize the fair value of our counterparty exposures to monoline insurers with respect to U.S. residential mortgage-related activity and other activities, respectively, in each case on the basis of the fair value of the assets compared with the notional value guaranteed or underwritten by monoline insurers. The other exposures described in the second table arise from a range of client and trading activity, including collateralized loan obligations, commercial mortgage-backed securities, trust preferred securities, student loans and public sector or municipal debt. The tables show the associated Credit Valuation Adjustments (CVA) that we have recorded against the exposures. For monolines with actively traded CDS, the CVA is calculated using a full CDS-based valuation model. For monolines without actively traded CDS, a model-based approach is used with various input factors, including relevant market driven default probabilities, the likelihood of an event (either a restructuring or an insolvency), an assessment of any potential settlement in the event of a restructuring, and recovery rates in the event of either restructuring or insolvency. The monoline CVA methodology is reviewed on a quarterly basis by management; since the second quarter of 2011 market based spreads have been used more extensively in the CVA assessment.

The ratings in the tables below are the lowest of Standard & Poor's, Moody's or our own internal credit ratings.

AA Monolines:								
TPS-CLO	1,269	254	(43)	210	1,512	298	(41)	257
CMBS	712	(2)	0	(2)	1,030	(3)	0	(3)
Corporate single name/Corporate CDO	0	0	0	0	0	0	0	0
Student loans	322	44	(9)	35	285	0	0	0
Other	506	72	(14)	59	511	69	(7)	62
Total AA Monolines	2,810	368	(66)	302	3,338	364	(48)	316
Non investment-grade Monolines:								
TPS-CLO	329	77	(16)	61	353	67	(8)	58
CMBS	1,476	(2)	0	(2)	1,444	7	0	6
Corporate single name/Corporate CDO	28	5	0	5	0	0	0	0
Student loans	679	66	(9)	57	604	116	(11)	105
Other	774	136	(50)	86	827	90	(31)	60
Total Non investment-grade Monolines	3,285	282	(75)	207	3,228	280	(50)	229
Total	6,095	650	(141)	509	6,566	644	(98)	545

The tables exclude counterparty exposure to monoline insurers that relates to wrapped bonds. A wrapped bond is one that is insured or guaranteed by a third party. As of December 31, 2014 and December 31, 2013, the exposure on wrapped bonds related to U.S. residential mortgages was nil and nil, respectively, and the exposure on wrapped bonds other than those related to U.S. residential mortgages was 22 million and 15 million, respectively. In each case, the exposure represents an estimate of the potential mark-downs of wrapped assets in the event of monoline defaults.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

A proportion of the mark-to-market monoline exposure has been mitigated with CDS protection arranged with other market counterparties and other economic hedge activity.

The total Credit Valuation Adjustment held against monoline insurers as of December 31, 2014 was 209 million. There has been no change in the overall monoline CVA reserve versus December 31, 2013, as the impact of reduced exposure has been offset by the movement in monoline credit spreads during the period.

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	57
	Introduction	

Introduction

Disclosures in line with IFRS 7 and IAS 1, as well as IFRS 4

The following Risk Report provides qualitative and quantitative disclosures about credit, market and other risks in line with the requirements of International Financial Reporting Standard 7 (IFRS 7) Financial Instruments: Disclosures, and capital disclosures required by International Accounting Standard 1 (IAS 1) Presentation of Financial Statements, as well as qualitative and quantitative disclosures about insurance risks in line with the requirements of International Financial Reporting Standard 4 (IFRS 4) Insurance contracts. Information which forms part of and is incorporated by reference into the financial statements of this report is marked by a bracket in the margins throughout this Risk Report.

Disclosures according to Pillar 3 of the Basel 3 Capital Framework

The following Risk Report incorporates the Pillar 3 disclosures required by the global regulatory framework for capital and liquidity as established by the Basel Committee on Banking Supervision, also known as Basel 3 (formerly Basel 2 and Basel 2.5). This is implemented in the disclosure requirements as laid down in Part Eight of the Regulation (EU) No 575/2013 on prudential requirements for credit institutions and investment firms (Capital Requirements Regulation, or CRR) and the Directive 2013/36/EU on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms (Capital Requirements Directive 4, or CRD 4). Germany implemented these CRD 4 requirements into national law in Section 26a of the German Banking Act (Kreditwesengesetz or KWG). Per regulation it is not required to have Pillar 3 disclosures audited. As such certain Pillar 3 disclosures are labeled unaudited.

Throughout this risk report, the term Basel 2.5 refers to the Capital Requirements Directives 2 and 3 as implemented into German law and in effect until December 31, 2013. Therefore, when referring to year-end 2013 we use the term Basel 2.5 . Starting January 1, 2014, the calculation of our regulatory capital, risk-weighted assets and capital ratios incorporates the capital requirements following CRR and CRD 4, including certain transitional rules. Therefore, when referring to the 2014 results, according to the transitional rules, we use the term CRR/CRD 4 , unless otherwise stated. When referring to results according to full application of the framework (without consideration of applicable transitional methodology) we use the term CRR/CRD 4 fully loaded .

We have applied the Basel 3 capital framework for the majority of our risk exposures on the basis of internal models for measuring credit risk, market risk and operational risk, as approved by the German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht or BaFin). All Pillar 3 relevant disclosures are compiled based upon a set of internally defined principles and related processes as stipulated in our applicable risk disclosure policy.

Disclosures according to principles and recommendations of the Enhanced Disclosure Task Force (EDTF)

In 2012 the Enhanced Disclosure Task Force (EDTF) was established as a private sector initiative under the auspice of the Financial Stability Board, with the primary objective to develop fundamental principles for enhanced risk disclosures and to recommend improvements to existing risk disclosures. As a member of the EDTF we adhered to the disclosure recommendations in this Risk Report.

Basel 3 and CRR/CRD 4

In the European Union, the Basel 3 capital framework was implemented by the Regulation (EU) No 575/2013 on prudential requirements for credit institutions and investment firms (Capital Requirements Regulation, or CRR) published on June 27, 2013, and the Directive 2013/36/EU on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms (Capital Requirements Directive 4, or CRD 4) published on June 27, 2013. The CRR/CRD 4 framework replaced the laws implementing the international capital adequacy standards as recommended by the Basel Committee on Banking Supervision, commonly referred to as Basel 2 and Basel 2.5. As a single rulebook , the CRR is directly applicable to credit institutions and investment firms in the European Union. Thus, the need for implementation of national regulatory legislation was eliminated in many instances. As a result, the German Banking Act (KWG) and the German Solvency Regulation (SolvV) were amended to remove all regulations that were supplanted by the CRR. Regulatory capital requirements, the assessment of counterparty risk and securitizations and many other regulations relevant for us are now regulated through the CRR. In addition, the CRD 4 was implemented into German law by means of further amendments to the German Banking Act (KWG) and the German Solvency Regulation (SolvV) and accompanying regulations. Jointly, these laws and regulations represent the

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	59
	Introduction	

new regulatory framework applicable in Germany to, among other things, capital, leverage and liquidity as well as Pillar 3 disclosures.

The new regulatory framework became effective on January 1, 2014, subject to transitional rules. When referring to Deutsche Bank results according to transitional rules we use the term "CRR/CRD 4". When referring to results according to full application of the final framework (without consideration of applicable transitional methodology) we use the term "CRR/CRD 4 fully loaded". In some cases, CRR/CRD 4 maintains transitional rules that had been adopted in earlier capital adequacy frameworks through Basel 2 or Basel 2.5. These relate to the risk weighting of certain categories of assets and include rules permitting the grandfathering of equity investments at a risk-weight of 100 % and allowing the selection of the greater position of long and short positions as the basis for measurement in the Market Risk Standardized Approach rather than the sum of both long and short positions. In these cases, our CRR/CRD 4 methodology assumes that the impact of the expiration of these transitional rules will be mitigated through sales of the underlying assets or other measures prior to the expiration of the grandfathering provisions.

The new minimum capital ratios are being phased in through 2015. Most regulatory adjustments (i.e., capital deductions and regulatory filters) are being phased in through 2018. Capital instruments that no longer qualify under the new rules are being phased out through 2022. New capital buffer requirements are being phased in through 2019. Although they are subject to supervisory reporting starting from 2014, binding minimum requirements for short-term liquidity will be introduced in 2015 and a standard for longer term liquidity is expected to become effective in 2018. The introduction of a binding leverage ratio is expected from 2018 following disclosure of the ratio starting in 2015.

There are still some interpretation uncertainties with regard to CRR/CRD 4 rules and some of the related binding Technical Standards are not yet available in their final version. Thus, we will continue to refine our assumptions and models in line with evolution of our as well as the industry's understanding and interpretation of the rules. Against this background, current CRR/CRD 4 measures may not be comparable to previous expectations. Also, our CRR/CRD 4 measures may not be comparable with similarly labeled measures used by our competitors as our competitors' assumptions and estimates regarding such implementation may differ from ours.

Scope of Consolidation

The following sections providing quantitative information refer to our financial statements in accordance with International Financial Reporting Standards (IFRS). Consequently, the reporting is generally based on IFRS principles of valuation and consolidation. However, in particular for Pillar 3 purposes, regulatory principles of consolidation are relevant which differ from those applied for our financial statements and are described in more detail below. Where the regulatory relevant scope is used this is explicitly stated.

Scope of the Regulatory Consolidation

Deutsche Bank Aktiengesellschaft (Deutsche Bank AG), headquartered in Frankfurt am Main, Germany, is the parent institution of the Deutsche Bank Group of institutions (the "regulatory group"), which is subject to the supervisory provisions of the KWG and the SolvV, including the references to the CRR and CRD 4. Under Section 10a KWG in conjunction with Articles 11 and 18 CRR, a regulatory group of institutions consists of an institution (meaning a credit institution or an investment firm) as the parent company, and all other institutions and financial institutions (comprising inter alia financial holding companies, payment institutions, asset management companies) that are its subsidiaries within the meaning of Article 4 (16) CRR or are included voluntarily. Subsidiaries are fully consolidated, while companies which are not subsidiaries are included on a pro-rata basis.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Insurance companies and companies outside the banking and financial sector are not consolidated in the regulatory group of institutions. In case a regulatory group of institutions and its subsidiaries and participations in the insurance sector are classified as a financial conglomerate, the German Act on the Supervision of Financial Conglomerates (Finanzkonglomerate-Aufsichtsgesetz) is applicable according to which insurance compa-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	60
	Introduction	

nies have to be included in an additional capital adequacy calculation (also referred to as solvency margin). We were designated by the BaFin as a financial conglomerate in October 2007.

As of December 31, 2014, Deutsche Bank AG and its subsidiaries Deutsche Bank Privat- und Geschäftskunden AG, norisbank GmbH, Deutsche Bank Europe GmbH, Sal. Oppenheim jr. & Cie. AG & Co. KGaA, Deutsche Oppenheim Family Office AG, Deutsche Immobilien Leasing GmbH and Leasing Verwaltungsgesellschaft Waltersdorf mbH, which all were consolidated within the Deutsche Bank regulatory group, did not calculate or report regulatory capital ratios on a stand-alone basis as these companies had applied the exemptions codified in the waiver rule pursuant to Section 2a KWG in conjunction with Article 7 CRR. As a result, they are exempted from the obligation to comply with certain requirements of the KWG and the CRR regarding their regulatory capital on a standalone basis, including solvency and leverage calculations and reporting of regulatory capital and leverage ratios. These exemptions are available only for group companies in Germany and can only be applied if, among other things, the risk strategies and risk management processes of Deutsche Bank AG also include the companies that apply the waiver rules, there is no material practical or legal impediment to the prompt transfer of own funds or repayment of liabilities from Deutsche Bank AG to the respective subsidiaries or from all subsidiaries in the Group to Deutsche Bank AG and Deutsche Bank AG has assumed the responsibility for the liabilities of the respective subsidiaries unless the risks presented by them are insignificant.

The principles of consolidation for our regulatory group are not identical to those applied for our financial statements. Nonetheless, the majority of our subsidiaries in the regulatory group are also fully consolidated in accordance with IFRS in our consolidated financial statements.

The main differences between regulatory and accounting consolidation are:

Subsidiaries outside the banking and financial sector are not consolidated within the regulatory group of institutions, but are included in the consolidated financial statements according to IFRS.

Most of our Special Purpose Entities (SPEs) consolidated under IFRS do not meet the regulatory subsidiary definition pursuant to Article 4 (1) (16) CRR and were consequently not consolidated within our regulatory group. However, the risks resulting from our exposures to such entities are reflected in the regulatory capital requirements.

Only a few entities included in the regulatory group are not consolidated as subsidiaries for accounting purposes but are treated differently: thirteen, mostly immaterial subsidiaries which were not consolidated for accounting purposes were consolidated within the regulatory group; a further two entities are jointly controlled by their owners and were consolidated on a pro-rata basis within the regulatory group while they were accounted according to the equity method for financial accounting purposes; another four entities were voluntarily consolidated on a pro-rata basis for regulatory purposes, of which one entity was accounted according to the equity method, one entity was treated as an available-for-sale-asset, one entity was consolidated according to the SPE-rules and one entity was considered as other asset in our financial statements according to IFRS.

As of year-end 2014, our regulatory group comprised 769 entities (excluding the parent Deutsche Bank AG), of which six were consolidated on a pro-rata basis. The regulatory group comprised 115 credit institutions, two payment institutions, 60 financial services institutions, 396 financial enterprises, eight investment fund management companies and 188 ancillary services enterprises.

As of year-end 2013, our regulatory group comprised 844 entities (excluding the parent Deutsche Bank AG), of which seven were consolidated on a pro-rata basis. Our regulatory group comprised 127 credit institutions, one payment institution, 67 financial services institutions, 449 financial enterprises, 12 investment fund management companies and 188 ancillary services enterprises.

The decrease in the number of credit institutions within our regulatory group by 12 in 2014 was mainly driven by the winding down of four entities that were part of the issuance structure of four series of Trust preferred securities that we called and the sale of three credit institutions belonging to the sold BHF-BANK group.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	61
	Introduction	

106 entities were exempted from regulatory consolidation pursuant to Section 31 (3) KWG in conjunction with Article 19 CRR as per year end 2014 (year end 2013: 120 entities). These regulations allow the exclusion of small entities in the regulatory scope of application from consolidated regulatory reporting if either their total assets (including off-balance sheet items) are below 10 million or below 1 % of our Group's total assets. None of these entities needed to be consolidated in our financial statements in accordance with IFRS.

These regulatory unconsolidated entities have to be included in the deduction treatment for significant investments in financial sector entities pursuant to Article 36 (1) (i) CRR in conjunction with Article 43 (c) CRR. The book values of our participations in their equity included in the deduction treatment amounted to in total 40 million as per year end 2014 (year end 2013: 20 million). We further have applied the deduction treatment to 248 regulatory unconsolidated entities in the financial sector (including three insurance entities) where we have an investment of more than 10 % of the capital of these entities as per year end 2014 (year end 2013: 260 entities). Pursuant to Article 36 (1) (i) CRR and in conjunction with Article 48 CRR, investments in the capital of financial sector entities have to be deducted from CET 1 capital if they exceed in sum 10 % of the institution's own CET 1 capital or if they exceed in aggregate with deferred tax assets that rely on future profitability and arise from temporary differences 15 % of the relevant CET 1 capital. Since we are classified as a financial conglomerate, investments in insurance entities included in our solvency calculation at the financial conglomerate level were not deducted from our regulatory capital.

Financial Conglomerate

Deutsche Bank Group was designated as a financial conglomerate by the BaFin in October 2007. Therefore, the German Act on the Supervision of Financial Conglomerates (Finanzkonglomerate-Aufsichtsgesetz or FKAG) in conjunction with the Financial Conglomerates Solvency Regulation (FkSolV) is applicable to us.

The financial conglomerate of Deutsche Bank consists predominantly of entities that belong to the regulatory group and a small number of individual insurance sector entities. Three of these insurance entities are deducted from our regulatory capital due to immateriality. The material insurance sector entities are:

- Abbey Life Assurance Company Limited
- DB Re S.A.
- DB Vita S.A.
- Legacy Reinsurance, LLC
- Primelux Insurances S.A.

These insurance entities are included in the additional capital adequacy calculation (also referred to as solvency margin) for the financial conglomerate. The insurance sector subsidiaries of Deutsche Bank in aggregate make up only about 1 % of the entire Deutsche Bank Group IFRS balances.

Legally all these insurance companies are not directly associated; i.e. none of these insurance companies holds a participation in another insurance company, so that technically these insurance companies do not form a group on their own.

From the overall governance perspective these insurance companies are integrated, in principle, into Deutsche Bank Group no differently from any other legal entity of Deutsche Bank Group. This is, among others, evidenced by the fact that Deutsche Bank issues its group policies to any subsidiary, regardless of whether such subsidiary forms part of the prudentially consolidated group (according to Article 18 CRR) or not. The applicability of relevant group policies, in turn, ensures that insurance sector subsidiaries maintain effectively the same governance and management structures as the rest of the regulatory group. For further details with regard to the organizational requirements in accordance with Section 25 (4) FKAG please refer to our Corporate Governance Report and the sections Risk Management Framework and Risk Governance

within our Risk Report.

Additional Disclosure Requirements for Significant Subsidiaries

In line with Article 13 (1) CRR our significant subsidiaries and those subsidiaries which are of material significance for their local market are required to disclose information to the extent applicable in respect of own funds, capital requirements, capital buffers, credit risk adjustments, remuneration policy, leverage and use of credit risk mitigation techniques on an individual or sub-consolidated basis.

For some of our subsidiaries located in Germany it is not mandatory to calculate or report regulatory capital or leverage ratios on a stand-alone basis if they qualify for the exemptions codified in the waiver rule pursuant to Section 2a KWG in conjunction with Article 7 CRR. In these cases, the above-mentioned disclosure requirements are also not applicable for those subsidiaries.

In order to identify significant subsidiaries a catalogue of criteria has been developed, applied to all subsidiaries classified as credit institution or investment firm under the CRR and not qualifying for a waiver status pursuant to Section 2a KWG in conjunction with Article 7 CRR. A subsidiary is required to comply with the requirements in Article 13 CRR (as described above) if at least one criterion mentioned in the list below has been met. The criteria have been defined in relation to our business activities as well as the complexity and risk profile of the respective subsidiary. All figures referenced below are calculated on an IFRS basis as of December 31, 2014:

Total Assets of 30 billion or more (on individual or sub-consolidated basis)

Five percent or more of our risk-weighted assets on group level

20 percent or more of the gross domestic product in its respective country, in which the subsidiary is located, but at least total assets of 5 billion (on individual or sub-consolidated basis)

Institutions directly supported by the European Stability Mechanism (ESM), European Financial Stability Facility (EFSF) or similar mechanisms

Institutions belonging to the three largest institutions in their respective countries, in which the subsidiary is located (referring to the amount of total assets)

Classification as local systemically important institution by the local competent authority

None of our subsidiaries have received support from any kind of stability mechanism.

As a result of the selection process described above, we identified four subsidiaries as significant for the Group and hence required to provide additional disclosure requirements as laid down in Article 13 CRR:

Deutsche Postbank AG, Germany

Deutsche Bank Luxembourg S.A., Luxembourg

Deutsche Bank Securities Inc., United States of America

Deutsche Bank Trust Company Americas, United States of America

The additional disclosures for our significant subsidiaries in relation to Article 13 CRR can be found either within the Pillar 3 Reports of the respective subsidiary as published on its website or on the Group's website for our U.S. entities.

Overall Risk Assessment

Key risk categories for us include credit risk, market risk, operational risk (including legal risk), business risk (including tax and strategic risk), reputational risk, liquidity risk, model risk and compliance risk (MaRisk, i.e., minimum requirements for risk management). We manage the

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

identification, assessment and mitigation of top and emerging risks through an internal governance process and the use of risk management tools and processes. Our approach to identification and impact assessment aims to ensure that we mitigate the impact of these risks on our financial results, long term strategic goals and reputation.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Overall Risk Assessment

63

As part of our regular risk and cross-risk analysis, sensitivities of the key portfolio risks are reviewed using a bottom-up risk assessment and through a top-down macro-economic and political scenario analysis. This two-pronged approach allows us to capture not only risks that have an impact across our risk inventories and business divisions but also those that are relevant only to specific portfolios.

Current portfolio-wide risks on which we continue to focus include: the potential re-escalation of the European sovereign debt crisis, a potential slowdown in Asian growth, disruptive US monetary tightening and its impact in particular on Emerging Markets and the potential risk of a geopolitical shock including the ongoing tensions between Russia and Ukraine. These risks have been a consistent focus throughout recent quarters. In recent months we have also focused on the impact of lower oil prices on key producing countries and related industries. The assessment of the potential impacts of these risks is made through integration into our group-wide stress tests which assess our ability to absorb these events should they occur. The results of these tests showed that we currently have adequate capital and liquidity reserves to absorb the impact of these risks if they were to materialize in line with the tests' parameters. Further information about the impact of these and other risks faced by our portfolios can be found in 'Credit Exposures' section.

Consistent with prior years, the year 2014 continued to demonstrate the trend of increasing global regulation of the financial services industry, which we view as likely to persist through the coming years. We are focused on identifying potential political and regulatory changes and assessing the possible impact on our business model and processes.

The overall focus of Risk and Capital Management throughout 2014 was on maintaining our risk profile in line with our risk strategy, increasing our capital base and supporting our strategic management initiatives with a focus on balance sheet optimization. This approach is reflected across the different risk metrics summarized below.

For purposes of Article 431 CRR, we have adopted a formal risk disclosure policy aiming to support a conclusion that our risk disclosures are in compliance with applicable legal, regulatory and accounting risk disclosure standards. A Risk Disclosure Committee comprising senior representatives and subject matter experts from Finance and Risk governs our respective risk disclosure processes. Based upon our assessment and verification we believe that our risk disclosures presented throughout this risk report appropriately and comprehensively convey our overall risk profile.

Risk Profile

Our mix of various business activities results in diverse risk taking by our business divisions. We measure the key risks inherent to their respective business models through the undiversified Total Economic Capital metric, which mirrors each business division's risk profile before taking into account cross-risk effects at the Group level.

In comparison to year-end 2013, the increase in our economic capital was mainly driven by CB&S reflecting increased credit and market risk levels partly due to foreign exchange effects and a higher economic capital usage for operational and strategic risk. Further increases are caused by Consolidation & Adjustments due to higher nontraded market risk for structural foreign exchange risk and methodology enhancements for pension risk. The observed RWA increase is to a large extent driven by transferring the RWA calculation from the Basel 2.5 framework to the new CRR/CRD 4 rules and further methodology updates. Further movements reflect changes in foreign exchange rates as well as increased risk taking off-set by NCOU de-risking.

¹ Amounts allocated to the business segments have been restated to reflect comparatives according to the structure as of December 31, 2014.

² Excluding strategic risk which was not included in the calculation of the diversification benefit for 2013.

³ Book equity allocation framework driven by risk-weighted assets and certain regulatory capital deduction items pursuant to CRR/CRD 4 (fully-loaded). See Note 4 Business Segments and Related Information to the consolidated financial statements for a description of how average active equity is allocated to the divisions.

⁴ Risk weighted assets and capital ratios are based upon Basel 2.5 rules through December 31, 2013 and upon CRR/CRD 4 fully-loaded since January 1, 2014. Corporate Banking & Securities (CB&S) risk profile is dominated by its trading in support of origination, structuring and market making activities, which gives rise to market risk and credit risk. Further credit risks originate from exposures to corporates and financial institutions. Under CB&S current business model, the remainder is derived from operational risks and business risk, primarily from potential legal and earnings volatility risks, respectively. CB&S income before income taxes increased by 108 million or 3 % in 2014 compared to 2013, however CB&S pre-tax return on average active equity decreased from 2013 by 3 percentage points to 13 % in 2014. This development is mainly driven by a higher average active equity allocation associated with our capi-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Management Executive Summary	65
--	---	----

tal raise in May 2014 as well as RWA increases mainly from methodology changes which relate to a large extent to switching from Basel 2.5 framework to the CRR/CRD 4 rules.

Private & Business Clients (PBC) risk profile comprises of credit risk from retail and small and medium-sized enterprises (SMEs) lending as well as nontrading market risk from investment risk, modeling of client deposits and credit spread risk. While PBC's risk profile stayed materially unchanged over the year, the reported income before income taxes declined significantly compared to 2013 driven by charges triggered by changes in German legal practice regarding loan processing fees in May and in October 2014, leading to a slightly lower pre-tax return on average active equity.

Global Transaction Banking's (GTB) revenues are generated from various products with different risk profiles. The vast majority of its risk relates to credit risk in the Trade Finance business, while other businesses attract low to no credit risk. The relatively low market risk mainly results from derivative hedge positions. The pre-tax return on average active equity of 20 % in 2014 decreased slightly compared to 2013. While the profitability of GTB increased, the lower return on average active equity primarily relates to higher volumes in a highly competitive and low interest rate environment.

The main risk driver of Deutsche Asset & Wealth Management's (Deutsche AWM) business are guarantees on investment funds, which we report as nontrading market risk. Otherwise Deutsche AWM's advisory and commission focused business attracts primarily operational risk. Deutsche AWM's return on average active equity has increased year over year, driven by improved P&L performance given lower cost to achieve, a reversal of intangible impairment, and lower litigation expense. The increased economic capital usage was mainly driven by a higher nontraded market risk for guaranteed funds.

The Non-Core Operations Unit (NCOU) portfolio includes activities that are non-core to the Bank's future strategy; assets materially affected by business, environment, legal or regulatory changes; assets earmarked for de-risking; assets suitable for separation; assets with significant capital absorption but low returns; and assets exposed to legal risks. NCOU's risk profile covers risks across the entire range of our operations comprising credit risks and also market and operational risks (including legal risks) targeted where possible for accelerated de-risking. The development of the pre-tax return on average active equity shows that the capital allocation induced by de-risking decreased more than the negative performance. Whilst the de-risking strategy was capital accretive, net income continues to be impacted by outflows related to legal and regulatory matters.

Consolidation & Adjustments mainly comprises non traded market risk for structural foreign exchange risk and pension risk.

Risk Management Executive Summary**Credit Risk Summary**

Maximum Exposure to Credit Risk increased by 105 billion or 6 % to 1.8 trillion compared to December 31, 2013, largely due to increases in positive market values from derivative instruments, primarily related to interest rate and foreign exchange products in the fourth quarter, despite significant activity in trade restructuring and novation to reduce exposure. Credit quality of Maximum Exposure to Credit Risk was 79 % investment-grade rated as of December 31, 2014, slightly increased from 77 % as of December 31, 2013.

Main Credit exposure remained diversified by region, industry and counterparty. Regional exposure is evenly spread across our key markets (North America 31 %, Germany 29 %, Rest of Western Europe 26 %) and the regional distribution has been relatively stable year on year. Our largest industry exposure is to Banks and insurance, which constitutes 25 % of overall gross exposures (i.e., before consideration of collateral), compared to 33 % on December 31, 2013. On a counterparty level, we remained well diversified with our top ten exposures representing 7 % of our total gross main credit exposures compared with 10 % as of December 31, 2013, all with highly rated investment-grade counterparties.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Management Executive Summary

66

Provision for credit losses in 2014 was 1.1 billion, down by 931 million, or 45 % versus 2013 reflecting material reductions in all businesses. The reduction in NCOU was driven by decreased provision for credit losses in IAS39 reclassified and commercial real estate assets. Our core bank benefited from increased releases and a non-recurrence of large single name bookings.

Our overall loan book increased by 29 billion or 7 %, from 382 billion as of December 31, 2013 to 411 billion as of December 31, 2014. Increases were driven by foreign exchange impact, collateral restructuring related to ETF business within CB&S and business growth across CB&S and Deutsche AWM, partly offset by reductions in NCOU. Our single largest loan book category is household mortgages, equating to 153 billion as of December 31, 2014, thereof 119 billion in the stable German market. Our corporate loan book, which accounts for 55 % of the total loan book, contained 65 % of loans with an investment-grade rating as of December 31, 2014, slightly increased from 64 % as of December 31, 2013.

The economic capital usage for credit risk increased to 12.9 billion as of December 31, 2014, compared with 12.0 billion at year-end 2013 reflecting higher exposures in CB&S and GTB, partly offset by lower exposures in NCOU.

RWA for credit risk has increased by 41.9 billion or 21 % to 244 billion since December 31, 2013, largely driven by introducing the new CRR/CRD 4 regulatory framework, the impact from foreign exchange movements and from model refinements, partly offset by reductions from de-risking activities and asset sales, primarily in NCOU.

Market Risk Summary

The average value-at-risk of our trading units was 51.6 million during 2014, compared with 53.6 million for 2013. The decrease was driven by lower exposure levels in credit spread risk and commodities risk.

RWA for Market risk has increased by 17.0 billion or 36 % to 64.2 billion since December 31, 2013, largely driven by the introduction of the new CRR/CRD 4 regulatory framework which has increased the RWA for trading book securitization exposures within CB&S and changes to our internal Incremental Risk Charge Model.

Nontrading market risk economic capital usage increased by 1.4 billion or 16 % to 9.9 billion as of December 31, 2014. The increase was primarily driven by higher structural foreign exchange risk exposure, methodology enhancements for pension risk and increased guaranteed funds risk, partly offset by de-risking activities in NCOU.

The economic capital usage for trading market risk totaled 5.0 billion as of December 31, 2014, compared with 4.2 billion at year-end 2013. The increase was primarily driven by increased exposures in fair value banking books.

Operational Risk Summary

The economic capital usage for operational risk increased to 7.6 billion as of December 31, 2014, compared with 5.3 billion at year-end 2013. The increase was mainly driven by an early recognition of the impact of model enhancements to our Advanced Measurement Approach (AMA) model that were implemented in the second quarter 2014, which initially led to additional economic capital of 1.1 billion. An additional driver was the increased operational risk loss profile of Deutsche Bank as well as of the industry as a whole. The related operational risk losses that have materialized and given rise to the increased economic capital usage are largely due to the outflows related to litigation, investigations and enforcement actions.

We continue to formally apply the economic capital safety margin to our AMA model, which we first implemented in 2011 to cover unforeseen legal risks. Recently submitted risk sensitive model enhancements aiming to replace the safety margin will lead to a higher amount required for economic capital compared to this safety margin. Management decided to recognize the increment for the first time in the second quarter 2014.

RWA for operational risk increased to 67.1 billion as of December 31, 2014, compared with 50.9 billion at year-end 2013. The increase of 16.2 billion is caused by our early recognition of enhancements to our Advanced Measurement Approach (AMA) model in the second quarter of 2014, which initially led to additional RWA of 7.7 billion. An additional driver was the increased operational risk loss profile of Deutsche Bank as well as of the industry as a whole.

Financial Report 20141 Management Report
Risk Report
Risk Management Executive Summary

67

Liquidity Risk Summary

Liquidity reserves amounted to 184 billion as of December 31, 2014 (compared to 196 billion as of December 31, 2013). We maintained a positive liquidity stress result as of December 31, 2014 (under the combined scenario).

We raised 44 billion for the full year 2014 in the capital markets at average spread of 45bps and average tenor of 4.8 years, fully completing our 2014 funding requirements.

76 % of our overall funding came from the funding sources we categorize as the most stable comprising capital markets and equity, retail and transaction banking.

Capital Management Summary

The Common Equity Tier 1 (CET 1, formerly: Core Tier 1) capital ratio, calculated on the basis of CRR/CRD 4 (phase-in rate of 20 %), was 15.2 % as of December 31, 2014, compared with 12.8 % at year-end 2013 based on Basel 2.5. Our pro forma CRR/CRD 4 (phase-in rate of 0 %) CET 1 capital ratio was 14.6 % at year-end 2013.

CET 1 capital according to CRR/CRD 4 increased by 21.6 billion to 60.1 billion compared with 38.5 billion CET 1 capital according to Basel 2.5. The framework change has led to a positive first-day application effect of 10.4 billion due to the applicable phase-in rate of 20 % for 2014, mainly driven by the treatment of intangible assets of 9.2 billion. During the transitional period, CRR/CRD 4 allows subtraction of certain CET 1 deductions from Additional Tier 1 capital instead of CET 1 capital, to ease the transition for banks to the fully-loaded rules. The remaining 11.1 billion increase was mainly driven by our capital increase from authorized capital against cash contributions with gross proceeds of 8.5 billion.

Additional Tier 1 (AT1) capital according to CRR/CRD 4 decreased by 8.4 billion to 3.8 billion compared with 12.2 billion AT1 capital according to Basel 2.5. We had a negative first-day effect from application of CRR/CRD 4 rules of 12.0 billion, largely reflecting deductions from intangible assets of 9.2 billion as well as the derecognition of AT1 instruments of 2.2 billion that no longer qualify as AT1 capital. The first-day effect was partly offset by the issuance of CRR/CRD 4 compliant AT1-Notes of 4.6 billion.

Tier 2 capital according to CRR/CRD 4 decreased by 0.4 billion to 4.4 billion compared with 4.7 billion Tier 2 capital according to Basel 2.5, mainly due to redemptions and amortization adjustments that were partly offset by deduction reliefs from securitizations and significant investments in financial and insurance entities.

RWA according to CRR/CRD 4 increased by 96 billion to 397 billion as of December 31, 2014, compared with 300 billion at year-end 2013 based on Basel 2.5. Our pro forma CRR/CRD 4 RWA were 355 billion at year-end 2013. The RWA increase is mainly reflecting the impact from the CRR/CRD 4 framework including RWA for CVA, higher operational risk RWA and credit risk RWA including the impact from foreign exchange movements. That was partly offset by de-risking and asset sales.

The internal capital adequacy ratio increased to 177 % as of December 31, 2014, compared with 165 % as of December 31, 2013.

The CRR/CRD 4 fully loaded Common Equity Tier 1 ratio significantly improved in 2014 from pro forma 9.7 % as of December 31, 2013 to 11.7 % as of December 31, 2014. The 199 basis points ratio increase was driven by an approximate 250 basis points increase resulting from our issue of common shares in the second quarter of 2014 partially offset by higher risk-weighted assets.

Balance Sheet Management Summary

As of December 31, 2014, our fully loaded CRR/CRD 4 leverage ratio under revised rules, which is a non-GAAP financial measure, was 3.5 % compared to our pro forma CRR/CRD 4 leverage ratio (not taking into account recent revisions to the leverage ratio rules) of 2.4 % as of December 31, 2013, taking into account a fully loaded Tier 1 capital of 50.7 billion over an applicable exposure measure of 1,445 billion (34.0 billion and 1,445 billion as of December 31, 2013, respectively).

For a discussion of the revised CRR/CRD 4 rules please refer to section Balance Sheet Management of this report.

Risk Management Principles

68

Risk Management Principles**Risk Management Framework**

The diversity of our business model requires us to identify, assess, measure, aggregate and manage our risks, and to allocate our capital among our businesses. We operate as an integrated group through our divisions, business units and infrastructure functions. Risk and capital are managed via a framework of principles, organizational structures and measurement and monitoring processes that are closely aligned with the activities of the divisions and business units:

Core risk management responsibilities are embedded in the Management Board and delegated to senior risk management committees responsible for execution and oversight. The Supervisory Board regularly monitors the risk and capital profile.

We operate a three-line of defense risk management model whereby front office functions, risk management oversight and assurance roles are played by functions independent of one another.

Risk strategy is approved by the Management Board on an annual basis and is defined based on the Group Risk Appetite and Strategic and Capital Plan in order to align risk, capital and performance targets.

Cross-risk analysis reviews are conducted across the Group to validate that sound risk management practices and a holistic awareness of risk exist.

All major risk classes are managed via risk management processes, including: credit risk, market risk, operational risk, liquidity risk, business risk, reputational risk, model risk and compliance risk (MaRisk, i.e., minimum requirements for risk management). Modeling and measurement approaches for quantifying risk and capital demand are implemented across the major risk classes. Non-standard risks (reputational risk, model risk, compliance risk) are implicitly covered in our economic capital framework, primarily within operational and strategic risk.

Monitoring, stress testing tools and escalation processes are in place for key capital and liquidity thresholds and metrics.

Systems, processes and policies are critical components of our risk management capability.

Recovery planning provides the escalation path for crisis management governance and supplies senior management with a list of actions designed to improve the capital and liquidity positions in a stress event.

Resolution planning is closely supervised by our home resolution authority. It provides a strategy to manage Deutsche Bank in case of default. It is designed to prevent the need for tax payer bailout and strengthen financial stability by the continuation of critical services delivered to the wider economy.

Risk Governance

From a supervisory perspective, our operations throughout the world are regulated and supervised by relevant authorities in each of the jurisdictions in which we conduct business. Such regulation focuses on licensing, capital adequacy, liquidity, risk concentration, conduct of business as well as organizational and reporting requirements. The European Central Bank in connection with the competent authorities of EU countries which joined the Single Supervisory Mechanism via the Joint Supervisory Team act in cooperation as our primary supervisors to monitor our compliance with the German Banking Act and other applicable laws and regulations as well as, from January 1, 2014, the CRR/CRD 4 framework, as implemented into German law, as applicable.

German banking regulators assess our capacity to assume risk in several ways, which are described in more detail in the section [Regulatory Capital](#).

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Management Principles

69

From an internal governance perspective, we have several layers of management to provide cohesive risk governance:

The Supervisory Board is required to be informed regularly and as necessary on special developments in our risk situation, risk management and risk controlling, as well as on our reputation and material litigation cases. It has formed various committees to handle specific tasks.

At the meetings of the Risk Committee, the Management Board reports on credit, market, liquidity, operational as well as litigation and reputational risks. It also reports on credit risk strategy, credit portfolios, loans requiring a Supervisory Board resolution pursuant to law or the Articles of Association, questions of capital resources and matters of special importance due to the risks they entail. The Risk Committee deliberates with the Management Board on issues of the aggregate risk disposition and the risk strategy.

The Integrity Committee monitors the Management Board's measures that promote the company's compliance with legal requirements, authorities' regulations and the company's own in-house policies. It also reviews the Bank's Code of Business Conduct and Ethics, monitors and analyzes the Bank's legal and reputational risks and advocates their avoidance.

The Audit Committee monitors, among other matters, the effectiveness of the risk management system, particularly the internal control system and the internal audit system.

The Management Board is responsible for managing Deutsche Bank Group in accordance with the law, the Articles of Association and its Terms of Reference with the objective of creating sustainable value in the interest of the company, thus taking into consideration the interests of the shareholders, employees and other stakeholders. The Management Board is responsible for establishing a proper business organization, encompassing an appropriate and effective risk management. In agreement with the Supervisory Board and with the aim to ensure an effective governance of resources and risk, the Management Board has established the Capital and Risk Committee (CaR) and the Risk Executive Committee (Risk ExCo) whose roles are described in more detail below.

For further information on how we aim to ensure that our overall performance is aligned to our risk strategy, please refer to the sections Risk Appetite and Capacity and Strategic and Capital Plan .

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Management Principles	70
--	--	----

Risk Management Governance Structure of the Deutsche Bank Group

The following functional committees are central to the management of risk in Deutsche Bank:

The CaR oversees and controls integrated planning and monitoring of our risk profile and capital capacity, providing an alignment of risk appetite, capital requirements and funding/liquidity needs with Group, divisional and sub-divisional business strategies. It provides a platform to discuss and agree strategic issues impacting capital, funding and liquidity among Risk, Government & Regulatory Affairs, Finance and the business divisions. The CaR initiates actions and/or makes recommendations to the Management Board. It is also responsible for monitoring our risk profile against our risk appetite on a regular basis and ensuring escalation or other actions are taken. The CaR monitors the performance of our risk profile against early warning indicators and recovery triggers, and provides recommendations to the Management Board to invoke defined processes and/or actions under the recovery governance framework if required.

Our Risk ExCo, as the most senior functional committee of our risk management, identifies, controls and manages all risks including risk concentrations at Group level. It is responsible for risk policy, the organization and governance of risk management and oversees the execution of risk and capital management including identification, assessment and risk mitigation, within the scope of the risk and capital strategy (Risk and Capital Demand Plan) approved by the Management Board. The Risk ExCo is supported by sub-committees that are responsible for dedicated areas of risk management, including several policy committees, the Portfolio Risk Committee (PRC) and the Group Reputational Risk Committee (GRRC). In February 2015, it was agreed to move the GRRC from a sub-committee of the Risk ExCo to report directly into the Management Board.

The PRC supports the Risk ExCo and the CaR with particular emphasis on the management of Group-wide risk patterns. The PRC, under a delegation of authority from the CaR has responsibility for the day-to-day oversight and control of our Internal Capital Adequacy Assessment Process (ICAAP). The PRC also oversees our Group-wide stress tests, reviews the results and proposes management action, if required. It

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Management Principles

71

monitors the effectiveness of the stress test process and drives continuous improvement of our stress testing framework.

The Living Wills Committee (LWC) is the dedicated sub-committee of the CaR with focus on recovery and resolution planning. It oversees the implementation of our recovery and resolution plans and enhancements to the Group s operational readiness to respond to severe stress or the threat of a severe stress.

The Regulatory Capital Committee is a further sub-committee of our Capital and Risk Committee. It is tasked with oversight on our risk quantification models. To promote a comprehensive oversight, it is supported by several sub-committees that cover certain kinds of models and model-related matters.

Multiple members of the CaR are also members of the Risk ExCo which facilitates the information flow between the two committees.

Our Chief Risk Officer (CRO), who is a member of the Management Board, has Group-wide, supra-divisional responsibility for the management of all credit, market and operational risks as well as for the comprehensive control of risk, i.e. including liquidity risk, and continuing development of methods for risk measurement. In addition, the Chief Risk Officer is responsible for monitoring, analyzing and reporting risk on a comprehensive basis, including asset and liability gap, capital, liquidity, legal, compliance and regulatory risks.

The CRO has direct management responsibility for the following risk management functions: Credit Risk Management, Market Risk Management, Operational Risk Management and Liquidity Risk Control.

These are established with the mandate to:

Support that the business within each division is consistent with the risk appetite that the CaR has set within a framework established by the Management Board;

Determine and implement risk and capital management policies, procedures and methodologies that are appropriate to the businesses within each division;

Approve credit, market and liquidity risk limits;

Conduct periodic portfolio reviews to keep the portfolio of risks within acceptable parameters; and

Develop and implement risk and capital management infrastructures and systems that are appropriate for each division.

In addition to the heads for these risk management functions, dedicated regional Chief Risk Officers for Germany, for the Americas and for Asia-Pacific, and divisional Chief Risk Officers for Deutsche AWM and NCOU have been appointed to establish a holistic risk management coverage.

The heads of the aforementioned risk management functions as well as the regional and divisional Chief Risk Officers have a direct reporting line into the CRO.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Furthermore, several teams within the risk management functions cover overarching aspects of risk management. Their mandate is to provide an increased focus on holistic risk management and cross-risk oversight to further enhance our risk portfolio steering. Key objectives are to:

- Drive key strategic cross-risk initiatives and establish greater cohesion between defining portfolio strategy and governing execution, including regulatory adherence;
- Provide a strategic and forward-looking perspective on the key risk issues for discussion at senior levels within the bank (risk appetite, stress testing framework);
- Strengthen risk culture in the bank; and
- Foster the implementation of consistent risk management standards.

Our Finance, Risk and Group Audit functions operate independently of our business divisions. It is the responsibility of the Finance and Risk departments to quantify and verify the risk that we assume and maintain the

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Management Principles	72
--	--	----

quality and integrity of our risk-related data. Group Audit examines, evaluates and reports on the adequacy of both the design and effectiveness of the systems of internal control including the risk management systems.

The integration of the risk management of our subsidiary Deutsche Postbank AG is promoted through harmonized processes for identifying, assessing, managing, monitoring, and communicating risk, the strategies and procedures for determining and safe guarding risk-bearing capacity, and corresponding internal control procedures. Key features of the joint governance are:

- Functional reporting lines from the Postbank Risk Management to Deutsche Bank Risk;
- Participation of voting members from Deutsche Bank from the respective risk functions in Postbank's key risk committees and vice versa for selected key committees; and
- Implementation of key Group risk policies at Postbank.

The key risk management committees of Postbank, in all of which Postbank's Chief Risk Officer or senior risk managers of Deutsche Bank are voting members, are:

- The Bank Risk Committee, which advises Postbank's Management Board with respect to the determination of overall risk appetite and risk and capital allocation;
- The Credit Risk Committee, which is responsible for limit allocation and the definition of an appropriate limit framework;
- The Market Risk Committee, which decides on limit allocations as well as strategic positioning of Postbank's banking and trading book and the management of liquidity risk;
- The Operational Risk Management Committee, which defines the appropriate risk framework as well as the limit allocation for the individual business areas; and
- The Model and Validation Risk Committee, which monitors validation of all rating systems and risk management models.

The main focus of this work is to comply with the agreed regulatory IRBA roadmap and to further develop our joint risk management infrastructure. In 2013, the group-wide AMA model for operational risk was approved by the regulator to be used in Postbank.

In 2014, the full integration of large clients has been completed. These are now centrally managed on our credit platform and the regulator extended acceptance for the use of the joint model parameters for large caps and financial institutions. The other client types (small and medium enterprises, retail, corporate real estate) are areas of focus for 2015 and beyond.

Risk Culture

We seek to promote a strong risk culture throughout our organization. A strong risk culture is designed to help reinforce our resilience by encouraging a holistic approach to the management of risk and return throughout our organization as well as the effective management of our risk, capital and reputational profile. We actively take risks in connection with our business and as such the following principles underpin risk

culture within our group:

- Risk is taken within a defined risk appetite;
- Every risk taken needs to be approved within the risk management framework;
- Risk taken needs to be adequately compensated; and
- Risk should be continuously monitored and managed.

Employees at all levels are responsible for the management and escalation of risks. We expect employees to exhibit behaviors that support a strong risk culture. To promote this our policies require that behavior assessment is incorporated into our performance assessment and compensation processes. We have communicated the following risk culture behaviors through various communication vehicles:

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Management Principles

73

Being fully responsible for our risks;
 Being rigorous, forward looking and comprehensive in the assessment of risk;
 Inviting, providing and respecting challenges;
 Trouble shooting collectively; and
 Placing Deutsche Bank and its reputation at the heart of all decisions.

To reinforce these expected behaviors and strengthen our risk culture, we conduct a number of group-wide activities. Our Board members and senior management frequently communicate the importance of a strong risk culture to support a consistent tone from the top. To further strengthen this message, we have reinforced our targeted training. In 2014, our employees attended more than 88,000 mandatory training modules globally including, for example, Global Information Security Awareness, An Introduction to MaRisk and the newly introduced Tone from the Top module. As part of our ongoing efforts to strengthen our risk culture, we review our training suite regularly to develop further modules or enhance existing components.

In addition, along with other measures to strengthen our performance management processes, we have designed and implemented a process to tie formal measurement of risk culture-related behaviors to our employee performance assessment, promotion and compensation processes. This process has been in place in our CB&S and GTB divisions since 2010 and has subsequently been rolled out to all divisions and functions, with PBC Germany being the latest to have implemented the process in January 2015. This process is designed to further strengthen employee accountability.

We have also developed a dashboard to measure risk culture at a divisional and regional level. This was piloted in CB&S and AWM in 2014 and will be further developed over the coming months.

Further measures are already being reviewed and will be added to the program in 2015.

Risk Appetite and Capacity

Risk appetite expresses the level of risk that we are willing to assume within our risk capacity in order to achieve our business objectives, as defined by a set of minimum quantitative metrics and qualitative standards. Risk capacity is defined as the maximum level of risk we can assume in both normal and distressed situations before breaching regulatory constraints and our obligations to stakeholders.

Risk appetite is an integral element in our business planning processes via our Risk and Capital Demand Plan, to promote the appropriate alignment of risk, capital and performance targets, while at the same time considering risk capacity and appetite constraints. We leverage the stress testing process to test the compliance of the plan also under stressed market conditions. Top-down risk appetite serves as the limit for risk-taking for the bottom-up planning from the business functions.

The Management Board reviews and approves our risk appetite and capacity on an annual basis, or more frequently in the event of unexpected changes to the risk environment, with the aim of ensuring that they are consistent with our Group's strategy, business and regulatory environment and stakeholders' requirements.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

In order to determine our risk appetite and capacity, we set different group level triggers and thresholds on a forward looking basis and define the escalation requirements for further action. We assign risk metrics that are sensitive to the material risks to which we are exposed and which are able to function as key indicators of financial health. In addition to that, we link our risk and recovery management governance framework with the risk appetite framework. In detail, we assess a suite of metrics under stress (CRR/CRD 4 fully loaded Common Equity Tier 1 (CET 1) ratio, Internal Capital Adequacy (ICA) ratio, and Stressed Net Liquidity Position (SNLP)) within the regularly performed benchmark and more severe group-wide stress tests and compare them to the Red-Amber-Green (RAG) levels as defined in the table below.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Management Principles	74
--	--	----

Risk Appetite Thresholds for key metrics

RAG levels	CRR/CRD 4 fully loaded CET1 ratio	Internal capital adequacy	Stressed net liquidity position
Normal	> 8.0%	> 135%	> 5 billion
Critical	8.0% 5.5%	135% 120%	5 billion 0 billion
Crisis	< 5.5%	< 120%	< 0 billion

Reports relating to our risk profile as compared to our risk appetite and strategy and our monitoring thereof are presented regularly up to the Management Board. Throughout the year 2014, our actual risk profile has remained in the normal levels as defined in the table above. In the event that our desired risk appetite is breached under either normal or stressed scenarios, a predefined escalation governance matrix is applied so these breaches are highlighted to the respective committees, and ultimately to the Chief Risk Officer and the Management Board. Amendments to the risk appetite and capacity must be approved by the Chief Risk Officer or the full Management Board, depending on their significance. As part of our annual risk appetite thresholds calibration exercise, we have furthermore adjusted our normal level of CRR/CRD 4 fully loaded CET1 ratio to 8.5 % and our ICA ratio to 140 % effective 2015 onwards. Therefore, the upper bound of the critical level for CRR/CRD 4 fully loaded CET1 ratio and ICA ratio will be adjusted for these changes as well.

Strategic and Capital Plan

We conduct an annual strategic planning process which lays out the development of our future strategic direction as a group and for our business areas/units. The strategic plan aims to create a holistic perspective on capital, funding and risk under risk-return considerations. This process translates our long term strategic targets into measurable short to medium term financial targets and enables intra-year performance monitoring and management. Thereby we aim to identify optimal growth options by considering the risks involved and the allocation of available capital resources to drive sustainable performance. Risk specific portfolio strategies complement this framework and allow for an in-depth implementation of the risk strategy on portfolio level, addressing risk specifics including risk concentrations.

The strategic planning process consists of two phases: a top-down target setting and a bottom-up substantiation.

In a first phase the top down target setting our key targets for profit and loss (including revenues and costs), capital supply, and capital demand as well as leverage and funding and liquidity are discussed for the group and the key business areas by the Group Executive Committee. In this process, the targets for the next three years are based on our global macro-economic outlook and the expected regulatory framework. Subsequently, the targets are approved by the Management Board.

In a second phase, the top-down objectives are substantiated bottom-up by detailed business unit plans, which for the first year consist of a month by month operative plan; years two and three are annual plans. The proposed bottom-up plans are reviewed and challenged by Finance and Risk and are discussed individually with the business heads. Thereby, the specifics of the business are considered and concrete targets decided in line with our strategic direction. The bottom-up plans include targets for key legal entities to review local risk and capitalization levels. Stress tests complement the strategic plan to also consider stressed market conditions.

The resulting Strategic and Capital Plan is presented to the Group Executive Committee and the Management Board for discussion and approval. Following the approval of the Management Board, the final plan is presented to the Supervisory Board.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Management Principles

75

The Strategic and Capital Plan is designed to support our vision of being a leading client-centric global universal bank and aims to ensure:

- Balanced risk adjusted performance across business areas and units;
- High risk management standards with focus on risk concentrations;
- Compliance with regulatory requirements;
- Strong capital and liquidity position; and
- Stable funding and liquidity strategy allowing for the business planning within the liquidity risk appetite and regulatory requirements.

The Strategic and Capital Planning process allows us to:

- Set earnings and key risk and capital adequacy targets considering the bank's strategic focus and business plans;
- Assess our risk-bearing capacity with regard to internal and external requirements (i.e., economic capital and regulatory capital); and
- Apply an appropriate stress test to assess the impact on capital demand, capital supply and liquidity.

The specific limits e.g. regulatory capital demand and economic capital are derived from the Strategic and Capital Plan to align risk, capital and performance targets at all relevant levels of the organization.

The targets of a fully loaded CET 1 ratio of higher than 10 % and a leverage ratio of 3.5 % by year end 2015 are monitored on an ongoing basis in appropriate management committees. Any projected shortfall from targets is discussed together with potential mitigating strategies seeking to ensure that we remain on track to achieve our targets. Amendments to the strategic and capital plan must be approved by the Management Board. Achieving our externally communicated solvency targets ensures that we also comply with the Group Supervisory Review and Evaluation Process requirements as articulated by our home supervisor (CET 1 ratio of at least 10 % on a phase-in basis at all times).

Recovery and Resolution Planning

The 2007/2008 financial crisis exposed banks and the broader financial market to unprecedented pressures. These pressures led to significant support for certain banks by their governments and to large scale interventions by central banks. The crisis also forced many financial institutions to significantly restructure their businesses and strengthen their capital, liquidity and funding bases. This crisis revealed that many financial institutions were insufficiently prepared for a fast-evolving systemic crisis and thus were unable to act and respond in a way that would avoid potential failure and prevent material adverse impacts on the financial system and ultimately the economy and society.

In response to the crisis, the Financial Stability Board (FSB) has published a list of global systemically important banks (G-SIBs) and has advised its member institutions to mandate and to support the development of recovery and resolution plans within G-SIBs. Corresponding legislation has been enacted or proposed, as the case may be, in several jurisdictions, including the member states of the European Union (EU), Germany, UK and the U.S. As we have been identified as one of the G-SIBs, we have developed the Group's recovery plan (Recovery Plan) and submitted this to our relevant regulators. The Recovery Plan is updated at least annually to reflect changes in the business and the regulatory requirements.

The Recovery Plan prepares us to restore our financial strength and viability during an extreme stress situation. The Recovery Plan's more specific purpose is to outline how we can respond to a financial stress situation that would significantly impact our capital or liquidity position. Therefore it lays out a set of defined actions aimed to protect us, our customers and the markets and prevent a potentially more costly resolution event. In line with regulatory guidance, we have identified a wide range of recovery measures that will mitigate different types of stress scenarios. These scenarios originate from both idiosyncratic and market-wide events, which would have led to severe capital and liquidity impacts as well as impacts on our performance and balance sheet. The Re-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Management Principles	76
--	--	----

covery Plan, including its corresponding policy, is intended to enable us to effectively monitor, escalate, plan and execute recovery actions in the event of a crisis situation.

The Recovery Plan's key objective is to help us to recover from a crisis situation by selecting appropriate recovery actions to stay sufficiently capitalised and funded. This plan extends beyond our risk management framework and can be executed in extreme scenarios where crises may threaten our survival (i.e., substantial loss of capital or inability to access market liquidity when needed). The Management Board determines when the Recovery Plan has to be invoked and which recovery measures are deemed appropriate.

The Recovery Plan is designed to cover multiple regulations including those of the FSB, EU, Germany and other key jurisdictions. Furthermore, the plan incorporates feedback from extensive discussions with our Crisis Management Group (CMG), formed by key home and host authorities. We report to this CMG with the objective of enhancing preparedness for, and facilitating the management and resolution of a cross-border financial crisis affecting us. This CMG is also intended to cooperate closely with authorities in other jurisdictions where firms have a systemic presence.

We are also working closely with our home resolution authority to create a Group Resolution Plan for Deutsche Bank as set out in the Banking Recovery and Resolution Directive and the German Recovery and Resolution Act (Sanierungs- und Abwicklungsgesetz or SAG).

In addition, title I of the Dodd-Frank Wall Street Reform and Consumer Protection Act and the implementing regulations issued by the Board of Governors of the Federal Reserve System and the Federal Deposit Insurance Corporation (FDIC) require each bank holding company with assets of U.S. \$ 50 billion or more, including Deutsche Bank AG (DBAG), to prepare and submit annually a plan for the orderly resolution of subsidiaries and operations in the event of future material financial distress or failure (the Title I US Resolution Plan). For foreign-based covered companies such as DBAG, the Title I US Resolution Plan only relates to subsidiaries, branches, agencies and businesses that are domiciled in or conducted in whole or in material part in the United States. In addition to the Title I US Resolution Plan, in 2014, Deutsche Bank Trust Company Americas (DBTCA), one of DBAG's insured depository institutions (IDIs) in the United States, was subject to the FDIC's final rule requiring IDIs with total assets of U.S. \$ 50 billion or more to submit periodically to the FDIC a plan for resolution in the event of failure under the Federal Deposit Insurance Act (the IDI Rule). DBTCA exceeded the IDI Rule's threshold of U.S. \$ 50 billion in average total consolidated assets during 2013 and DBAG expanded its 2014 Title I US Resolution Plan to also be responsive to the IDI Rule requirements (the Title I US Resolution Plan together with the IDI Plan, the US Resolution Plan).

