### Trinity Biotech Completes Acquisition of Primus Corporation

DUBLIN, Ireland (July 21, 2005)...Trinity Biotech plc (NASDAQ: TRIB, ISE:TRIB.I ), a leading developer and manufacturer of diagnostic products for the point-of-care and clinical laboratory markets, today announced that it has completed the acquisition of Primus Corporation, a leader in the field of in vitro diagnostic testing for haemoglobin Alc and haemoglobin variants.

Trinity Biotech has acquired Primus for US\$12 million, consisting of a cash consideration of US\$9 million and a one year promissory note of US\$3 million. The shareholders of Primus will also be entitled to an additional consideration of up to US\$4.6 million depending on the growth of the business during the remainder of 2005. The transaction is being funded entirely with bank borrowings, thereby leaving Trinity's cash balances available for future potential acquisitions.

Primus, a Kansas City, Missouri based corporation advised by Crosstree Capital Partners, was founded in 1989 and employs 36 people in the manufacture of glycohaemoglobin instruments and reagents to serve customers from physicians' offices to the largest reference laboratories worldwide. Trinity is committed to further developing the business from the Kansas City location.

Primus has demonstrated consistent sales and profit growth. Sales increased from \$3.6 million for the year 2001 to \$7.9 million for the year 2004, a compound annual growth rate of 30%. The acquisition will be earnings positive for Trinity Biotech in 2005. As part of the transaction, Primus CEO and founder, Tom Reidy, will remain with the Company and continue to direct the operations of Primus within the Trinity Group.

Ronan O'Caoimh, Trinity Biotech CEO, commented "We are delighted to acquire Primus which has a strong track record of growth and a unique patented technology in the field of Alc testing. In particular, Primus has a strong position in the US market for variant Alc testing with an estimated market share of 35%. Trinity's distribution network through direct sales and worldwide distributors can further expand the Primus sales effort and ultimately result in a significant increase in the number of instruments placed above the current level of approximately three hundred. We are also excited about the new Primus Rapid Gel product which is currently awaiting FDA approval which we expect will be granted in early 2006. The Rapid Gel product will compete in the US\$100 million point-of-care Alc market and is based on the Company's unique boronate affinity methodology. We are confident that Primus will make a significant contribution to Trinity's growth in future years."

more-more-more

-2-

Tom Reidy, CEO and founder of Primus, commented "The acquisition of Primus by Trinity will provide the company with access to the wider distribution base and technical support infrastructure of Trinity's direct sales operations in the USA, Germany and the UK and to its worldwide distributor network. We are very excited at the opportunities this will present to continue the growth profile of our business and to better serve our customers."

Trinity will provide additional information regarding the acquisition during its second quarter earnings conference call on Thursday 28th July at 11.00am EST.

Trinity Biotech develops, acquires manufactures and markets over 500 diagnostic products for the point-of-care and clinical laboratory segments of the diagnostic market. The broad line of test kits are used to detect infectious diseases, sexually transmitted diseases, blood coagulation disorders, and autoimmune diseases. Trinity Biotech sells worldwide in over 80 countries through its own salesforce and a network of international distributors and strategic partners. For further information please see the company's website: [www.trinitybiotech.com](http://www.trinitybiotech.com).

Forward-looking statements in this release are made pursuant to the "safe harbor" provision of the Private Securities Litigation Reform Act of 1995. Investors are cautioned that such forward-looking statements involve risks and uncertainties including, but not limited to, the results of research and development efforts, the effect of regulation by the United States Food and Drug Administration and other agencies, the impact of competitive products, product development commercialisation and technological difficulties, and other risks detailed in the Company's periodic reports filed with the Securities and Exchange Commission.
