Balance sheet

The Bank has made further progress in its strategy of strengthening its deposit franchise. This is reflected in the Bank's robust growth in savings and current account deposits and increase in the CASA ratio. The Bank continues to invest in expansion of its branch network to enhance its deposit franchise and create an integrated distribution network for both asset and liability products.

In line with the above strategy, the total deposits of the Bank were Rs. 197,832 crore (US\$ 41.1 billion) at September 30, 2009, compared to Rs. 210,236 crore (US\$ 43.7 billion) at June 30, 2009. During the quarter, the Bank's savings account deposits increased by Rs. 4,859 crore (US\$ 1,010 million) and current account deposits increased by Rs. 4,094 crore (US\$ 851 million) resulting in an improvement in the CASA ratio to 36.9% at September 30, 2009 from 30.0% at September 30, 2008 and 30.4% at June 30, 2009.

The branch network of the Bank stood at 1,520 at October 26, 2009. The Bank is in the process of implementing the 580 branch licenses received from Reserve Bank of India which would expand the branch network to about 2,000 branches, giving the Bank a wide distribution reach in the country.

The loan book of the Bank decreased to Rs. 190,860 crore (US\$ 39.7 billion) at September 30, 2009 from Rs. 198,102 crore (US\$ 41.2 billion) at June 30, 2009 mainly due to the decrease in the agricultural loan portfolio in line with the seasonal nature of the business, and repayments from the retail loan portfolio, partly offset by increase in corporate advances.

¹ Life insurance companies worldwide make accounting losses in initial years due to business set-up and customer acquisition costs in the initial years and reserving for actuarial liability. Further, in India, amortization of acquisition costs is not permitted. If properly priced, life insurance policies are profitable over the life of the policy, but at the time of sale, there is a loss on account of non-amortized expenses and commissions, generally termed as new business strain that emerges out of new business written during the year. New Business Profit (NBP) is an alternate measure of the underlying business profitability (as opposed to the statutory profit or loss) and relevant in the case of companies in their growth phase. NBP is the present value of the profits of the new business written during the year. It is based on standard economic and non-economic assumptions including risk discount rates, investment returns, mortality, expenses and persistency assumptions. Disclosure on economic assumptions is available in the annual report for the year ended March 31, 2009.