The core elements of the US Resolution Plan are Material Entities (MEs), Core Business Lines (CBLs), Critical Operations (COs) and, for purposes of the IDI Plan, Critical Services. The US Resolution Plan lays out the resolution strategy for each ME, defined as those entities significant to the activities of a CO or CBL and demonstrates how each ME, CBL and CO, as applicable, can be resolved in a rapid and orderly manner and without systemic impact on U.S. financial stability. The US Resolution Plan also discusses the strategy for continuing Critical Services in resolution. Key factors addressed in the US Resolution Plan include how to ensure:

- Continued access to services from other U.S. and non-U.S. legal entities as well as from third parties such as payment servicers, exchanges and key vendors;
- Availability of funding from both external and internal sources;
- Retention of key employees during resolution; and
- Efficient and coordinated close-out of cross-border contracts.

The US Resolution Plan is drafted in coordination with the U.S. businesses and infrastructure groups so that it accurately reflects the business, critical infrastructure and key interconnections.

Risk Assessment and Reporting

77

Risk Assessment and Reporting**Risk Metrics**

We use a broad range of quantitative and qualitative methodologies for assessing and managing risks. As a matter of policy, we continually assess the appropriateness and the reliability of our quantitative tools and metrics in light of our changing risk environment. Some of these tools are common to a number of risk categories, while others are tailored to the particular features of specific risk categories. The advanced internal tools and metrics we currently use to measure, manage and report our risks are:

RWA equivalent. This is defined as total risk-weighted assets (RWA) plus a theoretical amount for specific allocated Common Equity Tier 1 capital deduction items if these were converted into RWA. RWA form the key factor in determining the bank's regulatory capital adequacy as reflected in the Common Equity Tier 1 capital ratio. RWA equivalents are used to set targets for the growth of our businesses and monitored within our management reporting systems. As a general rule, RWA are calculated in accordance with the currently valid CRR/CRD 4 framework, as implemented into German law (where necessary) and used within our forward looking risk and capital planning processes.

Expected loss. We use expected loss as a measure of our credit and operational risk. Expected loss is a measurement of the loss we can expect induced by defaults within a one-year period from these risks as of the respective reporting date, based on our historical loss experience. When calculating expected loss for credit risk, we take into account credit risk ratings, collateral, maturities and statistical averaging procedures to reflect the risk characteristics of our different types of exposures and facilities. All parameter assumptions are based on statistical considerations of up to nine years based on our internal default and loss history as well as external benchmarks. We use expected loss as a tool of our risk management process and as part of our management reporting systems. We also consider the applicable results of the expected loss calculations as a component of our collectively assessed allowance for credit losses included in our financial statements. For operational risk we determine the expected loss from statistical averages of our internal loss history, recent risk trends as well as forward looking estimates.

Return on risk-weighted assets (RoRWA). In times of regulatory capital constraints, RoRWA has become an important metric to assess our client relationships' profitability, in particular for credit risk. RoRWA is currently the primary performance measure and continues to attract more attention than the previously used RARoC profitability measure based on economic capital.

Value-at-risk. We use the value-at-risk approach to derive quantitative measures for our trading book market risks under normal market conditions and by means of the stressed value-at-risk under stressed market conditions. Our respective value-at-risk figures play a role in both internal and external (regulatory) reporting. For a given portfolio, value-at-risk measures the potential future loss (in terms of market value) that, under normal/stressed market conditions, is not expected to be exceeded with a defined confidence level in a defined period. The value-at-risk for a total portfolio represents a measure of our diversified market risk (aggregated, using pre-determined correlations) under normal/stressed market conditions in that portfolio.

Economic capital. Economic capital measures the amount of capital we need to absorb very severe unexpected losses arising from our exposures. Very severe in this context means that economic capital is set at a level to cover with a probability of 99.98 % the aggregated unexpected losses within one year. We calculate economic capital for credit risk, for market risk including trading default risk, for operational risk and for business risk.

Stress testing

We have a strong commitment to stress testing performed on a regular basis in order to assess the impact of a severe economic downturn on our risk profile and financial position. These exercises complement traditional risk measures and represent an integral part of our strategic and capital planning process. Our stress testing framework comprises regular Group-wide stress tests based on internally defined benchmark and more severe macroeconomic global downturn scenarios. We include all material risk types into our stress testing exercises. The time-horizon of internal stress tests is one year. Our methodologies undergo regular scrutiny from internal

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Assessment and Reporting

78

experts as well as regulators to review whether they correctly capture the impact of a given stress scenario. These analyses are complemented by portfolio- and country-specific stress tests as well as regulatory requirements, such as annual reverse stress tests and additional stress tests requested by our regulators on the group or legal entity level. Moreover, a capital planning stress test is performed annually to assess the viability of our capital plan in adverse circumstances and to demonstrate a clear link between risk appetite, business strategy, capital plan and stress testing. An integrated procedure allows us to assess the impact of ad-hoc scenarios that simulate potential imminent financial or geopolitical shocks.

The initial phase of our internal stress tests consists of defining a macroeconomic downturn scenario by dbResearch in cooperation with business specialists. dbResearch monitors the political and economic development around the world and maintains a macro-economic heat map that identifies potentially harmful scenarios. Based on quantitative models and expert judgments, economic parameters such as foreign exchange rates, interest rates, GDP growth or unemployment rates are set accordingly to reflect the impact on our business. The scenario parameters are translated into specific risk drivers by subject matter experts in the risk units. Using internal models metrics such as RWA, losses and economic capital under stress are computed by risk type. These results are aggregated at the Group level, and key metrics such as the SNLP, the CET 1 ratio and ICA ratio under stress are derived. Stress testing results and the underlying scenarios are reviewed across risk types on various levels by senior managers within Risk, Finance and the business units. After comparing these results against our defined risk appetite, senior management decides on specific mitigation actions to remediate the stress impact in alignment with the overall strategic and capital plan if certain limits are breached. The results also feed into the annual recovery planning which is crucial for the recoverability of the bank in times of crisis. The outcome is presented to senior management up to the Management Board to raise awareness on the highest level as it provides key insights into specific business vulnerabilities and contributes to the overall risk profile assessment of the bank. In 2014 we remained well capitalized within our internal stress testing program under various severe stress events. By choosing actions out of our pool of maintained recovery measures we would have been able to mitigate shortfalls under those stress scenarios directly. A reverse stress test is performed annually in order to challenge our business model to determine the severity of scenarios that would cause us to become unviable. Such a reverse stress test is based on a hypothetical macroeconomic scenario or idiosyncratic event and takes into account severe impacts of major risks on our results. Comparing the hypothetical macroeconomic scenario that would be necessary to result in our non-viability according to the reverse stress, to the current economic environment, we consider that the probability of occurrence of such a hypothetical macroeconomic scenario is extremely low. Given the extremely low probability of the reverse stress test scenario, we do not believe that our business continuity is at risk.

Stress Testing Framework of Deutsche Bank Group

Risk Reporting and Measurement Systems

We have centralized risk data and systems supporting regulatory reporting and external disclosures, as well as internal management reporting for credit, market, operational (including legal risk), business, reputational, liquidity risk, model risk and compliance risk (in accordance with MaRisk). The risk infrastructure incorporates the relevant legal entities and business divisions and provides the basis for tailor-made reporting on risk posi-

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Inventory

79

tions, capital adequacy and limit utilization to the relevant functions on a regular and ad-hoc basis. Established units within Finance and Risk assume responsibility for measurement, analysis and reporting of risk while promoting sufficient quality and integrity of risk-related data. Our risk management systems are reviewed by Group Audit following a risk-based audit approach. Our Management Board confirms, for the purpose of Article 435 CRR, that our risk management systems are adequate with regard to our risk profile and strategy.

The main reports on risk and capital management that are used to provide the central governance bodies with information relating to Group Risk Exposures are the following:

Our Risk and Capital Profile is presented monthly to the CaR and the Management Board and is subsequently submitted to the Risk Committee of the Supervisory Board for information. It comprises an overview of the current risk, capital and liquidity status of the Group, also incorporating information on regulatory capital and economic capital adequacy.

An overview of our capital, liquidity and funding is presented to the CaR by Group Capital Management and the Group Treasurer every month. It comprises information on key metrics including CRR/CRD 4 Common Equity Tier 1 capital and the CRR/CRD 4 leverage ratio, as well as an overview of our current funding and liquidity status, the liquidity stress test results and contingency measures.

Results of the group-wide macroeconomic stress tests that are performed twice per quarter and/or more regularly are reported to and discussed at the PRC.

The above reports are complemented by a suite of other standard and ad-hoc management reports of Risk and Finance, which are presented to several different senior committees responsible for risk and capital management at Group level.

Risk Inventory

We face a variety of risks as a result of our business activities, as described below. Credit risk, market risk and operational risk attract regulatory capital. As part of our internal capital adequacy assessment process, we calculate the amount of economic capital from credit, market, operational and business risk to cover risks generated from our business activities taking into account diversification effects across those risk types. Furthermore, our economic capital framework implicitly covers additional risks, e.g. reputational risk and refinancing risk, for which no dedicated economic capital models exist. Liquidity risk is excluded from the economic capital calculation since it is covered separately. The risk inventory is updated, regularly at least once a year or at other times if needed, by running a risk identification and materiality assessment process in line with MaRisk. In 2014 reputational risk, compliance risk and model risk were newly assessed as material.

Credit Risk

Credit risk arises from all transactions where actual, contingent or potential claims against any counterparty, borrower, obligor or issuer (which we refer to collectively as counterparties) exist, including those claims that we plan to distribute (see below in the more detailed section Credit Risk). These transactions are typically part of our traditional nontrading lending activities (such as loans and contingent liabilities), traded bonds and debt securities available for sale or our direct trading activity with clients (such as OTC derivatives, foreign exchange forwards and Forward Rate Agreements). Carrying values of equity investments are also disclosed in our Credit Risk section. We manage the respective positions within our market risk and credit risk frameworks.

We distinguish between three kinds of credit risk:

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Default (Counterparty) risk, the most significant element of credit risk, is the risk that counterparties fail to meet contractual obligations in relation to the claims described above;

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Inventory	80
--	--	----

Settlement risk is the risk that the settlement or clearance of a transaction may fail. Settlement risk arises whenever the exchange of cash, securities and/or other assets is not simultaneous leaving us exposed to a potential loss should the counterparty default; and Country risk is the risk that we may experience unexpected default or settlement risk and subsequent losses, in a given country, due to a range of macro-economic or social events primarily affecting counterparties in that jurisdiction including: a material deterioration of economic conditions, political and social upheaval, nationalization and expropriation of assets, government repudiation of indebtedness, or disruptive currency depreciation or devaluation. Country risk also includes transfer risk which arises when debtors are unable to meet their obligations owing to an inability to transfer assets to non-residents due to direct sovereign intervention.

Market Risk

Market risk arises from the uncertainty concerning changes in market prices and rates (including interest rates, equity prices, foreign exchange rates and commodity prices), the correlations among them and their levels of volatility. We differentiate between three different types of market risk:

Trading market risk arises primarily through the market-making activities of the Corporate Banking & Securities division (CB&S). This involves taking positions in debt, equity, foreign exchange, other securities and commodities as well as in equivalent derivatives.

Trading default risk arises from defaults and rating migrations relating to trading instruments.

Nontrading market risk arises from market movements, primarily outside the activities of our trading units, in our banking book and from off-balance sheet items. This includes interest rate risk, credit spread risk, investment risk and foreign exchange risk as well as market risk arising from our pension schemes, guaranteed funds and equity compensation. Nontrading market risk also includes risk from the modeling of client deposits as well as savings and loan products.

Operational Risk

Operational risk means the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events, and includes legal risk. Operational risk excludes business and reputational risk.

Liquidity Risk

Liquidity risk is the risk arising from our potential inability to meet all payment obligations when they come due or only being able to meet these obligations at excessive costs.

Business Risk

Business risk describes the risk we assume due to potential changes in general business conditions, such as our market environment, client behavior and technological progress. This can affect our results if we fail to adjust quickly to these changing conditions. Business risk consists of strategic risk, tax risk and refinancing risk, of which only strategic risk is assessed as material.

Reputational Risk

Within our risk management processes, we define reputational risk as the risk that publicity concerning a transaction, counterparty or business practice involving a client will negatively impact the public's trust in our organization.

Model Risk

Model risk is the risk of possible adverse consequences of decisions taken based on models that are inappropriate, incorrect, or misused. In this context, a model is defined as a quantitative method, system, or approach that applies statistical, economic, financial, or mathematical theories, techniques, and assumptions to process input data into quantitative estimates.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Risk Inventory

81

Compliance Risk

Compliance risk (MaRisk, i.e. minimum requirements for risk management) is defined as the current or prospective risk to earnings and capital arising from violations or non-compliance with laws, rules, regulations, agreements, prescribed practices or ethical standards and can lead to fines, damages and/or the voiding of contracts and can negatively impact an institution's reputation.

Insurance Specific Risk

Our exposure to insurance risk relates to Abbey Life Assurance Company Limited and our defined benefit pension obligations. There is also some insurance-related risk within the Pensions and Insurance Risk Markets business. In our risk management framework, we consider insurance-related risks primarily as nontrading market risk that has been classified as material risk. We monitor the underlying assumptions in the calculation of these risks regularly and seek risk mitigating measures such as reinsurances, if we deem this appropriate. We are primarily exposed to the following insurance-related risks:

Longevity risk: the risk of faster or slower than expected improvements in life expectancy on immediate and deferred annuity products;

Mortality and morbidity risks: the risks of a higher or lower than expected number of death or disability claims on insurance products and of an occurrence of one or more large claims;

Expenses risk: the risk that policies cost more or less to administer than expected; and

Persistency risk: the risk of a higher or lower than expected percentage of lapsed policies.

To the extent that actual experience is less favorable than the underlying assumptions, or it is necessary to increase provisions due to more onerous assumptions, the amount of capital required in the insurance entities may increase.

Risk Concentrations

Risk concentrations refer to clusters of the same or similar risk drivers within specific risk types (intra-risk concentrations in credit, market, operational, liquidity and other risks) as well as across different risk types (inter-risk concentrations). They could occur within and across counterparties, businesses, regions/countries, industries and products. The management of concentrations is integrated as part of the management of individual risk types and monitored on an ongoing basis. The key objective is to avoid any undue concentrations in the portfolio, which is achieved through a quantitative and qualitative approach, as follows:

Intra-risk concentrations are assessed, monitored and mitigated by the individual risk disciplines (credit, market, operational, liquidity risk management and others). This is supported by limit setting on different levels and/or management according to risk type.

Inter-risk concentrations are managed through quantitative top-down stress-testing and qualitative bottom-up reviews, identifying and assessing risk themes independent of any risk type and providing a holistic view across the bank.

The most senior governance body for the oversight of risk concentrations throughout 2014 was the Portfolio Risk Committee (PRC), which is a subcommittee of the Capital and Risk Committee (CaR) and the Risk Executive Committee (Risk ExCo).

Risk Type Diversification Benefit

The risk type diversification benefit quantifies diversification effects between credit, market, operational and strategic risk in the economic capital calculation. To the extent correlations between these risk types fall below 1.0, a risk type diversification benefit results. The calculation

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

of the risk type diversification benefit is intended to ensure that the standalone economic capital figures for the individual risk types are aggregated in an economically meaningful way.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Risk Management Framework Material Risks	82
--	--	----

Risk Management Framework Material Risks

Risk management frameworks of credit, market, operational and liquidity risks are narrated in the Sections Credit Risk , Trading Market Risk , Nontrading Market Risk , Operational Risk , and Liquidity Risk . We describe the risk management approaches for other material risks here, as below:

Strategic Risk

Strategic risk represents the risk of suffering unexpected operating losses (i.e. negative earnings) during the period covered by the model due to decreases in operating revenues which cannot be compensated by cost reductions. Strategic risk covers only revenue or cost volatility which is not attributable to position taking (market risk), credit losses (credit risk) and operational events (operational risk) since these elements are already covered in the respective risk types explicitly. We aim to mitigate strategic risk within our business units through portfolio diversification designed to reduce dependency on individual or a small set of markets or products, products innovations and close monitoring of the execution of our strategic and capital plan, and ensuring flexibility of the cost base, i.e. through outsourcing.

Reputational Risk

Our reputational risk is governed by the Reputational Risk Management Program (RRM Program). The RRM Program was established to provide consistent standards for the identification, escalation and resolution of reputational risk issues that arise from transactions with clients or through different business activities. Primary responsibility for the identification, escalation and resolution of reputational risk issues resides with the business divisions. Each employee is under an obligation, within the scope of his/her activities, to analyze and assess any imminent or intended transaction in terms of possible risk factors in order to minimize reputational risks. If a potential reputational risk is identified, it is required to be referred for further consideration at a sufficiently senior level within that respective business division. If issues remain, they should then be escalated for discussion among appropriate senior members of the relevant Business and Control Groups. Reputational risk issues not addressed to satisfactory conclusion through such informal discussions must then be escalated for further review and final determination via the established reputational risk escalation process.

The Group Reputational Risk Committee (GRRC) provides review and final determinations on all reputational risk issues and new client adoptions, where escalation of such issues is deemed necessary by senior Business and Regional Management, or required under the Group policies and procedures. Throughout 2014 the GRRC was a sub-committee of the Risk ExCo but it has since been elevated to be a sub-committee of the Management Board, with effectiveness in February 2015.

Model Risk

A new Model risk function was established in 2014, aggregating all core model risk management activities across the bank into one independent function:

Model validation provides independent validation of the methodological aspects of models. The key objectives of model validation are to verify that models are performing as expected, in line with their design objectives and business uses, and to aim to ensure that models are logically and conceptually sound and assess the appropriateness and accuracy of the implementation methodology;

Model risk governance supports establishment of a front-to-back model risk management framework which includes defining common standards for model development, usage and validation; identification and remediation of issues and inconsistencies in modeling; and maintenance of a bank-wide model inventory; and

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Credit Risk	83
--	---	----

Key senior management forums to address model risk are the Group Model Risk Management Committee (GMRMC) and the Pricing Model Risk Management Committee (PMRMC). Both are subcommittees of the CaR and the Risk ExCo, and act on behalf of the Management Board. The PMRMC is responsible for management and oversight of model risk from valuation models (front office models that are used for official pricing and risk management of trading positions). The GMRMC is responsible for management and oversight of model risk from risk and capital models.

Compliance Risk

Compliance manages this risk through the following:

- Identifying material rules and regulations where non-compliance could lead to endangerment of the Bank's assets (supported by the bank's business divisions, infrastructure functions or Regional Management);
- Advising and supporting the Management Board concerning the adherence to material rules and regulations as well as acting to implement effective procedures for compliance with applicable material rules and regulations, and the setup of the corresponding controls;
- Monitoring the coverage of new or changed material rules and regulations by our business divisions, infrastructure functions or Regional Management including potential implementation plans for appropriate controls. Compliance is not explicitly requested to run its own monitoring programs but has the right to carry out monitoring activities;
- Assessing the coverage of all existing material rules and regulations by the bank's business divisions, infrastructure functions or Regional Management and existence of a corresponding control environment; and
- Reporting to the Management and Supervisory Boards on at least an annual basis and on an ad hoc basis.

Credit Risk

We measure and manage our credit risk using the following philosophy and principles:

- Our credit risk management function is independent from our business divisions and in each of our divisions credit decision standards, processes and principles are consistently applied.
- A key principle of credit risk management is client credit due diligence. Our client selection is achieved in collaboration with our business division counterparts who stand as a first line of defence.
- We aim to prevent undue concentration and tail-risks (large unexpected losses) by maintaining a diversified credit portfolio. Client-, industry-, country- and product-specific concentrations are assessed and managed against our risk appetite.
- We maintain underwriting standards aiming to avoid large directional credit risk on a counterparty and portfolio level. In this regard we assume unsecured cash positions and actively use hedging for risk mitigation purposes. Additionally, we strive to secure our derivative portfolio through collateral agreements and may additionally hedge concentration risks to further mitigate credit risks from underlying market movements.
- Every new credit facility and every extension or material change of an existing credit facility (such as its tenor, collateral structure or major covenants) to any counterparty requires credit approval at the appropriate authority level. We assign credit approval authorities to individuals according to their qualifications, experience and training, and we review these periodically.
- We measure and consolidate all our credit exposures to each obligor across our consolidated Group on a global basis that applies, in line with regulatory requirements.
- We manage credit exposures on the basis of the one obligor principle, under which all facilities to a group of borrowers which are linked to each other (i.e., by one entity holding a majority of the voting rights or capital of another) are consolidated under one group.

Credit Risk

84

We have established within Credit Risk Management where appropriate specialized teams for deriving internal client ratings, analyzing and approving transactions, monitoring the portfolio or covering workout clients. The credit coverage for assets transferred to the NCOU utilizes the expertise of our core credit organization.

Our credit related activities are governed by our Principles for Managing Credit Risk. These principles define our general risk philosophy for credit risk and our methods to manage this risk. The principles define key organizational requirements, roles and responsibilities as well as process principles for credit risk management and are applicable to all credit related activities undertaken by us.

Credit Risk Ratings

The credit rating is an essential part of the Bank's underwriting and credit process and builds the basis for risk appetite determination as well as credit decision and transaction pricing. Each borrower must be rated and each rating has to be reviewed at least annually. Ongoing monitoring of counterparties foster that ratings are kept up-to-date. There must be no credit limit without a credit rating. For each credit rating the appropriate rating approach has to be applied and the derived credit rating has to be established in the relevant systems. Different rating approaches have been established to best reflect the specific characteristics of exposure classes, including central governments and central banks, institutions, corporates and retail.

Counterparties in our non-homogenous portfolios are rated by our independent Credit Risk Management function. Country risk related ratings are provided by dbResearch.

Our rating analysis is based on a combination of qualitative and quantitative factors. When rating a counterparty we apply in-house assessment methodologies, scorecards and our 21-grade rating scale for evaluating the credit-worthiness of our counterparties. The previous 26-grid rating scale has been replaced by a 21-grade rating scale, merging seven default classes into two. These two include either provisioned exposure or non provisioned exposure (e.g. due to collateral). This change in methodology has not resulted in any impact in RWA, EL and EC.

The majority of our rating methodologies are authorized for use within the advanced internal rating based approach under applicable Basel rules. Our rating scale enables us to compare our internal ratings with common market practice and promotes comparability between different sub-portfolios of our institution. We generally rate our counterparties individually, though certain portfolios of purchased or securitized receivables are rated on a pool basis. Ratings are required to be kept well documented. The algorithms of the rating procedures for all counterparties are recalibrated regularly on the basis of the default history as well as other external and internal factors and expert judgments.

Ratings for central governments and central banks take into account economic, political and socio-demographic indicators, e.g. the political dynamics in a country. The model incorporates relevant aspects covered in the fields of empirical country risk analysis and early warning crisis models to arrive at an overall risk evaluation.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Ratings for corporates, institutions and SMEs combine quantitative analysis of financial information with qualitative assessments of i.a. industry trends, market position and management experience. Financial analysis has a specific focus on cash flow generation and the counterparty's capability to service its debts, also in comparison to peers. We supplement the analysis of financials by an internal forecast of the counterparty's financial profile where deemed to be necessary. For purchased corporate receivables the corporate rating approach is applied.

Ratings for SME clients are based on automated sub-ratings for e.g. financial aspects and conduct of bank account. Specialized lending is managed by specific credit risk management teams, e.g. for real estate, ship finance or leveraged transactions. Following the individual characteristic of the underlying credit transactions we have developed bespoke scorecards where appropriate to derive credit ratings.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Credit Risk

85

In our retail business, creditworthiness checks and counterparty ratings are generally derived by utilizing an automated decision engine. The decision engine incorporates quantitative aspects (i.e., financial figures), behavioural aspects, credit bureau information (such as SCHUFA in Germany) and general customer data. These input factors are used by the decision engine to determine the creditworthiness of the borrower and, after consideration of collateral, the expected loss. The established rating procedures we have implemented in our retail business are based on multivariate statistical methods.

They are used to support our individual credit decisions for the retail portfolio as well as to continuously monitor it in an automated fashion. In case elevated risks are identified as part to this monitoring process or new regulatory requirements apply, credit ratings are reviewed on an individual basis for these affected counterparties.

Credit risk arising from equity position is managed by a separate team within Credit Risk Management. We usually use either external rating where available or standard rating approaches as default to measure the expected loss of equity positions.

Postbank also makes use of internal rating systems authorized for use within the foundation or advanced internal rating based approach according to CRR. All internal ratings and scorings are based on a uniform master scale, which assigns each rating or scoring result to the default probability determined for that class. Risk governance is provided within a Legal Entity committee structure as well as on group level by full integration and representation of Postbank in DB Group's global risk committees.

Rating Governance

All of our rating methodologies, excluding Postbank, have to be approved by the Capital Methodology Committee (CMC), a sub-committee of the Regulatory Capital Committee, before the methodologies are used for credit decisions and capital calculation for the first time or before they are significantly changed. Regulatory approval may be required in addition. The results of the regular validation processes as stipulated by internal policies have to be brought to the attention of the CMC, even if the validation results do not lead to a change. The validation plan for rating methodologies is presented to CMC at the beginning of the calendar year and a status update is given on a quarterly basis.

For Postbank, responsibility for implementation and monitoring of internal rating systems effectiveness rests with Postbank's Risk Analytics unit and Postbank's validation committee, chaired by Postbank's Head of Credit Risk Controlling. All rating systems are subject to approval by Postbank's Bank Risk Committee chaired by the Chief Risk Officer. Effectiveness of rating systems and rating results are reported to the Postbank Management Board on a regular basis. Joint governance is ensured via a cross committee membership of Deutsche Bank senior managers joining Postbank committees and vice versa.

Credit Risk Measures

The key credit risk measures we apply for managing our credit portfolio, including transaction approval and the setting of risk appetite, are internal limits and credit exposures under these limits. Credit limits set forth maximum credit exposures we are willing to assume over specified periods. In determining the credit limit for a counterparty, we consider the counterparty's credit quality by reference to our internal credit rating. Credit limits and credit exposures are both measured on a gross and net basis where net is derived by deducting hedges and certain collateral from respective gross figures. For derivatives, we look at current market values and the potential future exposure over the lifetime of a transaction. We generally also take into consideration the risk-return characteristics of individual transactions and portfolios.

Credit Approval and Authority

Credit limits are established by the Credit Risk Management function via the execution of assigned credit authorities. Credit approvals are documented by the signing of the credit report by the respective credit authority holders and retained for future reference.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Credit Risk Mitigation

86

Credit authority is generally assigned to individuals as personal credit authority according to the individual's professional qualification and experience. All assigned credit authorities are reviewed on a periodic basis to help ensure that they are adequate to the individual performance of the authority holder.

Where an individual's personal authority is insufficient to establish required credit limits, the transaction is referred to a higher credit authority holder or where necessary to an appropriate credit committee such as the Underwriting Committee. Where personal and committee authorities are insufficient to establish appropriate limits, the case is referred to the Management Board for approval.

Credit Risk Mitigation

In addition to determining counterparty credit quality and our risk appetite, we also use various credit risk mitigation techniques to optimize credit exposure and reduce potential credit losses. Credit risk mitigants are applied in the following forms:

Comprehensive and enforceable credit documentation with adequate terms and conditions.

Collateral held as security to reduce losses by increasing the recovery of obligations.

Risk transfers, which shift the probability of default risk of an obligor to a third party including hedging executed by our Credit Portfolio Strategies Group.

Netting and collateral arrangements which reduce the credit exposure from derivatives and repo- and repo-style transactions.

Collateral Held as Security

We regularly agree on collateral to be received from or to be provided to customers in contracts that are subject to credit risk. Collateral is security in the form of an asset or third-party obligation that serves to mitigate the inherent risk of credit loss in an exposure, by either substituting the borrower default risk or improving recoveries in the event of a default. While collateral can be an alternative source of repayment, it generally does not replace the necessity of high quality underwriting standards.

We segregate collateral received into the following two types:

Financial and other collateral, which enables us to recover all or part of the outstanding exposure by liquidating the collateral asset provided, in cases where the borrower is unable or unwilling to fulfil its primary obligations. Cash collateral, securities (equity, bonds), collateral assignments of other claims or inventory, equipment (i.e., plant, machinery and aircraft) and real estate typically fall into this category.

Guarantee collateral, which complements the borrower's ability to fulfil its obligation under the legal contract and as such is provided by third parties. Letters of credit, insurance contracts, export credit insurance, guarantees, credit derivatives and risk participations typically

fall into this category.

Our processes seek to ensure that the collateral we accept for risk mitigation purposes is of high quality. This includes seeking to have in place legally effective and enforceable documentation for realizable and measureable collateral assets which are evaluated regularly by dedicated teams. The assessment of the suitability of collateral for a specific transaction is part of the credit decision and must be undertaken in a conservative way, including collateral haircuts that are applied. We have collateral type specific haircuts in place which are regularly reviewed and approved. In this regard, we strive to avoid wrong-way risk characteristics where the borrower's counterparty risk is positively correlated with the risk of deterioration in the collateral value. For guarantee collateral, the process for the analysis of the guarantor's creditworthiness is aligned to the credit assessment process for borrowers.

Financial Report 20141 Management Report
Risk Report
Credit Risk Mitigation

87

Risk Transfers

Risk transfers to third parties form a key part of our overall risk management process and are executed in various forms, including outright sales, single name and portfolio hedging, and securitizations. Risk transfers are conducted by the respective business units and by our Credit Portfolio Strategies Group (CPSG), in accordance with specifically approved mandates.

CPSG manages the residual credit risk of loans and lending-related commitments of the institutional and corporate credit portfolio; the leveraged portfolio and the medium-sized German companies portfolio within our Corporate Divisions of CB&S and GTB.

Acting as a central pricing reference, CPSG provides the respective CB&S and GTB Division businesses with an observed or derived capital market rate for loan applications; however, the decision of whether or not the business can enter into the credit risk remains exclusively with Credit Risk Management.

CPSG is concentrating on two primary objectives within the credit risk framework to enhance risk management discipline, improve returns and use capital more efficiently:

- to reduce single-name credit risk concentrations within the credit portfolio and
- to manage credit exposures by utilizing techniques including loan sales, securitization via collateralized loan obligations, default insurance coverage and single-name and portfolio credit default swaps.

Netting and Collateral Arrangements for Derivatives and Securities Financing Transactions

Netting is applicable to both exchange traded derivative transactions (futures and options) and those traded over-the-counter (OTC derivative transactions). Netting is also applied to securities financing transactions as far as documentation, structure and nature of the risk mitigation allow netting with the underlying credit risk.

All futures and options are cleared through central counterparties (CCPs), which interpose itself between the trading entities by becoming the counterparty to each of the entities. Where available and to the extent agreed with our counterparties, we also use CCP clearing for our OTC derivative transactions. The Dodd-Frank Wall Street Reform and Consumer Protection Act (DFA) introduced mandatory CCP clearing for certain standardized OTC derivative transactions in 2013. The European Regulation (EU) No 648/2012 on OTC Derivatives, Central Counterparties and Trade Repositories (EMIR) will introduce mandatory CCP clearing for certain standardized OTC derivatives transactions, currently expected to start with certain interest rate derivatives and credit derivatives in the fourth quarter of 2015. The rules and regulations of CCPs usually provide for the bilateral set off of all amounts payable on the same day and in the same currency (payment netting) and thereby reducing our settlement risk. Depending on the business model applied by the CCP, this payment netting applies either to all of our derivatives cleared by the CCP or at least to those that form part of the same class of derivatives. Many CCP rules and regulations also provide for the termination, close-out and netting of all cleared transactions upon the CCP s default (close-out netting), which reduced our credit risk. In our risk measurement and risk assessment processes we apply close-out netting only to the extent we have satisfied ourselves of the legal validity and enforceability of the relevant CCP s close-out netting provisions.

In order to reduce the credit risk resulting from OTC derivative transactions, where CCP clearing is not available, we regularly seek the execution of standard master agreements (such as master agreements for derivatives published by the International Swaps and Derivatives Association, Inc. (ISDA) or the German Master Agreement for Financial Derivative Transactions) with our counterparts. A master agreement allows for the close-out netting of rights and obligations arising under derivative transactions that have been entered into under such a master agreement upon the counterparty s default, resulting in a single net claim owed by or to the counterparty. For parts of the derivatives business (i.e., foreign exchange transactions) we also enter into master agreements under which payment netting applies in respect to transactions covered

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

by such master agreements, reducing our settlement risk. In our risk measurement and risk assessment processes we apply close-out netting only to the extent we have satisfied ourselves of the legal validity and enforceability of the master agreement in all relevant jurisdictions.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Monitoring and Managing Credit Risk	88
--	---	----

Also, we enter into credit support annexes (CSA) to master agreements in order to further reduce our derivatives-related credit risk. These annexes generally provide risk mitigation through periodic, usually daily, margining of the covered exposure. The CSAs also provide for the right to terminate the related derivative transactions upon the counterparty's failure to honour a margin call. As with netting, when we believe the annex is enforceable, we reflect this in our exposure measurement.

Certain CSAs to master agreements provide for rating dependent triggers, where additional collateral must be pledged if a party's rating is downgraded. We also enter into master agreements that provide for an additional termination event upon a party's rating downgrade. These downgrading provisions in CSAs and master agreements usually apply to both parties but may also apply to us only. We analyze and monitor our potential contingent payment obligations resulting from a rating downgrade in our stress testing approach for liquidity risk on an ongoing basis. For an assessment of the quantitative impact of a downgrading of our credit rating please refer to table Stress Testing Results in the section Liquidity Risk .

Concentrations within Credit Risk Mitigation

Concentrations within credit risk mitigations taken may occur if a number of guarantors and credit derivative providers with similar economic characteristics are engaged in comparable activities with changes in economic or industry conditions affecting their ability to meet contractual obligations. We use a range of quantitative tools and metrics to monitor our credit risk mitigating activities. These also include monitoring of potential concentrations within collateral types supported by dedicated stress tests.

For more qualitative and quantitative details in relation to the application of credit risk mitigation and potential concentration effects please refer to the section Maximum Exposure to Credit Risk .

Monitoring and Managing Credit Risk

Ongoing active monitoring and management of Deutsche Bank's credit risk positions is an integral part of our credit risk management framework. The key monitoring focus is on quality trends and on concentrations along the dimensions of counterparty, industry, country and product-specific risks to avoid undue concentrations of credit risk. On a portfolio level, significant concentrations of credit risk could result from having material exposures to a number of counterparties with similar economic characteristics, or who are engaged in comparable activities, where these similarities may cause their ability to meet contractual obligations to be affected in the same manner by changes in economic or industry conditions.

Our portfolio management framework supports a comprehensive assessment of concentrations within our credit risk portfolio in order to keep concentrations within acceptable levels.

Counterparty Risk Management

Credit-related counterparties are principally allocated to credit officers within credit teams which are aligned to types of counterparty (such as financial institutions, corporate or private individuals) or economic area (i.e., emerging markets) and dedicated rating analyst teams. The individual credit officers have the relevant expertise and experience to manage the credit risks associated with these counterparties and their associated credit related transactions. For retail clients credit decision making and credit monitoring is highly automated for efficiency reasons. Credit Risk Management has full oversight of the respective processes and tools used in the retail credit process. It is the responsibility of each credit officer to undertake ongoing credit monitoring for their allocated portfolio of counterparties. We also have procedures in place intended to identify at an early stage credit exposures for which there may be an increased risk of loss.

In instances where we have identified counterparties where there is a concern that the credit quality has deteriorated or appears likely to deteriorate to the point where they present a heightened risk of loss in default, the respective exposure is generally placed on a watch list . We aim to identify counterparties that, on the basis of

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Monitoring and Managing Credit Risk	89
--	---	----

the application of our risk management tools, demonstrate the likelihood of problems well in advance in order to effectively manage the credit exposure and maximize the recovery. The objective of this early warning system is to address potential problems while adequate options for action are still available. This early risk detection is a tenet of our credit culture and is intended to ensure that greater attention is paid to such exposures.

Industry Risk Management

To manage industry risk, we have grouped our corporate and financial institutions counterparties into various industry sub-portfolios. For each of these sub-portfolios an Industry Batch report is prepared usually on an annual basis. This report highlights industry developments and risks to our credit portfolio, reviews concentration risks, analyzes the risk/reward profile of the portfolio and incorporates an economic downside stress test. Finally, this analysis is used to define the credit strategies for the portfolio in question.

The Industry Batch reports are presented to the CRM Portfolio Committee, a sub-committee of the Risk Executive Committee and are submitted afterwards to the Management Board. In accordance with an agreed schedule, a select number of Industry Batch reports are also submitted to the Risk Committee of the Supervisory Board. In addition to these Industry Batch reports, the development of the industry sub-portfolios is regularly monitored during the year and is compared with the approved sub-portfolio strategies. Regular overviews are prepared for the CRM Portfolio Committee to discuss recent developments and to agree on actions where necessary.

Country Risk Management

Avoiding undue concentrations from a regional perspective is also an integral part of our credit risk management framework. In order to achieve this, country risk limits are applied to Emerging Markets as well as selected Developed Markets countries (based on internal country risk ratings). Emerging Markets are grouped into regions and for each region, as well as for the Higher Risk Developed Markets, a Country Batch report is prepared, usually on an annual basis. These reports assess key macroeconomic developments and outlook, review portfolio composition and concentration risks and analyze the risk/reward profile of the portfolio. Based on this, limits and strategies are set for countries and, where relevant, for the region as a whole. Country risk limits are approved by either our Management Board or by our Portfolio Risk Committee, a sub-committee of our Risk Executive Committee and Capital and Risk Committee, pursuant to delegated authority.

The Country Limit framework covers all major risk categories which are managed by the respective divisions in Risk:

Credit Risk: Limits are established for counterparty credit risk exposures in a given country to manage the aggregate credit risk subject to country-specific economic and political events. These limits include exposures to entities incorporated locally as well as subsidiaries of foreign multinational corporations. Separate Transfer Risk Limits are established as sub-limits to these counterparty credit limits and apply to Deutsche Bank's cross-border exposures.

Market Risk: Limits are established to manage trading position risk in emerging markets and are set based on the P&L impact of potential stressed market events on those positions.

Treasury Risk: Exposures of one Deutsche Bank entity to another (Funding, Capital or Margin) are subject to limits given the transfer risk inherent in these cross-border positions.

Gap Risk: Limits established to manage the risk of loss due to intra-country wrong-way risk exposure.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Monitoring and Managing Credit Risk	90
--	---	----

Our country risk ratings represent a key tool in our management of country risk. They are established by the independent dbResearch function within Deutsche Bank and include:

Sovereign rating: A measure of the probability of the sovereign defaulting on its foreign or local currency obligations.

Transfer risk rating: A measure of the probability of a transfer risk event, i.e., the risk that an otherwise solvent debtor is unable to meet its obligations due to inability to obtain foreign currency or to transfer assets as a result of direct sovereign intervention.

Event risk rating: A measure of the probability of major disruptions in the market risk factors relating to a country (interest rates, credit spreads, etc.). Event risks are measured as part of our event risk scenarios, as described in the section Market Risk Monitoring of this report. All sovereign and transfer risk ratings are reviewed, at least annually, by the Cross Risk Review Committee, although more frequent reviews are undertaken when deemed necessary.

Country risk limits and sovereign risk limits for all relevant countries are approved by the Postbank Management Board annually.

Product specific Risk Management

Complementary to our counterparty, industry and country risk approach, we focus on product specific risk concentrations and selectively set limits where required for risk management purposes. Specific product limits are set in particular if a concentration of transactions of a specific type might lead to significant losses under certain cases. In this respect, correlated losses might result from disruptions of the functioning of financial markets, significant moves in market parameters to which the respective product is sensitive, macroeconomic default scenarios or other factors affecting certain credit products. Specific product limits can either be set with regards to exposure to certain industries or affecting the total credit portfolio. We have introduced a uniform framework for the establishment and annual review of product limits for our Corporate Banking & Securities and Global Transaction Banking businesses. Exposures are monitored regularly; remedial action is required in case of an excess of utilization over the approved limit.

A key focus is put on underwriting caps. These caps limit the combined risk for transactions where we underwrite commitments with the intention to sell down or distribute part of the risk to third parties. These commitments include the undertaking to fund bank loans and to provide bridge loans for the issuance of public bonds. The risk is that we may not be successful in the distribution of the facilities, meaning that we would have to hold more of the underlying risk for longer periods of time than originally intended. These underwriting commitments are additionally exposed to market risk in the form of widening credit spreads. We dynamically hedge this credit spread risk to be within the approved market risk limit framework.

Furthermore, in our PBC businesses, we apply product-specific strategies setting our risk appetite for sufficiently homogeneous portfolios where tailored client analysis is secondary, such as the retail portfolios of mortgages, business and consumer finance products. In Wealth Management, target levels are set for global concentration based on the liquidity of the underlying collateral.

Credit Exposure

91

Settlement Risk Management

Our trading activities may give rise to risk at the time of settlement of those trades. Settlement risk arises when Deutsche Bank exchanges a value of cash or other assets with a counterparty. It is the risk of loss due to the failure of a counterparty to honour its obligations (to deliver cash or other assets) to us, after we release payment or delivery of its obligations (of cash or other assets) to the counterparty.

For many types of transactions, we mitigate settlement risk by closing the transaction through a clearing agent, which effectively acts as a stakeholder for both parties, only settling the trade once both parties have fulfilled their sides of the contractual obligation.

Where no such settlement system exists, the simultaneous commencement of the payment and the delivery parts of the transaction is common practice between trading partners (free settlement). In these cases, we may seek to mitigate our settlement risk through the execution of bilateral payment netting agreements. We also participate in industry initiatives to reduce settlement risks. Acceptance of settlement risk on free settlement trades requires approval from our credit risk personnel, either in the form of pre-approved settlement risk limits, or through transaction-specific approvals. We do not aggregate settlement risk limits with other credit exposures for credit approval purposes, but we take the aggregate exposure into account when we consider whether a given settlement risk would be acceptable.

Credit Risk Tools Economic Capital for Credit Risk

We calculate economic capital for the default risk, country risk and settlement risk as elements of credit risk. In line with our economic capital framework, economic capital for credit risk is set at a level to absorb with a probability of 99.98 % very severe aggregate unexpected losses within one year.

Our economic capital for credit risk is derived from the loss distribution of a portfolio via Monte Carlo Simulation of correlated rating migrations. The loss distribution is modeled in two steps. First, individual credit exposures are specified based on parameters for the probability of default, exposure at default and loss given default. In a second step, the probability of joint defaults is modeled through the introduction of economic factors, which correspond to geographic regions and industries. The simulation of portfolio losses is then performed by an internally developed model, which takes rating migration and maturity effects into account. Effects due to wrong-way derivatives risk (i.e., the credit exposure of a derivative in the default case is higher than in nondefault scenarios) are modeled by applying our own alpha factor when deriving the exposure at default for derivatives and securities financing transactions under the Basel 2.5 Internal Models Method (IMM). The alpha factor is identical with the one used for the risk-weighted assets calculation, yet subject to a lower floor of 1.0. For December 31, 2014 the alpha factor was calibrated to 1.11. We allocate expected losses and economic capital derived from loss distributions down to transaction level to enable management on transaction, customer and business level.

Credit Exposure

Counterparty credit exposure arises from our traditional nontrading lending activities which include elements such as loans and contingent liabilities, as well as from our direct trading activity with clients in certain instruments including OTC derivatives like foreign exchange forwards and Forward Rate Agreements. A default risk also arises from our positions in equity products and traded credit products such as bonds.

We define our credit exposure by taking into account all transactions where losses might occur due to the fact that counterparties may not fulfil their contractual payment obligations.

Maximum Exposure to Credit Risk

The maximum exposure to credit risk table shows the direct exposure before consideration of associated collateral held and other credit enhancements (netting and hedges) that do not qualify for offset in our financial statements for the periods specified. The netting credit enhancement component includes the effects of legally enforceable netting agreements as well as the offset of negative mark-to-markets from derivatives against pledged cash collateral. The collateral credit enhancement component mainly includes real estate, collateral in the form of cash as well as securities related collateral. In relation to collateral we apply internally determined haircuts and additionally cap all collateral values at the level of the respective collateralized exposure.

Maximum Exposure to Credit Risk

2 Does not include credit derivative notional sold (1,035,946 million) and credit derivative notional bought protection. Interest-earning deposits with banks mainly relate to liquidity reserves.

3 Bought credit protection is reflected with the notional of the underlying.

4 Excludes equities, other equity interests and commodities.

5 Comparatives have been restated by 10,591 million (netting) and 9,681 million (collateral) erroneously included in prior disclosure.

6 Gross loans less deferred expense/unearned income before deductions of allowance for loan losses.

7 Figures are reflected at notional amounts.

8 In 2014, comparatives have been restated by 10,542 million to include Fronting Commitments erroneously not included in prior disclosure.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The overall increase in maximum exposure to credit risk for December 31, 2014 was predominantly driven by a 125 billion increase in positive market values from derivative financial instruments during the period as well as foreign exchange impact across various products, partly offset by a 73 billion decrease in securities purchased under resale agreements and securities borrowed both under fair value and accrual accounting as discussed in various other sections of this report. Our overall loan book increased by 29 billion or 7 %, from 382 billion as of December 31, 2013 to 411 billion as of December 31, 2014. Increases were driven by foreign exchange impact, collateral restructuring related to ETF business within CB&S, and business growth across CB&S and Deutsche AWM, partly offset by reductions in NCOU.

Included in the category of trading assets as of December 31, 2014, were traded bonds of 108 billion (126 billion as of December 31, 2013) that are over 80 % investment-grade (over 86 % as of December 31, 2013). The above mentioned financial assets available for sale category primarily reflected debt securities of which more than 94 % were investment-grade (more than 97 % as of December 31, 2013).

Credit Enhancements are split into three categories: netting, collateral, and guarantees and credit derivatives. A prudent approach is taken with respect to haircuts, parameter setting for regular margin calls as well as expert judgements for collateral valuation to prevent market developments from leading to a build-up of uncollateralized exposures. All categories are monitored and reviewed regularly. Overall credit enhancements received are diversified and of adequate quality being largely cash, highly rated government bonds and third-party guarantees mostly from well rated banks and insurance companies. These financial institutions are mainly domiciled in Western European countries and the United States. Furthermore we have collateral pools of highly liquid assets and mortgages (principally consisting of residential properties mainly in Germany) for the homogeneous retail portfolio.

Total	489,864		550,591	238,600	265,540	77,900	19,826	1,642,321

¹ All amounts at carrying value unless otherwise indicated.

² Excludes equities, other equity interests and commodities.

³ Prior year figures have been restated by 1.5 billion to include past due instruments in order to be consistent with the Asset Quality section of this report.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

⁴ Gross loans less deferred expense/unearned income before deductions of allowance for loan losses. Amounts for December 31, 2013, were adjusted up for past due loans, neither renegotiated nor impaired by 303 million erroneously not considered in prior disclosure.

⁵ Figures are reflected at notional amounts.

⁶ In 2014, comparatives have been restated by 10.5 billion to include Fronting Commitments erroneously not included in prior disclosure.

The overall growth in total credit exposure of 107 billion for December 31, 2014 is mainly due to an increase in positive market value from derivative financial instruments in investment grade rating categories and here mainly in the top category iAAA-iAA as well as foreign exchange impact across various products.

Main Credit Exposure Categories

The tables in this section show details about several of our main credit exposure categories, namely loans, irrevocable lending commitments, contingent liabilities, over-the-counter (OTC) derivatives, traded loans, traded bonds, debt securities available for sale and repo and repo-style transactions:

Loans are net loans as reported on our balance sheet at amortized cost but before deduction of our allowance for loan losses.

Irrevocable lending commitments consist of the undrawn portion of irrevocable lending-related commitments.

Contingent liabilities consist of financial and performance guarantees, standby letters of credit and other similar arrangements (mainly indemnity agreements).

OTC derivatives are our credit exposures from over-the-counter derivative transactions that we have entered into, after netting and cash collateral received. On our balance sheet, these are included in financial assets at fair value through profit or loss or, for derivatives qualifying for hedge accounting, in other assets, in either case, before netting and cash collateral received.

Traded loans are loans that are bought and held for the purpose of selling them in the near term, or the material risks of which have all been hedged or sold. From a regulatory perspective this category principally covers trading book positions.

Traded bonds include bonds, deposits, notes or commercial paper that are bought and held for the purpose of selling them in the near term. From a regulatory perspective this category principally covers trading book positions.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	96
	Credit Exposure	

Debt securities available for sale include debentures, bonds, deposits, notes or commercial paper, which are issued for a fixed term and redeemable by the issuer, which we have classified as available for sale.

Repo and repo-style transactions consist of reverse repurchase transactions, as well as securities or commodities borrowing transactions before application of netting and collateral received.

Although considered in the monitoring of maximum credit exposures, the following are not included in the details of our main credit exposure: brokerage and securities related receivables, interest-earning deposits with banks, cash and due from banks, assets held for sale and accrued interest receivables. Excluded as well are traditional securitization positions and equity investments, which are dealt with specifically in the sections Securitization and Nontrading Market Risk Investment Risk and Nontrading Market Risk Equity Investments Held, respectively.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	97
	Credit Exposure	

Our main credit exposure decreased by 32.9 billion.

From a divisional perspective, a reduction of 27.7 billion has been achieved by CB&S, of 8.5 billion by NCOU and of 6.4 billion by PBC. From a product perspective, strong exposure reductions have been observed for Repo and repo-style transactions and for Traded Bonds. Slight exposure reductions were also observed for Contingent Liabilities and Traded Loans.

The ETF related collateral restructuring in CB&S entailed replacing our physical securities exposure by entering into fully funded total returns swaps. As a consequence, CB&S loans with embedded securities exposure increased whereas the securities exposure within trading assets decreased.

⁴ Includes the effect of netting agreements and cash collateral received where applicable. Excludes derivatives qualifying for hedge accounting.

⁵ Before reflection of collateral and limited to securities purchased under resale agreements and securities borrowed.

⁶ Commercial real estate activities are based on counterparty industry classification, irrespective of business unit attribution. The business units mostly involved are PBC Mortgages and Commercial Real Estate .

⁷ Loan exposures for Other include lease financing.

The above table gives an overview of our credit exposure by industry; allocated based on the NACE code of the counterparty we are doing business with.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Credit Exposure	98
--	---	----

From an industry perspective, our credit exposure is lower compared with last year mainly due to a decrease in banks and insurance of 83.5 billion, driven by lower Repo and Repo-style transactions, partly offset by increases, especially in the category Other of 23.6 billion.

Loan exposure increase in category Other is mainly due to ETF related collateral restructuring within CB&S. This is due to replacing our physical securities exposure by entering into fully funded total returns swaps resulting in a corresponding decrease of securities exposure within trading assets.

Loan exposures to the industry sectors banks and insurance, manufacturing and public sector comprise predominantly investment-grade loans. The portfolio is subject to the same credit underwriting requirements stipulated in our Principles for Managing Credit Risk, including various controls according to single name, country, industry and product-specific concentration.

Material transactions, such as loans underwritten with the intention to syndicate, are subject to review by senior credit risk management professionals and (depending upon size) an underwriting credit committee and/or the Management Board. High emphasis is placed on structuring such transactions so that de-risking is achieved in a timely and cost effective manner. Exposures within these categories are mostly to good quality borrowers and also subject to further risk mitigation as outlined in the description of our Credit Portfolio Strategies Group's activities.

Our household loans exposure amounting to 198 billion as of December 31, 2014 (194 billion as of December 2013) is principally associated with our PBC portfolio. 153 billion (77 %) of the portfolio comprises mortgages, of which 119 billion are held in Germany. The remaining exposures (45 billion, 23 %) are predominantly consumer finance business related. Given the largely homogeneous nature of this portfolio, counterparty credit worthiness and ratings are predominately derived by utilizing an automated decision engine.

Mortgage business is principally the financing of owner occupied properties sold by various business channels in Europe, primarily in Germany but also in Spain, Italy and Poland, with exposure normally not exceeding real estate value. Consumer finance is divided into personal instalment loans, credit lines and credit cards. Various lending requirements are stipulated, including (but not limited to) maximum loan amounts and maximum tenors and are adapted to regional conditions and/or circumstances of the borrower (i.e., for consumer loans a maximum loan amount taking into account household net income). Interest rates are mostly fixed over a certain period of time, especially in Germany. Second lien loans are not actively pursued.

The level of credit risk of the mortgage loan portfolio is determined by assessing the quality of the client and the underlying collateral. The loan amounts are generally larger than consumer finance loans and they are extended for longer time horizons. Consumer finance loan risk depends on client quality. Given that they are uncollateralized, compared with mortgages they are also smaller in value and are extended for shorter time. Based on our underwriting criteria and processes, diversified portfolio (customers/properties) and low loan-to-value (LTV) ratios, the mortgage portfolio is categorized as lower risk and consumer finance medium risk.

Our commercial real estate loans are generally secured by first mortgages on the underlying real estate property, and follow the credit underwriting requirements stipulated in the Principles for Managing Credit Risk noted above (i.e., rating followed by credit approval based on assigned credit authority) and are subject to additional underwriting and policy guidelines such as LTV ratios of generally less than 75%. Additionally, given the significance of the underlying collateral independent external appraisals are commissioned for all secured loans by our valuation team (part of the independent Credit Risk Management function). Our valuation team is responsible for reviewing and challenging the reported real estate values regularly.

Excluding the exposures transferred into the NCOU, the Commercial Real Estate Group only in exceptional cases retains mezzanine or other junior tranches of debt (although we do underwrite mezzanine loans), though the Postbank portfolio holds an insignificant sub-portfolio of junior tranches. Loans originated for securitization are carefully monitored under a pipeline limit. Securitized loan positions are entirely sold (except where regula-

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	99
	Credit Exposure	

tion requires retention of economic risk), while we frequently retain a portion of syndicated bank loans. This hold portfolio, which is held at amortized cost, is also subject to the aforementioned principles and policy guidelines. We also participate in conservatively underwritten unsecured lines of credit to well-capitalized real estate investment trusts and other public companies (generally investment-grade). We provide both fixed rate (generally securitized product) and floating rate loans, with interest rate exposure subject to hedging arrangements. In addition, sub-performing and non-performing loans and pools of loans are acquired from other financial institutions at generally substantial discounts to both the notional amounts and current collateral values. The underwriting process for these is stringent and the exposure is managed under separate portfolio limits. Commercial real estate property valuations and rental incomes can be significantly impacted by macro-economic conditions and underlying properties to idiosyncratic events. Accordingly, the portfolio is categorized as higher risk and hence subject to the aforementioned tight restrictions on concentration.

The category other loans, with exposure of 83 billion as of December 31, 2014 (68 billion as of December 31, 2013), relates to numerous smaller industry sectors with no individual sector greater than 5 % of total loans.

Our credit exposure to our ten largest counterparties accounted for 7 % of our aggregated total credit exposure in these categories as of December 31, 2014 compared with 10 % as of December 31, 2013. Our top ten counterparty exposures were with well-rated counterparties or otherwise related to structured trades which show high levels of risk mitigation.

⁴ Includes the effect of netting agreements and cash collateral received where applicable. Excludes derivatives qualifying for hedge accounting.

⁵ Before reflection of collateral and limited to securities purchased under resale agreements and securities borrowed.

The above table gives an overview of our credit exposure by geographical region, allocated based on the counterparty's country of domicile, see also section "Credit Exposure to Certain Eurozone Countries" of this report for a detailed discussion of the "country of domicile view".

Our largest concentration of credit risk within loans from a regional perspective is in our home market Germany, with a significant share in households, which includes the majority of our mortgage lending business.

Within the OTC derivatives business, tradable assets as well as repo and repo-style transactions, our largest concentrations from a regional perspective were in Western Europe (excluding Germany) and North America. From the industry perspective, exposures from OTC derivative, tradable assets as well as repo and repo-style transactions have a significant share in highly rated banks and insurance companies. For tradable assets, a large proportion of exposure also with public sector companies.

As of December 31, 2014 our loan book increased to 411 billion (versus 382 billion as of December 31, 2013) mainly in North America and Western Europe (excluding Germany) with other, households and manufacturing experiencing largest increases. The increase in loans for Luxembourg is due to ETF related collateral restructuring within CB&S which involved replacing our physical securities exposure by entering into fully funded total returns swaps. The decrease in repo and repo-style transactions (73 billion) was primarily in positions with banks and insurance companies within Western Europe (excluding Germany) and North America coupled with an increase in irrevocable lending commitments (17 billion) mainly in North America. Credit exposure to Russia has decreased by 1 billion to 5 billion as a result of successful de-risking and is focused

on corporates in strategic important industry sectors. Credit exposure to Ukraine is relatively small at 370 million.

Credit Exposure to Certain Eurozone Countries

Certain eurozone countries are presented within the tables below due to concerns relating to sovereign risk. This heightened risk is driven by a number of factors impacting the associated sovereign including high public debt levels and/or large deficits, limited access to capital markets, proximity of debt repayment dates, poor economic fundamentals and outlook (including low gross domestic product growth, weak competitiveness, high unemployment and political uncertainty). Fundamentals have improved to some extent, with the growth outlook for these economies stabilising, competitiveness improving and external imbalances (i.e., current account deficits) narrowing. This adjustment process has been supported by the ECB's Outright Monetary Transactions (OMT) program and the European Stability Mechanism (ESM) which have provided a credible (if untested) backstop and helped to contain funding costs. Although a recent Advocate General Opinion stated that the OMT program should be valid under European law, the Court of Justice of the European Union is not expected to issue a final decision until the summer of 2015. The newly announced Quantitative Easing (QE) programme will also help to lower funding costs across the Eurozone. The effectiveness of these measures so far has limited the contagion to other Eurozone bond markets. This has occurred despite the rising uncertainty around the future of Greece's program following Syriza's election victory in January 2015.

For the presentation of our exposure to these certain eurozone countries we apply two general concepts as follows:

In our risk management view, we consider the domicile of the group parent, thereby reflecting the one obligor principle. All facilities to a group of borrowers which are linked to each other (i.e., by one entity holding a majority of the voting rights or capital of another) are consolidated under one obligor. This group of borrowers is usually allocated to the country of domicile of the respective parent company. As an example, a loan to a counterparty in Spain is Spanish risk as per a domicile view but considered a German risk from a risk management perspective if the respective counterparty is linked to a parent company domiciled in Germany following the above-mentioned one obligor principle. In this risk management view we also consider derivative netting and present exposures net of hedges and collateral. The collateral valuations follow the same stringent approach and principles as outlined separately. Also, in our risk management we classify exposure to special purpose entities based on the domicile of the underlying assets as opposed to the domicile of the special purpose entities. Additional considerations apply for structured products. If, for example, a structured note is issued by a special purpose entity domiciled in Ireland, it will be considered an Irish risk in a country of domicile view, but if the underlying assets collateralizing the structured note are German mortgage loans, then the exposure would be included as German risk in the risk management view.

In our country of domicile view we aggregate credit risk exposures to counterparties by allocating them to the domicile of the primary counterparty, irrespective of any link to other counterparties, or in relation to credit default swaps underlying reference assets from, these eurozone countries. Hence we also include counterparties whose group parent is located outside of these countries and exposures to special purpose entities whose underlying assets are from entities domiciled in other countries.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	102
	Credit Exposure	

Net credit risk exposure is down 1.7 billion since year-end 2013. This was mainly driven by decreases across Spain and Italy mostly from reductions in our Sovereign exposure, partly offset by increases in Ireland and Portugal mainly driven by higher traded credit positions.

Our above exposure is principally to highly diversified, low risk retail portfolios and small and medium enterprises in Italy and Spain, as well as stronger corporate and diversified mid-cap clients. Our financial institutions exposure is predominantly geared towards larger banks in Spain and Italy, typically collateralised. Sovereign exposure is at what we view as a manageable level absent more generalized contagion spreading after an adverse event such as a Greek exit from the euro.

The following tables, which are based on the country of domicile view, present our gross position, the included amount thereof of undrawn exposure and our net exposure to these Eurozone countries. The gross exposure reflects our net credit risk exposure grossed up for net credit derivative protection purchased with underlying reference assets domiciled in one of these countries, guarantees received and collateral. Such collateral is particularly held with respect to the retail portfolio, but also for financial institutions predominantly based on derivative margining arrangements, as well as for corporates. In addition the amounts also reflect the allowance for credit losses. In some cases, our counterparties ability to draw on undrawn commitments is limited by terms included in the specific contractual documentation. Net credit exposures are presented after effects of collateral held, guarantees received and further risk mitigation, including net notional amounts of credit derivatives for protection sold/(bought). The provided gross and net exposures to certain European countries do not include credit derivative tranches and credit derivatives in relation to our correlation business which, by design, is structured to be credit risk neutral. Additionally the tranche and correlated nature of these positions does not allow a meaningful disaggregated notional presentation by country, e.g., as identical notional exposures represent different levels of risk for different tranche levels.

Total	19,159	17,373	10,784	2,431	4,970	3,432	38,990

¹ Primarily includes contingent liabilities and undrawn lending commitments.

² Excludes equities and other equity interests.

³ After loan loss allowances.

The above tables exclude credit derivative exposure, which is separately reported in the following table. For our credit derivative exposure with these eurozone countries we present the notional amounts for protection sold and protection bought on a gross level as well as the resulting net notional position and its fair value.

Credit derivative exposure with underlying assets domiciled in certain eurozone countries

In line with common industry practice, we use credit default swaps (CDS) as one important instrument to manage credit risk in order to avoid any undue concentrations in the credit portfolio. CDS contracts are governed by standard ISDA documentation which defines trigger events which result in settlement payouts. Examples of

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	104
	Credit Exposure	

these triggers include bankruptcy of the reference entity, failure of reference entity to meeting contractual obligations (i.e., interest or principal repayment) and debt restructuring of the reference entity. These triggers also apply to credit default protection contracts sold. Our purchased credit default swap protection acting as a risk mitigant is predominantly issued by highly rated financial institutions governed under collateral agreements. While we clearly focus on net risk including hedging/collateral we also review our gross positions before any CDS hedging in reflection of the potential risk that a CDS trigger event does not occur as expected.

The exposures associated with these countries noted above are managed and monitored using the credit process explained within the Credit Risk section of this Risk Report including detailed counterparty ratings, ongoing counterparty monitoring as well as our framework for managing concentration risk as documented within our Country Risk and Industry Risk sections as outlined above. This framework is complemented by regular management reporting including targeted portfolio reviews of these countries and portfolio de-risking initiatives.

For credit protection purposes we strive to avoid any maturity mismatches. However, this depends on the availability of required hedging instruments in the market. Where maturity mismatches cannot be avoided, these positions are tightly monitored. We take into account the sensitivities of hedging instruments and underlying assets to neutralize the maturity mismatch.

Our governance framework is intended to enable adequate preparation for and an ability to manage euro crisis events in terms of risk mitigation and operational contingency measures, which we consider to have been effective when Cyprus stresses escalated, with close coordination between Risk, Legal, business and other infrastructure functions to promote consistent operational and strategic responses across the Bank.

Overall, we have managed our exposures to GIIPS countries since the early stages of the debt crisis and believe our credit portfolio to be well-positioned following selective early de-risking focused on sovereign risk and weaker counterparties.

Sovereign Credit Risk Exposure to Certain Eurozone Countries

The amounts below reflect a net country of domicile view of our sovereign exposure.

² The amounts reflect the net fair value (i.e., counterparty credit risk) in relation to credit default swaps referencing sovereign debt of the respective country.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The reduction in net sovereign credit exposure compared with year-end 2013 mainly reflects movements from trading debt securities and derivative positions. Net sovereign exposure for Italy declined since year-end 2013 as increases in direct sovereign exposure resulting from reduced short bond positions were more than offset by higher net hedge positions mostly due to lower CDS protection sold. The decrease of our direct sovereign exposure to Spain primarily reflects exposure changes in trading debt securities. The increase in Greece is mainly attributable to derivative positions.

The above mentioned direct sovereign exposure included exposure at amortized cost to sovereigns which, as of December 31, 2014, amounted to 1.3 billion out of which the carrying value of loans held at amortized cost to sovereigns amounted to 279 million for Italy and 580 million for Spain.

¹ Prior year numbers were not restated to reflect business segment structure as of December 31, 2014, as it would require a disproportionate effort.

² Loans largely unwound in March 2013.

³ Thereof vendor financing on loans sold in Leveraged Finance amounting to 0 million and in Commercial Real Estate amounting to 0 million as of December 31, 2014 (353 million and 22 million as of December 31, 2013, respectively).

⁴ Includes loans from CMBS securitizations. Commercial Real Estate is based on business unit classification, irrespective of counterparty industry classification. The industry contributing most is Commercial real estate activities (13.9 billion as of December 31, 2014).

⁵ Includes loans managed by CPSG.

⁶ Includes other smaller loans predominantly in our CB&S business division.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	106
	Credit Exposure	

Our exposure in collateralized hedged structured transactions increased by 10 billion at December 31, 2014 compared with prior year-end. This increase is predominantly driven by ETF related collateral restructuring within CB&S which resulted in replacing our physical securities exposure by entering into fully funded total returns swaps.

The majority of our low risk exposures is associated with our PBC retail banking activities. 78 % of our loan book at December 31, 2014 was in the low risk category.

Our higher risk bucket mainly relates to commercial real estate exposures which increased by 1.6 billion at December 31, 2014 compared with prior year-end. Our credit risk management approach puts strong emphasis specifically on the portfolios we deem to be of higher risk. Portfolio strategies and credit monitoring controls are in place for these portfolios.

Impaired loans and allowance for loan losses for our higher-risk loan bucket

Total	1,178	578	880	368	2,114	951	1,481	570

In 2014, impaired loans as well as allowance for loan losses significantly decreased by 44 % and 39 % respectively, driven by exposure reductions and charge-off of allowances in Commercial Real Estate in NCOU, reflecting among other factors disposals as well as the consolidation of borrowers under IFRS 10.

Credit Exposure Classification

We also classify our credit exposure under two broad headings: consumer credit exposure and corporate credit exposure.

Our consumer credit exposure consists of our smaller-balance standardized homogeneous loans, primarily in Germany, Italy and Spain, which include personal loans, residential and non-residential mortgage loans, overdrafts and loans to self-employed and small business customers of our private and retail business.

Our corporate credit exposure consists of all exposures not defined as consumer credit exposure.

Corporate Credit Exposure

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

¹ Probability of default on a 12 month basis.

² Includes impaired loans mainly in category iCCC and below amounting to 5.9 billion as of December 31, 2013.

³ Includes irrevocable lending commitments related to consumer credit exposure of 9.8 billion as of December 31, 2013.

⁴ Comparatives have been restated by 10.5 billion to include Fronting Commitments erroneously not included in prior disclosure.

⁵ Includes the effect of netting agreements and cash collateral received where applicable.

The above table shows an overall increase in our corporate credit exposure in 2014 of 57.7 billion or 11.8 %. The increase in loans of 26.8 billion was mainly attributable to North America and Asia driven by the bank's growth strategy in this region. This includes a significant increase of 13.3 billion in the strongest rating band, which is mainly driven by collateral restructuring related to ETF business within CB&S. Debt securities available for sale increased by 14.9 billion mainly driven by a 12 billion increase in highly liquid securities held in the Group's Strategic Liquidity Reserve. These increases are the result of the ongoing optimization of our liquidity reserves. The increase in debt securities available for sale is almost entirely related to the top rating band. The quality of the corporate credit exposure before risk mitigation has remained stable at 71 % share of investment-grade rated exposures compared to December 31, 2013.

We use risk mitigation techniques as described above to optimize our corporate credit exposure and reduce potential credit losses. The tables below disclose the development of our corporate credit exposure net of collateral, guarantees and hedges.

¹ Net of eligible collateral, guarantees and hedges based on IFRS requirements.² Probability of default on a 12 month basis.³ Comparatives have been restated by 10.5 billion to include Fronting Commitments erroneously not included in prior disclosure.

The corporate credit exposure net of collateral amounted to 406.5 billion as of December 31, 2014 resulting in a risk mitigation of 26 % or 140.7 billion compared to the corporate gross exposure. This includes a more significant reduction of 42 % for our loans exposure which includes a reduction by 54 % for the lower rated sub-investment-grade rated loans and 37 % for the higher rated investment-grade loans. The risk mitigation in the weakest rating band was 47 %, which was significantly higher than 17 % in the strongest rating band.

The risk mitigation of 140.7 billion is split into 31 % guarantees and hedges and 69 % other collateral.

CPSG Risk Mitigation for the Corporate Credit Exposure

Our Credit Portfolio Strategies Group (CPSG) helps mitigate the risk of our corporate credit exposures. The notional amount of CPSG 's risk reduction activities increased by 13 % from 33.8 billion as of December 31, 2013, to 38.2 billion as of December 31, 2014, due to an increase in the notional of loans requiring hedging and an increase in hedges used to manage market risk.

As of year-end 2014, CPSG held credit derivatives with an underlying notional amount of 6.8 billion. The position totaled 10.4 billion as of December 31, 2013. The credit derivatives used for our portfolio management activities are accounted for at fair value.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	109
	Credit Exposure	

CPSG also mitigated the credit risk of 31.4 billion of loans and lending-related commitments as of December 31, 2014, through synthetic collateralized loan obligations supported predominantly by financial guarantees and, to a lesser extent, credit derivatives for which the first loss piece has been sold. This position totaled 23.4 billion as of December 31, 2013.

CPSG has elected to use the fair value option under IAS 39 to report loans and commitments at fair value, provided the criteria for this option are met. The notional amount of CPSG loans and commitments reported at fair value decreased during the year to 14.1 billion as of December 31, 2014, from 25.5 billion as of December 31, 2013. By reporting loans and commitments at fair value, CPSG has significantly reduced profit and loss volatility that resulted from the accounting mismatch that existed when all loans and commitments were reported at amortized cost while derivative hedges are reported at fair value.

Consumer Credit Exposure

In our consumer credit exposure we monitor consumer loan delinquencies in terms of loans that are 90 days or more past due and net credit costs, which are the annualized net provisions charged after recoveries.

Consumer credit exposure, consumer loan delinquencies and net credit costs

	Total exposure in m.		90 days or more past due as a % of total exposure		Net credit costs as a % of total exposure	
	Dec 31, 2014	Dec 31, 2013	Dec 31, 2014	Dec 31, 2013	Dec 31, 2014	Dec 31, 2013
Consumer credit exposure Germany: Consumer and small business financing	147,647	145,929	1.15	1.23	0.22	0.23
Mortgage lending	19,980	20,778	3.93	3.81	1.09	1.04
	127,667	125,151	0.71	0.81	0.08	0.10
Consumer credit exposure outside Germany: Consumer and small business financing	38,761	38,616	5.35	5.38	0.69	0.76
Mortgage lending	11,913	12,307	11.19	11.34	1.64	1.75
	26,848	26,309	2.76	2.60	0.26	0.29
Total consumer credit exposure²	186,408	184,545	2.02	2.10	0.32	0.34

¹ Retrospective as per December 31, 2013, the 90 days or more past due volume of Postbank Consumer Credit Exposure Germany was restated by 626 million (or 0.43 % of total Consumer Credit Exposure in Germany) erroneously not included in prior disclosure.

² Includes impaired loans amounting to 4.4 billion as of December 31, 2014 and 4.2 billion as of December 31, 2013.

The volume of our consumer credit exposure increased from year-end 2013 to year-end 2014 by 1.9 billion, or 1.0 %, mainly driven by mortgage lending in Germany which increased by 2.5 billion; partly offset by decrease of the consumer and small business financing exposure, driven by a sale of acquired receivables at Postbank. Outside Germany, the consumer credit exposure in India increased by 298 million and in Poland by 209 million. The credit exposure in Portugal decreased by 186 million.

The 90 days or more past due ratio of our consumer credit exposure decreased from 2.10 % as per year-end 2013 to 2.02 % as per year-end 2014. The 90 days or more past due ratio in the consumer and small business financing in Germany increased, driven by the aforementioned total volume decrease in the Postbank portfolio, more than compensated for by improved German mortgage lending. The 90 days or more past due ratio in consumer and small business financing outside Germany benefited from a sale of non-performing loans in the third quarter in Italy, while the ratio for Mortgage lending outside Germany increased driven by overdue exposures in Postbank Italy.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The total net credit costs as a percentage of our consumer credit exposure decreased from 0.34 % as per year-end 2013 to 0.32 % as per year-end 2014. The slight increase of net credit costs as a percentage of Consumer and small business financing in Germany compared to last year is driven by a higher positive effect from non-performing loan sales in 2013, which was more than compensated for by the favourable environment for our German mortgages business. The decrease of this ratio outside Germany compared to last year is positively impacted from the aforementioned non-performing loan sale in Italy in the third quarter 2014.

¹ When assigning the exposure to the corresponding LTV buckets, the exposure amounts are distributed according to their relative share of the underlying assessed real estate value.

The LTV expresses the amount of exposure as a percentage of assessed value of real estate.

Our LTV ratios are calculated using the total exposure divided by the current assessed value of the respective properties. These values are updated on a regular basis. The exposure of transactions that are additionally backed by liquid collaterals is reduced by the respective collateral values, whereas any prior charges increase the corresponding total exposure. The LTV calculation includes exposure which is secured by real estate collaterals. Any mortgage lending exposure that is collateralized exclusively by any other type of collateral is not included in the LTV calculation.

The creditor's creditworthiness, the LTV and the quality of collateral is an integral part of our risk management when originating loans and when monitoring and steering our credit risks. In general, we are willing to accept higher LTV's, the better the creditor's creditworthiness is. Nevertheless, restrictions of LTV apply for countries with negative economic outlook or expected declines of real estate values.

As of December 31, 2014, 68 % of our exposure related to the mortgage lending portfolio had a LTV ratio below or equal to 50 %.

Credit Exposure from Derivatives

Exchange-traded derivative transactions (i.e., futures and options) are regularly settled through a central counterparty, the rules and regulations of which provide for daily margining of all current and future credit risk positions emerging out of such transactions. To the extent possible, we also use central counterparty clearing services for OTC derivative transactions (OTC clearing); we thereby benefit from the credit risk mitigation achieved through the central counterparty's settlement system.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The Dodd-Frank Wall Street Reform and Consumer Protection Act (DFA) introduced mandatory OTC clearing for certain standardized OTC derivative transactions in 2013, and margin requirements for un-cleared OTC derivatives transactions are expected to be phased in from December 2015. The European Regulation (EU) No 648/2012 on OTC Derivatives, Central Counterparties and Trade Repositories (EMIR) introduced a number of risk mitigation techniques for non-centrally cleared OTC derivatives in 2013 and the reporting of OTC and exchange traded derivatives in 2014. Mandatory clearing for certain standardized OTC derivatives transactions is expected to start in the second half of 2015, and margin requirements for un-cleared OTC derivative transactions are expected to be phased in from December 2015.

The tables split the exposure into the part held in the regulatory banking book, which is shown under the heading "used for own credit portfolio" and the part held in the regulatory trading book, referred to as "acting as intermediary". The decrease in credit derivatives is primarily related to our de-risking activities and reduced volumes in the credit derivatives market.

As the replacement values of derivatives portfolios fluctuate with movements in market rates and with changes in the transactions in the portfolios, we also estimate the potential future replacement costs of the portfolios over their lifetimes or, in case of collateralized portfolios, over appropriate unwind periods. We measure the potential future exposure against separate limits. We supplement the potential future exposure analysis with stress tests to estimate the immediate impact of extreme market events on our exposures (such as event risk in our Emerging Markets portfolio).

The potential future exposure measure which we use is generally given by a time profile of simulated positive market values of each counterparty's derivatives portfolio, for which netting and collateralization are considered. For limit monitoring we employ the 95th quantile of the resulting distribution of market values, internally referred to as potential future exposure (PFE). The average exposure profiles generated by

the same calculation process are used to derive the so-called average expected exposure (AEE) measure, which we use to reflect expected future replacement costs within our credit risk economic capital, and the expected positive exposure (EPE) measure driving our regulatory capital requirements. While AEE and EPE are generally calculated with respect to a time horizon of one year, the PFE is measured over the entire lifetime of a transaction or netting set for uncollateralized portfolios and over an appropriate unwind period for collateralized portfolios, respectively. We also employ the aforementioned calculation process to derive stressed exposure results for input into our credit portfolio stress testing.

The PFE profile of each counterparty is compared daily to a PFE limit profile set by the responsible credit officer. PFE limits are integral part of the overall counterparty credit exposure management in line with other limit types. Breaches of PFE limits at any one profile time point are highlighted for action within our credit risk management process. The EPE is directly used in the customer level calculation of the IRBA regulatory capital under the so-called internal model method (IMM), whereas AEE feeds as a loan equivalent into the Group s credit portfolio model where it is combined with all other exposure to a counterparty within the respective simulation and allocation process (see the section Monitoring and Managing Credit Risk).

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	114
	Asset Quality	

Equity Exposure

The table below presents the carrying values of our equity investments according to IFRS definition split by trading and nontrading for the respective reporting dates. We manage our respective positions within our market risk and other appropriate risk frameworks.

Composition of our Equity Exposure

in m.	Dec 31, 2014	Dec 31, 2013
Trading Equities	69,831	61,393
Nontrading Equities ¹	6,402	5,614
Total Equity Exposure	76,233	67,008

¹ Includes equity investment funds amounting to 338 million as of December 31, 2014 and 695 million as of December 31, 2013.

As of December 31, 2014, our Trading Equities exposure was mainly comprised of 65.2 billion from CB&S activities and 4.6 billion from Deutsche AWM business. Overall Trading Equities increased by 8.4 billion year on year driven by increased exposure in CB&S (up 7.5 billion) and Deutsche AWM (up 0.9 billion).

For details about our Nontrading Equities exposure see the respective section *Equity Investments Held* in our *Nontrading Market Risk* section.

Asset Quality

This section describes the asset quality of our loans. All loans where known information about possible credit problems of borrowers causes our management to have serious doubts as to the collectability of the borrower's contractual obligations are included in this section.

Overview of performing, renegotiated, past due and impaired loans by customer groups

in m.	Dec 31, 2014			Dec 31, 2013 ¹		
	Corporate loans	Consumer loans	Total	Corporate loans	Consumer loans	Total

--------------	----------------	----------------	----------------	----------------	----------------	----------------

¹ Amounts for December 31, 2013, were adjusted up for past due loans, neither renegotiated nor impaired by 303 million and for loans renegotiated, but not impaired by 112 million erroneously not included in prior disclosure.

Past Due Loans

Loans are considered to be past due if contractually agreed payments of principal and/or interest remain unpaid by the borrower, except if those loans are acquired through consolidation. The latter are considered to be past due if payments of principal and/or interest, which were expected at a certain payment date at the time of the initial consolidation of the loans, are unpaid by the borrower.

Non-impaired past due loans at amortized cost by past due status

in m.	Dec 31, 2014	Dec 31, 2013 ¹
Loans less than 30 days past due	3,223	3,218
Loans 30 or more but less than 60 days past due	534	857

Other	0	0
Total	5,018	5,813

¹ Amounts for December 31, 2013, were adjusted up for past due loans, neither renegotiated nor impaired by 303 million, erroneously not included in prior disclosure.

Our non-impaired past due loans decreased by 795 million to 5.0 billion as of December 31, 2014, mainly due to a decrease of loans 90 days or more past due within Postbank of 343 million, which were partly transferred to collectively assessed impaired loans.

Aggregated value of collateral with the fair values of collateral capped at loan outstandings held against our non-impaired past due loans

	Dec 31, 2014	Dec 31, 2013
in m. Financial and other collateral	2,854	3,260
Guarantees received	226	161
Total	3,080	3,421

Our aggregated value of collateral held against our non-impaired past due loans as of December 31, 2014 decreased in line with the reduction of non-impaired past due loans compared to prior year.

Renegotiated and Forborne Loans

For economic or legal reasons we might enter into a forbearance agreement with a borrower who faces or will face financial difficulties in order to ease the contractual obligation for a limited period of time. A case by case approach is applied for our corporate clients considering each transaction and client specific facts and circumstances. For consumer loans we offer forbearances for a limited period of time, in which the total or partial outstanding or future installments are deferred to a later point of time. However, the amount not paid including accrued interest during this period must be re-compensated at a later point of time. Repayment options include distribution over residual tenor, a one-off payment or a tenor extension. Forbearances are restricted and depending on the economic situation of the client, our risk management strategies and the local legislation. In case of a forbearance agreement is entered into, an impairment measurement is conducted as described below, an impairment charge is taken if necessary and the loan is subsequently recorded as impaired.

Loans that have been renegotiated in such a way that, for economic or legal reasons related to the borrower's financial difficulties, we granted a concession to the borrower that we would not otherwise have considered are disclosed as renegotiated loans and are a subset of forborne loans.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	116
	Asset Quality	

On February 20, 2014, the EBA issued the draft Implementing Technical Standards (ITS) on Supervisory reporting on forbearance and non-performing exposures under article 99(4) of Regulation (EU) No 575/2013.

During 2014 we introduced the new EBA definition for forbearances replacing the definition of renegotiated and restructured loans. The scope of the new definition goes far beyond the prior definitions applied and now includes those measures to clients which will face financial difficulties. Once the conditions mentioned in the ITS are met, we report the loan as being forborene; we remove the loan from our forbearance reporting, once the discontinuing criteria in the ITS are met.

Forborne Loans

				Dec 31, 2014 ¹
	Performing		Nonperforming	Total

Total	2,029	927	2,947	5,903

¹ First time data collection was only practically feasible for 2014 figure.

Impaired Loans

Credit Risk Management regularly assesses whether there is objective evidence that a loan or group of loans is impaired. A loan or group of loans is impaired and impairment losses are incurred if:

there is objective evidence of impairment as a result of a loss event that occurred after the initial recognition of the asset and up to the balance sheet date (a loss event). When making our assessment we consider information on such events that is reasonably available up to the date the financial statements are authorized for issuance in line with the requirements of IAS 10;

the loss event had an impact on the estimated future cash flows of the financial asset or the group of financial assets, and

a reliable estimate of the loss amount can be made.

Credit Risk Management's loss assessments are subject to regular review in collaboration with Group Finance. The results of this review are reported to and approved by an oversight committee comprised of Group Finance and Risk Senior Management.

For further details with regard to impaired loans please refer to Note 1 Significant Accounting Policies and Critical Accounting Estimates .

Impairment Loss and Allowance for Loan Losses

If there is evidence of impairment the impairment loss is generally calculated on the basis of discounted expected cash flows using the original effective interest rate of the loan. If the terms of a loan are renegotiated or otherwise modified because of financial difficulties of the borrower without qualifying for a derecognition of the loan, the impairment loss is measured using the original effective interest rate before modification of terms. We reduce the carrying amount of the impaired loan by the use of an allowance account and recognize the amount of the loss in the consolidated statement of income as a component of the provision for credit losses. We record increases to our allowance for loan losses as an increase of the provision for loan losses in our income statement. Charge-offs reduce our allowance while recoveries, if any, are credited to the allowance account. If we determine that we no longer require allowances which we have previously established, we decrease our allowance and record the amount as a reduction of the provision for loan losses in our income statement. When it is considered that there is no realistic prospect of recovery and all collateral has been realized or trans-

	Asset Quality	

ferred to us, the loan and any associated allowance for loan losses is charged off (i.e., the loan and the related allowance for loan losses are removed from the balance sheet).

While we assess the impairment for our corporate credit exposures individually, we assess the impairment of our smaller-balance standardized homogeneous loans collectively.

Our collectively assessed allowance for non-impaired loans reflects allowances to cover for incurred losses that have neither been individually identified nor provided for as part of the impairment assessment of smaller-balance homogeneous loans.

For further details regarding our accounting policies regarding impairment loss and allowance for credit losses please refer to Note 1 Significant Accounting Policies and Critical Accounting Estimates .

¹ Include repayments.

² Include consolidated items because the Group obtained control over the structured entity borrowers by total 598 million (as per December 31, 2013). In 2014 our impaired loans decreased by 795 million or 7.8 % to 9.3 billion driven by individually assessed impaired loans and partly offset by a slight increase in collectively assessed impaired loans. The reduction in individually assessed impaired loans is mainly caused by disposals along with a reduction of new impairments mainly in NCOU reflecting impairments booked in the previous years and the consequent de-risking of our book. Our Core bank also contributed to the overall reduction again related to disposals along with lower new impairments in an improving economic environment. The increase in collectively assessed impaired loans results from Postbank's Core business.

The impaired loan coverage ratio (defined as total on-balance sheet allowances for all loans individually impaired or collectively assessed divided by IFRS impaired loans (excluding collateral)) slightly increased from 55 % as of year-end 2013 to 56 % driven by NCOU.

Our impaired loans included 986 million of loans reclassified to loans and receivables in accordance with IAS 39, down 20 million from prior year's level.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Asset Quality	120
--	---	-----

Our total collateral held for impaired loans as of December 31, 2014 decreased in line with the reduction of impaired loans by 663 million compared to prior year and predominantly for loans held in London and Spain. The coverage ratio including collateral (defined as total on-balance sheet allowances for all loans individually impaired or collectively assessed plus collateral held against impaired loans, with fair values capped at transactional outstandings, divided by IFRS impaired loans) slightly decreased to 93 % as of December 31, 2014 compared to 96 % as of December 31, 2013.

Financial assets available for sale

The impairment concept is also applicable for available for sale debt instruments, which are otherwise carried at fair value with changes in fair value reported in other comprehensive income. If an available for sale debt instrument is considered impaired, the cumulative impairment loss reflects the difference between the amortized cost and the current fair value of the instrument. For a detailed discussion of our accounting procedures please refer to Note 1 Significant Accounting policies and Critical Accounting Estimates .

Impaired financial assets available for sale, accumulated impairments and coverage ratio

Impaired financial assets available for sale coverage ratio in %	34

¹ First time data collection was only feasible for 2014 figures.

Collateral Obtained

We obtain collateral on the balance sheet by taking possession of collateral held as security or by calling upon other credit enhancements. Collateral obtained is made available for sale in an orderly fashion or through public auctions, with the proceeds used to repay or reduce outstanding indebtedness. Generally we do not occupy obtained properties for our business use. The commercial and residential real estate collateral obtained in 2014 refers predominantly to our U.S. and Spain exposures.

Collateral obtained during the reporting periods

Relative	(17%)	4%	(7%)	(17)%	24%	5%	(6)%

The reduction in 2014 in provisions for loan losses in our individually assessed loan portfolio of 878 million reflects material reductions across all businesses. The reduction in NCOU was driven by decreased provision for credit losses in IAS39 reclassified and commercial real estate assets, while the performance in our Core bank benefited from increased releases and a non-recurrence of large single name bookings. Provisions for our collectively assessed portfolio decreased compared to prior year reflecting among other factors the ongoing good environment in the German credit market.

The main driver of the increase in charge-offs against our individually assessed loan portfolio was an alignment of processes in Postbank. This alignment resulted in an adjustment of the level of loan loss allowance for loans recorded at Postbank by 233 million reflecting accelerated

write-offs as well as the elimination of previous misclassification of recoveries in the credit quality of Postbank loans, which had been impaired after change of control, as interest income. Additionally, higher charge-offs in GTB relating to a single client credit event in the prior year contributed to the overall increase which was partly offset by reductions in charge-offs for IAS 39 reclassified assets. The increase in charge-offs against our collectively assessed loan portfolio mainly related to the disposal of impaired loan portfolios in Italy.

Our allowance for loan losses for IAS 39 reclassified assets, which are reported in NCOU, amounted to 518 million at the end of 2014, representing 10 % of our total allowance for loan losses, up 8 % from the level at the end of the prior year which amounted to 479 million (9 % of total allowance for loan losses). This increase was largely driven by foreign exchange as most IAS 39 reclassified assets are denominated in non-Euro currencies while additional provisions for loan losses of 54 million were largely offset by net charge-offs of 43 million. Compared to 2013, provision for loan losses for IAS 39 reclassified assets dropped by 319 million and net charge-offs decreased by 305 million in 2014. Both reductions result from the non-recurrence of large items in the present year compared to high levels in the comparison period.

2013 increase of provision for loan losses in our individually assessed loan portfolio is a result of a single client credit event recorded in GTB, increased provisioning for shipping exposure recorded in CB&S and higher charges in NCOU driven by single client items amongst others related to the European commercial real estate sector. The increase in our collectively assessed loan portfolio was driven by NCOU. This increase was partly offset by reductions in our Core business mainly reflecting an improved credit environment in the German retail market compared to prior year. Our overall provisions for off-balance sheet positions increased by 12 million compared with previous year driven by GTB as a result of increased collectively assessed allowances amongst other driven by volume increase.

Our allowance for loan losses for IAS 39 reclassified assets amounted to 479 million as at year end 2013, representing 9 % of our total allowance for loan losses, slightly down from 489 million (10 % of total allowance for loan losses) at prior year end. The slight reduction in 2013 was a result of reductions due to 349 million charge-offs and 35 million other changes overcompensating increases due to an additional provision for loan losses of 373 million. Compared to prior year, provision for loan losses for IAS 39 reclassified assets decreased by 43 million in 2013 (to 373 million from 415 million) driven by reductions across portfolios apart from commercial real estate. Net charge-offs related to IAS 39 reclassified assets slightly increased by 18 million to 349 million in 2013 from 331 million in 2012 caused by a small number of charge-offs in the commercial real estate sector (subsequent to the partial charge-off, the respective borrowers have been consolidated due to the Group obtaining control over the structured entity borrower during the second and third quarters of 2013).

Derivatives Credit Valuation Adjustment

We establish a counterparty Credit Valuation Adjustment (CVA) for OTC derivative transactions to cover expected credit losses. The adjustment amount is determined by assessing the potential credit exposure to a given counterparty and taking into account any collateral held, the effect of any relevant netting arrangements, expected loss given default and the credit risk, based on available market information, including CDS spreads.

We recorded 209 million in CVAs against our aggregate monoline exposures as of December 31, 2014, flat compared with 209 million as of December 31, 2013. For more details about CVAs for monoline counterparties, please refer to section Financial position Exposure to Monoline Insurers .

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	123
	Counterparty Credit Risk: Regulatory Assessment	

Treatment of Default Situations under Derivatives

Unlike standard loan assets, we generally have more options to manage the credit risk in our derivatives transactions when movement in the current replacement costs or the behavior of our counterparty indicate that there is the risk that upcoming payment obligations under the transactions might not be honored. In these situations, we are frequently able under the relevant derivatives agreements to obtain additional collateral or to terminate and close-out the derivative transactions at short notice.

The master agreements for OTC derivative transactions executed with our clients usually provide for a broad set of standard or bespoke termination rights, which allow us to respond swiftly to a counterparty's default or to other circumstances which indicate a high probability of failure. We have less comfort under the rules and regulations applied by clearing CCPs, which rely primarily on the clearing members default fund contributions and guarantees and less on the termination and close-out of contracts, which will be considered only at a later point in time after all other measures failed. Considering the severe systemic disruptions to the financial system, that could be caused by a disorderly failure of a CCP, the Financial Stability Board (FSB) recommended in October 2014 to subject CCPs to resolution regimes that apply the same objectives and provisions that apply to global systematically important banks (G-SIBs).

Our contractual termination rights are supported by internal policies and procedures with defined roles and responsibilities which ensure that potential counterparty defaults are identified and addressed in a timely fashion. These procedures include necessary settlement and trading restrictions. When our decision to terminate derivative transactions results in a residual net obligation owed by the counterparty, we restructure the obligation into a non-derivative claim and manage it through our regular work-out process. As a consequence, for accounting purposes we typically do not show any nonperforming derivatives.

Wrong-way risk occurs when exposure to a counterparty is adversely correlated with the credit quality of that counterparty. In compliance with Article 291(2) and (4) CRR we, excluding Postbank, had established a monthly process to monitor several layers of wrong-way risk (specific wrong-way risk, general explicit wrong-way risk at country/industry/region levels and general implicit wrong-way risk, whereby exposures arising from transactions subject to wrong-way risk are automatically selected and presented for comment to the responsible credit officer. A wrong-way risk report is then sent to Credit Risk senior management on a monthly basis. In addition, we, excluding Postbank, utilized our established process for calibrating our own alpha factor (as defined in Article 284 (9) CRR) to estimate the overall wrong-way risk in our derivatives and securities financing transaction portfolio. Postbank derivative counterparty risk is immaterial to the Group and collateral held is typically in the form of cash.

Counterparty Credit Risk: Regulatory Assessment

The following section on Counterparty Credit Risk: Regulatory Assessment presents specific disclosures in relation to Pillar 3. Per regulation it is not required to audit Pillar 3 disclosures. As such this section, which ends with the beginning of section Securitization, is labeled unaudited. Quantitative information presented follows the regulatory scope of consolidation.

General Considerations for the Regulatory Assessment of Counterparty Risk

As a general rule, we applied the advanced IRBA for the majority of our advanced IRBA eligible credit portfolios to calculate the regulatory capital requirements according to the CRR/CRD 4 framework, based on respective approvals received from BaFin.

A prerequisite for the development of rating methodologies and the determination of risk parameters is a proper definition, identification and recording of the default event of a customer. We apply a default definition in accordance with the requirements of Article 178 CRR as confirmed by the BaFin as part of the IRBA approval process.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	124
	Counterparty Credit Risk: Regulatory Assessment	

The BaFin approvals obtained as a result of the advanced IRBA audit processes for our counterparty credit exposures allow the usage of 68 internally developed rating systems for regulatory capital calculation purposes excluding for exposures in Postbank. Thereof, 37 rating systems were authorized in December 2007; a further 31 followed until year end 2014. Overall they cover all of our material exposures, excluding Postbank, in the advanced IRBA eligible exposure classes central governments and central banks, institutions, corporates, and retail.

At Postbank, the retail portfolio is also assigned to the advanced IRBA based on respective BaFin approvals Postbank received and the fact that we have an advanced IRBA status. Moreover, during 2014 Postbank obtained BaFin approvals for one Postbank specific rating system as well as nine rating systems already applied at Group level to start applying the advanced IRBA within the exposure classes institutions and corporates subsequent to respective audit processes. For a significant portion of Postbank's remaining IRBA eligible credit portfolio we apply the foundation IRBA based on respective BaFin approvals Postbank received in recent years.

In summary, the approvals Postbank obtained from the BaFin as a result of its IRBA audit processes for the counterparty credit exposures allow the usage of eight internally developed rating systems for regulatory capital calculation purposes under the IRBA and the use of nine rating systems already used at Group level. Overall they cover Postbank's material exposures in the advanced IRBA eligible exposure class retail as well as Postbank's material exposures in the advanced and foundation IRBA eligible exposure classes central governments and central banks, institutions and corporates.

When referring to RWA and EAD as of December 31, 2014 in the following tables, we generally report according to the CRR/CRD 4 transitional rules if not stated otherwise.

Details of the advanced IRBA and the advanced IRBA exposures are provided in sections Advanced Internal Ratings Based Approach and Advanced IRBA Exposure. The foundation IRBA and the foundation IRBA exposures are discussed in Sections Foundation Internal Ratings Based Approach and Foundation IRBA Exposure.

As an IRBA institution, we are required to treat specific equity positions and other non-credit obligation assets generally within the IRBA. For these exposure types typically regulatory defined IRBA risk weights are applied. Our specialized lending exposures reported under the foundation IRBA also receive regulatory risk weights.

At Group level excluding Postbank, we assign a few remaining advanced IRBA eligible portfolios of small size temporarily to the standardized approach. With regard to these, an implementation plan and approval schedule have been set up and agreed with the Bundesbank, the BaFin and the ECB. A portion of Postbank's IRBA eligible portfolios is also still temporarily assigned to the standardized approach. During 2014, the implementation plans for the Group excluding Postbank and for Postbank have been combined to an overall Group level implementation plan with a combined approval schedule set up and agreed with the BaFin and the Bundesbank.

Details of the standardized approach and the standardized approach exposures are discussed in the Section Standardized Approach.

Our advanced IRBA coverage ratio, excluding Postbank, exceeded, with 96,5 % by exposure value (EAD) as well as with 93 % by RWA as of December 31, 2014, the European regulatory requirement, remaining nearly unchanged from the levels at December 31, 2013 (96,7 % EAD and 93 % by RWA), using applicable measures according to Section 11 SolvV. These ratios excluded the exposures permanently assigned to the standardized approach (according to Article 150 CRR), other IRBA exposure as well as securitization positions. The regulatory minimum requirements with regard to the respective coverage ratio thresholds have been met at all times. Subsequent to the combination of the implementation plans for the Group excluding Postbank and Postbank the overall Group-wide advanced IRBA coverage ratios have also been established. They were

Table of Contents

Counterparty Credit Risk: Regulatory Assessment

measured according to Section 11 SolvV and were well above the regulatory defined initial thresholds during 2014.

The following table provides an overview of our credit risk exposure broken down by model approaches and business division.

The line item "Other" in Advanced IRBA reflects EAD from securitization positions in the banking book, specific equity positions and other non-credit obligation assets. Within the Standardized Approach, the line item "central governments and central banks" includes exposures to regional governments or local authorities, public sector entities, multilateral development banks and international organizations. "Other" in the Standardized Approach includes EAD from exposures secured by mortgages on immovable property, exposures in default, items associated with particular high risk, covered bonds, claims on institutions and corporates with a short-term credit assessment, collective investments undertakings (CIU), equity positions (grandfathered), securitization positions in the banking book and other items.

The table below shows the credit risk exposures before credit risk mitigation, the average amount of the exposures and RWA broken down by model approach and regulatory exposure class. The EAD as defined for regulatory purposes is presented on a gross basis, i.e. information for

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

exposures covered by guarantees or credit derivatives is assigned to the exposure class of the original counterparty. The average EAD is calculated over the last four quarter of this fiscal year. In contrast to the EAD gross the RWA is shown after credit risk mitigation.

Advanced Internal Ratings Based Approach

The advanced IRBA is the most sophisticated approach available under the regulatory framework for credit risk and allows us to make use of our internal rating methodologies as well as internal estimates of specific other risk parameters. These methods and parameters represent long-used key components of the internal risk measurement and management process supporting the credit approval process, the economic capital and expected loss calculation and the internal monitoring and reporting of credit risk. The relevant parameters

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	130
--	------------------------------------	-----

Counterparty Credit Risk: Regulatory Assessment

include the probability of default (PD), the loss given default (LGD) and the maturity (M) driving the regulatory risk-weight and the credit conversion factor (CCF) as part of the regulatory exposure at default (EAD) estimation. For most of our internal rating systems more than seven years of historical information is available to assess these parameters. Our internal rating methodologies reflect a point-in-time rather than a through-the-cycle rating.

The probability of default for customers is derived from our internal rating systems. We assign a probability of default to each relevant counterparty credit exposure as a function of a transparent and consistent 21-grade master rating scale for all of our exposure excluding Postbank. The borrower ratings assigned are derived on the grounds of internally developed rating models which specify consistent and distinct customer-relevant criteria and assign a rating grade based on a specific set of criteria as given for a certain customer. The set of criteria is generated from information sets relevant for the respective customer segments like general customer behavior, financial and external data. The methods in use range from statistical scoring models to expert-based models taking into account the relevant available quantitative and qualitative information. Expert-based models are usually applied for counterparts in the exposure classes Central governments and central banks , Institutions and Corporates with the exception of small- and medium-sized entities. For the latter as well as for the retail segment statistical scoring or hybrid models combining both approaches are commonly used. Quantitative rating methodologies are developed based on applicable statistical modeling techniques, such as logistic regression. In line with Article 174 CRR, these models are complemented by human judgment and oversight to review model-based assignments and are intended to ensure that the models are used appropriately. When we assign our internal risk ratings, it allows us to compare them with external risk ratings assigned to our counterparties by the major international rating agencies, where possible, as our internal rating scale has been designed to principally correspond to the external rating scales from rating agencies. For quantitative information regarding our advanced and foundation IRBA exposure based on a rating grade granularity which corresponds to the external Standard & Poor 's rating equivalents please refer to the section Advanced IRBA Exposure and Foundation IRBA Exposure .

Although different rating methodologies are applied to the various customer segments in order to properly reflect customer-specific characteristics, they all adhere to the same risk management principles. Credit process policies provide guidance on the classification of customers into the various rating systems. For more information regarding the credit process and the respective rating methods used within that process, please refer to Sections Credit Risk Ratings and Rating Governance .

Postbank also assigns a probability of default to each relevant counterparty credit exposure as a function of an internal rating master scale for its portfolios. The ratings assigned are derived on the grounds of internally developed rating models which specify consistent and distinct customer-relevant criteria. These rating models are internally developed statistical scoring or rating models based on internal and external information relating to the borrower and use statistical procedures to evaluate a probability of default. The resulting score or probability of default is then mapped to Postbank 's internal rating master scale.

We apply internally estimated LGD factors as part of the advanced IRBA capital requirement calculation as approved by the BaFin. LGD is defined as the likely loss intensity in case of a counterparty default. It provides an estimation of the exposure that cannot be recovered in a default event and therefore captures the severity of a loss. Conceptually, LGD estimates are independent of a customer 's probability of default. The LGD models ensure that the main drivers for losses (i.e., different levels and quality of collateralization and customer or product types or seniority of facility) are reflected in specific LGD factors. In our LGD models, except Postbank, we assign collateral type specific LGD parameters to the collateralized exposure (collateral value after application of haircuts). Moreover, the LGD for uncollateralized exposure cannot be below the LGD assigned to collateralized exposure and regulatory floors (10 % for residential mortgage loans) are applied.

As part of the application of the advanced IRBA we apply specific CCFs in order to calculate an EAD value. Conceptually the EAD is defined as the expected amount of the credit exposure to a counterparty at the time of its default. For advanced IRBA calculation purposes we apply the general principles as defined in Article 166

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	131
--	---	-----

CRR to determine the EAD of a transaction. In instances, however, where a transaction outside of Postbank involves an unused limit a percentage share of this unused limit is added to the outstanding amount in order to appropriately reflect the expected outstanding amount in case of a counterparty default. This reflects the assumption that for commitments the utilization at the time of default might be higher than the current utilization. When a transaction involves an additional contingent component (i.e., guarantees) a further percentage share (usage factor) is applied as part of the CCF model in order to estimate the amount of guarantees drawn in case of default. Where allowed under the advanced IRBA, the CCFs are internally estimated. The calibrations of such parameters are based on statistical experience as well as internal historical data and consider customer and product type specifics. As part of the approval process, the BaFin assessed our CCF models and stated their appropriateness for use in the process of regulatory capital requirement calculations.

Overall Postbank has similar standards in place to apply the advanced IRBA to its retail portfolios as well as to the advanced IRBA covered institution and corporate portfolios using internally estimated default probabilities, loss rates and conversion factors as the basis for calculating minimum regulatory capital requirements.

For the majority of derivative counterparty exposures as well as securities financing transactions (SFT) we, excluding Postbank, make use of the internal model method (IMM) in accordance with Article 283 et seq. CRR and Section 18 et. seq. SolvV. In this respect securities financing transactions encompass repurchase transactions, securities or commodities lending and borrowing as well as margin lending transactions (including prime brokerage). The IMM is a more sophisticated approach for calculating EAD for derivatives and SFT, again requiring prior approval from the BaFin before its first application. By applying this approach, we build our EAD calculations on a Monte Carlo simulation of the transactions' future market values. Within this simulation process, interest and foreign exchange rates, credit spreads, equity and commodity prices are modeled by stochastic processes and each derivative and securities financing transaction is revalued at each point of a pre-defined time grid by our internally approved valuation routines. As the result of this process, a distribution of future market values for each transaction at each time grid point is generated. From these distributions, by considering the appropriate netting and collateral agreements, we derive the exposure measures potential future exposure (PFE), average expected exposure (AEE) and expected positive exposure (EPE) mentioned in section Counterparty Credit Risk from Derivatives . The EPE measure evaluated on regulatory eligible netting sets defines the EAD for derivative counterparty exposures as well as for securities financing transactions within our regulatory capital calculations for the great majority of our derivative and SFT portfolio, while applying an own calibrated alpha factor in its calculation, floored at the minimum level of 1.2. For December 31, 2014, the alpha factor was calibrated to 1.11 and thus the floor was applied. For the small population of transactions for which a simulation cannot be computed or is subject to regulatory restrictions (such as for those with risk factors not approved by BaFin or for specific wrong-way risk), the EAD used is derived from the Mark-to-Market method according to Article 274 CRR.

For our derivative counterparty credit risk resulting from Postbank we also apply the Mark-to-Market method according to Article 274 CRR, i.e., we calculate the EAD as the sum of the net positive fair value of the derivative transactions and the regulatory add-ons. As the EAD derivative position resulting from Postbank is less than 1 % in relation to our overall counterparty credit risk position from derivatives we consider Postbank's derivative position to be immaterial.

Advanced IRBA Model Validation

As an important element of our risk management framework we regularly validate our rating methodologies and credit risk parameters. Whereas the rating methodology validation focuses on the discriminatory power of the models, the risk parameter validation for PD, LGD and EAD analyzes the predictive power of those parameters when compared against historical default and loss experiences.

According to our standards, and in line with the CRR-defined minimum requirements, the parameters PD, LGD and EAD are reviewed annually. The validation process for parameters as used by us excluding Postbank is coordinated and supervised by a validation committee composed of members from Finance, Risk Analytics & Living Wills and Credit Risk Management. Risk parameter validations consist of quantitative analyses of inter-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	132
--	---	-----

nal historical data and are enriched by qualitative assessments in case data for validation is not statistically sufficient for reliable validation results. A recalibration of specific parameter settings is triggered based on validation results if required. In addition to annual validations, ad hoc reviews are performed where appropriate as a reaction to quality deterioration at an early stage due to systematic changes of input factors (i.e., changes in payment behaviour) or changes in the structure of the portfolio.

Analogously at Postbank the results of the estimations of the input parameters PD, CCF and LGD are reviewed annually. Postbank's model validation committee is responsible for supervising the annual validation process of all models. Via a cross committee membership Deutsche Bank senior managers join Postbank committees and vice versa, to promote joint governance.

The reviews conducted in 2014 for advanced IRBA rating systems triggered recalibrations as shown in the table below. Changes in overall counts of parameters are due to newly approved rating systems or due to changes in granularity in existing risk parameter assignment and include Postbank. None of the recalibrations individually nor the impact of all recalibrations in the aggregate materially impacted our regulatory capital requirements.

Validation results for risk parameters used in our advanced IRBA

	Count	PD EAD in %	Count	LGD EAD in %	Count	2014 EAD EAD in %

Total	9	12.1	6	6.0	11	42.1

Individual risk parameter settings are classified as appropriate if no recalibration was triggered by the validation and thus the application of the current parameter setting is continued since still sufficiently conservative. A parameter classifies as overly conservative or progressive if the validation triggers a recalibration analysis leading to a potential downward or upward change of the current setting, respectively. The breakdown for PD, LGD and EAD is presented by number as well as by the relative EAD attached to the respective parameter as of December 31, 2014 and December 31, 2013.

The validations during 2014 largely confirmed our parameter settings. Negatively validated PD parameters with high materiality were caused by two rating systems. One Postbank rating system contributed around 5.4 % of EAD, and the PD parameter was classified as too progressive and the LGD parameter is overly conservative. Both parameters had already been amended. One Deutsche Bank rating system contributed to approximately

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	133
--	---	-----

3.9 % of EAD. The progressive PD parameters were already mitigated by re-rating of affected exposures which has already begun in 2013. A Postbank rating system contributing around 4 % of EAD the LGD parameter was classified as, after an increase in 2013, overly conservative and was accordingly recalibrated. The LGD parameter for one Deutsche Bank rating system contributed around 7.7 % of EAD was classified as too progressive. A recalibration is scheduled for the second quarter 2015. In addition, one LGD parameter contributing approximately 6.2 % of EAD proved to be too progressive and one EAD parameter contributing 4.7 % of the free limit was classified as overly conservative. Both parameters are used in the Bank and are scheduled for recalibration in the second quarter 2015. One EAD parameter used in the Bank contributing around 37.7 % of the free limit was overly conservative. It was reduced by 3 %-points in 2013 still keeping a high level of conservatism and a further reduction of the parameter is not planned. All other negatively validated parameters are only applied to smaller portfolios.

Out of the 57 risk parameters, where a change was suggested during 2014 following their validation, 8 were already amended in 2014. Out of the remaining 49 parameter changes 45 are scheduled for implementation in the first half of 2015. One EAD parameter of high materiality listed above will be kept deliberately conservative. The remaining 3 parameter settings are planned to be implemented during 2015. Out of the 59 risk parameters where a change was suggested during 2013 by the conducted validation, 26 were already introduced in 2013 and one parameter setting was maintained due to changed portfolio composition. Subsequently, 25 parameter changes were implemented in 2014 and 4 parameter settings were kept deliberately conservative. The remaining 3 parameter settings were not changed due to discontinuation of the respective rating system.

In addition to the above, the comparison of regulatory expected loss (EL) estimates with actual losses recorded also provides some insight into the predictive power of our parameter estimations and, therefore, EL calculations.

The EL used in this comparison is the forecast credit loss from counterparty defaults of our exposures over a one year period and is computed as the product of PD, LGD and EAD for performing exposures as of December 31 of the preceding year. The actual loss measure is defined by us as new provisions on newly impaired exposures recorded in our financial statements through profit and loss during the respective reported years.

While we believe that this approach provides some insight, the comparison has limitations as the two measures are not directly comparable. In particular, the parameter LGD underlying the EL calculation represents the loss expectation until finalization of the workout period while the actual loss as defined above represents the accounting information recorded for one particular financial year. Furthermore, EL is a measure of expected credit losses for a snapshot of our credit exposure at a certain balance sheet date while the actual loss is recorded for a fluctuating credit portfolio over the course of a financial year, i.e., including losses in relation to new loans entered into during the year.

According to the methodology described above, the following table provides a comparison of EL estimates for loans, commitments and contingent liabilities as of year-end 2013 through 2009, with actual losses recorded for the financial years 2014 through 2010, by regulatory exposure class for advanced IRBA exposures. Postbank is first reflected in the comparison of EL estimates as of year end 2010 with actual losses recorded for the financial year 2011.

1 2013 EL figures are based on pro forma CRR/CRD 4.

2 In 2013, the December 31, 2012 actual loss amounts have been restated due to alignment of Postbank's calculation model to the Group's approach. Actual loss in 2014 was below expectations mainly driven by a significant outperformance in Corporate exposures as well as in Retail exposures secured by real estate property.

The actual loss in 2013 exceeded the expected loss by 261 million or 24 %. This was primarily due to higher than expected level of provisions in our corporate portfolio driven by a large single client credit event in a usually low risk portfolio of GTB as well as one large charge within NCOU. Additionally, actual loss for central governments was higher than expected driven by one single client. Better than expected performance in all retail exposure classes as well as in institutions partly offset the overall excess of actual compared to expected loss.

The actual loss in 2012 was 13 % lower than the expected loss across all exposure classes apart from Institutions, where actual loss was driven by one single client.

The decrease in expected loss as of December 31, 2012 in comparison to December 31, 2011 is mainly resulting from exposure reductions and to less extent by partially lower LGD parameters.

The consolidation of Postbank led to an increase in the expected loss starting December 31, 2010 and in the actual losses starting 2011.

In 2010 the actual loss was 18 % below the expected loss as the actual loss and was positively influenced by lower provisions taken for assets reclassified in accordance with IAS 39.

The decrease of the expected loss for 2010 compared with the expected loss for 2009 reflected the slightly improved economic environment after the financial crisis.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The following table provides a year-to-year comparison of the actual loss by regulatory exposure class. Postbank is firstly included in the reporting period 2011.

Year-to-year comparison of the actual loss by IRBA exposure class

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	135
--	---	-----

Actual loss materially declined in 2014 compared to prior year due to the low level of new impairments across all businesses.

In 2013 the actual loss increased by 308 million or 30 % compared to 2012 primarily driven by our corporate portfolio and to a minor extent exposures to central governments. The increase in our corporate portfolio was caused by a single client credit event in GTB along with higher actual losses for shipping companies recorded in CB&S as well as one large charge in NCOU related to the European Commercial Real Estate sector, while higher actual losses in central governments result from a charge to one single client. These increases were partly offset by slight reductions in our retail portfolios as well as in institutions.

The slight reduction of 27 million or 3 % actual loss in 2012 compared to 2011 is driven by retail exposures secured by real estate property resulting from the alignment of Postbank's calculation model to the Group's approach.

New provisions established in 2011 were 308 million higher compared with 2010 primarily due to the first time inclusion of Postbank in full year reporting.

Advanced IRBA Exposure

The advanced IRBA requires differentiating a bank's credit portfolio into various regulatory defined exposure classes. We identify the relevant regulatory exposure class for each exposure by taking into account factors like customer-specific characteristics, the rating system used as well as certain materiality thresholds which are regulatory defined.

As an IRBA institution, we are required to treat specific equity positions and other non-credit obligation assets generally within the IRBA. For these exposure types typically regulatory defined IRBA risk weights are applied. Details of these positions are provided in section Exposures with regulatory defined risk weights.

The following tables show our advanced IRBA exposures distributed on a rating scale and separately for regulatory IRBA exposure classes central governments and central banks, institutions, corporates and retail clients. Advanced IRBA exposure types, for which regulatory defined IRBA risk weights are applied (securitization positions in the regulatory banking book, specific equity positions and other non-credit obligation assets), are not included here but shown separately.

The EAD is presented in conjunction with exposures-weighted average PD and LGD, the risk-weighted assets (RWA) and the average risk weight (RW) calculated as RWA divided by EAD net. The information is shown after credit risk mitigation obtained in the form of financial, physical and other collateral as well as guarantees and credit derivatives. The effect of double default, as far as applicable outside of Postbank's retail exposures, is considered in the average risk weight. It implies that for a guaranteed exposure a loss only occurs if the primary obligor and the guarantor fail to meet their obligations at the same time.

It should be noted that the EAD gross information for exposures covered by guarantees or credit derivatives is assigned to the exposure class of the original counterparty respectively whereas the EAD net information assigns the exposures to the protection seller. As a consequence the EAD net can be higher than the EAD gross.

The tables below also include our counterparty credit risk position from derivatives and securities financing transactions so far as it has been assigned to the advanced IRBA. For the vast majority of these exposures we make use of the IMM to derive the EAD where the appropriate netting and collateral agreements are already considered resulting in an EAD net of collateral. They also provide a ratio of expected loss by EAD for the non-defaulted exposures. For defaulted exposure, we apply a LGD conception already incorporating potential unexpected losses in the loss rate estimate as required by Article 181 (1) (h) CRR.

Counterparty Credit Risk: Regulatory Assessment

138

The increase in exposure value is mainly driven within the exposure class corporates, primarily resulting from method changes due to CRR/CRD 4, the impact from foreign exchange movements and to a lesser extent from transferring Postbank's Large Cap Corporates/Financial Institutions portfolio from the foundation to the advanced IRBA.

The tables below show our advanced IRBA exposures excluding counterparty credit risk exposures from derivatives and SFT for central governments and central banks, institutions and corporates, distributed on our internal rating scale, showing also the PD range for each grade. Our internal rating grades take into account the respective external Standard & Poor's rating grade equivalents. The EAD net is presented in conjunction with exposures-weighted average PD and LGD, the RWA and the average RW. The information is shown after credit risk mitigation obtained in the form of financial, physical and other collateral as well as guarantees and credit derivatives. The effect of double default, as far as applicable to exposures outside of Postbank, is considered in the average risk weight. It implies that for a guaranteed exposure a loss only occurs if the primary obligor and the guarantor fail to meet their obligations at the same time.

EAD net for Advanced IRBA credit exposures by PD grade with central governments and central banks (excluding derivatives and SFTs)

¹ Higher average PD in % than defined for the internal rating scales iAAA and iAA+ results for Institutions and Corporates exposure subject to a PD floor of 3 basis points.

The decrease in exposure results mainly from de-risking activities and is partly offset by foreign exchange movements. At the same time the risk weighted assets increased due to methodology changes, e.g. the asset value correlation for large regulated financial entities.

N/M Not meaningful

¹ Higher average PD in % than defined for the internal rating scales iAAA and iAA+ results for Institutions and Corporates exposure subject to a PD floor of 3 basis points.

The majority of these exposures in all exposure classes are assigned to investment-grade customers. The exposures in the lower rating classes are largely collateralized.

Exposure levels increased over the reporting period, mainly driven by foreign exchange movements, growth in CB&S and GTB as well as method changes of CRR/CRD 4. An additional contribution resulted from transferring the Postbank Large Cap Corporates/Financial Institutions portfolio from the foundation approach to the advanced IRBA.

The table below shows our Advanced IRBA exposure distributed based on the corresponding exposure classes for each relevant geographical location. As geographical location we show countries where the Bank maintains a branch or subsidiary and exposure volume is equal to or higher than 0.5 million. Exposure which does not meet these criteria is shown in Other, which also comprises exposure to international organizations. Exposures are assigned to the specific geographical location based on the country of domicile of the respective counterparty. The EAD net is presented in conjunction with exposures-weighted average LGD and PD in percentage. It excludes the following exposure classes: securitization positions in the regulatory banking book, specific equity positions and non-credit obligation assets.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	147
--	---	-----

A year-on-year comparison shows an increase in undrawn commitments in particular driven by the corporates exposure where levels increased by foreign exchange movements and specific growth in CB&S and GTB. An additional contribution resulted from transferring Postbank's Large Cap Corporates/Financial Institutions portfolio from the foundation to the advanced IRBA.

Exposures with regulatory defined risk weights

As an IRBA institution, we are required to treat equity investments, collective investment undertakings (CIU) and other non-credit obligation assets generally within the IRBA. For these exposure types typically regulatory-defined IRBA risk weights are applied.

We use the simple risk-weight approach according to Article 155 (2) CRR for our investments in equity positions entered into since January 1, 2008. It distinguishes between exposure in equities which are non-exchange traded but sufficiently diversified, exchange-traded and other non-exchange-traded and then uses the regulatory-defined risk weights of 190 %, 290 % or 370 %, respectively. We also include exposures attracting a risk weight of 250 % according to Article 48 (4) for significant investments in the CET 1 instruments of financial sector entities which are subject to the threshold exemptions as outlined in Article 48 CRR.

Exposures which are assigned to the exposure class other non-credit obligation assets receive an IRBA risk weight of 0 % in case of cash positions, 250 % for deferred tax assets that rely on future profitability and arise from temporary differences subject to the threshold exemptions as outlined in Article 48 CRR, or 100 %.

The following table summarizes on an EAD basis our IRBA exposure for equities and other non-credit obligation assets, where regulatory risk weights are applied. Credit risk mitigation techniques have not been applied.

EAD net of equity investments and other non-credit obligation assets by risk weight

in m.	Dec 31, 2014	Dec 31, 2013
0 %	2,130	883
100 %	3,891	5,739
190 %	0	62
250 %	7,103	0
290 %	266	184
370 %	1,096	1,089
Total EAD of equity investments and other non-credit obligation assets	14,486	7,957

The increase mainly results from the CRR/CRD4 introduction of a risk weight of 250 % according to Article 48 CRR for significant investments in financial sector entities and deferred tax assets as outlined above (10/15 % rule).

Foundation Internal Ratings Based Approach

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

We apply the foundation IRBA for the majority of our remaining foundation IRBA eligible credit portfolios at Postbank to the extent these have not been newly assigned to the advanced IRBA during 2014. The foundation IRBA is an approach available under the regulatory framework for credit risk allowing institutions to make use of their internal rating methodologies while using pre-defined regulatory values for all other risk parameters. Parameters subject to internal estimates include the probability of default (PD) while the loss given default (LGD) and the credit conversion factor (CCF) are defined in the regulatory framework.

For exposures in classes institutions and corporates respective foundation IRBA rating systems have been developed. A probability of default is assigned to each relevant counterparty credit exposure as a function of a transparent and consistent rating master scale. The borrower ratings assigned are derived on the grounds of internally developed rating models which specify consistent and distinct customer-relevant criteria and assign a rating grade based on a specific set of criteria as given for a certain customer. The set of criteria is generated from information sets relevant for the respective customer segments like general customer behavior, financial

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	148
--	---	-----

and external data. The methods in use are based on statistical analyses and for specific portfolio segments amended by expert-based assessments while taking into account the relevant available quantitative and qualitative information. The rating systems consider external long-term ratings from the major rating agencies (i.e., Standard & Poor's, Moody's and Fitch Ratings).

For the foundation IRBA a default definition was applied in accordance with the requirements of Article 178 CRR as confirmed by the BaFin as part of its IRBA approval process.

Foundation Internal Ratings Model Validation

We regularly validate our rating methodologies and credit risk parameters at Postbank. Whereas the rating methodology validation focuses on the discriminatory power of the models, the risk parameter validation for PD analyzes its predictive power when compared against historical default experiences.

Validation results of risk parameters used in our Foundation IRBA at Postbank

	2014		PD 2013	
	Count	EAD in %	Count	EAD in %
Appropriate	0	0.0	2	99.6
Overly conservative	0	0.0	1	0.4
Progressive	2	100.0	0	0.0
Total	2	100.0	3	100.0
Thereof already recalibrated and introduced		in 2014		in 2013
Overly conservative	0	0.0	0	0.0
Progressive	0	0.0	0	0.0
Total	0	0.0	0	0.0

Above table summarizes the outcome of the model validations for the risk parameter PD used in our foundation IRBA for Postbank. If individual risk parameter settings are classified as appropriate, no recalibration was triggered by the validation. The breakdown is presented by number as well as by the relative EAD attached to the respective parameter as of December 31, 2014 and as of December 31, 2013.

The validations classify the PD parameter settings for the two foundation IRBA relevant rating systems of Postbank as too progressive. The recalibration is scheduled for 2015. The rating system classified as overly conservative in 2013 was discontinued in 2014.

Foundation IRBA Exposure

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Within the Postbank portfolios we assign our exposures to the relevant regulatory exposure class by taking into account factors like customer-specific characteristics and the rating system used. The following tables also consider Postbank's counterparty credit risk position resulting from derivatives and SFTs as far as they are assigned to the foundation IRBA.

The table below presents the EAD in conjunction with exposures-weighted average risk weights (RW). The information is shown after credit risk mitigation obtained in the form of financial, physical and other collateral as well as guarantees and credit derivatives. EAD gross information for exposures covered by guarantees or credit derivatives are assigned to the exposure class of the original counterparty whereas the EAD net information assigns the exposure to the protection seller.

The decrease in the Foundation IRBA exposures classes – central governments and banks, institutions and corporates mainly results from the transition of Postbank Large Cap Corporate/Financials portfolio into the Advanced IRBA.

The table below shows our Foundation IRBA exposure distributed based on the corresponding exposure classes for each relevant geographical location. As geographical location we show countries where the Bank maintains a branch or subsidiary and exposure volume is equal to or higher than 0.5 million. Exposure which does not meet these criteria is shown in Other, which also comprises exposure to international organizations. Exposures are assigned to the specific geographical location based on the country of domicile of the respective counterparty. The EAD net is presented in conjunction with exposures-weighted average PD in percentage.

The table below summarizes on an EAD basis our foundation approach exposure for specialized lending. For the calculation of minimum capital requirements regulatory risk weights are applied where potential risk mitigating factors are already considered in the assignment of a risk weight to a specific structure. Additional credit risk mitigation techniques have not been applied.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	155
--	---	-----

The decrease is primarily driven by a part of Postbank exposures resulting from the Advanced IRBA rating system approval from BaFin for specialized lending in 2014.

Standardized Approach

We treat a subset of our credit risk exposures within the standardized approach. The standardized approach measures credit risk either pursuant to fixed risk weights, which are predefined by the regulator, or through the application of external ratings.

We assign certain credit exposures permanently to the standardized approach in accordance with Article 150 CRR. These are predominantly exposures to the Federal Republic of Germany and other German public sector entities as well as exposures to central governments of other European Member States that meet the required conditions. These exposures make up more than half of the exposures carried in the standardized approach and receive predominantly a risk weight of zero percent. For internal purposes, however, these exposures are subject to an internal credit assessment and fully integrated in the risk management and economic capital processes.

For certain CIU exposures we apply the look-through -treatment which constitutes a decomposition of the CIU into its underlying investments. According to Article 152 CRR these exposures, primarily consisting of defined benefit pension fund assets, are assigned to the standardized approach.

In line with Article 150 CRR and Section 10 SolvV, we assign further generally IRBA eligible exposures permanently to the standardized approach. This population comprises several small-sized portfolios, which are considered to be immaterial on a stand-alone basis for inclusion in the IRBA.

Other credit exposures which are small in size are temporarily assigned to the standardized approach and we plan to transfer them to the IRBA over time. The prioritization and the corresponding transition plan is discussed and agreed with the competent authorities, the Bundesbank, the BaFin and the ECB.

Equity positions entered into before January 1, 2008 are subject to the transitional arrangement to exempt them from the IRBA and a risk weight of 100 % is applied according to the standardized approach treatment.

In order to calculate the regulatory capital requirements under the standardized approach, we use eligible external ratings from Standard & Poor's, Moody's, Fitch Ratings and in some cases from DBRS. DBRS ratings are applied in the standardized approach for a small number of exposures since 2009. Ratings are applied to all relevant exposure classes in the standardized approach. If more than one rating is available for a specific counterparty, the selection criteria as set out in Article 138 CRR are applied in order to determine the relevant risk weight for the capital calculation. Moreover, given the low volume of exposures covered under the standardized approach and the high percentage of (externally rated) central government exposures therein, we do not infer borrower ratings from issuer ratings.

The table below shows exposure values in the standardized approach broken down by risk weight before and after credit risk mitigation obtained in the form of eligible financial collateral, guarantees and credit derivatives excluding securitization positions in the regulatory banking book and Postbank's CIU exposures assigned to the standardized approach which are displayed in the table EAD of CIUs of Postbank in the Standardized Approach by Risk Weight thereafter.

Total EAD in the standardized approach	167,568	161,854	140,680	130,441

The increase in EAD is predominantly driven by the implementation of the CRR/CRD 4 framework regarding our trade exposure against Central Counterparties that is reported with a fixed risk weight of 2 %. The impact for our defined benefit pension fund assets exposure that are calculated at a phase-in rate of 20 % in 2014 also contributed to the increase.

The table below comprises bonds in the form of collective investment undertakings assigned to the standardized approach based on a look-through treatment as well as the exposure values for collective investment undertakings with risk weights calculated by third parties from Postbank. Credit risk mitigation techniques have not been applied.

Regulatory Application of Credit Risk Mitigation Techniques

Risk-weighted assets and regulatory capital requirements can be managed actively by credit risk mitigation techniques. As a prerequisite for recognition in regulatory calculations, we must adhere to certain minimum requirements as stipulated in the CRR regarding collateral management, monitoring processes and legal enforceability.

The range of collateral being eligible for regulatory recognition is dependent predominantly on the regulatory capital calculation method used for a specific risk position. The principle is that a higher degree of sophistication with regard to the underlying methodology generally leads to a wider range of admissible collateral and options to recognize protection via guarantees and credit derivatives. However, also the minimum requirements to be adhered to and the mechanism available to reflect the risk mitigation benefits are predominantly a function of the regulatory calculation method applied.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Counterparty Credit Risk: Regulatory Assessment	157
--	---	-----

The advanced IRBA generally accepts all types of financial collateral, as well as real estate, collateral assignments and other physical collateral. In our application of the advanced IRBA, there is basically no limitation to the range of accepted collateral as long as we can demonstrate to the competent authorities that reliable estimates of the collateral values can be generated and that basic requirements are fulfilled.

The same principle holds true for taking benefits from guarantee and credit derivative arrangements. Within the advanced IRBA, again there are generally no limitations with regard to the range of eligible collateral providers as long as some basic minimum requirements are met. However, collateral providers' credit quality and other relevant factors are incorporated through our internal models.

In our advanced IRBA calculations financial and other collateral is generally considered through an adjustment to the applicable LGD as the input parameter for determining the risk weight. For recognizing protection from guarantees and credit derivatives, generally a PD substitution approach is applied, i.e., within the advanced IRBA risk-weight calculation the PD of the borrower is replaced by the protection seller's or guarantor's PD. However, for certain guaranteed exposures and certain protection providers the so-called double default treatment is applicable. The double default effect implies that for a guaranteed exposure a loss only occurs if the originator and the guarantor fail to meet their obligations at the same time.

The table below shows the advanced IRBA exposures before credit risk mitigation in conjunction with the proportional amounts for eligible advanced IRBA collateral as well as guarantees and credit derivatives.

Collateralized counterparty credit risk exposure in the Advanced IRBA by exposure class

in m.	Total EAD	Dec 31, 2014			Dec 31, 2013			
		Eligible advanced IRBA collateral	Guarantees and credit derivatives	Total EAD collateralized ¹	Total EAD	Eligible advanced IRBA collateral	Guarantees and credit derivatives	Total EAD collateralized ¹

Retail	192,891	135,969	968	136,937	190,588	133,104	1,009	134,113
Total	651,649	216,433	30,644	247,077	610,731	215,940	26,845	242,785

¹ Excludes collateralization which is reflected in the EPE measure.

² Includes exposure subject to dilution risk of 1.43 billion per end 2014 and 1.16 billion per year end 2013.

The increase in EAD and respective collateralized EAD is mainly driven by model changes, foreign exchange movements and specific growth in CB&S and GTB in the corporates exposure. An additional contribution resulted from the switch of Postbank Large Cap Corporates/Financial from Foundation to Advanced IRBA.

The foundation IRBA sets stricter limitations with regard to the eligibility of credit risk mitigation compared to the advanced IRBA but allows for consideration of financial collateral, guarantees and credit derivatives as well as other foundation IRBA-eligible collateral like mortgages and security assignments.

The financial collateral recognized in the foundation IRBA essentially comprises cash, bonds and other securities related to repo lending.

Counterparty Credit Risk: Regulatory Assessment

158

The table below shows the Foundation IRBA exposures before credit risk mitigation in conjunction with the proportional amounts for financial and other collateral as well as guarantees and credit derivatives.

Collateralized counterparty credit risk exposure in the Foundation IRBA by exposure class

						Dec 31, 2014
in m.	Total EAD	Financial collateral	Other collateral	Guarantees and credit derivatives	Total EAD collateralized	
Central governments and central banks	0	0	0	0	0	
Institutions	1	0	0	0	0	
Corporates	6,039	0	0	567	567	
Total	6,040	0	0	567	567	
						Dec 31, 2013
in m.	Total EAD	Financial collateral	Other collateral	Guarantees and credit derivatives	Total EAD collateralized	
Central governments and central banks	8	0	0	0	0	
Institutions	5,592	0	0	0	0	
Corporates	7,521	0	0	643	643	
Total	13,121	0	0	643	643	

The decrease in EAD is mainly driven by the switch of Postbank Large Cap Corporates/Financial from Foundation IRBA to Advanced IRBA and thus reflects part of the effects described above.

In the standardized approach, collateral recognition is limited to eligible financial collateral, such as cash, gold bullion, certain debt securities, equities and CIUs, in many cases only with their volatility-adjusted collateral value. In its general structure, the standardized approach provides a preferred (lower) risk-weight for claims secured by real estate property. Given this, preferred risk-weight real estate is not considered a collateral item under the standardized approach. Further limitations must be considered with regard to eligible guarantee and credit derivative providers.

In order to reflect risk mitigation techniques in the calculation of capital requirements we apply the financial collateral comprehensive method since the higher sophistication of that method allows a broader range of eligible collateral. Within this approach, financial collateral is reflected through a reduction in the exposure value of the respective risk position, while protection taken in the form of guarantees and credit derivatives is considered by means of a substitution, i.e., the borrower's risk weight is replaced by the risk weight of the protection provider.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The table below shows the standard approach exposures, financial collateral and guarantees and credit derivatives by exposure class. The exposure classes are according to CRR/CRD 4, which are in general comparable to the exposure classes according to the Basel 2.5 framework.

Total	169,630	4,996	1,001	5,996	142,600	8,975	1,693	10,667

The increase in EAD is predominantly driven by the implementation of the CRR/CRD 4 framework regarding our trade exposure against central counterparties which is now reported under exposure class institutions. Defined benefit pension fund assets exposure, that had been reported under the exposure class Other items in 2013, is shown under the exposure class Collective investment undertakings (CIU). Here the calculation at a phase-in rate of 20 % in 2014 also contributed to the exposure increase. The increase in EAD in the exposure class Exposures in default is primarily attributable to the adjusted default definition under the CRR/CRD 4 framework.

Securitization

The following section on Securitization, ending on page 178, presents specific disclosures in relation to Pillar 3. Per regulation it is not required to audit Pillar 3 disclosures. As such this section is labeled unaudited. Quantitative information presented follows the regulatory scope of consolidation.

Overview of our Securitization Activities

We engage in various business activities that use securitization structures. The main purposes are to provide investor clients with access to risk and returns related to specific portfolios of assets, to provide borrowing clients with access to funding and to manage our own credit risk exposure.

A participant in the securitization market can typically adopt three different roles: as originator, sponsor or investor, as defined in the Article 4 (1) (13,14) CRR. An originator is an institution which is involved, either itself or through its related entities, directly or indirectly, in the origination or purchase of the securitized exposures. In a sponsorship role, an institution establishes and manages an asset-backed commercial paper program (ABCP) or other securitization transaction, but has neither originated nor taken the purchased assets on its balance sheet. All other securitization positions entered into by us are assumed in the capacity as an investor. In order to achieve our business objectives we act in all three roles on the securitization markets.

Banking Book Securitizations

As an originator we use securitizations primarily as a strategy to reduce credit risk, mainly through the Credit Portfolio Strategies Group (CPSG). It uses, among other means, synthetic securitizations to manage the credit risk of loans and lending-related commitments of the international investment-grade portfolio, leveraged

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	160
	Securitization	

portfolio, and the medium-sized German companies portfolio within the corporate divisions of CB&S and GTB. The credit risk is predominantly transferred to counterparties through synthetic collateralized loan obligations mainly in the form of financial guarantees and, to a lesser extent, as credit derivatives providing first loss protection.

The overall volume of credit risk transfer as originator showed an increase for CB&S. This resulted mainly from originator activities during 2014. These transactions are related to European small and medium entities (SMEs) and European and American assets related to large entities and institutions. The volume of credit risk transfer for PBC decreased following repayments in the underlying pool for transactions of Postbank.

On a limited basis we have entered into securitization transactions as part of an active liquidity risk management strategy during 2008 and 2009, some of which we intend to replace in 2015. These transactions do not transfer credit risk and are therefore not included in the quantitative part of this section.

We set up, sponsor and administer a number of ABCP programs through which we securitize assets originated by third parties. These programs provide customers with access to funding in the commercial paper (CP) market and create investment products for clients. Each program consists of a CP issuing special purpose entity (the so-called conduit) and one or more supporting SPEs through which the assets are purchased. The conduits and the SPEs are organized as limited liability companies or in an equivalent legal form. The assets securitized through the ABCP programs include auto loans, auto leases, auto dealer floor plan receivables, student loans, credit card receivables, trade receivables, capital call receivables, residential and commercial mortgage loans, future flows and other assets. As administrative agent for the CP programs, we facilitate the purchase of non-Deutsche Bank Group loans, securities and other receivables by the CP conduit, which then issues to the market high-grade, short-term CP, collateralized by the underlying assets, to fund the purchase. The conduits require sufficient collateral, credit enhancements and liquidity support to maintain an investment-grade rating for the CP. We are acting as provider of liquidity and credit enhancement to these conduits with facilities recorded in our regulatory banking book. There are also instances in which we will face the conduit on foreign exchange and interest rate swaps which are recorded in the trading book. More details on our conduit exposure as part of ABCP programs are provided in section Types of Special Purpose Entities used by Deutsche Bank as Sponsor of Securitizations .

Furthermore, we act as an investor in third party securitizations through the purchase of tranches from third party-issued securitizations, or by providing liquidity, credit support or other form of financing. Additionally, we assist third party securitizations by providing derivatives related to securitization structures. These include currency, interest rate, equity and credit derivatives.

Almost half of our securitization book in 2014 related to origination activity, predominantly through transactions for CPSG, i.e., from de-risking activity for our existing loan portfolio. The sponsor role is considered for about 8 % of our securitization exposure and for the rest we acted as investor.

During 2014 the total securitization book increased by 3.5 billion to 55.1 billion. The main driver was originator activity to reduce credit risk as mentioned above and currency related movements.

Overall, the securitization positions are exposed to the performance of diverse asset classes, including primarily corporate senior loans or unsecured debt, consumer debt such as auto loans or student loans, as well as residential or commercial first and second lien mortgages. We are active across the entire capital structure with an emphasis on the more senior tranches. The subset of re-securitization is predominantly backed by securitizations with corporate obligations in the underlying pools.

Primary recourse for securitization exposures lies with the underlying assets. The related risk is mitigated by credit enhancement typically in the form of overcollateralization, subordination, reserve accounts, excess interest, or other support arrangements. Additional protection features include performance triggers, financial cove-

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	161
	Securitization	

nants and events of default stipulated in the legal documentation which, when breached, provide for the acceleration of repayment, rights of foreclosure and/or other remediation.

The initial due diligence for new banking book exposures usually includes any or all of the following, depending on the specifics of the transaction: (a) the review of the relevant documents including term sheets, servicer reports or other historical performance data, third-party assessment reports such as rating agency analysis (if externally rated), etc., (b) modeling of base and downside scenarios through asset-class specific cash-flow models, (c) servicer reviews to assess the robustness of the servicer's processes and financial strength. The result of this due diligence is summarized in a credit and rating review which requires approval by an appropriate level of credit authority, depending on the size of exposure and internal rating assigned.

Compliance with the regulatory requirements for risk retention, due diligence and monitoring according to the applicable regulatory requirements is part of our credit review process and the relevant data is gathered for reporting purposes with the support of the IT systems used for the credit review process and the process for financial reporting

Ongoing regular performance reviews include checks of the periodic servicer reports against any performance triggers/covenants in the loan documentation, as well as the overall performance trend in the context of economic, geographic, sector and servicer developments. Monitoring of the re-securitization subset takes into consideration the performance of the securitized tranches' underlying assets, to the extent available.

For longer-term lending-related commitments an internal rating review is required at least annually. Significant negative (or positive) changes in asset performance can trigger an earlier review date. Full credit reviews are also required annually, or, for highly rated exposures, every other year. Furthermore, there is a separate, usually quarterly, watch list process for exposures identified to be at a higher risk of loss, which requires a separate assessment of asset and servicer performance. It includes a review of the exposure strategy and identifies next steps to be taken to mitigate loss potential. There is no difference in approach for re-securitization transactions.

Evaluation of structural integrity is another important component of risk management for securitization, focusing on the structural protection of a securitization as defined in the legal documentation (i.e., perfection of security interest, segregation of payment flows, and rights to audit). The evaluation for each securitization is performed by a dedicated team who engages third-party auditors, determines audit scopes, and reviews the results of such external audits. The results of these risk reviews and assessments complement the credit and rating review process performed by Credit Risk Management.

Securitization activities have an impact on our liquidity activity. On the one hand, we have entered into securitization transactions as part of an active liquidity risk management strategy during 2008 and 2009, as mentioned before. On the other hand, we are exposed to potential drawdown under liquidity backstop facilities supporting the Deutsche Bank-sponsored asset-backed commercial paper or other revolving commitments. This liquidity risk is monitored by our Treasury department and is included in our liquidity planning and regular stress testing.

We have identified part of the existing book of securitization transactions as 'legacy book' earmarked for de-risking, which forms part of our NCOU. De-risking generally means that existing positions on our books are either partially or completely sold into the market, as far as adequate prices can be achieved. These positions also benefit from reduction through amortization, where applicable. In 2014, this legacy book experienced a net decrease by 2.5 billion to 5.2 billion.

Credit hedging requirements for securitization exposures are mandated in the context of each individual credit approval, and are re-visited at each internal credit or rating review. However, management of credit risk is conducted mostly through avoidance of undue risk concentration on borrower, servicer and asset class levels. Any higher initial underwritings are de-risked to a final hold mandated in the credit approval mainly through

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Securitization	162
--	--	-----

syndication, or sales in the secondary market. Success of de-risking is monitored and reported regularly to senior management. There is only very limited credit hedging activity in the banking book.

Furthermore, in the context of structuring securitization transactions, hedging usually takes place to insulate the SPE from interest rate and cross-currency risk as far as required depending on the assets being included. When this hedging is provided by us, the related counterparty risk to the securitization structure is included in the Credit Risk Management review process and reported below as part of the banking book exposure despite effectively being part of our trading book. If this hedging is not provided by us, it is largely conducted with large international financial institutions with strong financials. Such indirect counterparty risk is reported to the hedging counterparty's credit officer to become part of his/her credit evaluation.

Trading Book Securitizations

In the trading book, we act as originator, sponsor and investor. In the role of investor, our main objective is to serve as a market maker in the secondary market. The market making function consists of providing liquidity for our customers and providing two way markets (buy and sell) to generate flow trading revenues. In the role of originator, we predominately engage in short synthetic single tranche CDOs (SST-CDOs) backed by loans to corporates or SMEs. Also in our role as originator, we finance loans to be securitized, predominantly in the commercial real estate business. Trading book activities where we have the role of a sponsor excluding activities derived from multi-seller originator transactions as described above are minimal.

We hold a portfolio of asset backed securities (ABS) correlation trades within the NCOU portfolio that is in the process of being wound down. Other than facilitating the de-risking, no new activity is being generated. The positions are being managed and are part of Market Risk Management's Governance Framework (described below).

Our securitization desks trade assets across all capital structures, from senior bonds with large subordination to first loss subordinate tranches, across both securitizations and re-securitizations. Our exposure to re-securitizations in the trading book as of December 31, 2014 was 801 million, compared with 1,025 million as of prior year end, comprised mostly of older vintage collateralized loan obligations (including a bucket of securitization) and a median rating of BBB+. The varying degrees of risk along the capital structure are reflected by the price in which the asset trades; this is because the market requires minimum loss adjusted returns on their investments. Securitization positions consist mostly of residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS) backed by first and second lien loans, collateralized loan obligations (CLOs) backed by corporate senior loans and unsecured debt and consumer ABS backed by secured and unsecured credit.

Similar to other fixed income and credit assets, securitized trading volume is linked to global growth and geopolitical events which affect liquidity and can lead to lower trading volumes, as observed during the crisis. Current changes to regulation and uncertainty over final implementation may lead to increased volatility and decreased liquidity/trading volumes across securitized products. Other potential risks that exist in securitized assets are prepayment, default, loss severity and servicer performance. Note that trading book assets are marked to market and the previous mentioned risks are reflected in the position's price.

Our Market Risk Management Governance Framework applies to all securitization positions held within the trading book. The Risk Governance Framework applied to securitization includes policies and procedures with respect to new product approvals, new transaction approvals, risk models and measurements, as well as inventory management systems and trade entry. All securitization positions are captured and measured within value-at-risk, stressed value-at-risk, and economic capital. The measurements are dependent upon internal and external models and processes, which includes the use of third-party assessments of risks associated with the underlying collateral. All securitization positions held within the trading book are captured, reported and limited within the Risk Governance Framework at the global, regional and product levels. Any changes in credit and market risks are also reported.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	163
	Securitization	

The limit structure includes value-at-risk and product specific limits. Asset class market value limits are based on seniority/rating and liquidity, where lower rated positions or positions in less liquid asset class are given a lower trading limit. The limit monitoring system captures exposures and flags any threshold breaches. Market Risk Management approval is required for any trades over the limit. The processes for securitization and re-securitizations are similar.

The Market Risk Management Governance Framework also captures issuer (credit) risk for securitization positions in the trading book. MRM's process manages concentration risks and sets limits at the position level. The limit structure is based on asset class and rating where less liquid positions and those with lower ratings are assigned lower trading limits. Limit management reports are produced to promote position level limit compliance and to detect any potential limit breaches. When positions exceed the respective market value limits on a global basis, MRM approval is required. Further due diligence is performed on positions that require trade approval; this includes analyzing the credit performance of the security and evaluating risks of the trade. In addition collateral level stress testing and performance monitoring is incorporated into the risk management process. The process covers both securitizations and re-securitizations.

The securitization desks incorporate a combination of macro and position level hedges to mitigate credit, interest rate and certain tail risks on the entire securitization portfolio. Duration and credit sensitivities (DV01s and CS01s) are the primary risk sensitivity measures used to calculate appropriate hedges. Some of the hedging products utilized include plain vanilla interest rate swaps, US Treasury bonds and product specific liquid indices. The market risks of the hedges (both funded and unfunded) are incorporated and managed within our Market Risk Management Governance Framework as described above; and, the counterparty risks of the hedges (both funded and unfunded), which are comprised primarily of major global financial institutions, are managed and approved through a formalized risk management process performed by Credit Risk Management.

Compliance with the CRR rules, as applicable requires that pre-trade due diligence is performed on all relevant positions. It is the responsibility of the respective trading desk to perform the pre-trade due diligence and then record the appropriate data records at trade execution to indicate whether relevant due diligence items have been performed. The pre-trade due diligence items include confirmations of deal structural features, performance monitoring of the underlying portfolio, and any related retention disclosures.

The GTO Regulatory Securitization Group then reviews trade inputs for errors or flag changes, distributes regulatory control reports and serves as the subject matter escalation contact. Upon validation of flag changes or trading desk errors, the GTO Regulatory Securitization Group will then communicate and action the changes accordingly. Further pre-trade due diligence is performed by MRM for CRR, as applicable for relevant positions exceeding predefined limits (process as described above).

Accounting and Valuation Policies for Securitizations

Our accounting policies are included in Note 1 Significant Accounting Policies and Critical Accounting Estimates. The most relevant accounting policies for the securitization programs originated by us, and where we hold assets purchased with the intent to securitize, are Principles of Consolidation, Financial Assets and Financial Liabilities and Derecognition of Financial Assets and Financial Liabilities, see also Note 14 Financial Instruments carried at Fair Value.

Types of Special Purposes Entities used by Deutsche Bank as Sponsor of Securitizations

We establish and administer as sponsor asset-backed commercial paper (ABCP) programs which securitizes assets acquired from third parties. Each program consists of a commercial paper issuing special purpose vehicle (the so-called conduit) and one or more supporting special purpose entities (the SPE) through which the assets are purchased. The assets securitized through the ABCP programs include auto loans, auto leases, auto dealer floor plan receivables, student loans, credit card receivables, trade receivables, capital call receivables, residential and commercial mortgage loans, future flows and other assets.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	164
	Securitization	

The major conduits used in 2014 for issuing commercial paper are: Aspen Funding Corp., Newport Funding Corp., Gemini Securitization Corp. and Rhein-Main Securitization Ltd.. The asset purchasing SPEs are funded by the conduits issuing notes (including variable funding notes) or entering into credit facilities. The table below presents the ABCP-related exposures as applied for regulatory calculation purposes within the securitization framework by our conduits. Associated with Moody's downgrade of our short term rating in July 2014, the utilization of conduits as a funding source for third party securitization was de-emphasized, primarily explaining the reduction in ABCP related exposure.

ABC Program Exposures by Major Conduits

in m.	Dec 31,2014	Dec 31,2013
Aspen Funding Corp.	1,022	959
Newport Funding Corp.	546	582
Gemini Securitization Corp. LLC ¹	1,074	6,176

Montage Funding LLC	0	894
Saratoga Funding Corp. LLC	0	1,047
Rhein Main Securitization Ltd. ²	1,077	3,195
RM Multi-Asset Ltd.	0	215
RM Fife Ltd.	296	922
RM AYR Ltd.	0	551
RM Sussex Ltd.	777	963
RM Chestnut Ltd.	0	543
Sword Securitization Ltd.; Scimitar Securitization Ltd.	0	338
SPAN NO 9 PT LIMITED	0	338
Total	3,720	11,250

¹ Gemini Securitization Corp. LLC consists of direct (1,073 million) and additional exposure from respective SPEs shown under the before mentioned conduit (mainly Sedona Capital Funding Corp. LLC 1 million).

² Rhein Main Securitization Ltd. consists of direct (4 million) and additional exposure from respective SPEs shown under the before mentioned conduit (mainly RM Fife Ltd. 296 million and RM Sussex Ltd. 777 million).

We assume both on-balance sheet exposure and off-balance sheet exposure which stems from liquidity facilities granted to the SPVs or the related conduit, letters of credit, total return swaps or similar credit enhancement, interest rate and foreign exchange related derivatives and commercial papers.

As sponsor, we also assist some special purpose entities in selecting the securitized assets and structuring the tranches. This type of transactions may include multi-seller securitizations where a small portion of the securitized assets were originated by us, e.g., performing and non-performing residential and commercial mortgage loans. We may assume on-balance sheet and off-balance sheet exposure including first loss tranches or interest rate and foreign exchange related derivatives.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

We as originator or sponsor of a securitization transaction sell ABCPs and other securitization tranches (or arrange for such sale through mandated market making institutions) solely on an execution only basis and only to sophisticated operative corporate clients that rely on their own risk assessment. In the ordinary course of business, we do not offer such tranches to operative corporate clients to which, at the same time, we offer investment advisory services.

Our division Deutsche Asset & Wealth Management (Deutsche AWM) provides asset management services to undertakings for collective investments, including mutual funds and alternative investment funds, and private individuals offering access to traditional and alternative investments across all major asset classes, including securitization positions. A small portion of those positions of 3.0 % consisted of tranches in securitization transactions where Deutsche Bank acts as originator or sponsor.

Regulatory Securitization Framework

Article 4(1)(61) CRR defines which types of transactions and positions must be classified as securitization transactions and securitization positions for regulatory reporting.

Securitization transactions are basically defined as transactions in which the credit risk of a securitized portfolio is divided into at least two securitization tranches and where the payments to the holders of the tranches depend on the performance of the securitized portfolio. The different tranches are in a subordinate relationship that determines the order and the amount of payments or losses assigned to the holders of the tranches (waterfall). Loss allocations to a junior tranche will not already lead to a termination of the entire securitization transaction, i.e., senior tranches survive loss allocations to subordinate tranches.

Securitization positions can be acquired in various forms including investments in securitization tranches, derivative transactions for hedging interest rate and currency risks included in the waterfall, liquidity facilities, credit enhancements, unfunded credit protection or collateral for securitization tranches.

Assets originated or acquired with the intent to securitize follow the general approach for the assignment to the regulatory banking or trading book. Further details are described in chapter Allocation of Positions to the Regulatory Trading book .

The approach for the calculation of the regulatory capital requirements for banking book and trading book securitization positions is prescribed by the European Capital Requirements Regulation (CRR).

Calculation of Regulatory Capital Requirements for Banking Book Securitizations

The regulatory capital requirements for the credit risk of banking book securitizations are determined based on the securitization framework pursuant to Articles 242 to 270 CRR, which distinguishes between credit risk standardized approach (CRSA)-securitization positions and internal ratings based approach (IRBA)-securitization positions. The classification of securitization positions as either CRSA- or IRBA-securitization positions depends on the nature of the securitization portfolio. Basically, CRSA-securitization positions are those where the securitized portfolio predominantly includes credit risk exposures, which would qualify as CRSA-exposures under the credit risk framework if they would be held by us directly. Otherwise, if the majority of the securitized portfolio would qualify as IRBA-exposures, the securitization positions qualify as IRBA-securitization positions.

The risk weights of CRSA-securitization positions are derived from their relevant external ratings, when applicable. External ratings must satisfy certain eligibility criteria for being used in the risk weight calculation. Eligible external ratings are taken from Standard & Poor's, Moody's, Fitch Ratings and DBRS. If more than one eligible rating is available for a specific securitization position, the relevant external rating is determined as the second best eligible rating in accordance with the provisions set forth in Article 269 CRR. CRSA-securitization positions with no eligible external rating receive a risk weight of 1,250 % unless they qualify for the application of the Internal Assessment Approach according to Article 109(1) CRR in conjunction with Article 259(3) CRR or for the application of the risk concentration approach pursuant to Article 253 CRR which might lead to a risk weight below 1,250 %.

The risk weight of IRBA-securitization positions is determined according to the following hierarchy:

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

If one or more eligible external ratings exist for the IRBA-securitization position, or if an external rating can be inferred from an eligible external rating of a benchmark securitization position, the risk weight is derived from the relevant external rating (ratings based approach). Otherwise, if no eligible external rating exists or can be inferred, the risk weight of the IRBA-securitization position will generally be determined based on the supervisory formula approach pursuant to Section 262 CRR or the internal assessment approach pursuant to Article 259 (3) and (4) CRR.

If neither of the aforementioned approaches can be applied, the position receives a risk weight of 1,250 %.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	166
	Securitization	

The ratings based approach applies to a material part of our IRBA- and CRSA-securitization positions, largely in the lower (better) risk weight bands. We use the external ratings of Standard & Poor's, Moody's, Fitch Ratings and DBRS. The majority of securitization positions with an eligible external or inferred external credit assessment are securitization positions held as investor. The risk concentration approach is applied to a few CRSA-securitization exposures that are small compared with the total amount of our banking book securitization exposures. The scope of application of the supervisory formula approach and of the internal assessment approach is described below.

There is no securitization position for which we have applied the special provisions for originators of securitization transactions which include an investor's interest to be recognized by the originator pursuant to Article 256 CRR respectively Article 265 CRR.

Supervisory Formula Approach and Internal Assessment Approach

The risk weight of securitization positions subject to the supervisory formula approach (SFA) are determined based on a formula which takes as input the capital requirement of the securitized portfolio and the seniority of the securitization position in the waterfall, amongst others. When applying the SFA, we estimate the risk parameters PD and LGD for the assets included in the securitized portfolio, by using internally developed rating systems approved for such assets. We continue to develop new rating systems for homogenous pools of assets to be applied to assets that have not been originated by us. The rating systems are based on historical default and loss information from comparable assets. The risk parameters PD and LGD are derived on risk pool level.

Approximately 72 % of the total banking book securitization positions are subject to the SFA. This approach is predominantly used to rate positions backed by corporate loans, auto-related receivables and commercial real estates.

For unrated IRBA-securitization positions which are related to ABCP programs and which are not asset backed commercial paper, the risk weight is calculated based on the internal assessment approach (IAA). Apart from using this concept for regulatory purposes, the internal rating is used for expected loss and economic capital calculations and plays a significant role in the credit decision and monitoring process.

We have received approval from BaFin to apply the IAA to approximately 71 % of our ABCP conduit securitization exposure.

Asset classes subject to IAA are governed by a specific and detailed set of rules per asset class. These asset class write-ups (ACW) have been established by Credit Risk Management, Risk Analytics and Living Wills and the Front Office. They are reviewed and approved in a formal internal process, and subject to an at least annual review. For BaFin approved asset classes, the ACW require re-approval by the regulator in case of significant changes during the review process.

BaFin approval for IAA has been received for currently 14 different asset classes in both consumer and commercial assets. The stress factors are different per asset class and rating level; they are established based on criteria set by the dominant external rating agency which forms the basis of the internal qualitative and quantitative rating analysis. The stress factor multiples generally indicate how much credit enhancement is required to obtain a specific rating compared to the level of pool expected loss.

The following tables summarize (a) the stress factor multiples per rating level, or (b) key stress testing methodology for those without defined Stress Factor Multiples, based on the methodology published by the respective dominant rating agencies:

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	167
	Securitization	

Stress Factor Multiples per Rating Level by dominant Rating Agencies

Asset Class	Auto Loans	Comm. Lease	Consumer Loans	Credit Card	Trade Receivable
Dominant Rating Agency	S&P	CDO Moody's	& Loans S&P	S&P	S&P
AAA	3.75 5	1.95	5	4 5	3 6.6 2.5
AA	3 4	1.8 1.76	4	3 4	2.5 5 2.25

BBB	1.75 2	1.67 1.63	2	1.5 2	1.5 2.5 1.5
BB	1.5 1.75	1.5 1.2		1 1.5	1.25 1.5

Summary of Rating agency Stress Factor Methodologies without defined Stress Factor Multiples

Asset Class	Capital Calls	MBS Servicer Advances	Market Values CDO	RMBS Australia	RMBS Europe	RMBS US	Structured Settlements	Student Loans FFELP
Dominant Rating Agency	Moody's	Moody's	S&P	S&P	S&P	S&P	S&P	Moody's
Comment	Methodology relies on conservative assumptions regarding debtor ratings and recovery rates; supported by conservative correlation criteria	Methodology applies rating-specific stressed recovery curves for each type of servicer advances. Cash flows are run under multiple interest rate stress scenarios	Methodology of both S&P and Moody's is using Advance rates instead of Stress Factor Multiples, which are available on their respective websites	Methodology uses default & loss assumptions per rating level, based on benchmark pools with adjustments appropriate for the respective pool being compared	Methodology uses default & loss assumptions per rating level, based on benchmark pools with adjustments appropriate for the respective pool being compared	Stress-testing by applying S&P default and loss assumptions per rating level on each individual loan in the pool	Generating a probability distribution of potential default rates at each rating level for the portfolio using industry-specific recovery rates. Additional stress tests regarding Largest Obligor and Largest Industry Defaults	Applying rating-level specific stresses including defined cumulative default rates, voluntary pre-payment rates, servicer reject rates and borrower benefit rates

Information based on methodology published by the respective Dominant Rating Agencies, which may be amended from time to time.

The underlying cash flow models per asset class are also subject to the regular review process described above. For securitizations in these asset classes we utilize external credit assessment institutions, namely Standard & Poor's and Moody's as outlined in the tables above.

Calculation of Regulatory Capital Requirements for Trading Book Securitizations

The regulatory capital requirements for the market risk of trading book securitizations are determined based on a combination of internal models and regulatory standard approaches pursuant to Article 337 CRR.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The capital requirement for the general market risk of trading book securitization positions is determined as the sum of (i) the value-at-risk based capital requirement for general market risk and (ii) the stressed value-at-risk based capital requirement for general market risk.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The capital requirement for the specific market risk of trading book securitization positions depends on whether the positions are assigned to the regulatory correlation trading portfolio (CTP) or not.

For securitization positions that are not assigned to the CTP, the capital requirement for specific market risk is calculated based on the market risk standardized approach (MRSA). The MRSA risk weight for trading book securitization positions is generally calculated by using the same methodologies which apply to banking book securitization positions. The only difference relates to the use of the SFA for trading book securitization positions, where the capital requirement of the securitized portfolio is determined by making use of risk parameters (probability of default and loss given default) that are based on the incremental risk charge model. The MRSA based capital requirement for specific risk is determined as the higher of the capital requirements for all net long and all net short securitization positions outside of the CTP. The securitization positions included in the MRSA calculations for specific risk are additionally included in the value-at-risk and stressed value-at-risk calculations for specific risk.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Securitization	168
--	--	-----

Trading book securitizations subject to MRSA treatment include various asset classes differentiated by the respective underlying collateral types:

- Residential mortgage backed securities (RMBS);
- Commercial mortgage backed securities (CMBS);
- Collateralized loan obligations (CLO);
- Collateralized debt obligations (CDO); and
- Asset backed securities (incl. credit cards, auto loans and leases, student loans, equipment loans and leases, dealer floorplan loans, etc).

They also include synthetic credit derivatives and commonly-traded indices based on the above listed instruments.

Conversely, the capital requirement for the specific market risk of securitization positions which are assigned to the CTP is determined as the sum of (i) the value-at-risk based capital requirement for specific risk, (ii) the stressed value-at-risk based capital requirement for specific risk and (iii) the capital requirement for specific risk as derived from the comprehensive risk measurement (CRM) model. The CRM based capital requirement is subject to a floor equal to 8 % of the higher of the specific risk capital requirements for all net long and all net short securitization positions under the MRSA.

The CTP includes securitization positions and nth-to-default credit derivatives principally held for the purpose of trading correlation that satisfy the following requirements:

- all reference instruments are either single-name instruments, including single-name credit derivatives for which a liquid two-way market exists, or commonly-traded indices based on those reference entities;
- the positions are neither re-securitization positions, nor options on a securitization tranche, nor any other derivatives of securitization exposures that do not provide a pro-rata share in the proceeds of a securitization tranche; and
- the positions do not reference a claim on a special purpose entity, claims or contingent claims on real estate property or retail.

The CTP also comprises hedges to the securitization and nth-to-default positions in the portfolio, provided a liquid two-way market exists for the instrument or its underlying. Typical products assigned to the CTP are synthetic CDOs, nth-to-default credit default swaps (CDS), and index and single name CDS. For details on the CRM covering the regulatory CTP please also refer to the section Trading Market Risk .

Securitization Details

The amounts reported in the following tables provide details of our securitization exposures separately for the regulatory banking and trading book. The presentation of the banking and trading book exposures is in line with last year's disclosure. The details of our trading book securitization positions subject to the MRSA are included in this chapter, while details of the trading book securitization positions covered under the Comprehensive Risk Measure (CRM) are described in chapter Trading Market Risk .

Outstanding Exposures Securitized

We are only exposed to credit or market risks related to the exposures securitized, as shown below, to the extent that we have retained or purchased any of the related securitization positions. The risk of the retained or purchased positions depends on the relative position in the payment waterfall structure of the securitization transaction. For disclosure purposes, we are deemed to be originator and additionally sponsor in

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

case of multi-seller securitizations, which is reflected in the disclosure of the total outstanding exposures securitized in the sponsor column and our share of those exposures in the originator column.

The following table details the total banking book outstanding exposure, i.e., the overall pool size, we have securitized in our capacity as either originator or sponsor through traditional or synthetic securitization transac-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	169
	Securitization	

tions split by exposure type. Within the originator columns the table provides information of the underlying securitized asset pool which was either originated from our balance sheet or acquired from third parties. The amounts reported are either the carrying values as reported in our consolidated financial statements for on-balance sheet exposures in synthetic securitizations or the principal notional amount for traditional securitizations and off-balance sheet exposures in synthetic transactions. Of the 46.5 billion total outstanding securitized exposure reported as of December 31, 2014 in the table below as originator, the amount retained was 27.0 billion reflecting an increase in both outstanding securitized as well as retained exposure which for December 31, 2013 were 42.3 billion and 22.7 billion respectively.

For sponsor relationships, the total outstanding exposure securitized reported in the table below represents the principal notional amount of outstanding exposures of the entities issuing the securities and other receivables. As of December 31, 2014, our retained or repurchased exposure of the 29.3 billion total outstanding exposure securitized shown in the sponsor columns including multi-seller transactions was 9.2 billion. The remaining exposure is held by third parties. As of December 31, 2013, our exposure with regard to the 77.2 billion total outstanding exposure securitized resulted from sponsoring activities including multi-seller transactions amounted to 13.0 billion. The decrease in our exposure resulted primarily from a management decision to reduce the securitization book funded through ABCP conduits. The total reported outstanding exposure securitized is derived using information received from servicer reports of the third parties with whom the conduits have relationships.

Outstanding Exposures Securitized by Exposure Type (Overall Pool Size) within the Banking Book

in m.	Dec 31, 2014				Dec 31, 2013			
	Traditional	Originator Synthetic	Traditional	Sponsor ¹ Synthetic	Traditional	Originator Synthetic	Traditional	Sponsor ¹ Synthetic
Residential mortgages	8,485	2,171	635	64	9,379	2,945	3,867	0
Commercial mortgages	9,978	0	7,525	0	9,265	0	7,980	0
Credit card receivables	0	0	1,560	0	0	0	4,118	0
Leasing	89	0	3,691	0	0	0	8,439	0
Loans to corporates or SMEs (treated as corporates) ²	1,320	24,420	6,814	0	2,215	18,522	13,342	0
Consumer loans	0	0	6,506	0	0	0	15,185	0
Trade receivables	0	0	547	0	0	0	193	0
Covered bonds	0	0	0	0	0	0	0	0
Other liabilities	0	0	0	0	0	0	0	0
Other assets ³	0	0	1,974	0	0	0	24,107	0
Total outstanding exposures securitized⁴	19,873	26,592	29,252	64	20,858	21,467	77,232	0

¹ As of December 31, 2014 included under sponsor is the amount 8.8 billion of multi-seller related securitized exposures, of which we have originated 4.8 billion, and therefore have also included this amount under originator. For December 31, 2013 the amounts were 11.0 billion and 5.8 billion respectively.

² SMEs are small- or medium-sized entities.

³ 2013 amount consists mainly of securitizations supporting rental car and dealer floorplan activities.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

⁴ For a regulatory assessment of our exposure to credit risk in relation to securitization activity in the banking book see table Banking Book Securitization Positions Retained or Purchased by Risk Weight Band .

The table below provides the total outstanding exposure securitized in relation to securitization positions held in our regulatory trading book separately for originator and sponsor activities and further broken down into traditional and synthetic transactions. Short synthetic single tranche CDOs have been reflected as originator positions for which the synthetic pool size was determined as the maximum pool size of the position sets referencing a given synthetic pool. The total outstanding exposure securitized as shown in the table below does not reflect our risk as it includes exposures not retained by us, does not consider the different positioning in the waterfall of related positions and most notably does not reflect hedging other than that in identical tranches. Compared with last year, the pool of outstanding exposures securitized increased for synthetic securitizations following the consideration of certain CTP positions within the MRSA due to their ineligibility for CRM.

¹ As of December 31, 2014 included under sponsor is the amount 73.4 billion of multi-seller related securitized exposures, of which we have originated 28.3 billion, and therefore have also included this amount under originator. For December 31, 2013 the amounts were 56.5 billion and 22.5 billion respectively.

² SMEs are small- or medium-sized entities.

³ For a regulatory assessment of our exposure to credit risk in relation to securitization activity in the trading book see table Trading Book Securitization Positions Retained or Purchased by Risk Weight Band subject to the MRSA. The table includes securitized exposure as originator amounting to 12.4 billion and as sponsor amounting to 9.2 billion already reflected in table Outstanding Exposures Securitized by Exposure Type (Overall Pool Size) within the Banking Book. The following table provides details of the quality of the underlying asset pool of outstanding exposures securitized for which we are an originator and hold positions in the regulatory banking book. An exposure is reported as past due when it has the status past due for 30 days or more and has not already been included as impaired. For our originated synthetic securitizations, impaired and past due exposure amounts are determined through our internal administration, while for our originated traditional securitizations, impaired and past due exposure amounts are primarily derived from investor reports of underlying exposures.

Separately, the table details losses we recognized in 2014 and 2013 for retained or purchased securitization positions as originator by exposure type. The losses are those reported in the consolidated statement of income. The amounts are the actual losses in the underlying asset pool to the extent that these losses are allocated to the retained or purchased securitization positions held by us after considering any eligible credit protection. This applies to both traditional and synthetic transactions.

Impaired and Past Due Exposures Securitized and Losses Recognized by Exposure Type (Overall Pool Size) as Originator

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	171
	Securitization	

The total impaired or past due exposure securitized decreased by 2.4 billion in 2014. The reduction was mainly attributed to the exposure types Residential mortgages and Loans to corporates or SMEs. Losses recorded by us in 2014 decreased to 15 million compared to 74 million in 2013.

The following table provides details of existing banking and trading book outstanding exposures split by exposure type for which there is a management intention to securitize them in either an existing or new securitization transaction in the near future. Outstanding exposures awaiting securitization do not include assets due for securitization without risk transfer i.e., those securitizations where we will keep all tranches.

Outstanding Exposures Awaiting Securitization (Exposure Amount)

in m.	Banking Book	Dec 31, 2014 Trading Book	Dec 31, 2014 Banking Book	Dec 31, 2013 Trading Book
Residential mortgages	0	0	0	741

Covered bonds	0	0	0	0
Other liabilities	0	0	0	0
Other assets	0	0	0	0
Outstanding exposures awaiting securitization	1,645	1,770	0	3,036

¹ SMEs are small- or medium-sized entities.

The majority of the outstanding exposures awaiting securitization were Commercial mortgages, in the trading book and Loans to corporates or SMEs (treated as corporates) in the banking book.

Securitization Positions Retained or Purchased

The table below shows the amount of the securitization positions retained or purchased in the banking book. The reported amounts are based on the regulatory exposure values prior to the application of credit risk mitigation. The securitization positions in the regulatory trading book were reported based on the exposure definition in Articles 327 to 332 CRR which states that identical or closely matched securities and derivatives are offset to a net position. The capital requirements for securitization positions both regulatory banking and regulatory trading book are additionally reported by the underlying exposure type.

² For a regulatory assessment of our exposure to credit risk in relation to securitization activities see table Banking Book Securitization Positions Retained or Purchased by Risk Weight Band and table Trading Book Securitization Positions Retained or Purchased by Risk Weight Band subject to the MRSA . Total retained or purchased securitization positions in the banking book increased throughout the year 2014, driven by our originator activities for the exposure type Loans to corporate or SMEs , new exposure for the exposure type Commercial mortgages and foreign exchange related movements. Decrease for the exposure type Residential mortgages is mainly driven by termination/repayments of deals and a new exposure definition according to Article 246 (1) CRR. Within the trading book, the securitization exposure decreased by 1.2 billion or 8 % mainly for the exposure type Commercial mortgages and Other assets partially offset by an increase from the exposure type Residential mortgages .

¹ After considering value adjustments according to Article 266 (1,2) CRR for 2014 and Sections 253 (3) and 268 (2) SolvV for 2013. Including capital requirements for maturity mismatch of synthetic securitizations by risk weight band defined as notional weighted average risk weight of the underlying pool.

² Deduction from capital no longer applied from 2014 onwards.

Exposure subject to the £ 10 % bucket increased to 45.0 billion mainly driven by new originator activities whereas exposure subject to the 1,250 % bucket decreased to 424 million following the new exposure definition according to Article 246 (1) CRR. Although the overall banking book exposure increased by 6 % to 55.1 billion, the capital requirements only increased by 3 % to 1.2 billion.

The largest portion for IRBA eligible banking book securitization exposures are treated according to the Supervisory Formula Approach (SFA). For the remaining IRBA eligible banking book exposures we use the Internal Assessment Approach (IAA) predominantly for our ABCP sponsor activity or the Ratings Based Approach (RBA).

The exposure reduction subject to the IRBA-Internal Assessment Approach (IAA) resulted primarily from a management decision to reduce the securitization book funded through ABCP conduits. The overall exposure decreased by 73 % to 2.6 billion in 2014, which for December 31, 2013 was 9.9 billion.

² Deduction from capital no longer applied from 2014 onwards.

Banking Book exposure subject to the IRBA-Supervisory Formula Approach (SFA) overall increased to 39.5 billion in 2014. This increase is mainly driven by Originator activities and securitization positions which funding source changed from ABCP conduits formerly calculated under the IRBA-Internal Assessment Approach (IAA).

The Credit Risk Standardized Approach (CRSA) is used for securitization positions where the underlying portfolio predominantly concerns credit risk exposures, which would qualify for application of the CRSA if these exposures would be directly held by us.

Exposure subject to CRSA decreased by 824 million, mainly driven by an exposure reduction of Postbank.

Trading Book Securitization Exposure

For trading book securitization positions not covered under the CRM, the capital requirement for specific market risk is calculated based on the MRSA. The MRSA risk weight calculation for trading book securitization positions is generally based on the same methodologies which apply to banking book securitization positions. More details on the approaches are provided in section Regulatory Securitization Framework as well as in section Trading Market Risk .

Securitization Activities

The 2014 year-end amounts in the tables below show an increase of our securitization sponsor activity compared with 2013. An increase as of year-end 2014 of our securitization originator activity predominately concerned the exposure type Loans to corporates or SMEs dominated by the synthetic transactions executed by the Credit Portfolio Strategies Group (CPSG). The increase in Commercial mortgages is driven by new traditional transactions mainly based on assets from the Americas.

	Securitization	

The higher exposure originated via traditional securitizations in 2014 compared to 2013 is mainly driven by increased market activity within CMBS securitizations resulting from a general market recovery in this segment. Following our de-risking strategy, no new synthetic transactions have been entered into within the trading book.

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	179
	Trading Market Risk	

Trading Market Risk

The vast majority of our businesses are subject to market risk, defined as the potential for change in the market value of our trading and invested positions. Risk can arise from changes in interest rates, credit spreads, foreign exchange rates, equity prices, commodity prices and other relevant parameters, such as market volatility and market implied default probabilities.

The primary objective of Market Risk Management, a part of our independent Risk function, is to ensure that our business units optimize the risk-reward relationship and do not expose us to unacceptable losses outside of our risk appetite. To achieve this objective, Market Risk Management works closely together with risk takers (the business units) and other control and support groups.

We distinguish between three substantially different types of market risk:

Trading market risk arises primarily through the market-making activities of the CB&S Division. This involves taking positions in debt, equity, foreign exchange, other securities and commodities as well as in equivalent derivatives.

Traded default risk arising from defaults and rating migrations relating to trading instruments.

Nontrading market risk arises from market movements, primarily outside the activities of our trading units, in our banking book and from off-balance sheet items. This includes interest rate risk, credit spread risk, investment risk and foreign exchange risk as well as market risk arising from our pension schemes, guaranteed funds and equity compensation. Nontrading market risk also includes risk from the modeling of client deposits as well as savings and loan products.

Market Risk Management Framework

Market Risk Management governance is designed and established to promote oversight of all market risks, including trading market risk, traded default risk and nontrading market risk, effective decision-making and timely escalation to senior management.

Market Risk Management defines and implements a framework to systematically identify, assess, monitor and report our market risk and supports management and mitigation. Market risk managers identify market risks through active portfolio analysis and engagement with the business areas.

Market Risk Measurement and Assessment

Market Risk Management aims to accurately measure all types of market risks by a comprehensive set of risk metrics reflecting economic and regulatory requirements.

In accordance with economic and regulatory requirements, we measure market and related risks by several key risk metrics:

Value-at-risk and stressed value-at-risk

Three metrics for specific risks: Incremental risk charge, comprehensive risk measure, and market risk standardized approach

Three types of stress tests: Portfolio stress testing, business-level stress testing, and event risk scenarios

Market Risk economic capital, including traded default risk

Sensitivities

Market value/notional (concentration risk)

Loss given default

These measures are viewed as complementary to each other and in aggregate define the market risk framework, by which all businesses can be measured and monitored.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Trading Market Risk	180
--	---	-----

For information on the regulatory capital requirements and RWA for trading market risk including a presentation by approach and risk type please see the section [Regulatory Capital Requirements](#) .

Market Risk Monitoring

Our primary mechanism to manage trading market risk is the application of our limit framework. Our Management Board supported by Market Risk Management, sets group-wide value-at-risk, economic capital and portfolio stress testing (extreme) limits for market risk in the trading book. Market Risk Management sub-allocates this overall limit to our Corporate Divisions and individual business units within CB&S (i.e., Fixed Income and Currencies, Structured Finance, Equities, etc.) based on anticipated business plans and risk appetite. Within the individual business units, the business heads establish business limits, by allocating the limit down to individual portfolios or geographical regions.

In practice, Market Risk Management sets key limits, which tend to be global in nature, to capture an exposure to a particular risk factor. Business limits are specific to various factors, including a particular geographical region or specific portfolio.

Value-at-risk, economic capital and Portfolio Stress Testing limits are used for managing all types of market risk at an overall portfolio level. As an additional and complementary tool for managing certain portfolios or risk types, Market Risk Management performs risk analysis and business specific stress testing. Limits are also set on sensitivity and concentration/liquidity, business-level stress testing and event risk scenarios.

Business units are responsible for adhering to the limits against which exposures are monitored and reported. The market risk limits set by Market Risk Management are monitored on a daily, weekly and monthly basis. Where limits are exceeded, Market Risk Management is responsible for identifying and escalating those excesses on a timely basis.

To manage the exposures inside the limits, the business units apply several risk mitigating measures, most notably the use of:

Portfolio management: Risk diversification arises in portfolios which consist of a variety of positions. Since some investments are likely to rise in value when others decline, diversification can help to lower the overall level of risk profile of a portfolio.

Hedging: Hedging involves taking positions in related financial assets and includes derivative products, such as futures, swaps and options. Hedging activities may not always provide effective mitigation against losses due to differences in the terms, specific characteristics or other basis risks that may exist between the hedge instrument and the exposure being hedged. For further details with regard to hedge

accounting please refer to Note 1 Significant Accounting Policies and Critical Accounting Estimates .

Market Risk Reporting

Market Risk Management reporting creates transparency on the risk profile and facilitates the understanding of core market risk drivers to all levels of the organization. The Management Board and Senior Governance Committees receive regular reporting, as well as ad hoc reporting as required, on market risk, regulatory capital and stress testing. Senior Risk Committees receive risk information at a number of frequencies, including weekly or monthly.

Additionally, Market Risk Management produces daily and weekly Market Risk specific reports and daily limit excess reports for each asset class.

Market Risk Measurement

Value-at-Risk (VaR) at Deutsche Bank Group (excluding Postbank)

VaR is a quantitative measure of the potential loss (in value) of trading positions due to market movements that will not be exceeded in a defined period of time and with a defined confidence level.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	181
	Trading Market Risk	

Our value-at-risk for the trading businesses is based on our own internal model. In October 1998, the German Banking Supervisory Authority (now the BaFin) approved our internal model for calculating the regulatory market risk capital for our general and specific market risks. Since then the model has been continually refined and approval has been maintained.

We calculate VaR using a 99 % confidence level and a one day holding period. This means we estimate there is a 1 in 100 chance that a mark-to-market loss from our trading positions will be at least as large as the reported VaR. For regulatory purposes, which include the calculation of our capital requirements and risk-weighted assets, the holding period is ten days.

We use one year of historical market data as input to calculate VaR. The calculation employs a Monte Carlo Simulation technique, and we assume that changes in risk factors follow a well-defined distribution, e.g. normal, lognormal, or non-normal (t, skew-t, Skew-Normal). To determine our aggregated VaR, we use observed correlations between the risk factors during this one year period.

Our VaR model is designed to take into account a comprehensive set of risk factors across all asset classes. Key risk factors are swap/government curves, index and issuer-specific credit curves, funding spreads, single equity and index prices, foreign exchange rates, commodity prices as well as their implied volatilities. To help ensure completeness in the risk coverage, second order risk factors, e.g. CDS index vs. constituent basis, money market basis, implied dividends, option-adjusted spreads and precious metals lease rates are considered in the VaR calculation.

For each business unit a separate VaR is calculated for each risk type, e.g. interest rate risk, credit spread risk, equity risk, foreign exchange risk and commodity risk. For each risk type this is achieved by assigning the sensitivities to the relevant risk type and then simulating changes in the associated risk drivers. Diversification effect reflects the fact that the total VaR on a given day will be lower than the sum of the VaR relating to the individual risk types. Simply adding the VaR figures of the individual risk types to arrive at an aggregate VaR would imply the assumption that the losses in all risk types occur simultaneously.

The model incorporates both linear and, especially for derivatives, nonlinear effects through a combination of sensitivity-based and full revaluation approach on a fixed price-implied volatility grid.

The VaR measure enables us to apply a consistent measure across all of our trading businesses and products. It allows a comparison of risk in different businesses, and also provides a means of aggregating and netting positions within a portfolio to reflect correlations and offsets between different asset classes. Furthermore, it facilitates comparisons of our market risk both over time and against our daily trading results.

When using VaR estimates a number of considerations should be taken into account. These include:

- The use of historical market data may not be a good indicator of potential future events, particularly those that are extreme in nature. This backward-looking limitation can cause VaR to understate risk (as in 2008), but can also cause it to be overstated.
- Assumptions concerning the distribution of changes in risk factors, and the correlation between different risk factors, may not hold true, particularly during market events that are extreme in nature. The one day holding period does not fully capture the market risk arising during periods of illiquidity, when positions cannot be closed out or hedged within one day.
- VaR does not indicate the potential loss beyond the 99th quantile.
- Intra-day risk is not captured.
- There may be risks in the trading book that are partially or not captured by the VaR model.

We are committed to the ongoing development of our proprietary risk models, and we allocate substantial resources to reviewing and improving them. Additionally, we have further developed and improved our process of systematically capturing and evaluating risks currently not captured

in our value-at-risk model. An assess-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	182
	Trading Market Risk	

ment is made to determine the level of materiality of these risks and material risks are prioritized for inclusion in our internal model. All risks not in value-at-risk are monitored and assessed on a regular basis.

During 2014 the value-at-risk calculation was further refined. In particular, in adherence to a new regulatory standard published by the European Banking Authority for CVA-RWA calculations, the granularity of market data benchmarks was increased.

Regulatory Backtesting of Trading Market Risk

We continually analyze potential weaknesses of our value-at-risk model using statistical techniques, such as backtesting, and also rely on risk management experience.

Backtesting is a procedure we use in accordance with German regulatory requirements to verify the predictive power of our value-at-risk calculations involving the comparison of hypothetical daily profits and losses under the buy-and-hold assumption (daily buy-and hold income). Under this assumption we estimate the P&L impact that would have resulted on a portfolio for a trading day valued with current market prices and parameters assuming it had been left untouched for that day and compare it with the estimates from the value-at-risk model from the preceding day. Our calculation of hypothetical daily profits and losses (buy & hold income) excludes gains and losses from intraday trading, fees and commissions, carry (including net interest margins), reserves and other miscellaneous revenues. An outlier is a hypothetical buy-and-hold trading loss that exceeds our value-at-risk from the preceding day. On average, we would expect a 99 % confidence level to give rise to two to three outliers representing 1 % of approximately 260 trading days in any one year. We analyze and document underlying reasons for outliers and classify them either as due to market movements, risks not included in our value-at-risk model, model or process shortcomings. We use the results for further enhancement of our value-at-risk methodology. Formal communications explaining the reasons behind any outlier on Group level are provided to the BaFin and the ECB.

In addition to the standard backtesting analysis at the value-at-risk quantile, the value-at-risk model performance is further verified by analyzing the distributional fit across the whole of the distribution (full distribution backtesting). Regular backtesting is also undertaken on hypothetical portfolios to test value-at-risk performance of particular products and their hedges.

The Global Backtesting Committee, with participation from Market Risk Management, Market Risk Analysis, Risk Analytics & Living Wills, and Finance, meets on a regular basis to review backtesting results as a whole and of individual businesses. The committee analyzes performance fluctuations and assesses the predictive power of our value-at-risk model, which allows us to improve and adjust the risk estimation process accordingly.

An independent model validation team reviews all quantitative aspects of our value-at-risk model on a regular basis. The review covers, but is not limited to, the appropriateness of distribution assumptions of risk factors, recalibration approaches for risk parameters, and model assumptions. Validation results and remediation measures are presented to senior management and are tracked to promote adherence to deadlines.

Holistic Validation process

The Holistic Validation (HV) process provides a comprehensive assessment of the value-at-risk model and framework across five control areas: Limits, Backtesting, Process, Model Validation, and Risks-not-in-VaR. HV runs on a quarterly basis and provides a detailed report for each of the control areas (HV Control Packs) as well as an HV Dashboard indicating the health of each control area. In addition the Quarterly Business Line Review (QBLR) provides an overview of the business line trading strategy and the corresponding risk return profile. The associated formal quarterly HV governance framework is as follows:

Level 1: A series of asset-class level HV Control Pack Review meetings (chaired by the respective Market Risk Management Asset Class Head), at which the HV Control Pack is reviewed and the HV Dashboard status is agreed

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Trading Market Risk	183
--	---	-----

Level 2: The HV Governance Committee (chaired by the Global Head of Market Risk Management), at which the QBLRs are presented and the overall HV Dashboard is agreed

Level 3: Top-level HV governance is achieved via a series of senior management briefings including to the Capital and Risk Committee, the Management Board and the Supervisory Board. The briefings provide an executive summary of the quality and control of value-at-risk across the business, an overview of the CB&S business trading strategy and the corresponding risk management strategy.

In 2014, our value-at-risk and stressed value-at-risk multipliers remained at four versus the regulatory floor of three.

Market Risk Stress Testing

Stress testing is a key risk management technique, which evaluates the potential effects of extreme market events and extreme movements in individual risk factors. It is one of the core quantitative tools used to assess the market risk of Deutsche Bank's positions and complements VaR and Economic Capital. Market Risk Management performs several types of stress testing to capture the variety of risks: Portfolio stress testing, individual business-level stress tests, Event Risk Scenarios, and also contributes to Group-wide stress testing.

Portfolio Stress Testing measures the profit and loss impact of potential market events based on pre-defined scenarios of different severities, which are either historical or hypothetical and defined at a macro level. With Portfolio Stress Testing, Market Risk Management completes its perspective on risk provided by other metrics, given that the range of portfolio stress tests fills the gap between the most extreme scenarios (economic capital) and potential daily losses (value-at-risk). Besides dynamic scenarios, we have three static scenarios, which are calculated and monitored on a weekly basis against limits.

For individual business-level stress tests, market risk managers identify relevant risk factors and develop stress scenarios relating either to macro-economic or business-specific developments. Business-level stress tests capture idiosyncratic and basis risks.

Event risk scenario measures the profit and loss impact of historically observable events or hypothetical situations on trading positions for specific emerging market countries and regions. The bank's trading book exposure to an individual country is stressed under a single scenario, which replicates market movements across that country in times of significant market crisis and reduced liquidity.

Besides these market-risk specific stress tests, Market Risk Management participates in the Group-wide stress test process, where macro-economic scenarios are defined by dbResearch and each risk department translates that same scenario to the relevant shocks required to apply to their portfolio. This includes credit, market and operational risks. Results are reviewed by the Stress Testing Oversight Committee.

Tail risk or the potential for extreme loss events beyond reported value-at risk is captured via stressed value-at-risk, economic capital, incremental risk charge and comprehensive risk measure. It is also captured via stress testing.

Trading Market Risk Requirements

In December 2011 we received model approvals, from the BaFin, for the stressed value-at-risk, incremental risk charge and comprehensive risk measure models. These are additional methods we use to measure market risk exposures.

Stressed value-at-risk: calculates a stressed value-at-risk measure based on a continuous one year period of significant market stress.

Incremental Risk Charge: captures default and credit migration risks in addition to the risks already captured in value-at-risk for credit-sensitive positions in the trading book.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	184
	Trading Market Risk	

Comprehensive Risk Measure: captures incremental risk for the correlation trading portfolio calculated using an internal model subject to qualitative minimum requirements as well as stress testing requirements.

Market Risk Standardized Approach: calculates regulatory capital for securitizations and nth-to-default credit derivatives.

Stressed value-at-risk, incremental risk charge and the comprehensive risk measure are calculated for all relevant portfolios. The results from the models are used in the ongoing risk management of the bank, as well as for defining regulatory capital.

Stressed Value-at-Risk

We calculate a stressed value-at-risk measure using a 99 % confidence level and a holding period of one day. For regulatory purposes, the holding period is ten days.

Our stressed value-at-risk calculation utilizes the same systems, trade information and processes as those used for the calculation of value-at-risk. The only difference is that historical market data from a period of significant financial stress (i.e., characterized by high volatilities) is used as an input for the Monte Carlo Simulation. The time window selection process for the stressed value-at-risk calculation is based on the identification of a time window characterized by high levels of volatility and extreme movements in the top value-at-risk contributors. The results from these two indicators (volatility and number of outliers) are combined using chosen weights intended to ensure qualitative aspects are also taken into account (i.e., inclusion of key crisis periods).

Incremental Risk Charge

The incremental risk charge is based on our own internal model and is intended to complement the value-at-risk modeling framework. It represents an estimate of the default and migration risks of unsecuritized credit products over a one-year capital horizon at a 99.9 % confidence level, taking into account the liquidity horizons of individual positions or sets of positions. We use a Monte Carlo Simulation for calculating incremental risk charge as the 99.9 % quantile of the portfolio loss distribution and for allocating contributory incremental risk charge to individual positions. The model captures the default and migration risk in an accurate and consistent quantitative approach for all portfolios. Important parameters for the incremental risk charge calculation are exposures, recovery rates and default probabilities, ratings migrations, maturity, and liquidity horizons of individual positions.

We calculate the incremental risk charge on a weekly basis. The charge is determined as the higher of the most recent 12 week average of incremental risk charge and the most recent incremental risk charge.

The contributory incremental risk charge of individual positions, which is calculated by expected shortfall allocation, provides the basis for identifying risk concentrations in the portfolio.

Liquidity horizons are conservatively set to the time required to sell a position or to hedge all material relevant price risks in a stressed market. Liquidity horizons are specified at product level and reflect our actual practice and experience during periods of systematic and idiosyncratic stresses. We have defined the sets of positions used for applying liquidity horizons in a way that meaningfully reflects the differences in liquidity for each set. Market risk managers who specialize in each product type determine liquidity horizons, with a liquidity horizon floor of three-months. Liquidity horizons are regularly reviewed so that the act of selling or hedging, in itself, would not materially affect the price. As at year-end 2014, for regulatory RWA calculation all liquidity horizons have been conservatively set to 12 months while we review the selection methodology. Default and rating migration probabilities are defined by rating migration matrices which are calibrated on historical external rating data. Taking into account the trade-off between granularity of matrices and their stability we apply a global corporate matrix and a sovereign matrix comprising the seven main rating bands. Accordingly, issue or issuer ratings from the rating agencies Moody's, S&P and Fitch are assigned to each position.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Trading Market Risk	185
--	---	-----

To quantify a loss due to rating migration, a revaluation of a position is performed under the new rating. The probability of joint rating downgrades and defaults is determined by the migration and rating correlations of the incremental risk charge model. These correlations are specified through systematic factors that represent geographical regions and industries and are calibrated on historical rating migration and equity time series. The simulation process incorporates a rollover strategy that is based on the assumption of a constant level of risk. This assumption implies that positions that have experienced default or rating migration over their liquidity horizon are re-balanced at the end of their liquidity horizon to attain the initial level of risk. Correlations between positions with different liquidity horizons are implicitly specified by the dependence structure of the underlying systematic and idiosyncratic risk factors, helping to ensure that portfolio concentrations are identified across liquidity horizons. In particular, differences between liquidity horizons and maturities of hedges and hedged positions are recognized.

Direct validation of the incremental risk charge through back-testing methods is not possible. The charge is subject to validation principles such as the evaluation of conceptual soundness, ongoing monitoring, process verification and benchmarking and outcome analysis. The validation of the incremental risk charge methodology is embedded in the validation process for our credit portfolio model, with particular focus on the incremental risk charge specific aspects. Model validation relies more on indirect methods including stress tests and sensitivity analyses. Relevant parameters are included in the annual validation cycle established in the current regulatory framework. The incremental risk charge is part of the quarterly group-wide stress test using the stress testing functionality within our credit engine. Stressed incremental risk charge figures are reported on group level and submitted to the Stress Test Working Group (STWG) and the Portfolio Risk Committee (PRC).

Comprehensive Risk Measure

The comprehensive risk measure for the correlation trading portfolio is based on our own internal model. We calculate the comprehensive risk measure based on a Monte Carlo Simulation technique to a 99.9 % confidence level and a capital horizon of one year. Our model is applied to the eligible correlation trading positions where typical products include collateralized debt obligations, nth-to-default credit default swaps, and commonly traded index- and single-name credit default swaps. Re-securitizations or products which reference retail claims or real estate exposures are not eligible. Furthermore, trades subject to the comprehensive risk measure have to meet minimum liquidity standards to be eligible. The model incorporates concentrations of the portfolio and nonlinear effects via a full revaluation approach.

Comprehensive risk measure is designed to capture defaults as well as the following risk drivers: interest rates, credit spreads, recovery rates, foreign exchange rates and base correlations, index-to-constituent and base correlation basis risks.

Comprehensive risk measure is calculated on a weekly basis. Initially, the eligible trade population within the correlation trading portfolio is identified. Secondly, the risk drivers of the P&L are simulated over a one year time horizon. The trade population is then re-valued under the various Monte Carlo Simulation scenarios and the 99.9 % quantile of the loss distribution is extracted.

The market and position data are collected from front office systems and are subject to quality control. The comprehensive risk measure figures are closely monitored and play a significant role in the management of the correlation trading portfolio. We use three years of historical market data to estimate the risk drivers to the comprehensive risk measure.

In our comprehensive risk measure model the liquidity horizon is set to 12 months, which equals the capital horizon.

In order to maintain the quality of our comprehensive risk measure model we continually monitor the potential weaknesses of this model. Backtesting of the trade valuations and the propagation of single risk factors is carried out on a monthly basis and a quarterly recalibration of parameters is performed. In addition, a series of

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	186
	Trading Market Risk	

stress tests have been defined on the correlation trading portfolio where the shock sizes link into historical distressed market conditions.

Model validation is performed by an independent team and reviews, but is not limited to, the above mentioned backtesting, the models which generate risk factors, appropriateness and completeness of risk factors, the Monte Carlo Simulation stability, and performs sensitivity analyses.

For regulatory reporting purposes, the comprehensive risk measure represents the higher of the internal model spot value at the reporting dates, their preceding 12-week average calculation, and the floor, where the floor is equal to 8 % of the equivalent capital charge under the standardised approach securitization framework.

Market Risk Standardized Approach

Market Risk Management monitors exposures and addresses risk issues and concentrations for certain exposures under the specific Market Risk Standardized Approach (MRSA). We use the MRSA to determine the regulatory capital charge for the interest rate risk of nth-to-default credit default swaps and for the correlation trading portfolio securitization positions which are not eligible for the comprehensive risk measure. For these positions we assign all retained securitization positions that are unrated or rated below BB a risk weight of 1,250 percent to the exposure.

We also use the MRSA to determine the regulatory capital charge for longevity risk as set out in CRR/CRD 4 regulations. Longevity risk is the risk of adverse changes in life expectancies resulting in a loss in value on longevity linked policies and transactions. For risk management purposes, stress testing and economic capital allocations are also used to monitor and manage longevity risk.

Furthermore, certain types of investment funds require a capital charge under the MRSA. For risk management purposes, these positions are also included in our internal reporting framework.

Validation of Front Office models

An independent team validates front office models that are used for official pricing and risk management of trading positions. The key objectives of model validation are to:

- Assess and validate the logical and conceptual soundness (model design and construction) of models in line with their design objectives and purpose (for front office models this would be valuation and risk sensitivities);
- Assess appropriateness and accuracy of implementation methodology; and
- Assess the appropriateness of the model for the intended products to be priced and risk managed, identifying potential limitations and conditions for use.

Trading Market Risk Management Framework at Postbank

Market risk arising from Postbank has been included in our reporting since 2010. Since the domination agreement between Deutsche Bank and Postbank became effective in September 2012, aggregate market risk limits for Postbank are set by Deutsche Bank according to our market risk limit framework. Postbank's Head of Market Risk Management has a functional reporting line into our Market Risk Management organization and acts based upon delegated authority with respect to monitoring, reporting and managing market risk exposure according to market risk limits allocated to Postbank.

Sub limits are allocated by the Postbank Market Risk Committee to the individual operating business units. Deutsche Bank is represented by a senior member of Market Risk Management on the Postbank Market Risk Committee. The market risk economic capital limits allocated to specific business activities define the level of market risk that is reasonable and desirable for Postbank from an earnings perspective.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Trading Market Risk	187
--	---	-----

Market risk at Postbank is monitored on a daily basis using a system of limits based on value-at-risk. In addition, Postbank's Market Risk Committee has defined sensitivity limits for the trading and banking book as well as for key sub-portfolios. Postbank also performs scenario analyses and stress tests in addition to the value-at-risk calculations. The assumptions underlying the stress tests are reviewed and validated on an ongoing basis.

Value-at-Risk at Postbank

Postbank also uses the value-at-risk concept to quantify and monitor the market risk it assumes. Value-at-risk is calculated using a Monte Carlo Simulation. The risk factors taken into account in the value-at-risk include interest rates, equity prices, foreign exchange rates, and volatilities, along with risks arising from changes in credit spreads. Correlation effects between the risk factors are derived from equally-weighted historical data.

Postbank's trading book value-at-risk is currently not consolidated into the value-at-risk of the remaining Group. However, it is shown separately in the internal value-at-risk report.

We also apply the MRSA for the determination of the regulatory capital charge for Postbank's trading market risk.

Economic Capital for Market Risk

Economic capital for market risk measures the amount of capital needed to absorb very severe, unexpected losses arising from our exposures over the period of one year. Very severe in this context means that the underlying economic capital is set at a level which covers, with a probability of 99.98 % all unexpected losses over a one year time horizon.

Our economic capital model comprises two core components, the Common Risk component covering risk drivers across all businesses and the suite of Business Specific Stress Tests (BSSTs) which enriches the Common Risk component. Both components are calibrated to historically observed severe market shocks.

The Common Risk component of the traded market risk economic capital model is based on an enhanced version of our regulatory stressed value-at-risk approach. Hence the economic capital model benefits from the value-at-risk model taking into account the longer liquidity horizons.

The calculation of economic capital for market risk from the trading units is performed weekly. The model incorporates the following risk factors: interest rates, credit spreads, equity prices, foreign exchange rates, commodity prices and correlations.

We also continuously assess and refine our BSSTs in an effort to promote the capture of material risks as well as reflect possible extreme market moves. Additionally, risk managers use their expert judgment to define worst case scenarios based upon the knowledge of past extreme market moves. It is possible however, for our market risk positions to lose more value than our economic capital estimates since all downside scenarios cannot be predicted and simulated.

Economic capital for traded default risk represents an estimate of the default and migration risks of credit products at a 99.98 % confidence level, taking into account the liquidity horizons of the respective sub-portfolios. It covers the following positions:

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Fair value assets in the banking book;
Unsecuritized credit products in the trading book excluding correlation trading portfolio;
Securitized products in the trading book excluding correlation trading portfolio and
Correlation trading portfolio.

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	188
	Trading Market Risk	

The traded default risk economic capital for the correlation trading portfolio is calculated using the comprehensive risk measure. For all other positions the calculation of traded default risk economic capital is based on our credit portfolio model. Traded default risk captures the credit exposures across our trading books and it is monitored via single name concentration and portfolio limits which are set based upon rating, size and liquidity. Single name concentration risk limits are set for two key metrics: Default Exposure, i.e., the P&L impact of an instantaneous default at the current recovery rate (RR), and bond equivalent Market Value (MV), i.e. default exposure at 0 % recovery. In addition, a traded default risk economic capital limit is set within the Market Risk economic capital framework while the incremental risk charge monitors the regulatory capital requirements associated with these positions. In order to capture diversification and concentration effects we perform a joint calculation for traded default risk economic capital and credit risk economic capital. Important parameters for the calculation of traded default risk are exposures, recovery rates and default probabilities as well as maturities. Exposures, recovery rates and default probabilities are derived from market information and external ratings for the trading book and internal assessments for the banking book as for credit risk economic capital. Rating migrations are governed by migration matrices, which are obtained from historical rating time series from rating agencies and internal observations. The probability of joint rating downgrades and defaults is determined by the default and rating correlations of the portfolio model. These correlations are specified through systematic factors that represent countries, geographical regions and industries.

Validation of the market risk economic capital model is performed by an independent team. The regular review covers, but is not limited to, the appropriateness of risk factors, the calibration techniques, the parameter settings, and model assumptions.

Allocation of Positions to the Regulatory Trading book

For European regulatory purposes all our positions must be assigned to either the trading book or the banking book. This classification of a position impacts its regulatory treatment, in particular the calculation of the regulatory capital charges for the position. We laid down the criteria for the allocation of positions to either the trading book or banking book in internal policy documents, which were based on the respective requirements applicable to the Group contained in Articles 102 to 106 of the CRR.

A central function in Finance is responsible for the policy guidance and is the centre of competence with regard to questions concerning its application. The Finance functions for the individual business areas are responsible for the classification of positions in line with the policy requirements.

We include positions in the trading book that are financial instruments or commodities which are held with trading intent or which are held for the purpose of hedging other trading book positions.

Positions included in the trading book must be free of any restrictive covenants regarding their transferability or able to be hedged.

Moreover, positions assigned to the trading book must be valued daily. Further information on the valuation methodology that we used is provided in Note 14 Financial Instruments carried at Fair Value .

As part of the ongoing procedures to confirm that the inclusion of positions in the trading book continues to be in line with the above referenced internal policy guidance, the Finance functions for our trading businesses carry out a global review of the classification of positions on a quarterly basis. The results of the review are documented and presented to the Trading Book Review Committee with representatives from Finance and Legal.

Re-allocations of positions between the trading book and the banking book may only be carried out in line with the internal policy guidance. They must be documented and are subject to approval by the central function in Finance described above.

Total Liabilities	1,635,481	756,854	878,628	1,556,434	696,914	859,520

The vast majority of our trading book assets on our balance sheet are financial assets at fair value through profit or loss. The total increase in balance sheet assets of 97 billion compared to year-end 2013 is mainly driven by an increase in positive market values from derivative financial instruments as already discussed in other sections of this report. Another driver is the increase in trading book loans of 9 billion. This increase is driven by collateral restructuring related to ETF business within CB&S.

Within liabilities the vast majority of our trading book is comprised of financial liabilities at fair value through profit or loss. The total increase in balance sheet liabilities of 79 billion compared to year-end 2013 is mainly driven by an increase in negative market values from derivative financial instruments as already discussed in other sections of this report.

The average value-at-risk over 2014 was 51.6 million, which is a decrease of 2.0 million compared with the full year 2013. There have been notable reductions in the average value-at-risk across credit spread, mainly coming from a reduction in name specific risk and commodity risk due to the winding down of the commodities business. Overall there has been less benefit from diversification following changes in the composition of the

Table of Contents

	Trading Market Risk	

portfolio. The value-at-risk has moved over a wider range during 2014 compared with 2013 particularly towards the later part of the year. In October 2014 the value-at-risk reached a high for the year of 71.4 million quickly followed by a low of 35.4 million in November following an effort to de-risk the portfolio due to heightened volatility in the markets.

Regulatory Trading Market Risk Measures (excluding Postbank)

The tables below present the stressed value-at-risk metrics calculated with a 99 % confidence level and a one-day holding period for our trading units. They exclude contributions from Postbank trading book which are calculated on a stand-alone basis

Stressed Value-at-Risk by Risk Type

in m.	Dec 31, 2014	Dec 31, 2013

Minimum	81.6	75.1	(102.3)	(105.5)	48.8	44.4	100.7	90.0	0.0	4.3	13.7	12.1	1.4	7.1

¹ Includes value-at-risk from gold and other precious metal positions
The average stressed value-at-risk was 109.6 million over 2014, a decrease of 4.4 million compared with the full year 2013. The reduction is most notably the result of lower equity risk due to carrying greater downside protection, and a decrease in commodity risk due to the unwind of the commodities business. This has partly been offset by an increase in credit spread risk following an overall increase in exposure over 2014,

and there has been some increase in interest rate risk.

The following graph compares the development of the daily value-at-risk with the daily stressed value-at-risk and their 60 day averages, calculated with a 99 % confidence level and a one-day holding period for our trading units. Amounts are shown in millions of euro and exclude contributions from Postbank's trading book which are calculated on a stand-alone basis.

Average, Maximum and Minimum Incremental Risk Charge of Trading Units (with a 99.9 % confidence level and one-year capital horizon)

in m.	Weighted average liquidity horizon in month	2014			2013			
		Average ¹	Maximum ¹	Minimum ¹	Weighted average liquidity horizon in month	Average ¹	Maximum ¹	Minimum ¹
Global Finance and Foreign Exchange	12.0	148.3	251.1	68.9	6.0	66.9	82.4	43.5
Rates and Credit Trading	12.0	384.6	645.7	235.7	6.0	505.8	603.4	414.2
NCOU	12.0	(3.6)	39.4	(25.8)	6.0	(20.6)	(3.7)	(36.6)
Emerging Markets Debt	12.0	164.1	220.2	119.5	6.0	179.5	205.0	156.1
Other	12.0	118.6	224.4	38.9	6.0	236.5	323.9	185.1
Total incremental risk charge of trading units	12.0	811.9	1,065.4	647.9	6.0	968.2	1,044.8	928.5

¹ Amounts show the bands within which the values fluctuated during the 12-week period preceding December 31, 2014 and December 31, 2013.

The incremental risk charge as at the end of 2014 was 1,038 million and increased by 42 million (4 %) compared with year end 2013. The 12-week average incremental risk charge as at the end of 2014 was 812 million and thus 156 million (16 %) lower compared with the average for the 12-week period ended December 31, 2013. The increase at the end of 2014 is driven by model changes that increased the weighted average liquidity horizon from 6 months to 12 months and increased the charge for defaulted and unrated entities.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Trading Market Risk	193
--	---	-----

For regulatory reporting purposes, the comprehensive risk measure for the respective reporting dates represents the higher of the internal spot value at the reporting dates, their preceding 12-week average calculation, and the floor, where the floor is equal to 8 % of the equivalent capital charge under the standardised approach securitization framework.

Comprehensive Risk Measure of Trading Units (with a 99.9 % confidence level and one-year capital horizon)

in m.	Dec 31, 2014	Dec 31, 2013
Correlation trading ¹	222.0	223.8

¹ Spot value of internal model Comprehensive Risk Measure at period end.

Average, Maximum and Minimum Comprehensive Risk Measure of Trading Units (with a 99.9 % confidence level and one-year capital horizon)

in m.	2014			2013				
	Weighted average liquidity horizon in month	Average ¹	Maximum ¹	Minimum ¹	Weighted average liquidity horizon in month	Average ¹	Maximum ¹	Minimum ¹
Correlation trading	12.0	246.9	257.5	223.0	12.0	316.0	359.6	285.9

¹ Regulatory Comprehensive Risk Measure calculated for the 12-week period ending December 31.

The comprehensive risk measure as of year end 2014 was 222 million and decreased by 2 million (1 %) compared with year end 2013. The 12-week average of our comprehensive risk measure as at the end of 2014 was 247 million and thus 69 million (22 %) lower compared with the average for the 12-week period ended December 31, 2013. There was an increase due to the impact of a higher floor applicable in the calculation under the CRR/CRD 4 framework which has now been offset by de-risking of the portfolio.

Market Risk Standardized Approach

As of December 31, 2014, the securitization positions, for which the specific interest rate risk is calculated using the market risk standardized approach, generated capital requirements of 1,682 million corresponding to risk weighted-assets of 21.0 billion. As of December 31, 2013 these positions generated capital requirements of 473 million and further capital deduction items of 1.5 billion corresponding to a total RWA-equivalent of 13.3 billion. The increase in RWA was related to a regulatory driven change in the treatment of positions receiving a risk weight of 1,250 %. As a result these positions are now disclosed under RWA compared to CDI in the previous year. A like comparison made after adjusting the year end 2013 portfolio with the new CRD 4 regulatory framework would show a year on year decrease of 3.4 billion RWA following the disposal of positions.

For nth-to-default credit default swaps the capital requirement reduced to 1 million corresponding to risk weighted-assets of 19 million compared with 5 million and 63 million as of December 31, 2013. This development was driven by certain positions becoming eligible for our comprehensive risk measurement model based on improved market liquidity.

Additionally, the capital requirement for investment funds under the market risk standardized approach was 91 million corresponding to risk weighted-assets of 1,139 million as of December 31, 2014, compared with 78 million and 977 million as of December 31, 2013.

The capital requirement for longevity risk under the market risk standardized approach was 26 million corresponding to risk weighted-assets of 326 million as of December 31 2014, compared with 29 million and 363 million as of December 31, 2013.

Value-at-Risk at Postbank

The value-at-risk of Postbank's trading book calculated with a 99 % confidence level and a one-day holding period amounted to zero as at December 31, 2014 in comparison to 0.1 million at year end 2013. The only impact at year-end 2013 was 0.1 million resulting from foreign exchange risk while all other risks components (including diversification effects) amounted to 0.0 million. Diversification effect reflects the fact that the total

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Trading Market Risk

194

value-at-risk on a given day will be lower than the sum of the value-at-risk relating to the individual risk classes. Simply adding the value-at-risk figures of the individual risk classes to arrive at an aggregate value-at-risk would imply the assumption that the losses in all risk categories occur simultaneously. Postbank's current trading strategy does not allow any new trading activities with regard to the trading book. Therefore, Postbank's trading book did not contain any positions at year-end 2014. Nevertheless, Postbank will remain classified as a trading book institution.

The table below presents average, maximum and minimum value-at-risk amounts of Postbank's trading book during the year 2014.

Average, Maximum and Minimum Value-at-Risk of Postbank trading book

in m.	Total		Diversification effect		Interest rate risk		Credit spread risk		Equity price risk		Foreign exchange risk		Commodity price risk	
	2014	2013	2014	2013	2014	2013	2014	2013	2014	2013	2014	2013	2014	2013
Average	0.1	0.3	0.0	(0.2)	0.0	0.2	0.0	0.1	0.0	0.0	0.1	0.1	0.0	0.0

Results of Regulatory Backtesting of Trading Market Risk

In 2014, we observed one global outlier compared with two outliers in 2013. The outlier occurred in January 2014 driven by market movements beyond the historical 1 year 99 percentile level and an increased level of co-movement between risk factors not captured in the prevailing one year time window. Based on the backtesting results, our analysis of the underlying reasons for outliers and enhancements included in our value-at-risk methodology we continue to believe that our value-at-risk model will remain an appropriate measure for our trading market risk under normal market conditions.

The following graph shows the trading units daily buy-and-hold income in comparison to the value-at-risk as of the close of the previous business day for the trading days of the reporting period. The value-at-risk is presented in negative amounts to visually compare the estimated potential loss of our trading positions with the buy and hold income. Figures are shown in millions of euro and exclude contributions from Postbank's trading book which is calculated on a stand-alone basis. The chart shows that our trading units achieved a positive buy and hold income for 52 % of the trading days in 2014 (versus 52 % in 2013), as well as displaying the one global outlier in 2014.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Trading Market Risk	195
--	---	-----

Daily Income of our Trading Units

The following histogram shows the distribution of daily income of our trading units (excluding Postbank). Daily income is defined as total income which consists of new trades, fees & commissions, buy & hold income, reserves, carry and other income. It displays the number of trading days on which we reached each level of trading income shown on the horizontal axis in millions of euro.

Our trading units achieved a positive actual income for 95 % of the trading days in 2014 (versus 94 % in 2013).

Economic Capital Usage for our Trading Market Risk

The economic capital usage for trading market risk was 5.0 billion at year-end 2014 compared with 4.2 billion at year-end 2013. Our trading market risk economic capital usage increased by approximately 758 million, or 18 %. This increase was mainly driven by increased exposures in fair value banking books.

Postbank's contribution to the economic capital usage for our trading market risk was minimal.

Valuation of Market Risk Positions

For details about our methods for determining fair value see the respective section in Note 1 Significant Accounting Policies and Critical Accounting Estimates of our financial statements.

Regulatory prudent valuation of assets carried at fair value

Pursuant to Article 34 CRR institutions shall apply the prudent valuation requirements of Article 105 CRR to all assets measured at fair value and shall deduct from CET1 capital the amount of any additional value adjustment necessary.

The approach we applied to the prudent valuation of our assets measured at fair value is based on these requirements and is unchanged to previous years and does not reflect the methodology as laid out in the final EBA standard on prudent valuation.

Based on our interpretation of the requirements we have reached the conclusion that the categories of valuation adjustments which must be considered to determine the regulatory prudent value of fair-valued assets are already covered by our standards and policies for IFRS fair value measurement as well as other regulatory standards including those for operational risk. This result is based on our understanding that assets measured at fair value under IFRS will meet the existing regulatory prudent valuation requirements, if the relevant catego-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Nontrading Market Risk	196
--	--	-----

ries of valuation adjustments have been considered in the determination of the fair value of the asset under IFRS. We provide further information on the valuation methodology we used under IFRS in Note 14 Financial Instruments carried at Fair Value .

In January 2015 the European Banking Authority (EBA) has re-issued a draft Regulatory Technical Standard (EBA RTS 2014/06/rev1) which defines a specific measurement methodology for calculating the amount of the required additional value adjustment. This measurement methodology, which is different to our current and past practice, is currently being considered by the European Commission for adoption in European Banking regulation.

We currently prepare for the potential future application of this new standard for calculating the amount of any additional value adjustment necessary. In contrast to the existing requirements, which identify the categories of valuation adjustments that must be considered for prudent valuation purposes, the new standard defines a specific measurement methodology for calculating the additional value adjustment for each category. Since this methodology is not consistent with the methodology used under IFRS, the future application of the new standard will lead to a difference between the IFRS fair value and the regulatory prudent value.

We currently estimate the amount of the additional value adjustment arising in case of a future application of the new standard to range between 1.5 and 2.0 billion. Following guidance provided by the EBA we will only consider this additional value adjustment in the calculation of our CET1 capital once the new standard has been adopted and published by the European Commission (unless a later application date would apply).

Nontrading Market Risk

Nontrading market risk arises from market movements, primarily outside the activities of our trading units, in our banking book and from off-balance sheet items. Significant market risk factors the bank is exposed to and are overseen by risk management groups in that area are:

Interest rate risk (including model risk from embedded optionality and from modeling behavioral assumptions for certain product types), credit spread risk, foreign exchange risk, equity risk (including investments in public and private equity as well as real estate, infrastructure and fund assets).

Market risks from off-balance sheet items such as pension schemes and guarantees as well as structural foreign exchange risk and equity compensation risk.

The market risk component of our nontrading activities is overseen by dedicated groups within our risk management organization. Due to the variety of businesses and initiatives subject to nontrading market risk exposure, coverage is split into three main areas:

Market Risk Management covering market risks arising in the business units PBC, GTB, Deutsche AWM, and NCOU as well as Treasury and in other group activities such as structural foreign exchange risks, equity compensation risks and pension risks.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

CRM Principal Investments specializing in the risk-related aspects of our nontrading alternative asset activities and performing regular reviews of the risk profile of the banks alternative asset portfolios.

Asset Management Risk specializing in the fiduciary risk related aspects of our asset and fund management business in the Deutsche AWM Corporate Division. Key risks in this area arise from operational and/or principal guarantees and reputational risk related to managing client funds.

Investment proposals for strategic investments are analyzed by the Group Investment Committee. Depending on the size, strategic investments may require approval from the Group Investment Committee, the Management Board or the Supervisory Board. The development of strategic investments is monitored by the Group Investment Committee on a regular basis. Multiple members of the Capital and Risk Committee & Risk Execu-

Table of Contents

tive Committee are also members of the Group Investment Committee, establishing a close link between these committees.

An independent team in Risk validates the models for nontrading market risk. In general the validation includes a review of the appropriateness of risk factors, parameters, parameter calibration and model assumptions. Validation results are presented to senior management and appropriate remedial actions are taken by Market Risk Management Methodology to improve the specific model used for the various risk types.

Assessment of Market Risk in Nontrading Portfolios

The majority of market risk in our nontrading portfolios is quantified through the use of stress testing procedures. We use stress tests that are specific to each risk class and which consider, among other factors, large historically observed market moves, the liquidity of each asset class, and changes in client behavior in relation to deposit products. This assessment forms the basis of the economic capital calculations which enable us to monitor, aggregate and manage our nontrading market risk exposure.

Interest Rate Risk in the Banking Book

The majority of our interest rate risk arising from nontrading asset and liability positions, with the exception of some entities and portfolios, has been transferred through internal transactions to the CB&S division. This internally transferred interest rate risk is managed on the basis of value-at-risk, as reflected in trading portfolio figures. The treatment of interest rate risk in our trading portfolios and the application of the value-at-risk model is discussed in the Trading Market Risk section of this document.

The most notable exceptions from the aforementioned paragraph are in the PBC Corporate Division in Germany including Postbank and the Deutsche AWM mortgage business in the U.S. Unit. These entities manage interest rate risk separately through dedicated Asset and Liability Management departments subject to banking book value-at-risk limits set and monitored by Market Risk Management. The measurement and reporting of interest rate risk managed by these dedicated Asset and Liability functions is performed daily in the PBC division and on a weekly basis for Deutsche AWM. In addition, the Group holds selected positions managed by Treasury, where the measurement and reporting of interest rate risk is performed daily. The global interest rate in the banking book is reported on a monthly basis.

The maximum negative change of present values of the banking book positions when applying the regulatory required parallel yield curve shifts of (200) and +200 basis points was 2 % of our total regulatory capital at December 31, 2014. Consequently, outright interest rate risk in the banking book is considered immaterial for us.

Our PBC, GTB and Deutsche AWM businesses are subject to model risk with regard to client deposits as well as savings and loan products. Measuring interest rate risks for these product types in the banking book is based upon assumptions with respect to client behavior, future availability of deposit balances and sensitivities of deposit rates versus market interest rates resulting in a longer than contractual effective duration. Those parameters are subject to stress testing within our Economic Capital framework. Additionally, consideration is made regarding early prepayment behavior for loan products. The parameters are based on historical observations, statistical analyses and expert assessments. If the future evolution of balances, rates or client behavior differs from these assumptions, then this could have an impact on our interest rate risks in the banking book.

Foreign Exchange Risk

Foreign exchange risk arises from our nontrading asset and liability positions, denominated in currencies other than the functional currency of the respective entity. The majority of this foreign exchange risk is transferred through internal hedges to trading books within CB&S and is therefore reflected and managed via the

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Nontrading Market Risk	198
--	--	-----

value-at-risk figures in the trading books. The remaining foreign exchange risks that have not been transferred are mitigated through match funding the investment in the same currency, therefore only residual risk remains in the portfolios. Small exceptions to above approach follow the general MRM monitoring and reporting process, as outlined for the trading portfolio.

The bulk of nontrading foreign exchange risk is related to unhedged structural foreign exchange exposure, mainly in our U.S., U.K. and China entities. Structural foreign exchange exposure arises from local capital (including retained earnings) held in the Bank's consolidated subsidiaries and branches and from investments accounted for at equity. Change in foreign exchange rates of the underlying functional currencies result in revaluation of capital and retained earnings and are recognized in other comprehensive income booked as Currency Translation Adjustments (CTA).

The primary objective for managing our structural foreign exchange exposure is to stabilize consolidated capital ratios from the effects of fluctuations in exchange rates. Therefore the exposure remains unhedged for a number of core currencies with considerable amounts of risk-weighted assets denominated in that currency in order to avoid volatility in the capital ratio for the specific entity and the Group as a whole.

Investment Risk

Nontrading market risk from investment exposure is predominantly the equity risk arising from our non-consolidated investment holdings in the banking book categorized into strategic and alternative investment assets.

Strategic investments typically relate to acquisitions made by us to support our business franchise and are undertaken with a medium to long-term investment horizon. Alternative assets are comprised of principal investments and other non-strategic investment assets. Principal investments are direct investments in private equity (including leveraged buy-out fund commitments and equity bridge commitments), real estate (including mezzanine debt) and venture capital, undertaken for capital appreciation. In addition, principal investments are made in hedge funds and mutual funds in order to establish a track record for sale to external clients. Other non-strategic investment assets comprise of assets recovered in the workout of distressed positions or other legacy investment assets in private equity and real estate of a non-strategic nature.

Pension Risk

Deutsche Bank is exposed to market risk from a number of defined benefit pension schemes for past and current employees. The ability of the pension schemes to meet the projected pension payments, is maintained through investments and ongoing plan contributions. Market risk materializes due to a potential decline in the market value of the assets or an increase in the liability of each of the pension plans. Market Risk Management monitors and reports all market risks both on the asset and liability side of our defined benefit pension plans including interest rate risk, inflation risk, credit spread risk, equity risk and longevity risk. For details on our defined benefit pension obligation see additional Note 35 Employee Benefits.

Other Risks

In addition to the above risks, Market Risk Management has the mandate to monitor and manage market risks that arise from capital and liquidity risk management activities of our treasury department. Besides the structural foreign exchange capital hedging process this includes market risks arising from our equity compensation plans.

Market risks in our asset management activities in Deutsche AWM, primarily results from principal guaranteed funds or accounts, but also from co-investments in our funds.

Economic Capital Usage for our Nontrading Market Risk Portfolios per Business Area

Economic Capital Usage of Nontrading Portfolios by Business Division

in m.	Dec 31, 2014	Dec 31, 2013	2014 increase (decrease) from 2013	
			in m.	in %
Corporate Banking & Securities	382	333	49	15
Private & Business Clients	3,196	2,964	232	8
Global Transaction Banking	172	143	29	20
Deutsche Asset & Wealth Management	1,748	1,295	453	35
Non-Core Operations Unit	804	1,362	(558)	(41)
Consolidation & Adjustments	3,596	2,444	1,152	47
Total	9,898	8,541	1,357	16

Nontrading market risk economic capital usage totaled 9,898 million as of December 31, 2014, which is 1,357 million, or 16 %, above our economic capital usage at year-end 2013.

Increases in economic capital usage were largely driven by the increased structural foreign exchange risk and increased pension risk, both reflected in Consolidation & Adjustments.

The increase in economic capital usage for Deutsche AWM was mainly driven by the increased guaranteed funds risk caused by the continued low interest rate environment. At PBC the economic capital usage increase is largely related to our participation in Hua Xia Bank Company Limited. The decrease for NCOU is mainly caused by the sale of The Cosmopolitan Resort & Casino.

N/M Not meaningful

¹ N/M Indicates that the risk is mostly related to off-balance sheet and liabilities items

² Prior year number was adjusted by 44m to reflect the AWM mortgage business

The total economic capital figures do take into account diversification benefits between interest rate & credit spread risks, equity compensation risk, pension risk and structural foreign exchange risk.

Strategic investments. Economic capital usage was mainly driven by our participation in Hua Xia Bank Company Limited.

Alternative assets. The nontrading market risk economic capital decreased during 2014 mainly driven from further de-risking initiatives within the alternative assets portfolio, valuations and foreign exchange effects.

Other nontrading market risks:

Interest rate risk. Besides the allocation of economic capital to outright interest rate risk in the nontrading market risk portfolio, a main component in this category is the maturity transformation of contractually short term deposits. The effective duration of contractually short term deposits is based upon observable client behavior, elasticity of deposit rates to market interest rates (DRE), volatility of deposit balances and Deutsche Bank's own credit spread. Economic capital is derived by stressing modelling assumptions in particular the DRE for the effective duration of overnight deposits. Behavioral and economic characteristics are taken into account when calculating the effective duration and

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Nontrading Market Risk	200
--	--	-----

optional exposures from our mortgages businesses. In total the economic capital usage for December 31, 2014 was 1,683 million, versus 1,601 million for December 31, 2013, predominantly driven by PBC including Postbank, BHW and Deutsche Bank Bauspar and by Treasury, reflected under Consolidation & Adjustments.

Credit spread risk. Economic capital charge for portfolios in the banking book subject to material credit spread risk. Economic capital usage was 319 million as of December 31, 2014, versus 444 million as of December 31, 2013. The decrease in economic capital usage was driven by increased diversification effects with other areas as traded market risk and pension risk.

Equity compensation risk. Risk arising from structural short position in our own share price arising from restricted equity units. The economic capital usage was (237) million as of December 31, 2014 on a diversified basis, compared with (262) million as of December 31, 2013. The negative contribution to our diversified economic capital was derived from the fact that a reduction of our share price in a downside scenario as expressed by economic capital calculation methodology would reduce the negative impact on our capital position from the equity compensation liabilities.

Pension risk. Risk arising from our defined benefit obligations, including interest rate risk and inflation risk, credit spread risk, equity risk and longevity risk. The economic capital usage was 1,189 million and 734 million as of December 31, 2014 and December 31, 2013 respectively. The increase is mainly caused by an increased pension liability resulting from a decline in interest rates and credit spreads during the year as well as changed diversification effects after continuous alignment of the calculation methodology with the traded market risk economic capital calculation.

Structural foreign exchange risk. Our foreign exchange exposure arising from unhedged capital and retained earnings in non-euro currencies in certain subsidiaries. Our economic capital usage was 2,672 million as of December 31, 2014 on a diversified basis versus 2,037 million as of December 31, 2013. The increase is largely caused by a stronger US dollar and the issuance of Additional Tier 1 notes in non-euro currencies.

Guaranteed funds risk. The increase in economic capital usage to 1,425 million as of December 31, 2014 was triggered predominately by higher interest rate risk due to consistently low or even negative interest rates. As of December 31, 2013 the economic capital amounted to 988 million.

Accounting and Valuation of Equity Investments

Outside of trading, equity investments which are neither consolidated for regulatory purposes nor deducted from our regulatory capital are held as equity positions in the regulatory banking book. In our consolidated balance sheet, these equity investments are classified as Financial assets available for sale (AFS) , Equity method investments or Financial assets designated at fair value through profit or loss .

For details on our accounting and valuation policies related to AFS equity instruments and investments in associates and joint ventures please refer to Notes 1 Significant Accounting Policies and Critical Accounting Estimates , 14 Financial Instruments carried at Fair Value and 17 Equity Method Investments .

Equity Investments Held (unaudited)

The following section on Equity Investments Held, ending on page 201, presents specific disclosures in relation to Pillar 3. Per regulation it is not required to audit Pillar 3 disclosures. As such this section is labeled unaudited.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

The tables below present IFRS classifications and the gains (losses) for equity investments held. These equity investments principally constitute equity positions in the regulatory banking book or capital deductions according to CRR. However, the following aspects need to be considered when comparing the equity investments held presented below with the equity position in the regulatory banking book:

Equity investments held by entities, which are consolidated for IFRS purposes but not consolidated for regulatory purposes, are included in the tables.

Collective investment undertakings, which are shown as IFRS, are treated differently for regulatory purposes and are not included in the tables.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Nontrading Market Risk	201
--	--	-----

Entities holding equity investments which are considered for regulatory purposes but not consolidated according to IFRS, do not provide IFRS balance sheet and profit or loss information, and are excluded from these tables. The regulatory exposure value (EAD) of these excluded equity investments amounted to 13 million as of December 31, 2014, and 176 million as of December 31, 2013.

Other positions like equity underlyings resulting from derivative transactions or certain subordinated bonds which from a regulatory point of view are also assigned to the exposure class Equity in the banking book are excluded from the tables. Their EAD amounted to 304 million as of December 31, 2014, and 167 million as of December 31, 2013.

The regulatory equity position includes 1.9 billion EAD as of December 31, 2014, and 3.3 billion EAD as of December 31, 2013, in respect of equity investments which are Group-internal from an IFRS perspective.

Non-exchange-traded positions combine private equity exposures in sufficiently diversified portfolios and other exposures according to Article 447 (c) CRR.

Equity Investments According to IFRS Classification

in m.	Dec 31, 2014	Carrying value Dec 31, 2013
Financial assets available for sale equity instruments	1,928	1,226
Exchange-traded positions	291	327
Non-exchange-traded positions	1,637	899
Equity method investments	4,134	3,574
Exchange-traded positions	3,181	2,616 ¹
Non-exchange-traded positions	953	958 ¹
Financial assets designated at fair value through profit or loss equity instruments	2	119
Exchange-traded positions	0	0
Non-exchange-traded positions	2	119
Total equity investments	6,064	4,919

¹ Comparatives have been restated by 2.6 billion to show participating interest as exchange-traded positions if applicable.

Type and nature of these equity investments predominantly relate to investments as described in the Investment Risk section of this report.

A slight difference between the carrying value of the investment positions and their fair value was only observable for the exchange-traded equity method investments, which had a carrying value of 3.2 billion and a fair value of 3.2 billion as of December 31, 2014 compared with 2.6 billion and a fair value of 1.9 billion as of December 31, 2013.

Realized Gains (Losses) in the Reporting Period and Unrealized Gains (Losses) at Year-end from Equity Investments

in m.	2014	2013
Gains and losses on disposal	202	97
Impairments	(54)	(110)
Pro-rata share of net income (loss)	569	433
Total realized gains (losses) from equity investments	716	420

Dec 31, 2013

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

	Dec 31, 2014	
Unrealized revaluation gains (losses)	658	424
Difference between carrying value and fair value	46	(682)
Total unrealized gains (losses) from equity investments	704	(258)

For AFS equity investments, the components considered are realized gains and losses from sales and liquidations as well as unrealized revaluation gains and losses and impairments. For equity method investments, the gain and loss elements consist of realized gains and losses from sales and liquidations, pro-rata share of net income (loss), impairments and unrealized revaluation gains (losses) in form of the differences between carrying amounts and fair values. In this respect, the realized gains (losses) on disposals, the impairments and the pro-rata share of net income (loss) are referring to the reporting period 2014 and 2013 whereas the unrealized revaluation gains (losses) as well as the difference between the carrying values and the fair values for the at equity investments represent the amounts as of December 31, 2014, and December 31, 2013.

Operational Risk

Definition of Operational Risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. It includes legal risk but excludes business and reputational risk.

We have categorized operational risks into the following risk types for our 2014 self assessment process:

Origination & Execution Risk is the risk that deficiencies and/or errors in the origination of products/services/transactions, their execution, inappropriate business practices, or contractual obligations will result in losses.

Fraud Risk is the risk of incurring losses as a result of an intentional act or omission by an employee or by a third party involving dishonesty, for personal and/or business gain, to avoid personal and/or business loss, or to conceal improper or unauthorized activity. This includes the falsification or alteration of records and reports, facilitation, breach of trust, intentional omission, misrepresentation, concealment, misleading, and the abuse of one's position.

Business Continuity Risk is the risk of incurring losses resulting from the interruption of normal business activities, i.e. interruptions to our infrastructure as well as to the infrastructure that supports our businesses (including third party vendors) and the communities in which we are located.

Regulatory Compliance Risk is the risk of incurring regulatory sanctions (including restrictions on business activities, fines or enhanced reporting requirements), financial and/or reputational damage arising from our failure to comply with applicable laws, rules and regulations.

Information Technology Risk is the risk that our information technology will lead to quantifiable losses due to inadequate information technology and processing in terms of manageability, exclusivity, integrity, controllability, and continuity.

Information Security Risk is the risk of an event which could result in the compromise of organizational assets, including, but not limited to, unauthorized use, loss, damage, disclosure or modification of organization assets. It includes the risk of cyber threats on the organization.

Vendor Risk arises from adverse events and risk concentrations due to failures in vendor selection, insufficient controls and oversight over a vendor and/or services provided by a vendor, and other impacts to the vendor itself.

Fiduciary Service Risk is the risk to fail to act in the best interest of our clients when advising, investing, accounting for or safeguarding client assets, including the failure to prevent, detect or correct negligence and/or violations of fiduciary responsibilities, and the failure to appropriately address fiduciary conflicts of interests that may arise.

Financial Reporting and Recording Risk is the risk that a mis-reporting or mis-recording in the financial statements results in an operational risk related event and, potentially, an operational risk related loss.

Real Estate Risk or Facilities and Infrastructure risk is the risk of incurring a loss resulting from damage to or the loss-of-use of the bank's Facilities/Infrastructure.

Staff Risk is the risk that shortcomings in processes and procedures related to the employment of internal staff either directly generate a loss or indirectly contribute to the occurrence of events in other risk categories.

Tax Compliance Risk describes operational risk related to the filing of tax returns and other tax related tasks, e.g. failure to file advance tax returns, being subject to a tax audit, or incurring tax payments etc.

Transaction Processing Risk is the risk that deficiencies in transaction processing or in our internal processes or controls result in losses. The risk is caused by human error, IT applications system failure and inadequate process design.

Legal Risk may materialize in any of the above risk types due to the fact that in each type, we may be the subject of a claim or proceedings alleging non-compliance with contractual or other legal or statutory responsibilities; or we may otherwise be subject to losses allegedly deriving from other legal circumstances. For details on provisions please refer to Note 29 Provisions of our consolidated financial statements.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Operational Risk	203
--	--	-----

We will migrate to a new risk taxonomy covering non-financial risks such as transaction processing risk, project and transformation risk and reputational risk through the course of 2015 to support the risk assessment process.

Organizational & Governance Structure

The Head of Operational Risk Management (ORM) chairs the Operational Risk Management Committee (ORMC), which is a permanent sub-committee of the Risk Executive Committee and is comprised of those responsible for managing operational risk from our divisions and infrastructure functions. It is the main decision-making committee for all operational risk management matters.

While the day-to-day management of operational risk is the primary responsibility of our business divisions and infrastructure functions, the ORM function manages the cross divisional and cross regional operational risk as well as risk concentrations and promotes a consistent application of our operational risk management framework across the bank. Through our business partnership model, we aim to maintain close monitoring and high awareness of operational risks.

Strengthening controls through Three Lines of Defense

The Three Lines of Defense program is an integral part of Deutsche Bank's strategic agenda. It was initiated in the fourth quarter of 2013 by the Management Board in the context of heightened regulatory standards. The program builds on lessons learned from past control failures and aims to reinforce Deutsche Bank's non-financial risk management capabilities and compliance culture across all corporate divisions and infrastructure functions. Furthermore, it is intended to maintain consistency across the ongoing control enhancement initiatives throughout the bank.

Deutsche Bank defines the Three Lines of Defense as follows:

The First Line of Defense includes all corporate divisions and selected infrastructure functions. First Line of Defense units are ultimately accountable for all risks and controls in their business processes.

The Second Line of Defense encompasses all control functions such as Risk, Compliance, Legal, Human Resources, Finance and Tax. These are responsible for the design of Deutsche Bank's policy framework and independent risk assessment. Second Line of Defense units are independent from the First Line of Defense.

The Third Line of Defense is Group Audit which is responsible for providing independent and objective assurance on the effectiveness of risk management, internal controls and governance processes.

In 2014, the program performed a systematic review of Deutsche Bank's non-financial risk and control organizations and supporting management processes. This led to the following changes:

The Bank established dedicated control units in each First Line of Defense to reinforce the division's accountability for the management of their control environment.

The risk and control responsibilities across the Second Line of Defense control functions were realigned within a common risk and control framework. For selected risks new initiatives were launched to further strengthen Deutsche Bank's control framework.

The risk and control assessment approach was enhanced towards an integrated framework shared by all three Lines of Defense to ensure the use of common standards.

Key themes for 2015 are the further build-out of the control organization, the rollout of the enhanced risk and control assessment framework as well as continuing the work across all three Lines of Defense regarding specific control enhancements. This also includes the rollout of the enhanced Three Lines of Defense model into the regions.

--	--	-----

Managing Our Operational Risk

We manage operational risk based on a Group-wide consistent framework that enables us to determine our operational risk profile in comparison to our risk tolerance, to systematically identify operational risk themes and concentrations, and to define risk mitigating measures and priorities. The global operational risk framework is applicable to all risk types included in the definition for operational risk.

In order to cover the broad range of operational risk types as outlined in the definition of operational risk, our framework contains a number of operational risk management techniques. These aim to efficiently manage the operational risk in our business and are used to identify, assess and mitigate operational risks:

The continuous collection of operational risk loss events, as a prerequisite for operational risk management, includes detailed analyses, the identification of mitigating actions, and timely information of the senior management. All losses above 10,000 are collected in our db-Incident Reporting System (dbIRS).

The Lessons Learned process is triggered for events, including near misses, above 1 million. This process includes, but is not limited to: systematic risk analyses, including a description of the business environment in which the loss occurred, previous events, near misses and event-specific Key Risk Indicators (KRI), consideration of any risk management decisions connected with the specific risk taken, root cause analyses, review of control improvements and other actions to prevent or mitigate the recurrence, and assessment of the residual operational risk exposure.

The Lessons Learned process is an important means of identifying emerging areas of risk and to define appropriate risk mitigating actions. All corrective actions are captured and monitored for resolution via actions plans in our tracking system dbTrack . The execution of corrective actions is reported on a monthly basis to senior management via the ORMC.

We systematically utilize information on external loss events occurring in the banking industry to prevent similar incidents from happening to us, e. g. by particular deep dive analyses or risk profile reviews.

In addition to internal and external loss information, scenarios are utilized and actions are derived from them. The set of scenarios consists of relevant external scenarios provided by a public database and internal scenarios. The latter are generated to complete our risk profile.

Regular operational risk profile reports at a Group level for our business divisions, for the countries in which we operate and for our infrastructure functions, are reviewed and discussed with the departments senior management. Regular risk profile reviews enable us to detect changes in the business units risk profiles as well as risk concentrations across the Group early on, and to take appropriate corrective actions. We assess and approve the impact of changes on our risk profile as a result of new products, outsourcing activities, strategic initiatives, and acquisitions and divestments.

Once operational risks are identified, mitigation is required following the as low as reasonably practicable (ALARP) principle by balancing the cost of mitigation with the benefits thereof, and formally accepting the residual operational risk. Risks which violate applicable national or international regulations and legislation cannot be accepted; once identified, such risks must always be mitigated.

When we implement risk mitigating measures, we monitor them until they are resolved within our tracking tool dbTrack . Residual operational risks rated higher than important need to be accepted by the risk bearing division and the ORMC.

We perform top risk analyses in which the results of the aforementioned activities are considered. The Top Risk Analyses are a primary input for the annual operational risk management strategy and planning process. Besides the operational risk management strategic and tactical planning, we define capital and expected loss targets which are monitored on a regular basis within a quarterly forecasting process.

We continuously seek to enhance the process to assess whether identified issues require a broader approach across multiple entities and locations within Deutsche Bank. A review of material findings is performed in order to assess their relevance to areas of the Bank other than where they originated.

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Operational Risk

205

KRIs are used to monitor the operational risk profile and alert the organization to impending problems in a timely fashion. KRIs allow the monitoring of the bank's control culture and business environment and trigger risk mitigating actions. They facilitate the forward looking management of operational risks, based on early warning signals returned by the KRIs.

In our bottom-up self assessment (SA) process, which is conducted at least annually, areas with high risk potential are highlighted, and risk mitigating measures to resolve issues are identified. On a regular basis we conduct risk workshops aiming to evaluate risks specific to local legal entities and the countries we operate in, and take appropriate risk mitigating actions.

Additional functions, methodologies and tools implemented by the responsible divisions are utilized to complement the global operational risk framework and specifically address the risk types. These include but are not limited to:

A Legal Risk Management (LRM) function in the Legal Department was established in 2013. This function is exclusively dedicated to the identification and management of legal risk. In addition to being used for reporting purposes, LRM's analysis is applied to our control framework as it relates to legal risk in order to promote that it is sufficiently robust, including remediation of highlighted issues (whether via new or existing initiatives); and also as a further means of Legal's input being a significant decision-making criterion for our businesses. The LRM function has a mandate to undertake a broad variety of tasks aimed at proactively managing legal risk, including: devising, implementing and overseeing an annual Legal Risk Assessment Program; agreeing and participating in resulting portfolio reviews and mitigation plans; and administering the Legal Lessons Learned process. The LRM function also coordinates Legal's response to DB's Three Lines of Defense program.

The Legal Risk Assessment Program enables us to analyze existing and historic legal risks and, importantly, to better assess the potential for future legal risk events. This requires the participation of the business division (represented by Divisional Control Officer, DCO), Legal Advisory, LRM and ORM, and involves a primary self assessment on pre-defined terms by the business and a secondary assessment by the relevant Legal Advisory teams in order to form a global view of that business' products, activities and locations.

The Legal Lessons Learned process is a means of identifying, on a quarterly basis, legal risks arising from our activities; and of devising appropriate steps to remediate, mitigate or prevent such risks in future. The Legal Lessons Learned process is a retrospective one, whereby existing or completed matters are considered with a view to identifying legal lessons that can be learned from those matters and taking such steps as may be necessary for those legal lessons to be learned. Overall management of the Legal Lessons Learned process is the responsibility of the LRM function, working with ORM, DCO and the Legal Department via its Operating Committees.

The operational risk from outsourcing is managed by the Vendor Risk Management (VRM) Process and documented in the VRM database. The outsourcing risk is assessed and managed for all outsourcing arrangements individually, following the Vendor Risk Management Policy and in line with the overall ORM framework. A broad governance structure is established to promote appropriate risk levels.

Fraud Risk is managed based on section 25a of the German Banking Act (KWG) as well as other legal and regulatory requirements via a risk based approach, governed by the Global Anti-Fraud Policy and corresponding Compliance and Anti-Money-Laundering (AML) framework. In line with regulatory requirements, a global risk assessment is performed on a regular basis. Within the general management of operational risks, dedicated Fraud Risk relevant aspects are part of the self assessment process.

Deutsche Bank manages Business Continuity (BC) Risk with its Business Continuity Management (BCM) Program which outlines core procedures for the relocation or the recovery of operations in response to varying levels of disruption. Within this program, each of our core businesses functions and infrastructure groups set up, maintain and periodically test business continuity plans (BC Plans) to promote continuous and reliable service. The BCM Program has defined roles and responsibilities which are documented in corporate standards. Compliance with these standards is monitored regionally by dedicated business continuity teams. Reporting to the Group Resiliency Committee, which is a sub-committee of the Group Oper-

Financial Report 20141 Management Report
Risk Report
Operational Risk

206

ating Committee, is a quarterly requirement. Furthermore, key information on the established BCM control environment feed into operational risk KRIs.

The operational risk in Technology is managed within the technology area, following international standards for IT management. Applications and IT infrastructure are catalogued and assessed on a regular basis. Stability monitoring is established. Key outcomes of the established assessment and control environment are used as input for operational risk metrics such as KRIs or self assessments. A new Operational Risk Assessment Policy for Change-the-Bank Processes has been implemented for material systems and process changes. All material change initiatives are assessed for operational risks stemming from process/systems changes via an embedded ORM framework for change-the-bank operational risk assessments. Identified risks and mitigating actions are tracked in Deutsche Bank's system as mentioned above.

Although we have established a comprehensive framework for managing operational risks, including specific methodologies and techniques, we nevertheless face a trend of increasing operational risk losses and capital demand as has been the case with much of our industry. In a consolidated effort to continuously enhance the operational risk management framework, we recently added top risk analyses as an additional reporting component to our management reporting:

The top risk analysis aims to identify our most critical risks and those of our respective business divisions in terms of probability and severity. With the inclusion of the top risk reporting component in the standard global operational risk management reporting, we increase the engagement of senior management in the operational risk management process by providing transparency of our operational risk portfolio for the regions in which we operate and our business divisions. It forms a comprehensive report on a global level. This facilitates senior management's conversations on our top risks and strengthens ownership and accountability by presenting specific action plans for risk mitigation, including responsibilities and target dates, adapted to our risk tolerance.

Below we show selected examples for the usage of the top risk analysis and actions derived from this process to mitigate the inherent risks. In line with our main peers and the general situation throughout the financial industry, we currently identify among our top risks such topics that result directly or as second order effects from the financial crisis:

Uncertainty of litigation outflow: Improper and potentially improper business practices of the past were revealed by or following the crisis and further litigation has been induced by the change in market sentiment resulting from the crisis. These have led and may in future lead to significant regulatory fines or settlements from lawsuits initiated by respective business counterparties.

Regulatory driven change agenda: The multiplicity of new regulatory requirements, as a reaction to the financial crisis, have already placed significant burden and cost on us, but could lead to additional regulatory sanctions in case of non-compliance.

Internally driven change agenda: In order to meet profitability targets it is necessary for us to increase efficiency. In combination with the above mentioned points this results in pressure on us to re-organize and streamline our portfolios and business processes. The respective change initiatives bear potential transition risk or could potentially expose us to new operational risks.

In response to the challenges of the financial crisis, ORM introduced a set of measures and revised tools to improve the operational risk management of the top risks by strengthening the organizational robustness and enhancing the risk management processes. The key projects are outlined below:

Operational Risk Management Target Operating Model

We are currently redefining the responsibilities for managing operational risks within the Group under adoption of the Three Lines of Defense program. Key changes and improvements within the Three Lines of Defense model affect the roles and responsibilities of the first and second lines of Defense, risk taxonomies and the organizational structure of ORM. Regarding risk taxonomies ORM takes the second line control function

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Operational Risk	207
--	--	-----

responsibility for the following non-financial risk types: transaction processing risk, project and transformation risk and reputational risk. This will be reflected in the organizational structure of ORM.

Self Assessment process as part of ORM's Target Operating Model

We have initiated a project to review the self assessment processes and to enhance the resulting qualitative risk management information set. This will align, connect and integrate key non-financial risk assessment processes (e.g. for operational, compliance and legal risks).

OR assessments on change initiatives

In reaction to our comprehensive change agenda, and our inherent operational project risks, we set up a specific operational risk assessment. For critical control initiatives, i.e. those initiatives considered crucial to the success of our cultural change program, specific operational risk assessments of the internal control environment were introduced to assess the operational risk impact of such initiatives onto the Group.

Measuring Our Operational Risks

We calculate and measure the regulatory and economic capital for operational risk using the internal Advanced Measurement Approach (AMA) methodology. Our AMA capital calculation is based upon the loss distribution approach (LDA). Gross losses from historical internal and external loss data (Operational Riskdata eXchange Association (ORX) consortium data), adjusted for direct recoveries, and external scenarios from a public database (IBM OpData) complemented by internal scenario data are used to estimate the risk profile (that is, a loss frequency and a loss severity distribution). Thereafter, the frequency and severity distributions are combined in a Monte Carlo simulation to generate potential losses over a one year time horizon. Finally, the risk mitigating benefits of insurance are applied to each loss generated in the Monte Carlo simulation. Correlation and diversification benefits are applied to the net losses in a manner compatible with regulatory requirements to arrive at a net loss distribution at Group level, covering expected and unexpected losses. Capital is then allocated to each of the business divisions and both, a qualitative adjustment and an expected loss deduction, are performed.

The qualitative adjustment (QA) reflects the effectiveness and performance of the day-to-day operational risk management activities via KRIs and self assessment scores, focusing on the business environment and internal control factors. The qualitative adjustment is applied as a percentage adjustment to the final capital number. This approach makes qualitative adjustments transparent to the management of the businesses and provides feedback on their risk profile as well as on the success of their management of operational risks. It thus provides incentives for the businesses to continuously improve the management of operational risks in their areas.

The expected loss (EL) for operational risk is based on historical loss experience and expert judgment, considering business changes denoting the expected cost of operational losses for doing business. To the extent it is considered in the divisional business plans, it is deducted from the AMA capital figure within certain constraints. The unexpected losses per business division (after QA and EL) are aggregated to produce the Group AMA capital figure.

Regulatory and economic capital for operational risk is calculated on a quarterly basis. The used internal data are captured in a snapshot at the beginning of the quarterly production cycle and undergo a quality assurance and sign-off process. Therefore, the complete history of previous quarters' internal losses is taken into account in the calculation of the capital figures. ORX external data is submitted by the ORX members and also undergo quality assurance and sign-off. These data are recognized in the capital calculation at the earliest after six months. For the additional external loss data sourced from the IBM OpData (formerly named OpVantage), we use the data that are available twice a year (in the first and third quarters).

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Operational Risk	208
--	--	-----

Economic capital is derived from the 99.98 % percentile, allocated to the business divisions, and used for performance measurement and resource allocation purposes, providing an incentive to manage operational risks, and optimizing the utilization of economic capital. The regulatory capital for operational risk applies the 99.9 % percentile. Economic and regulatory capital are calculated for a time horizon of one year.

Continued Operational Risk Framework Development

The AMA model is subject to continuous validation and enhancement, as we attempt to adequately reflect our risk profile. As part of the continuous enhancement and validation of our model we submitted model changes to BaFin and are awaiting approval from the joint supervisory team (BaFin and ECB). These model changes include an improved validation and recalibration methodology for insurance recoveries, changes to the modeling of the loss frequency as well as an enhanced scoring mechanism for the self assessment results in our AMA model.

Further, we have submitted an additional model change request to BaFin to replace the 1 billion economic capital safety margin, which we have continuously applied since its implementation in 2011. This model change, which adds increased forward looking aspects to the AMA model, will result in higher economic capital even after we remove the safety margin. This change will make our model more risk sensitive by including reasonably possible litigation losses in our Relevant Loss Data set. Reasonably possible litigation losses may result from ongoing and new legal matters which are reviewed quarterly and are based on the judgment provided by our Legal Department.

While our dialogue with the joint supervisory team on these model enhancements is on-going, management has decided to recognize the impact of these model changes in the second quarter 2014 wherever they will lead to an increase in the capital requirement over the models that have previously been approved by BaFin.

Our Operational Risk Management Stress Testing Concept

We conduct stress testing on a regular basis and separate from our AMA methodology, to analyze the impact of extreme macro scenarios on our capital and the profit-and-loss account. In 2014, ORM took part in all firm-wide stress test scenarios and assessed and contributed the impact of operational risk to the various stress levels of the scenarios. The impact of operational risk on macro stress test scenarios has been moderate and remained in the expected range in regards to capital.

Our AMA Model Validation and Quality Assurance Review Concept

We independently validate all our AMA model components such as but not limited to scenario analysis, KRIs and Self Assessments, Expected Loss and internal loss data individually. The results of the validation exercise are summarized in validation reports and issues identified are followed up for resolution. This promotes enhancement of the methodologies. The validation activities performed in 2013 detected areas of improvement in our AMA model regarding the estimation of the loss frequency and the use of reasonably possible litigation losses. The results of this validation lead to model enhancements which increased the economic capital.

Quality Assurance Reviews are performed for the AMA components requiring data input provided by business divisions and result in capital impact. The AMA components data and documentation is challenged and compared across business divisions to help us maintain consistency and adequacy for any capital calculation.

Operational Risk Risk Profile

Operational Risk Losses by Event Type (Profit and Loss view)

in m.	2014	2013 ¹
Clients, Products and Business Practices	1,742	2,438
Internal Fraud	498	913
External Fraud	20	(69)
Execution, Delivery and Process Management	72	68
Others	61	32
Group	2,393	3,382

¹ Changed 2013 loss figures due to subsequent booking of losses and reclassification.

Profit and loss based operational losses decreased by 1.0 billion or 29 % compared to year-end 2013. The decrease was predominantly driven by the event types Clients, Products and Business Practices and Internal Fraud (see section Definition of Operational Risk Fraud Risk), due to settlements reached and decreased litigation reserves for unsettled cases. The increase in the event type External Fraud is caused by a gain from a direct recovery in 2013. The event type Execution, Delivery and Process Management is stable, other event types increased slightly.

The above left pie chart Frequency of Operational Losses summarizes operational risk events which occurred in the five-year period 2010-2014, based on the period in which a loss was first recognized for that event. For example, for a loss event that was first recognized in 2002 with an additional profit/loss event recognized in 2014, the frequency chart would not include the loss event, but the loss distribution chart would include the profit/loss recognized in the respective period.

Frequencies are dominated by the event type External Fraud with a frequency of 53 % of all observed loss events. The event types Execution, Delivery and Process Management contribute 25 % of the events and Clients, Product and Business Practices 20 %. Others are stable at 2 %. The event type Internal Fraud has a low frequency, resulting in 0.2 % of the loss events in the period 2010-2014. This is unchanged compared to 2009-2013.

The above right pie chart Distribution of Operational Losses summarizes operational risk loss postings recognized in the profit/loss over the five-year period 2010-2014. The event type Clients, Product and Business Practices dominates the operational loss distribution with a share of 64 % and is determined by outflows related to litigation, investigations and enforcement actions. Internal Fraud has the second highest share (21 %) which is related to regulatory events we have experienced in recent years. Finally, the event types External

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Operational Risk	210
--	--	-----

Fraud (9 %) and Execution, Delivery and Process Management (4 %) can be considered minor, compared to other event types.

Economic Capital usage for Operational Risks

Economic Capital Usage for Operational Risk by Business Division

in m.	Dec 31, 2014	Dec 31, 2013	2014 increase (decrease) from 2013 ¹	
			in m.	in %
Corporate Banking & Securities	3,569	2,453	1,116	45
Private & Business Clients	1,088	803	285	35
Global Transaction Banking	150	96	54	56
Deutsche Asset & Wealth Management	722	580	142	24
Non-Core Operations Unit	2,070	1,320	750	57
Total economic capital usage for operational risk	7,598	5,253	2,345	45

¹ Amounts allocated to the business segments have been restated to reflect comparatives according to the structure as of December 31, 2014.

The economic capital usage for operational risk as of December 31, 2014 was 7.6 billion, 2.3 billion or 45 % higher compared to year-end 2013. The increase was mainly driven by an early recognition of the impact of model enhancements to our Advanced Measurement Approach (AMA) model that were implemented in the second quarter and which initially led to additional economic capital of 1.1 billion. These model enhancements led to a reflection of the operational risk losses that have materialized and which are largely due to outflows related to litigation, investigations and enforcement actions. The increase in economic capital is spread across all business divisions.

The economic capital continues to include the safety margin applied in our AMA model. It was implemented in 2011 to cover unforeseen legal risks from the recent financial crisis. The model enhancements mentioned above are intended to replace the safety margin by a more risk sensitive measure. Therefore the impact of the model change above the safety margin is recognized in the economic capital. This will result in higher economic capital even after we remove the safety margin.

Role of Corporate Insurance/Deukona

The definition of our insurance strategy and supporting insurance policy and guidelines is the responsibility of our specialized unit Corporate Insurance/Deukona (CI/D). CI/D is responsible for our global corporate insurance policy which is approved by our Management Board.

CI/D is responsible for acquiring insurance coverage and for negotiating contract terms and premiums. CI/D also has a role in the allocation of insurance premiums to the businesses. CI/D specialists assist in devising the method for reflecting insurance in the capital calculations and in arriving at parameters to reflect the regulatory requirements. They validate the settings of insurance parameters used in the AMA model and provide respective updates. CI/D is actively involved in industry efforts to reflect the effect of insurance in the results of the capital calculations.

We buy insurance in order to protect ourselves against unexpected and substantial unforeseeable losses. The identification, definition of magnitude and estimation procedures used are based on the recognized insurance principles and methods. The maximum limit per insured risk takes into account the reliability of the insurer and a cost/benefit ratio, especially in cases in which the insurance market tries to reduce coverage

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

by restricted/limited policy wordings and specific exclusions.

We maintain a number of captive insurance companies, both primary and re-insurance companies. However, insurance contracts provided are only considered in the modeling/calculation of insurance-related reductions of operational risk capital requirements where the risk is re-insured in the external insurance market.

The regulatory capital figure includes a deduction for insurance coverage amounting to 564 million as of December 31, 2014 compared with 522 million as of December 31, 2013. Currently, no other risk transfer techniques beyond insurance are recognized in the AMA model.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Liquidity Risk	211
--	--	-----

CI/D selects insurance partners in strict compliance with the regulatory requirements specified in the CRR and based on recommendations of the respective subject matter experts on the recognition of insurance in advanced measurement approaches. The insurance portfolio, as well as CI/D activities, is audited by Group Audit on a risk-based approach.

Liquidity Risk

Liquidity risk is the risk arising from our potential inability to meet all payment obligations when they come due or only being able to meet these obligations at excessive costs.

Our liquidity risk management framework has been an important factor in maintaining adequate liquidity and in managing our funding profile during 2014.

Liquidity Risk Management Framework

The Management Board defines our liquidity risk strategy, and in particular our appetite for liquidity risk based on recommendations made by the Capital and Risk Committee. At least once every year the Management Board will review and approve the limits which are applied to the Group to measure and control liquidity risk as well as our long-term funding and issuance plan.

Our Treasury function is responsible for the management of our liquidity and funding risk globally as defined in the liquidity risk strategy. Our liquidity risk management framework is designed to identify, measure and manage our liquidity risk position. Liquidity Risk Control is responsible for the internal reporting on liquidity and funding across the firm on a global and local level. The Management Board, in this context, is updated at least weekly via a Liquidity Scorecard. In addition Liquidity Risk Control is responsible for the oversight and validation of the bank's liquidity risk framework. This includes the independent validation of all liquidity risk models as well as the review and back-testing of limits. Our liquidity risk management approach starts at the intraday level forecasting cash flows and factoring in our access to Central Banks. It then covers tactical liquidity risk management dealing with access to secured and unsecured funding sources. Finally, the strategic perspective comprises the maturity profile of all assets and liabilities (Funding Matrix) and our issuance strategy.

Our cash-flow based reporting system provides daily liquidity risk information to global and local management.

Stress testing and scenario analysis plays a central role in our liquidity risk management framework. This also incorporates an assessment of asset liquidity, i.e., the characteristics of our asset inventory, under various stress scenarios as well as contingent funding requirements from off-balance-sheet commitments. Daily stress test results are used to monitor our ongoing compliance with the Board's overall liquidity risk appetite. Furthermore, our short-term wholesale funding profile limits (both unsecured and secured) which are a key tool of the framework are calibrated against the stress test results on a monthly basis.

Short-term Liquidity and Wholesale Funding

Our Group-wide reporting system tracks all contractual cash flows from wholesale funding sources on a daily basis over a 12-month horizon. We consider as wholesale funding for this purpose unsecured liabilities raised primarily by our Global Liquidity Management business as well as secured liabilities primarily raised by our Global Liquidity Management and Equities businesses. Such liabilities primarily come from corporates, banks and other financial institutions, governments and sovereigns. Wholesale funding profile limits, which are calibrated against our monthly stress testing results and are approved by the Management Board according to internal governance, express our maximum appetite for liquidity risk. The wholesale funding limits apply to the respective cumulative global cash outflows as well as the total volume of unsecured wholesale funding and are monitored on a daily basis. Our Liquidity Reserves are the primary mitigant against stresses in short-term wholesale funding markets. At an individual entity level we may set liquidity outflow limits across a broader range of cash flows where this is considered to be meaningful or appropriate.

Funding Markets and Capital Markets Issuance

2014 was a relatively benign year for bank credit and funding conditions as evidenced by the development of the itraxx Senior Financial Index which peaked at 106 in January, averaged 92 bps over Q1, 75 bps over Q2 and closed the year at 69 bps. Our 5 year CDS traded within a range of 58 to 102 bps, peaking in February. Since then, the spread has declined and as of year-end was trading in the middle of the range for the year. The spreads on our bonds exhibited similar volatility. For example, our 9 year EUR benchmark (2.375 % coupon, maturing in January 2023) traded in a range of 27 to 60 bps, closing near its year lows.

Our 2014 funding plan of up to 35 billion, comprising debt issuance with an original maturity in excess of one year, was fully completed and we concluded 2014 having raised 44.1 billion in term funding. The over-fulfillment of 9.1 billion represents prefunding for 2015. This funding was broadly spread across the following funding sources: unsecured benchmark issuance (17.1 billion), Additional Tier 1 benchmark issuance (4.8 billion), unsecured retail-targeted issuance (9.8 billion) and unsecured and secured private placements (12.3 billion). Of the 44.1 billion total, the majority was in U.S. dollar (22.2 billion). We also issued 17.8 billion in Euro and smaller amounts in JPY and GBP. In addition to direct issuance, we use long-term cross currency swaps to manage our funding needs outside of EUR. Our investor base comprised retail customers (25 %), banks (19 %), asset managers and pension funds (29 %), insurance companies (6 %) and other, including institutional investors (21 %). The geographical distribution was split between Germany (19 %), Rest of Europe (29 %), US (29 %), Asia/Pacific (16 %) and Other (6 %). Of our total capital markets issuance outstanding as of December 31, 2014, approximately 85 % was issued on an unsecured basis.

The average spread of our issuance over the relevant floating index (i.e., Libor) was 45 bps for the full year with an average tenor of 4.8 years. Our issuance activities were higher in the first half of the year with volumes decreasing in the second half of the year 2014. We issued the following volumes over each quarter: 8.5 billion, 16.3 billion, 11.4 billion and 7.9 billion, respectively.

In 2015, our base case funding plan is 30 to 35 billion which we plan to cover by accessing the above sources, without being overly dependent on any one source. We also plan to raise a portion of this funding in U.S. dollar and may enter into cross currency swaps to manage any residual requirements. We have total capital markets maturities, excluding legally exercisable calls of approximately 22 billion in 2015.

For information regarding the maturity profile of our wholesale funding and capital markets issuance please refer to the table on pages 214 to 215.

Funding Diversification

Diversification of our funding profile in terms of investor types, regions, products and instruments is an important element of our liquidity risk management framework. Our most stable funding sources are capital markets and equity, retail, and transaction banking clients. Other customer deposits and borrowing from wholesale clients are additional sources of funding. Unsecured wholesale funding represents unsecured wholesale liabilities sourced primarily by our Global Liquidity Management business. Given the relatively short-term nature of these liabilities, they are primarily used to fund cash and liquid trading assets.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

To promote the additional diversification of our refinancing activities, we hold a Pfandbrief license allowing us to issue mortgage Pfandbriefe.

In 2014, we reduced our overall funding volume in line with the broader balance sheet de-leveraging. Total external funding declined by 64 billion (6.5 %) during the year of which the majority came in our CB&S business, in particular we reduced secured funding and shorts by 69 billion (46 %), other customers by 23 billion (24 %) and unsecured wholesale funding by 19 billion (26 %). We also saw smaller reductions from financing vehicles (7 billion, 37 %). These reductions more than offset the increases in capital markets and equity (29 billion, 16 %), retail clients (19 billion, 7 %) and transaction banking (6 billion, 4 %). The overall proportion of our most stable funding sources (comprising capital markets and equity, retail, and transaction banking) increased from 66 % to 76 %.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Liquidity Risk	213
--	--	-----

Unsecured wholesale funding comprises a range of unsecured products e.g. Certificates of Deposit (CDs), Commercial Paper (CP) as well as term, call and overnight deposits across tenors primarily up to one year. Asset-Backed Commercial Paper (ABCP) issued through conduits is included within Financing Vehicles.

The overall volume of unsecured wholesale funding and secured funding fluctuated between reporting dates based on our underlying business activities. These fluctuations are dependent on client-related securities financing activities as well as changes in liquid trading inventories during the quarter.

To avoid any unwanted reliance on these short-term funding sources, and to promote a sound funding profile at the short end, which complies with the defined risk appetite, we have implemented limit structures (across tenor) to these funding sources, which are derived from our monthly stress testing analysis. In addition, we are setting a limit on the total volume of unsecured wholesale funding to manage the reliance on this funding source as part of the overall funding diversification.

The following chart shows the composition of our external funding sources that contribute to the liquidity risk position, both in EUR billion and as a percentage of our total external funding sources.

The following table shows the contractual maturity of our short-term wholesale funding (comprising unsecured wholesale funding plus asset-backed commercial paper), as well as our capital markets issuance.

Funding Matrix

We map all funding-relevant assets and all liabilities into time buckets corresponding to their economic maturities to compile a maturity profile (funding matrix). The funding matrix is compiled on an aggregated currency basis, as well as for selected individual currencies and legal entities. Given that trading assets are typically more liquid than their contractual maturities suggest, we determine individual liquidity profiles reflecting

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

their relative liquidity value. We take assets and liabilities from the retail bank (mortgage loans and retail deposits) that show a behavior of being renewed or prolonged regardless of capital market conditions and assign them to time buckets reflecting the expected prolongation. Wholesale banking products are included with their contractual maturities.

The funding matrix identifies the excess or shortfall of assets over liabilities in each time bucket, facilitating management of open liquidity exposures. The funding matrix analysis together with the strategic liquidity planning process, which forecasts the funding supply and demand across business units, provides the key input parameter for our annual capital market issuance plan. Upon approval by the Management Board the capital markets issuance plan establishes issuing targets for securities by tenor, volume and instrument. We also maintain a stand-alone U.S. dollar funding matrix which limits the maximum short position in any time bucket (>1 year to >10 years) to 10 billion. This supplements the risk appetite for our aggregate currency funding matrix which requires us to maintain a positive funding position in any time bucket (>1 year to > 10 years). Both funding matrices were in line with the respective risk appetite as of year ends 2014 and 2013.

Transfer Pricing

We operate a global funds transfer pricing framework that applies to all businesses and regions and promotes pricing of (i) assets in accordance with their underlying liquidity risk, (ii) liabilities in accordance with their liquidity value and funding maturity and (iii) contingent liquidity exposures in accordance with the cost of providing for commensurate liquidity reserves to fund unexpected cash requirements.

Within this funds transfer pricing framework we allocate funding and liquidity risk costs and benefits to the firm's business units based on market rates reflecting the economic costs of liquidity for Deutsche Bank. Treasury might set further financial incentives in line with the bank's liquidity risk guidelines. In addition,

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Liquidity Risk

216

Deutsche Bank's funds transfer pricing framework reflects regulatory principles and guidelines. While the framework ensures a diligent group-wide allocation of the bank's funding costs to the liquidity users, it also provides an incentive based compensation framework for businesses generating stable long-term and stress compliant funding. Funding relevant transactions are subject to liquidity (term) premiums and/or other funds transfer pricing mechanisms depending on market conditions. Liquidity premiums are set by Treasury and picked up by a segregated Treasury liquidity account which is the aggregator of liquidity costs. The management and allocation of the liquidity account cost base is the key variable for funds transfer pricing within Deutsche Bank.

Liquidity Reserves

Liquidity reserves comprise available cash and cash equivalents, highly liquid securities (includes government, agency and government guaranteed) as well as other unencumbered central bank eligible assets.

The volume of our liquidity reserves is a function of our expected monthly stress result, both at an aggregate level as well as at an individual currency level. To the extent we receive incremental short-term wholesale liabilities which attract a high stress roll-off, we will largely keep the proceeds of such liabilities in cash or highly liquid securities as a stress mitigant. Accordingly, the total volume of our liquidity reserves will fluctuate as a function of the level of short-term wholesale liabilities held, although this has no material impact on our overall liquidity position under stress. Our liquidity reserves include only assets that are freely transferable within the Group, or can be applied against local entity stress outflows. We hold the vast majority of our liquidity reserves centrally, at our parent and our foreign branches with further reserves held at key locations in which we are active. While we hold our reserves across major currencies, their size and composition are subject to regular senior management review. In addition to the reported liquidity reserves below, there was an amount of \$32 billion of liquidity reserves, in excess of local stress outflows, that remains in entities which are subject to transfer restrictions due to local connected lending requirements or similar regulatory restrictions. We therefore do not include such amounts into our freely transferable liquidity reserves.

Composition of our freely transferable liquidity reserves by parent company (including branches) and subsidiaries

in bn.	Dec 31, 2014		Dec 31, 2013	
	Carrying Value	Liquidity Value	Carrying Value	Liquidity Value
Available cash and cash equivalents (held primarily at central banks)	65	65	78	77

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Parent (incl. foreign branches)	149	139	156	147
Subsidiaries	35	32	41	36

As of December 31, 2014, our freely transferable liquidity reserves amounted to 184 billion compared with 196 billion as of December 31, 2013. The primary driver of the decrease of 12 billion in 2014 was a reduction of 19 billion in our unsecured wholesale funding during the year, together with reductions in other liability sources. Our average liquidity reserves during the year were 190 billion compared with 216 billion during 2013. In the table above the carrying value represents the market value of our liquidity reserves while the liquidity value reflects our assumption of the value that could be obtained, primarily through secured funding, taking into account the experience observed in secured funding markets at times of stress.

Stress Testing and Scenario Analysis

We use stress testing and scenario analysis to evaluate the impact of sudden and severe stress events on our liquidity position. The scenarios we apply have been based on historic events, such as the 1987 stock market crash, the 1990 U.S. liquidity crunch and the September 2001 terrorist attacks, liquidity crisis case studies and hypothetical events, as well as the lessons learned from the latest financial markets crisis.

They include a prolonged term money-market and secured funding freeze, collateral repudiation, reduced fungibility of currencies, stranded syndications as well as other systemic knock-on effects. The scenario types cover institution-specific events (i.e., rating downgrade), market related events (i.e., systemic market risk) as well as a combination of both, which links a systemic market shock with a multi-notch rating downgrade. We apply stress scenarios to selected significant currencies and entities. As a result of the recent downgrades of Deutsche Bank's credit ratings, we have adjusted the most severe idiosyncratic scenario (previously A-2/P-2). This scenario is now called severe downgrade scenario and describes a downgrade of Deutsche Bank to a long-term rating level of BBB/Baa2 and short-term rating of A-3/P-3 across all major rating agencies.

Under each of these scenarios we assume a high degree of rollovers of maturing loans to non-wholesale customers (in order to support franchise value) whereas the rollover of liabilities will be partially or fully impaired resulting in a funding gap. In this context, wholesale funding from the most risk sensitive sources (including unsecured funding from commercial banks, money market mutual funds, as well as asset backed commercial paper) is assumed to contractually roll off in the acute phase of stress. In addition, we analyze the potential funding requirements from contingent risks which could materialize under stress. Those include drawings of credit facilities, increased collateral requirements under derivative agreements as well as outflows from deposits with a contractual rating trigger. We then model the steps we would take to counterbalance the resulting net shortfall in funding. Countermeasures would include our Liquidity Reserves, as well as potential further asset liquidity from other unencumbered securities. Stress testing is conducted at a global and individual legal entity level and across significant non-eurozone currencies, in particular USD as the major non-EUR funding currency. We review material stress-test assumptions on a regular basis and have increased the severity of a number of these assumptions through the course of 2014.

Stress testing is fully integrated in our liquidity risk management framework. For this purpose we use the contractual wholesale cash flows per currency and product over an eight-week horizon (which we consider the most critical time span in a liquidity crisis) and apply the relevant stress case to all potential risk drivers from on-balance sheet and off-balance sheet products. Beyond the eight week time horizon we analyze on a monthly basis the impact of a more prolonged stress period extending out to twelve months. The liquidity stress testing provides the basis for the bank's contingency funding plan which is approved by the Management Board.

Our stress testing analysis assesses our ability to generate sufficient liquidity under extreme conditions and is a key input when defining our target liquidity risk position. The stress testing analysis is performed daily. The following table shows, that under each of our defined and regularly reviewed scenarios we would maintain a positive net liquidity position, as the counterbalancing liquidity we could generate via different sources more than offsets our cumulative funding gap over an eight-week horizon after occurrence of the triggering event.

With the increasing importance of liquidity management in the financial industry, we maintain an active dialogue with central banks, supervisors, rating agencies and market participants on liquidity risk-related topics. We participate in a number of working groups regarding liquidity and support efforts to create industry-wide standards to evaluate and manage liquidity risk at financial institutions. In addition to our internal liquidity management systems, the liquidity exposure of German banks is regulated by the German Banking Act, the CRR, the Single Supervisory Mechanism and accompanying regulations.

Liquidity Requirements under CRR

As part of the Basel 3 rules, the Basel Committee on Banking Supervision specified two minimum liquidity standards for banks:

The Liquidity Coverage Ratio (LCR): Finalized by the Basel Committee in January 2013, the LCR is intended to promote the short-term resilience of a bank's liquidity risk profile over a 30 day stress scenario. The ratio is defined as the amount of High Quality Liquid Assets (HQLA) that could be used to raise liquidity, measured against the total volume of net cash outflows, arising from both actual and contingent exposures, in a stressed scenario.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

This requirement has been implemented into European law, via the European Commission Delegated Act, published on January 17, 2015. Compliance with the LCR, will not be required in Europe until October 1, 2015 at the earliest. The Liquidity Coverage Ratio is subject to a transitional phase-in period, starting at 60 % in October 2015, which will be increased to 70 % in 2016, 80 % in 2017 and 100 % in 2018. The European Banking Authority (EBA) is in the process of consulting on reporting formats for calculating the standard, in accordance with the Delegated Act.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Liquidity Risk	219
--	--	-----

In order to allow for better comparability, our pro forma LCR of 119 % as of December 31, 2014 has been calculated in accordance with the Basel 3 specification.

The Net Stable Funding Ratio (NSFR): Basel 3 also contains a proposal to introduce a net stable funding ratio (NSFR) to reduce medium to long-term funding risks by requiring banks to fund their activities with sufficiently stable sources of funding. The NSFR requires banks to maintain a stable funding profile in relation to their on- and off-balance sheet activities. The ratio is defined as the amount of Available Stable Funding (the portion of capital and liabilities expected to be a stable source of funding), relative to the amount of Required Stable Funding (a function of the liquidity characteristics of various assets held).

Although the NSFR is scheduled to become a minimum standard internationally, by January 1, 2018, the ratio is subject to national implementation. In Europe, rules on the NSFR are due to be finalized by the European Commission, in the form of a Delegated Act due in 2016. Therefore, for European banks, the final format of the ratio and associated implementation timeframe has not yet been confirmed.

Asset Encumbrance

On June 27, 2014 the EBA published guidelines on the disclosure of encumbered and unencumbered assets as mandated by Article 443 CRR. They represent a first step in determining a framework for asset encumbrance and will form the basis of the binding technical standards that the EBA will develop by 2016. We have used these guidelines to complete the following section.

Encumbered assets primarily comprise those on- and off-balance sheet assets that are pledged as collateral against secured funding, collateral swaps, and other collateralized obligations. Additionally, in line with the EBA technical standards on regulatory asset encumbrance reporting, we consider assets placed with settlement systems, including default funds and initial margins as encumbered, as well as other assets pledged which cannot be freely withdrawn such as mandatory minimum reserves at central banks. We also include derivative margin receivable assets as encumbered under these EBA guidelines.

This section refers to asset encumbrance in the group of institutions consolidated for banking regulatory purposes pursuant to the German Banking Act. Thereunder not included are insurance companies or companies outside the finance sector. Assets pledged by our insurance subsidiaries are included in Note 22 Assets Pledged and Received as Collateral of the Consolidated Financial Statements, and restricted assets held to satisfy obligations to insurance companies policy holders are included within Note 39 Information on Subsidiaries of the Consolidated Financial Statements.

Readily available assets are those on- and off-balance sheet assets that are not otherwise encumbered, and which are in freely transferable form. Unencumbered financial assets at fair value, other than securities borrowed or purchased under resale agreements and positive market value from derivatives, and available for sale investments are all assumed to be readily available.

The readily available value represents the current balance sheet carrying value rather than any form of stressed liquidity value (see the Liquidity Reserves section for an analysis of unencumbered liquid assets available under a liquidity stress scenario). Other unencumbered on- and off-balance sheet assets are those assets that have not been pledged as collateral against secured funding or other collateralized obligations, or are otherwise not considered to be ready available. Included in this category are securities borrowed or purchased under resale agreements and positive market value from derivatives. Similarly, for loans and other advances to customers, these would only be viewed as readily available to the extent they are already in a pre-packaged transferable format, and have not already been used to generate funding. This represents the most conservative view given that an element of such loans currently shown in other could be packaged into a format that would be suitable for use to generate funding.

Fair value of collateral received

Unencumbered

assets

in bn.

Off-balance sheet	Assets	Encumbered assets	Readily available	Other
Collateral received:	253.1	201.9	49.8	1.4
Debt securities	175.4	127.0	48.4	0
Equity instruments	76.3	74.9	1.4	0
Other collateral received	1.4	0	0	1.4
Own debt securities issued other than covered bonds and asset backed securities	0	0	0	0

The above tables set out a breakdown of on- and off-balance sheet items, broken down between encumbered, readily available and other. Any securities borrowed or purchased under resale agreements are shown based on the fair value of collateral received.

The above tables of encumbered assets include assets that are not encumbered at an individual entity level, but which may be subject to restrictions in terms of their transferability within the group. Such restrictions may be due to local connected lending requirements or similar regulatory restrictions. In this situation it is not feasible to identify individual balance sheet items that cannot be transferred. Own debt securities issued other than covered bonds and asset backed securities refers to those own bond holdings that are not derecognized from the balance sheet by a non-IFRS institution. This is not applicable for Deutsche Bank AG.

			Carrying value of encumbered
			assets, fair value of
			encumbered collateral
	Matching liabilities, contingent liabilities, securities lent		received and own debt securities issued
in bn.			
On-balance/off-balance sheet amount of selected financial liabilities and financial assets		382.5	408.7

The above table shows the total amount of encumbered on- and off-balance sheet assets against the corresponding liabilities, contingent liabilities or securities lent that have given rise to the encumbrance. At December 31, 2014, only 207 billion of the Group's on-balance sheet assets were encumbered. These assets primarily related to firm financing of trading inventory and other securities, to funding (i.e., Pfandbriefe and covered bonds) secured against loan collateral and to cash collateral for derivative margin requirements.

As of December 31, 2014, the Group had received securities as collateral with a fair value of 253 billion, of which 202 billion were sold or on pledged. These pledges typically relate to trades to facilitate client activity, including prime brokerage, collateral posted in respect of Exchange Traded Funds and derivative margin requirements.

Maturity Analysis of Assets and Financial Liabilities

Treasury manages the maturity analysis of assets and liabilities. Modelling of assets and liabilities is necessary in cases where the contractual maturity does not adequately reflect the liquidity risk position. The most significant example in this context would be immediately repayable deposits from retail and transaction banking customers which have consistently displayed high stability throughout even the most severe financial crises.

The modelling profiles are part of the overall liquidity risk management framework (see section Stress Test for short-term liquidity positions < 1 year and section Funding Matrix for long-term liquidity positions > 1 year) which is defined and approved by the Management Board.

The following tables present a maturity analysis of our total assets based on carrying value and upon earliest legally exercisable maturity as of December 31, 2014 and 2013, respectively.

Capital Management

Our Treasury function manages capital both at Group level and locally in each region. Treasury implements our capital strategy, which itself is developed by the Capital and Risk Committee and approved by the Management Board, including the issuance and repurchase of shares. We are fully committed to maintaining our sound capitalization both from an economic and regulatory perspective. We continually monitor and adjust our overall capital demand and supply in an effort to achieve the optimal balance of the economic and regulatory considerations at all times and from all perspectives. These perspectives include book equity based on IFRS accounting standards, regulatory and economic capital as well as specific capital requirements from rating agencies.

Regional capital plans covering the capital needs of our branches and subsidiaries across the globe are prepared on an annual basis and presented to the Group Investment Committee. Most of our subsidiaries are subject to legal and regulatory capital requirements. Local Asset and Liability Committees attend to those needs under the stewardship of our regional Treasury teams. Local Asset and Liability Committees further safeguard compliance with all requirements such as restrictions on dividends allowable for remittance to Deutsche Bank AG or regarding the ability of our subsidiaries to make loans or advances to the parent bank. In developing, implementing and testing our capital and liquidity, we take such legal and regulatory requirements into account.

Our core currencies are Euro, US Dollar and Pound Sterling. Treasury manages the sensitivity of our capital ratios against swings in core currencies. The capital invested into our foreign subsidiaries and branches in the other non-core currencies is largely hedged against foreign exchange swings. Treasury determines which currencies are to be hedged, develops suitable hedging strategies in close cooperation with Risk Management and finally executes these hedges.

Treasury is represented on the Investment Committee of the largest Deutsche Bank pension fund which sets the investment guidelines. This representation is intended to ensure that pension assets are aligned with pension liabilities, thus protecting our capital base.

Treasury constantly monitors the market for liability management trades. Such trades represent a countercyclical opportunity to create Common Equity Tier 1 capital by buying back our issuances below par.

During the reporting period, we have applied the internal capital allocation framework that was originally initiated in 2013. A new methodology will come into effect in January 2015.

Under the methodology that was started in 2013, we allocated the average active equity to the business segments reflecting the regulatory requirements under CRR/CRD 4, as well as the communicated capital and return on equity targets. Regulatory capital demand then

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

exceeded the demand from an economic perspective. Under this methodology, our internal demand for regulatory capital was derived based on a Common Equity Tier 1 ratio of 10.0 % at a Group level in accordance with the fully loaded CRR/CRD 4 framework. Consequently, our book equity allocation framework under this methodology was driven by risk-weighted assets and certain regulatory capital deduction items pursuant to the fully-loaded CRR/CRD 4 framework. If our average active equity exceeded the higher of the overall economic risk exposure or the regulatory capital demand, this surplus was assigned to Consolidation & Adjustments.

The new methodology to be introduced in 2015 incorporates the growing importance of leverage requirements for the bank. Regulatory requirements will now be driven by the higher of CET1 ratio (solvency) and Leverage ratio (leverage) requirements. In terms of order for the internal capital allocation, solvency-based allocation comes first, then incremental leverage-driven allocation. The new methodology utilises a two step approach: Allocation of Average Active Equity solvency-based first until the externally communicated target of a 10 % CET1 solvency ratio (CRR/CRD 4 calculated on a fully loaded basis) is met, and then incremental leverage

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Capital Management	227
--	--	-----

capital allocation based on pro-rata leverage exposure of divisions to satisfy the externally communicated target of a 3.5 % leverage ratio (CRR/CRD 4 calculated on a fully loaded basis). The allocation can be changed if the externally communicated targets for the CET1 and leverage ratio should be adjusted. The new methodology also applies different rates for the cost of equity for each of the business segments, reflecting in a more differentiated way the earnings volatility of the individual business models. This enables improved performance management and investment decisions.

The 2013 Annual General Meeting granted our Management Board the authority to buy back up to 101.9 million shares before the end of April 2018. Thereof 51.0 million shares can be purchased by using derivatives. These authorizations replaced the authorizations of the 2012 Annual General Meeting. During the period from the 2013 Annual General Meeting until the 2014 Annual General Meeting (May 22, 2014), 31.3 million shares were purchased, of which 9.4 million via derivatives. The shares purchased were used for equity compensation purposes in the same period.

The 2014 Annual General Meeting granted our Management Board the authority to buy back up to 101.9 million shares before the end of April 2019. Thereof 51.0 million shares can be purchased by using derivatives. These authorizations replaced the authorizations of the 2013 Annual General Meeting. We have received approval from the BaFin for the execution of these authorizations as required under new CRR/CRD 4 rules. During the period from the 2014 Annual General Meeting until December 31, 2014, we purchased 17.2 million shares. The shares purchased were used for equity compensation purposes and for the Global Share Purchase Plan (GSPP) for Deutsche Bank employees in the same period. Consequently, the number of shares held in Treasury from buybacks was 0.1 million as of December 31, 2014.

To take advantage of Deutsche Bank's low share price in the third quarter 2014, Treasury unwound 8.9 million physically settled call options purchased between May 2012 and February 2014 and entered into 8.9 million new physically settled call options with significantly lower strike prices. These call options were purchased under the authorization from the 2014 Annual General Meeting. Of the 8.9 million call options, 2.3 million have a remaining maturity of more than 18 months.

The 2013 Annual General Meeting further replaced an existing authorized capital with a face value of 230.4 million (90 million shares) by a new authorization in the same amount, but with broader scope also allowing for share issuance excluding pre-emptive rights. The total face value of available authorized capital amounted to 922 million (360 million shares). In addition, the conditional capital available to the Management Board had a total face value of 691 million (270 million shares).

On June 25, 2014, Deutsche Bank AG completed a capital increase from authorized capital against cash contributions with gross proceeds of 8.5 billion. The number of shares of Deutsche Bank AG increased by 359.8 million, from 1,019.5 million to 1,379.3 million, and includes both the issuance of 59.9 million new shares without subscription rights to an anchor investor, and our fully underwritten public offering of 299.8 million new shares via subscription rights.

Prior to the launch of the fully underwritten rights offering, we issued 59.9 million new shares at a price of 29.20 to Paramount Services Holdings Ltd., an investment vehicle ultimately beneficially owned and controlled by His Excellency Sheikh Hamad Bin Jassim Bin Jabor Al-Thani of Qatar, who intends to remain an anchor investor in Deutsche Bank. The transaction, which we structured as a capital increase excluding subscription rights, was not subject to the registration requirements of the U.S. Securities Act of 1933, and was not offered or sold in the United States. The gross proceeds of this offering were 1.7 billion.

In the fully underwritten public offering with subscription rights, 299.8 million new registered no par value shares (common shares) were issued. The subscription price was 22.50 per share. 99.1 % of the subscription rights were exercised. The remaining new shares that were not subscribed were sold in the market. The gross proceeds from the offering amounted to 6.8 billion.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Capital Management	228
--	--	-----

With the capital increase, the authorized capital available to the Management Board was reduced from 922 million (360 million shares) to a total face value of 0.6 million (0.2 million shares). In addition, the 2014 Annual General meeting authorized capital with a face value of 256 million (100 million shares).

As mentioned, prior to the 2014 Annual General meeting, the conditional capital available to the Management Board was 691 million (270 million shares). Following an authorization of new conditional capital of 256 million (100 million shares) through a partial replacement of old authorizations, the conditional capital now stands at 486 million (190 million shares). Moreover, the 2014 Annual General meeting authorized the issuance of naked participatory notes for the purpose of Additional Tier 1 (AT1) capital.

Deutsche Bank AG executed two transactions to issue AT1 notes with a total volume of 4.7 billion, one in May and one in November 2014. These transactions materially complete the overall targeted volume of approximately 5 billion of CRR/CRD 4 compliant Additional Tier 1 capital which were planned to be issued by the end of 2015.

On May 20, 2014, Deutsche Bank AG issued undated AT1 Notes with an equivalent value of 3.5 billion. The offering consisted of three tranches: a 1.75 billion tranche with a coupon of 6 %, a U.S.\$ 1.25 billion tranche with a coupon of 6.25 % and a GBP 650 million tranche with a coupon of 7.125 %. All tranches were priced at an issue price of par (100 %) or greater. The denominations of the individual notes are 100,000, \$ 200,000 and GBP 100,000, respectively.

The AT1 Notes take the form of participatory notes with temporary write-down at a trigger level of 5.125 % phase-in Common Equity Tier 1 capital ratio. The AT1 Notes were issued with attached warrants, excluding shareholders' pre-emptive rights. This decision is based on the authorization granted by the 2012 Annual General Meeting. Each AT1 Note carries one warrant, entitling the owner to purchase one common share in Deutsche Bank AG. Warrants to subscribe for a total of 30,250 shares from all three tranches, which had originally been attached to the notes, were detached by an initial subscriber. The warrants expired in the fourth quarter of 2014 and had not been exercised.

On November 18, 2014, Deutsche Bank placed undated Additional Tier 1 Notes with a principal amount of \$ 1.5 billion (1.2 billion equivalent). The denominations of the notes are \$ 200,000. The notes are registered with the U.S. Securities and Exchange Commission. As with the AT1 Notes issued in May 2014, the securities are subject to a write-down provision if Deutsche Bank's Common Equity Tier 1 capital ratio (under the phase-in rules) falls below 5.125 % and are subject to other loss absorption features pursuant to the applicable capital rules. The AT1 notes were issued under the new authorization of the 2014 Annual General meeting and did not have attached warrants.

Our legacy Hybrid Tier 1 capital instruments (substantially all noncumulative trust preferred securities) are no longer fully recognized under fully loaded CRR/CRD 4 rules mainly because they have no write-down or equity conversion feature. However, they are to a large extent recognized as Additional Tier 1 capital under CRR/CRD 4 transitional provisions, and can still be partially recognized as Tier 2 capital

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

under the fully loaded CRR/CRD 4 rules. During the transitional phase-out period the maximum recognizable amount of Additional Tier 1 instruments from Basel 2.5 compliant issuances as of December 31, 2012 will be reduced at the beginning of each financial year by 10 % or 1.3 billion, through 2022. For December 31, 2014, this resulted in eligible Additional Tier 1 instruments of 14.6 billion (i.e. 4.6 billion newly issued AT1 Notes plus 10.0 billion of legacy Hybrid Tier 1 instruments recognizable during the transition period). Four Hybrid Tier 1 capital instruments with a notional of 2.7 billion and an eligible equivalent amount of 2.5 billion have been called in 2014. 8.6 billion of the legacy Hybrid Tier 1 instruments can still be recognized as Tier 2 capital under the fully loaded CRR/CRD 4 rules.

The Tier 2 instrument types (subordinated debt, profit participation rights, cumulative preferred securities) and the categorization into Upper and Lower Tier 2 capital according to Basel 2.5 no longer apply under CRR/CRD 4.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Regulatory Capital	229
--	--	-----

The total of our Tier 2 capital as of December 31, 2014 recognized during the transition period under CRR/CRD 4 was 4.9 billion. Thereof, 0.4 billion were legacy Hybrid Tier 1 instruments that are counted as Tier 2 capital, representing the excess amount of the outstanding legacy Hybrid Tier 1 instruments above the respective cap during the transitional period (the so called spill-over). The gross notional value of the Tier 2 capital instruments was 6.6 billion. The difference to the recognizable Tier 2 capital during the transition period under CRR/CRD 4 is mainly due to capital deductions for maturity haircuts, which provide for a straight proportional reduction of the eligible amount of an instrument in the last 5 years before maturity. Fifteen Tier 2 capital instruments with a total notional of 3.3 billion have been called in 2014.

Regulatory Capital**Capital Adequacy**

Starting January 1, 2014, the calculation of our regulatory capital incorporates the capital requirements following the Regulation (EU) No 575/2013 on prudential requirements for credit institutions and investment firms (Capital Requirements Regulation or CRR), and the Directive 2013/36/EU on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms (Capital Requirements Directive 4 or CRD 4) as implemented into German law. The information in this section as well as in the section Development of risk-weighted Assets is based on the regulatory principles of consolidation.

This section refers to the capital adequacy of the group of institutions consolidated for banking regulatory purposes pursuant to the CRR and the German Banking Act (Kreditwesengesetz or KWG). Thereunder not included are insurance companies or companies outside the finance sector. Our insurance companies are included in an additional capital adequacy (also solvency margin) calculation under the German Solvency Regulation for Financial Conglomerates. Our solvency margin as a financial conglomerate remains dominated by our banking activities.

In light of the regulations given above the following information is based on the banking regulatory principles of consolidation.

The total regulatory capital pursuant to the effective regulations as of year-end 2014 comprises Tier 1 and Tier 2 (T2) capital. Tier 1 capital is subdivided into Common Equity Tier 1 (CET 1) capital and Additional Tier 1 (AT1) capital.

Common Equity Tier 1 (CET 1) capital consists primarily of common share capital including related share premium accounts, retained earnings and accumulated other comprehensive income, subject to regulatory adjustments (i.e. prudential filters and deductions).

Prudential filters for CET 1, according to Articles 32 to 35 CRR, comprise (i) securitized assets, (ii) cash flow hedges and changes in the value of own liabilities, (iii) unrealized gains and losses measured at fair value, and (iv) additional value adjustments.

Regulatory adjustments that apply to CET 1 capital entailed the exclusion of (i) intangible assets, (ii) deferred tax assets that rely on future profitability, (iii) shortfall of provisions to expected losses, and (iv) defined benefit pension fund assets.

For certain deduction items exemptions from deduction or alternative to deductions exist. Non-significant investments in the capital (CET 1, AT1, T2) of financial sector entities (especially if the investment is below 10 % of their CET 1 capital) have to be deducted from the corresponding capital component (CET 1, AT1, T2) to the extent that the sum of these investments exceeds 10 % of the institution's own CET 1 capital. The amount below the 10 % threshold is risk weighted. Significant investments in the CET 1 instruments of financial sector entities (above or equal 10 % of their CET 1 capital) and deferred tax assets that rely on future profitability and

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Risk Report
Regulatory Capital

230

arise from temporary differences can be exempted from deduction where such items in aggregate are equal or less than 15 % of the relevant CET 1 capital. The amount eligible to be included in the 15 % threshold exemption are those amounts up to 10 % of the relevant CET 1 capital for each of the above referred significant investments in the capital of financial sector entities and deferred tax assets that rely on future profitability and arise from temporary differences. All items not deducted (i.e. amounts below the threshold) are subject to a risk weight of 250 %. Investments in the capital of insurance entities that qualify as financial sector entities can be exempted from deduction for the calculation of the solvency margin of the financial conglomerate in accordance with the Financial Conglomerate Directive. The amount not deducted is subject to a risk-weight pursuant to the applicable rules for trading and banking book. Furthermore, institutions can opt for the deduction alternative for the exposure amount of certain items (e.g. securitizations positions in the banking book) which otherwise would qualify for a risk weight of 1,250 %.

Further regulatory adjustments apply to all capital components: (i) direct, indirect and synthetic holdings in own capital instruments, (ii) reciprocal cross holdings in the capital of financial sector entities, and (iii) investments in the capital of financial sector entities. All deductions for investments in the capital of financial sector entities are made from the capital component for which they would qualify if issued by the bank itself.

During the transitional period additional specific regulatory adjustments are applicable. The CET 1 deduction amount can be split into the amount deducted pursuant to the new rules (i.e. the applicable percentage in 2014 is 20 %) and the residual amount that is subject to specific transitional rules which reflect a substitute for previous national treatment. For the residual amount of CET 1 deductions different treatments are in place. The residual amount of intangible assets and direct holdings of own CET 1 instruments are deducted from Tier 1 capital. The residual amount of shortfall of provisions to expected losses as well as direct holdings of significant and non-significant investments in financial sector entities are deducted half from each of Tier 1 and Tier 2 capital.

Additional Tier 1 (AT1) capital consists of Additional Tier 1 capital instruments and related share premium accounts as well as noncontrolling interests that qualify for inclusion in consolidated AT1, subject to regulatory adjustments. To qualify as AT1 under CRR/CRD 4 instruments must have principal loss absorption through a conversion to common shares or a write-down mechanism allocating losses at trigger point. The trigger level for such conversion or write-down is set at a CET 1 ratio of at least 5.125 %. Further requirements have to be met, inter alia these instruments must be perpetual (i.e. not dated or with incentives to redeem) and the institution must have full dividend/coupon discretion at all times.

Tier 2 (T2) capital comprises eligible capital instruments and the related share premium and subordinated long-term debt, certain loan loss provisions and T2 noncontrolling interests that qualify for inclusion in consolidated T2. To qualify as T2 capital instruments or subordinated loans must have an original maturity of at least five years. Moreover, eligible capital instruments may not inter alia contain an incentive to redeem, a right of investors to accelerate repayment or a credit sensitive dividend feature.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Capital instruments that no longer qualify as AT1 or T2 capital are subject to grandfathering rules during transitional period and are phased out from 2013 to 2022 with their recognition capped at 80 % in 2014 and the cap decreasing by 10 % every year.

Basel 2.5 Solvency Measures

Our comparative numbers for year-end 2013 are based on Basel 2.5 rules. Major differences in the calculation of regulatory capital are related to tighter definition of all capital components and stricter regulatory adjustments applied in the calculation of the respective capital component as introduced by the CRR/CRD 4 framework.

Common Equity Tier 1 capital under Basel 2.5 consisted primarily of common share capital including related share premium accounts and retained earnings. Under CRR/CRD 4 transitional rules, capital instruments no longer eligible are phased-out. Note however, that this entails no material changes for common shares under German law.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Regulatory Capital	231
--	--	-----

Amongst other, regulatory adjustments under Basel 2.5 included items that were deducted half from each of Tier 1 and Tier 2 capital such as deduction of financial and insurance entities where a bank holds more than 10 % of the capital, shortfall of provisions to expected loss or securitization positions which qualify for a risk weight of 1,250 %. These items are treated differently under CRR/CRD 4, as outlined in the section above.

Other regulatory adjustments entailed the reversal of capital effects under the fair value option on financial liabilities due to own credit risk. The reversal of these capital effects is also implemented under CRR/CRD 4 and further applies to all fair value gains and losses arising from the institution's own credit risk related to derivative liabilities.

Under Basel 2.5 Additional Tier 1 capital consisted of hybrid capital components such as noncumulative trust preferred securities. Depending on the quality, the amount of hybrid capital instruments was subject to certain limits. These limits are not implemented under CRR/CRD 4 rules. Capital instruments no longer eligible are phased-out, however subject to grandfathering rules.

Tier 2 capital primarily comprised cumulative trust preferred securities, certain profit participation rights and long-term subordinated debt, as well as 45 % of unrealized gains on certain listed securities. The amount of long-term subordinated debt that may be included as Tier 2 capital was limited to 50 % of Tier 1 capital. Total Tier 2 capital was limited to 100 % of Tier 1 capital. Under CRR/CRD 4 rules, these limits are not implemented. Capital instruments no longer eligible are phased-out, subject to grandfathering rules. Under CRR/CRD 4 unrealized gains no longer contribute to T2.

Capital Instruments

A description of the main features of the Common Equity Tier 1, Additional Tier 1 and Tier 2 capital instruments issued by Deutsche Bank is published on Deutsche Bank's website (https://www.db.com/ir/en/content/capital_instruments_prospectuses.htm). In addition, this website provides full terms and conditions of all Common Equity Tier 1, Additional Tier 1 and Tier 2 capital instruments.

Minimum capital requirements and additional capital buffers

The implementation of CRR/CRD 4 aims to strengthen the regulatory capital in the banking system in particular by setting higher minimum capital requirements for CET 1 capital and by introducing new capital buffer requirements that have to be met solely with CET 1 capital. New minimum capital requirements are phased-in starting in 2014, while new capital buffer requirements are phased-in starting 2016.

In 2013 under the Basel 2.5 regulation the minimum capital requirement of CET 1 capital has been set at 2 % of RWA. Under the new rules of CRR/CRD 4 this minimum requirement increased significantly to 4 % in 2014 and to 4.5 % from 2015 onwards, which represents the end of the phase in period of the CET 1 minimum capital requirement. The total capital requirement of 8 % demands further resources that may be met with up to 1.5 % AT1 capital and up to 2 % Tier 2 capital from 2015 onwards. Deutsche Bank is at year-end 2014 well above these minimum requirements.

Failure to meet minimum capital requirements can result in orders to suspend or reduce dividend payments or other profit distributions on regulatory capital and discretionary actions by the BaFin and ECB that, if undertaken, could have a direct material effect on our businesses. We complied with the regulatory capital adequacy requirements in 2014. Our subsidiaries which have to comply with own minimum capital standards and were not included in our regulatory consolidation due to their immateriality reported in one case an insignificant capital deficiency of 16 thousands in 2014.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Regulatory Capital	232
--	--	-----

Beside the minimum capital requirement CRR/CRD 4 requires institutions to fulfill further capital buffers that can be drawn down in times of economic stress to absorb losses; nevertheless they are not classified as minimum requirements. The following gives an overview of the different capital buffers.

The capital conservation buffer is designed to ensure that institutions build up capital buffers outside periods of stress that may be drawn down when necessary. The capital conservation buffer equals a requirement of 2.5 % CET 1 of RWA. In Germany it is phased in during a transitional period from 2016 until 2019 in steps of 0.625 %. It is implemented in Section 10c German Banking Act, based on Article 129 CRD 4. This buffer is therefore not applicable as of year-end 2014.

The countercyclical capital buffer, implemented in Section 10d German Banking Act, Sections 33 to 35 German Solvency Regulation based on Articles 135 to 139 CRD 4, aims to counter excessive credit growth in an economy. It is deployed when excess credit growth is associated with an increase in system wide risk. It is a weighted average of the countercyclical capital buffers that apply in the jurisdictions where our relevant credit exposures are located. The buffer may vary between 0 % to 2.5 % CET 1 of RWA, in a given case even higher, depending on each individual requirement set by the different national regulators. It is introduced on a transitional basis from 2016 until 2019. As of year-end 2014, no countercyclical capital buffer was relevant for Deutsche Bank.

The buffer for global systemically important institutions (G-SII buffer), implemented in Section 10f German Banking Act, based on Article 131 (2), (4), (9) to (18) CRD 4, aims to address the too-big-to fail problem, i.e. the higher risk that these large financial institutions represent for the financial system due to their size, market importance or interconnectedness in case of a failure. To face this issue, banks are categorized into buckets that are linked with different buffer requirements, based on an indicator-based approach as proposed by the Financial Stability Board (FSB), which comprises five main indicators: size, interconnectedness, substitutability (i.e. lack of readily available substitutes or financial institution infrastructure), complexity and global (cross-jurisdictional) activity. The G-SII buffer will range from 1 % to 2.5 % CET 1 of RWA, depending on the above mentioned systemic importance of an institution. In addition, there is an initially empty bucket of 3.5 % as a means to discourage institutions from becoming even more systemically important. Deutsche Bank qualifies as a G-SII that falls into the second highest bucket, based on the indicators as published in 2014 on our website that was the basis for the requirement of 2 % CET 1 of RWA. The additional buffer requirement of 2 % will be phased in starting 2016. We will continue to publish our indicators on our website.

Another upcoming requirement to address the too-big-to fail problem is the total loss-absorbing capacity (TLAC) which is currently in the consultation process. The objective of this requirement is to ensure the availability of adequate loss-absorbing capacity for global systemically important institutions in resolution. An introduction is currently planned in 2019. Deutsche Bank monitors the development of this requirement on an ongoing basis to be prepared for its fulfillment.

In addition to the buffers introduced by Basel, national authorities may require for a systemic risk buffer to prevent and mitigate long-term non-cyclical systemic or macroprudential risks that are not covered by the CRR. They can require an additional buffer of up to 5 % CET 1 of RWA. It is to be noted that usually only the higher one out of the systemic risk buffer and the G-SII buffer must be applied. This capital buffer was not applicable for Deutsche Bank as of year-end 2014.

The following chart presents the CRR/CRD 4 capital requirements that were applicable to Deutsche Bank at year-end 2014 as well as capital requirements that will be applicable from 2015 onwards. The chart shows the highest possible requirements that might occur based on the CRD 4 and its implementation into German law, before any additional requirements as a result of the Supervisory Review and Evaluation Process (SREP). Pursuant to the SREP, the ECB may impose capital requirements on individual banks which are more stringent than statutory requirements. On February 20, 2015, the ECB notified us that we are required to maintain a CET 1 ratio of at least 10 % (on a phase-in basis) at all times.

Treatment of year-end profits for the solvency report

On February 11, 2015 we submitted the solvency report for Deutsche Bank Group as of December 31, 2014 to the regulatory authorities in line with the Decision (EU) (2015/4) of the ECB of February, 4 2015 defining the conditions under which credit institutions are permitted to include interim or year-end profits in CET 1 capital in accordance with Article 26 (2) CRR. According to this Decision at that point in time we excluded our full year profits in our CET 1 capital calculation resulting in the following capital figures, RWA and capital ratios.

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Regulatory Capital	234
--	--	-----

The Decision (EU) (2015/4) of the ECB allows the inclusion of year-end profits in CET 1 capital after deduction of the dividend formally proposed or decided by the management body.

The calculation of the regulatory capital numbers and ratios presented in this report include year-end profits after the deduction of a dividend payment of 0.75 per share proposed by the Management Board to the Supervisory Board and the Annual General Meeting.

Key developments

The Common Equity Tier 1 (CET 1, formerly: Core Tier 1) capital ratio, calculated on the basis of CRR/CRD 4 (phase-in rate of 20 %), was 15.2 % as of December 31, 2014, compared with 12.8 % at year-end 2013 based on Basel 2.5. Our pro forma CRR/CRD 4 (phase-in rate of 0 %) CET 1 capital ratio was 14.6 % at year-end 2013.

CET 1 capital according to CRR/CRD 4 increased by 21.6 billion to 60.1 billion as of December 31, 2014, compared with 38.5 billion CET 1 capital according to Basel 2.5. The framework change has led to a positive first-day application effect of 10.4 billion due to the applicable phase-in rate of 20 % for 2014, mainly driven by the treatment of intangible assets of 9.2 billion. During the transitional period, CRR/CRD 4 allows subtraction of certain CET 1 deductions from Additional Tier 1 capital instead of CET 1 capital, to ease the transition for banks to the fully-loaded rules. The remaining 11.1 billion increase was mainly driven by our capital increase from authorized capital against cash contributions with gross proceeds of 8.5 billion.

Additional Tier 1 (AT1) capital according to CRR/CRD 4 decreased by 8.4 billion to 3.8 billion as of December 31, 2014, compared with 12.2 billion AT1 capital according to Basel 2.5. We had a negative first-day effect from application of CRR/CRD 4 rules of 12.0 billion, largely reflecting deductions from intangible assets of 9.2 billion as well as the derecognition of AT1 instruments of 2.2 billion that no longer qualify as AT1 capital. The first-day effect was partly offset by the issuance of CRR/CRD 4 compliant AT1 Notes of 4.6 billion.

Tier 2 capital according to CRR/CRD 4 decreased by 0.4 billion to 4.4 billion as of December 31, 2014, compared with 4.7 billion Tier 2 capital according to Basel 2.5, mainly due to redemptions and amortization adjustments that were partly offset by deduction reliefs from securitizations and significant investments in financial and insurance entities.

RWA according to CRR/CRD 4 increased by 96 billion to 397 billion as of December 31, 2014, compared with 300 billion at year-end 2013 based on Basel 2.5. Our pro forma CRR/CRD 4 RWA were 355 billion at year-end 2013. The RWA increase is mainly reflecting the impact from the CRR/CRD 4 framework including RWA for CVA, higher operational risk RWA and credit risk RWA including the impact from foreign exchange movements. That was partly offset by de-risking and asset sales.

Where applicable, more detailed information are provided in the respective reference footnote section.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

- ² Based on EBA list as referred to in Article 26 (3) CRR.
- ³ Includes year-end profits after the deduction of a dividend payment of 0.75 per share proposed by the Management Board to the Supervisory Board and the Annual General Meeting. For further details we refer to our paragraph Treatment of year-end profits for the solvency report in this section.
- ⁴ The Regulatory Technical Standard issued by the EBA has not yet been adopted and published by the European Commission. For further details we refer to our paragraph Regulatory prudent valuation of assets carried at fair value in the section Risk Report Trading Market Risk .
- ⁵ Gains and losses on liabilities of the institution that are valued at fair value that result from changes in the own credit standing of the institution according to Article 33 (1) (b) CRR as well as all fair value gains and losses arising from the institution's own credit risk related to derivative liabilities according to Article 33 (1) (c) CRR.
- ⁶ Excludes holdings that are already considered in the accounting base of Common Equity. Basel 2.5: amounts in compliance with Basel 2.5 regulations (i.a. only direct holdings).
- ⁷ Based on our current interpretation no deduction amount expected. Basel 2.5: amounts in compliance with Basel 2.5-regulations (i.a. only direct holdings and Basel 2.5 threshold).
- ⁸ Basel 2.5: amounts in compliance with Basel 2.5-regulations (i.a. only direct holdings and Basel 2.5 threshold).
- ⁹ Basel 2.5: amounts in compliance with Basel 2.5-regulations (i.a. prudential filter based on Consolidated Financial Statements Reconciliation Regulation Konzernabschlussüberleitungs-verordnung).
- ¹⁰ Prudential filter for fund for home loans and savings protection (Fonds zur baupartechnischen Absicherung) and for capital effects resulting from non financial at-equity investments.
- ¹¹ Basel 2.5: amounts in compliance with Basel 2.5-regulations (i.a. only direct holdings).
- ¹² Qualifying AT1 deductions that exceed AT1 capital are deducted from CET 1 capital (reflected in Total regulatory adjustments to Common Equity Tier 1 (CET 1) capital).
- ¹³ Includes silent participation of 16 million as of December 31, 2014 and 20 million as of December 31, 2013.
- ¹⁴ Amortization is taken into account.
- ¹⁵ Excludes risk-weighted assets for positions in the trading book which are subject to phase out as prescribed in CRR (i.e. CRR residual amounts) as attributed risk-weighted assets are calculated on a portfolio basis.
- ¹⁶ Article 465 (1) (a) CRR requires a minimum Common Equity Tier 1 capital ratio of 4 % for the period from January 1, 2014 to December 31, 2014. Article 92 (1) (a) CRR requires a minimum Common Equity Tier 1 capital ratio of 4.5 % excluding additional capital buffer for the years after aforementioned period.
- ¹⁷ Countercyclical buffer rates not yet available.
- ¹⁸ G-SII buffer as published in November 2014 by Financial Stability Board.
- ¹⁹ Calculated as the CET 1 capital less any CET 1 items used to meet Tier 1 and Total capital requirements.
- ^a Common shares, additional paid-in capital and common shares in treasury reflect regulatory eligible CET 1 capital instruments.
- ^b The position retained earnings in the regulatory balance sheet includes net income attributable to Deutsche Bank Shareholders, net of tax, of 1,663 million (2013: 666 million). This item is excluded from the position retained earnings in the transitional template for regulatory capital and shown separately along with foreseeable dividends of 1,182 million (2013: 765 million) in the position independently reviewed interim profits net of any foreseeable change or dividend.
- ^c Difference to regulatory balance sheet position driven by prudential filters for unrealized gains and losses.
- ^d Phase-out of noncontrolling interests at a rate of 80 % in 2014 (2013 Basel 2.5: N/M).
- ^e Regulatory applicable amount is Goodwill and other intangible assets of 13,134 million (2013: 11,990 million) plus Goodwill from equity method investments of 430 million (2013: 25 million) as per regulatory balance sheet reduced by deferred tax liabilities on other intangibles of 585 million (2013: 548 million). Total CET1 deduction amount is phased-in at a rate of 20 %. Residual amount is deducted from AT1 capital.
- ^f Differences to balance sheet position mainly driven by adjustments as set out in Article 38 (2) to (5) CRR (e.g. regulatory offsetting requirements).
- ^g Phase-in at a rate of 20 % in 2014 (2013 Basel 2.5: N/M).
- ^h Hua Xia Bank Company Limited as major part of the position equity method investments and the major part of significant holdings of the CET 1 instruments of financial sector entities, subject to threshold deductions. CET 1 deduction amount is phased-in at a rate of 20 %. Residual amount is deducted from AT1 capital.
- ⁱ Additional equity components reflects regulatory eligible AT1 capital instruments.
- ^j Difference to regulatory balance sheet driven by regulatory adjustments as set out in Articles 51 to 61 CRR (e.g. current cap on AT1 instruments subject to phase-out arrangements).
- ^k Difference to regulatory balance sheet driven by regulatory adjustments as set out in Articles 62 to 71 CRR (e.g. maturity deduction, noncontrolling interests).

	Regulatory Capital	

The following table details the main changes in our Common Equity Tier 1 capital, Additional Tier 1 and Tier 2 capital, based on the regulatory eligible amounts, from the beginning to the end of the years 2014 and 2013.

Development of regulatory capital

in m.	Dec 31, 2014 CRR/CRD 4	Dec 31, 2013 Basel 2.5
Common Equity Tier 1 (CET 1) capital opening amount	38,534	37,957
Common shares, net effect thereof:	921	230
New shares issued (+)	921	230
Shares retired ()	0	0
Additional paid-in capital	7,429	2,428
Retained earnings thereof:	1,077	(57)
Actuarial gains (losses) rel. to defined benefit plans, net of tax/CTA	5	(659)
Net income attributable to Deutsche Bank Shareholders	1,663	666
Common shares in treasury, net effect/(+) sales () purchase	6	47
Movements in accumulated other comprehensive income thereof:	2,947	(1,121)
Foreign currency translation, net of tax	2,865	(1,121)
Unrealized gains and losses	0	0
Other	82	0
Accrual for dividend and AT1 coupons thereof:	(1,182)	(765)
Gross dividends (deduction)	(1,034)	(765)
Shares issued in lieu of dividends (add back)	0	0
Gross AT1 coupons (deduction)	(148)	0
Additional valuation adjustments	0	0
Intangible assets (net of related tax liabilities)	8,870	113
therein: first day effect of application of CRR/CRD 4 rules	9,173	N/M
Deferred tax assets that rely on future profitability (excluding those arising from temporary differences)	(524)	0
therein: first day effect of application of CRR/CRD 4 rules	(441)	N/M
Excess of expected losses over risk provisions	283	9
therein: first day effect of application of CRR/CRD 4 rules	231	N/M
Removal of gains/losses resulting from changes in own credit standing in liabilities designated at fair value (net of tax)	(209)	1
therein: first day effect of application of CRR/CRD 4 rules	(103)	N/M

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Defined benefit pension fund assets	(192)	N/M

Regulatory Capital Requirements

Under CRR/CRD 4, overall capital requirements have to be calculated and compared with the regulatory capital described above. The overall capital requirements are frequently expressed in risk-weighted asset terms whereby total capital requirements are 8 % of risk-weighted assets. The information presented below is based on the regulatory principles of consolidation.

Starting January 1, 2014, the calculation of our regulatory capital, our risk-weighted assets and capital ratios are based on the CRR/CRD 4 framework published on June 27, 2013.

This framework predominantly introduced the following additional requirements in relation to RWA:

Credit Valuation Adjustment (CVA): a new regulatory capital charge which captures the volatility of expected losses from counterparty credit risk exposure in connection with OTC derivatives in a value-at-risk model. Deutsche Bank calculates the majority of CVA RWA based on the advanced approach using an internal model as approved by BaFin.

Changes to Counterparty Credit Risk (CCR): various changes have been introduced for the use of the internal model method (IMM) for the determination of counterparty credit risk exposures, among others the usage of a current and a stressed calibration and the increase of the margin period of risk used in the IMM calculation.

Central Clearing Counterparty (CCP): zero-weighted exposures against CCPs under Basel 2.5 now become subject to capital charges for both trade exposures and default fund exposures. Trade exposures arise from derivatives and security financing transactions. The regulatory EAD is calculated using the internal model method and for transactions, for which a simulation cannot be computed, is derived from the mark-to-market method. A risk weight of 2 % is applied for the trade exposures to a qualifying CCP. Default fund exposures arise from the clearing member's contribution to the loss mutualisation scheme of the CCP and are used to cover losses arising from defaults of one or more of its clearing members if the margins and the CCP's own funds are not sufficient to cover the resulting losses. The risk weight for default fund exposures varies between 2 % and 1,500 % depending on the hypothetical capital requirement of the CCP compared with the financial resources being the pre-funded default fund contributions and the own funds of the CCP.

Financial Sector Exposure: for exposures under the advanced IRBA and to financial sector entities as defined in Article 142 (1) CRR, the asset correlation parameter increases by 25 %.

Securitization Positions: exposures in the regulatory banking and trading book that were deducted half from each of Tier 1 and Tier 2 capital under Basel 2.5 are subject to a risk weight of 1,250 %.

Significant Investments and Deferred Tax Assets (DTA): significant investments in CET 1 instruments of financial sector entities and DTA that rely on future profitability and arise from temporary differences which are subject to the threshold exemptions as outlined in Article 48 CRR receive a risk weight of 250 %.

Against this background, we calculate our RWA based on the following approaches:

In December 2007 the BaFin approved the use of the advanced IRBA for the majority of our counterparty credit risk positions, which excludes the exposures consolidated from Postbank. Additional advanced IRBA-related BaFin approvals have been obtained during the period 2008 to 2014. The advanced IRBA constitutes the most sophisticated approach available under the Basel regime. Postbank has BaFin approval for the advanced IRBA to be applied to the retail business and certain exposures in the exposure classes institutions and corporate, and the foundation IRBA for a portion of the other counterparty credit risk exposures.

The remaining IRBA eligible exposures are covered within the standardized approach either temporarily (where we are seeking regulatory approval for some remaining small portfolios) or permanently (where exposures are treated under the standardized approach in accordance with Article 150 CRR). More details on this topic are provided in the Section Counterparty Credit Risk: Regulatory Assessment.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Regulatory Capital	245
--	--	-----

The capital requirement for securitization positions is calculated substantially using the IRBA approach; only minor exposures are captured under the standardized approach. More details on the treatment of securitization positions can be found in the Section [Securitization](#) .

For equity investments entered into before January 1, 2008, we use the transitional arrangement to exempt these positions from an IRBA treatment and apply the grandfathering rule, using a 100 % risk weighting. For investments in equity positions entered into since January 1, 2008, we apply the simple risk weight approach within the IRBA for our exposures. For more details regarding equity investments please refer to the Sections [Nontrading Market Risk](#) [Investment Risk](#) and [Nontrading Market Risk](#) [Equity Investments Held](#) .

The new CVA (credit valuation adjustment) capital charge was introduced in the Basel 3 framework and implemented in the EU via the Capital Requirement Directive (EU 575/2013). The charge aims to capture volatility in the expected losses from derivative exposures. This is done by calculating the derivative exposures for each counterparty, deriving a credit spread sensitivity based on the exposure and the credit spread of the counterparty, and applying a value-at-risk model on those sensitivity including any eligible hedges.

Deutsche Bank has received approval from the BaFin to use the advanced method to calculate the CVA capital charge. This means that derivative exposures are calculated using approved internal model methods, the same models that are also used for counterparty credit risk RWA. Netting and collateral are applied to the exposures where applicable.

The CVA sensitivities that feed into the existing approved market risk value-at-risk model are calculated using the prescribed sensitivity formula as defined in the regulation. Where credit spreads for a counterparty are not available in the market, an appropriate proxy credit spread is used instead that is identified using a water-fall methodology. The value-at-risk model used for CVA is the same as used for the market risk value-at-risk calculation for the trading book. Each counterparty's CVA sensitivity and any eligible CDS hedges are assigned to a risk factor based on the characteristics of the counterparty or hedge, in the same way that a corporate bond or CDS on the trading book would be assigned to a risk factor for market risk value-at-risk.

The scope for the CVA capital charge is over-the-counter derivatives excluding those traded with counterparties that are exempt from CVA as defined in the regulation. During 2014, the new proxy methodology for value-at-risk as defined by the EBA was implemented by Deutsche Bank and is now used to calculate value-at risk for both the regular trading books and CVA.

The calculation of regulatory market risk capital requirements is generally based on an internal value-at-risk model, which was approved by the BaFin in October 1998 for our market risk exposures. In December 2011, we received model approvals from BaFin for the stressed value-at-risk, incremental risk charge and comprehensive risk measure. Our regulatory capital calculation for the specific interest rate risk of trading book securitizations and nth-to-default credit derivatives is based on the market risk standardized approach. Further market risk positions covered under the standardized approach include for example exposures in relation to Postbank, longevity risk and certain types of investment funds. More details on the aforementioned internal models are provided in the Section [Trading Market Risk](#) .

In December 2007, we obtained approval to apply the advanced measurement approach (AMA) to determine our regulatory operational risk capital requirements. On May 15, 2013 BaFin approved the integration of Postbank into our regulatory capital calculation, which has been reflected since second quarter of 2013.

Development of Risk-weighted Assets

The tables below provide an overview of risk-weighted assets broken down by model approach and business division. They include the aggregated effects of the segmental reallocation of infrastructure related positions if applicable as well as reallocations between the segments.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report	246
	Regulatory Capital	

For the current reporting date the amounts presented are based on the CRR/CRD 4 framework according to the transitional rules. The amounts for the comparative period are presented on the then applicable Basel 2.5 framework.

In line with our decision to scale down and discontinue parts of our commodities business, certain portfolios containing discontinued activities were aggregated under the Special Commodities Group (SCG), which has been subsequently transferred from CB&S to NCOU in the first quarter of 2014. The amounts for credit, market and operational risk RWA for the comparative period have been restated including related effects from reallocations between the segments, accordingly.

Within credit risk, the line item "Other" in Advanced IRBA reflects RWA from securitization positions in the banking book, specific equity positions and other non-credit obligation assets. Within the Standardized Approach, the majority of the line item "Other" includes RWAs from our pension fund assets with the remainder being RWAs from banking book securitizations as well as exposures assigned to the further exposure classes apart from central governments or central banks, institutions, corporates and retail.

--	--	-----

The tables below provide an analysis of key drivers for RWA movements on a CRR/CRD 4 basis observed for credit, market and operational risk in the reporting period.

Development of Risk-weighted Assets for Credit Risk

in m.	Counterparty credit risk	Dec 31, 2014 CRR/CRD 4 thereof: derivatives and repo-style transactions	Counterparty credit risk	Dec 31, 2013 Basel 2.5 thereof: derivatives and repo-style transactions
Credit risk RWA balance, beginning of year	202,186¹	29,454¹	228,952	35,274
Book size	(5,024)	(5,327)	4,272	621
Book quality	(2,348)	1,841	(18,522)	(5,036)
Model updates	11,676	11,676	(2,061)	0
Methodology and Policy	24,110	297	0	0
Acquisition and Disposals	(3,198)	(62)	(5,467)	(3)
Foreign exchange movements	11,752	3,237	(4,988)	(1,403)
Other	4,974	0	0	0
Credit risk RWA balance, end of year	244,128	41,117	202,186	29,454

¹ RWA balances beginning of the year 2014 are based on Basel 2.5.

The classifications of key drivers for the RWA credit risk development table are fully aligned with the recommendations of the Enhanced Disclosure Task Force (EDTF). The category **Book quality** mainly represents the effects from portfolio rating migrations, loss given default, model parameter re-calibrations as well as collateral coverage activities. Organic changes in our portfolio size and composition are considered in the category **Book size**. **Model updates** include model refinements and advanced model roll out. RWA movements resulting from externally, regulatory-driven changes, e.g. applying new regulations, are now considered in the **methodology and policy** section. **Acquisition and disposals** is reserved to show significant exposure movements which can be clearly assigned to new businesses or disposal-related activities.

The increase in RWA for counterparty credit risk by 20.7 % or 41.9 billion since December 31, 2013 is primarily driven by the impact from foreign exchange movements mainly resulting from a strengthening US Dollar and by the introduction of the new CRR/CRD 4 regulatory framework, which is shown under **Methodology and Policy**. The increase in the category **model updates** represents the impact of a more restrictive application of the maturity capping which allows the bank to use a maturity of one year when calculating the credit risk RWA for derivatives depending on the market risk model applied for the Credit Valuation Adjustment (CVA) RWA, a model change for our Internal Model Method impacting derivatives RWA as well as a more restrictive application of a Security Financing Collateral haircut. The overall decrease in the category **Book size** is predominantly driven by derivatives and security financing transaction positions mainly in our Core Bank reflecting our de-risking activities. The decrease in the category **Acquisition and Disposals** shows the impact of the sale of BHF-BANK as well as the sale of The Cosmopolitan of Las Vegas. The increase in the category **Other** reflects the effects on RWA subsequent to our share capital increase in the second quarter 2014 (4 billion) with the remaining resulting from movements applying the 10/15 % threshold rule.

Development of Risk-weighted Assets for Credit Valuation Adjustment

in m.	Dec 31, 2014 CRR/CRD 4
CVA RWA balance, beginning of year	0

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Movement in risk levels	2,017
Market data changes and recalibrations	(1,914)
Model updates	7,400
Methodology and policy	12,330
Acquisitions and disposals	0
Foreign exchange movements	1,370
CVA RWA balance, end of year	21,203

Based on the new CRR/CRD 4 regulatory framework, we are required to calculate RWA using the CVA which takes into account the credit quality of our counterparties. RWA for CVA covers the risk of mark-to-market loss-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Regulatory Capital	250
--	--	-----

es on the expected counterparty risk in connection with OTC derivative exposures. We calculate the majority of the CVA based on our own internal model as approved by BaFin.

The development of CVA RWA is broken down into a number of categories. Movement in risk levels, which includes changes to the portfolio size and composition; market data changes and calibrations, which includes changes in market data levels and volatilities as well as recalibrations; model updates refers to changes to either the IMM credit exposure models or the value-at-risk models that are used for CVA RWA; methodology and policy relates to changes to the regulation, for 2014 the first introduction of CVA RWA. Any significant business acquisitions or disposals would be highlighted on their own.

As of December 31, 2014, the RWA for CVA amounted to 21.2 billion, representing an increase of 8.9 billion (72 %) compared with our pro forma calculation of 12.3 billion for December 31, 2013. The increase was driven by changes to the portfolio as part of regular business activities throughout the year, but also due to re-optimization of the CVA RWA hedging program and market volatility. During the fourth quarter we implemented a change to the value-at-risk model as per the EBA guidelines for CVA which increased the CVA RWA. This was partly offset by further de-risking efforts which reduced capital requirements in both core and non-core business units.

Development of Risk-weighted Assets for Market Risk

in m.	Dec 31, 2014 CRR/CRD 4	Dec 31, 2013 Basel 2.5
Market risk RWA balance, beginning of year	47,259¹	53,058
Movement in risk levels	(10,161)	(8,598)
Market data changes and recalibrations	(730)	1,136
Model updates	5,101	542
Methodology and policy	20,089	1,200
Acquisitions and disposals	(81)	0
Foreign exchange movements	2,732	(79)
Market risk RWA balance, end of year	64,209	47,259

¹ RWA balance beginning of the year 2014 is based on Basel 2.5.

The analysis for market risk covers movements in our internal models for value-at-risk, stressed value-at-risk, incremental risk charge and comprehensive risk measure as well as results from the market risk standardized approach, e.g. for trading securitizations and nth-to-default derivatives or trading exposures for Postbank. The market risk RWA movements due to changes in market data levels, volatilities, correlations, liquidity and ratings are included under the market data changes and recalibrations category. Changes to our market risk RWA internal models, such as methodology enhancements or risk scope extensions, are included in the category of model updates. In the methodology and policy category we reflect regulatory driven changes to our market risk RWA models and calculations. Significant new businesses and disposals would be assigned to the line item acquisition and disposals.

The 17.0 billion (36 %) RWA increase for market risk since December 31, 2013 was primarily driven by increases in the category methodology and policy as well as movement in risk levels. There is an 20.1 billion RWA increase for methodology and policy primarily from the Market Risk Standardized Approach for securitizations due to the new regulatory CRR/CRD 4 framework, which became effective on January 1, 2014. In the new framework we assign all retained securitization positions that are unrated or rated below BB a risk weight of 1,250 % to the exposure and these are now included in RWA whereas these exposures were previously considered capital deduction items. Also, under the new framework there is some increase in the floor applied to the comprehensive risk measure for the correlation trading portfolio although this has now been offset by de-risking. The increase from model changes is driven by the Incremental Risk Charge with changes for the treatment of unrated and defaulted exposures as well as an increase of the liquidity horizons. There has been a reduction from movements in risk levels since December 31, 2013 particularly coming from the Incremental Risk Charge, Comprehensive Risk Measure and the Market Risk Standardized

Approach for securitizations. There has also been an increase from Foreign exchange movements mainly during the second half of the year.

Development of Risk-weighted Assets for Operational Risk

in m.	Dec 31, 2014 CRR/CRD 4	Dec 31, 2013 Basel 2.5
Operational risk RWA balance, beginning of year	50,891¹	51,595
Loss profile changes (internal and external)	9,345	2,623
Expected loss development	37	(959)
Forward looking risk component	(734)	(515)
Model updates	7,652	1,885
Methodology and policy	0	0
Acquisitions and disposals	(109)	(3,738)
Operational risk RWA balance, end of year	67,082	50,891

¹ RWA balance beginning of the year 2014 is based on Basel 2.5.

The overall RWA increase of 16.2 billion was mainly driven by our early recognition of enhancements to our Advanced Measurement Approach (AMA) model in the second quarter of this year, which led to additional RWA of 7.7 billion. From the third quarter, further effects from the model change related to reasonably possible litigation losses are shown under the category loss profile changes.

The increase in loss profile changes resulted from large external market operational risk events which are reflected in our AMA model, such as settlements of regulatory matters by financial institutions.

Further embedded impacts from the AMA model enhancements on the other operational risk RWA components, specifically on the expected loss, are expected to materialize after the awaited model approval by the joint supervisory team, when the model changes have been implemented.

Balance Sheet Management

We manage our balance sheet on a Group level and, where applicable, locally in each region. In the allocation of financial resources we favour business portfolios with the highest positive impact on our profitability and shareholder value. We monitor and analyze balance sheet developments and track certain market-observed balance sheet ratios. Based on this we trigger discussion and management action by the Capital and Risk Committee. Following the publication of the CRR/CRD 4 framework on June 27, 2013, we established a leverage ratio calculation according to that framework.

Leverage Ratio according to revised CRR/CRD 4 framework (fully loaded) (unaudited)

The CRR/CRD 4 framework introduced a non-risk based leverage ratio that is intended to act as a supplementary measure to the risk based capital requirements. Its objectives are to constrain the build-up of leverage in the banking sector, helping avoid destabilizing deleveraging processes which can damage the broader financial system and the economy, and to reinforce the risk based requirements with a simple, non-risk based backstop measure.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

On October 10, 2014, the European Commission adopted a delegated act published in the Official Journal of the European Union on January 17, 2015. The delegated act leads to substantial changes in the calculation of the leverage exposure measure for the leverage ratio under a revised CRR/CRD 4 framework:

Written Credit Derivatives: The effective notional amount of written credit derivatives, i.e., the notional reduced by any negative fair value changes that have been incorporated in Tier 1 capital is now included in the leverage ratio exposure measure. The resulting exposure measure may be further reduced by the effective notional amount of a purchased credit derivative on the same reference name provided certain conditions are met.

Variation Margin Netting: Variation margin received in cash from counterparties may now be deducted from the current replacement cost portion of the leverage ratio exposure measure and variation margin

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Balance Sheet Management	252
--	--	-----

paid to counterparties will be deducted from the leverage ratio exposure measure related to receivables recognized as an asset on the balance sheet, provided certain conditions are met.

Securities financing transactions (SFT): Gross receivables for securities financing transactions (SFT) are permitted to be netted with SFT payables if specific conditions are met. In addition to the gross exposure an add-on for the net counterparty exposure is required to be included in the SFT exposure measure. In the transition from the Supervisory Volatility Adjustments Approach (SVAA) to the Net Exposure the haircuts are removed from the exposure measure.

Off-balance sheet exposure: Off-balance sheet exposure follows the credit risk conversion factors (CCF) of the standardized approach for credit risk (0 %, 20 %, 50 %, or 100 %), which depend on the risk category subject to a floor of 10 %.

Regulatory Adjustments: Modification of regulatory adjustments with respect to investments into financial sector entities not deducted from regulatory capital.

To harmonize the disclosure of the leverage ratio and its components, Article 451(2) of the CRR contains a mandate for the European Banking Authority (EBA) to develop draft implementing technical standards (ITS) based on the Basel Committee publication of the framework and disclosure requirements for the Basel 3 leverage ratio. Against this background, the draft ITS on disclosure of the leverage ratio published on June 5, 2014 contains uniform templates for the disclosure of the leverage ratio and its components. As described above a delegated act was finally adopted by the European Commission and we expect that the draft ITS on disclosure of the leverage ratio will be modified accordingly. Pending final ITS templates, we have adjusted the draft templates to reflect the changes under the delegated act in the meantime.

The following tables show leverage ratio exposures based on revised CRR/CRD 4 rules:

Summary reconciliation of accounting assets and leverage ratio exposures

in bn.

Description of the process used to manage the risk of excessive leverage (unaudited)

As described in the section **Risk Management Principles** of this report, the Capital and Risk Committee (CaR) is mandated to oversee and control integrated planning and to monitor our risk profile and capital capacity. We actively manage our limits

to allocate the leverage exposure capacity,
to support business achievement of strategic performance plans,
to provide a firm basis for achieving the target leverage ratio,
to incentivize businesses to make appropriate choices at the margin based on a group-wide benchmark, and
to maintain risk discipline.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Overall Risk Position	254
--	---	-----

In the case of limit excess the respective division is charged. The limit excess charges are calculated in accordance with the Group-wide limit-setting framework for leverage.

Description of the factors that had an impact on the leverage ratio in 2014 (unaudited)

As of December 31, 2014, our fully loaded CRR/CRD 4 leverage ratio under revised rules, which is a non-GAAP financial measure, was 3.5 % compared to our pro forma CRR/CRD 4 leverage ratio (not taking into account recent revisions to the leverage ratio rules) of 2.4 % as of December 31, 2013, taking into account as of December 31, 2014 a fully loaded Tier 1 capital of 50.7 billion over an applicable exposure measure of 1,445 billion (34.0 billion and 1,445 billion as of December 31, 2013, respectively).

Over the year 2014 the active management of our leverage exposure resulted in a decrease of the leverage ratio exposure amounting to 177 billion, though this decrease was offset by currency impacts and the effect of rule changes introduced by the revised CRR/CRD 4 which we applied in the second half of 2014.

In the first six months of the year we reduced our leverage ratio exposure under previous rules by 7 billion offset by currency effects of 10 billion. The decrease mainly reflects exposure reductions in derivatives and securities financing transaction of 31 billion and de-leveraging of 24 billion in our NCOU which were partly offset by increases of 44 billion in remaining assets, cash and deposits with banks and loans.

With the introduction of the revised CRR/CRD 4 rules in the second half of 2014, the leverage ratio exposure increased by 85 billion due to the aforementioned substantial changes in the calculation rules as well as foreign exchange impacts of 83 billion mainly caused by a weakening of the euro against the US dollar. These effects were offset by a decrease of our leverage ratio exposure of 170 billion, mainly driven by reductions in our derivatives portfolio and securities financing activities of 98 billion, non-derivative trading assets of 27 billion, off-balance sheet and other items of 25 billion and 20 billion de-risking within NCOU, which demonstrates our strong commitment to reduce our risk appetite.

For main drivers of the Tier 1 capital development please refer to section Liquidity and Capital Resources in this report.

Overall Risk Position**Economic Capital**

To determine our overall (nonregulatory) risk position, we generally consider diversification benefits across risk types.

Overall risk position as measured by economic capital usage

in m. (unless stated otherwise)	Dec 31, 2014	Dec 31, 2013	2014 increase (decrease) from 2013	
			in m.	in %
Credit risk	12,885	12,013	872	7
Market Risk	14,852	12,738	2,114	17
Trading market risk	4,955	4,197	757	18

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Nontrading market risk	9,898	8,541	1,357	16
Operational risk	7,598	5,253	2,345	45
Business risk	3,084	1,682	1,403	83
Diversification benefit ¹	(6,554)	(4,515) ²	(2,039)	45
Total economic capital usage	31,866	27,171	4,695	17

¹ Diversification benefit across credit, market, operational and strategic risk (largest part of business risk)

² Excluding strategic risk (not included in the diversification calculation for 2013)

As of December 31, 2014, our economic capital usage amounted to 31.9 billion, which was 4.7 billion, or 17 %, above the 27.2 billion economic capital usage as of December 31, 2013. The higher overall risk position is driven by an increase in risk taking across all risk types and risk methodology enhancements.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Overall Risk Position	255
--	---	-----

The economic capital usage for credit risk increased to 12.9 billion as of December 31, 2014, 872 million or 7 % higher compared to year-end 2013. This increase is driven by higher exposures in CB&S and GTB, partly offset by lower exposures in NCOU.

The economic capital usage for trading market risk increased to 5.0 billion as of December 31, 2014, compared with 4.2 billion at year-end 2013. This was mainly driven by increased exposures in the fair value banking book. The nontrading market risk economic capital usage increased by 1.4 billion or 16 %, mainly driven by higher structural foreign exchange risk exposure, methodology enhancements for pension risk and increased guaranteed funds risk, partly offset by de-risking activities in NCOU.

The economic capital usage for operational risk increased to 7.6 billion as of December 31, 2014, compared with 5.3 billion at year-end 2013. The increase was mainly driven by an early recognition of the impact of model enhancements to our Advanced Measurement Approach (AMA) model that were implemented in the second quarter 2014, which led to additional economic capital of 1.1 billion. An additional driver was the increased operational risk loss profile of Deutsche Bank as well as of the industry as a whole. The related operational risk losses that have materialized and given rise to the increased economic capital usage are largely due to the outflows related to litigation, investigations and enforcement actions.

Our business risk economic capital methodology captures strategic risk, which also implicitly includes elements of non standard risks including refinancing and reputational risk, and a tax risk component. The business risk economic capital usage totaled 3.1 billion as of December 31, 2014, which is 1.4 billion or 83 % higher than the 1.7 billion economic capital usage as of December 31, 2013. The increase mainly reflected a higher economic capital usage for the strategic risk component driven by adjustments to the strategic plan for 2015 compared to the business plan for 2014.

The inter-risk diversification effect of the economic capital usage across credit, market, operational and strategic risk increased by 2.0 billion, or 45 %, as of December 31, 2014, mainly reflecting the increase in economic capital usage before diversification and a methodology update in the first quarter 2014, which relates, among other things, to the incorporation of strategic risk into the diversification calculation.

Internal Capital Adequacy Assessment Process

The Internal Capital Adequacy Assessment Process (ICAAP) requires banks to identify and assess risks, maintain sufficient capital to face these risks and apply appropriate risk-management techniques to maintain adequate capitalization on an ongoing and forward looking basis, i.e., internal capital supply to exceed internal capital demand (figures are described in more detail in the section Internal Capital Adequacy).

We, at a Group level, maintain compliance with the ICAAP as required under Pillar 2 of Basel 2 and its local implementation in Germany, the Minimum Requirements for Risk Management (MaRisk), through a Group-wide risk management and governance framework, methodologies, processes and infrastructure.

In line with MaRisk and Basel requirements, the key instruments to help us maintain our adequate capitalization on an ongoing and forward looking basis are:

- A strategic planning process which aligns risk strategy and appetite with commercial objectives;

- A continuous monitoring process against approved risk and capital targets set;

- Frequent risk and capital reporting to management; and

- An economic capital and stress testing framework which also includes specific stress tests to underpin our recovery monitoring processes.

More information on risk management organized by major risk category can be found in section Risk Management Principles Risk Governance .

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Risk Report Overall Risk Position	256
--	---	-----

Internal Capital Adequacy

As the primary measure of our Internal Capital Adequacy Assessment Process (ICAAP) we assess our internal capital adequacy based on our gone concern approach as the ratio of our total capital supply divided by our total capital demand as shown in the table below. In 2014 we included defined benefit pension fund assets in our capital supply definition to reflect the CRR/CRD 4 capital framework. The prior year information has been revised accordingly.

Internal Capital Adequacy

in m.

(unless stated otherwise)	Dec 31, 2014	Dec 31, 2013
Capital supply		
Shareholders' equity	68,351	54,719
Fair value gains on own debt and debt valuation adjustments, subject to own credit risk ¹	(544)	(537)
Defined benefit pension fund assets ²	(961)	(639)
Deferred tax assets	(6,865)	(7,071)
Fair Value adjustments for financial assets reclassified to loans ³	0	(363)
Noncontrolling Interests ⁴	0	0
Hybrid Tier 1 capital instruments	16,158	12,182
Tier 2 capital instruments	6,620	9,689
Capital supply	82,759	67,980
Capital demand		
Economic capital requirement	31,866	27,171
Intangible assets	14,951	13,932
Capital demand	46,817	41,103
Internal capital adequacy ratio	177 %	165 %

¹ Includes deduction of fair value gains on own credit-effect relating to own liabilities designated under the fair value option as well as the debt valuation adjustments.

² Reported as net assets (assets minus liabilities) of a defined pension fund, i.e. applicable for overfunded pension plans.

³ Includes fair value adjustments for assets reclassified in accordance with IAS 39 and for banking book assets where no matched funding is available. A positive adjustment is not considered.

⁴ Includes noncontrolling interest up to the economic capital requirement for each subsidiary.

A ratio of more than 100 % signifies that the total capital supply is sufficient to cover the capital demand determined by the risk positions. This ratio was 177 % as of December 31, 2014, compared with 165 % as of December 31, 2013. The change of the ratio was driven by an increase in capital supply. Shareholders' equity increased by 13.6 billion mainly driven by the capital increase on June 25, 2014. Hybrid Tier 1 capital instruments increased by 4.0 billion mainly driven by the completed issuances of Additional Tier 1 Notes on May 20, 2014 and November 19, 2014. Tier 2 capital instruments decreased by 3.1 billion mainly due to called capital instruments. Further details are explained in the section

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Capital Management . The increase in capital demand was driven by higher economic capital requirement as explained in the section Overall Risk Position and an increase in intangible assets by 1.0 billion.

The above capital adequacy measures apply to the consolidated Group as a whole (including Postbank) and form an integral part of our Risk and Capital Management framework, further described in the respective sections of this report (please refer in particular to sections Credit Risk Tools Economic Capital for Credit Risk , Economic Capital for Market Risk , Economic Capital Usage for Our Nontrading Market Risk Portfolios per Business Area , Carrying Value and Economic Capital Usage for Nontrading Market Risk Portfolios , Measuring Our Operational Risks and Economic Capital usage for Operational Risk).

Compensation Report

Introduction

The 2014 Compensation Report provides detailed qualitative and quantitative compensation information with regards to the overall Deutsche Bank Group (except for Postbank, who provide disclosures separately). Furthermore, it contains disclosures specific to the Management Board members and employees identified pursuant to the German regulation on the supervisory requirements for compensation systems of banks (Institutsvergütungsverordnung, InstitutsVergV).

The report comprises the following sections:

- Group compensation overview and disclosure
- Material Risk Takers
- Management Board report and disclosure
- Supervisory Board report and disclosure

The report complies with the requirements of Section 314 (1) No. 6 of the German Commercial Code (Handelsgesetzbuch, HGB), the German Accounting Standard No. 17 Reporting on Executive Body Remuneration , the InstitutsVergV and the recommendations of the German Corporate Governance Code.

Group Compensation Overview and Disclosure

Executive Summary

2014 was a defining year for the Bank. 2013 saw the introduction of significant external regulations and the launch of internal cultural projects to effect change within the organization. This year, the focus has been to build on the foundations laid in 2013 and to execute and implement change. Most significantly, new regulatory requirements have necessitated amendments to compensation structures. These changes offer an opportunity to embed the renewed values and beliefs in the organization.

Our Group variable compensation (VC) pool in respect of financial year 2014 was 2.7 billion. In keeping with our historic approach, 45 % of the pool was deferred over three to five years and made subject to a combination of behavioral and performance based forfeiture provisions. The scope of the forfeiture provisions was significantly extended in 2013, and the Bank has maintained these provisions for performance year 2014.

Cultural Developments and Compensation Strategy

Deutsche Bank recognizes the need for cultural change in the banking sector and aspires to be at the forefront of change. The Bank firmly believes that corporate culture is one of the key factors to its long-term success. That is why developing a culture that sustainably rewards performance in line with societal values is a core component of Strategy 2015+.

In 2013, we laid the foundations for cultural change and launched the renewed values and beliefs. The six core values of Integrity, Sustainable Performance, Client Centricity, Innovation, Discipline and Partnership, are supported by 18 beliefs. In 2014, the focus has been on engaging

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

employees and embedding the values and beliefs within each division, function and region. The Bank has approached this challenge with three distinct strategies:

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	258
--	--	-----

Tone from the top and active engagement of employees, through communication measures, transparency and running involvement workshops throughout the Bank, with a focus on the implications and the need for change in the respective businesses
 Implementing culture-embedding mechanisms, adjusting HR processes and systems, and overhauling compensation practices
 Reflecting cultural change through changes in business practices
 The values and beliefs will continue to be embedded throughout 2015.

Aligned to the Bank's values, our compensation strategy is predicated on supporting a diversified universal banking model with safe compensation practices. The compensation strategy is vital to delivering all five levers of the Bank's Strategy 2015+:

- Clients: Placing a strategic emphasis on the Bank's client franchises by ensuring franchise competitiveness and client centricity
- Competencies: Ensuring the Bank can attract and retain the right talent across the breadth of products and control function/infrastructure areas
- Capital: Promoting organic capital growth, the reduction of risk-weighted assets and a compensation system that supports the Group's capital plan
- Costs: Incentivizing actions that deliver long term cost targets and ongoing cost discipline
- Culture: Linking incentives to behaviors that underpin sustainable performance, financial discipline and an appropriate risk culture. In particular, compensation outcomes have been more closely linked to disciplinary action through improved forfeiture provisions.

Regulatory Developments

The Bank has strived to be at the forefront of compensation regulatory changes and will work with our new prudential supervisor, the European Central Bank (ECB), to be in compliance with all of the new requirements.

Capital Requirements Directive (CRD 4)

CRD 4 requirements came into effect on January 1, 2014, and are applicable to EU-headquartered institutions globally. The headline measure, limiting fixed to variable compensation ratios, is applicable to compensation in respect of performance year 2014. While CRD 4 applies the maximum ratio to material risk takers only; the InstitutsVergV and the German Banking Act extend the applicability of this to all employees globally. The Bank is fully cognizant of the regulatory changes and is compliant with the new requirements.

Pursuant to CRD 4 and the requirements subsequently adopted in the InstitutsVergV, the Bank is subject to a fixed to variable compensation ratio of 1:1 (1:2 with shareholder approval). At the Bank's Annual General Meeting on May 22, 2014, shareholder approval was granted to increase the ratio to 1:2. Based on external regulatory requirements which explicitly address the maximum ratio for control function personnel, the Management Board has determined that individuals within the control functions (Audit, Compliance, Finance, Human Resources, Legal, Risk, CISO and CSBC) will be subject to a 1:1 ratio.

In implementing this resolution, steps were taken which have had an impact on the remuneration structure. A number of employees were identified as requiring a rebalancing of compensation and received fixed pay increases in August 2014. See the section CRD 4 Implementation for more detail.

Material Risk Takers (MRTs)

The European Banking Authority's (EBA) Regulatory Technical Standards (RTS), which came into effect in June 2014, outline prescriptive quantitative and qualitative criteria for identifying Material Risk Takers (MRTs). The EBA RTS have been adopted by the InstitutsVergV and, in accordance with this; the Bank has identified 2,903 MRTs in respect of 2014, representing a 124 % increase from 2013.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	259
--	--	-----

Approximately 44 % of the MRT group are based in the European Union (EU). From the MRT population, we again identified a core senior management group consisting of 139 employees. As the leaders and stewards of the Bank, it is prudent that the majority of their compensation should be linked to the long-term success of the Group. As such, their deferred equity awards are subject to a combined deferral and retention period of five years and the average deferral rate of variable compensation across this group was 99 %.

Alternative Investments Fund Managers Directive (AIFMD) and Markets in Financial Instruments Directive (MiFID)

The Bank also is required to comply with other EU Directives: AIFMD and MiFID. AIFMD is an EU Directive that contains provisions on remuneration which outline the rules that Alternative Investment Fund Managers (AIFMs) have to comply with when establishing and applying the remuneration policies for certain categories of their employees. AIFMD Risk Takers are to be identified at the AIFM level. As the AIFMD is largely inspired by CRD 3, many remuneration aspects have already been incorporated by the Bank. One notable difference is that AIFMD MRTs are not subject to the fixed to variable compensation ratio stipulated in CRD 4.

MiFID includes compensation requirements seeking to prohibit remuneration structures and practices that could create inducements for employees to act against the client s best interests. The MaComp Circular published by BaFin implements compensation aspects of MiFID. MaComp requires implementation of a specific compensation policy addressing general requirements, a review of compensation plans and identification of populations of employees deemed to be Relevant Persons (RPs). All InstitutsVergV requirements apply to this population to the same extent.

Compensation Governance

Our robust governance structure enables us to operate within the clear parameters of our compensation strategy and policy. All compensation matters, and overall compliance with regulatory requirements, are overseen by the key committees that form the Global Reward Governance Structure.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	260
--	--	-----

In accordance with the German two-tier board structure, the Supervisory Board governs the compensation of the Management Board members, while the Management Board, supported by the Senior Executive Compensation Committee (SECC), oversees compensation matters for all other employees in the Group. The SECC meets at least every two months (24 meetings in performance year 2014), and is co-chaired by Stefan Krause (CFO) and Stephan Leithner (for 2014: CEO Europe ex Germany and UK, Human Resources, Legal & Compliance, Government and Regulatory Affairs), both of whom are members of the Management Board. The remaining membership is comprised of Stuart Lewis (CRO and member of the Management Board) and senior employees from Finance and Human Resources. In order to maintain its independence, no employees aligned to any of our business divisions are members of the SECC. The SECC prepares and recommends to the Management Board key Group level decisions on compensation strategy and structures, as well as overseeing the overall compensation process through its sub-committee structure.

The Management Board has approved a Group Compensation Strategy, which ensures that compensation practices are fully linked to the Group's business and risk strategies. The Bank also has a Group Compensation Policy, an internal document focused on informing and educating employees with regards to the Bank's compensation strategy, governance processes and structures. These documents provide a clear and demonstrable link between compensation practices and the wider Group strategy and, in compliance with § 13 InstitutsVergV, these documents have been published on the Bank's intranet site and are therefore available to all employees.

In accordance with the InstitutsVergV, the SECC works in co-operation with the Compensation Control Committee (CCC) in relation to Group matters. The CCC is comprised of Supervisory Board members and establishes a closer link to, and focus on, Group compensation matters by the Supervisory Board by monitoring the structure of remuneration systems for senior management and employees. The CCC also supports the Supervisory Board in monitoring whether the relevant internal control functions are adequately involved in the structuring of remuneration systems, as well as ensuring that the long-term interests of shareholders, investors and other stakeholders are taken into account. In addition, and according to §§ 23 to 26 of the InstVV, the Management Board, in cooperation with the CCC, has appointed a Compensation Officer, who cooperates closely with the chair of the CCC and is responsible for continuously monitoring the adequacy of the compensation systems. A Deputy Compensation Officer has also been appointed to assist the Compensation Officer in the fulfilment of his duties. The CCC had seven meetings in performance year 2014.

Compensation Governance Enhancements

Building on the improvements made in 2013, a number of additional governance enhancements were introduced during 2014 with particular focus on the remit and work of the Group Compensation Oversight Committee (GCOC) and the direct reporting of subcommittees to the SECC (including those sub-committees that previously reported to the Group Compensation Review Committee, which has been removed from the governance structure).

GCOC

As a delegated body of the SECC, the GCOC is responsible for the oversight of the governance of divisions' year-end compensation processes. This includes demonstrably reviewing that the Divisional Compensation Committees (DCC) (i) meet the established governance requirements and (ii) ensure that sound compensation parameters (financial and nonfinancial) are taken into account when allocating variable compensation (VC) pools within their division, and by decision-making managers when making individual VC allocation decisions. The GCOC committed to delivering a strengthened and more streamlined governance process for performance-year 2014.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	261
--	--	-----

The GCOC monitored the DCCs' progress in relation to the established compensation governance requirements throughout the Group's annual year-end compensation process and provided ongoing updates to the SECC, including a summary of its final findings and recommendations prior to the conclusion of the process.

The GCOC made a number of key enhancements to the compensation governance process for 2014. These enhancements included, but were not limited to:

- a review and refinement of all existing compensation governance requirements
- further integration of the Group's values and beliefs into the compensation governance requirements
- increased engagement with the DCCs on the compensation governance requirements to ensure full understanding of expectations
- introduction of significantly enhanced requirements for the documentation of individual VC decisions
- strengthening of the impact of non-compliance with compensation governance requirements

As a result of these enhancements, the Bank achieved a more robust, focused and better documented GCOC process for 2014.

Compensation Structure

The Bank employs a total compensation philosophy, which comprises fixed pay and variable compensation (VC).

Fixed pay is used to compensate employees for their skills, experience and competencies, commensurate with the requirements, size and scope of their role. For the majority of Deutsche Bank employees, fixed pay is the primary compensation component, and the share of fixed compensation within total compensation is far greater than 50 %. This is appropriate to many businesses and will continue to be a significant feature of total compensation going forward.

VC is predicated on the industry objective of retaining cost flexibility whilst attracting and retaining the right talent. VC also has the advantage of being able to differentiate performance outcomes and drive behaviours through appropriate incentive systems that can also positively influence culture. As a result, VC is a key feature of market practice compensation in many business lines in the banking environment globally. Combined with fixed pay, this drives total compensation outcomes that are both cost effective and flexible.

CRD 4 Implementation

As previously stated, pursuant to § 25a (5) German Banking Act (KWG) and § 6 (2) InstitutsVergV, the Bank is subject to a maximum fixed to variable compensation ratio. In implementation of this, the Bank has taken a number of steps which impact the remuneration structure. Implementing the regulatory requirements of 1:1 and 1:2 will not in itself cause individual employee total compensation to rise. Total compensation will continue to be performance and market driven. To ensure that total compensation levels remain competitive, the application of a 1:1 and 1:2 ratio has required an adjustment to the compensation structure of a number of employees.

A number of employees globally were identified as requiring a rebalancing of compensation and received fixed pay increases. The appropriate level of fixed pay for each role is determined with reference to the prevailing market value of the role and the regulatory requirements of total compensation structures. Fixed pay levels allow for headroom, which is important to ensure sufficient potential competitive upside and compensation development prospects for high performing employees. In order to support attracting and retaining the right people in the various country locations and business models, market competitive fixed pay levels have an important part to play in ensuring the Bank has the critical competence required to meet its strategic objectives.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	262
--	--	-----

Of those employees who received a fixed pay adjustment, certain employees received an Additional Fixed Pay Supplement (AFPS). The Management Board approved the introduction of the AFPS, primarily for benefits and pensions cost management purposes. Together, monthly fixed pay and the Additional Fixed Pay Supplement form total fixed pay . All things being equal, employees who received a fixed pay increase will see a reduction in their VC.

At the time of adjustment in July 2014, approximately 1,100 employees, or about 1 % of the Bank s global employee population, were identified as being eligible to receive fixed pay increases, at a 2014 fiscal year cost impact of 0.3 billion.

Determining Group-wide Variable Compensation

The Bank uses a formalized and transparent process to derive recommended VC pools across the Group. For business divisions, VC pool recommendations are calculated by applying divisional payout rates to divisional risk-adjusted, bonus-eligible performance. Divisional payout rates are calibrated to both historical midpoints and competitive benchmarks to promote transparency of initial pool recommendations. Infrastructure pool recommendations are determined separately and are not dependent on the performance of the divisions they oversee, in accordance with § 5 (4) InstitutsVergV.

The resulting pool recommendations are then considered and reviewed taking into account other strategic qualitative factors and external benchmarks. In accordance with the InstitutsVergV, the emphasis of remuneration for the majority of infrastructure employees, particularly in key control functions, is on fixed compensation.

When making VC pool decisions, the overriding consideration is balancing Group affordability with competitiveness; ensuring the Bank is able to meet externally published targets, liquidity and capital requirements, in accordance with the specifications of § 7 and § 19 InstitutsVergV. Group-level affordability tests are conducted to determine the recommended VC pool sizes are appropriate; supporting long-term profitability and the sustainable development of the Bank, in line with the Group Compensation Strategy and with the Bank s values and beliefs. The metrics used by the SECC to assess Group affordability include, but are not limited to:

- Pro forma CRR/CRD 4 Common Equity Tier 1 Capital Ratio
- Liquidity
- Risk Bearing Capacity
- Cost Income Ratio
- Compensation Ratio
- Income before Income Taxes (IBIT)
- Net Income
- Other relevant financial metrics requested by the SECC

The Group VC pool is considered affordable if aligned with these key financial metrics and if consistent with the projected fulfillment of future regulatory and strategic goals.

Variable Compensation Structure and Vehicles

VC has been used by the Bank for many years to incentivize, reward and retain strong performing employees and thereby differentiate total compensation outcomes. All individual VC decisions must be performance-based and linked to a combination of risk-adjusted Group, divisional and individual performance. Managers, when exercising discretion, must fully understand both the absolute and relative risk-taking activities of individuals to ensure that VC allocations are balanced and risk-taking is not inappropriately incentivized.

At a senior level, we are committed to ensuring that a large portion of any VC award is linked to the long-term development and performance of the Bank through the structured deferral of awards over a minimum three year period, with appropriate performance conditions and forfeiture provisions.

The overall benefits of deferred awards and the positive aspects from a retention and risk management perspective must also be carefully balanced with the management of compensation costs for future years and the implications of increasing levels of deferral. To strike the right balance, it was determined that 45 % (not including Equity Upfront Awards) of the overall group bonus pool for 2014 would be in the form of deferred compensation.

For 2014, following CRD 4 implementation, the Bank has considered the impact of CRD 4's effect of both reducing the VC pool and restricting the population whose deferral level can be varied, whilst giving due consideration to market deferral levels and regulatory requirements.

The 2014 deferral matrix delivers similar employee deferral levels on a total compensation basis to that in 2013. The key change is the introduction of a new threshold, whereby employees with fixed pay of greater than 500,000 are subject to 100 % VC deferral. Introducing 100 % deferral for employees with significant levels of fixed pay reinforces Deutsche Bank's publicly stated goal of being at the forefront of compensation change.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	264
--	--	-----

Employees with fixed pay less than or equal to 500,000 will be subject to the Bank's VC deferral matrix. For these individuals, the deferral threshold was set at 100,000, above which at least 50 % of any VC was deferred. The deferral matrix is fully aligned with regulatory requirements and it continues to be geared towards protecting lower earners, whilst ensuring an appropriate amount of deferral for higher earners. As such, 100 % of any VC above 500,000 was fully deferred.

Employees with a 2014 deferred VC award received 50 % of the award in the form of deferred equity and 50 % in deferred cash. Note: a limited number of senior employees in our Deutsche AWM division received a portion of their deferred award in the form of an Employee Investment Plan (EIP) Award. These are cash settled awards based on the value of funds managed by the business. Deferral and forfeiture provisions under the EIP remain the same as all other awards.

The following instruments were utilized to achieve this:

Restricted Equity Awards

The deferred equity portion is delivered as a Restricted Equity Award (REA) which vests on a pro rata basis over three years (or 4.5 years for the Senior Management Group). Employees in the Private Client Services (PCS) business of Deutsche AWM receive a PCS award instead of REA. The value of the REA is linked to the Bank's share price over the vesting (and, where applicable, retention) period and is therefore tied to the long-term sustained performance of the Bank. Specific forfeiture provisions apply during the deferral period and, where applicable, retention periods.

Restricted Incentive Awards

The non-equity based portion is granted as deferred cash compensation (Restricted Incentive Award, RIA) which vests on a pro rata basis over three years (a longer deferral period applies to Management Board members). Specific forfeiture provisions apply during the deferral period.

Equity Upfront Awards

In addition to the above deferred awards, all Material Risk Takers receive 50 % of their upfront (non-deferred) award in the form of an Equity Upfront Award (EUA).

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	265
--	--	-----

The EUA is vested at grant but it is subject to a 6 month retention period. The value of the EUA is linked to the Bank's share price during the retention period and is therefore tied to the sustained performance of the Bank. Specific forfeiture provisions apply during the retention period in addition to a service requirement.

The following diagram summarizes the above compensation vehicles utilized for Material Risk Takers and all other employees with a deferred award.

Deferral Schedule

Regulatory requirements dictate that deferral periods for Material Risk Takers should be a minimum of three years. As in previous years, we have chosen to apply these minimum requirements to all employees with deferred awards. We have also once more identified a subset of our most senior MRTs. This Senior Management Group (consisting of 139 employees) are subject to a 4.5 year (cliff vest) deferral period in respect of their REA. This is intended to ensure more than any other employees they have a vested interest in the long-term, sustained performance of the Bank.

A six month retention period also applies following the vesting of each REA tranche for MRTs. For the Senior Management Group, the six month retention period follows the 4.5 year vesting period. As such, they will not realise any of the value of their 2015 REA until at least February 2020 (five years following grant).

All MRTs also receive 50 % of their upfront award in the form of an EUA. The EUA is vested at grant, however it is subject to a six month retention period during which time forfeiture provisions are applicable (this goes beyond regulatory requirements).

Below is a summary of the vesting structure for each population of employees with a deferred award (excluding the Management Board).

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	266
--	--	-----

Risk Adjustment of Variable Compensation

A series of measures are intended to facilitate effective risk management processes are embedded into compensation systems addressing both ex ante and ex post adjustments.

Ex-Ante Risk Adjustment

To establish appropriate ex-ante risk adjustments, we use a consistent, bank-wide standardised methodology to measure risk-adjusted bonus-eligible (RA BE) performance (RA BE Net Income before Bonus and Tax (NIBBT)) by business. All performance for VC calculation purposes is appropriately risk-adjusted based on economic capital utilisation in accordance with the requirements of § 19 InstitutsVergV.

The Bank s economic capital model was developed within the Risk function and is the Bank s primary method for calculating the degree of future potential risk to which the Bank may be exposed. The model measures the amount of capital that the Bank would need in order to absorb very severe unexpected losses arising from the Bank s exposures.

Economic capital was verified as being the Bank s best estimate for future but not materialized losses from its current portfolio and therefore the best metric to adjust VC pools. The SECC reviewed the appropriateness of the risk-adjustment methodology and does so on an annual basis.

The Bank s economic capital model captures inputs from four risk areas:

- Credit risk
- Market risk
- Operational risk
- Business risk

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Compensation Report
Group Compensation Overview and Disclosure

267

These risks are modelled independently and with the consideration of the different components that constitute each risk area.

Credit Risk

Credit risk arises from all transactions where actual, contingent or potential claims against any counterparty, borrower or obligor (referred to collectively as counterparties) exist, including those claims that the Bank plans to distribute. Credit risk includes default risk, country risk and settlement risk.

Market Risk

Market risk arises from the uncertainty concerning changes in market prices and rates (including interest rates, equity prices, foreign exchange rates and commodity prices), the correlations among them and their levels of volatility. Market risk includes trading market risk, non-trading market risk and traded default risk.

Operational Risk

Operational risk means the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. It includes infrastructure risk and other non-financial risk, such as regulatory and legal risk. It also includes model risk, which comprises the Bank's risk of suffering losses or taking wrong strategic decisions due to malfunctioning of models used in asset or liability pricing, risk measurement or other areas (e.g., to implement trading strategies, forecast economic developments, analyse investments or optimise performance).

Business Risk

Business risk describes the risk we assume due to potential changes in general business conditions, such as our market environment, client behaviour and technological progress, as these can affect DB's results if we fail to adjust quickly to these changing conditions. The most material aspect of business risk is strategic risk, which represents the risk of suffering unexpected operating losses due to decreases in operating revenues which cannot be compensated by cost reductions within the respective time horizon. Strategic risk only covers revenue or cost volatility which are not attributable to position taking (market risk), credit losses (credit risk) and operational events (operational risk).

As a general rule, the Bank captures all material risks within the four prime risk types of the Bank's economic capital framework described above. Other risks are hereby mapped into the appropriate overarching risk type.

As a result of the above methodology, as the risk profile of the organisation increases, the economic capital charge also increases, thereby reducing Bank-wide economic profitability and, by extension, the amount of variable compensation awarded. The Bank considers that the utilisation of risk adjusted P&Ls is an extremely effective and robust ex-ante adjustment methodology and serves as a deterrent for taking substantial risk because this model correlates variable compensation payouts to the amount of risk taken.

The economic capital risk adjustment is not the sole risk adjustment. Credit, market and operational losses booked in the P&L are reflected in NIBBT and, additionally, sub-divisional allocation considers other appropriate risk metrics and Red Flag data. Divisional VC pools also include the impact of liquidity costs through Funds Transfer Pricing, which provides appropriate incentives to liquidity users and providers. Liquidity costs are fully allocated to businesses and reported as part of business performance. The rationale and magnitude of the pricing components are continually monitored by Treasury.

Ex post risk adjustment

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

Performance conditions and forfeiture provisions are a key element of our deferred compensation structures and ensure that awards are aligned to future conduct and performance. As illustrated by the statistics in this report, the percentage of VC awards subject to deferral, and therefore performance and forfeiture conditions, increases in line with earnings. In conjunction with the scope of the risk adjustment measures, the duration for

Table of ContentsDeutsche Bank
Financial Report 20141 Management Report
Compensation Report
Group Compensation Overview and Disclosure

268

which they are applicable is equally as important and is reflected in the application of such conditions up to the settlement of awards.

The following performance and forfeiture provisions have been applied to 2014 deferred VC awards (awarded in February 2015).

Group's Common Equity Tier 1 capital ratio performance condition

This performance condition is applicable to all employees with deferred equity awards. If at any quarter end during the vesting period and prior to settlement the Group's Common Equity Tier 1 capital ratio is below the applicable regulatory minimum capital level, inclusive of an additional risk buffer of 200 basis points, as determined by the Management Board, the full undelivered REA will be forfeited by all employees with deferred equity awards.

For the Senior Management Group subject to the five year REA cliff vesting and retention period, if the CET 1 provision is triggered at any time, the full undelivered REA will be forfeited.

Group IBIT performance condition

This performance condition is triggered if Group Income before Income Taxes (IBIT) is negative. It is applicable to all employees with deferred equity awards. If the Management Board determines, prior to settlement, that Group IBIT is negative for the year prior to vesting, the performance condition will not be met and 100 % of the REA tranche due to settle in respect of that year will be forfeited by all employees.

For the Senior Management Group subject to the five year REA cliff vesting and retention period, if for any year during this period the Group IBIT is negative (but the CET 1 provision is not triggered), 20 % of the award will be forfeited in respect of that year.

For Material Risk Takers, the tranche aspect of the Group IBIT provision also applies to their RIA so that if the Management Board determines, prior to settlement, that Group IBIT is negative for the year prior to vesting, the performance condition will not be met and 100 % of the RIA tranche due to settle in respect of that year will be forfeited.

Divisional IBIT performance condition

This performance condition is applicable to MRTs only and is triggered if an employee's respective division's IBIT is negative. If IBIT is negative for any division for the year prior to vesting, 100 % of the REA and RIA tranches due to settle in respect of that year will be forfeited (as determined by the Management Board, prior to settlement) by all MRTs in the applicable division even if Group performance remains positive.

For the Senior Management Group subject to the five year REA cliff vesting and retention period, if for any year during this period the divisional IBIT is negative, 20 % of the award will be forfeited in respect of that year.

The divisional forfeiture measure does not apply to the Management Board or employees working in Regional Management or Infrastructure divisions. Only the Group forfeiture provision applies.

Revenue Impairment provision

This forfeiture provision applies to RIA and REA and allows the Bank to determine whether adjustments may be necessary based on actual outcomes following award. Up to 100 % of undelivered awards can be forfeited in the event that it is discovered that the original award value (or the grant, vesting or settlement of any other award made to the participant) was inappropriate because a performance measure is later deemed to

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

be materially inaccurate or if a deal, trade or transaction considered to be attributable to an employee has a significant adverse effect on any Group entity, division or the Group as a whole.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	269
--	--	-----

This provision also includes EUA for MRTs, ensuring that a greater percentage of awards for MRTs are subject to potential performance based forfeiture. Furthermore, it is also applicable during the retention period following REA vesting therefore ensuring performance forfeiture measures stretch over a minimum 3.5 year period for equity awards to MRTs (five years for the Senior Management Group).

Policy/Regulatory Breach provision

This behavioural based forfeiture provision is applicable to both REA and RIA and provides for the forfeiture of up to 100 % of undelivered deferred compensation for an internal policy or procedure breach, or breach of any applicable laws or regulations imposed externally.

For MRTs, this provision also applies to EUAs and the six month retention period following REA vesting therefore ensuring behavioural forfeiture measures remain applicable for a minimum of 3.5 years for equity awards granted to Material Risk Takers (five years for the Senior Management Group).

A summary of the above provisions is set out below.

2014 deferred compensation awards: forfeiture provisions

	Senior Management Group & other Material Risk Takers	All other staff with Deferred Awards
Performance Conditions & Forfeiture provisions		
Group Performance Provision (REA) Applicable to REA tranches prior to settlement In the event of negative Group IBIT, the next vesting tranche of REAs will be forfeited In the event that the CET1 Capital Ratio is less than 200 basis points over the Group's applicable regulatory minimum capital level according to Article 92(1)(a) of the CRR as a result of the Group incurring a negative net income or for any other reason, 100% of undelivered 2014 REAs will be forfeited	yes	yes
Group Performance Provision (RIA) Applicable to RIA tranches prior to settlement for MRTs In the event of negative Group IBIT, the next vesting tranche of RIAs will be forfeited	yes	
Divisional Performance Provision Applicable to REA and RIA tranches prior to settlement for MRTs In the event of negative Divisional IBIT, the next vesting tranche of REAs/RIAs will be forfeited Provision is not applicable for Infrastructure, Regional Management or NCOU employees	yes	
Revenue Impairment Forfeiture Applicable to undelivered RIA and REA	yes	yes
Revenue Impairment Forfeiture Applicable to EUA and retention periods following vesting of REA tranches for MRTs	yes	
Breach of Policy Applicable to undelivered RIA and REA	yes	yes
Breach of Policy Applicable to EUA and retention periods following vesting of REA tranches for MRTs	yes	

2014 Variable Compensation Awards

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

2014 Variable Compensation awards (which exclude charges for prior year deferrals but include current year awards amortized in the future) were 2.7 billion in total. The Group-wide deferral ratio (including EUAs) was 52 %.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Group Compensation Overview and Disclosure	270

# of employees (full-time equivalent) at period end	25,843	11,284	11,635	47,619	1,757	98,138	98,254

¹ Total Compensation defined as fixed pay (base salary + AFPS + relevant local allowances) plus VC

All figures in the table include the allocation of Infrastructure related compensation and number of employees according to our established cost allocation key. The table may contain marginal rounding differences.

Variable compensation has been used in the above table. The Group total of 2.7 billion aligns to the VC pool as signed off by the Management Board. Please note that for fixed to variable ratio calculation purposes, variable pay has been used, which comprises variable compensation as well as other discretionary remuneration payments.

As detailed in the section CRD 4 Implementation, the application of a 1:1 and 1:2 ratio has required a rebalancing from variable to fixed compensation for a number of employees. The proportion of fixed and variable compensation within total compensation in the above table is reflective of the measures taken to adhere to the mandated ratios.

Recognition and Amortization of Variable Compensation Granted

As of December 31, 2014, including awards granted in early February 2015, unamortized deferred variable compensation costs amount to approximately 2.4 billion.

Group Compensation Overview and Disclosure

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report	272
	Material Risk Takers	

Material Risk Takers

In accordance with the InstitutsVergV we are required to identify all employees whose work is deemed to have a major influence on the overall risk profile of the Group. Appropriately identifying Material Risk Takers (MRTs), and subsequently designing suitable compensation structures for them, is essential in order not to incentivize inappropriate risk-taking. The European Banking Authority's Regulatory Technical Standards (EBA RTS), which have been adopted by the InstitutsVergV, came into effect in June 2014. The RTS outline prescriptive quantitative and qualitative criteria for identifying MRTs.

To promote alignment with new regulatory requirements, the 2014 MRT identification process is based on a combination of qualitative and quantitative criteria as set out in the EBA RTS, and internal criteria developed by the Bank to identify additional categories of employees whose professional activities have a material impact on the Bank's risk profile.

On a global basis, 2,903 employees were identified as MRTs for performance-year 2014, spanning 47 countries. This represents an increase of 124 % compared to 2013, when 1,295 were identified. In prior years, the number of our MRTs has been significantly higher than many of our principal competitors, both from an absolute level and as a percentage of total employee population. However, and as intended, it is expected that the application of the EBA RTS will result in a much more level playing field.

Compensation Structures for Material Risk Takers

Material Risk Takers are subject to the same deferral matrix as the general employee population, save for the requirement that at least 40 % 60 % of VC must be deferred. If a MRT's VC does not trigger a deferral of at least 40 % under the Group's global deferral matrix then (providing their VC is in excess of 50,000) the matrix is overridden to ensure that regulatory obligations are met. On average, however, MRTs are subject to deferral rates in excess of the minimum 40 % 60 % regulatory requirements.

All MRTs receive 50 % of their deferred VC in the form of a Restricted Equity Award (REA) and typically the remaining 50 % as a Restricted Incentive Award (RIA). A limited number of MRTs in Deutsche AWM received a portion of their RIA in the form of an Employee Investment Plan (EIP) Award. These are cash settled awards based on the value of funds managed by the business, and deferral and forfeiture provisions under the EIP remain the same as the RIA. These employees still received 50 % of their deferred award in equity (as a REA) as required by regulation.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Material Risk Takers	273
--	--	-----

Upon the vesting of each REA tranche (or at the end of the 4.5 year vesting period for the Senior Management Group), a further minimum six-month retention period applies during which time employees are not permitted to sell their shares. Employees can still forfeit their REA under the Policy/Regulatory Breach and Revenue Impairment forfeiture provisions or if they are subject to termination for Cause during the retention period.

In addition to the deferred award, 50 % of the upfront award (the remaining portion after the deferred element is calculated) is also awarded in equity in the form of an Equity Upfront Award (EUA). At award, the equity is subject to a minimum six-month retention period during which time the shares cannot be sold. Adding the EUA to the deferred portion of the award means that, on average, MRTs receive less than 15 % of their 2014 VC as an immediate cash payment (i.e., average deferral rates in excess of 85 %). EUAs are subject to the Policy/Regulatory Breach and Revenue Impairment forfeiture provisions during the retention period and will also be forfeited if the employee leaves the Group either voluntarily or for cause.

All deferred awards and the EUA are subject to forfeiture following a Policy/Regulatory Breach or Revenue Impairment event. In addition, all deferred awards are subject to forfeiture provisions linked to the performance of the respective division and/or the Group as a whole.

See Ex-post risk adjustment in the section Group Compensation Overview and Disclosure for a full summary of the performance and forfeiture provisions.

Compensation Disclosure pursuant to Section 16 InstitutsVergV

Section 16 InstitutsVergV provides that the duties of disclosure for institutions are determined solely by Article 450 of Regulation (EU) No. 575/2013 (the Capital Requirements Regulation, CRR). Article 450 CRR introduces new disclosure requirements and the tables below have been created in accordance with this.

Aggregate remuneration

As described above, we have developed, refined and implemented a structured and comprehensive approach in order to identify Material Risk Takers in accordance with the InstitutsVergV requirements. The collective remuneration elements for this population of employees are detailed in the table below. Please note that variable pay is reported in the table, which includes variable compensation as well as other discretionary remuneration elements. Variable pay has been used for fixed to variable remuneration ratio purposes.

All Management Board members and Board members of other significant Group Subsidiaries per Section 1 and 17 InstitutsVergV are included in the Geschäftsleiter column. Non-executive Board members and Supervisory Board members are included in the adjacent column. Compensation information is not reported for Non-executive Board members and Supervisory Board members. Their compensation (limited to a fixed fee/expenses) is not part of the SECC's remit or governance.

¹ Excluding Postbank² Fixed pay defined as: base salary + Additional Fixed Pay Supplement + relevant local allowances³ Variable pay defined as: VC + other discretionary remuneration payments⁴ Termination payments have been disclosed collectively for the Group in order to safeguard employee confidentiality due to the low number of recipients

All figures in the table include the allocation of Infrastructure related compensation and number of employees according to our established cost allocation key. The table may contain marginal rounding differences.

Sign-on awards are intended to be a one-off premium to exceptional new hires and are included as variable pay in the year of joining for the purposes of the maximum fixed to variable ratio. As such, Sign-on awards are included in variable pay in the above table. For 2014, 6.09 million Sign-on awards were granted to a total number of 15 MRTs.

We are conscious that any discretionary termination payments made must be determined based on the sustained commitment of the individual and their personal contribution to the success of the Bank during the course of their employment. The largest single award made in 2014 was 3.01 million.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

During the course of 2014, seven MRTs had awards subject to forfeiture as a result of being terminated for cause or as a result of a finding of a Policy/Regulatory Breach or Revenue Impairment. The total amount forfeited (based on the value of the awards at grant) was 2.75 million. As at the end of 2014, one individual was also under review by the Bank's committees and subject to suspended vesting or delivery of deferred awards due to ongoing investigations.

Management Board Report and Disclosure

Compensation System for Management Board Members

Responsibility

The Supervisory Board as a plenary body is responsible for the structuring of the compensation system for the members of the Management Board as well as for determining their individual compensation. As of the 2014 financial year, the Supervisory Board is supported by the Compensation Control Committee. The requirement to establish this additional Committee from Supervisory Board members is a result of the regulatory approaches under CRD 4. This Directive has been refined and transposed into German law by the CRD 4 Implementation Act by way of amendments to the German Banking Act (*Kreditwesengesetz* – KWG) and revised versions of the *InstitutsVergV* at the national level.

276

Compensation System for Management Board Members

As required by law, the Compensation Control Committee comprises four members, of which at least one must have sufficient expertise and professional experience in the area of risk management and risk controlling and at least one other must be an employee representative. With regard to the Management Board, the Compensation Control Committee has assumed the essential functions, previously carried out by the Chairman's Committee, in particular, supporting and monitoring the Supervisory Board in the appropriate structuring of the compensation system, as well as preparing the resolutions of the Supervisory Board regarding individual compensation.

Approval of the compensation system by the General Meeting

The Supervisory Board regularly reviews the compensation system for the members of the Management Board. In the case of a change or restructuring of the compensation framework, the Supervisory Board uses the possibility provided in the German Act on the Appropriateness of Management Board Remuneration (*Gesetz zur Angemessenheit der Vorstandsvergütung* – VorstAG) for the General Meeting to approve the system of compensation for Management Board members. Most recently, in May 2013, the General Meeting approved a new compensation system for the members of the Management Board by a large majority of 88.71 % retroactive to January 1, 2013.

New regulatory and statutory requirements

The regulatory approaches under CRD 4 also create new challenges for the design of compensation systems. The requirements apply for the first time to the Management Board compensation that is determined for the 2014 financial year. A material element of the regulatory provisions is the limit on the ratio of fixed to variable compensation of 1:1 (cap regulation), i.e. the amount of variable compensation must not exceed that of fixed compensation. The thought behind this is that excessively high variable compensation could create an increased incentive to enter into inappropriately high risks.

Retaining the approved system under the new statutory requirements would make it necessary to increase the fixed compensation and thus to significantly raise the directly payable cash component. However, lawmakers have also stipulated that shareholders can resolve to soften the requirement by setting the ratio of fixed to variable compensation to 1:2.

In May 2014, the General Meeting made use of this statutory possibility and approved the before-mentioned setting to 1:2 with a large majority of 90.84 %. As a result, the increase in fixed costs will be minimized and greater flexibility will be preserved in the composition of total compensation within the present system. In addition, the contributions to the company pension plan have been modified to be able to include them in the calculation of the 1:2 ratio (which further reduces the need to increase fixed compensation) and thus to avoid undesirable cost increases relating to pension benefits.

Principles of the compensation system

The structuring of the compensation system for members of the Management Board takes place in consideration of and within the framework of the statutory and regulatory requirements. The widely varying requirements applicable worldwide present the Supervisory Board with the challenge of being able to offer, within the regulatory requirements, overall compensation packages that continue to be in line with customary market practices and therefore competitive.

When designing the specific structure of the compensation system, determining individual compensation amounts, and structuring its delivery and allocation, the focus is on ensuring a close link between the interest of both the Management Board members and shareholders. While defining the variable compensation, this is achieved through the utilization of clearly defined key financial figures which are directly linked to the performance of Deutsche Bank and granting equity-based compensation components amounting to at least 50 % of the total Variable Compensation. When determining the variable compensation, the equity-based compensation components are directly linked to the performance of the Deutsche Bank share price, and only become eligible for payment after a period of several years.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Compensation System for Management Board Members	277
--	--	-----

Through the structure of the compensation system the members of the Management Board are motivated to avoid unreasonably high risks, to achieve the objectives set out in the Bank's strategies and to work continuously towards the positive development of the Group.

In the context of its review of the compensation system and the determination of the Variable Compensation the Supervisory Board uses the expertise of independent external compensation consultants and, if necessary, legal consultants.

Compensation Structure

With effect from January 1, 2013, the compensation system for Management Board members was fundamentally changed by the Supervisory Board, and in 2014 it was adapted to the new regulatory requirements. The compensation system approved by the Supervisory Board and the compensation structures it encompasses are reflected in the individual Management Board members' contracts.

At the beginning of the financial year, the Supervisory Board reviews the fixed compensation and the target figures for the Variable Compensation components. Furthermore, it defines the general Group-wide and individual objectives for the Management Board members and verifies that the standardized target objectives set for the Long-Term Performance Award are still aligned to the Bank's long-term strategy. The performance of individual Management Board members is evaluated by the Supervisory Board and discussed with the Management Board members throughout and at the end of the year.

The total compensation resulting from the new compensation system is divided into both non-performance-related and performance-related components.

Non-Performance-Related Components (fixed compensation)

The fixed compensation is not linked to performance.

The fixed compensation primarily consists of a base salary. The base salary is disbursed as a base salary in twelve equal monthly payments. In light of the new regulatory requirements, the base salary was reviewed in the course of the year 2014 and determined as follows:

in	2014	2013
Base salary		
Co-Chairmen	3,800,000	2,300,000
Ordinary Board member	2,400,000	1,150,000

The InstitutsVergV provides for the possibility to define contributions to the company pension plan as fixed compensation and thus to include these in the basis for calculating the ratio between fixed and variable compensation components. The aforementioned base salary amounts have therefore been determined taking into account the contributions to the company pension plan.

Since the 2014 financial year, the contributions to the company pension plan amount to:

in	2014
Contributions to the company pension plan	
Co-Chairmen	650,000
Ordinary Board member	400,000

Additional non-performance-related components include other benefits. The other benefits comprise the monetary value of non-cash benefits such as company cars and driver services, insurance premiums, expenses for company-related social functions and security measures including payments, if applicable, of taxes on these benefits as well as taxable reimbursements of expenses.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Compensation System for Management Board Members	278
--	--	-----

Performance-Related Components (Variable Compensation)

The Variable Compensation is performance-related and consists of two components:

- the Annual Performance Award and
 - the Long-Term Performance Award.
- Annual Performance Award (APA)

The APA rewards the achievement of the Bank's short and medium-term business policy and corporate objectives that were set as part of the objective setting agreement for the respective financial year's performance evaluation. Not only is financial success taken into account in the process, but also the conduct towards staff members and clients as part of carrying out business activities.

The total amount of the APA is determined on the basis of several components:

- 60 % of the Award amount depends on general Group-wide objectives that are identical for all Management Board members;
 - The remaining 40 % of the Award amount is based on individual performance and individual objectives that are set by the Supervisory Board for each member of the Management Board separately on the basis of the member's function.
- With regard to the Strategy 2015+, the objectives are generally aligned with the categories capital, costs, competencies, clients and culture and thus not only reflect quantitative objectives, but also address qualitative aspects of the performance delivered.

Objectives for the 2014 Financial Year

The following Group-wide key financial figures were agreed to as metrics for the 2014 financial year and apply equally to all Management Board members. The targets to be achieved may also generally include other aspects, such as return-on-investment targets, derived from the five identified categories:

- Category Capital: Common Equity Tier 1 Ratio (CET 1) and Leverage Ratio;
 - Category Costs: Cost-Income-Ratio (CIR);
 - Category Competencies: Value added reported; and
 - Categories Culture/Clients: Employee Commitment, Behaviour and Reputation.
- Each category of these objectives is weighted at 15 % in the determination of the Award amount. Thus, the proportion of these categories as part of the overall APA is equal to 60 %.

In assessing the individual performance component, the Supervisory Board agrees with each Board member separately on

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

a quantitative objective from the categories **Capital/Costs/Competencies** and
a qualitative objective from the categories **Culture/Clients**.

Each of these two objectives is also weighted at 15 % in the determination of the Award amount. Thus, the proportion of these objectives as part of the overall APA is 30 %.

Altogether, the sum of Group-wide and individually agreed objectives amounts to 90 % of the overall APA. An additional maximum of 10 % remain for the Supervisory Board to reward outstanding contributions, including project-specific contributions over the course of the financial year as an exercise of its wide discretionary authority.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report	279
--	--	-----

Compensation System for Management Board Members

As part of the annual objective setting process, corresponding factors are set for all objectives that the Supervisory Board will use as the basis for evaluating achievement at the end of the year. The level of the respective target achievement and the final amount of the APA is no longer defined on the basis of a formula, but is determined on a discretionary basis by the Supervisory Board as part of an informed judgment based on the pre-defined factors. The following factors are considered: the actual value delivered, plan values and externally announced target values, comparable figures of the Bank's peers, the prior-year values in terms of a multi-year review of development as well as a qualitative analysis of the achievement level and also the overall risk orientation of the Bank.

If the objectives were not achieved during the period being evaluated, the Supervisory Board may determine that an APA will not be granted.

Taking into account the adjustments of the compensation system to the CRD 4 requirements, the target and maximum values applicable to the APA for the year 2014 for an ordinary Management Board member and for the Co-Chairmen of the Management Board are as follows:

in	Minimum	Target	2014 Maximum	2013 Target
Co-Chairmen				
Amount per 15 % objective	0	225,000	450,000	345,000
APA total	0	1,500,000	3,000,000	2,300,000
Ordinary Board member				
Amount per 15 % objective	0	150,000	300,000	225,000
APA total	0	1,000,000	2,000,000	1,500,000

Long-Term Performance Award (LTPA)

The level of the Long-Term Performance Award is no longer determined solely on the basis of the relative performance of the Deutsche Bank share in comparison to selected peer institutions. Rather, through the additional inclusion of non-financial parameters, it is also oriented towards how the targets are achieved. This will further promote sustainable performance development.

Accordingly, the level of the LTPA continues to be linked to the Relative Total Shareholder Return and will additionally be based on a Culture & Client Factor. The level of the LTPA will in general continue to be formula-based and calculated on the basis of pre-defined target figures. The long-term nature of this compensation component will also be maintained by the continued determination of the Relative Total Shareholder Return on the basis of a three-year assessment.

Relative Total Shareholder Return of Deutsche Bank

The Relative Total Shareholder Return (RTSR) of Deutsche Bank is derived from the Total Shareholder Return of Deutsche Bank in relation to the average total shareholder returns of a select peer group (calculated in Euro). The level of the Award portion will continue to be calculated from the average of the annual RTSR for the last three financial years (compensation year and the two preceding years).

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

If the three-year average of the relative total shareholder return of Deutsche Bank is greater than 100 %, then the value of the RTSR portion increases proportionately to an upper limit of 150 % of the target figure, i.e. the value increases by 1 % for each percentage point above 100 %. As in the past, if the three-year average of the relative total shareholder return is lower than 100 %, the value generally declines disproportionately; however, the discount provision has been modified. If the relative total shareholder return is calculated to be in the range of smaller than 100 % to 80 %, the value of the Award portion is reduced for each lower percentage point by 2 percentage points. In the range between 80 % and 60 %, the value of the Award portion is reduced for each lower percentage point by 3 percentage points. As before, if the three-year average of the RTSR does not exceed 60 %, the value of the Award portion is set to zero.

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Compensation System for Management Board Members	280
--	--	-----

As part of the revision of the compensation system and the intended stronger alignment to Deutsche Bank's strategy, the peer group used for the calculation of the relative total shareholder return was adjusted. The peer group now comprises the following banks:

BNP Paribas and Société Générale (both from the eurozone),
Barclays, Credit Suisse and UBS (from Europe outside the eurozone), as well as
Bank of America, Citigroup, Goldman Sachs, JP Morgan Chase and Morgan Stanley (all from the USA).

The criteria used to select the peer group are: generally comparable business activities, comparable size and international presence. The selection shall continue to be reviewed regularly over the years to come.

Culture & Client Factor

Through the Culture & Client Factor, client satisfaction and dealings with clients will be measured to foster a sustainable development of the relationships to clients. In the future, this factor will be determined based on a formulaic approach. Efforts are currently underway to implement a corresponding system.

For a transitional phase, and until the final development and calibration of this system, the Supervisory Board will assess the status of the Bank's development in these aspects at its discretion based on divisionally specific survey results as well as other market analyses along the four categories below average, average, good and excellent. For a classification in the excellent category, 150 % of the Culture & Client Factor target figure is assigned, 100 % for good, and 50 % for average. For below average, the value of the Award portion is set to zero.

Taking into account the adjustments of the compensation system to the CRD 4 requirements, the LTPA will be calculated based on the modified target figures in conjunction with the achieved RTSR as well as the Culture & Client Factor. The LTPA can be a maximum of 150 % of the respective target figures.

The weighting of these two performance metrics is two-thirds for the RTSR value and one-third for the Culture & Client value.

	Minimum	Target	2014 Maximum	2013 Target
in Co-Chairmen				
RTSR component	0	2,533,333	3,800,000	3,066,667

Target	2,400,000	1,000,000	2,400,000	5,800,000	5,650,000
Maximum	2,400,000	2,000,000	3,600,000	8,000,000	7,900,000

Even after the implementation of the regulatory requirements, the total compensation of a Management Board member is subject to a separate cap of 9.85 million which voluntarily has been set by the Supervisory Board for the overall total compensation for the 2014 financial year. Accordingly, the calculated maximum of the total compensation of 12.5 million for the Co-Chairmen cannot take effect and therefore, the potential maximum Variable Compensation for each Co-Chairman is limited to 6.05 million.

Long-Term Incentive/Sustainability

According to the requirements of the InstitutVergV at least 60 % of the total Variable Compensation must be granted on a deferred basis. Not less than half of this deferred portion may comprise equity-based compensation components, while the remaining portion must be granted as deferred cash compensation. Both compensation components must be deferred over a multi-year period which, for the equity-based compensation components, must be followed by a retention period. During the period until payment or delivery, the compensation portions awarded on a deferred basis may be forfeited. A maximum of 40 % of the total Variable Compensation may be granted on a non-deferred basis. However, at least half of this must consist of equity-based compensation components and only the remaining portion may be paid out directly in cash. Of the total Variable Compensation, no more than a maximum of 20 % may be paid out in cash immediately, while at least 80 % must be paid or delivered at a later date.

Up to and including 2013, the APA was granted, to some extent, as a non-deferred variable component (Upfront Award). The respective Upfront Awards amounted to a maximum of 40 % of the total Variable Compensation. In accordance with regulatory requirements, at least half of the Upfront Award amount was granted in equity-based compensation components (Equity Upfront Award). The Equity Upfront Awards were

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F

subject to a retention period of three years. Only after this retention period has ended may the awards be sold. The remaining portion was paid out in cash immediately (Cash Upfront). If regulatory requirements or bank-specific rules made it necessary, parts of the APA were granted on a deferred basis, whereby this was generally carried out in the form of deferred cash compensation components (Restricted Incentive Awards). The Restricted Incentive Awards vested in four equal tranches. The first tranche vested approximately one and a half years after it was granted. The remaining tranches each subsequently vested in intervals of one year. Payment took place upon vesting. The deferred cash compensation was thus disbursed over a period of approximately four and a half years.

With the implementation of the regulatory requirements in 2014 and the related increase in fixed salaries, the APA will only be granted on a deferred basis from now on, although it is in principle granted in the form of deferred cash compensation components (Restricted Incentive Awards) with a deferral over at least four years. Therewith, non-deferred Upfront Awards are no longer granted.

The LTPA is granted 100 % on a deferred basis and only in the form of equity-based compensation components (Restricted Equity Award). The Restricted Equity Awards vest after four and a half years in one tranche (cliff vesting) and have an additional retention period of six months. Accordingly, Management Board mem-

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report Compensation System for Management Board Members	282
--	--	-----

bers are first permitted to dispose of the equities after approximately five years if the entitlement has not been forfeited due to infringements of forfeiture conditions during this period.

The following chart shows the payment date for the immediate cash compensation and specifically the time period for the payment or the delivery of the other Variable Compensation components in the five consecutive years following the grant year.

As Restricted Incentive Awards do not bear interest prior to payment, a one-time premium in the amount of 2 % is added upon grant.

Equity-based awards granted are entitled to a dividend equivalent to align the award with the actually paid dividend and thus with the return for the shareholder. The dividend equivalent is determined according to the following formula:

Forfeiture Conditions

Because some of the compensation components are deferred or spread out over several years (Restricted Equity Awards, Restricted Incentive Awards and Equity Upfront Awards) certain forfeiture conditions are applicable until vesting or the end of the retention periods, in order to create a long-term incentive. Awards may be fully or partially forfeited, for example, due to individual misconduct (including a breach of regulations) or termination for cause, and with regard to Restricted Equity Awards and Restricted Incentive Awards also due to a negative Group result or individual negative contributions to results. In addition, the LTPA will be forfeited completely if the statutory or regulatory minimum requirements for the core capital ratio are not met during this period.

Limitations in the Event of Exceptional Developments

In the event of exceptional developments (for example, the sale of large investments), the total compensation for each Management Board member is limited to a maximum amount. A payment of Variable Compensation elements will not take place if the payment of Variable Compensation components is prohibited or restricted by the German Federal Financial Supervisory Authority in accordance with existing statutory requirements.

	Management Board Compensation	

Shareholding Guidelines

To foster the identification with Deutsche Bank and its shareholders, the Management Board members will be required to invest a portion of their private funds in Deutsche Bank shares. For this purpose, the Management Board members will continuously hold a number of Deutsche Bank shares in their securities accounts. Deferred, equity-based compensation may be taken into account at 75 % of its value towards fulfillment of the obligation.

In 2013, the number of shares to be held amounted to three times the annual base salary for the Co-Chairmen and two times the annual base salary for ordinary Management Board members. The adjustment to fixed compensation made in 2014 and the related reduction in variable compensation elements require an adjustment to the shareholding guidelines for the members of the Management Board. Since 2014, the number of shares to be held amounts to two times the annual base salary for the Co-Chairmen and one time the annual base salary for ordinary Management Board members.

There is a waiting period of 36 months for the Co-Chairmen and 24 months for ordinary Management Board members until which this requirement must be fulfilled. The retention obligations for shares will only become effective as from 2016 for the Co-Chairmen and as from 2015 for the ordinary Management Board members; however, all Management Board members fulfilled the requirement in 2014. Observance of the requirement is reviewed semi-annually as of June 30 and December 31. If the required number of shares is not met, the Management Board members must correct any deficiencies by the next review.

As compensation components are deferred or spread out over several years, another link to the performance of the Deutsche Bank share is established that should generally continue to exist even for the period after leaving the Management Board.

Management Board Compensation**Principles**

At the end of January 2015, the Compensation Control Committee discussed in detail and prepared for the Supervisory Board as a plenary the resolution of the Supervisory Board on the determination of the Variable Compensation for Management Board members. Particular focus was placed on reviewing the appropriateness of the compensation in a horizontal analysis vis-à-vis the Bank's competitors, as well as in vertical analysis per the German Corporate Governance Codex requirements. In the context of this comparative review, the appropriateness of the compensation was reviewed with respect to:

- the ratio of fixed to variable compensation;
- the ratio of short-term to long-term compensation elements;
- the ratio of immediately due to deferred compensation elements; and
- the ratio of immediately vested compensation elements to compensation elements subject to forfeiture conditions.

In addition, the appropriateness of the total amount of compensation in relation to the average income of the employees was considered.

Base Salary

In the 2014 financial year, the annual base salary of the Management Board Co-Chairmen was 3,800,000 each and for an ordinary Management Board member 2,400,000.

Variable Compensation

The Supervisory Board, based on the proposal of the Compensation Control Committee, determined the Variable Compensation for the Management Board members for the 2014 financial year. When calculating and

Table of Contents

Deutsche Bank Financial Report 2014	1 Management Report Compensation Report	284
	Management Board Compensation	

determining the amount of the APA and the LTPA, the Supervisory Board, above all, adequately considered individual Management Board members' contributions to the Bank's revenue, in addition to the Group's overall results. For this purpose, the individual contribution to the Bank's revenue was determined on the basis of the achievement of agreed objectives and was assessed separately for each member of the Management Board.

Total Compensation

The members of the Management Board collectively received in/for the 2014 financial year compensation (without fringe benefits and pension service costs) totalling 35,277,666 (2013: 38,496,509) for their service on the Management Board. Of that, 19,600,000 (2013: 10,350,000) was for base salaries, 15,677,666 (2013: 27,096,509) for performance-related components with long-term incentives and 0 (2013: 1,050,000) for performance-related components without long-term incentives.

The Supervisory Board determined the aforementioned compensation on an individual basis for 2014 as follows:

in	Base salary	APA ¹	LTPA ²	2014 Total compensation	2013 Total compensation
Jürgen Fitschen	3,800,000	860,625	2,001,333	6,661,958	7,474,597
Anshuman Jain	3,800,000	860,625	2,001,333	6,661,958	7,474,597
Stefan Krause	2,400,000	688,500	1,264,000	4,352,500	4,676,415
Dr. Stephan Leithner	2,400,000	803,250	1,264,000	4,467,250	4,706,250
Stuart Lewis	2,400,000	765,000	1,264,000	4,429,000	4,671,825
Rainer Neske	2,400,000	688,500	1,264,000	4,352,500	4,821,000
Henry Ritchotte	2,400,000	688,500	1,264,000	4,352,500	4,671,825
Total	19,600,000	5,355,000	10,322,666	35,277,666	38,496,509

¹ APA = Annual Performance Award/value including premium of 2 %.

² LTPA = Long-Term Performance Award.

Compensation in accordance with the German Corporate Governance Codex (GCGC)

The compensation for the members of the Management Board in accordance with the requirements of section 4.2.5 paragraph 3 of the GCGC is provided below. This comprises the benefits granted for the year under review including the fringe benefits, and including the maximum and minimum achievable compensation for variable compensation components. In addition, the disbursements of fixed compensation, short-term variable compensation and long-term variable compensation in/for the year under review, broken down into the relevant reference years are reported.

Edgar Filing: DEUTSCHE BANK AKTIENGESELLSCHAFT - Form 20-F
